If a 3-dose course of vaccination had been started before September 2014 in a female aged under 15 years, then where possible this should be completed; the interrupted course should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

Under the national programme in England, females remain eligible to receive the human papillomavirus vaccine up to the age of 18 years if they did not receive the vaccine when scheduled. Where appropriate, immunisation with human papillomavirus vaccine should be offered to females coming into the UK as they may not have been offered protection in their country of origin. The duration of protection has not been established, but current studies suggest that protection is maintained for at least 6 years after completion of the primary course.

As the vaccines do not protect against all strains of human papillomavirus, routine cervical screening should continue.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Influenza vaccine

23-Apr-2019

### Overview

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccine p. 1322 in use contain the H and N components of the prevalent strain or strains as recommended each year by the World Health Organization.

The influenza vaccines recommended for immunisation are the adjuvanted trivalent influenza vaccine (inactivated), high dose trivalent influenza vaccine (inactivated), cell-grown quadrivalent influenza vaccine (inactivated), standard egg-grown quadrivalent influenza vaccine (inactivated), and live attenuated influenza vaccine. The choice of vaccine is dependent on the person's age and contra-indications.

The ideal time for immunisation is between September and early November.

Immunisation is recommended for *people at high risk* from influenza, and to reduce transmission of infection. Annual immunisation is strongly recommended for individuals aged 6 months and over with the following conditions:

- chronic respiratory disease;
- chronic heart disease;
- chronic liver disease;
- chronic renal disease at stage 3, 4 or 5;
- chronic neurological disease;
- complement disorders;
- diabetes mellitus;
- immunosuppression because of disease (including asplenia or splenic dysfunction) or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone p. 678: *adult and child* over 20 kg, 20 mg or more daily; *child* under 20 kg, 1 mg/kg or more daily], and chemotherapy);
- HIV infection (regardless of immune status);
- morbid obesity (BMI of 40 kg/m<sup>2</sup> and above).

Annual influenza vaccine is also recommended for:

- children of specific ages, see Immunisation schedule p. 1296;
- all pregnant women (including those who become pregnant during the flu season);
- all adults aged 65 years and over (including those becoming 65 by 31 March 2020);
- residents of nursing or residential homes for the elderly and other long-stay facilities;
- carers of individuals whose welfare may be at risk if the carer falls ill;
- household contacts of immunocompromised individuals;
- frontline health and social care workers.

Children aged 6 months to less than 2 years of age in clinical risk groups should be offered the standard egg-grown quadrivalent inactivated influenza vaccine.

Children aged 2–17 years of age (including those in clinical risk groups) should be offered the live attenuated influenza vaccine, administered as a nasal spray (*Fluenz tetra*<sup>®</sup>). The live attenuated vaccine is thought to provide broader protection than inactivated vaccines. If the child is in a clinical risk group and the live attenuated vaccine is contra-indicated or otherwise unsuitable, offer standard egg-grown quadrivalent inactivated influenza vaccine.

Children aged 6 months to less than 9 years of age in clinical risk groups who have not had the influenza vaccine previously should be offered two doses of the appropriate influenza vaccine, four weeks apart.

Adults aged 18 to 64 years of age in clinical risk groups, pregnant females, and other eligible groups should be offered either the standard egg-grown quadrivalent inactivated influenza vaccine or the cell-grown quadrivalent inactivated influenza vaccine.

Adults aged 65 years and over should be offered either the adjuvanted trivalent inactivated influenza vaccine or the cell-grown quadrivalent inactivated influenza vaccine. The high dose trivalent inactivated influenza vaccine is equally suitable but is **not eligible for reimbursement under the NHS flu vaccination 2019/2020 programme**.

In the 2019/2020 national influenza immunisation programme, annual influenza vaccine will be offered to all children aged 2–10 years on 31st August 2019 (including those in reception class and school years 1, 2, 3, 4, 5, and 6).

For the management of influenza, see Influenza p. 661.

Information on pandemic influenza, avian influenza, swine influenza, and annual flu programme may be found at [www.gov.uk/government/collections/pandemic-flu-public-health-response](http://www.gov.uk/government/collections/pandemic-flu-public-health-response) and at [www.gov.uk/government/collections/annual-flu-programme](http://www.gov.uk/government/collections/annual-flu-programme).

## Japanese encephalitis vaccine 14-Nov-2018

### Overview

Japanese encephalitis is a mosquito-borne viral encephalitis caused by a *Flavivirus*.

Japanese encephalitis vaccine p. 1323 (*IXIARO*)<sup>®</sup> is an inactivated vaccine adsorbed onto an adjuvant. It is recommended for individuals who are going to reside in an area where Japanese encephalitis is endemic or epidemic. Travellers to South and South-East Asia and the Far East should be immunised if staying for a month or longer in endemic areas during the transmission season. Other travellers with shorter exposure periods should also be immunised if the risk is considered sufficient. Immunisation is also recommended for laboratory staff at risk of exposure to the virus.

The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

In adults (aged under 65 years) and children (aged 2 months and over) at ongoing risk (including laboratory staff and long-term travellers), a single booster dose should be given 12 months after the primary immunisation course. A booster dose can be considered in adults aged 65 years and over, but the immune response is lower than in younger adults. For other travellers, a single booster dose should be given within 12–24 months after primary immunisation, before potential re-exposure to the Japanese encephalitis virus. Travellers aged 18–64 years should be offered a second booster dose at 10 years if they remain at risk.

Cases of Japanese encephalitis should be managed with supportive treatment.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre.

### Useful Resources

Recommendations reflect Chapter 20, *Japanese encephalitis, in Immunisation against infectious disease* – ‘The Green book’. Public Health England, June 2018.

## Measles, Mumps and Rubella vaccine

### Overview

**Measles vaccine** has been replaced by a combined measles, mumps and rubella vaccine, live p. 1323 (MMR vaccine).

Measles, mumps and rubella vaccine, live aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-

indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children at 1 year of age, on or after their first birthday. A second dose is given before starting school at 3 years and 4 months of age, or soon after (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 3 months later by a second dose.

At school-leaving age or at entry into further education, measles, mumps and rubella vaccine, live immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of measles, mumps and rubella vaccine, live in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella vaccine, live are required, the second dose should be given one month after the initial dose. The decision on whether to vaccinate adults should take into consideration their vaccination history, the likelihood of the individual remaining susceptible, and the future risk of exposure and disease.

Measles, mumps and rubella vaccine, live should be used to protect against rubella in *seronegative women of child-bearing age* (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously *unimmunised and seronegative post-partum women* (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

### Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged over 6 months who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as those with history of recent severe illness) can be given normal immunoglobulin after exposure to measles; routine measles, mumps and rubella vaccine, live immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live is **not suitable** for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children and adults with impaired immune response should not receive live vaccines (see advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin.

### Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should

receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Meningococcal vaccine

### Overview

Almost all childhood meningococcal disease in the UK is caused by *Neisseria meningitidis* serogroups B and C. **Meningococcal group C conjugate vaccine** protects only against infection by serogroup C and **Meningococcal group B vaccine** protects only against infection by serogroup B. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetravalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the **meningococcal groups A, C, W135, and Y conjugate vaccine** is likely to provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal [not currently available in the UK].

**Meningococcal group B vaccines**, *Bexsero*<sup>®</sup>, and *Trumenba*<sup>®</sup> are licensed in the UK against infection caused by *Neisseria meningitidis* serogroup B. The use of *Bexsero*<sup>®</sup> is recommended in the Immunisation Schedule. *Bexsero*<sup>®</sup> contains 3 recombinant *Neisseria meningitidis* serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against *Neisseria meningitidis* serogroup B. *Trumenba*<sup>®</sup> contains 2 recombinant *Neisseria meningitidis* serogroup B proteins. The proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

### Childhood immunisation

**Meningococcal group C conjugate vaccine** provides long-term protection against infection by serogroup C of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 12 months of age (as the haemophilus influenzae type b with meningococcal group C vaccine p. 1314) and a second dose given at 13–15 years of age (as the meningococcal groups A with C and W135 and Y vaccine p. 1315) (see Immunisation Schedule).

**Meningococcal group B vaccine** provides protection against infection by serogroup B of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 2 months of age, a second dose at 4 months of age, and a booster dose at 12 months of age (see *Immunisation Schedule* above).

Unimmunised children aged under 12 months should be given 1 dose of meningococcal group B vaccine (rDNA,

component, adsorbed) p. 1314 followed by a second dose of meningococcal group B vaccine (rDNA, component, adsorbed) two months later. They should then be vaccinated according to the Immunisation Schedule (ensuring at least a two month interval between doses of meningococcal group B vaccines). Unimmunised children aged 12–23 months should be given 2 doses of meningococcal group B vaccine (rDNA, component, adsorbed) separated by an interval of two months if they have received less than 2 doses in the first year of life. Unimmunised children aged 2–9 years should be given a single dose of meningococcal group C vaccine (as the haemophilus influenzae type b with meningococcal group C vaccine) followed by a booster dose of meningococcal groups A with C and W135 and Y vaccine at 13–15 years of age.

From 2015, unimmunised individuals aged 10–25 years, including those aged under 25 years who are attending university for the first time, should be given a single dose of meningococcal groups A with C and W135 and Y vaccine; a booster dose is not required.

Patients under 25 years of age with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

### Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetravalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of meningococcal outbreaks and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

Proof of vaccination with the tetravalent meningococcal groups A with C and W135 and Y vaccine is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

### Contacts

For advice on the immunisation of *laboratory workers and close contacts* of cases of meningococcal disease in the UK and on the role of the vaccine in the control of *local outbreaks*, consult Guidance for Public Health Management of Meningococcal Disease in the UK at [www.gov.uk/phe](http://www.gov.uk/phe). Also see for antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

The need for immunisation of laboratory staff who work directly with *Neisseria meningitidis* should be considered.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pertussis vaccine

### Overview

**Pertussis vaccine** is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of *Bordetella pertussis*. Primary immunisation against pertussis (whooping cough) requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with a combination vaccine of diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1312 (*Infanrix hexa*<sup>®</sup>).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed. Children aged 1–10 years who have not received a *pertussis-containing* vaccine as part of their primary immunisation should be offered 1 dose of a suitable pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

### Vaccination of pregnant women against pertussis

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis-specific antibodies that are transferred through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine; *Boostrix-IPV*<sup>®</sup>) between 16 and 32 weeks of pregnancy. Public Health England has advised (2016) that the vaccine is probably best offered after the fetal anomaly scan at around 18–20 weeks. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 16–32 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

### Contacts

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

### Side-effects

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;

- severe local reaction, irrespective of extent.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pneumococcal vaccine

18-Dec-2018

### Overview

The pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1316 and the pneumococcal polysaccharide vaccine p. 1316 protect against infection with *Streptococcus pneumoniae* (pneumococcus). Both vaccines contain polysaccharide from capsular pneumococci. The pneumococcal polysaccharide vaccine contains purified polysaccharide from **23 capsular types** of pneumococcus, whereas the pneumococcal polysaccharide conjugate vaccine (adsorbed) contains polysaccharide from either **10 capsular types** (*Synflorix*<sup>®</sup>) or **13 capsular types** (*Prevenar 13*<sup>®</sup>). Both vaccines are inactivated.

*Prevenar 13*<sup>®</sup> is the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) used in the childhood Immunisation schedule p. 1296. The schedule consists of 3 doses given at separate intervals.

The 23-valent pneumococcal polysaccharide vaccine is recommended for all adults aged 65 years and over, and for adults and children aged 2 years and over in the following at-risk groups:

- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac syndrome which could lead to splenic dysfunction);
- chronic respiratory disease (including severe asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- diabetes mellitus requiring insulin or oral hypoglycaemic drugs;
- immunosuppression because of disease (e.g. HIV infection, and genetic disorders affecting the immune system) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *adult and child 20 kg and over*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily, and chemotherapy);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid may occur.

The 23-valent pneumococcal polysaccharide vaccine should also be considered for those at risk of occupational exposure to metal fume (e.g. welders).

Where possible, the vaccine should be given at least 2 weeks (ideally 4–6 weeks) before splenectomy, chemotherapy, or radiotherapy; patients should be given advice about the increased risk of pneumococcal infection. If it is not possible to vaccinate at least 2 weeks before splenectomy, chemotherapy, or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy, and at least 3 months after completion of chemotherapy or radiotherapy. For patients with leukaemia or who have had a bone marrow transplant, refer to Chapter 25, Pneumococcal, in *Immunisation against infectious disease* – ‘The Green Book’ for vaccination advice. A patient card and information leaflet

for patients with asplenia are available from the Department of Health or in Scotland from the Scottish Government, Health Protection Division (Tel (0131) 244 2879).

#### Choice of vaccine

Vaccination regimens may differ depending on the patient's age, risk of pneumococcal disease, vaccination history, and immune status. Individuals in at-risk groups may require additional protection.

#### Children with unknown or incomplete vaccination histories

Unimmunised or partially immunised children who present late for vaccination and before the age of 1 year should receive 2 doses of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) 2 months apart, and a further dose on their first birthday, at least 2 months after the previous dose (intervals can be reduced to 1 month to allow the immunisation schedule to be completed promptly).

Children aged between 1 year and under 2 years of age who are unimmunised or partially immunised should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

#### Children diagnosed with at-risk conditions under 2 years of age

Children under 1 year in an at-risk group should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) according to the Immunisation schedule p. 1296. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories* above. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children under 2 years who are severely immunocompromised or those with asplenia, splenic dysfunction, or complement disorders, should have an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), given at least 2 months after the routine dose due on their first birthday. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

#### Children diagnosed with at-risk conditions from 2 years to under 10 years of age

Children diagnosed or first presenting with an at-risk condition aged 2 years to under 10 years of age who have completed their routine immunisation schedule should receive a single dose of 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children previously unvaccinated or partially vaccinated with the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 2 months later.

Severely immunocompromised children may have a sub-optimal immunological response to the vaccine and should be given an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), even if they are fully vaccinated. This should be followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). If the 23-valent pneumococcal polysaccharide vaccine has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 6 months after.

#### Children diagnosed with at-risk conditions aged 10 years and over and adults

Individuals diagnosed or first presenting with an at-risk condition should be given a single dose of the 23-valent pneumococcal polysaccharide vaccine. No additional 23-valent pneumococcal polysaccharide vaccine is required at 65 years of age.

Severely immunocompromised individuals should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) followed by the 23-valent pneumococcal polysaccharide vaccine at least 2 months after, irrespective of their previous pneumococcal vaccinations. If the 23-valent pneumococcal polysaccharide vaccine has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 6 months after.

For further information on vaccination in patients with asplenia, see Vaccination, general principles p. 1294.

#### Revaccination

In individuals with higher concentrations of antibodies to pneumococcal polysaccharides, revaccination with the 23-valent pneumococcal polysaccharide vaccine more commonly produces side effects (e.g. chills, asthenia, and myalgia). Revaccination is therefore not recommended, except for individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction and chronic renal disease), where revaccination is recommended every 5 years.

#### Management of cases

For the management of cases, contacts and outbreaks, refer to Chapter 25, Pneumococcal, in *Immunisation against infectious disease* – 'The Green Book'.

#### Useful Resources

Recommendations reflect Chapter 25, Pneumococcal, in *Immunisation against infectious disease* – 'The Green Book'. Public Health England, January 2018.  
[www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25](http://www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25)

## Poliomyelitis vaccine

### Overview

Two types of poliomyelitis vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated poliomyelitis vaccine (for injection) and live (oral) poliomyelitis vaccine. **Inactivated** poliomyelitis vaccines, only available in combined preparation, is recommended for routine immunisation.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliomyelitis vaccines, starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised adults; no adult should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliomyelitis vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses are only necessary for adults at special risk, such as travellers to endemic areas, or laboratory staff likely to be exposed to the viruses, or healthcare workers in possible contact with cases; booster doses should be given to such individuals every 10 years.

**Live (oral) poliomyelitis vaccine** is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated

strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must **not** be used for immunosuppressed individuals or their household contacts. The use of inactivated poliomyelitis vaccines removes the risk of vaccine-associated paralytic polio altogether.

#### Travel

Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliomyelitis vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**. Information about countries with a high incidence of poliomyelitis can be obtained from [www.travax.nhs.uk/](http://www.travax.nhs.uk/) or from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

#### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Rabies vaccine

### Overview

Rabies vaccine p. 1324 contains inactivated rabies virus cultivated in either human diploid cells or purified chick embryo cells; vaccines are used for pre- and post-exposure prophylaxis.

#### Pre-exposure prophylaxis

Immunisation should be offered to those at high risk of exposure to rabies— laboratory staff who handle the rabies virus, those working in quarantine stations, animal handlers, veterinary surgeons and field workers who are likely to be bitten by infected wild animals, certain port officials, and bat handlers. Transmission of rabies by humans has not been recorded but it is advised that those caring for patients with the disease should be vaccinated.

Immunisation against rabies is also recommended where there is limited access to prompt medical care for those living in areas where rabies is enzootic, for those travelling to such areas for longer than 1 month, and for those on shorter visits who may be exposed to unusual risk.

Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

Up-to-date country-by-country information on the incidence of rabies can be obtained from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)) and, in Scotland, from Health Protection Scotland ([www.hps.scot.nhs.uk/](http://www.hps.scot.nhs.uk/)).

Immunisation against rabies requires 3 doses of rabies vaccine, with further booster doses for those who remain at frequent risk. To ensure continued protection in persons at high risk (e.g. laboratory workers), the concentration of antirabies antibodies in plasma is used to determine the intervals between doses.

#### Post-exposure management

Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible after exposure. Disinfectant and a simple dressing can be applied, but suturing should be

delayed because it may increase the risk of introducing rabies virus into the nerves.

Post-exposure prophylaxis against rabies depends on the level of risk in the country, the nature of exposure, and the individual's immunity. In each case, expert risk assessment and advice on appropriate management should be obtained from the local Public Health England Centre or Public Health England's Virus Reference Department, Colindale (tel. (020) 8200 4400) or the PHE Colindale Duty Doctor (tel. (020) 8200 6868), in Wales from the Public Health Wales local Health Protection Team or Public Health Wales Virus Reference Laboratory (tel. (029) 2074 7747), in Scotland from the local on-call infectious diseases consultant, and in Northern Ireland from the Public Health Agency Duty Room (tel (028) 9055 3997/(028) 9063 2662) or the Regional Virology Service (tel. (028) 9024 0503).

There are no specific contra-indications to the use of rabies vaccine for post-exposure prophylaxis and its use should be considered whenever a patient has been attacked by an animal in a country where rabies is enzootic, even if there is no direct evidence of rabies in the attacking animal. Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis.

For post-exposure prophylaxis of *fully immunised* individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine), 2 doses of cell-derived vaccine are likely to be sufficient; the first dose is given on day 0 and the second dose is given between day 3–7. Rabies immunoglobulin p. 1292 is not necessary in such cases.

Post-exposure treatment for *unimmunised individuals* (or those whose prophylaxis is possibly incomplete) comprises 5 doses of rabies vaccine given over 1 month (on days 0, 3, 7, 14, and the fifth dose is given between day 28–30); also, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine. The immunisation course can be discontinued if it is proved that the individual was not at risk.

#### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Rotavirus vaccine

### Overview

Rotavirus vaccine p. 1325 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection. The recommended schedule consists of 2 doses, the first at 2 months of age, and the second at 3 months of age (see Immunisation schedule). The first dose of rotavirus vaccine must be given between 6–15 weeks of age and the second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal

association between vaccination and intussusception; the course must be completed before 24 weeks of age.

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with *immunosuppressed* close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Smallpox vaccine

### Overview

Limited supplies of **smallpox vaccine** are held at the Specialist and Reference Microbiology Division, Public Health England Colindale (Tel. (020) 8200 4400) for the exclusive use of workers in laboratories where pox viruses (such as vaccinia) are handled.

If a wider use of the vaccine is being considered, *Guidelines for smallpox response and management in the post-eradication era* should be consulted at [www.gov.uk/phe](http://www.gov.uk/phe).

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Tetanus vaccine

### Overview

**Tetanus vaccine** contains a cell-free purified toxin of *Clostridium tetani* adsorbed on aluminium hydroxide or aluminium phosphate to improve antigenicity.

Primary immunisation for children under 10 years consists of 3 doses of a combined preparation containing adsorbed tetanus vaccine, with an interval of 1 month between doses (see *Routine immunisation schedule*). Following routine childhood vaccination, 2 booster doses of a preparation containing adsorbed tetanus vaccine are recommended, the first before school entry and the second before leaving school.

The recommended schedule of tetanus vaccination not only gives protection against tetanus in childhood but also gives the basic immunity for subsequent booster doses. In most circumstances, a total of 5 doses of tetanus vaccine is considered sufficient for long term protection.

For primary immunisation of adults and children over 10 years previously unimmunised against tetanus, 3 doses of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine** are given with an interval of 1 month between doses (see *Diphtheria-containing vaccines for children over 10 years and adults*).

When an individual presents for a booster dose but has been vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, the booster should still be given to ensure adequate protection against all antigens in the booster vaccine.

Very rarely, tetanus has developed after abdominal surgery; patients awaiting elective surgery should be asked about tetanus immunisation and immunised if necessary.

Parenteral drug abuse is also associated with tetanus; those abusing drugs by injection should be vaccinated if unimmunised—booster doses should be given if there is any doubt about their immunisation status.

All laboratory staff should be offered a primary course if unimmunised.

### Wounds

Wounds are considered to be tetanus-prone if they are sustained more than 6 hours before surgical treatment or at any interval after injury and are puncture-type (particularly if contaminated with soil or manure) or show much devitalised tissue or are septic or are compound fractures or contain foreign bodies. All wounds should receive thorough cleansing.

- For *clean wounds*: fully immunised individuals (those who have received a total of 5 doses of a tetanus-containing vaccine at appropriate intervals) and those whose primary immunisation is complete (with boosters up to date), do not require tetanus vaccine; individuals whose primary immunisation is incomplete or whose boosters are not up to date require a reinforcing dose of a tetanus-containing vaccine (followed by further doses as required to complete the schedule); non-immunised individuals (or those whose immunisation status is not known or who have been fully immunised but are now immunocompromised) should be given a dose of the appropriate tetanus-containing vaccine immediately (followed by completion of the full course of the vaccine if records confirm the need)
- For *tetanus-prone wounds*: management is as for clean wounds with the addition of a dose of tetanus immunoglobulin given at a different site; in fully immunised individuals and those whose primary immunisation is complete (with boosters up to date) the immunoglobulin is needed only if the risk of infection is especially high (e.g. contamination with manure). Antibacterial prophylaxis (with benzylpenicillin, co-amoxiclav, or metronidazole) may also be required for tetanus-prone wounds.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Tick-borne encephalitis vaccine

### Overview

Tick-borne encephalitis vaccine, inactivated p. 1325 contains inactivated tick-borne encephalitis virus cultivated in chick embryo cells. It is recommended for immunisation of those working in, or visiting, high-risk areas (see *International Travel*). Those working, walking or camping in warm forested areas of Central and Eastern Europe, Scandinavia, Northern and Eastern China, and some parts of Japan, particularly from April to November when ticks are

most prevalent, are at greatest risk of tick-borne encephalitis. For full protection, 3 doses of the vaccine are required; booster doses are required every 3–5 years for those still at risk. Ideally, immunisation should be completed at least one month before travel.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Typhoid vaccine

07-Nov-2018

### Overview

Typhoid vaccine p. 1317 is available as a Vi capsular polysaccharide (from *Salmonella typhi*) vaccine for injection and a live, attenuated *Salmonella typhi* vaccine for oral use.

Typhoid immunisation is advised for:

- travellers to areas where typhoid is endemic and whose planned activities put them at higher risk (country-by-country information is available from the National Travel Health Network and Centre);
- travellers to endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely;
- laboratory personnel who, in the course of their work, may be exposed to *Salmonella typhi*.

Capsular polysaccharide typhoid vaccine is given as a single dose, usually by intramuscular injection. Children under 2 years [unlicensed] may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). A single booster dose should be given at 3-year intervals in adults and children over 2 years of age who remain at risk from typhoid fever.

Oral typhoid vaccine is a live, attenuated vaccine contained in an enteric-coated capsule recommended in individuals aged 6 years and over. One capsule taken on alternate days for a total of 3 doses, provides protection 7–10 days after the last dose. If travelling from a non-endemic area to an area where typhoid is endemic, a booster consisting of 3 doses is recommended every 3 years. The oral typhoid vaccine should be avoided in immunosuppressed and HIV-infected individuals.

Prevention of typhoid primarily depends on improving sanitation and water supplies in endemic areas and on scrupulous personal, food and water hygiene.

All suspected cases of typhoid fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Useful Resources

Recommendations reflect Chapter 33, Typhoid, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, August 2015.

## Varicella-zoster vaccine

### Overview

The live varicella-zoster vaccine p. 1326, *Varilrix*<sup>®</sup> and *Varivax*<sup>®</sup>, are licensed for immunisation against varicella (chickenpox) in seronegative individuals. They are not recommended for routine use in children, but can be given to seronegative healthy children over 1 year who come into close contact with individuals at high risk of severe varicella infections. The Department of Health recommends these vaccines for seronegative healthcare workers who come into direct contact with patients. Those with a history of chickenpox or shingles can be considered immune, but healthcare workers with a negative or uncertain history should be tested.

Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy;

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

### National shingles immunisation programme

The aim of the national shingles immunisation programme is to lower the incidence and severity of shingles in older people using the high potency, live varicella-zoster vaccine, *Zostavax*<sup>®</sup>. It is recommended that vaccination is routinely offered to people aged 70 years. A catch-up programme has also been rolled out (since 2013) in those aged 70–79 years, as this age group is likely to have the greatest benefit from vaccination.

In the 2016–2017 immunisation programme, varicella-zoster vaccine is recommended in adults who were 70 or 78 years of age on 1st September 2016. Patients who were eligible for vaccination in the first 3 years of the programme but have not been vaccinated against *herpes zoster* remain eligible until their 80th birthday; this includes patients who were aged 71–73 or 79 on 1st September 2016. Patients who have reached 80 years are no longer eligible for vaccination. A single dose of *Zostavax*<sup>®</sup> is likely to give protection for at least 7 years, but the need for, or timing of, a booster dose has not been established. Although *Zostavax*<sup>®</sup> is not recommended for the treatment of shingles or post-herpetic neuralgia, it can be given to those with a previous history of shingles; ideally the vaccine should be delayed until systemic antiviral therapy has been completed.

Varicella-zoster immunoglobulin p. 1292 is used to protect susceptible individuals at increased risk of severe varicella infection (see Immunoglobulins p. 1287).

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Yellow fever vaccine

19-Mar-2019

### Overview

Yellow fever vaccine, live p. 1327 is an attenuated preparation of yellow fever virus grown in chick eggs. Yellow fever vaccine, live is recommended for:

- laboratory workers handling infected material;
- individuals aged 9 months or older who are travelling to, or living in areas or countries with a risk of yellow fever transmission;
- individuals aged 9 months or older who are travelling to, or living in countries that require an International Certificate of Vaccination or Prophylaxis (ICVP) for entry (information about countries at risk of yellow fever is available from the National Travel Health Network and Centre).

Children aged under 9 months are at risk of vaccine-associated encephalitis, with the risk being inversely proportional to age. Children aged under 6 months should **not** be vaccinated. Children aged 6–9 months should only be vaccinated following a detailed risk assessment, and vaccination is generally only recommended if the risk of yellow fever transmission is high (such as during epidemics/outbreaks). If travel is unavoidable, seek expert advice on whether to vaccinate.

A single-dose of yellow fever vaccine, live confers life-long immunity against yellow fever disease. Immunisation should be performed at least 10 days before travelling to an endemic area to allow protective immunity to develop and for the ICVP (if required) to become valid.

Reinforcing immunisation is not needed, except for a small subset of individuals at continued risk who may not have developed long-term protection from their initial yellow fever vaccine, live vaccination—seek expert advice.

Yellow fever vaccine, live should be avoided in HIV-infected and immunosuppressed individuals. If the yellow fever risk is unavoidable, consult the British HIV Association ([bhiva.org.uk/vaccination-guidelines.aspx](http://bhiva.org.uk/vaccination-guidelines.aspx)) or other specialist advice.

All suspected cases of yellow fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Useful Resources

Recommendations reflect Chapter 35, Yellow fever, in *Immunisation against infectious disease*—‘The Green book’. Public Health England, January 2019. [www.gov.uk/government/publications/yellow-fever-the-green-book-chapter-35](http://www.gov.uk/government/publications/yellow-fever-the-green-book-chapter-35)

National Travel Health Network and Centre [nathnac.net](http://nathnac.net)

## Vaccines for travel

### Immunisation for travel

See advice on Malaria, treatment p. 613.

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although all travellers should have immunity to tetanus and poliomyelitis (and childhood immunisations should be up to date); Tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of **poliomyelitis** or **tuberculosis** should be immunised with

the appropriate vaccine; in the case of poliomyelitis previously immunised travellers may be given a booster dose of a preparation containing inactivated poliomyelitis vaccine. BCG immunisation is recommended for travellers aged under 16 years proposing to stay for longer than 3 months (or in close contact with the local population) in countries with an incidence of tuberculosis greater than 40 per 100 000 (list of countries where the incidence of tuberculosis is greater than 40 cases per 100 000 is available from [www.gov.uk/phe](http://www.gov.uk/phe)); it should preferably be given 3 months or more before departure.

**Yellow fever immunisation** is recommended for travel to the endemic zones of Africa and South America. Many countries require an International Certificate of Vaccination from individuals arriving from, or who have been travelling through, endemic areas; other countries require a certificate from all entering travellers (consult the Department of Health handbook, *Health Information for Overseas Travel*, [www.dh.gov.uk](http://www.dh.gov.uk)).

Immunisation against **meningococcal meningitis** is recommended for a number of areas of the world.

Protection against **hepatitis A** is recommended for travellers to high-risk areas outside Northern and Western Europe, North America, Japan, Australia and New Zealand. Hepatitis A vaccine is recommended and it is likely to be effective even if given shortly before departure; Public Health England recommends travellers can be vaccinated with hepatitis A vaccine up to the day of travel, and no longer recommends the use of normal immunoglobulin for travel prophylaxis. Special care must also be taken with food hygiene.

**Hepatitis B** vaccine is recommended for those travelling to areas of high or intermediate prevalence who intend to seek employment as healthcare workers or who plan to remain there for lengthy periods and who may therefore be at increased risk of acquiring infection as the result of medical or dental procedures carried out in those countries. Short-term tourists or business travellers are not generally at increased risk of infection but may put themselves at risk by their sexual behaviour when abroad.

Prophylactic immunisation against **rabies** is recommended for travellers to enzootic areas on long journeys or to areas out of reach of immediate medical attention.

Travellers who have not had a **tetanus** booster in the last 10 years and are visiting areas where medical attention may not be accessible should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, even if they have received 5 doses of a tetanus-containing vaccine previously.

**Typhoid vaccine** is indicated for travellers to countries where typhoid is endemic, but the vaccine is no substitute for personal precautions.

There is no requirement for cholera vaccination as a condition for entry into any country, but **oral cholera vaccine** should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on **diphtheria**, on **Japanese encephalitis**, and on **tick-borne encephalitis** is included in *Health Information for Overseas Travel*.

### Food hygiene

In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers' diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable

bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

### Information on health advice for travellers

Health professionals and travellers can find the latest information on immunisation requirements and precautions for avoiding disease while travelling from: [www.nathnac.org](http://www.nathnac.org).

The handbook, *Health Information for Overseas Travel* (2010), which draws together essential information for *healthcare professionals* regarding health advice for travellers, can also be obtained from this website.

Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country or from:

## VACCINES

### Vaccines

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED NOVEMBER 2017)

Following reports of death in neonates who received a live attenuated vaccine after exposure to a tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitor in utero, the MHRA has issued the following advice:

- any infant who has been exposed to immunosuppressive treatment from the mother either in utero during pregnancy or via breastfeeding should have any live attenuated vaccination deferred for as long as a postnatal influence on the immune status of the infant remains possible;
- in the case of infants who have been exposed to TNF- $\alpha$  inhibitors and other immunosuppressive biological

medicines in utero, PHE advise that any live attenuated vaccination (e.g. BCG vaccine) should be deferred until the infant is age 6 months;

- PHE advise if there is any doubt as to whether an infant due to receive a live attenuated vaccine may be immunosuppressed due to the mother's therapy, including exposure through breast-feeding, specialist advice should be sought.

#### CONTRA-INDICATIONS

##### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Impaired immune response Severely immunosuppressed patients should not be given live vaccines (including those with severe primary immunodeficiency).

- CAUTIONS Acute illness · minor illnesses

**CAUTIONS, FURTHER INFORMATION** Vaccination may be postponed if the individual is suffering from an acute illness; however, it is not necessary to postpone immunisation in patients with minor illnesses without fever or systemic upset.

- ▶ Impaired immune response and drugs affecting immune response Immune response to vaccines may be reduced in immunosuppressed patients and there is also a risk of generalised infection with live vaccines.

Specialist advice should be sought for those being treated with high doses of corticosteroids (dose equivalents of prednisolone: **adults**, at least 40 mg daily for more than 1 week; **children**, 2 mg/kg (or more than 40 mg) daily for at least 1 week or 1 mg/kg daily for 1 month), or other immunosuppressive drugs, and those being treated for malignant conditions with chemotherapy or generalised radiotherapy. Live vaccines should be postponed until at least 3 months after stopping high-dose systemic corticosteroids and at least 6 months after stopping other immunosuppressive drugs or generalised radiotherapy (at least 12 months after discontinuing immunosuppressants following bone-marrow transplantation).

The Royal College of Paediatrics and Child Health has produced a statement, *Immunisation of the Immunocompromised Child* (2002)(available at [www.rcpch.ac.uk](http://www.rcpch.ac.uk)).

- ▶ Predisposition to neurological problems When there is a personal or family history of *febrile* convulsions, there is an increased risk of these occurring during fever from any cause including immunisation, but this is not a contra-indication to immunisation. In children who have had a seizure associated with fever without neurological deterioration, immunisation is *recommended*; advice on the *management of fever* (see Post-immunisation Pyrexia in Infants) should be given before immunisation. When a child has had a convulsion not associated with fever, and the neurological condition is not deteriorating, immunisation is *recommended*.

Children with stable neurological disorders (e.g. spina bifida, congenital brain abnormality, and peri-natal hypoxic-ischaemic encephalopathy) should be immunised according to the recommended schedule.

When there is a *still evolving neurological problem*, including poorly controlled epilepsy, immunisation should be deferred and the child referred to a specialist. Immunisation is recommended if a cause for the neurological disorder is identified. If a cause is not identified, immunisation should be deferred until the condition is stable.

- SIDE-EFFECTS

- ▶ Common or very common Appetite decreased · arthralgia (frequency not known in elderly) · diarrhoea (uncommon in elderly) · dizziness (uncommon in elderly) · fatigue · fever · headache · irritability · lymphadenopathy (uncommon in elderly) · malaise · myalgia · nausea

(uncommon in elderly) · skin reactions (rare in elderly) · vomiting (uncommon in elderly)

- ▶ **Uncommon** Hypersensitivity (frequency not known in elderly)
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a confirmed anaphylactic reaction to a preceding dose of a vaccine containing the same antigens or vaccine component (such as antibacterials in viral vaccines).
- **PREGNANCY** Live vaccines should not be administered routinely to pregnant women because of the theoretical risk of fetal infection but where there is a significant risk of exposure to disease, the need for vaccination usually outweighs any possible risk to the fetus. Termination of pregnancy following inadvertent immunisation is not recommended. There is no evidence of risk from vaccinating pregnant women with inactivated viral or bacterial vaccines or toxoids.
- **BREAST FEEDING** Although there is a theoretical risk of live vaccine being present in breast milk, vaccination is not contra-indicated for women who are breast-feeding when there is significant risk of exposure to disease. There is no evidence of risk from vaccinating women who are breast-feeding, with inactivated viral or bacterial vaccines or toxoids.
- **DIRECTIONS FOR ADMINISTRATION** If alcohol or disinfectant is used for cleansing the skin it should be allowed to evaporate before vaccination to prevent possible inactivation of live vaccines.  
When 2 or more live vaccines are required (and are not available as a combined preparation), they can be administered at any time before or after each other at different sites, preferably in a different limb; if more than one injection is to be given in the same limb, they should be administered at least 2.5 cm apart. See also Bacillus Calmette-Guérin vaccine p. 1313, and Cautions, further information in measles, mumps and rubella vaccine, live p. 1323.

Vaccines should not be given intravenously. Most vaccines are given by the intramuscular route, although some are given by either the intradermal, deep subcutaneous, or oral route. The intramuscular route should not be used in patients with **bleeding disorders** such as haemophilia or thrombocytopenia, vaccines usually given by the intramuscular route should be given by deep subcutaneous injection instead.

The Department of Health has advised *against the use of jet guns* for vaccination owing to the risk of transmitting blood borne infections, such as HIV.

Particular attention must be paid to instructions on the use of diluents. Vaccines which are liquid suspensions or are reconstituted before use should be adequately mixed to ensure uniformity of the material to be injected.

- **HANDLING AND STORAGE** Care must be taken to store all vaccines under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many vaccines need to be stored at 2–8°C and not allowed to freeze. Vaccines should be protected from light. Reconstituted vaccines and opened multidose vials must be used within the period recommended in the product literature. Unused vaccines should be disposed of by incineration at a registered disposal contractor.

## VACCINES > BACTERIAL AND VIRAL VACCINES, COMBINED

F 1310

### Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus

#### ● INDICATIONS AND DOSE

##### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2 months–9 years: 0.5 mL every month for 3 doses

- **UNLICENSED USE** *Infanrix-IPV+ Hib*® not licensed for use in children over 36 months; *Pediacel*® not licensed in children over 4 years. However, the Department of Health recommends that these be used for children up to 10 years.

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Crying abnormal · drowsiness · restlessness
- ▶ **Uncommon** Cough · extensive swelling of vaccinated limb · increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · apnoea · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Powder and suspension for suspension for injection

- ▶ **Infanrix-IPV + Hib** (GlaxoSmithKline UK Ltd)  
Infanrix-IPV + Hib vaccine powder and suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection **PoM** £27.86

F 1310

### Diphtheria with pertussis, poliomyelitis vaccine and tetanus

#### ● INDICATIONS AND DOSE

##### First booster dose

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–9 years: 0.5 mL, to be given 3 years after primary immunisation

##### Vaccination of pregnant women against pertussis (using low dose vaccines)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 0.5 mL for 1 dose

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain
- ▶ **Uncommon** Apathy (in children) · asthma · chills · drowsiness (very common in children) · dry throat (in children) · extensive swelling of vaccinated limb (very common in children) · oral herpes · pain · paraesthesia · sleep disorder (in children)

- ▶ **Frequency not known** Angioedema · asthenia · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

- **PREGNANCY** Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological complications following previous immunisation against diphtheria or tetanus.
- **PRESCRIBING AND DISPENSING INFORMATION** Pregnant women should be vaccinated using low dose vaccines (brands may include *Boostrix-IPV*® or *Repevax*®). Available as part of childhood immunisation schedule from health organisations or ImmForm. Available for vaccination of pregnant women from ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Boostrix-IPV** (GlaxoSmithKline UK Ltd)

Boostrix-IPV suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] £22.74 DT = £20.00

- ▶ **Repevax** (Sanofi Pasteur)

Repevax vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] £20.00 DT = £20.00

F 1310

## Diphtheria with poliomyelitis and tetanus vaccine

### ● INDICATIONS AND DOSE

#### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL every month for 3 doses
- ▶ Adult: 0.5 mL every month for 3 doses

#### Booster doses

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine
- ▶ Adult: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Vertigo
- ▶ **Frequency not known** Abdominal pain · asthenia · chills · face oedema · influenza like illness · nerve disorders · pallor · seizure · shock · syncope · vaccination reactions
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Revaxis** (Sanofi Pasteur)

Revaxis vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] £7.80 DT = £7.80

## Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine

12-Oct-2017

### ● INDICATIONS AND DOSE

#### Primary immunisation (first dose)

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose

#### Primary immunisation (second dose)

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 3 months: 0.5 mL for 1 dose, preferably administer at a different injection site to that of first dose

#### Primary immunisation (third dose)

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 4 months: 0.5 mL for 1 dose, preferably administer at a different injection site to that of second dose

### ● SIDE-EFFECTS

- ▶ **Common or very common** Anxiety · crying abnormal
- ▶ **Uncommon** Cough · drowsiness · extensive swelling of vaccinated limb · increased risk of infection
- ▶ **Rare or very rare** Angioedema · apnoea · hypotonic-hyporesponsiveness episode · seizure · swelling · thrombocytopenia

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and suspension for suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b

- ▶ **Infanrix Hexa** (GlaxoSmithKline UK Ltd)

Infanrix Hexa vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] [S]

## VACCINES > BACTERIAL VACCINES

F 1310

## Anthrax vaccine

31-Jan-2019

### ● INDICATIONS AND DOSE

#### Immunisation against anthrax

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 0.5 mL every 3 weeks for 3 doses, followed by 0.5 mL after 6 months, to be administered in the deltoid region

#### Booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.5 mL every 10 years for up to 3 doses, to be administered in deltoid region

### ● SIDE-EFFECTS

- ▶ **Common or very common** Febrile disorders · influenza like illness
- ▶ **Rare or very rare** Angioedema · asthenia · hyperhidrosis · paraesthesia
- ▶ **Frequency not known** Bronchospasm · circulatory collapse · hypotension

● **PRESCRIBING AND DISPENSING INFORMATION** Available from Public Health England's Centre for Emergency Preparedness and Response (Porton Down).

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Thiomersal

#### ▶ Anthrax vaccine (Non-proprietary)

£751.71 | 300 vial [PoM](#) £225,513.09

F 1310

## Bacillus Calmette-Guérin vaccine

13-Nov-2018

### (BCG Vaccine)

● **DRUG ACTION** BCG (Bacillus Calmette-Guérin) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of immunity to *M. tuberculosis*.

#### ● INDICATIONS AND DOSE

##### Immunisation against tuberculosis

#### ▶ BY INTRADERMAL INJECTION

- ▶ Child 1-11 months: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- ▶ Child 1-17 years: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- ▶ Adult: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**

● **CONTRA-INDICATIONS** Generalised septic skin conditions

#### CONTRA-INDICATIONS, FURTHER INFORMATION

A lesion-free site should be used to administer BCG vaccine to patients with eczema.

#### ● CAUTIONS

**CAUTIONS, FURTHER INFORMATION** When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

● **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

▶ **Rare or very rare** Increased risk of infection · osteitis

● **PRE-TREATMENT SCREENING** Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculin (see tuberculin purified protein derivative p. 1294). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

### ● DIRECTIONS FOR ADMINISTRATION

Intradermal injection technique Skin is stretched between thumb and forefinger and needle (size 25G or 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb showing tips of hair follicles is sign of correct injection; 7 mm bleb ≡ 0.1 mL injection, 3 mm bleb ≡ 0.05 mL injection; if considerable resistance not felt, needle too deep and should be removed and reinserted before giving more vaccine.

● **PRESCRIBING AND DISPENSING INFORMATION** Available from health organisations or direct from ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk) (SSI brand, multidose vial with diluent).

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

F 1310

## Cholera vaccine

### ● INDICATIONS AND DOSE

#### Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)

#### ▶ BY MOUTH

- ▶ Child 2-5 years: 1 dose every 1-6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Child 6-17 years: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Adult: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

#### Booster

#### ▶ BY MOUTH

- ▶ Child 2-5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
- ▶ Child 6-17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated
- ▶ Adult: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

● **CONTRA-INDICATIONS** Acute gastro-intestinal illness

● **INTERACTIONS** → Appendix 1: cholera vaccine

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Gastrointestinal discomfort · gastrointestinal disorders
- ▶ **Rare or very rare** Chills · cough · dehydration · drowsiness · hyperhidrosis · increased risk of infection · insomnia · pulmonary reaction · syncope · taste altered · throat pain
- ▶ **Frequency not known** Angioedema · asthenia · dyspnoea · hypertension · influenza like illness · lymphadenitis · pain · paraesthesia · sputum increased

### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2–5 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.
- ▶ In adults Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). Add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.

- **PATIENT AND CARER ADVICE** Counselling on administration advised. Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is **essential**.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral suspension

- ▶ **Dukoral** (Valneva UK Ltd)  
Dukoral cholera vaccine oral suspension | 2 dose **[PoM]** £31.62 DT = £31.62

F 1310

## Haemophilus influenzae type b with meningococcal group C vaccine

### ● INDICATIONS AND DOSE

**Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component) and primary immunisation against *Neisseria meningitidis***

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12–13 months: 0.5 mL for 1 dose

**Immunisation against *Neisseria meningitidis* in an unimmunised patient**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–9 years: 0.5 mL for 1 dose

**Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) | Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–9 years: 0.5 mL for 1 dose

**Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose, this booster dose should be given after the second birthday, this is the second dose of haemophilus influenzae type B vaccine combined with meningococcal group C conjugate vaccine (the first dose is given during the routine immunisation schedule)

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at over 2 years of age)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose, this booster dose should be followed 2 months later by one dose of meningococcal A, C, W135, and Y conjugate vaccine (in patients from 11 years of age, this interval can be reduced to one month)
- ▶ Adult: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine

- **UNLICENSED USE** Not licensed for use in patients over 2 years.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Drowsiness
- ▶ **Uncommon** Crying
- ▶ **Rare or very rare** Abdominal pain · insomnia
- ▶ **Frequency not known** Febrile seizure · meningism (but no evidence that vaccine causes meningococcal C meningitis) · muscle tone decreased

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of the childhood immunisation schedule from ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

## Meningococcal group B vaccine (rDNA, component, adsorbed)

19-Oct-2017

### ● INDICATIONS AND DOSE

BEXSERO®

**Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 444.
- ▶ Child 4 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 444.

**Immunisation against *Neisseria meningitidis*, primary immunisation booster dose**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 12–23 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants)

**Immunisation against *Neisseria meningitidis*, primary immunisation (in unimmunised patients)**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 6–11 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given between 1–2 years of age and at least 2 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 12–23 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given 12–24 months after completion of primary

immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)

- ▶ Child 2-10 years: 0.5 mL for 2 doses, separated by an interval of at least 2 months. Injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 11-17 years: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region
- ▶ Adult: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

#### TRUMENBA®

#### Immunisation against *Neisseria meningitidis*, primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature
- ▶ Adult: 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Crying abnormal (in children) · drowsiness (in children) · eating disorder (in children)
- ▶ **Uncommon** Seizures (in children) · vascular disorders (in children)
- ▶ **Frequency not known** Extensive swelling of vaccinated limb · hypotonic-hyporesponsiveness episode (in children)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

- EXCIPIENTS: May contain Kanamycin

## Meningococcal groups A with C and W135 and Y vaccine

#### ● INDICATIONS AND DOSE

#### MENVEO®

#### Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13-15 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region

#### Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 1 dose, booster dose is not required
- ▶ Adult 18-24 years: 0.5 mL for 1 dose, booster dose is not required

#### Immunisation against *Neisseria meningitidis* in those at risk of exposure to prevent invasive disease

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3-11 months: 0.5 mL every month for 2 doses, dose preferably injected into deltoid region
- ▶ Child 1-17 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region
- ▶ Adult: 0.5 mL for 1 dose, dose preferably injected into deltoid region

#### Patients attending university for the first time (who have not received the routine meningococcal groups A with C and W135 and Y conjugate vaccine over the age of 10 years)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 18-24 years: 0.5 mL for 1 dose

#### NIMENRIX®

#### Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13-15 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region

#### Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 1 dose, booster dose is not required
- ▶ Adult 18-24 years: 0.5 mL for 1 dose, booster dose is not required

#### Immunisation against *Neisseria meningitidis* in those at risk of exposure

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-17 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region (or anterolateral thigh in child 12-23 months), then 0.5 mL after continued →

1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

- ▶ Adult: 0.5 mL for 1 dose, to be injected preferably into deltoid region, then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

**Patients attending university for the first time (who have not received the routine meningococcal groups A with C and W135 and Y conjugate vaccine over the age of 10 years)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 18-24 years: 0.5 mL for 1 dose

#### ● UNLICENSED USE

##### MEVVEO®

- ▶ In children *Menveo*® is not licensed for use in children under 2 years.
- **SIDE-EFFECTS**
- ▶ **Common or very common** Drowsiness
- ▶ **Uncommon** Crying · insomnia · numbness · pain in extremity
- ▶ **Frequency not known** Extensive swelling of vaccinated limb

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

F 1310

## Pneumococcal polysaccharide conjugate vaccine (adsorbed)

01-May-2019

#### ● INDICATIONS AND DOSE

##### PREVENAR 13®

**Primary immunisation against pneumococcal infection [first dose]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

**Primary immunisation against pneumococcal infection [second dose]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 4 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

**Primary immunisation against pneumococcal infection [booster dose]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1 year: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in older children

**Immunisation against pneumococcal infection [in patients who are unimmunised or partially immunised]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3-11 months: 0.5 mL for 2 doses, given 2 months apart (interval may be reduced to 1 month to ensure immunisation schedule is completed), followed by 0.5 mL for 1 dose on their first birthday, given at least 2 months after the last dose. Anterolateral thigh is preferred site of injection in infants under 1 year
- ▶ Child 12-23 months: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

#### **Immunisation against pneumococcal infection [immunised patients at increased risk]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 14 months-17 years: 0.5 mL for 1 dose, given at least 2 months after primary immunisation booster dose, deltoid muscle is preferred site of injection in children
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

#### **Immunisation against pneumococcal infection [unimmunised or partially immunised patients at increased risk]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3-11 months: 0.5 mL for 2 doses, given 2 months apart (interval may be reduced to 1 month to ensure immunisation schedule is completed), followed by 0.5 mL for 1 dose on their first birthday, given at least 2 months after the last dose, followed by 0.5 mL for 1 dose, given at least 2 months after the last dose. Anterolateral thigh is preferred site of injection in infants under 1 year
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

##### SYNFLORIX®

#### **Immunisation against pneumococcal infection**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 6 weeks-4 years: Deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants (consult product literature)

#### ● UNLICENSED USE

**PREVENAR 13®** The dose in BNF publications may differ from that in product literature.

- **CONTRA-INDICATIONS** Concomitant use of high potency varicella-zoster vaccine (*Zostavax*®) with pneumococcal polysaccharide vaccine (in adults)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Drowsiness
- ▶ **Uncommon** Apnoea · crying abnormal · extensive swelling of vaccinated limb
- ▶ **Rare or very rare** Angioedema · hypotonic-hyporesponsiveness episode · Kawasaki disease · seizure

#### ● PRESCRIBING AND DISPENSING INFORMATION

**PREVENAR 13®** Available as part of childhood immunisation schedule from ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Suspension for injection**

- ▶ **Prevenar** (Pfizer Ltd)  
Prevenar 13 vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection (PoM) £49.10 | 10 pre-filled disposable injection (PoM) £491.00
- ▶ **Synflorix** (GlaxoSmithKline UK Ltd)  
Synflorix vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection (PoM) £27.60

F 1310

## Pneumococcal polysaccharide vaccine

01-May-2019

#### ● INDICATIONS AND DOSE

**Primary immunisation against pneumococcal infection**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Elderly: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

### Immunisation against pneumococcal infection [in patients at increased risk]

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2-17 years: 0.5 mL for 1 dose, dose should be administered at least 2 months after the last dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), deltoid muscle is preferred site of injection in children and adults
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults, primary immunisation with the pneumococcal polysaccharide vaccine is not required when these patients reach 65 years of age

### Immunisation against pneumococcal infection [revaccination; booster dose in patients with no spleen, splenic dysfunction or chronic kidney disease]

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 7-17 years: 0.5 mL every 5 years, deltoid muscle is preferred site of injection in children and adults
- ▶ Adult: 0.5 mL every 5 years, deltoid muscle is preferred site of injection in adults

- **SIDE-EFFECTS** Angioedema · arthritis · asthenia · chills · febrile seizure · haemolytic anaemia · injected limb mobility decreased · leucocytosis · lymphadenitis · nerve disorders · paraesthesia · peripheral oedema · thrombocytopenia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Pneumococcal polysaccharide vaccine (Non-proprietary)**  
Pneumococcal polysaccharide vaccine solution for injection 0.5ml vials | 1 vial [PoM] £8.32
- ▶ **Pneumovax 23** (Merck Sharp & Dohme Ltd)  
Pneumovax 23 solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.80

- ▶ Rare or very rare
- ▶ With oral use Asthenia · back pain · chills · flatulence · paraesthesia
- ▶ Frequency not known
- ▶ With parenteral use Abdominal pain · asthma · shock · syncope

- **DIRECTIONS FOR ADMINISTRATION** Capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

#### ● HANDLING AND STORAGE

- ▶ With oral use It is important to store capsules in a refrigerator.

#### ● PATIENT AND CARER ADVICE

- ▶ With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Typhim Vi (Sanofi Pasteur)

- ▶ **Salmonella typhi Vi capsular polysaccharide 50 microgram per 1 ml** Typhim Vi 25micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £11.16 DT = £11.16 | 10 pre-filled disposable injection [PoM] £111.60 DT = £11.60

#### Gastro-resistant capsule

##### CAUTIONARY AND ADVISORY LABELS 25

##### ▶ Vivotif (PaxVax Ltd)

- ▶ Vivotif vaccine gastro-resistant capsules | 3 capsule [PoM] £14.77 DT = £14.77

- Combinations available: **Hepatitis A with typhoid vaccine**, p. 1319

## VACCINES > VIRAL VACCINES

### Hepatitis A and B vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1318, hepatitis B vaccine p. 1319.

#### ● INDICATIONS AND DOSE

##### AMBIRIX<sup>®</sup>

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-15 years: Initially 1 mL for 1 dose, then 1 mL after 6-12 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

##### TWINRIX<sup>®</sup> ADULT

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 16-17 years: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- ▶ Adult: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

continued →

## Typhoid vaccine

#### ● INDICATIONS AND DOSE

#### Immunisation against typhoid fever in children at high risk of typhoid fever

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 12-23 months: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection, response may be suboptimal

#### Immunisation against typhoid fever

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2-17 years: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
  - ▶ Adult: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ##### ▶ BY MOUTH
- ▶ Child 6-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5)
  - ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5)

#### ● UNLICENSED USE

- ▶ With intramuscular use in children Not licensed for use in children under 2 years.

#### ● CONTRA-INDICATIONS

- ▶ With oral use Acute gastro-intestinal illness

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ Common or very common

- ▶ With oral use Gastrointestinal discomfort · influenza like illness

### Immunisation against hepatitis A and hepatitis B infection—accelerated schedule for travellers departing within 1 month

#### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- Adult: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX® PAEDIATRIC

### Immunisation against hepatitis A and hepatitis B infection (primary course)

#### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL every month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### IMPORTANT SAFETY INFORMATION

*Ambirix*® and *Twinrix*® are not recommended for post-exposure prophylaxis following percutaneous (needle-stick), ocular, or mucous membrane exposure to hepatitis B virus.

#### ● PRESCRIBING AND DISPENSING INFORMATION

**TWINRIX® PAEDIATRIC** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**TWINRIX® ADULT** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**AMBIRIX®** Primary course should be completed with *Ambirix*® (single component vaccines given at appropriate intervals may be used for booster dose).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

- **Ambirix** (GlaxoSmithKline UK Ltd)  
Ambirix vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £31.18 DT = £31.18
- **Twinrix** (GlaxoSmithKline UK Ltd)  
Twinrix Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.79 DT = £20.79  
Twinrix Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £33.31 DT = £31.18 | 10 pre-filled disposable injection [PoM] £333.13

## Hepatitis A vaccine

#### ● INDICATIONS AND DOSE

##### AVAXIM®

### Immunisation against hepatitis A infection

#### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

##### HAVRIX MONODOSE®

### Immunisation against hepatitis A infection

#### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

##### VAQTA® ADULT

### Immunisation against hepatitis A infection

#### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be delayed)

##### VAQTA® PAEDIATRIC

### Immunisation against hepatitis A infection

#### ► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

#### ● SIDE-EFFECTS

- **Common or very common** Asthenia (uncommon in children) · pain (uncommon in children)
- **Uncommon** Anxiety (in children) · chills (in adults) · cough · crying (in children) · ear pain (rare in children) ·

gastrointestinal discomfort · gastrointestinal disorders (rare in children) · increased risk of infection (in adults) · influenza like illness (rare in children) · muscle weakness (in adults) · musculoskeletal stiffness (rare in children) · nasal complaints · paraesthesia (rare in children) · respiratory disorders (rare in children) · sensation of tightness (rare in children) · temperature sensation altered (rare in children) · vasodilation (rare in children)

- ▶ **Rare or very rare** Allergic rhinitis (in children) · apathy (in adults) · asthma (in children) · ataxia (in children) · burping (in children) · chest pain · constipation (in children) · dehydration (in children) · drowsiness (uncommon in children) · dry mouth (in adults) · eye discomfort · gait abnormal (in children) · infantile spitting up (in children) · menstrual disorder (in adults) · migraine (in adults) · muscle complaints (in adults) · oral ulceration (in adults) · oropharyngeal pain (in children) · photophobia (in adults) · screaming (in children) · sleep disorders (uncommon in children) · sweat changes · synovitis (in children) · throat oedema (in adults) · tremor (in adults) · vertigo (in adults) · watering eye (in adults)
- ▶ **Frequency not known** Guillain-Barre syndrome · thrombocytopenia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

#### Avaxim (Sanofi Pasteur)

Avaxim vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £21.72 | 10 pre-filled disposable injection [PoM] £217.20

#### ▶ Havrix (GlaxoSmithKline UK Ltd)

Havrix Monodose vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.14 DT = £22.14 | 10 pre-filled disposable injection [PoM] £221.43

Havrix Junior Monodose vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.77 | 10 pre-filled disposable injection [PoM] £167.68

#### ▶ VAQTA (Merck Sharp & Dohme Ltd)

VAQTA Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £14.74

## Hepatitis A with typhoid vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1318, typhoid vaccine p. 1317.

### ● INDICATIONS AND DOSE

#### HEPATYRIX®

#### Immunisation against hepatitis A and typhoid infection (primary course)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 15-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines
- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

#### VIATIM®

#### Immunisation against hepatitis A and typhoid infection (primary course)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 16-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into

the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

#### ▶ VIATIM (Sanofi Pasteur)

VIATIM vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £35.76 DT = £35.76

F 1310

## Hepatitis B vaccine

### ● INDICATIONS AND DOSE

#### ENGERIX B®

#### Immunisation against hepatitis B infection

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 10 month-15 years: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (accelerated schedule)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Neonate: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

continued →

**Immunisation against hepatitis B infection, alternative accelerated schedule**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 11-15 years: 20 micrograms for 1 dose, followed by 20 micrograms after 6 months, this schedule is not suitable if high risk of infection between doses or if compliance with second dose uncertain, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule in exceptional cases, e.g. for travellers departing within 1 month)**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 7 days for 1 dose, followed by 20 micrograms after 14 days for 1 dose, followed by 20 micrograms for 1 dose, to be given 12 months after the first dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients)**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 2 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients (accelerated schedule))**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

**FENDRIX®****Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 15-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to

be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**HBVAXPRO®****Immunisation against hepatitis B infection**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- ▶ Child 1 month-15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule)**

## ▶ BY INTRAMUSCULAR INJECTION

- ▶ Neonate: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- ▶ Child 1 month-15 years: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid

muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

### Neonate born to hepatitis B surface antigen-positive mother

#### ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every month for 3 doses, first dose given at birth with hepatitis B immunoglobulin injection (separate site), followed by 5 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced).

### Chronic haemodialysis patients

#### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

### ● SIDE-EFFECTS

- **Common or very common** Drowsiness · gastrointestinal disorder
- **Uncommon** Influenza like illness
- **Rare or very rare** Sensation abnormal
- **Frequency not known** Angioedema · apnoea · arthritis · encephalitis · encephalopathy · hypotension · meningitis · multiple sclerosis · muscle weakness · nerve disorders · paralysis · seizure · thrombocytopenia · vasculitis

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Suspension for injection

EXCIPIENTS: May contain Thiomersal

- **Engerix B** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 20 microgram per 1 ml** Engerix B 10micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.67 DT = £9.67  
**Engerix B 20micrograms/1ml vaccine suspension for injection pre-filled syringes** | 1 pre-filled disposable injection [PoM] £12.99 DT = £12.99 | 10 pre-filled disposable injection [PoM] £129.92

- **Fendrix** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 40 microgram per 1 ml** Fendrix 20micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £38.10 DT = £38.10

- **HBVAXPRO** (Merck Sharp & Dohme Ltd)

**Hepatitis B virus surface antigen 10 microgram per 1 ml** HBVAXPRO 5micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £8.95 DT = £8.95

**Hepatitis B virus surface antigen 40 microgram per 1 ml** HBVaxPRO 40micrograms/1ml vaccine suspension for injection vials | 1 vial [PoM] £27.60 DT = £27.60

1310

## Human papillomavirus vaccines

02-Mar-2017

### ● INDICATIONS AND DOSE

#### CERVARIX®

### Prevention of premalignant genital lesions and cervical cancer

#### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 5–7 months for 1 dose, if second dose administered earlier than 5 months after the first, a

third dose should be administered, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.

- Child 15–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.
- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

#### GARDASIL®

### Prevention of premalignant genital (cervical, vulvar and vaginal) and anal lesions, cervical and anal cancers, and genital warts

#### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 6 months for 1 dose, if the second dose is administered earlier than 6 months after the first dose, a third dose should be administered, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.
- Child 15–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.
- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

### Prevention of premalignant genital (cervical, vulvar, and vaginal) and anal lesions, cervical and anal cancers, and genital warts (alternative schedule)

#### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

- **UNLICENSED USE**  
**GARDASIL®** Two dose schedule not licensed for use in girls aged 14 years.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Pain in extremity
  - ▶ **Rare or very rare** Bronchospasm
  - ▶ **Frequency not known** Acute disseminated encephalomyelitis · asthenia · chills · Guillain-Barre syndrome · immune thrombocytopenic purpura · syncope
- **PREGNANCY** Not known to be harmful, but vaccination should be postponed until completion of pregnancy.
- **PRESCRIBING AND DISPENSING INFORMATION** To avoid confusion, prescribers should specify the brand to be dispensed.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Suspension for injection**
  - ▶ **Cervarix** (GlaxoSmithKline UK Ltd)  
Cervarix vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £80.50
  - ▶ **Gardasil** (Merck Sharp & Dohme Ltd)

## Influenza vaccine

25-Oct-2018

### ● INDICATIONS AND DOSE

#### Annual immunisation against seasonal influenza

- ▶ **BY INTRAMUSCULAR INJECTION**
  - ▶ Child 6 months-17 years: 0.5 mL for 1 dose
  - ▶ Adult: 0.5 mL for 1 dose
- ▶ **BY INTRADERMAL INJECTION**
  - ▶ Adult 18-59 years: 9 micrograms for 1 dose, dose to be injected into deltoid region
  - ▶ Adult 60 years and over: 15 micrograms for 1 dose, dose to be injected into deltoid region
- ▶ **BY INTRANASAL ADMINISTRATION**
  - ▶ Child 2-17 years: 0.1 mL for 1 dose, dose to be administered into each nostril

#### Annual immunisation against seasonal influenza (for children in clinical risk groups who have not received seasonal influenza vaccine previously)

- ▶ **BY INTRAMUSCULAR INJECTION**
  - ▶ Child 6 months-8 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, after at least 4 weeks
- ▶ **BY INTRANASAL ADMINISTRATION**
  - ▶ Child 2-8 years: 0.1 mL for 1 dose, followed by 0.1 mL for 1 dose, after at least 4 weeks. 0.1 mL dose to be administered to each nostril

- **UNLICENSED USE** The Joint Committee on Vaccination and Immunisation advises offering a second dose of vaccine for annual immunisation against seasonal influenza to children in clinical risk groups only.
- **CONTRA-INDICATIONS** Preparations marketed by Pfizer, or CSL Biotherapies in child under 5 years— increased risk of febrile convulsions  
**FLUENZ TETRA®** Active wheezing · concomitant use with antiviral therapy for influenza · severe asthma
- **CONTRA-INDICATIONS, FURTHER INFORMATION**
  - ▶ Concomitant use with antiviral therapy for influenza Avoid influenza antiviral agents for at least 2 weeks after immunisation; avoid immunisation for at least 48 hours after stopping the influenza antiviral agent.
- **CAUTIONS** Increased risk of fever in child 5-9 years with preparations marketed by Pfizer or CSL Biotherapies—use alternative influenza vaccine if available
- **INTERACTIONS** → Appendix 1: live vaccines

### ● SIDE-EFFECTS

- ▶ **Common or very common**
  - ▶ With intradermal use Chills · local reactions · pain
  - ▶ With intramuscular use Chills (uncommon in elderly) · hyperhidrosis · induration · local reactions · pain (uncommon in elderly)
  - ▶ With intranasal use Nasal complaints
- ▶ **Uncommon**
  - ▶ With intradermal use Hyperhidrosis
  - ▶ With intramuscular use Cough (in adults)
  - ▶ With intranasal use Epistaxis · face oedema
- ▶ **Rare or very rare**
  - ▶ With intradermal use Nerve disorders · paraesthesia
  - ▶ With intramuscular use Vasodilation (in adults)
- ▶ **Frequency not known**
  - ▶ With intradermal use Angioedema · encephalomyelitis · febrile seizure · nervous system disorder · shock · thrombocytopenia · vasculitis
  - ▶ With intramuscular use Angioedema · asthenia (in adults) · chest pain (in adults) · dyspnoea (in adults) · extensive swelling of vaccinated limb · eye erythema (in adults) · increased risk of infection · nerve disorders · nervous system disorders · paraesthesia · seizures · shock · syncope · throat tightness (in adults) · thrombocytopenia · vasculitis · wheezing (in adults)
  - ▶ With intranasal use Guillain-Barre syndrome
- **ALLERGY AND CROSS-SENSITIVITY** Individuals with a history of egg allergy can be immunised with either an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). Vaccines with an ovalbumin content more than 120 nanograms/mL or where content is not stated should not be used in individuals with egg allergy. If an influenza vaccine containing ovalbumin is being considered in those with a history of anaphylaxis to egg or egg allergy with uncontrolled asthma, these individuals should be referred to a specialist in hospital.
- **PREGNANCY** Inactivated vaccines not known to be harmful.  
**FLUENZ TETRA®** Avoid in pregnancy.
- **BREAST FEEDING** Inactivated vaccines not known to be harmful.  
**FLUENZ TETRA®** Avoid in breast-feeding.
- **PRESCRIBING AND DISPENSING INFORMATION** The available preparations are not licensed for use in all age-groups—further information can be found in the product literature for the individual vaccines.
- **FLUARIX TETRA®** Ovalbumin content less than 100 nanograms/mL.
- **PATIENT AND CARER ADVICE**  
**FLUENZ TETRA®** Avoid close contact with severely immunocompromised patients for 1-2 weeks after vaccination.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

F 1310

## Japanese encephalitis vaccine

22-Feb-2019

### ● INDICATIONS AND DOSE

#### Immunisation against Japanese encephalitis

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2–35 months: 0.25 mL every 28 days for 2 doses, alternatively 0.25 mL every 7 days for 2 doses, anterolateral thigh may be used as the injection site in infants; deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ Child 3–17 years: 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ Adult: 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site of injection, immunisation should be completed at least 1 week before potential exposure

#### First booster

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 0.5 mL after 1–2 years, deltoid muscle is preferred site of injection, for those at continued risk, the booster dose should be given 1 year after completing the primary course
- ▶ Elderly: 0.5 mL after 1 year, for those at continued risk, deltoid muscle is preferred site of injection

#### Second booster

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 0.5 mL after 10 years, for those at continued risk, deltoid muscle is preferred site of injection

### ● UNLICENSED USE

- ▶ When used for Immunisation against Japanese encephalitis The rapid schedule administered at days 0 and 7 is not licensed in children or the elderly.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Influenza like illness (frequency not known in children)
- ▶ **Uncommon** Abdominal pain (frequency not known in children) · asthenia (in adults) · chills (in adults) ·

- hyperhidrosis (in adults) · migraine (in adults) · musculoskeletal stiffness (in adults) · vertigo (in adults)
- ▶ **Rare or very rare** Dyspnoea (in adults) · eyelid oedema (in adults) · neuritis (in adults) · pain in extremity (in adults) · palpitations (in adults) · paraesthesia (in adults) · peripheral oedema (in adults) · tachycardia (in adults) · taste altered (in adults) · thrombocytopenia (in adults)
- ▶ **Frequency not known** Cough (in children)
- **PREGNANCY** Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

#### ▶ Japanese encephalitis vaccine (Non-proprietary)

- Japanese encephalitis GCVC vaccine solution for injection 1ml vials | 1 vial [X]
- Japanese encephalitis GCVC vaccine solution for injection 20ml vials | 1 vial [X]
- Japanese encephalitis GCVC vaccine solution for injection 10ml vials | 1 vial [X]

### Suspension for injection

#### ▶ Ixiaro (Valneva UK Ltd)

- Ixiaro vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £59.50

F 1310

## Measles, mumps and rubella vaccine, live

### ● INDICATIONS AND DOSE

#### Primary immunisation against measles, mumps, and rubella (first dose)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 12–13 months: 0.5 mL for 1 dose

#### Primary immunisation against measles, mumps, and rubella (second dose)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 40 months–5 years: 0.5 mL for 1 dose

#### Rubella immunisation (in seronegative women, susceptible to rubella and in unimmunised, seronegative women, post-partum)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Females of childbearing potential: (consult product literature or local protocols)

#### Children presenting for pre-school booster, who have not received the primary immunisation (first dose) |

#### Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course | Control of measles outbreak | Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6 months–17 years: (consult product literature or local protocols)
- ▶ Adult: (consult product literature or local protocols)

### ● UNLICENSED USE

- ▶ In children Not licensed for use in children under 9 months.

### IMPORTANT SAFETY INFORMATION

#### MMR VACCINATION AND BOWEL DISEASE OR AUTISM

Reviews undertaken on behalf of the CSM, the Medical Research Council, and the Cochrane Collaboration, have not found any evidence of a link between MMR

vaccination and bowel disease or autism. The Chief Medical Officers have advised that the MMR vaccine is the safest and best way to protect children against measles, mumps, and rubella. Information (including fact sheets and a list of references) may be obtained from [www.dh.gov.uk/immunisation](http://www.dh.gov.uk/immunisation).

- **CAUTIONS** Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion—leave an interval of at least 3 months before MMR immunisation

#### CAUTIONS, FURTHER INFORMATION

- ▶ Administration with other vaccines MMR vaccine should not be administered on the same day as yellow fever vaccine; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

MMR and varicella-zoster vaccine can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · arthritis · ataxia · cough · encephalopathy · eye inflammation · meningitis · aseptic · nerve deafness · nerve disorders · oculomotor nerve paralysis · oedema · panniculitis · papillitis · paraesthesia · regional lymphadenopathy · respiratory disorders · seizures · Stevens-Johnson syndrome · subacute sclerosing panencephalitis · syncope · throat pain · thrombocytopenia · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days.

Febrile seizures occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection).

**Idiopathic thrombocytopenic purpura** Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose. The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR should undergo serological testing before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. Samples should be sent to the Virus Reference Laboratory of the Health Protection Agency.

**Frequency of side effects** Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.

- **ALLERGY AND CROSS-SENSITIVITY** MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg. Dislike of eggs, refusal to eat egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist.
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before immunisation. Avoid pregnancy for at least 1 month after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from health organisations or ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Gelatin, neomycin

- ▶ **M-M-RVAXPRO** (Merck Sharp & Dohme Ltd)  
M-M-RVAXPRO vaccine powder and solvent for suspension for injection  
0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM]  
£11.00

#### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

- ▶ **Priorix** (GlaxoSmithKline UK Ltd)  
Priorix vaccine powder and solvent for solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.64

F 1310

## Rabies vaccine

### ● INDICATIONS AND DOSE

#### **Pre-exposure prophylaxis**

▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child:** 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region or anterolateral thigh in infants, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel
- ▶ **Adult:** 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

#### **Pre-exposure prophylaxis booster dose (for patients at frequent risk of exposure)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child:** 1 mL after 1 year for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region or anterolateral thigh in infants, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies
- ▶ **Adult:** 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies

#### **Pre-exposure prophylaxis booster dose (for patients at infrequent risk of exposure)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region or anterolateral thigh in infants
- ▶ **Adult:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region

#### **Post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, rabies immunoglobulin is not necessary
- ▶ **Adult** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region, rabies immunoglobulin is not necessary

**Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete)****► BY INTRAMUSCULAR INJECTION**

- Child (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region or anterolateral thigh in infants, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk
- Adult (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

● **INTERACTIONS** → Appendix 1: rabies vaccine

**● SIDE-EFFECTS**

- **Common or very common** Asthenia · gastrointestinal discomfort
- **Rare or very rare** Angioedema · chills · encephalitis · Guillain-Barre syndrome · hyperhidrosis · paraesthesia · syncope · vertigo

● **PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Neomycin

**► Rabies vaccine (Non-proprietary)**

Rabies vaccine powder and solvent for suspension for injection 1mL vials | 1 vial PoM £40.84

**Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

Rabipur vaccine powder and solvent for solution for injection 1mL vials | 1 vial PoM £34.56

Rabipur vaccine powder and solvent for solution for injection 1mL pre-filled syringes | 1 pre-filled disposable injection PoM £34.56

F 1310

**Rotavirus vaccine**

11-Dec-2017

● **DRUG ACTION** Rotavirus vaccine is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

**● INDICATIONS AND DOSE****Immunisation against gastro-enteritis caused by rotavirus****► BY MOUTH**

- **Child 6–23 weeks:** 1.5 mL for 2 doses separated by an interval of at least 4 weeks, first dose must be given between 6–14 weeks of age; course should be

completed before 24 weeks of age (preferably before 16 weeks)

**IMPORTANT SAFETY INFORMATION****PUBLIC HEALTH ENGLAND: UPDATE TO GREEN BOOK (OCTOBER 2017)**

Public Health England advises that immunisation with live vaccines should be delayed until 6 months of age in children born to mothers who received immunosuppressive biological therapy during pregnancy. In practice, this means that children born to mothers who were on immunosuppressive biological therapy during pregnancy will not be eligible to receive rotavirus vaccine.

● **CONTRA-INDICATIONS** History of intussusception · predisposition to intussusception · severe combined immunosuppression

**CONTRA-INDICATIONS, FURTHER INFORMATION**

► **Immunosuppression** With the exception of severe combined immunodeficiency (and children born to mothers who received immunosuppressive biological therapy during pregnancy, see *Important safety information*), rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from vaccination is likely to outweigh the risk, if there is any doubt, seek specialist advice.

● **CAUTIONS** Diarrhoea (postpone vaccination) · immunosuppressed close contacts · vomiting (postpone vaccination)

**CAUTIONS, FURTHER INFORMATION**

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.

● **INTERACTIONS** → Appendix 1: live vaccines

**● SIDE-EFFECTS**

- **Uncommon** Abdominal pain · gastrointestinal disorders
- **Frequency not known** Apnoea · haematochezia

● **PATIENT AND CARER ADVICE** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Oral suspension****► Rotarix (GlaxoSmithKline UK Ltd)**

Rotarix vaccine live oral suspension 1.5mL pre-filled syringes | 1 unit dose PoM £34.76

Rotarix vaccine live oral suspension 1.5mL tube | 1 tube PoM £34.76

F 1310

**Tick-borne encephalitis vaccine, inactivated****● INDICATIONS AND DOSE****Initial immunisation against tick-borne encephalitis****► BY INTRAMUSCULAR INJECTION**

- **Child 1–15 years:** 0.25 mL for 1 dose, followed by 0.25 mL after 1–3 months for 1 dose, then 0.25 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

continued →

- ▶ Child 16–17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- ▶ Adult: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- ▶ Elderly: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

#### Immunisation against tick-borne encephalitis, booster doses

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region or anterolateral thigh in infants (consult product literature)
- ▶ Adult: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region (consult product literature)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Restlessness (in children) · sleep disorder (in children)
- ▶ **Rare or very rare** Asthenia · autoimmune disorder (in adults) · chills (uncommon in children) · demyelination (in adults) · drowsiness (in adults) · dyspnoea · eye pain · gait abnormal · gastrointestinal discomfort (uncommon in children) · hyperhidrosis · increased risk of infection · influenza like illness · joint swelling (in adults) · meningism · meningitis aseptic (in adults) · motor dysfunction · musculoskeletal stiffness · nerve disorders · oedema · pain · seizures · sensory disorder · tachycardia (in adults) · tinnitus · vertigo · vision disorders

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Supplies for injection

EXCIPIENTS: May contain Gentamicin, neomycin

#### ▶ TicoVac (Pfizer Ltd)

TicoVac Junior vaccine suspension for injection 0.25ml pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £28.00  
TicoVac vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £32.00

## Varicella-zoster vaccine

F 1310

### ● INDICATIONS AND DOSE

#### VARILRIX®

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Child 1–17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh
- ▶ Adult: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh

#### VARIVAX®

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)
- ▶ Child 13–17 years: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region
- ▶ Adult: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region

##### Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of 12 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)

#### ZOSTAVAX®

##### Prevention of herpes zoster (shingles)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult 70–79 years: 0.65 mL for 1 dose, to be administered preferably into the deltoid region

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

**CAUTIONS, FURTHER INFORMATION** Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
  - individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.
- Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.
- ▶ Administration with MMR vaccine Varicella-zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Cough · drowsiness · increased risk of infection
- ▶ **Rare or very rare** Abdominal pain · conjunctivitis · Kawasaki disease · seizure · stroke · thrombocytopenia · vasculitis

- **CONCEPTION AND CONTRACEPTION** Avoid pregnancy for 3 months after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION**  
**ZOSTAVAX**® Advice in the BNF may differ from that in product literature.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder and solvent for suspension for injection**  
EXCIPIENTS: May contain Gelatin, neomycin
  - ▶ **Varivax** (Merck Sharp & Dohme Ltd)  
Varivax vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £30.28
  - ▶ **Zostavax** (Merck Sharp & Dohme Ltd)  
Zostavax vaccine powder and solvent for suspension for injection 0.65ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £99.96 DT = £99.96**Powder and solvent for solution for injection**  
EXCIPIENTS: May contain Neomycin
  - ▶ **Varilrix** (GlaxoSmithKline UK Ltd)  
Varilrix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £27.31

1310

## Yellow fever vaccine, live

22-May-2019

### ● INDICATIONS AND DOSE

#### Immunisation against yellow fever

- ▶ BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6–8 months (administered on expert advice): Infants under 9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (consult product literature or local protocols)
- ▶ Child 9 months–17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

### IMPORTANT SAFETY INFORMATION

#### MHRA/CHM ADVICE: YELLOW FEVER VACCINE (STAMARIL®) AND FATAL ADVERSE REACTIONS: EXTREME CAUTION NEEDED IN PEOPLE WHO MAY BE IMMUNOSUPPRESSED AND THOSE 60 YEARS AND OLDER (APRIL 2019)

The yellow fever vaccine (*Stamaril*®) has been associated with an increased risk of life-threatening reactions and must not be given to patients with a history of thymus dysfunction (including myasthenia gravis and thymoma), to patients that are immunosuppressed, or that have had a thymectomy. Vaccination in patients aged 60 years and older should be administered with extreme caution, following a careful risk assessment. Prior to administering yellow fever vaccines, healthcare professionals are advised to familiarise themselves with any contra-indications and special precautions, and to defer vaccination if it is suspected that a patient is immunosuppressed, until specialist advice can be sought. Healthcare professionals administering vaccines should consult information in the YF Vaccine Centre code of practice and strengthen protocols and checklists to avoid inappropriate administration.

- **CONTRA-INDICATIONS** Children under 6 months · history of thymus dysfunction
- **CAUTIONS** Individuals over 60 years—greater risk of vaccine-associated adverse effects  
**CAUTIONS, FURTHER INFORMATION**
  - ▶ Administration with MMR vaccine Yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.
- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Asthenia · crying (in children) · drowsiness (in children)
  - ▶ **Uncommon** Abdominal pain
  - ▶ **Rare or very rare** Rhinitis · yellow fever vaccine-associated neurotropic disease · yellow fever vaccine-associated viscerotropic disease
  - ▶ **Frequency not known** Angioedema · influenza like illness · paraesthesia**SIDE-EFFECTS, FURTHER INFORMATION** Very rare vaccine-associated adverse effects may occur, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These very rare adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity. Increased risk of fatal reactions reported in patients aged 60 years and older and those who are immunosuppressed.
  - **ALLERGY AND CROSS-SENSITIVITY** Yellow fever vaccine should only be considered under the guidance of a specialist in individuals with evidence of previous anaphylactic reaction to egg.
  - **PREGNANCY** Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.
  - **BREAST FEEDING** Avoid; seek specialist advice if exposure to virus cannot be avoided.
  - **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder and solvent for suspension for injection**
    - ▶ **Stamaril** (Sanofi Pasteur)  
Stamaril vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £39.72

## General anaesthesia

### Anaesthesia (general)

#### Overview

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated patients and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

#### Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using 'rapid sequence induction'); lower doses may be required in premedicated patients.

#### Total intravenous anaesthesia

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to

predicted plasma-drug concentrations in ventilated adult patients.

#### Drugs used for intravenous anaesthesia

Propofol p. 1330, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in adults and children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures and sedation in adults in intensive care.

Thiopental sodium p. 338 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect and recovery is much slower.

Etomidate p. 1330 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 1345 is used rarely. Ketamine causes less hypotension than thiopental sodium and propofol during induction. It is used mainly for paediatric anaesthesia, particularly when repeated administration is required (such as for serial burns dressings); recovery is relatively slow and there is a high incidence of extraneous muscle movements. The main disadvantage of ketamine is the high incidence of hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 343 or midazolam p. 340.

#### Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. *Gaseous anaesthetics* require suitable equipment for storage and administration. *Volatile liquid anaesthetics* are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 1332 is being administered.

### Volatile liquid anaesthetics

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isoflurane p. 1332 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isoflurane anaesthesia, but heart-rate can rise, particularly in younger patients. Systemic arterial pressure and cardiac output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isoflurane is the preferred inhalational anaesthetic for use in obstetrics.

Desflurane p. 1332 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isoflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract.

Sevoflurane p. 1333 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia; it has little effect on heart rhythm compared with other volatile liquid anaesthetics.

### Nitrous oxide

Nitrous oxide is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For anaesthesia, nitrous oxide is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox<sup>®</sup>, Equanox<sup>®</sup>) is used. Self-administration using a demand valve is popular in obstetric practice, for changing painful dressings, as an aid to postoperative physiotherapy, and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

### Malignant hyperthermia

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride p. 1337 has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in patients at high risk of malignant hyperthermia.

Dantrolene sodium p. 1346 is used in the treatment of malignant hyperthermia.

## Sedation, anaesthesia, and resuscitation in dental practice

### Overview

Sedation for dental procedures should be limited to conscious sedation. Diazepam p. 343 and temazepam p. 488 are effective anxiolytics for dental treatment in adults.

For details of sedation, anaesthesia, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated documents. Further details can also be found in *Standards for Conscious Sedation in the Provision of Dental Care*; report of an Intercollegiate Advisory Committee for Sedation in Dentistry, 2015 [www.rcseng.ac.uk/-/media/files/rcs/library-and-publications/non-journal-publications/dental-sedation-report.pdf](http://www.rcseng.ac.uk/-/media/files/rcs/library-and-publications/non-journal-publications/dental-sedation-report.pdf).

## Surgery and long-term medication

### Overview

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about **all** drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids).

Other drugs that should normally not be stopped before surgery include antiepileptics, antiparkinsonian drugs, antipsychotics, anxiolytics, bronchodilators, cardiovascular drugs (but see potassium-sparing diuretics, angiotensin-converting enzyme inhibitors, and angiotensin-II receptor antagonists), glaucoma drugs, immunosuppressants, drugs of dependence, and thyroid or antithyroid drugs. Expert advice is required for patients receiving antivirals for HIV infection. See general advice on surgery in diabetic patients in Diabetes, surgery and medical illness p. 689.

Patients taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) p. 133 or low molecular weight heparin therapy. [EvGr](#) In patients with stable angina, perioperative aspirin p. 121 should be only continued where there is a high thrombotic risk (e.g. patients with a recent acute coronary syndrome, coronary artery stents, or an ischaemic stroke). [A](#)

Drugs that should be stopped before surgery include combined oral contraceptives, see Contraceptives, hormonal p. 791; for advice on hormone replacement therapy, see Sex hormones p. 750. MAOIs can have important interactions with some drugs used during surgery, such as pethidine hydrochloride p. 470. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or

if there is tissue damage. Angiotensin-converting enzyme (ACE) inhibitors and angiotensin-II receptor antagonists may be associated with severe hypotension after induction of anaesthesia; these drugs may need to be discontinued 24 hours before surgery. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

## ANAESTHETICS, GENERAL > INTRAVENOUS ANAESTHETICS

### Etomidate

12-Jul-2018

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia

###### ▶ BY SLOW INTRAVENOUS INJECTION

- ▶ Adult: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)
- ▶ Elderly: 150–200 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)

#### IMPORTANT SAFETY INFORMATION

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · adrenal insufficiency · Avoid in Acute porphyrias p. 1058 · cardiovascular disease · elderly · fixed cardiac output · hypovolaemia

#### CAUTIONS, FURTHER INFORMATION

- ▶ Adrenal insufficiency Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.

- **INTERACTIONS** → Appendix 1: etomidate

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Apnoea · hypotension · movement disorders · nausea · respiratory disorders · skin reactions · vascular pain · vomiting
- ▶ **Uncommon** Arrhythmias · cough · hiccups · hypersalivation · hypertension · muscle rigidity · neuromuscular dysfunction · nystagmus · procedural complications
- ▶ **Frequency not known** Adrenal insufficiency · atrioventricular block · cardiac arrest · embolism and thrombosis · seizures · shock · Stevens-Johnson syndrome · trismus

#### SIDE-EFFECTS, FURTHER INFORMATION **Pain on injection**

Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.

**Extraneous muscle movements** Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT**  
**Dose adjustments** Manufacturer advises reduce dose in liver cirrhosis.
- **DIRECTIONS FOR ADMINISTRATION** To be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous).

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Propylene glycol

##### ▶ **Hypnomidate** (Piramal Critical Care Ltd)

**Etomidate 2 mg per 1 ml** Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoule [POM] £6.90

#### Emulsion for injection

##### ▶ **Etomidate-Lipuro** (B.Braun Medical Ltd)

**Etomidate 2 mg per 1 ml** Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoule [POM] £16.09

## Propofol

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia using 0.5% or 1% injection

###### ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response, for debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Induction of anaesthesia using 2% injection

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Maintenance of anaesthesia using 1% injection

###### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ Adult: Usual dose 4–12 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response

##### Maintenance of anaesthesia using 2% injection

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Usual dose 4–12 mg/kg/hour, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour

##### Sedation of ventilated patients in intensive care using 1% or 2% injection

###### ▶ BY CONTINUOUS INTRAVENOUS INFUSION

- ▶ Adult: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

##### Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

###### ▶ BY SLOW INTRAVENOUS INJECTION

- ▶ Adult: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

**Maintenance of sedation for surgical and diagnostic procedures using 0.5% injection**

## ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**Maintenance of sedation for surgical and diagnostic procedures using 1% injection**

## ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**Maintenance of sedation for surgical and diagnostic procedures using 2% injection**

## ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, using 0.5% or 1% injection (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**IMPORTANT SAFETY INFORMATION**

Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · cardiac impairment · cardiovascular disease · elderly · epilepsy · fixed cardiac output · hypotension · hypovolaemia · raised intracranial pressure · respiratory impairment
- **INTERACTIONS** → Appendix 1: propofol
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Apnoea · arrhythmias · headache · hypotension · localised pain · nausea · vomiting
  - ▶ **Uncommon** Thrombosis
  - ▶ **Rare or very rare** Epileptiform seizure (may be delayed) · pancreatitis · post procedural complications · pulmonary oedema · sexual disinhibition · soft tissue necrosis · urine discolouration
  - ▶ **Frequency not known** Drug use disorders · dyskinesia · euphoric mood · heart failure · hepatomegaly · hyperkalaemia · hyperlipidaemia · metabolic acidosis · renal failure · respiratory depression · rhabdomyolysis
- **SIDE-EFFECTS, FURTHER INFORMATION** **Bradycardia** Bradycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.
  - ▶ **Pain on injection** Pain on injection can be reduced by intravenous lidocaine.
  - ▶ **Propofol infusion syndrome** Prolonged infusion of propofol doses exceeding 4mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
  - ▶ **Dose adjustments** Max. dose for maintenance of anaesthesia 6 mg/kg/hour.

- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Use with caution.
- **MONITORING REQUIREMENTS** Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.
- **DIRECTIONS FOR ADMINISTRATION** Shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% **emulsion** for injection or intermittent infusion; may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% **emulsion** for injection or infusion; may be administered undiluted, or diluted with Glucose 5% (*Diprivan*®) or (*Propofol-Lipuro*®) or Sodium chloride 0.9% (*Propofol-Lipuro*® only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% **emulsion** for infusion; do not dilute.
- **PATIENT AND CARER ADVICE**
  - ▶ **Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Emulsion for infusion**▶ **Propofol (Non-proprietary)**

- ▶ **Propofol 10 mg per 1 ml** Propofol 500mg/50ml emulsion for infusion vials | 1 vial [PoM](#) £15.00 (Hospital only)
- ▶ **Propofol-Lipuro 1% emulsion for infusion 50ml vials** | 10 vial [PoM](#) £97.56 (Hospital only)

## ANAESTHETICS, GENERAL > VOLATILE LIQUID ANAESTHETICS

### Volatile halogenated anaesthetics

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia · raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Agitation · apnoea · arrhythmias · chills · cough · dizziness · headache · hypersalivation · hypertension · hypotension · nausea · respiratory disorders · vomiting
  - ▶ **Uncommon** Hypoxia
  - ▶ **Frequency not known** Breath holding · cardiac arrest · haemorrhage · hepatic disorders · hyperkalaemia · malignant hyperthermia · QT interval prolongation · rhabdomyolysis · seizure
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.
- **DIRECTIONS FOR ADMINISTRATION** Volatile liquid anaesthetics are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

### Desflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (but not recommended)

- ▶ BY INHALATION
- ▶ **Adult:** 4–11 %, to be inhaled through specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ **Adult:** 2–6 %, to be inhaled through a specifically calibrated vaporiser

##### Maintenance of anaesthesia (in oxygen or oxygen-enriched air)

- ▶ BY INHALATION
- ▶ **Adult:** 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Coagulation disorder · conjunctivitis

- ▶ **Uncommon** Myalgia · myocardial infarction · myocardial ischaemia · vasodilation
- ▶ **Frequency not known** Abdominal pain · asthenia · heart failure · hypokalaemia · malaise · metabolic acidosis · pancreatitis acute · shock · skin reactions · ventricular dysfunction · visual acuity decreased
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Inhalation vapour

##### ▶ Desflurane (Non-proprietary)

**Desflurane 1 ml per 1 ml** Desflurane volatile liquid | 240 ml  

## Isoflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ **Adult:** Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ **Adult:** 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1% may be required when given with oxygen alone

##### Maintenance of anaesthesia in caesarean section (in nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ **Adult:** 0.5–0.75 %, to be administered using specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS** Carboxyhaemoglobinaemia · chest discomfort · cognitive impairment · delirium · dyspnoea · ileus · mood altered (that can last several days) · myoglobinuria · skin reactions
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Inhalation vapour

##### ▶ Isoflurane (Non-proprietary)

**Isoflurane 1 ml per 1 ml** Isoflurane inhalation vapour | 250 ml  £35.29 (Hospital only)

##### ▶ AErrane (Baxter Healthcare Ltd)

**Isoflurane 1 ml per 1 ml** AErrane volatile liquid | 250 ml  

## Nitrous oxide

#### ● INDICATIONS AND DOSE

##### Maintenance of anaesthesia in conjunction with other anaesthetic agents

- ▶ BY INHALATION
- ▶ **Adult:** 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen

**Analgesia**

## ▶ BY INHALATION

- ▶ Adult: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs

**IMPORTANT SAFETY INFORMATION**

Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Entrapped air following recent underwater dive · pneumothorax · presence of intracranial air after head injury · recent intra-ocular gas injection
- CAUTIONS, FURTHER INFORMATION** Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.
- **INTERACTIONS** → Appendix 1: nitrous oxide
- **SIDE-EFFECTS** Abdominal distension · addiction · agranulocytosis · disorientation · dizziness · euphoric mood · megaloblastic anaemia · middle ear damage · myeloneuropathy · nausea · paraesthesia · sedation · subacute combined cord degeneration · tympanic membrane perforation · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B<sub>12</sub>; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MONITORING REQUIREMENTS**
  - ▶ Assessment of plasma-vitamin B<sub>12</sub> concentration should be considered in those at risk of deficiency, including the elderly, those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
  - ▶ Nitrous oxide should **not** be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.
- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (*Entonox*<sup>®</sup>, *Equanox*<sup>®</sup>) is used.
- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
  - Inhalation gas**
    - ▶ **Nitrous oxide (Non-proprietary)**
    - Nitrous oxide 1 ml per 1 ml** Nitrous oxide cylinders size E | 1800 litre [P] [N]
    - Medical Nitrous Oxide cylinders size D | 900 litre [P] [N]

Anaesthesia

**1 Anaesthesia adjuvants****Pre-medication and peri-operative drugs****Drugs that affect gastric pH**

Regurgitation and aspiration of gastric contents (Mendelson's syndrome) can be an important complication of general anaesthesia, particularly in obstetrics and during emergency surgery, and requires prophylaxis against acid aspiration. Prophylaxis is also needed in those with gastro-oesophageal reflux disease and in circumstances where gastric emptying may be delayed.

A **H<sub>2</sub>-receptor antagonist** can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H<sub>2</sub>-receptor antagonist can be given 1–2 hours before the procedure. Antacids are frequently used to neutralise the acidity of the fluid already in the stomach; 'clear' (non-particulate) antacids such as sodium citrate p. 789 are preferred.

**Antimuscarinic drugs**

Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some

inhalational anaesthetics. They are also used before or with neostigmine p. 1125 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol p. 1330 and suxamethonium chloride p. 1337.

Atropine sulfate p. 1334 is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulfate may have a role in acute arrhythmias after myocardial infarction.

Hyoscine hydrobromide p. 439 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulfate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 1335 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulfate. It is widely used with neostigmine for reversal of non-depolarising neuromuscular blocking drugs.

**Phenothiazines** do not effectively reduce secretions when used alone.

### Sedative drugs

Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a **benzodiazepine**. Premedication may also augment the action of anaesthetics and provide some degree of pre-operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures.

Premedicants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

#### Benzodiazepines

Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used in intensive care units for sedation, particularly in those receiving assisted ventilation. Flumazenil p. 1368 is used to antagonise the effects of benzodiazepines.

Diazepam p. 343 is used to produce mild sedation with amnesia. It is a long-acting drug with active metabolites and a second period of drowsiness can occur several hours after its administration. Peri-operative use of diazepam in children is not recommended; its effect and timing of response are unreliable and paradoxical effects may occur.

Diazepam is relatively insoluble in water and preparations formulated in organic solvents are painful on intravenous injection and give rise to a high incidence of venous thrombosis (which may not be noticed for several days after the injection). Intramuscular injection of diazepam is painful and absorption is erratic. An emulsion formulated for intravenous injection is less irritant and reduces the risk of venous thrombosis; it is not suitable for intramuscular injection.

Temazepam p. 488 is given by mouth for premedication and has a shorter duration of action and a more rapid onset than oral diazepam; anxiolytic and sedative effects last about 90 minutes although there may be residual drowsiness.

Lorazepam p. 339 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Midazolam p. 340 is a water-soluble benzodiazepine that is often used in preference to intravenous diazepam; recovery is faster than from diazepam, but may be significantly longer in the elderly, in patients with a low cardiac output, or after repeated dosing. Midazolam is associated with profound

sedation when high doses are given intravenously or when it is used with certain other drugs.

#### Other drugs for sedation

Dexmedetomidine p. 1346 and clonidine hydrochloride p. 145 are alpha<sub>2</sub>-adrenergic agonists with sedative properties. Dexmedetomidine is licensed for the sedation of patients receiving intensive care who need to remain responsive to verbal stimulation. Clonidine hydrochloride [unlicensed indication] can be used by mouth or by intravenous injection as a sedative agent when adequate sedation cannot be achieved with standard treatment.

### Antagonists for central and respiratory depression

Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by naloxone hydrochloride p. 1369. Naloxone hydrochloride will immediately reverse opioid-induced respiratory depression but the dose may have to be repeated because of the short duration of action of naloxone hydrochloride; however, naloxone hydrochloride will also antagonise the analgesic effect.

Flumazenil is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become resedated.

Doxapram hydrochloride p. 299 is a central and respiratory stimulant but is of limited value in anaesthesia.

## ANTIMUSCARINICS

F 777

### Atropine sulfate

#### • INDICATIONS AND DOSE

##### Bradycardia due to acute massive overdose of beta-blockers

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 40 micrograms/kg (max. per dose 3 mg)
- ▶ Adult: 3 mg

##### Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning
- ▶ Adult: 2 mg every 5–10 minutes until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

##### Symptomatic relief of gastro-intestinal disorders characterised by smooth muscle spasm

- ▶ BY MOUTH
- ▶ Adult: 0.6–1.2 mg daily, dose to be taken at night

##### Premedication

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

**Intra-operative bradycardia**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12-17 years: 300–600 micrograms, larger doses may be used in emergencies
- ▶ Adult: 300–600 micrograms, larger doses may be used in emergencies

**Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12-17 years: 0.6–1.2 mg
- ▶ Adult: 0.6–1.2 mg

**Excessive bradycardia associated with beta-blocker use**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 0.6–2.4 mg in divided doses (max. per dose 600 micrograms)

**Bradycardia following myocardial infarction (particularly if complicated by hypotension)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 500 micrograms every 3–5 minutes; maximum 3 mg per course

**IMPORTANT SAFETY INFORMATION**

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- **INTERACTIONS** → Appendix 1: atropine
- **SIDE-EFFECTS**
  - ▶ **Common or very common**
    - ▶ With intravenous use Abdominal distension · anhidrosis · anxiety · arrhythmias · bronchial secretion decreased · dysphagia · gastrointestinal disorders · hallucination · hyperthermia · movement disorders · mydriasis · speech disorder · taste loss · thirst
  - ▶ **Uncommon**
    - ▶ With intravenous use Psychotic disorder
  - ▶ **Rare or very rare**
    - ▶ With intravenous use Angina pectoris · hypertensive crisis · seizure
  - ▶ **Frequency not known**
    - ▶ With intravenous use Insomnia
    - ▶ With oral use Angle closure glaucoma · arrhythmias · bronchial secretion altered · chest pain · dysphagia · fever · gastrointestinal disorders · mydriasis · staggering · thirst
- **PREGNANCY** Not known to be harmful; manufacturer advises caution.
- **BREAST FEEDING** May suppress lactation; small amount present in milk—manufacturer advises caution.
- **MONITORING REQUIREMENTS**
  - ▶ Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block Since atropine has a shorter duration of action than neostigmine, late unopposed bradycardia may result; close monitoring of the patient is necessary.
- **LESS SUITABLE FOR PRESCRIBING** Atropine tablets less suitable for prescribing. Any clinical benefit as a gastrointestinal antispasmodic is outweighed by atropinic side-effects.
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, solution for infusion

## 1.1 Neuromuscular blockade

### Neuromuscular blockade

#### Neuromuscular blocking drugs

Neuromuscular blocking drugs used in anaesthesia are also known as **muscle relaxants**. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in musculoskeletal disorders that act on the spinal cord or brain.

Patients who have received a neuromuscular blocking drug should **always** have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

#### Non-depolarising neuromuscular blocking drugs

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 1125. Non-depolarising neuromuscular blocking drugs can be divided into the **aminosteroid** group, comprising pancuronium bromide p. 1339, rocuronium bromide p. 1339, and vecuronium bromide, and the **benzylisoquinolinium** group, comprising atracurium besilate p. 1337, cisatracurium p. 1338, and mivacurium p. 1338.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride p. 1337. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as atracurium besilate and vecuronium bromide, are more widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzylisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney function, thus allowing its use in patients with hepatic or renal impairment. Cardiovascular effects are associated with

significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects.

Mivacurium, a benzylisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in patients receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity.

Vecuronium bromide, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects.

#### Depolarising neuromuscular blocking drugs

Suxamethonium chloride has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required, e.g. with tracheal intubation. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. While tachycardia occurs with single use, bradycardia may occur with repeated doses in adults and with the first dose in children. Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride use.

Prolonged paralysis may occur in **dual block**, which occurs with high or repeated doses of suxamethonium chloride and is caused by the development of a non-depolarising block following the initial depolarising block. Individuals with myasthenia gravis are resistant to suxamethonium chloride but can develop dual block resulting in delayed recovery. Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

## NEUROMUSCULAR BLOCKING DRUGS >

### DEPOLARISING

### Suxamethonium chloride

(Succinylcholine chloride)

- **DRUG ACTION** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

#### ● INDICATIONS AND DOSE

**Neuromuscular blockade (short duration) during surgery and intubation**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 1–1.5 mg/kg

- **UNLICENSED USE** Doses of suxamethonium in BNF may differ from those in product literature.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Duchenne muscular dystrophy · family history of malignant hyperthermia · hyperkalaemia · low plasma-cholinesterase activity (including severe liver disease) · major trauma · neurological disease involving acute wasting of major muscle · personal or family history of congenital myotonic disease · prolonged immobilisation (risk of hyperkalaemia) · severe burns
- **CAUTIONS** Cardiac disease · neuromuscular disease · raised intra-ocular pressure (avoid in penetrating eye injury) · respiratory disease · severe sepsis (risk of hyperkalaemia)
- **INTERACTIONS** → Appendix 1: suxamethonium
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · bradycardia (may occur with repeated doses) · flushing · muscle contractions involuntary · myoglobinaemia · myoglobinuria · post procedural muscle pain · rash
  - ▶ **Rare or very rare** Apnoea · cardiac arrest · hypersensitivity · malignant hyperthermia · respiratory disorders · trismus
- **SIDE-EFFECTS, FURTHER INFORMATION** Premedication with atropine reduces bradycardia associated with suxamethonium use.
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Mildly prolonged maternal neuromuscular blockade may occur.
- **BREAST FEEDING** Unlikely to be present in breast milk in significant amounts (ionised at physiological pH). Breast-feeding may be resumed once the mother recovered from neuromuscular block.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution, particularly in end stage hepatic failure (increased risk of prolonged apnoea due to reduced hepatic synthesis of plasma cholinesterase).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

- ▶ **Suxamethonium chloride (Non-proprietary)**
- ▶ **Suxamethonium chloride 50 mg per 1 ml** Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £28.80–£50.00

- ▶ **Anectine** (Aspen Pharma Trading Ltd)
- ▶ **Suxamethonium chloride 50 mg per 1 ml** Anectine 100mg/2ml solution for injection ampoules | 5 ampoule **[PoM]** £3.57

## NEUROMUSCULAR BLOCKING DRUGS >

### NON-DEPOLARISING

## Non-depolarising neuromuscular blocking drugs

#### IMPORTANT SAFETY INFORMATION

Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

- **CAUTIONS** Burns (resistance can develop, increased doses may be required) · cardiovascular disease (reduce rate of administration) · electrolyte disturbances (response unpredictable) · fluid disturbances (response unpredictable) · hypothermia (activity prolonged, lower doses required) · myasthenia gravis (activity prolonged, lower doses required) · neuromuscular disorders (response unpredictable)
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Flushing · hypotension
  - ▶ **Uncommon** Bronchospasm · hypersensitivity · skin reactions
  - ▶ **Rare or very rare** Muscle weakness · myopathy (after prolonged use in intensive care)
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.
- **BREAST FEEDING** Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

**above**

## Atracurium besilate

(Atracurium besylate)

#### ● INDICATIONS AND DOSE

**Neuromuscular blockade (short to intermediate duration) for surgery and intubation**

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg as required, alternatively (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour

**Neuromuscular blockade during intensive care**

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### ● SIDE-EFFECTS

- ▶ **Rare or very rare** Cardiac arrest · circulatory collapse · shock
- ▶ **Frequency not known** Seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Hypotension, skin flushing, and bronchospasm is associated with histamine release. Manufacturer advises minimising effects of histamine release by administering over 1 minute in patients with cardiovascular disease or sensitivity to hypotension.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Tracrium*<sup>®</sup>; Atracurium besilate injection, Hospira; Atracurium injection/infusion, Genus), give continuously in Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent; dilute requisite dose with infusion fluid to a concentration of 0.5–5 mg/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Atracurium besilate (Non-proprietary)

Atracurium besilate **10 mg per 1 ml** Atracurium besilate 250mg/25ml solution for injection vials | 1 vial **[PoM]** £16.50 (Hospital only)

Atracurium besilate 25mg/2.5ml solution for injection ampoules | 5 ampoule **[PoM]** £9.25 (Hospital only) | 5 ampoule **[PoM]** £11.50 | 10 ampoule **[PoM]** £18.50 | 10 ampoule **[PoM]** £16.56 (Hospital only) Atracurium besilate 50mg/5ml solution for injection ampoules | 5 ampoule **[PoM]** £17.50 (Hospital only) | 5 ampoule **[PoM]** £17.50 | 10 ampoule **[PoM]** £35.00 | 10 ampoule **[PoM]** £30.04 (Hospital only)

## Cisatracurium

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially 150 micrograms/kg, then (by intravenous injection) maintenance 30 micrograms/kg every 20 minutes, alternatively (by intravenous infusion) initially 180 micrograms/kg/hour, then (by intravenous infusion) maintenance 60–120 micrograms/kg/hour, maintenance dose administered after stabilisation

#### Neuromuscular blockade (intermediate duration) during intensive care

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially 150 micrograms/kg, initial dose is optional, then (by intravenous infusion) 180 micrograms/kg/hour, adjusted according to response; (by intravenous infusion) usual dose 30–600 micrograms/kg/hour

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### ● SIDE-EFFECTS

- ▶ **Common or very common** Bradycardia

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Nimbex*<sup>®</sup>, *Nimbex Forte*<sup>®</sup>), give continuously in Glucose 5% or Sodium Chloride 0.9%; solutions of 2 mg/mL and 5 mg/mL may be infused undiluted; alternatively dilute with infusion fluid to a concentration of 0.1–2 mg/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Cisatracurium (Non-proprietary)

Cisatracurium (as Cisatracurium besilate) **2 mg per**

## Mivacurium

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (short duration) during surgery and intubation

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ **Adult:** 70–250 micrograms/kg; (by intravenous injection) maintenance 100 micrograms/kg every 15 minutes, alternatively (by intravenous infusion) maintenance 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 6–7 micrograms/kg/minute

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **CAUTIONS** Burns (low plasma cholinesterase activity; dose titration required) · elderly

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### ● SIDE-EFFECTS

- ▶ **Uncommon** Tachycardia

### ● HEPATIC IMPAIRMENT

**Dose adjustments** Reduce dose in severe impairment.

### ● RENAL IMPAIRMENT

**Dose adjustments** Clinical effect prolonged in renal failure—reduce dose according to response.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, give continuously in Glucose 5% or Sodium chloride 0.9%. Dilute to a concentration of 500 micrograms/mL; may also be given undiluted. Doses up to 150 micrograms/kg may be given over 5–15 seconds, higher doses should be given over 30 seconds. In asthma, cardiovascular disease or in those sensitive to reduced arterial blood pressure, give over 60 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Mivacron (Aspen Pharma Trading Ltd)

Mivacurium (as Mivacurium chloride) **2 mg per 1 ml** Mivacron

10mg/5ml solution for injection ampoules | 5 ampoule **[PoM]** £13.95

Mivacron 20mg/10ml solution for injection ampoules |

5 ampoule **[PoM]** £22.57

## Pancuronium bromide

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (long duration) during surgery and intubation

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 100 micrograms/kg, then 20 micrograms/kg as required

#### Neuromuscular blockade (long duration) during intensive care

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 100 micrograms/kg, initial dose is optional, then 60 micrograms/kg every 60–90 minutes

### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **SIDE-EFFECTS** Apnoea · arrhythmia · hypersalivation · increased cardiac output · miosis
- SIDE-EFFECTS, FURTHER INFORMATION** Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia.
- **HEPATIC IMPAIRMENT** Possibly slower onset, higher dose requirement, and prolonged recovery time.
- **RENAL IMPAIRMENT** Use with caution; prolonged duration of block.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Pancuronium bromide (Non-proprietary)**  
Pancuronium bromide 2 mg per 1 ml Pancuronium bromide 4mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £50.00 (Hospital only)

F 1337

## Rocuronium bromide

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 600 micrograms/kg; (by intravenous injection) maintenance 150 micrograms/kg, alternatively (by intravenous infusion) maintenance 300–600 micrograms/kg/hour, adjusted according to response
- ▶ Elderly: Initially 600 micrograms/kg; (by intravenous injection) maintenance 75–100 micrograms/kg, alternatively (by intravenous infusion) maintenance up to 400 micrograms/kg/hour, adjusted according to response

#### Neuromuscular blockade (intermediate duration) during intensive care

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 600 micrograms/kg, initial dose is optional; (by intravenous infusion) maintenance 300–600 micrograms/kg/hour for first hour, then (by intravenous infusion) maintenance up to 400 micrograms/kg/hour, adjusted according to response

### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **SIDE-EFFECTS**
- ▶ **Uncommon** Procedural complications · tachycardia

- ▶ **Rare or very rare** Angioedema · circulatory collapse · face oedema · malignant hyperthermia · paralysis · shock
- **HEPATIC IMPAIRMENT**  
Dose adjustments Reduce dose.
- **RENAL IMPAIRMENT**  
Dose adjustments Reduce maintenance dose; prolonged paralysis.
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion* or via drip tubing, may be diluted with Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Rocuronium bromide (Non-proprietary)

**Rocuronium bromide 10 mg per 1 ml** Rocuronium bromide 50mg/5ml solution for injection ampoules | 10 ampoule **[PoM]** £24.00  
Rocuronium bromide 50mg/5ml solution for injection vials | 10 vial **[PoM]** £28.00–£36.50 | 10 vial **[PoM]** £28.00 (Hospital only)  
Rocuronium bromide 100mg/10ml solution for injection vials | 10 vial **[PoM]** £57.00–£73.00 | 10 vial **[PoM]** £57.00 (Hospital only)

##### ▶ Esmeron (Merck Sharp & Dohme Ltd)

**Rocuronium bromide 10 mg per 1 ml** Esmeron 50mg/5ml solution for injection vials | 10 vial **[PoM]** £28.92 (Hospital only)

15

Anaesthesia

## 1.2 Neuromuscular blockade reversal

### Neuromuscular blockade reversal

#### Neuromuscular blockade reversal

##### Anticholinesterases

Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide but they prolong the action of the depolarising neuromuscular blocking drug succinylcholine.

Neostigmine is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary. Glycopyrronium bromide p. 1335 or alternatively atropine sulfate p. 1334, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

##### Other drugs for reversal of neuromuscular blockade

Sugammadex p. 1340 is a modified gamma cyclodextrin that can be used for rapid reversal of neuromuscular blockade induced by rocuronium bromide or vecuronium bromide. In practice, sugammadex is used mainly for rapid reversal of neuromuscular blockade in an emergency.

### ANTICHOLINESTERASES

#### Neostigmine with glycopyrronium bromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, neostigmine p. 1125, glycopyrronium bromide p. 1335.

### ● INDICATIONS AND DOSE

#### Reversal of non-depolarising neuromuscular blockade

##### ▶ BY INTRAVENOUS INJECTION

- ▶ Adult: 1–2 mL, repeated if necessary, alternatively 0.02 mL/kg, repeated if necessary; maximum 2 mL per course

- **INTERACTIONS** → Appendix 1: glycopyrronium · neostigmine
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give over 10–30 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Neostigmine with glycopyrronium bromide (Non-proprietary)**  
Glycopyrronium bromide 500 microgram per 1 ml, Neostigmine metilsulfate 2.5 mg per 1 ml Neostigmine 2.5mg/1ml / Glycopyrronium bromide 500micrograms/1ml solution for injection ampoules | 10 ampoule **[PoM]** £11.50

## ANTIDOTES AND CHELATORS

### Sugammadex

#### ● INDICATIONS AND DOSE

##### Routine reversal of neuromuscular blockade induced by rocuronium or vecuronium

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 2–4 mg/kg, then 4 mg/kg if required, administered if recurrence of neuromuscular blockade occurs; consult product literature for further details

##### Immediate reversal of neuromuscular blockade induced by rocuronium

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 16 mg/kg (consult product literature)

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CAUTIONS** Cardiovascular disease (recovery may be delayed) · elderly (recovery may be delayed) · pre-existing coagulation disorders · recurrence of neuromuscular blockade— monitor respiratory function until fully recovered · use of anticoagulants (unrelated to surgery) · wait 24 hours before re-administering rocuronium · wait 24 hours before re-administering vecuronium
- **INTERACTIONS** → Appendix 1: sugammadex
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · arrhythmias · cough · dizziness · headache · nausea · procedural complications · skin reactions · taste altered · vomiting
  - ▶ **Uncommon** Hypersensitivity
  - ▶ **Frequency not known** Bronchospasm
- **PREGNANCY** Use with caution—no information available.
- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**Scottish Medicines Consortium (SMC) decisions**  
The *Scottish Medicines Consortium*, has advised (February 2013) that sugammadex (*Bridion*<sup>®</sup>) is accepted for restricted use within NHS Scotland for the routine reversal of neuromuscular blockade in high-risk patients only, or where prompt reversal of neuromuscular block is required.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

ELECTROLYTES: May contain Sodium

- ▶ **Bridion** (Merck Sharp & Dohme Ltd)  
Sugammadex (as Sugammadex sodium) 100 mg per 1 ml Bridion 500mg/5ml solution for injection vials | 10 vial **[PoM]** £1,491.00 (Hospital only)  
Bridion 200mg/2ml solution for injection vials | 10 vial **[PoM]** £596.40 (Hospital only)

## 1.3 Peri-operative analgesia

### Peri-operative analgesia

#### Non-opioid analgesics

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain. NSAIDs may be inadequate for the relief of severe pain. Diclofenac sodium p. 1135, diclofenac potassium p. 1135, flurbiprofen p. 1140, ibuprofen p. 1141, ketoprofen p. 1144, paracetamol p. 444, parecoxib p. 1342, and ketorolac trometamol p. 1342 are licensed for postoperative use. Diclofenac and paracetamol can be given by injection as well as by mouth. Diclofenac sodium can be given by intravenous infusion for the treatment or prevention of postoperative pain. Intramuscular injections of diclofenac sodium and ketoprofen are rarely used; they are given deep into the gluteal muscle to minimise pain and tissue damage. Ketorolac trometamol is less irritant on intramuscular injection but pain has been reported; it can also be given by intravenous injection.

Suppositories of diclofenac sodium and ketoprofen may be effective alternatives to the parenteral use of these drugs.

#### Opioid analgesics

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Pre-operative use of opioid analgesics is generally limited to those patients who require control of existing pain. See general notes on opioid analgesics and their use in postoperative pain.

See the management of opioid-induced respiratory depression in Pre-medication and peri-operative drugs p. 1333.

#### Intra-operative analgesia

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia.

Alfentanil p. 1343, fentanyl p. 458, and remifentanyl p. 1344 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect. Repeated intra-operative doses of alfentanil or fentanyl should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. Alfentanil, fentanyl, and remifentanyl can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanyl should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

## ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

### Esketamine

06-Nov-2018

- **DRUG ACTION** Esketamine is an isomer of ketamine that blocks N-methyl-D-aspartate (NMDA) receptors and interrupts the association pathways of the brain, resulting in dissociative anaesthesia and analgesia.

#### ● INDICATIONS AND DOSE

##### Induction and maintenance of anaesthesia (specialist use only)

- ▶ BY SLOW INTRAVENOUS INJECTION
  - Adult: 0.5–1 mg/kg, then maintenance 0.25–0.5 mg/kg every 10–15 minutes, adjusted according to response
- ▶ BY INTRAMUSCULAR INJECTION
  - Adult: 2–4 mg/kg, then maintenance 1–2 mg/kg every 10–15 minutes, adjusted according to response
- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
  - Adult: 0.5–3 mg/kg/hour, adjusted according to response

##### Analgesic supplementation of regional and local anaesthesia (specialist use only)

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
  - Adult: 0.125–0.25 mg/kg/hour, adjusted according to response

##### Analgesia in emergency medicine (specialist use only)

- ▶ BY INTRAMUSCULAR INJECTION
  - Adult: 0.25–0.5 mg/kg, adjusted according to response
- ▶ BY SLOW INTRAVENOUS INJECTION
  - Adult: 0.125–0.25 mg/kg, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Esketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1058 · eclampsia · ischaemic cardiac disorders (when used as sole anaesthetic agent) · patients in whom hypertension or raised intracranial pressure forms a serious risk · pre-eclampsia
- **CAUTIONS** Chronic or acute alcohol consumption · decompensated cardiac failure · hypertension · increased cerebrospinal fluid pressure · patients with multiple injuries or in poor condition—consult product literature · prolapsed umbilical cord · raised intra-ocular pressure · raised intracranial pressure · severe psychotic disorders · thyroid dysfunction · unstable angina pectoris · uterine rupture
- **INTERACTIONS** → Appendix 1: esketamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · dizziness · hypersalivation · movement disorders · nausea · respiratory disorders · respiratory secretion increased · sleep disorders · vision disorders · vomiting
  - ▶ **Uncommon** Muscle tone increased · nystagmus · skin reactions
  - ▶ **Rare or very rare** Hypotension
  - ▶ **Frequency not known** Anxiety · disorientation · drug-induced liver injury · dysphoria · hallucination
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—may depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Manufacturer advises present in milk—not thought to be harmful at therapeutic doses.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of prolonged action).
- **Dose adjustments** Manufacturer advises consider dose reduction.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises solution can be diluted with Glucose 5% or Sodium Chloride 0.9%.

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine which has similar pharmacokinetic properties to esketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Vesiera** (Pfizer Ltd)
  - **Esketamine (as Esketamine hydrochloride) 5 mg per 1 ml** Vesiera 25mg/5ml solution for injection ampoules | 10 ampoule (PoM) £18.98 (Hospital only) (CD2)
  - **Esketamine (as Esketamine hydrochloride) 25 mg per 1 ml** Vesiera 50mg/2ml solution for injection ampoules | 10 ampoule (PoM) £26.31 (Hospital only) (CD2)

## ANAESTHETICS, LOCAL

### Bupivacaine with fentanyl

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1349, fentanyl p. 458.

#### ● INDICATIONS AND DOSE

##### During labour (once epidural block established)

- ▶ BY CONTINUOUS LUMBAR EPIDURAL INFUSION
  - Adult: 10–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in 24 hours and 16–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours

##### Postoperative pain (once epidural block established)

- ▶ BY CONTINUOUS EPIDURAL INFUSION
  - Adult: 4–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in 24 hours and 8–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours, to be administered by thoracic, upper abdominal or lower abdominal epidural infusion

- **INTERACTIONS** → Appendix 1: anaesthetics, local · opioids

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

#### Solution for infusion

- ▶ **Buflyl** (Advanz Pharma)
  - **Fentanyl 2 microgram per 1 ml, Bupivacaine hydrochloride 1 mg per 1 ml** Buflyl 1mg/ml and 2micrograms/ml 250ml infusion bags | 20 bag (PoM) £170.00 (Hospital only) (CD2)
  - **Buflyl 1mg/ml and 2micrograms/ml 500ml infusion bags | 10 bag (PoM) £92.00 (Hospital only) (CD2)**
  - **Fentanyl (as Fentanyl citrate) 2 microgram per 1 ml, Bupivacaine hydrochloride 1.25 mg per 1 ml** Buflyl 1.25mg/ml and

2micrograms/ml 250ml infusion bags | 20 bag **[PoM]** £181.00  
(Hospital only) **[CD2]**  
Bupiv 1.25mg/ml and 2micrograms/ml 500ml infusion bags |  
10 bag **[PoM]** £92.00 (Hospital only) **[CD2]**

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Ketorolac trometamol

13-Aug-2018

#### ● INDICATIONS AND DOSE

##### Short-term management of moderate to severe acute postoperative pain only

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day
- Adult (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
- Elderly: Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

- **CONTRA-INDICATIONS** Active or history of gastro-intestinal bleeding · active or history of gastro-intestinal ulceration · coagulation disorders · complete or partial syndrome of nasal polyps · confirmed or suspected cerebrovascular bleeding · dehydration · following operations with high risk of haemorrhage or incomplete haemostasis · haemorrhagic diatheses · history of gastro-intestinal perforation · hypovolaemia · severe heart failure
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Agranulocytosis · angioedema · anxiety · aplastic anaemia · appetite decreased · asthenia · asthma · azotaemia · bradycardia · burping · chest pain · concentration impaired · confusion · constipation · Crohn's disease aggravated · depression · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · electrolyte imbalance · embolism and thrombosis · euphoric mood · fever · flank pain · fluid retention · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · hearing loss · heart failure · hepatic disorders · hyperhidrosis · hyperkinesia · hypersensitivity · hypertension · hypotension · infertility female · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · musculoskeletal disorder · myalgia · myocardial infarction · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral disorders · pallor · palpitations · pancreatitis · paraesthesia · perforation · photosensitivity reaction · platelet aggregation inhibition · psychotic disorder · pulmonary oedema · renal impairment · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · skin reactions · sleep disorders · stroke · taste altered · thinking

abnormal · thirst · thrombocytopenia · tinnitus · ulcer · urinary disorders · vertigo · visual impairment · vomiting · weight increased · wound haemorrhage

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1130

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—may increase risk of renal impairment; avoid in hepatic failure.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if serum creatinine greater than 160 micromol/litre.  
**Dose adjustments** The lowest effective dose should be used for the shortest possible duration. Max. 60 mg daily by intramuscular injection or intravenous injection.  
**Monitoring** In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give over at least 15 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Ketorolac trometamol (Non-proprietary)

**Ketorolac trometamol 30 mg per 1 ml** Ketorolac 30mg/1ml solution for injection ampoules | 5 ampoule **[PoM]** £15.60-£20.00 DT = £5.36 (Hospital only)

##### ► Toradol (Atrahs Pharma UK Ltd)

**Ketorolac trometamol 30 mg per 1 ml** Toradol 30mg/1ml solution for injection ampoules | 5 ampoule **[PoM]** £5.36 DT = £5.36 (Hospital only)

## Parecoxib

- **DRUG ACTION** Parecoxib is a selective inhibitor of cyclooxygenase-2.

#### ● INDICATIONS AND DOSE

##### Short-term management of acute postoperative pain

► BY DEEP INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult: Initially 40 mg, then 20–40 mg every 6–12 hours as required for up to 3 days; maximum 80 mg per day
  - Elderly (body-weight up to 50 kg): Initially 20 mg; maximum 40 mg per day
- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease
  - **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · dehydration · elderly (risk of serious side-effects and fatalities) · following coronary artery bypass graft surgery · history of cardiac failure · hypertension · left

ventricular dysfunction · oedema · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated)

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**

- ▶ **Common or very common** Agitation · back pain · constipation · dizziness · gastrointestinal discomfort · gastrointestinal disorders · hyperhidrosis · hypotension · hypokalaemia · hypotension · increased risk of infection · insomnia · nausea · numbness · peripheral oedema · post procedural complications · renal impairment · respiratory disorders · skin reactions · vomiting
- ▶ **Uncommon** Appetite decreased · arrhythmias · arthralgia · asthenia · cerebrovascular insufficiency · dry mouth · ear pain · embolism and thrombosis · hyperglycaemia · myocardial infarction · thrombocytopenia
- ▶ **Rare or very rare** Hypersensitivity · pancreatitis · perioral swelling
- ▶ **Frequency not known** Angioedema · cardiovascular event · circulatory collapse · congestive heart failure · dyspnoea · fluid retention · hepatitis · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1130

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contra-indicated in patients with a history of allergic drug reactions including sulfonamide hypersensitivity.

● **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

● **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

● **BREAST FEEDING** Avoid—present in milk.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment (risk of increased exposure); avoid in severe impairment (no information available).

**Dose adjustments** Manufacturer advises dose reduction to half the usual recommended dose in moderate impairment; maximum 40 mg daily.

● **RENAL IMPAIRMENT** Avoid if possible or use with caution.

**Dose adjustments** The lowest effective dose should be used for the shortest possible duration.

**Monitoring** In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) decisions**

The *Scottish Medicines Consortium* has advised (January 2003) that parecoxib is **not** recommended for use within NHS Scotland.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for solution for injection**

▶ **Dynastat** (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder and solvent for solution for injection vials | 5 vial **[PoM]** £28.34

**Powder for solution for injection**

▶ **Dynastat** (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder for solution for injection vials | 10 vial **[PoM]** £49.60

## ANALGESICS > OPIOIDS

447

### Alfentanil

● **INDICATIONS AND DOSE**

**Spontaneous respiration: analgesia and enhancement of anaesthesia for short procedures**

▶ **BY INTRAVENOUS INJECTION**

▶ **Adult:** Initially up to 500 micrograms, dose to be administered over 30 seconds; supplemental doses 250 micrograms

**Assisted ventilation: analgesia and enhancement of anaesthesia for short procedures**

▶ **BY INTRAVENOUS INJECTION**

▶ **Adult:** Initially 30–50 micrograms/kg, supplemental doses 15 micrograms/kg

**Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia for longer procedures**

▶ **BY INTRAVENOUS INFUSION**

▶ **Adult:** Initially 50–100 micrograms/kg, dose to be administered over 10 minutes or as a bolus, followed by maintenance 30–60 micrograms/kg/hour

**Assisted ventilation: analgesia and suppression of respiratory activity during intensive care for up to 4 days**

▶ **BY INTRAVENOUS INFUSION**

▶ **Adult:** Initially 2 mg/hour, adjusted according to response; usual dose 0.5–10 mg/hour, alternatively initially 5 mg in divided doses, to be administered over 10 minutes; dose used for more rapid initial control, reduce rate of administration if hypotension or bradycardia occur; additional doses of 0.5–1 mg may be given by intravenous injection during short painful procedures

**DOSES AT EXTREMES OF BODY-WEIGHT**

▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

● **CAUTIONS**

**CAUTIONS, FURTHER INFORMATION**

▶ Repeated intra-operative doses Repeated intra-operative doses of alfentanil should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive.

● **INTERACTIONS** → Appendix 1: opioids

● **SIDE-EFFECTS**

▶ **Common or very common** Apnoea · chills · fatigue · hypertension · movement disorders · muscle rigidity · procedural complications

▶ **Uncommon** Coma · hiccups · hypercapnia · pain · post procedural complications · respiratory disorders

▶ **Rare or very rare** Agitation · crying · epistaxis · vascular pain

▶ **Frequency not known** Cardiac arrest · cough · fever · loss of consciousness · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

● **BREAST FEEDING** Present in milk—withhold breast-feeding for 24 hours.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution.

**Dose adjustments** Manufacturer advises dose reduction and cautious titration.

● **RENAL IMPAIRMENT** Avoid use or reduce dose; opioid effects increased and prolonged and increased cerebral sensitivity occurs.

15

Anaesthesia

- **DIRECTIONS FOR ADMINISTRATION** 5 mg/mL injection to be diluted before use. For *continuous or intermittent intravenous infusion* dilute in Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

## Papaveretum with hyoscine hydrobromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, papaveretum p. 469, hyoscine hydrobromide p. 439.

#### ● INDICATIONS AND DOSE

##### Premedication

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.5–1 mL

- **INTERACTIONS** → Appendix 1: hyoscine · opioids
- **LESS SUITABLE FOR PRESCRIBING** Papaveretum with hyoscine hydrobromide is less suitable for prescribing.
- **MEDICINAL FORMS** No licensed medicines listed.

447

## Remifentanil

#### ● INDICATIONS AND DOSE

##### Analgesia and enhancement of anaesthesia at induction (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

##### Analgesia and enhancement of anaesthesia at induction with or without initial bolus dose

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 30–60 micrograms/kg/hour, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

##### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds

##### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia with or without initial bolus dose

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 3–120 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, in light anaesthesia additional doses can be given *by intravenous injection* every 2–5 minutes during the intravenous infusion

##### Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

##### Assisted ventilation: analgesia and sedation in intensive-care patients (for max 3 days)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 6–9 micrograms/kg/hour, then adjusted in steps of 1.5 micrograms/kg/hour, allow at least 5 minutes between dose adjustments; usual dose 0.36–44.4 micrograms/kg/hour, if an infusion rate of 12 micrograms/kg/hour does not produce adequate sedation add another sedative (consult product literature for details)

##### Assisted ventilation: additional analgesia during stimulating or painful procedures in intensive-care patients

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 15–45 micrograms/kg/hour, maintain infusion rate of at least 6 micrograms/kg/hour for at least 5 minutes before procedure and adjust every 2–5 minutes according to requirements

##### Cardiac surgery

- ▶ Adult: (consult product literature)

##### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Remifentanil doses in BNF may differ from those in product literature.
- **CONTRA-INDICATIONS** Analgesia in conscious patients
- **INTERACTIONS** → Appendix 1: opioids
- **SIDE-EFFECTS**
  - ▶ Common or very common Apnoea · muscle rigidity · post procedural complications
  - ▶ Uncommon Hypoxia
  - ▶ Rare or very rare Cardiac arrest
  - ▶ Frequency not known Agitation · atrioventricular block · hypertension · seizure
- SIDE-EFFECTS, FURTHER INFORMATION** In contrast to other opioids which are metabolised in the liver, remifentanil undergoes rapid metabolism by plasma esterases; it has short duration of action which is independent of dose and duration of infusion.
- Muscle rigidity** Remifentanil can cause muscle rigidity that can be managed by the use of neuromuscular blocking drugs.
- **PREGNANCY** No information available.
- **BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (limited information available).

### ● RENAL IMPAIRMENT

**Dose adjustments** No dose adjustment necessary in renal impairment.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Ultiva*<sup>®</sup>), give continuously in Glucose 5% or Sodium Chloride 0.9% or Water for Injections; reconstitute with infusion fluid to a concentration of 1 mg/mL then dilute further to a concentration of 20–250 micrograms/mL (50 micrograms/mL recommended for general anaesthesia, 20–50 micrograms/mL recommended when used with target controlled infusion (TCI) device).

### ● PRESCRIBING AND DISPENSING INFORMATION

Remifentanyl should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for solution for injection**

##### ▶ **Remifentanil (Non-proprietary)**

**Remifentanil (as Remifentanyl hydrochloride) 1 mg** Remifentanil 1mg powder for concentrate for solution for injection vials | 5 vial **[PoM]** £25.60 (Hospital only) **[CD2]**

**Remifentanil (as Remifentanyl hydrochloride) 2 mg** Remifentanil 2mg powder for concentrate for solution for injection vials | 5 vial **[PoM]** £51.13 (Hospital only) **[CD2]**

**Remifentanil (as Remifentanyl hydrochloride) 5 mg** Remifentanil 5mg powder for concentrate for solution for injection vials | 5 vial **[PoM]** £127.90-£131.74 (Hospital only) **[CD2]**

##### ▶ **Ultiva (Aspen Pharma Trading Ltd)**

**Remifentanil (as Remifentanyl hydrochloride) 1 mg** Ultiva 1mg powder for solution for injection vials | 5 vial **[PoM]** £25.58 (Hospital only) **[CD2]**

**Remifentanil (as Remifentanyl hydrochloride) 2 mg** Ultiva 2mg powder for solution for injection vials | 5 vial **[PoM]** £51.15 (Hospital only) **[CD2]**

**Remifentanil (as Remifentanyl hydrochloride) 5 mg** Ultiva 5mg powder for solution for injection vials | 5 vial **[PoM]** £127.88 (Hospital only) **[CD2]**

## 1.4 Peri-operative sedation

### Conscious sedation for clinical procedures

#### Overview

Sedation of patients during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure; some procedures are safer and more successful under anaesthesia. The patient should be *monitored carefully*; monitoring should begin as soon as the sedative is given or when the patient becomes drowsy, and should be continued until the patient wakes up.

#### ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

### Ketamine

14-Aug-2018

#### ● INDICATIONS AND DOSE

##### **Induction and maintenance of anaesthesia for short procedures**

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ **Adult:** Initially 6.5–13 mg/kg, adjusted according to response, a dose of 10 mg/kg usually produces 12–25 minutes of surgical anaesthesia

##### ▶ BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially 1–4.5 mg/kg, adjusted according to response, to be administered over at least 60 seconds, a dose of 2 mg/kg usually produces 5–10 minutes of surgical anaesthesia

##### **Diagnostic manoeuvres and procedures not involving intense pain**

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ **Adult:** Initially 4 mg/kg

##### **Induction and maintenance of anaesthesia for long procedures**

##### ▶ BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially 0.5–2 mg/kg, using an infusion solution containing 1 mg/mL; maintenance 10–45 micrograms/kg/minute, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1058 · eclampsia · head trauma · hypertension · pre-eclampsia · raised intracranial pressure · severe cardiac disease · stroke
- **CAUTIONS** Acute circulatory failure (shock) · cardiovascular disease · dehydration · elderly · fixed cardiac output · hallucinations · head injury · hypertension · hypovolaemia · increased cerebrospinal fluid pressure · intracranial mass lesions · nightmares · predisposition to seizures · psychotic disorders · raised intra-ocular pressure · respiratory tract infection · thyroid dysfunction
- **INTERACTIONS** → Appendix 1: ketamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anxiety · behaviour abnormal · confusion · diplopia · hallucination · muscle tone increased · nausea · nystagmus · skin reactions · sleep disorders · tonic clonic movements · vomiting
  - ▶ **Uncommon** Appetite decreased · arrhythmias · hypotension · respiratory disorders
  - ▶ **Rare or very rare** Apnoea · cystitis · cystitis haemorrhagic · delirium · dysphoria · flashback · hypersalivation
  - ▶ **Frequency not known** Drug-induced liver injury
- **SIDE-EFFECTS, FURTHER INFORMATION** Incidence of hallucinations can be reduced by premedication with a benzodiazepine (such as midazolam).
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Avoid for at least 12 hours after last dose.
- **HEPATIC IMPAIRMENT**

**Dose adjustments** Manufacturer advises consider dose reduction—increased risk of accumulation.
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of 1 mg/mL with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia. For *intravenous injection*, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9% or Water for Injections.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to

take patients home. The dangers of taking **alcohol** should also be emphasised.

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, spray

#### Solution for injection

##### ▶ Ketamine (Non-proprietary)

**Ketamine (as Ketamine hydrochloride) 10 mg per 1 ml** Ketamin 10 Curamed 50mg/5ml solution for injection ampoules | 10 ampoule [PoM] [S] [CD2]

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 ml** Ketamine 500mg/10ml solution for injection vials | 10 vial [PoM] £70.00 [CD2] | 10 vial [PoM] £70.00 (Hospital only) [CD2]

**Ketamin 100mg/2ml solution for injection ampoules** | 10 ampoule [PoM] [S] [CD2]

##### ▶ Ketalar (Pfizer Ltd)

**Ketamine (as Ketamine hydrochloride) 10 mg per 1 ml** Ketalar 200mg/20ml solution for injection vials | 1 vial [PoM] £5.06 (Hospital only) [CD2]

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 ml** Ketalar 500mg/10ml solution for injection vials | 1 vial [PoM] £8.77 (Hospital only) [CD2]

## HYPNOTICS, SEDATIVES AND ANXIOLYTICS > NON-BENZODIAZEPINE HYPNOTICS AND SEDATIVES

### Dexmedetomidine

06-Aug-2018

#### • INDICATIONS AND DOSE

##### Maintenance of sedation during intensive care

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 0.7 microgram/kg/hour, adjusted according to response; usual dose 0.2–1.4 micrograms/kg/hour

#### IMPORTANT SAFETY INFORMATION

Dexmedetomidine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management.

- **CONTRA-INDICATIONS** Acute cerebrovascular disorders · second- or third-degree AV block (unless pacemaker fitted) · uncontrolled hypotension
- **CAUTIONS** Abrupt withdrawal after prolonged use · bradycardia · ischaemic heart disease · malignant hyperthermia · severe cerebrovascular disease (especially at higher doses) · severe neurological disorders · spinal cord injury
- **INTERACTIONS** → Appendix 1: dexmedetomidine
- **SIDE-EFFECTS**
- ▶ **Common or very common** Agitation · arrhythmias · dry mouth · hyperglycaemia · hypertension · hyperthermia · hypoglycaemia · hypotension · myocardial infarction · myocardial ischaemia · nausea · respiratory depression · vomiting
- ▶ **Uncommon** Abdominal distension · apnoea · atrioventricular block · dyspnoea · hallucination · hypoalbuminaemia · metabolic acidosis · thirst
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—*toxicity in animal studies.*
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—*present in milk in animal studies.*
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity due to decreased clearance).

**Dose adjustments** Manufacturer advises consider dose reduction.

#### • MONITORING REQUIREMENTS

- ▶ Monitor cardiac function.
- ▶ Monitor respiratory function in non-intubated patients.

- **DIRECTIONS FOR ADMINISTRATION** To be diluted before use. For *intravenous infusion* given continuously in Glucose 5% or Sodium chloride 0.9%, dilute to a concentration of 4 micrograms/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

##### ▶ Dexmedetomidine (Non-proprietary)

###### Dexmedetomidine (as Dexmedetomidine hydrochloride)

**100 microgram per 1 ml** Dexmedetomidine 1mg/10ml concentrate for solution for infusion vials | 4 vial [PoM] £313.10 (Hospital only)

**Dexmedetomidine 400micrograms/4ml concentrate for solution for infusion vials** | 4 vial [PoM] £125.30 (Hospital only)

**Dexmedetomidine 200micrograms/2ml concentrate for solution for infusion ampoules** | 5 ampoule [PoM] £78.30 (Hospital only)

##### ▶ Dexdor (Orion Pharma (UK) Ltd)

###### Dexmedetomidine (as Dexmedetomidine hydrochloride)

**100 microgram per 1 ml** Dexdor 1mg/10ml concentrate for solution for infusion vials | 4 vial [PoM] £313.20 (Hospital only)

**Dexdor 400micrograms/4ml concentrate for solution for infusion vials** | 4 vial [PoM] £125.28 (Hospital only)

**Dexdor 200micrograms/2ml concentrate for solution for infusion ampoules** | 5 ampoule [PoM] £78.30 (Hospital only) | 25 ampoule [PoM] £391.50 (Hospital only)

## 2 Malignant hyperthermia

### MUSCLE RELAXANTS > DIRECTLY ACTING

### Dantrolene sodium

24-Jul-2018

- **DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

#### • INDICATIONS AND DOSE

##### Malignant hyperthermia

###### ▶ BY RAPID INTRAVENOUS INJECTION

- ▶ Adult: Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg/kg per course

##### Chronic severe spasticity of voluntary muscle

###### ▶ BY MOUTH

- ▶ Adult: Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals; usual dose 75 mg 3 times a day

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in the use of dantrolene when used for malignant hyperthermia.

#### • CONTRA-INDICATIONS

- ▶ With oral use Acute muscle spasm · avoid when spasticity is useful, for example, locomotion

#### • CAUTIONS

- ▶ With intravenous use Avoid extravasation (risk of tissue necrosis)
- ▶ With oral use Females (hepatotoxicity) · history of liver disorders (hepatotoxicity) · if doses greater than 400 mg daily (hepatotoxicity) · impaired cardiac function · impaired pulmonary function · patients over 30 years (hepatotoxicity) · therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

- **INTERACTIONS** → Appendix 1: dantrolene

## ● SIDE-EFFECTS

### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · hepatic disorders · nausea · respiratory disorders · skin reactions · speech disorder · vomiting
- ▶ **Uncommon** Crystalluria · hyperhidrosis
- ▶ **Frequency not known** Arrhythmias · dizziness · drowsiness

### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With oral use Appetite decreased · chills · confusion · depression · eosinophilia · fever · headache · insomnia · nervousness · pericarditis · visual impairment
- ▶ **Uncommon**
- ▶ With oral use Constipation · dysphagia · haemorrhage · heart failure aggravated · urinary disorders
- ▶ **Frequency not known**
- ▶ With intravenous use Gastrointestinal haemorrhage · heart failure · localised pain · pulmonary oedema · seizure · thrombophlebitis
- ▶ With oral use Asthenia · diarrhoea · dyspnoea · hypertension · malaise

## ● PREGNANCY

- ▶ With intravenous use Use only if potential benefit outweighs risk.
- ▶ With oral use Avoid use in chronic spasticity—embryotoxic in *animal* studies.

## ● BREAST FEEDING

- ▶ With intravenous use Present in milk—use only if potential benefit outweighs risk.
- ▶ With oral use Present in milk—manufacturer advises avoid use in chronic spasticity.

## ● HEPATIC IMPAIRMENT

- ▶ With oral use Manufacturer advises avoid in hepatic impairment.

## ● MONITORING REQUIREMENTS

- ▶ With oral use Test liver function before and at intervals during therapy.

## ● PATIENT AND CARER ADVICE

- ▶ Hepatotoxicity
- ▶ With oral use Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.
- ▶ **Driving and skilled tasks** ▶ With oral use Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

### Powder for solution for injection

- ▶ **Dantrium** (Norgine Pharmaceuticals Ltd)
- ▶ **Dantrolene sodium 20 mg** Dantrium Intravenous 20mg powder for solution for injection vials | 12 vial [PoM] £612.00 (Hospital only) | 36 vial [PoM] £1,836.00 (Hospital only)

### Capsule

#### CAUTIONARY AND ADVISORY LABELS 2

- ▶ **Dantrium** (Norgine Pharmaceuticals Ltd)
- ▶ **Dantrolene sodium 25 mg** Dantrium 25mg capsules | 100 capsule [PoM] £16.87 DT = £16.87
- ▶ **Dantrolene sodium 100 mg** Dantrium 100mg capsules | 100 capsule [PoM] £43.07 DT = £43.07

# Local anaesthesia

## Anaesthesia (local)

### Local anaesthetic drugs

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 1349 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Levobupivacaine p. 1351, an isomer of bupivacaine, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 103 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should **not** usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 1353) is about 90 minutes.

Prilocaine hydrochloride p. 1356 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride. A hyperbaric solution of prilocaine hydrochloride (containing glucose) may be used for spinal anaesthesia.

Ropivacaine hydrochloride p. 1357 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 1358, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. It is rapidly absorbed from mucous membranes and should **never** be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

### Administration by injection

The dose of local anaesthetic depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The patient's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity.

NHS Improvement has advised (September 2016) that, prior to administration, all injectable medicines must be drawn directly from their original ampoule or container into a syringe and should **never** be decanted into gallipots or open containers. This is to avoid the risk of medicines being confused with other substances, e.g. skin disinfectants, and to reduce the risk of contamination.

Great care must be taken to avoid accidental intravascular injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is commonly used during surgery, often combined with general anaesthesia, because of its protective effect against the stress response of surgery. It is often used when good postoperative pain relief is essential.

### Vasoconstrictors in combination with local anaesthetics

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is **not** advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline/epinephrine should be used.

### Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine.

The amide-type local anaesthetics **articaine** and mepivacaine hydrochloride p. 1355 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine and articaine is available with adrenaline.

In patients with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin can cause coronary vasoconstriction when used at high doses; limit dose in patients with coronary artery disease.

### Toxicity induced by local anaesthesia

For management of toxicity see Severe local anaesthetic-induced cardiovascular toxicity below.

## Severe local anaesthetic-induced cardiovascular toxicity

### Overview

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as *Intralipid*<sup>®</sup> [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at [www.toxbase.org](http://www.toxbase.org) can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic Toxicity and Management of Severe Local Anaesthetic Toxicity - Accompanying notes.

## ANAESTHETICS, LOCAL

### Adrenaline with articaine hydrochloride

28-Mar-2017

#### (Carticaine hydrochloride with epinephrine)

#### ● INDICATIONS AND DOSE

##### Infiltration anaesthesia in dentistry

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: Consult expert dental sources

##### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **CONTRA-INDICATIONS** Application to damaged skin · application to the middle ear (may cause ototoxicity) · complete heart block · injection into infected tissues · injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block)

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS** Arrhythmias · arteriosclerosis · cardiovascular disease · cerebrovascular disease · cor pulmonale · debilitated patients (consider dose reduction) · diabetes mellitus · elderly (consider dose reduction) · epilepsy · hypercalcaemia · hyperreflexia · hypertension · hyperthyroidism · hypokalaemia · hypovolaemia · impaired cardiac conduction · impaired respiratory function · ischaemic heart disease · myasthenia gravis · obstructive cardiomyopathy · occlusive vascular disease · organic brain damage · phaeochromocytoma · prostate disorders · psychoneurosis · severe angina · shock · susceptibility to angle-closure glaucoma

#### CAUTIONS, FURTHER INFORMATION

- ▶ Use of vasoconstrictors In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: articaine · sympathomimetics, vasoconstrictor

- **SIDE-EFFECTS** Face oedema · gingivitis · headache · nausea · sensation abnormal

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The toxicity mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

#### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Avoid breast-feeding for 48 hours after administration.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity in severe impairment).

- **RENAL IMPAIRMENT** Manufacturers advise use with caution in severe impairment.

- **MONITORING REQUIREMENTS** Consider monitoring blood pressure and ECG (advised with systemic adrenaline/epinephrine).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Sulfites

- ▶ **Septanest** (Septodont Ltd)

Adrenaline (as Adrenaline acid tartrate) 10 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml Septanest 1 in 100,000 solution for injection cartridges | 50 cartridge [PoM] £24.95

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml Septanest 1 in 200,000 solution for injection cartridges | 50 cartridge [PoM] £24.95

#### Surgical anaesthesia, field block

- ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

#### Surgical anaesthesia, thoracic epidural block

- ▶ BY THORACIC EPIDURAL

- ▶ Adult: 12.5–50 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

#### Surgical anaesthesia, caudal epidural block

- ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 50–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

#### Surgical anaesthesia, major nerve block

- ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 50–175 mg, dose administered using 5 mg/mL (0.5%) solution

#### Acute pain, intra-articular block

- ▶ BY INTRA-ARTICULAR INJECTION

- ▶ Adult: Up to 100 mg, dose administered using a 2.5 mg/mL (0.25%) solution; when co-administered with bupivacaine by another route, total max. 150 mg

#### Acute pain, thoracic epidural block

- ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 6.3–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

#### Acute pain, labour

- ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 6.25–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

#### Acute pain, lumbar epidural block

- ▶ INITIALLY BY LUMBAR EPIDURAL

- ▶ Adult: 15–37.5 mg, then (by lumbar epidural) 15–37.5 mg, repeated when required at intervals of at least 30 minutes, dose administered by intermittent injection using a 2.5 mg/mL (0.25%) solution, alternatively (by continuous epidural infusion) 12.5–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

#### Acute pain, field block

- ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### MARCAIN HEAVY®

#### Intrathecal anaesthesia for surgery

- ▶ BY INTRATHECAL INJECTION

- ▶ Adult: 10–20 mg

#### IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

## Bupivacaine hydrochloride

13-Jun-2018

#### ● INDICATIONS AND DOSE

##### Surgical anaesthesia, lumbar epidural block

- ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 75–150 mg, dose administered using a 5 mg/mL (0.5%) solution

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous

regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · cerebral atheroma · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypertension · hypotension · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · myocardial depression may be more severe and more resistant to treatment · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS**
- **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · urinary retention · vomiting
- ▶ **Uncommon** Neurotoxicity
- ▶ **Rare or very rare** Arachnoiditis · cardiac arrest · diplopia · nerve disorders · paraplegia · paresis · respiratory depression

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

- **ALLERGY AND CROSS-SENSITIVITY**
- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.  
**Dose adjustments** Use lower doses for intrathecal use during late pregnancy.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in advanced liver dysfunction.
- **RENAL IMPAIRMENT** Use with caution in severe impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

#### Solution for injection

##### ▶ Bupivacaine hydrochloride (Non-proprietary)

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Bupivacaine 25mg/10ml (0.25%) solution for injection vials | 10 vial [PoM](#) [S](#)  
Bupivacaine 0.25% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £17.50 DT = £17.50

**Bupivacaine hydrochloride 5 mg per 1 ml** Bupivacaine 0.5% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £18.30 DT = £18.30

Bupivacaine 100mg/20ml (0.5%) solution for injection vials | 10 vial [PoM](#) [S](#)

Bupivacaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM](#) £7.56-£17.58 DT = £7.56

**Bupivacaine hydrochloride anhydrous 40 mg per 1 ml** Bupivacain Sintetica 40mg/ml (4%) solution for injection ampoules | 10 ampoule [PoM](#) [S](#)

##### ▶ Marcain (Aspen Pharma Trading Ltd)

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Marcain 0.25% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) [S](#)  
£7.92 DT = £7.92

**Bupivacaine hydrochloride 5 mg per 1 ml** Marcain 0.5% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) [S](#)  
£9.25 DT = £9.25

#### Infusion

##### ▶ Bupivacaine hydrochloride (Non-proprietary)

**Bupivacaine hydrochloride 1 mg per 1 ml** Bupivacaine 100mg/100ml (0.1%) infusion bags | 20 bag [PoM](#) [S](#)  
Bupivacaine 250mg/250ml (0.1%) infusion bags | 20 bag [PoM](#) [S](#)  
£243.48

## Bupivacaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1349, adrenaline/epinephrine p. 222.

#### ● INDICATIONS AND DOSE

##### Surgical anaesthesia

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION, OR BY CAUDAL EPIDURAL
- ▶ **Adult:** (consult product literature)

##### Acute pain management

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION
- ▶ **Adult:** (consult product literature)

#### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200,000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

#### ● CAUTIONS

**CAUTIONS, FURTHER INFORMATION** In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: anaesthetics, local · sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Bupivacaine with adrenaline (Non-proprietary)

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 2.5 mg per 1 ml** Bupivacaine 25mg/10ml (0.25%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM](#) [S](#) £46.00 DT = £46.00

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride anhydrous 2.5 mg per 1 ml** Carbostesin-adrenaline 0.25% / 100micrograms/20ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM](#) [S](#)

## Levobupivacaine

01-Aug-2018

### ● INDICATIONS AND DOSE

#### Acute postoperative pain

##### ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 12.5–18.75 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

#### Acute labour pain

##### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 15–25 mg, repeated at intervals of at least 15 minutes, dose administered using a 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

##### ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 5–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

#### Surgical anaesthesia, peripheral nerve block

##### ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

#### Surgical anaesthesia, peribulbar nerve block

##### ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 37.5–112.5 mg, dose administered using a 7.5 mg/mL (0.75%) solution

#### Surgical anaesthesia for caesarean section

##### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 75–150 mg, to be given over 15–20 minutes, dose administered using a 5 mg/mL (0.5%) solution

#### Surgical anaesthesia

##### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 50–150 mg, to be given over 5 minutes, dose administered using a 5 mg/mL (0.5%) or 7.5 mg/mL (0.75%) solution

##### ▶ BY INTRATHECAL INJECTION

- ▶ Adult: 15 mg, dose administered using a 5 mg/mL (0.5%) solution

##### ▶ BY LOCAL INFILTRATION

- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

### IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose

reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · back pain · dizziness · fever · headache · hypotension · nausea · procedural pain · vomiting
- ▶ **Frequency not known** Angioedema · apnoea · arrhythmias · asthma · atrioventricular block · bladder disorder · cardiac arrest · drowsiness · eye disorders · faecal incontinence · flushing · loss of consciousness · muscle twitching · muscle weakness · nerve disorders · neurological injury · oral hypoaesthesia · paralysis · priapism · respiratory disorders · seizure · sensation abnormal · skin reactions · sneezing · sweat changes · syncope · vision blurred

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. Systemic toxicity can occur due to inadvertent intravascular injection. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

#### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—toxicity in *animal* studies. May cause fetal distress syndrome. Do not use for paracervical block in obstetrics. Do not use 7.5 mg/mL strength in obstetrics.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in impairment or patients with reduced hepatic blood flow (no information available).

- **DIRECTIONS FOR ADMINISTRATION** For 1.25 mg/mL concentration dilute standard solutions with sodium chloride 0.9%.

#### ● PRESCRIBING AND DISPENSING INFORMATION

Levobupivacaine is an isomer of bupivacaine.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Levobupivacaine (Non-proprietary)

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Levobupivacaine 25mg/10ml solution for injection ampoules | 5 ampoule [PoM] £9.00 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Levobupivacaine 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £10.35 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Levobupivacaine 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.45 (Hospital only)

##### ▶ Chirocaine (AbbVie Ltd)

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Chirocaine 25mg/10ml solution for injection ampoules | 10 ampoule [PoM] £14.11 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Chirocaine 50mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Chirocaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £24.23 (Hospital only)

**Infusion**▶ **Levobupivacaine (Non-proprietary)**

**Levobupivacaine** (as Levobupivacaine hydrochloride) 625 mg per 1 ml Levobupivacaine 62.5mg/100ml infusion bags | 5 bag [PoM]   
**Levobupivacaine** 125mg/200ml infusion bags | 5 bag [PoM] 

▶ **Levobupivacaine (as Levobupivacaine hydrochloride)** 1.25 mg per 1 ml

**Levobupivacaine** 125mg/100ml infusion bags | 5 bag [PoM]   
**Chirocaine** (AbbVie Ltd)  
**Levobupivacaine** (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml Chirocaine 125mg/100ml infusion bags | 24 bag [PoM] £174.22  
 Chirocaine 250mg/200ml infusion bags | 12 bag [PoM] 

**Lidocaine hydrochloride****(Lignocaine hydrochloride)**● **INDICATIONS AND DOSE****Infiltration anaesthesia**

## ▶ BY LOCAL INFILTRATION

- ▶ Adult: Dose to be given according to patient's weight and nature of procedure; max. 200 mg, maximum dose 500 mg if given in solutions containing adrenaline

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ When used by local infiltration To avoid excessive dosage in obese patients, weight-based doses for non-emergency indications may need to be calculated on the basis of ideal body-weight.

**Intravenous regional anaesthesia and nerve block**

## ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: Seek expert advice

**Pain relief (in anal fissures, haemorrhoids, pruritus ani, pruritus vulvae, herpes zoster, or herpes labialis)****Lubricant in cystoscopy | Lubricant in proctoscopy**

## ▶ TO THE SKIN USING OINTMENT

- ▶ Adult: Apply 1–2 mL as required, avoid long-term use

**Sore nipples from breast-feeding**

## ▶ TO THE SKIN USING OINTMENT

- ▶ Adult: Apply using gauze and wash off immediately before next feed

**LMX 4<sup>®</sup>****Anaesthesia before venous cannulation or venepuncture**

## ▶ TO THE SKIN

- ▶ Child 1-2 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 60 minutes, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Child 3-11 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 4 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Child 1-17 years: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Adult: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

**VERSATIS<sup>®</sup>****Postherpetic neuralgia**

## ▶ TO THE SKIN

- ▶ Adult: Apply once daily for up to 12 hours, followed by a 12-hour plaster-free period; discontinue if no response after 4 weeks, to be applied to intact, dry, non-hairy, non-irritated skin, up to 3 plasters may be used to cover large areas; plasters may be cut

**XYLOCAINE<sup>®</sup>****During delivery in obstetrics**

## ▶ TO THE SKIN

- ▶ Adult: Up to 20 doses

**IMPORTANT SAFETY INFORMATION**

- ▶ When used by local infiltration

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

● **CONTRA-INDICATIONS**

- ▶ When used by regional administration All grades of atrioventricular block · application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · severe myocardial depression · should not be applied to damaged skin · sino-atrial disorders

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ When used by regional administration Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

● **CAUTIONS**

- ▶ When used by regional administration Acute porphyrias p. 1058 (consider infusion with glucose for its anti-porphyrinogenic effects) · children (consider dose reduction) · congestive cardiac failure (consider lower dose) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · post cardiac surgery (consider lower dose) · shock

- **INTERACTIONS** → Appendix 1: antiarrhythmics

● **SIDE-EFFECTS**

- ▶ With parenteral use Anxiety · arrhythmias · atrioventricular block · cardiac arrest · circulatory collapse · confusion · dizziness · drowsiness · euphoric mood · headache · hypotension (may lead to cardiac arrest) · loss of consciousness · methaemoglobinaemia · muscle twitching · myocardial contractility decreased · nausea · neurological effects · nystagmus · pain · psychosis · respiratory disorders · seizure · sensation abnormal · temperature sensation altered · tinnitus · tremor · vision blurred · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** **Toxic effects** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

**Methaemoglobinaemia** Methylthionium chloride is licensed for the acute symptomatic treatment of drug-induced methaemoglobinaemia.

### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.

- **BREAST FEEDING** Present in milk but amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Caution—increased risk of side-effects.

- **RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.

### ● MONITORING REQUIREMENTS

- ▶ With systemic use Monitor ECG and have resuscitation facilities available.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### VERSATIS®

#### Scottish Medicines Consortium (SMC) decisions

The *Scottish Medicines Consortium* has advised (July 2008) that *Versatis*® is accepted for restricted use within NHS Scotland for the treatment of postherpetic neuralgia in patients who are intolerant of first-line systemic therapies or when they have been ineffective.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, liquid, ointment

#### Solution for injection

##### ▶ Lidocaine hydrochloride (Non-proprietary)

- Lidocaine hydrochloride 5 mg per 1 ml Lidocaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM] £7.00
- Lidocaine hydrochloride 10 mg per 1 ml Lidocaine 100mg/10ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £1.15–£11.21
- Lidocaine 100mg/10ml (1%) solution for injection ampoules | 10 ampoule [PoM] £4.00–£5.00 DT = £4.40
- Lidocaine 200mg/20ml (1%) solution for injection vials | 10 vial [PoM] £19.00–£22.00 DT = £22.00
- Lidocaine 200mg/20ml (1%) solution for injection ampoules | 10 ampoule [PoM] £7.00–£11.00 DT = £11.00
- Lidocaine 50mg/5ml (1%) solution for injection ampoules | 10 ampoule [PoM] £2.59–£12.00 DT = £2.59
- Lidocaine 200mg/20ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £
- Lidocaine 20mg/2ml (1%) solution for injection ampoules | 10 ampoule [PoM] £12.00 DT = £2.20
- Lidocaine 50mg/5ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £6.50
- Lidocaine 50mg/5ml (1%) solution for injection Sure-Amp ampoules | 20 ampoule [PoM] £6.00
- Lidocaine hydrochloride 20 mg per 1 ml Lidocaine 100mg/5ml (2%) solution for injection ampoules | 10 ampoule [PoM] £2.70–£12.00 DT = £2.70
- Lidocaine 400mg/20ml (2%) solution for injection vials | 10 vial [PoM] £19.50–£23.00 DT = £23.00
- Lidocaine 200mg/10ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £14.95
- Lidocaine 400mg/20ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £
- Lidocaine 40mg/2ml (2%) solution for injection ampoules | 10 ampoule [PoM] £12.00 DT = £2.37
- Lidocaine 100mg/5ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £7.50
- Lidocaine 400mg/20ml (2%) solution for injection ampoules | 10 ampoule [PoM] £8.00–£11.40 DT = £11.40

### Medicated plaster

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

- ▶ **Ralvo** (Grunenthal Ltd)  
Lidocaine 50 mg per 1 gram Ralvo 700mg medicated plasters | 30 plaster [PoM] £61.54 DT = £72.40
- ▶ **Versatis** (Grunenthal Ltd)  
Lidocaine 50 mg per 1 gram Versatis 700mg medicated plasters | 30 plaster [PoM] £72.40 DT = £72.40

### Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

- ▶ **LMX 4** (Ferndale Pharmaceuticals Ltd)  
Lidocaine 40 mg per 1 gram LMX 4 cream | 5 gram [P] £2.98 DT = £2.98 | 30 gram [P] £14.90 DT = £14.90
- ▶ **Vagisil medicated** (Combe International Ltd)  
Lidocaine 20 mg per 1 gram Vagisil 2% medicated cream | 30 gram [GSL] £2.99 DT = £2.99

### Ointment

- ▶ **Lidocaine hydrochloride (Non-proprietary)**  
Lidocaine hydrochloride 50 mg per 1 gram Lidocaine 5% ointment | 15 gram [P] £9.00 DT = £6.18

## Lidocaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 103, adrenaline/epinephrine p. 222.

### ● INDICATIONS AND DOSE

#### Local anaesthesia

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: Dosed according to the type of nerve block required (consult product literature)

### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **INTERACTIONS** → Appendix 1: antiarrhythmics · sympathomimetics, vasoconstrictor

### ● PROFESSION SPECIFIC INFORMATION

#### Dental information

A variety of lidocaine injections with adrenaline is available in dental cartridges.

Consult expert dental sources for specific advice in relation to dose of lidocaine for dental anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

EXCIPIENTS: May contain Sulfites

- ▶ **Lignospan Special** (Septodont Ltd)  
Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml Lignospan Special 2% injection 2.2ml cartridges | 50 cartridge [PoM] £21.95  
Lignospan Special 2% injection 1.8ml cartridges | 50 cartridge [PoM] £21.95
- ▶ **Rexocaine** (Henry Schein Ltd)  
Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml Rexocaine 2% injection 2.2ml cartridges | 50 cartridge [PoM] £23.29
- ▶ **Xylocaine with Adrenaline** (Aspen Pharma Trading Ltd)  
Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 10 mg per 1 ml Xylocaine 1% with Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £9.66 DT = £9.66
- Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml Xylocaine 2% with

Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £8.85 DT = £8.85

## Lidocaine with cetrimide

27-Apr-2018

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 103.

### ● INDICATIONS AND DOSE

#### Anaesthesia and disinfection in dental practice

- ▶ TO MUCOUS MEMBRANES USING OROMUCOSAL SPRAY
- ▶ Adult: 10–20 mg, no more than 30 mg should be applied to the same quadrant of the buccal cavity—consult product literature, dose expressed as lidocaine

#### Anaesthesia in dental practice

- ▶ TO MUCOUS MEMBRANES USING DENTAL GEL
- ▶ Adult: Apply 100–500 mg, use cotton pellet for application to dried mucosa, dose expressed as weight of gel

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ 1 metered dose of Xylonor® spray is equivalent to 10 mg of lidocaine.
- ▶ 2 millimetres of Xylonor® gel is approximately equivalent to 100 mg of gel (approximately equivalent to 5 mg of lidocaine).

- **CAUTIONS** Sepsis (risk of rapid systemic absorption) • traumatised mucosa (risk of rapid systemic absorption)
- **INTERACTIONS** → Appendix 1: antiarrhythmics
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oromucosal gel

- ▶ Xylonor (Septodont Ltd)  
Cetrimide 1.5 mg per 1 gram, Lidocaine 50 mg per 1 gram Xylonor 5% gel sugar-free | 15 gram [PoM] £4.00

#### Spray

- ▶ Xylonor (Septodont Ltd)  
Cetrimide 100 microgram per 1 gram, Lidocaine 10 mg per 1 gram Xylonor 10% spray sugar-free | 36 gram [PoM] £20.15

## Lidocaine with phenylephrine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 103, phenylephrine hydrochloride p. 189.

### ● INDICATIONS AND DOSE

#### Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Adult: Up to 8 sprays

- **INTERACTIONS** → Appendix 1: antiarrhythmics • sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

- ▶ Lidocaine with phenylephrine (Non-proprietary)  
Phenylephrine hydrochloride 5 mg per 1 ml, Lidocaine hydrochloride 50 mg per 1 ml Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 ml [PoM] £12.90 DT = £12.90

## Lidocaine with prilocaine

25-Apr-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 103, prilocaine hydrochloride p. 1356.

### ● INDICATIONS AND DOSE

#### Anaesthesia before minor skin procedures including venepuncture

- ▶ TO THE SKIN
- ▶ Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day
- ▶ Child 3-11 months: Apply up to 2 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 1-11 years: Apply 1–5 hours before procedure, a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 12-17 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)
- ▶ Adult: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing

#### Anaesthesia on genital skin before injection of local anaesthetics

- ▶ TO THE SKIN
- ▶ Adult: Apply under occlusive dressing for 15 minutes (males) or 60 minutes (females) before procedure

#### Anaesthesia before surgical treatment of lesions on genital mucosa

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 10 g, to be applied 5–10 minutes before procedure

#### Anaesthesia before cervical curettage

- ▶ TO THE SKIN
- ▶ Adult: Apply 10 g in lateral vaginal fornices for 10 minutes

#### Anaesthesia before mechanical cleansing or debridement of leg ulcer

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 10 g for 30–60 minutes, to be applied under occlusive dressing

#### FORTACIN®

#### Primary premature ejaculation

- ▶ TO THE SKIN
- ▶ Adult: 3 sprays every 4 hours as required, to be applied to cover the glans penis (excess spray should be removed after 5 minutes and before intercourse); maximum 9 sprays per day

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Fortacin®: Each dose of 3 sprays is equivalent to lidocaine 22.5 mg and prilocaine 7.5 mg.

- **CONTRA-INDICATIONS** Use in child less than 37 weeks corrected gestational age

- **CAUTIONS**

**FORTACIN**® Acquired methaemoglobinaemia · anaemia · congenital methaemoglobinaemia

- **INTERACTIONS** → Appendix 1: anaesthetics, local · antiarrhythmics

- **SIDE-EFFECTS**

- ▶ **Common or very common** Sexual dysfunction (in adults)
  - ▶ **Uncommon** Fever (in adults) · headache (in adults) · penis disorder (in adults)
  - ▶ **Rare or very rare** Methaemoglobinaemia · skin reactions
- SIDE-EFFECTS, FURTHER INFORMATION** When applied to the glans penis, side-effects for sexual partners should be considered. Side-effects reported in female partners include vaginal candidiasis and dysuria.

- **CONCEPTION AND CONTRACEPTION**

**FORTACIN**® Deterioration of polyurethane-based female and male condoms has been observed. Manufacturer advises avoid in patients planning to conceive, or if it is essential to achieve penetration, then the glans penis should be washed thoroughly 5 minutes after application but before intercourse.

- **PREGNANCY**

**FORTACIN**® Manufacturer advises preferably avoid unless an effective male barrier contraceptive is used—limited information available.

- **HEPATIC IMPAIRMENT**

**FORTACIN**® Manufacturer advises caution in severe impairment (no information available).

- **DIRECTIONS FOR ADMINISTRATION**

**FORTACIN**® Manufacturer advises when using the spray for the first time, shake and prime the unit with 3 sprays, and before each subsequent use, shake and prime the unit with 1 spray.

- **PATIENT AND CARER ADVICE**

Medicines for Children leaflet: EMLA cream for local anaesthesia [www.medicinesforchildren.org.uk/emla-cream-local-anaesthesia](http://www.medicinesforchildren.org.uk/emla-cream-local-anaesthesia)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

- ▶ **Denela** (Teva UK Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Denela  
5% cream | 5 gram [P] £2.84–£3.29 | 25 gram [P] £12.99 |  
30 gram [P] £14.75 DT = £12.30

- ▶ **Emla** (Aspen Pharma Trading Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Emla  
5% cream | 5 gram [P] £2.25–£2.99 | 25 gram [P] £11.70 |  
30 gram [P] £12.30 DT = £12.30

- ▶ **Nulbia** (Glenmark Pharmaceuticals Europe Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Nulbia  
5% cream | 5 gram [P] £1.58 | 25 gram [P] £7.88 | 30 gram [P]  
£8.61 DT = £12.30

**Cutaneous spray solution**

- ▶ **Fortacin** (Recordati Pharmaceuticals Ltd)

**Prilocaine 50 mg per 1 ml, Lidocaine 150 mg per 1 ml** Fortacin  
150mg/ml / 50mg/ml cutaneous spray | 5 ml [PoM] £59.99

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
  - **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) (in adults) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
  - **INTERACTIONS** → Appendix 1: anaesthetics, local
  - **SIDE-EFFECTS**
    - ▶ **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · vomiting
    - ▶ **Uncommon** Neurotoxicity
    - ▶ **Rare or very rare** Arachnoiditis · cardiac arrest · diplopia · nerve disorders · respiratory depression
- SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.
- **ALLERGY AND CROSS-SENSITIVITY**
    - ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
  - **PREGNANCY** Use with caution in early pregnancy.
  - **BREAST FEEDING** Use with caution.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution; increased risk of toxic plasma concentrations in severe impairment.
  - **RENAL IMPAIRMENT** Use with caution; increased risk of side-effects.

## Mepivacaine hydrochloride

05-Aug-2018

- **INDICATIONS AND DOSE**

**Infiltration anaesthesia and nerve block in dentistry**

- ▶ Child 3–17 years: Consult expert dental sources
- ▶ Adult: Consult expert dental sources

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Scandonest plain** (Septodont Ltd)

**Mepivacaine hydrochloride 30 mg per 1 ml** Scandonest plain 3% solution for injection 2.2ml cartridges | 50 cartridge [PoM] £21.95

## Mepivacaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, mepivacaine hydrochloride p. 1355, adrenaline/epinephrine p. 222.

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia and nerve block in dentistry

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **INTERACTIONS** → Appendix 1: anaesthetics, local - sympathomimetics, vasoconstrictor
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Sulfités

- ▶ **Scandonest special** (Septodont Ltd)

Adrenaline 10 microgram per 1 ml, Mepivacaine hydrochloride 20 mg per 1 ml Scandonest special 2% solution for injection 2.2ml cartridges | 50 cartridge [P6M] £21.95

## Prilocaine hydrochloride

### ● INDICATIONS AND DOSE

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### CITANEST 1%®

#### Infiltration anaesthesia | Nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 100–200 mg/minute, alternatively may be given in incremental doses; dose adjusted according to site of administration and response, and in elderly and debilitated patients (smaller doses may be required); maximum 400 mg per course

#### PRILOTEKAL®

#### Spinal anaesthesia

- ▶ BY INTRATHECAL INJECTION
- ▶ Adult: Usual dose 40–60 mg (max. per dose 80 mg), dose may need to be reduced in elderly or debilitated patients, or in late pregnancy

### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acquired methaemoglobinaemia - anaemia - application to the middle ear (can cause ototoxicity) - avoid injection into infected tissues - avoid injection into inflamed tissues - complete heart block - congenital methaemoglobinaemia - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) - should not be applied to damaged skin

### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease - debilitated patients (consider dose reduction) - elderly (consider dose reduction) - epilepsy - hypovolaemia - impaired cardiac conduction - impaired respiratory function - myasthenia gravis - severe or untreated hypertension - shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias - dizziness - hypertension - hypotension - nausea - paraesthesia - vomiting
  - ▶ **Uncommon** Neurotoxicity
  - ▶ **Rare or very rare** Cardiac arrest - methaemoglobinaemia - nerve disorders
  - ▶ **Frequency not known** Diplopia - respiratory depression
- SIDE-EFFECTS, FURTHER INFORMATION** **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

**Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of methylthionium chloride.

- **ALLERGY AND CROSS-SENSITIVITY**
  - ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or pudendal block in obstetrics (neonatal methaemoglobinaemia reported).
  - Dose adjustments** Use lower doses for intrathecal use during late pregnancy.
- **BREAST FEEDING** Present in milk but not known to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
  - Dose adjustments** ▶ With intrathecal use Manufacturer advises consider dose reduction.
- **RENAL IMPAIRMENT** Use with caution.
  - Dose adjustments** Lower doses may be required for intrathecal anaesthesia.
- **NATIONAL FUNDING/ACCESS DECISIONS**

**PRILOTEKAL®**

**Scottish Medicines Consortium (SMC) decisions**

  - ▶ With intrathecal use The *Scottish Medicines Consortium* has advised (December 2010) that prilocaine 2% hyperbaric solution for injection (*Prilotekal*®) is accepted for restricted use within NHS Scotland for use in spinal anaesthesia in ambulatory surgery settings.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Citanest** (Aspen Pharma Trading Ltd)  
**Prilocaine hydrochloride 10 mg per 1 ml** Citanest 1% solution for injection 50ml vials | 1 vial [PoM](#) £5.06
- ▶ **Prilotekal** (Sintetica Ltd)  
**Prilocaine hydrochloride 20 mg per 1 ml** Prilotekal 100mg/5ml solution for injection ampoules | 10 ampoule [PoM](#) £78.80

## Prilocaine with felypressin

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 1356.

#### ● INDICATIONS AND DOSE

##### Dental anaesthesia

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: Consult expert dental sources for specific advice

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS** Bradycardia · cardiac arrest · dizziness · drowsiness · hypotension · loss of consciousness · methaemoglobinaemia · myocardial contractility decreased · nervousness · respiratory arrest · seizure · tremor · vision blurred

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Citanest with Octapressin** (Dentsply Ltd)  
**Prilocaine hydrochloride 30 mg per 1 ml, Felypressin.03 unit per 1 ml** Citanest 3% with Octapressin Dental 0.066units/2.2ml solution for injection self aspirating cartridges | 50 cartridge [PoM](#) [X](#)

## Ropivacaine hydrochloride

#### ● INDICATIONS AND DOSE

##### Acute pain, peripheral nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 10–20 mg/hour, dose administered as a continuous infusion or by intermittent injection using a 2 mg/mL (0.2%) solution

##### Acute pain, field block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 2–200 mg, dose administered using a 2 mg/mL (0.2%) solution

##### Acute pain, lumbar epidural block

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 20–40 mg, followed by 20–30 mg at least every 30 minutes, dose administered using a 2 mg/mL (0.2%) solution

##### Acute labour pain

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–20 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

##### Acute postoperative pain

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: Up to 28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

##### Postoperative pain, thoracic epidural block

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

##### Surgical anaesthesia, field block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 7.5–225 mg, dose administered using a 7.5 mg/mL (0.75%) solution

##### Surgical anaesthesia, major nerve block (brachial plexus block)

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 225–300 mg, dose administered using a 7.5 mg/mL (0.75%) solution

##### Surgical anaesthesia, thoracic epidural block (to establish block for postoperative pain)

- ▶ BY THORACIC EPIDURAL
- ▶ Adult: 38–113 mg, dose administered using a 7.5 mg/mL (0.75%) solution

##### Surgical anaesthesia for caesarean section

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–150 mg, to be administered in incremental doses using a 7.5 mg/mL (0.75%) solution

##### Surgical anaesthesia, lumbar epidural block

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–200 mg, dose administered using a 7.5 mg/mL (0.75%) or 10 mg/mL (1%) solution

##### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal bodyweight.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 1058 · cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · back pain · chills · dizziness · headache · hypertension · hypotension · nausea · sensation abnormal · urinary retention · vomiting
  - ▶ **Uncommon** Anxiety · dyspnoea · hypothermia · neurotoxicity · syncope
  - ▶ **Rare or very rare** Cardiac arrest
  - ▶ **Frequency not known** Dyskinesia

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

- **ALLERGY AND CROSS-SENSITIVITY**

▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local

anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Not known to be harmful. Do not use for paracervical block in obstetrics.
- **BREAST FEEDING** Not known to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.  
**Dose adjustments** Manufacturer advises consider dose reduction for repeat doses in severe impairment.
- **RENAL IMPAIRMENT** Caution in severe impairment. Increased risk of systemic toxicity in chronic renal failure.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

ELECTROLYTES: May contain Sodium

##### ▶ Ropivacaine hydrochloride (Non-proprietary)

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 20mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.50 (Hospital only)

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Ropivacaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £25.00 (Hospital only)

**Ropivacaine hydrochloride 10 mg per 1 ml** Ropivacaine 100mg/10ml solution for injection ampoules | 10 ampoule [PoM] £30.00 (Hospital only)

##### ▶ Naropin (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 2 mg per 1 ml** Naropin 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £12.79

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Naropin 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.90

**Ropivacaine hydrochloride 10 mg per 1 ml** Naropin 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] £19.22

#### Infusion

ELECTROLYTES: May contain Sodium

##### ▶ Ropivacaine hydrochloride (Non-proprietary)

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 400mg/200ml infusion bags | 5 bag [PoM] £75.55 (Hospital only) | 10 bag [PoM] £137.00 (Hospital only)

##### ▶ Naropin (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 2 mg per 1 ml** Naropin 400mg/200ml infusion Polybags | 5 bag [PoM] £86.70

- **INTERACTIONS** → Appendix 1: anaesthetics, local

- **SIDE-EFFECTS** Oedema - skin reactions

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous system; systemic side effects unlikely as minimal absorption following topical application.

- **ALLERGY AND CROSS-SENSITIVITY**

▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **BREAST FEEDING** Not known to be harmful.

#### ● INDICATIONS AND DOSE

##### Anaesthesia before venepuncture or venous cannulation

###### ▶ TO THE SKIN

- ▶ Child 1 month–4 years: Apply contents of up to 1 tube (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation
- ▶ Child 5–17 years: Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation
- ▶ Adult: Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation

- **CONTRA-INDICATIONS** Should not be applied to damaged skin

## Poisoning, emergency treatment

### Overview

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either **TOXBASE** or the **UK National Poisons Information Service** be consulted when there is doubt about the degree of risk or about management.

### Hospital admission

Patients who have features of poisoning should generally be admitted to hospital. Patients who have taken poisons with delayed action should also be admitted, even if they appear well. Delayed-action poisons include aspirin p. 121, iron, paracetamol p. 444, tricyclic antidepressants, and co-phenotrope p. 66 (diphenoxylate with atropine, *Lomotil*®); the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

### Further information

**TOXBASE**, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at [www.toxbase.org](http://www.toxbase.org) (a backup site is available at [www.toxbasebackup.org](http://www.toxbasebackup.org) if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the **UK National Poisons Information Service** on the following number: Tel: 0344 892 0111.

Advice on laboratory analytical services can be obtained from **TOXBASE** or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

### General care

It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol, and iron) have specific antidotes; few patients require active removal of the poison. In most patients, treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual and from carers or parents. However, such information

should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The **National Poisons Information Service** should be consulted when there is doubt about any aspect of suspected poisoning.

### Respiration

Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

### Blood pressure

Hypotension is common in severe poisoning with central nervous system depressants. A systolic blood pressure of less than 70 mmHg may lead to irreversible brain damage or renal tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 1040 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service.

Fluid depletion without hypotension is common after prolonged coma and after aspirin poisoning due to vomiting, sweating, and hyperpnoea.

Hypertension, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amfetamines, phencyclidine, and cocaine.

### Heart

Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias often respond to correction of underlying hypoxia, acidosis,

or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

### Body temperature

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate re-warming as clinically indicated.

Hyperthermia can develop in patients taking CNS stimulants; children and the elderly are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with tepid water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require **urgent** hospitalisation for assessment and supportive treatment.

### Convulsions during poisoning

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 339 or diazepam p. 343 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzodiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 340 [unlicensed use in adults and children under 3 months] can be given by the buccal route or diazepam can be administered as a rectal solution.

### Methaemoglobinaemia

Drug- or chemical-induced methaemoglobinaemia should be treated with methylthionium chloride p. 1371 if the methaemoglobin concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthionium chloride reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthionium chloride can itself cause methaemoglobinaemia.

### Poison removal and elimination

#### Prevention of absorption

Given by mouth, charcoal, activated p. 1366 can bind many poisons in the gastro-intestinal system, thereby reducing their absorption. The **sooner** it is given the **more effective** it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

#### Active elimination techniques

Repeated doses of charcoal, activated by mouth *enhance the elimination* of some drugs after they have been absorbed; repeated doses are given after overdosage with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of

charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Charcoal, activated should **not** be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalisation of the urine for salicylates.

#### Removal from the gastro-intestinal tract

Gastric lavage is rarely required; for substances that cannot be removed effectively by other means (e.g. iron), it should be considered only if a life-threatening amount has been ingested within the previous hour. It should be carried out only if the airway can be protected adequately. Gastric lavage is contra-indicated if a corrosive substance or a petroleum distillate has been ingested, but it may occasionally be considered in patients who have ingested drugs that are not adsorbed by charcoal, such as iron or lithium. Induction of *emesis* (e.g. with ipecacuanha) is **not** recommended because there is no evidence that it affects absorption and it may increase the risk of aspiration.

*Whole bowel irrigation* (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with iron and lithium salts, and if illicit drugs are carried in the gastro-intestinal tract ('body-packing'). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

### Alcohol, acute intoxication

Acute intoxication with alcohol (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur in children and some adults. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

### Aspirin poisoning

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young and the elderly, and clinical and biochemical assessment is necessary. Generally, the clinical severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5).

Patients whose plasma-paracetamol concentrations are on or above the **treatment line** should be treated with acetylcysteine by intravenous infusion. The prognostic accuracy after 15 hours is uncertain, but a plasma-paracetamol concentration on or above the treatment line should be regarded as carrying a serious risk of liver damage.

Graph reproduced courtesy of Medicines and Healthcare products Regulatory Agency

Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalinisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis.

### Opioid poisoning

Opioids (narcotic analgesics) cause coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 1369 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone. Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene. The long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required. Norpropoxyphene, a metabolite of dextropropoxyphene, also has cardiotoxic effects which may require treatment

with sodium bicarbonate p. 1038 or magnesium sulfate p. 1051, or both. Arrhythmias may occur for up to 12 hours.

### Paracetamol poisoning

In cases of **intravenous paracetamol poisoning** contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol p. 444 may cause severe hepatocellular necrosis and, much less frequently, renal tubular necrosis. Nausea and vomiting, the only early features of poisoning, usually settle within 24 hours. Persistence beyond this time, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol overdose and may lead to encephalopathy, haemorrhage, hypoglycaemia, cerebral oedema, and death. Therefore, despite a lack of significant early symptoms, patients who have taken an overdose of paracetamol should be transferred to hospital urgently.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese patients who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 1370 protects the liver if infused up to, and possibly beyond, 24 hours of ingesting paracetamol. It is most effective if given within 8 hours of ingestion, after which effectiveness declines. Very rarely, giving acetylcysteine p. 1370 by mouth [unlicensed route] is an alternative if intravenous access is not possible—contact the National Poisons Information Service for advice.

Neonates less than 45 weeks corrected gestational age may be more susceptible to paracetamol-induced liver toxicity, therefore, treatment with acetylcysteine should be considered in all paracetamol p. 444 overdoses, and advice should be sought from the National Poisons Information Service.

#### Acute overdose

Hepatotoxicity may occur after a single ingestion of more than 150 mg/kg paracetamol taken in less than 1 hour. Rarely, hepatotoxicity may develop with single ingestions as low as 75 mg/kg of paracetamol taken in less than 1 hour. Patients who have ingested 75 mg/kg or more of paracetamol in less than 1 hour should be referred to hospital. Administration of charcoal, activated p. 1366 should be considered if paracetamol in excess of 150 mg/kg is thought to have been ingested within the previous hour.

Patients at risk of liver damage and, therefore, requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration, related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples may be misleading. The concentration is plotted on a paracetamol treatment graph, with a reference line ('treatment line') joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours. Acetylcysteine treatment should commence immediately in patients:

- whose plasma-paracetamol concentration falls on or above the *treatment line* on the paracetamol treatment graph;
- who present 8–24 hours after taking an acute overdose of more than 150 mg/kg of paracetamol, even if the plasma-paracetamol concentration is not yet available; acetylcysteine can be discontinued if the plasma-paracetamol concentration is later reported to be below the *treatment line* on the paracetamol treatment graph, provided that the patient is asymptomatic and liver function tests, serum creatinine and INR are normal.

The prognostic accuracy of a plasma-paracetamol concentration taken after 15 hours is uncertain, but a concentration on or above the *treatment line* on the paracetamol treatment graph should be regarded as carrying a serious risk of liver damage. If more than 15 hours have elapsed since ingestion, or there is doubt about appropriate management, advice should be sought from the National Poisons Information Service.

#### 'Staggered' overdose, uncertain time of overdose, or therapeutic excess

A 'staggered' overdose involves ingestion of a potentially toxic dose of paracetamol over more than one hour, with the possible intention of causing self-harm. Therapeutic excess is the inadvertent ingestion of a potentially toxic dose of paracetamol during its clinical use. The paracetamol treatment graph is unreliable if a 'staggered' overdose is taken, if there is uncertainty about the time of the overdose, or if there is therapeutic excess. In these cases, patients who have taken more than 150 mg/kg of paracetamol in any 24-hour period are at risk of toxicity and should be commenced on acetylcysteine immediately, unless it is more than 24 hours since the last ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal.

Rarely, toxicity can occur with paracetamol doses between 75–150 mg/kg in any 24-hour period; clinical judgement of the individual case is necessary to determine whether to treat those who have ingested this amount of paracetamol. For small adults, this may be within the licensed dose, but ingestion of a licensed dose of paracetamol is not considered an overdose.

Although there is some evidence suggesting that factors such as the use of liver enzyme-inducing drugs (e.g. carbamazepine p. 311, efavirenz p. 644, nevirapine p. 645,

phenobarbital p. 335, phenytoin p. 323, primidone p. 336, rifabutin p. 575, rifampicin p. 582, St John's wort), chronic alcoholism, and starvation may increase the risk of hepatotoxicity, the CHM has advised that these should no longer be used in the assessment of paracetamol toxicity.

Significant toxicity is unlikely if, 24 hours or longer after the last paracetamol ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal. Patients with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. If there is uncertainty about a patient's risk of toxicity after paracetamol overdose, treatment with acetylcysteine should be commenced. Advice should be sought from the National Poisons Information Service whenever necessary.

#### Acetylcysteine dose and administration

For paracetamol overdose, acetylcysteine is given in a total dose that is divided into 3 consecutive intravenous infusions over a total of 21 hours. The tables below include the dose of acetylcysteine, for adults and children of body-weight 40 kg and over, in terms of the volume of acetylcysteine Concentrate for Intravenous Infusion required for each of the 3 infusions. The requisite dose of acetylcysteine is added to glucose Intravenous Infusion 5% p. 1041.

##### First infusion

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare first infusion
40–49 kg	34 mL
50–59 kg	42 mL
60–69 kg	49 mL
70–79 kg	57 mL
80–89 kg	64 mL
90–99 kg	72 mL
100–109 kg	79 mL
≥110 kg	83 mL (max. dose)

*First infusion* (based on an acetylcysteine dose of approx. 150 mg/kg)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 200 mL Glucose Intravenous Infusion 5%; infuse over 1 hour.

##### Second infusion

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare second infusion
40–49 kg	12 mL
50–59 kg	14 mL
60–69 kg	17 mL
70–79 kg	19 mL
80–89 kg	22 mL
90–99 kg	24 mL
100–109 kg	27 mL
≥110 kg	28 mL (max. dose)

*Second infusion* (based on an acetylcysteine dose of approx. 50 mg/kg; start immediately after completion of first infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 500 mL Glucose Intravenous Infusion 5%; infuse over 4 hours.

**Third infusion**

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare third infusion
40–49 kg	23 mL
50–59 kg	28 mL
60–69 kg	33 mL
70–79 kg	38 mL
80–89 kg	43 mL
90–99 kg	48 mL
100–109 kg	53 mL
≥110 kg	55 mL (max. dose)

*Third infusion* (based on an acetylcysteine dose of approx. 100 mg/kg; start immediately after completion of second infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 1 litre Glucose Intravenous Infusion 5%; infuse over 16 hours.

**Antidepressant poisoning****Tricyclic and related antidepressants**

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis. The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam given by mouth is usually adequate to sedate delirious patients but large doses may be required.

**Selective serotonin re-uptake inhibitors (SSRIs)**

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSRI poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam, diazepam, or midazolam oromucosal solution [unlicensed use in adults and children under 3 months] (see *Convulsions*). Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

**Antimalarial poisoning**

Overdose with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include

arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

**Antipsychotic poisoning****Phenothiazines and related drugs**

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hypothermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 411 or diazepam p. 343 (emulsion preferred).

**Second-generation antipsychotic drugs**

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 1366 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

**Benzodiazepine poisoning**

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 1368 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in patients with a reduced level of consciousness.

**Beta blockers poisoning**

Therapeutic overdoses with beta-blockers may cause lightheadedness, dizziness, and possibly syncope as a result of bradycardia and hypotension; heart failure may be precipitated or exacerbated. These complications are most likely in patients with conduction system disorders or impaired myocardial function. Bradycardia is the most common arrhythmia caused by beta-blockers, but sotalol may induce ventricular tachyarrhythmias (sometimes of the torsade de pointes type). The effects of massive overdose can vary from one beta-blocker to another; propranolol overdose in particular may cause coma and convulsions.

*Acute massive overdose* must be managed in hospital and expert advice should be obtained. Maintenance of a clear airway and adequate ventilation is mandatory. An intravenous injection of atropine sulfate p. 1334 is required to treat bradycardia. Cardiogenic shock unresponsive to atropine sulfate is probably best treated with an intravenous injection of glucagon p. 724 [unlicensed] in glucose 5% (with precautions to protect the airway in case of vomiting) followed by an intravenous infusion. If glucagon is not available, intravenous isoprenaline (available from 'special-order' manufacturers or specialist importing companies) is an alternative. A cardiac pacemaker can be used to increase the heart rate.

### Calcium-channel blockers poisoning

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated should be considered if the patient presents within 1 hour of overdosage with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In patients with significant features of poisoning, calcium chloride p. 1045 or calcium gluconate p. 1045 is given by injection; atropine sulfate is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

### Iron salts poisoning

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepatocellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour.

Mortality is reduced by intensive and specific therapy with desferrioxamine mesilate p. 1028, which chelates iron. The serum-iron concentration is measured as an emergency and intravenous desferrioxamine mesilate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesilate should be given immediately without waiting for the result of the serum-iron measurement.

### Lithium poisoning

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the patient's depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Gastric lavage may be considered if it can be performed within

1 hour of ingesting significant quantities of lithium. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

### Stimulant-drug poisoning

Amfetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam p. 343 or lorazepam p. 339; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

### Cocaine

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves intravenous administration of diazepam to control agitation and cooling measures for hyperthermia (see Body temperature); hypertension and cardiac effects require specific treatment and expert advice should be sought.

### Ecstasy

Ecstasy (methylenedioxyamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use.

Treatment of methylenedioxyamphetamine poisoning is supportive, with diazepam to control severe agitation or persistent convulsions and close monitoring including ECG. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

'Liquid ecstasy' is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

### Theophylline poisoning

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of activated charcoal can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 436 may be effective for severe vomiting that is resistant to other antiemetics (unlicensed indication). Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 1057 and may be so severe as to require 60 mmol/hour (high doses require ECG monitoring). Convulsions should be controlled by intravenous administration of lorazepam or diazepam (see Convulsions). Sedation with diazepam may be necessary in agitated patients.

Provided the patient does not suffer from asthma, a short-acting beta-blocker can be administered intravenously to reverse severe tachycardia, hypokalaemia, and hyperglycaemia.

## Cyanide poisoning

**Oxygen** should be administered to patients with cyanide poisoning. The choice of antidote depends on the severity of poisoning, certainty of diagnosis, and the cause. Dicobalt edetate p. 1367 is the antidote of choice when there is a strong clinical suspicion of severe cyanide poisoning, but it should **not** be used as a precautionary measure. Dicobalt edetate itself is toxic, associated with anaphylactoid reactions, and is potentially fatal if administered in the absence of cyanide poisoning. A regimen of sodium nitrite p. 1367 followed by sodium thiosulfate p. 1367 is an alternative if dicobalt edetate is not available.

Hydroxocobalamin p. 1026 (*Cyanokit*<sup>®</sup>—no other preparation of hydroxocobalamin is suitable) can be considered for use in victims of smoke inhalation who show signs of significant cyanide poisoning.

## Ethylene glycol and methanol poisoning

**Fomepizole** (available from 'special-order' manufacturers or specialist importing companies) is the treatment of choice for ethylene glycol and methanol (methyl alcohol) poisoning. If necessary, **ethanol** (by mouth or by intravenous infusion) can be used, but with caution. Advice on the treatment of ethylene glycol and methanol poisoning should be obtained from the National Poisons Information Service. It is important to start antidote treatment promptly in cases of suspected poisoning with these agents.

## Heavy metal poisoning

Heavy metal antidotes include succimer (DMSA) [unlicensed], unithiol (DMPS) [unlicensed], sodium calcium edetate [unlicensed], and dimercaprol. Dimercaprol in the management of heavy metal poisoning has been superseded by other chelating agents. In all cases of heavy metal poisoning, the advice of the National Poisons Information Service should be sought.

## Noxious gases poisoning

### Carbon monoxide

Carbon monoxide poisoning is usually due to inhalation of smoke, car exhaust, or fumes caused by blocked flues or incomplete combustion of fuel gases in confined spaces.

Immediate treatment of carbon monoxide poisoning is essential. The person should be moved to fresh air, the airway cleared, and high-flow **oxygen** 100% administered through a tight-fitting mask with an inflated face seal. Artificial respiration should be given as necessary and continued until adequate spontaneous breathing starts, or stopped only after persistent and efficient treatment of cardiac arrest has failed. The patient should be admitted to hospital because complications may arise after a delay of hours or days. Cerebral oedema may occur in severe poisoning and is treated with an intravenous infusion of mannitol p. 229. Referral for hyperbaric oxygen treatment should be discussed with the National Poisons Information Service if the patient is pregnant or in cases of severe poisoning, such as if the patient is or has been unconscious, or has psychiatric or neurological features other than a headache, or has myocardial ischaemia or an arrhythmia, or has a blood carboxyhaemoglobin concentration of more than 20%.

### Sulfur dioxide, chlorine, phosgene, and ammonia

All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to 36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

## CS Spray poisoning

CS spray, which is used for riot control, irritates the eyes (hence 'tear gas') and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

## Nerve agent poisoning

Treatment of nerve agent poisoning is similar to organophosphorus insecticide poisoning, but advice must be sought from the National Poisons Information Service. The risk of cross-contamination is significant; adequate decontamination and protective clothing for healthcare personnel are essential. In emergencies involving the release of nerve agents, kits ('NAAS pods') containing pralidoxime chloride p. 1367 can be obtained through the Ambulance Service from the National Blood Service (or the Welsh Blood Service in South Wales or designated hospital pharmacies in Northern Ireland and Scotland—see TOXBASE for list of designated centres).

## Pesticide poisoning

### Organophosphorus insecticides

Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure.

Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the patient to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulfate p. 1334 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride, a cholinesterase reactivator, is used as an adjunct to atropine sulfate in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is continued until the patient has not required atropine sulfate for 12 hours. Pralidoxime chloride can be obtained from designated centres, the names of which are held by the National Poisons Information Service.

## Snake bites and animal stings

### Snake bites

Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegally, but the only indigenous venomous snake is the adder (*Vipera berus*). The

bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with **adrenaline/epinephrine p. 222**. Indications for european viper snake venom antiserum p. 1371 treatment include *systemic envenoming*, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within 4 hours of the bite. For those patients who present with clinical features of *severe envenoming* (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the european viper snake venom antiserum is recommended; if symptoms of *systemic envenoming* persist contact the National Poisons Information Service. Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the european viper snake venom antiserum.

European viper snake venom antiserum is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and for supply in an emergency, telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

#### Insect stings

Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible.

Anaphylactic reactions require immediate treatment with intramuscular **adrenaline/epinephrine**; self-administered intramuscular adrenaline/epinephrine (e.g. *EpiPen*®) is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator should be used for asthmatic reactions, see also the management of anaphylaxis. A short course of an **oral antihistamine** or a **topical corticosteroid** may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

#### Marine stings

The severe pain of weeverfish (*Trachinus vipera*) and Portuguese man-o'-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45°C). People stung by jellyfish and Portuguese man-o'-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing gloves or using tweezers) or washed off with seawater. Alcoholic solutions, including suntan lotions, should **not** be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

#### Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE.

The **National Poisons Information Service** (Tel: 0344 892 0111) will provide specialist advice on all aspects of poisoning day and night.

## 1 Active elimination from the gastro-intestinal tract

### ANTIDOTES AND CHELATORS > INTESTINAL ADSORBENTS

#### Charcoal, activated

##### • INDICATIONS AND DOSE

##### Reduction of absorption of poisons in the gastro-intestinal system

###### ► BY MOUTH

- Neonate: 1 g/kg.
- Child 1 month-11 years: 1 g/kg (max. per dose 50 g)
- Child 12-17 years: 50 g
- Adult: 50 g

##### Active elimination of poisons

###### ► BY MOUTH

- Neonate: 1 g/kg every 4 hours, dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy.
- Child 1 month-11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy
- Child 12-17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy
- Adult: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy

##### Accelerated elimination of terflunomide

###### ► BY MOUTH USING GRANULES

- Adult: 50 g every 12 hours for 11 days

##### Accelerated elimination of leflunomide (washout procedure)

###### ► BY MOUTH USING GRANULES

- Adult: 50 g 4 times a day for 11 days

##### • UNLICENSED USE

- In adults Activated charcoal doses in BNF may differ from those in product literature.

- **CAUTIONS** Comatose patient (risk of aspiration—ensure airway is protected) · drowsy patient (risk of aspiration—ensure airway protected) · reduced gastrointestinal motility (risk of obstruction)

- **SIDE-EFFECTS** Bezoar · constipation · diarrhoea · gastrointestinal disorders

- **DIRECTIONS FOR ADMINISTRATION** Suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Oral suspension

- **Charcodote** (Teva UK Ltd)

Activated charcoal 200 mg per 1 ml Charcodote 200mg/ml oral suspension sugar-free | 250 ml [P] £11.88

**Granules**

- ▶ **Carbomix** (Kent Pharmaceuticals Ltd)  
Activated charcoal **813 mg per 1 gram** Carbomix 81.3% granules sugar-free | 50 gram **P** | £11.90

## 2 Chemical toxicity

### 2.1 Cyanide toxicity

#### ANTIDOTES AND CHELATORS

##### Dicobalt edetate

**● INDICATIONS AND DOSE****Severe poisoning with cyanides**

- ▶ BY INTRAVENOUS INJECTION
- ▶ **Child:** Consult the National Poisons Information Service
- ▶ **Adult:** 300 mg, to be given over 1 minute (or 5 minutes if condition less serious), dose to be followed immediately by 50 mL of glucose intravenous infusion 50%; if response inadequate a second dose of both may be given, but risk of cobalt toxicity

- **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness
- **SIDE-EFFECTS** Reflex tachycardia · vomiting
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Dicobalt edetate (Non-proprietary)**

**Dicobalt edetate 15 mg per 1 mL** Dicobalt edetate 300mg/20ml solution for injection ampoules | 6 ampoule **[PoM]** | £117.20 DT = £117.20

##### Sodium nitrite

16-Mar-2018

**● INDICATIONS AND DOSE****Poisoning with cyanides (used in conjunction with sodium thiosulfate)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ **Child:** Consult the National Poisons Information Service
- ▶ **Adult:** 300 mg

- **SIDE-EFFECTS** Arrhythmias · dizziness · headache · hypotension · palpitations
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Sodium nitrite (Non-proprietary)**

**Sodium nitrite 30 mg per 1 mL** Sodium nitrite 300mg/10ml solution for injection vials | 1 vial **[PoM]** **X**

##### Sodium thiosulfate

16-Mar-2018

**● INDICATIONS AND DOSE****Poisoning with cyanides**

- ▶ BY INTRAVENOUS INJECTION
- ▶ **Child:** Consult the National Poisons Information Service
- ▶ **Adult:** 12.5 g, to be given over 10 minutes, dose may be repeated in severe cyanide poisoning

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ 12.5 g equates to 50 mL of a 25% solution *or* 25 mL of a 50% solution.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**

- ▶ **Sodium thiosulfate (Non-proprietary)**

**Sodium thiosulfate 250 mg per 1 mL** Sodium thiosulfate 12.5g/50ml solution for injection vials | 1 vial **[PoM]** **X**

### 2.2 Organophosphorus toxicity

**Other drugs used for Organophosphorus toxicity** Atropine sulfate, p. 1334

#### ANTIDOTES AND CHELATORS

##### Pralidoxime chloride

**● INDICATIONS AND DOSE****Adjunct to atropine in the treatment of poisoning by organophosphorus insecticide or nerve agent**

- ▶ BY INTRAVENOUS INFUSION
- ▶ **Child:** Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day
- ▶ **Adult:** Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

- **UNLICENSED USE** Pralidoxime chloride doses may differ from those in product literature.
- ▶ In children Licensed for use in children (age range not specified by manufacturer).
- **CONTRA-INDICATIONS** Poisoning with carbamates · poisoning with organophosphorus compounds without anticholinesterase activity
- **CAUTIONS** Myasthenia gravis
- **SIDE-EFFECTS** Dizziness · drowsiness · headache · hyperventilation · muscle weakness · nausea · tachycardia · visual impairment
- **RENAL IMPAIRMENT** Use with caution.
- **DIRECTIONS FOR ADMINISTRATION** The loading dose may be administered by intravenous injection (diluted to a concentration of 50 mg/mL with water for injections) over at least 5 minutes if pulmonary oedema is present or if it is not practical to administer an intravenous infusion.
- ▶ In children For *intravenous infusion*, reconstitute each vial with 20 mL Water for Injections, then dilute to a concentration of 10–20 mg/mL with Sodium Chloride 0.9%.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres for organophosphorus insecticide poisoning or from the National Blood Service (or Welsh

Ambulance Services for Mid West and South East Wales)—see TOXBASE for list of designated centres).

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for solution for injection**

- ▶ **Pralidoxime chloride (Imported (United States))**

**Pralidoxime chloride 1 gram** Protopam Chloride 1g powder for solution for injection vials | 6 vial [PoM](#) [S](#)

## 3 Drug toxicity

### 3.1 Benzodiazepine toxicity

#### ANTIDOTES AND CHELATORS >

#### BENZODIAZEPINE ANTAGONISTS

### Flumazenil

23-Jul-2018

#### ● INDICATIONS AND DOSE

#### **Reversal of sedative effects of benzodiazepines in anaesthesia and clinical procedures**

- ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** 200 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; usual dose 300–600 micrograms; maximum 1 mg per course

#### **Reversal of sedative effects of benzodiazepines in intensive care**

- ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** 300 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; maximum 2 mg per course

#### **Reversal of sedative effects of benzodiazepines in intensive care (if drowsiness recurs after injection)**

- ▶ INITIALLY BY INTRAVENOUS INFUSION

▶ **Adult:** 100–400 micrograms/hour, adjusted according to response, alternatively (by intravenous injection) 300 micrograms, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Flumazenil should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines

- **CAUTIONS** Avoid rapid injection following major surgery · avoid rapid injection in high-risk or anxious patients · benzodiazepine dependence (may precipitate withdrawal symptoms) · elderly · ensure neuromuscular blockade cleared before giving · head injury (rapid reversal of benzodiazepine sedation may cause convulsions) · history of panic disorders (risk of recurrence) · prolonged benzodiazepine therapy for epilepsy (risk of convulsions) · short-acting (repeat doses may be necessary—benzodiazepine effects may persist for at least 24 hours)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Anxiety · diplopia · dry mouth · eye disorders · flushing · headache · hiccups · hyperhidrosis · hyperventilation · hypotension · insomnia · nausea · palpitations · paraesthesia · speech disorder · tremor · vertigo · vomiting
- ▶ **Uncommon** Abnormal hearing · arrhythmias · chest pain · chills · cough · dyspnoea · nasal congestion · seizure (more common in patients with epilepsy)

- ▶ **Frequency not known** Withdrawal syndrome

- **PREGNANCY** Not known to be harmful.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased half-life).

**Dose adjustments** Manufacturer advises cautious dose titration.

- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute with Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

- ▶ **Flumazenil (Non-proprietary)**

**Flumazenil 100 microgram per 1 ml** Flumazenil 500micrograms/5ml solution for injection ampoules | 5 ampoule [PoM](#) £72.46 (Hospital only) | 5 ampoule [PoM](#) £65.50-£70.00 | 10 ampoule [PoM](#) £140.00

### 3.2 Digoxin toxicity

#### ANTIDOTES AND CHELATORS > ANTIBODIES

### Digoxin-specific antibody

#### ● INDICATIONS AND DOSE

**Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradyarrhythmias unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary**

- ▶ BY INTRAVENOUS INFUSION

▶ **Child:** Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

▶ **Adult:** Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In adults For *intravenous infusion (DigiFab®)*, given intermittently in Sodium chloride 0.9%. Reconstitute with water for injections (4 mL/vial), then dilute with infusion fluid and give over 30 minutes.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for solution for infusion**

- ▶ **DigiFab** (BTG International Ltd)

**Digoxin-specific antibody fragments 40 mg** DigiFab 40mg powder for solution for infusion vials | 1 vial [PoM](#) £750.00 (Hospital only)

### 3.3 Heparin toxicity

#### ANTIDOTES AND CHELATORS

### Protamine sulfate

#### ● INDICATIONS AND DOSE

**Overdosage with intravenous injection of unfractionated heparin**

- ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** Dose to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 80–100 units heparin when given within 15 minutes; if longer than 15 minute since heparin, less protamine required (consult product

literature for details) as heparin rapidly excreted; maximum 50 mg

#### Overdosage with intravenous infusion of unfractionated heparin

##### ► BY INTRAVENOUS INJECTION

- Adult: 25–50 mg, to be administered once heparin infusion stopped at a rate not exceeding 5 mg/minute

#### Overdosage with subcutaneous injection of unfractionated heparin

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 25–50 mg, to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 100 units heparin, then (by intravenous infusion), any remaining dose to be administered over 8–16 hours; maximum 50 mg per course

#### Overdosage with subcutaneous injection of low molecular weight heparin

##### ► BY INTRAVENOUS INJECTION, OR BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: Dose to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute, 1 mg neutralises approx. 100 units low molecular weight heparin (consult product literature of low molecular weight heparin for details); maximum 50 mg

- **CAUTIONS** Excessive doses can have an anticoagulant effect
- **SIDE-EFFECTS**
- **Rare or very rare** Hypertension · pulmonary oedema non-cardiogenic
- **Frequency not known** Acute pulmonary vasoconstriction · back pain · bradycardia · circulatory collapse · dyspnoea · fatigue · feeling hot · flushing · nausea · pulmonary hypertension · vomiting
- **ALLERGY AND CROSS-SENSITIVITY** Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile or who have had a vasectomy and who may have antibodies to protamine).
- **MONITORING REQUIREMENTS** Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.
- **PRESCRIBING AND DISPENSING INFORMATION** The long half-life of low molecular weight heparins should be taken into consideration when determining the dose of protamine sulfate; the effects of low molecular weight heparins can persist for up to 24 hours after administration.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Protamine sulfate (Non-proprietary)

Protamine sulfate 10 mg per 1 ml Protamine sulfate 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] [X]  
Protamine sulfate 50mg/5ml solution for injection ampoules | 10 ampoule [PoM] £49.55

## 3.4 Opioid toxicity

### OPIOID RECEPTOR ANTAGONISTS

#### Naloxone hydrochloride

##### ● INDICATIONS AND DOSE

#### Overdosage with opioids

##### ► BY INTRAVENOUS INJECTION

- Child 1 month–11 years: Initially 100 micrograms/kg (max. per dose 2 mg), if no response, repeat at intervals of 1 minute to a max. of 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action
- Child 12–17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action
- Adult: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action
- **BY CONTINUOUS INTRAVENOUS INFUSION**
- Child: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes
- Adult: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes

#### Overdosage with opioids in a non-medical setting

##### ► BY INTRAMUSCULAR INJECTION

- Adult: 400 micrograms every 2–3 minutes, each dose given in subsequent resuscitation cycles if patient not breathing normally, continue until consciousness regained, breathing normally, medical assistance available, or contents of syringe used up; to be injected into deltoid region or anterolateral thigh

#### Reversal of postoperative respiratory depression

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Child 1 month–11 years: 1 microgram/kg, repeated every 2–3 minutes if required
- Child 12–17 years: Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours

continued →

- ▶ **Adult:** Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours

#### PHARMACOKINETICS

- ▶ Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

- **UNLICENSED USE** Naloxone doses in BNF may differ from those in product literature.

#### IMPORTANT SAFETY INFORMATION

##### SAFE PRACTICE

Doses used in acute opioid overdose may not be appropriate for the management of opioid-induced respiratory depression and sedation in those receiving palliative care and in chronic opioid use.

- **CAUTIONS** Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects reported) · maternal physical dependence on opioids (may precipitate withdrawal in newborn) · pain · physical dependence on opioids (precipitates withdrawal)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Titration of dose In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · dizziness · headache · hypertension · hypotension · nausea · vomiting
  - ▶ **Uncommon** Diarrhoea · dry mouth · hyperhidrosis · hyperventilation · inflammation localised · pain · tremor · vascular irritation
  - ▶ **Rare or very rare** Anxiety · cardiac arrest · erythema multiforme · pulmonary oedema · seizure
  - ▶ **Frequency not known** Analgesia reversed · asthenia · chills · death · dyspnoea · fever · irritability · nasal complaints · piloerection · yawning
- **PREGNANCY** Use only if potential benefit outweighs risk.
- **BREAST FEEDING** Not orally bioavailable.
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With intravenous use in children For *continuous intravenous infusion*, dilute to a concentration of up to 200 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%.
  - ▶ With intravenous use in adults For *intravenous infusion* (*Minijet*® Naloxone Hydrochloride), give continuously in Glucose 5% or Sodium Chloride 0.9%. Dilute to a concentration of up to 200 micrograms/mL and administer via an infusion pump.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Naloxone hydrochloride (Non-proprietary)

**Naloxone hydrochloride 20 microgram per 1 ml** Naloxone 40micrograms/2ml solution for injection ampoules | 10 ampoule [POM] £55.00

**Naloxone hydrochloride dihydrate 400 microgram per 1 ml** Naloxone 400micrograms/1ml solution for injection ampoules | 10 ampoule [POM] £36.00–£53.70 DT = £40.79

**Naloxone hydrochloride 1 mg per 1 ml** Naloxone 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [POM] £16.80

## 3.5 Paracetamol toxicity

### ANTIDOTES AND CHELATORS

#### Acetylcysteine

03-Apr-2018

#### ● INDICATIONS AND DOSE

##### Paracetamol overdose

###### ▶ BY INTRAVENOUS INFUSION

- ▶ **Child (body-weight up to 20 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%
- ▶ **Child (body-weight 20–39 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- ▶ **Child (body-weight 40 kg and above):** 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%
- ▶ **Adult (body-weight 40 kg and above):** 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, a ceiling weight of 110 kg should be used when calculating the dose for paracetamol overdose.

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: INTRAVENOUS ACETYL-CYSTEINE FOR PARACETAMOL OVERDOSE: REMINDER OF AUTHORISED DOSE REGIMEN; POSSIBLE NEED FOR CONTINUED TREATMENT (JANUARY 2017)**

The authorised dose regimen for acetylcysteine in paracetamol overdose is 3 consecutive intravenous infusions given over a total of 21 hours.

Continued treatment (given at the dose and rate as used in the third infusion) may be necessary depending on the clinical evaluation of the individual patient.

- **CAUTIONS** Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) · atopy · may slightly increase INR · may slightly increase prothrombin time
- **SIDE-EFFECTS** Acidosis · anaphylactoid reaction · angioedema · anxiety · arrhythmias · cardiac arrest · chest discomfort · cough · cyanosis · eye pain · eye swelling · generalised seizure · hyperhidrosis · hypertension · hypotension · joint disorders · malaise · nausea · pain facial · respiratory disorders · skin reactions · syncope · thrombocytopenia · vasodilation · vision blurred · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** Anaphylactoid reactions (with intravenous use) can be managed by suspending treatment and initiating appropriate

management. Treatment may then be restarted at lower rate.

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Glucose 5% is preferred fluid; Sodium Chloride 0.9% is an alternative if Glucose 5% unsuitable.
- ▶ In adults For *intravenous infusion* (Parvolex®), give continuously in Glucose 5% or Sodium chloride 0.9%. Glucose Intravenous Infusion 5% is the preferred fluid; Sodium Chloride Intravenous Infusion 0.9% is an alternative if Glucose Intravenous Infusion 5% is unsuitable.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

ELECTROLYTES: May contain Sodium

#### ▶ Acetylcysteine (Non-proprietary)

Acetylcysteine 200 mg per 1 ml Acetylcysteine 2g/10ml solution for infusion ampoules | 10 ampoule [PoM] £21.26-£24.99 DT = £21.26

#### ▶ Parvolex (Phoenix Labs Ltd)

Acetylcysteine 200 mg per 1 ml Parvolex 2g/10ml concentrate for solution for infusion ampoules | 10 ampoule [PoM] £22.50 DT = £21.26

## 4 Methaemoglobinaemia

### ANTIDOTES AND CHELATORS

#### Methylthionium chloride

(Methylene blue)

#### ● INDICATIONS AND DOSE

##### Drug- or chemical-induced methaemoglobinaemia

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Child 3 months-17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course
- ▶ Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course

##### Aniline- or dapson-induced methaemoglobinaemia

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Child 3 months-17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course
- ▶ Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- **CAUTIONS** Chlorate poisoning (reduces efficacy of methylthionium) · G6PD deficiency (seek advice from National Poisons Information Service) · methaemoglobinaemia due to treatment of cyanide poisoning with sodium nitrite (seek advice from National Poisons Information Service) · pulse oximetry may give false estimation of oxygen saturation

- **INTERACTIONS** → Appendix 1: methylthionium chloride

#### ● SIDE-EFFECTS

- ▶ Common or very common Abdominal pain · anxiety · chest pain · dizziness · headache · hyperhidrosis · nausea · pain in extremity · paraesthesia · skin reactions · taste altered · urine discolouration · vomiting

- ▶ **Frequency not known** Aphasia · arrhythmias · confusion · faeces discoloured · fever · haemolytic anaemia · hyperbilirubinaemia (in infants) · hypertension · hypotension · injection site necrosis · mydriasis · tremor
- **PREGNANCY** No information available, but risk to fetus of untreated methaemoglobinaemia likely to be significantly higher than risk of treatment.
- **BREAST FEEDING** Manufacturer advises avoid breastfeeding for up to 6 days after administration—no information available.
- **RENAL IMPAIRMENT**  
**Dose adjustments** Use with caution in severe impairment; dose reduction may be required.
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ In children For *intravenous injection*, may be diluted with Glucose 5% to minimise injection-site pain; not compatible with Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Methylthionium chloride (Non-proprietary)

Methylthionium chloride 5 mg per 1 ml Methylthionium chloride Proveblue 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £196.89

## 5 Snake bites

### IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

#### European viper snake venom antiserum

#### ● INDICATIONS AND DOSE

##### Systemic envenoming from snake bites | Marked local envenoming

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Child: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- ▶ Adult: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

##### Severe systemic envenoming from snake bites in patients presenting with clinical features

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Child: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- ▶ Adult: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- **DIRECTIONS FOR ADMINISTRATION** By *intravenous injection* given over 10–15 minutes or by *intravenous infusion* over 30 minutes after diluting in sodium chloride 0.9% (use 5 mL diluent/kg body-weight).
- **PRESCRIBING AND DISPENSING INFORMATION** To order, email immform@dh.gsi.gov.uk.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Viper venom antiserum, European (equine) (Imported (Croatia))**  
European viper snake venom antiserum 100 mg per 1 ml Viper venom antiserum, European (equine) 1g/10ml solution for injection vials | 1 vial [PoM](#) 

# Appendix 1

## Interactions

Changes have been made to the interactions content in BNF publications. For more information, see [www.bnf.org/new-bnf-interactions/](http://www.bnf.org/new-bnf-interactions/).

Two or more drugs given at the same time can exert their effects independently or they can interact. Interactions may be beneficial and exploited therapeutically; this type of interaction is not within the scope of this appendix. Many interactions are harmless, and even those that are potentially harmful can often be managed, allowing the drugs to be used safely together. Nevertheless, adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse reactions to drugs p. 12), as for other adverse drug reactions.

Potentially harmful drug interactions may occur in only a small number of patients, but the true incidence is often hard to establish. Furthermore the severity of a harmful interaction is likely to vary from one patient to another. Patients at increased risk from drug interactions include the elderly and those with impaired renal or hepatic function.

Interactions can result in the potentiation or antagonism of one drug by another, or result in another effect, such as renal impairment. Drug interactions may develop either through pharmacokinetic or pharmacodynamic mechanisms.

### Pharmacodynamic interactions

These are interactions between drugs which have similar or antagonistic pharmacological effects or side-effects. They might be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs.

### Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or decreasing the amount of drug available to produce its pharmacological effects. Pharmacokinetic interactions occurring with one drug do not necessarily occur uniformly across a group of related drugs.

**Affecting absorption** The rate of absorption and the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless a rapid effect is required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, can result in ineffective therapy.

**Affecting distribution** *Due to changes in protein binding:* To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing the proportion free to diffuse from plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces

more than transient potentiation because this increased concentration of free drug will usually be eliminated.

Displacement from protein binding plays a part in the potentiation of warfarin by sulfonamides but these interactions become clinically relevant mainly because warfarin metabolism is also inhibited.

**Induction or inhibition of drug transporter proteins:** Drug transporter proteins, such as P-glycoprotein, actively transport drugs across biological membranes. Transporters can be induced or inhibited, resulting in changes in the concentrations of drugs that are substrates for the transporter. For example, rifampicin induces P-glycoprotein, particularly in the gut wall, resulting in decreased plasma concentrations of digoxin, a P-glycoprotein substrate.

**Affecting metabolism** Many drugs are metabolised in the liver. Drugs are either metabolised by phase I reactions (oxidation, reduction, or hydrolysis) or by phase II reactions (e.g. glucuronidation).

Phase I reactions are mainly carried out by the cytochrome P450 family of isoenzymes, of which CYP3A4 is the most important isoenzyme involved in the metabolism of drugs. Induction of cytochrome P450 isoenzymes by one drug can increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducing drug, plasma concentrations increase and toxicity can occur.

Conversely when one drug inhibits cytochrome P450 isoenzymes, it can decrease the metabolism of another, leading to higher plasma concentrations, resulting in an increased effect with a risk of toxicity.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. With knowledge of which isoenzymes are involved in a drug's metabolism, it is possible to predict whether certain pharmacokinetic interactions will occur. For example, carbamazepine is a potent inducer of CYP3A4, ketoconazole is potent inhibitor of CYP3A4, and midazolam is a substrate of CYP3A4. Carbamazepine reduces midazolam concentrations, and it is therefore likely that other drugs that are potent inducers of CYP3A4 will interact similarly with midazolam. Ketoconazole, however, increases midazolam concentrations, and it can be predicted that other drugs that are potent inhibitors of CYP3A4 will interact similarly.

Less is known about the enzymes involved in phase II reactions. These include UDP-glucuronyltransferases which, for example, might be induced by rifampicin, resulting in decreased metabolism of mycophenolate (a substrate for this enzyme) to its active form, mycophenolic acid.

**Affecting renal excretion** Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible. Changes in urinary pH can also affect the reabsorption of a small number of drugs, including methanamine.

### Relative importance of interactions

**Levels of severity:** Most interactions have been assigned a severity; this describes the likely effect of an unmanaged interaction on the patient.

**Severe**—the result may be a life-threatening event or have a permanent detrimental effect.

**Moderate**—the result could cause considerable distress or partially incapacitate a patient; they are unlikely to be life-threatening or result in long-term effects.

**Mild**—the result is unlikely to cause concern or incapacitate the majority of patients.

**Unknown**—used for those interactions that are predicted, but there is insufficient evidence to hazard a guess at the outcome.

**Levels of evidence:** Most interactions have been assigned a rating to indicate the weight of evidence behind the interaction.

**Study**—for interactions where the information is based on formal study including those for other drugs with same mechanism (e.g. known inducers, inhibitors, or substrates of cytochrome P450 isoenzymes or P-glycoprotein).

**Anecdotal**—interactions based on either a single case report or a limited number of case reports.

**Theoretical**—interactions that are predicted based on sound theoretical considerations. The information may have been derived from *in vitro* studies or based on the way other members in the same class act.

**Action messages:** Each interaction describes the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. **Pharmacodynamic interactions**, with the exception of interactions with drugs that may prolong the QT interval, do not have an action message included as these will depend on individual patient circumstances.

A1

Interactions | Appendix 1

## Appendix 1 structure

### 1 Drugs

Drugs are listed alphabetically. If a drug is a member of a drug class, all interactions for that drug will be listed under the drug class entry; in this case the drug entry provides direction to the relevant drug class where its interactions can be found.

Within a drug or drug class entry, interactions are listed alphabetically by the interacting drug or drug class. The interactions describe the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. If two drugs have a pharmacodynamic effect in addition to a pharmacokinetic interaction, a cross-reference to the relevant pharmacodynamic effect table is included at the end of the pharmacokinetic message.

### 2 Drug classes

The drugs that are members of a drug class are listed underneath the drug class entry in a blue box. Interactions for the class are then listed alphabetically by the interacting drug or drug class. If the interaction only applies to certain drugs in the class, these drugs will be shown in brackets after the drug class name.

### 3 Supplementary information

If a drug has additional important information to be considered, this is shown in a blue box underneath the drug or drug class entry. This information might be food and lifestyle advice (including smoking and alcohol consumption), relate to the pharmacology of the drug or applicability of interactions to certain routes of administration, or it might be advice about separating administration times.

### 4 Pharmacodynamic effects

Tables at the beginning of Appendix 1 cover pharmacodynamic effects. If a drug is included in one or more of these tables, this will be indicated at the top of the

#### 1 Drug entry

- ▶ Details of interaction between **drug entry** and another **drug** or **drug class**. Action statement. [Severity] Evidence
  - ▶ Details of interaction between **drug entry** and another **drug** or **drug class**. Action statement. [Severity] Evidence

Drug A · Drug B · Drug C · Drug D

- ▶ Details of interaction between **drug class entry** and another **drug** or **drug class**. Action statement. [Severity] Evidence

#### 3 Drug entry or Drug class entry

Supplementary information

#### 4 Drug entry or Drug class entry → see TABLE 1

**TABLE 1**  
**Name of pharmacodynamic effect**  
**Explanation of the effect**

Drug	Drug	Drug
Drug	Drug	Drug

list of interactions for the drug or drug class. In addition to the list of interactions for a drug or drug class, these tables should always be consulted.

Each table describes the relevant pharmacodynamic effect and lists those drugs that are commonly associated with the effect. Concurrent use of two or more drugs from the same table is expected to increase the risk of the pharmacodynamic effect occurring. Please note these tables are not exhaustive.

**TABLE 1****Drugs that cause hepatotoxicity**

The following is a list of some drugs that cause hepatotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alcohol (beverage)	dactinomycin	isoniazid	micafungin	streptozocin
alectinib	dantrolene	itraconazole	minocycline	sulfasalazine
asparaginase	demeclocycline	leflunomide	oxytetracycline	tetracycline
atorvastatin	didanosine	lenalidomide	paracetamol	tigecycline
bedaquiline	doxycycline	lomitapide	pegaspargase	trabectedin
carbamazepine	flucloxacillin	lymecycline	pravastatin	valproate
clavulanic acid	fluconazole	mercaptapurine	rosuvastatin	vincristine
crisantaspase	fluvastatin	methotrexate	simvastatin	

**TABLE 2****Drugs that cause nephrotoxicity**

The following is a list of some drugs that cause nephrotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

aceclofenac	ceftaroline	diclofenac	methotrexate	tacrolimus
aciclovir	ceftazidime	etodolac	nabumetone	telavancin
adefovir	ceftobiprole	etoricoxib	naproxen	tenofovir disoproxil
amikacin	ceftolozane	flurbiprofen	neomycin	tenoxicam
amphotericin	ceftriaxone	foscarnet	oxaliplatin	tiaprofenic acid
bacitracin	cefuroxime	ganciclovir	parecoxib	tobramycin
capreomycin	celecoxib	gentamicin	pemetrexed	tolfenamic acid
carboplatin	ciclosporin	ibuprofen	penicillamine	trimethoprim
cefaclor	cidofovir	ifosfamide	pyriminidone	valaciclovir
cefadroxil	cisplatin	indometacin	piroxicam	valganciclovir
cefalexin	colistimethate (particularly intravenous)	ketoprofen	polymyxins	vancomycin
cefixime	dexibuprofen	ketorolac	streptomycin	zidovudine
cefotaxime	dexketoprofen	mefenamic acid	streptozocin	zoledronic acid
cefradine		meloxicam	sulindac	

**TABLE 3****Drugs with anticoagulant effects**

The following is a list of drugs that have anticoagulant effects. Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with antiplatelet effects (see table of drugs with antiplatelet effects) might also increase this risk.

acenocoumarol	dabigatran	fondaparinux	rivaroxaban	warfarin
alteplase	dalteparin	heparin (unfractionated)	streptokinase	
apixaban	danaparoid	nicotinic acid	tenecteplase	
argatroban	edoxaban	omega-3-acid ethyl esters	tinzaparin	
bivalirudin	enoxaparin	phenindione	urokinase	

**TABLE 4****Drugs with antiplatelet effects**

The following is a list of drugs that have antiplatelet effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with anticoagulant effects (see table of drugs with anticoagulant effects) might also increase this risk.

aceclofenac	dasatinib	etoricoxib	ketorolac	sertraline
anagrelide	dexibuprofen	fluoxetine	mefenamic acid	sulindac
aspirin	dexketoprofen	flurbiprofen	meloxicam	tenoxicam
bevacizumab	diclofenac	fluvoxamine	nabumetone	tiaprofenic acid
cangrelor	dipyridamole	ibrutinib	naproxen	ticagrelor
celecoxib	duloxetine	ibuprofen	parecoxib	tirofiban
cilostazol	epoprostenol	iloprost	paroxetine	tolfenamic acid
citalopram	eptifibatid	indometacin	piroxicam	trastuzumab emtansine
clopidogrel	escitalopram	inotersen	prasugrel	venlafaxine
dapoxetine	etodolac	ketoprofen	regorafenib	vortioxetine

**TABLE 5****Drugs that cause thromboembolism**

The following is a list of some drugs that cause thromboembolism (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

bleomycin	epoetin zeta	pentostatin	toremifene	vinflunine
cyclophosphamide	flourouracil	pomalidomide	tranexamic acid	vinorelbine
darbepoetin alfa	fulvestrant	raloxifene	tretinoin	
doxorubicin	lenalidomide	tamoxifen	vinblastine	
epoetin alfa	methotrexate	thalidomide	vincristine	
epoetin beta	mitomycin	tibolone	vindesine	

TABLE 6

**Drugs that cause bradycardia**

The following is a list of drugs that cause bradycardia (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	carvedilol	fenytanyl	nadolol	selegiline
alectinib	celiprolol	fingolimod	nebivolol	sotalol
alfentanil	cisatracurium	flecainide	neostigmine	sufentanil
amiodarone	clonidine	galantamine	pasireotide	thalidomide
apraclonidine	crizotinib	ivabradine	pindolol	timolol
atenolol	digoxin	labetalol	propranolol	tizanidine
betaxolol	diltiazem	levobunolol	pyridostigmine	tizanidine
bisoprolol	donepezil	methadone	remifentanyl	verapamil
brimonidine	esmolol	metoprolol	rivastigmine	

TABLE 7

**Drugs that cause first dose hypotension**

The following is a list of some drugs that can cause first-dose hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alfuzosin	eprosartan	isosorbide dinitrate	prazosin	trandolapril
azilsartan	fosinopril	isosorbide mononitrate	quinapril	valsartan
candesartan	glyceryl trinitrate	lisinopril	ramipril	
captopril	imidapril	losartan	tamsulosin	
doxazosin	indoramin	olmesartan	telmisartan	
enalapril	irbesartan	perindopril	terazosin	

TABLE 8

**Drugs that cause hypotension**

The following is a list of some drugs that cause hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	chlorothiazide	guanfacine	minoxidil	risperidone
alcohol (beverage)	chlorthalidone	haloperidol	moxisylyte	ropinirole
alfuzosin	chlordiazepoxide	hydralazine	moxonidine	rotigotine
alfixiren	clevidipine	hydrochlorothiazide	nadolol	sacubitril
alprostadil	clomipramine	hydroflumethiazide	nebivolol	sapropterin
amantadine	clonidine	imidapril	nicardipine	selegiline
amitriptyline	clozapine	imipramine	nicorandil	sevoflurane
amlodipine	dapagliflozin	indapamide	nifedipine	sildenafil
apomorphine	desflurane	indoramin	nimodipine	sodium nitroprusside
apraclonidine	diazoxide	irbesartan	nitrous oxide	sodium oxybate
aripiprazole	diltiazem	isocarboxazid	nortriptyline	sotalol
asenapine	dipyridamole	isoflurane	olanzapine	spironolactone
atenolol	dosulepin	isosorbide dinitrate	olmesartan	sulpiride
avanafil	doxazosin	isosorbide mononitrate	paliperidone	tadalafil
azilsartan	doxepin	ketamine	pergolide	tamsulosin
baclofen	droperidol	labetalol	pericyazine	telmisartan
bendroflumethiazide	empagliflozin	lacidipine	perindopril	terazosin
benperidol	enalapril	lercanidipine	phenelzine	thiopental
betaxolol	eplerenone	levobunolol	pimozide	timolol
bisoprolol	eprosartan	levodopa	pindolol	tizanidine
bortezomib	ertugliflozin	levomepromazine	pramipexole	torasemide
brimonidine	esketamine	lisinopril	prazosin	trandolapril
bromocriptine	esmolol	lofepramine	prochlorperazine	tranylcypromine
bumetanide	etomidate	lofexidine	promazine	trifluoperazine
cabergoline	felodipine	losartan	propofol	trimipramine
canagliflozin	flupentixol	loxapine	propranolol	valsartan
candesartan	fluphenazine	lurasidone	quetiapine	varidenafil
captopril	fosinopril	methoxyflurane	quinagolide	verapamil
cariprazine	furosemide	methyl dopa	quinapril	xipamide
carvedilol	glyceryl trinitrate	metolazone	ramipril	zuclopenthixol
celiprolol	guanethidine	metoprolol	riociguat	

**TABLE 9****Drugs that prolong the QT interval**

The following is a list of some drugs that prolong the QT-interval (note that this list is not exhaustive). In general, manufacturers advise that the use of two or more drugs that are associated with QT prolongation should be avoided. Increasing age, female sex, cardiac disease, and some metabolic disturbances (notably hypokalaemia) predispose to QT prolongation—concurrent use of drugs that reduce serum potassium might further increase this risk (see table of drugs that reduce serum potassium).

Drugs that are not known to prolong the QT interval but are predicted (by the manufacturer) to increase the risk of QT prolongation include: domperidone, fingolimod, granisetron, ivabradine, mefloquine, mizolastine, palonosetron, and intravenous pentamidine. Most manufacturers advise avoiding concurrent use with drugs that prolong the QT interval.

amifampridine	clarithromycin	fluphenazine	panobinostat	tetrabenazine
amiodarone	clomipramine	haloperidol	pasireotide	tizanidine
amisulpride	crizotinib	hydroxyzine	pazopanib	tolterodine
anagrelide	dasatinib	inotuzumab ozogamicin	pimozide	toremifene
apalutamide	delamanid	lapatinib	quinine	vandetanib
apomorphine	disopyramide	lenvatinib	ranolazine	varidenafil
arsenic trioxide	dronedarone	levomepromazine	ribociclib	vemurafenib
artemether	droperidol	lithium	risperidone	venlafaxine
artenimol	efavirenz	lofedidine	sacuinavir	vinflunine
bedaquiline	encorafenib	methadone	sildenafil	voriconazole
bosutinib	eribulin	moxifloxacin	sorafenib	zuclophenthixol
cabozantinib	erythromycin	nilotinib	sotalol	
ceritinib	escitalopram	ondansetron	sulpiride	
chlorpromazine	flecainide	osimertinib	sumitinib	
citalopram	fluconazole	paliperidone	telavancin	

**TABLE 10****Drugs with antimuscarinic effects**

The following is a list of some drugs that have antimuscarinic effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of these effects occurring. Drugs with antimuscarinic effects decrease the absorption of levodopa.

acclidinium	cyclopentolate	haloperidol	orphenadrine	tolterodine
amantadine	cyproheptadine	homatropine	oxybutynin	trifluoperazine
amitriptyline	darifenacin	hydroxyzine	pimozide	trihexphenidyl
atropine	dicycloverine	hyoscine	prochlorperazine	trimipramine
baclofen	dimenhydrinate	imipramine	procyclidine	tropicamide
chlorphenamine	disopyramide	ipratropium	promethazine	tropium
chlorpromazine	dosulepin	levomepromazine	propofol	umeclidinium
clemastine	doxepin	lofepramine	propantheline	
clomipramine	fesoterodine	loxapine	propiverine	
clozapine	flavoxate	nefopam	solfenacin	
cyclizine	glycopyrronium	nortriptyline	tiotropium	

**TABLE 11****Drugs with CNS depressant effects**

The following is a list of some drugs with CNS depressant effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of CNS depressant effects, such as drowsiness, which might affect the ability to perform skilled tasks (see 'Drugs and Driving' in Guidance on Prescribing p. 1).

agomelatine	clobazam	hydromorphone	mirtazapine	propofol
alcohol (beverage)	clomethiazole	hydroxyzine	morphine	quetiapine
alfentanil	clonazepam	isoflurane	moxonidine	remifentanil
alimemazine	clonidine	ketamine	nabilone	risperidone
alprazolam	clozapine	ketotifen	nitrazepam	ropivacaine
amisulpride	codeine	lamotrigine	nitrous oxide	sevoflurane
apraclonidine	cyclizine	levetiracetam	olanzapine	sodium oxybate
aripiprazole	cyproheptadine	levomepromazine	oxazepam	sufentanil
articaine	desflurane	lidocaine	oxycodone	sulpiride
asenapine	dexmedetomidine	lofedidine	paliperidone	tapentadol
baclofen	diamorphine	loprazolam	papaveretum	temazepam
benperidol	diazepam	lorazepam	perazocine	tetracaine
brimonidine	dihydrocodeine	lormetazepam	perampanel	thalidomide
buclizine	dipipanone	loxapine	pericyazine	thiopental
bupivacaine	droperidol	lurasidone	peridine	tizanidine
buprenorphine	esketamine	melatonin	phenobarbital	tramadol
cannabis extract	etomidate	mepivacaine	pimozide	trazodone
cariprazine	fentanyl	meprobamate	pizotifen	trifluoperazine
chloral hydrate	flupentixol	meptazinol	pregabalin	venlafaxine
chlordiazepoxide	fluphenazine	methadone	prilocaline	zolpidem
chlorphenamine	flurazepam	methocarbamol	primidone	zopiclone
chlorpromazine	gabapentin	methoxyflurane	prochlorperazine	zuclophenthixol
cinnarizine	guanfacine	mianserin	promazine	
clemastine	haloperidol	midazolam	promethazine	

TABLE 12

**Drugs that cause peripheral neuropathy**

The following is a list of some drugs that cause peripheral neuropathy (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amiodarone	didanosine	isoniazid	phenytoin	vindesine
bortezomib	disulfiram	lamivudine	stavudine	vinflunine
brentuximab vedotin	docetaxel	metronidazole	thalidomide	vinorelbine
cabazitaxel	eribulin	nitrofurantoin		
cisplatin	fosphenytoin	paclitaxel	vincristine	

TABLE 13

**Drugs that cause serotonin syndrome**

The following is a list of some drugs that cause serotonin syndrome (note that this list is not exhaustive). See 'Serotonin Syndrome' and 'Monoamine-Oxidase Inhibitors' under Antidepressant drugs p. 359 for more information and for specific advice on avoiding monoamine-oxidase inhibitors during and after administration of other serotonergic drugs.

almotriptan	fentanyl	methadone	pethidine	tapentadol
bupropion	fluoxetine	methylthionium chloride	phenelzine	tramadol
bupirone	fluvoxamine	mianserin	procarbazine	tranylcypromine
citalopram	frovatriptan	mirtazapine	rasagiline	trazodone
clomipramine	granisetron	moclobemide	rizatriptan	tryptophan
dapoxetine	imipramine	naratriptan	safinamide	venlafaxine
dexamfetamine	isocarboxazid	ondansetron	selegiline	vortioxetine
duloxetine	linezolid	palonosetron	sertraline	zolmitriptan
eletriptan	lisdexamfetamine	paroxetine	St John's Wort	
escitalopram	lithium	pentazocine	sumatriptan	

TABLE 14

**Antidiabetic drugs**

The following is a list of antidiabetic drugs (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase the risk of hypoglycaemia.

acarbose	empagliflozin	glimepiride	lixisenatide	saxagliptin
alogliptin	ertugliflozin	glipizide	metformin	semaglutide
canagliflozin	exenatide	insulins	nateglinide	sitagliptin
dapagliflozin	glibenclamide	linagliptin	pioglitazone	tolbutamide
dulaglutide	gliclazide	liraglutide	repaglinide	vildagliptin

TABLE 15

**Drugs that cause myelosuppression**

The following is a list of some drugs that cause myelosuppression (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

afatinib	carmustine	fludarabine	nivolumab	siltuximab
aflibercept	ceritinib	fluorouracil	obinutuzumab	sorafenib
alemtuzumab	cetuximab	ganciclovir	olanzapine	sulfadiazine
amsacrine	chlorambucil	gefitinib	olaparib	sulfamethoxazole
anakinra	cisplatin	gemcitabine	olsalazine	sulfasalazine
arsenic trioxide	cladribine	hydroxycarbamide	oxaliplatin	sunitinib
asparaginase	clofarabine	ibrutinib	paclitaxel	temozolomide
axitinib	clozapine	idarubicin	panitumumab	temsirolimus
azacitidine	crisantaspase	idelalisib	panobinostat	thalidomide
azathioprine	crizotinib	ifosfamide	pazopanib	thiotepa
balsalazide	cyclophosphamide	imatinib	pegaspargase	tioguanine
belinumab	cytarabine	interferon alfa	peginterferon alfa	topotecan
bendamustine	dabrafenib	interferon beta	peginterferon beta-1a	trabectedin
bevacizumab	dacarbazine	irinotecan	pemetrexed	trastuzumab emtansine
bleomycin	dactinomycin	leflunomide	pentamidine	treosulfan
blinatumomab	dasatinib	lenalidomide	pentostatin	valganciclovir
bortezomib	daunorubicin	linezolid	pixantrone	vinblastine
bosutinib	decitabine	lomustine	pomalidomide	vincristine
brentuximab vedotin	deferiprone	melphalan	primaquine	vindesine
busulfan	docetaxel	mercaptopurine	procarbazine	vinflunine
cabazitaxel	doxorubicin	methotrexate	propylthiouracil	vinorelbine
cabozantinib	epirubicin	mitomycin	pyrimethamine	vismodegib
canakinumab	eribulin	mitotane	raltitrexed	zidovudine
capecitabine	estramustine	mitoxantrone	ramucirumab	
carbimazole	ethosuximide	mycophenolate	regorafenib	
carboplatin	etoposide	nelarabine	rituximab	
carfilzomib	everolimus	nilotinib	ruxolitinib	

TABLE 16

**Drugs that increase serum potassium**

The following is a list of some drugs that increase serum potassium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyperkalaemia (hyperkalaemia is particularly notable when ACE inhibitors or angiotensin-II receptor antagonists are given with spironolactone or eplerenone).

aceclofenac	diclofenac	heparin (unfractionated)	naproxen	tacrolimus
aliskiren	drosiprenone	ibuprofen	olmesartan	telmisartan
amiloride	enalapril	imidapril	parecoxib	tenoxicam
azilsartan	enoxaparin	indometacin	perindopril	tiaprofenic acid
candesartan	eplerenone	irbesartan	piroxicam	tinzaparin
captopril	epoetin alfa	ketoprofen	potassium aminobenzoate	tolfenamic acid
celecoxib	epoetin beta	ketorolac	potassium canrenoate	tolvaptan
ciclosporin	epoetin zeta	lisinopril	potassium chloride	trandolapril
dalteparin	eprosartan	losartan	quinapril	triamterene
darbepoetin alfa	etodolac	mefenamic acid	ramipril	trimethoprim
dexibuprofen	etoricoxib	meloxicam	spironolactone	valsartan
dexketoprofen	flurbiprofen	nabumetone	sulindac	

TABLE 17

**Drugs that reduce serum potassium**

The following is a list of some drugs that reduce serum potassium concentrations (note that this list is not exhaustive and that other drugs can cause hypokalaemia in overdose). Concurrent use of two or more drugs from this list might increase the risk of hypokalaemia. Hypokalaemia can increase the risk of torsade de pointes, which might be additive with the effects of drugs that prolong the QT interval (see table of drugs that prolong the QT interval). Drugs that reduce serum potassium are predicted to increase the risk of digoxin toxicity.

aminophylline	bumetanide	furosemide	metolazone	torasemide
amphotericin	chlorthiazide	hydrochlorothiazide	olodaterol	triamcinolone
bambuterol	chlortalidone	hydrocortisone	prednisolone	vilanterol
beclometasone	deflazacort	hydroflumethiazide	salbutamol	xipamide
bendroflumethiazide	dexamethasone	indacaterol	salmeterol	
betamethasone	fludrocortisone	indapamide	terbutaline	
budesonide	formoterol	methylprednisolone	theophylline	

TABLE 18

**Drugs that cause hyponatraemia**

The following is a list of some drugs that reduce sodium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyponatraemia.

aceclofenac	desmopressin	flurbiprofen	mefenamic acid	sulindac
amiloride	dexibuprofen	fluvoxamine	meloxicam	tenoxicam
amitriptyline	dexketoprofen	furosemide	metolazone	tiaprofenic acid
bendroflumethiazide	diclofenac	gabapentin	nabumetone	tolfenamic acid
bumetanide	dosulepin	hydrochlorothiazide	naproxen	torasemide
carbamazepine	doxepin	hydroflumethiazide	nortriptyline	triamterene
celecoxib	duloxetine	ibuprofen	parecoxib	triamterene
chlorthiazide	eplerenone	imipramine	paroxetine	trimethoprim
chlortalidone	escitalopram	indapamide	piroxicam	trimipramine
citalopram	etodolac	indometacin	sertraline	xipamide
clomipramine	etoricoxib	ketoprofen	sodium picosulfate	
dapoxetine	fluoxetine	ketorolac	spironolactone	

TABLE 19

**Drugs that cause ototoxicity**

The following is a list of some drugs that cause ototoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisplatin	oxaliplatin	torasemide	vindesine
bumetanide	furosemide	streptomycin	vancomycin	vinflunine
capreomycin	gentamicin	telavancin	vinblastine	vinorelbine
carboplatin	neomycin	tobramycin	vincristine	

TABLE 20

**Drugs with neuromuscular blocking effects**

The following is a list of some drugs with neuromuscular blocking effects (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	botulinum toxin type B	gentamicin	pancuronium	streptomycin
atracurium	cisatracurium	mivacurium	polymyxins	suxamethonium
botulinum toxin type A	colistimethate	neomycin	rocuronium	tobramycin

## List of drug interactions

The following is an alphabetical list of drugs and their interactions; to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

**Abacavir**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. [Moderate](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **abacavir**. Avoid. [Severe](#) Study

**Abatacept**

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). [Severe](#) Theoretical

- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe](#) Theoretical

**Abemaciclib**

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Cobiciclat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe](#) Study

**Abiraterone**

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe](#) Study
- ▶ **Abiraterone** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate](#) Study

- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe](#) Study

**Acarbose** → see TABLE 14 p. 1378 (antidiabetic drugs)

- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate](#) Study

- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate](#) Theoretical

**ACE inhibitors** → see TABLE 7 p. 1376 (first-dose hypotension), TABLE 8 p. 1376 (hypotension), TABLE 16 p. 1379 (increased serum potassium)

captopril · enalapril · fosinopril · imidapril · lisinopril · perindopril · quinapril · ramipril · trandolapril

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **alsikiren**. Use with caution or avoid **alsikiren** in selected patients, p. 179. [Severe](#) Study → Also see TABLE 8 p. 1376 → Also see TABLE 16 p. 1379

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [Severe](#) Anecdotal

- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe](#) Anecdotal

- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [Severe](#) Anecdotal

- ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icatibant** and **icatibant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate](#) Theoretical

- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe](#) Anecdotal

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [Severe](#) Anecdotal

- ▶ **Quinapril** (tablet) decreases the absorption of oral **tetracyclines (tetracycline)**. Avoid. [Moderate](#) Study

**Acetabulol** → see beta blockers, selective

**Acetocfenac** → see NSAIDs

**Acenocoumarol** → see coumarins

**Acetazolamide**

- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **antiepileptics (valproate)**. [Severe](#) Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe](#) Theoretical
- ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [Severe](#) Study
- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe](#) Anecdotal

- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate](#) Theoretical

- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate](#) Study

**Aciclovir** → see TABLE 2 p. 1375 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Aciclovir** increases the exposure to **aminophylline**. Monitor and adjust dose. [Severe](#) Anecdotal

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate](#) Theoretical

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe](#) Theoretical

**Acitretin** → see retinoids

**Acildinium** → see TABLE 10 p. 1377 (antimuscarinics)

**Acrivastine** → see antihistamines, non-sedating

**Adalimumab** → see monoclonal antibodies

**Adapalene** → see retinoids

**Adefovir** → see TABLE 2 p. 1375 (nephrotoxicity)

- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Study

**Adenosine** → see antiarrhythmics

**Adrenaline/epinephrine** → see sympathomimetics, vasoconstrictor

**Afatinib** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study

**Aflibercept** → see TABLE 15 p. 1378 (myelosuppression)

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

### Agalsidase

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. [\[Moderate\]](#) Theoretical

**Agomelatine** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
  - ▶ Caution with concomitant use of drugs associated with hepatic injury.
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
  - ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **agomelatine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
- Albendazole**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [\[Moderate\]](#) Study

- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **albendazole**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **albendazole**. [\[Moderate\]](#) Study
  - ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [\[Moderate\]](#) Study
- Alcohol (beverage)** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Alcohol (beverage)** potentially increases the risk of visual disturbances when given with **antiepileptics (retigabine)**. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **antifungals, azoles (ketoconazole)**. Avoid. [\[Moderate\]](#) Anecdotal
  - ▶ **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [\[Severe\]](#) Study → Also see TABLE 11 p. 1377
  - ▶ **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [\[Severe\]](#) Study
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [\[Moderate\]](#) Anecdotal
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **levamisole**. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [\[Moderate\]](#) Theoretical
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** causes rapid release of **opioids (hydromorphone, morphine)** (from extended-release preparations). Avoid. [\[Severe\]](#) Study → Also see TABLE 11 p. 1377
  - ▶ **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [\[Severe\]](#) Study → Also see TABLE 1 p. 1375
  - ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **procarbazine**. [\[Moderate\]](#) Anecdotal
  - ▶ **Alcohol (beverage)** potentially increases the concentration of **retinoids (acitretin)**. Avoid and for 2 months after stopping **acitretin**. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [\[Moderate\]](#) Study
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. [\[Moderate\]](#) Theoretical
- Aldosterone antagonists** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 8 p. 1376 (hypotension), TABLE 16 p. 1379 (increased serum potassium)
- eplerenone · spironolactone
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [\[Severe\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eplerenone**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 18 p. 1379
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [\[Severe\]](#) Study

## Aldosterone antagonists (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **eplerenone**. Avoid or monitor. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study → Also see TABLE 8 p. 1376
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Eplerenone** very slightly increases the exposure to **digoxin**. [Mild] Study
  - ▶ **Spirolactone** increases the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Eplerenone** potentially increases the concentration of **lithium**. Avoid. [Moderate] Theoretical
  - ▶ **Spirolactone** potentially increases the concentration of **lithium**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **Spirolactone** is predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Netupitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to slightly decrease the exposure to **eplerenone**. Avoid. [Moderate] Study
- Alectinib** → see TABLE 6 p. 1376 (bradycardia), TABLE 1 p. 1375 (hepatotoxicity)
- Alentuzumab** → see monoclonal antibodies
- Alendronic acid** → see bisphosphonates
- Alfacalcidol** → see vitamin D substances
- Alfentanil** → see opioids
- Alfuzosin** → see alpha blockers
- Alimemazine** → see antihistamines, sedating
- Aliskiren** → see TABLE 8 p. 1376 (hypotension), TABLE 16 p. 1379 (increased serum potassium)

**FOOD AND LIFESTYLE** Avoid apple juice and orange juice as they greatly decrease aliskiren concentrations and plasma renin activity.

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 179. [Severe] Study → Also see TABLE 8 p. 1376 → Also see TABLE 16 p. 1379
  - ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 179. [Severe] Study → Also see TABLE 8 p. 1376 → Also see TABLE 16 p. 1379
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **aliskiren**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole)** markedly increase the exposure to **aliskiren**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Calcium channel blockers (verapamil)** moderately increase the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1376
  - ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1379
  - ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
  - ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Aliskiren** slightly decreases the exposure to **loop diuretics (furosemide)**. [Moderate] Study → Also see TABLE 8 p. 1376
  - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Statins (atorvastatin)** slightly to moderately increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- Alitretinoin** → see retinoids
- Alkylating agents** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity), TABLE 5 p. 1375 (thromboembolism)
- benadamistine · busulfan · carmustine · chlorambucil · cyclophosphamide · dacarbazine · estramustine · ifosfamide · lomustine · melphalan · temozolomide · thiotepa · treosulfan
- ▶ **Antacids** are predicted to decrease the absorption of **estramustine**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **cyclophosphamide**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole)** increase the risk of busulfan toxicity when given with busulfan. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of busulfan. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to ifosfamide. [Severe] Theoretical
  - ▶ Oral **calcium salts** decrease the absorption of **estramustine**. [Severe] Study
  - ▶ **Fosaprepitant** is predicted to increase the exposure to ifosfamide. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with alkylating agents. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Metronidazole** increases the risk of toxicity when given with busulfan. [Severe] Study
  - ▶ **Netupitant** very slightly increases the exposure to cyclophosphamide. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to ifosfamide. [Moderate] Study
  - ▶ **Paracetamol** is predicted to decrease the clearance of busulfan. [Moderate] Theoretical

- ▶ **Cyclophosphamide** (high-dose) increases the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1378 → Also see TABLE 5 p. 1375
  - ▶ **Rolapitant** is predicted to increase the exposure to **bendamustine**. Avoid or monitor. [Moderate] Study
  - ▶ **Cyclophosphamide** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ### Allopurinol
- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [Severe] Anecdotal
  - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust azathioprine dose, p. 836. [Severe] Study
  - ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study
  - ▶ **Allopurinol** moderately increases the exposure to **didanosine**. Avoid. [Severe] Study
  - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust mercaptopurine dose, p. 912. [Severe] Study
  - ▶ **Allopurinol** increases the risk of skin rash when given with **penicillins (amoxicillin, ampicillin)**. [Moderate] Study
  - ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical
  - ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
- ### Almotriptan
- see TABLE 13 p. 1378 (serotonin syndrome)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [Mild] Study
  - ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
  - ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [Mild] Study
- ### Aligliptin
- see TABLE 14 p. 1378 (antidiabetic drugs)
- ### Alpha blockers
- see TABLE 7 p. 1376 (first-dose hypotension), TABLE 8 p. 1376 (hypotension)
- alfuzosin · doxazosin · indoramin · prazosin · tamsulosin · terazosin
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **doxazosin**. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **doxazosin**. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **indoramin**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Netupitant** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
  - ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1376
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alfuzosin**. Avoid. [Moderate] Theoretical
- ### Alpha tocopherol
- see vitamin E substances
- ### Alpha tocopheryl acetate
- see vitamin E substances
- ### Alprazolam
- see TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1377
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **alprazolam**. [Moderate] Study
  - ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical

## Alprazolam (continued)

- ▶ **Netupitant** is predicted to increase the exposure to alprazolam. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to alprazolam. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to alprazolam. Adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to alprazolam. Adjust dose. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to alprazolam. [Moderate] Study

**Alprostadil** → see TABLE 8 p. 1376 (hypotension)

**Alteplase** → see TABLE 3 p. 1375 (anticoagulant effects)

**Aluminium hydroxide** → see antacids

**Amantadine** → see dopamine receptor agonists

**Ambrisentan**

- ▶ **Ciclosporin** moderately increases the exposure to ambrisentan. Adjust ambrisentan dose, p. 184. [Moderate] Study
- ▶ **Rifampicin** transiently increases the exposure to ambrisentan. [Moderate] Study

**Amfetamines** → see TABLE 13 p. 1378 (serotonin syndrome)

dexamfetamine · lisdexamfetamine

- ▶ Amfetamines are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ Amfetamines are predicted to increase the risk of side-effects when given with **atomoxetine**. [Severe] Theoretical
- ▶ **Dexamfetamine** decreases the effects of **guanethidine**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to amfetamines. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with amfetamines. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with amfetamines. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with amfetamines. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with amfetamines. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with amfetamines. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of amfetamines and amfetamines are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to amfetamines. [Severe] Theoretical → Also see TABLE 13 p. 1378

**Amifampridine** → see TABLE 9 p. 1377 (QT-interval prolongation)

**Amikacin** → see aminoglycosides

**Amiloride** → see potassium-sparing diuretics

**Aminoglycosides** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity), TABLE 20 p. 1379 (neuromuscular blocking effects)

amikacin · gentamicin · streptomycin · tobramycin

- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **gentamicin** should be borne in mind.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **tobramycin** should be borne in mind.

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** potentially decrease the exposure to tobramycin. [Moderate] Anecdotal
- ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous aminoglycosides. Avoid. [Severe] Study

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1375
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with aminoglycosides. Avoid. [Moderate] Study → Also see TABLE 19 p. 1379
- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical

**Aminophylline** → see TABLE 17 p. 1379 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase aminophylline clearance and increased doses of aminophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** increases the exposure to aminophylline. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Aminophylline** is predicted to decrease the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to increase the clearance of aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to aminophylline. Avoid. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of aminophylline. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Interferons** are predicted to slightly increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to aminophylline. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to affect the clearance of aminophylline. [Severe] Theoretical
- ▶ **Leflunomide** decreases the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to aminophylline. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **macrolides (erythromycin)**. Adjust dose. [Severe] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of aminophylline. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to aminophylline. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to aminophylline. Monitor and adjust dose. [Moderate] Theoretical

- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Study
  - ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **aminophylline**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study
  - ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
- Aminosalicic acid**
- ▶ **Aminosalicic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Aminosalicic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- Amiodarone** → see antiarrhythmics
- Amisulpride** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
- Amitriptyline** → see tricyclic antidepressants
- Amlodipine** → see calcium channel blockers
- Amoxicillin** → see penicillins
- Amphotericin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 17 p. 1379 (reduced serum potassium)
- ▶ **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study
  - ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study
  - ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study
- Ampicillin** → see penicillins
- Amsacrine** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Anaesthetics, local** → see TABLE 11 p. 1377 (CNS depressant effects)
- bupivacaine · levobupivacaine · mepivacaine · oxybuprocaine · prilocaine · proxymetacaine · ropivacaine · tetracaine
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Aminosalicic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **SSRIs (fluvoxamine)** decrease the clearance of **ropivacaine**. Avoid prolonged use. [Moderate] Study
  - ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Anecdotal
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
- Anagrelide** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 4 p. 1375 (antiplatelet effects)
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1375
- Anakinra** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe] Theoretical
- Angiotensin-II receptor antagonists** → see TABLE 7 p. 1376 (first-dose hypotension), TABLE 8 p. 1376 (hypotension), TABLE 16 p. 1379 (increased serum potassium)
- azilsartan · candesartan · eprosartan · irbesartan · losartan · olmesartan · telmisartan · valsartan
- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 179. [Severe] Study → Also see TABLE 8 p. 1376 → Also see TABLE 16 p. 1379
  - ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal

**Antacids**

aluminium hydroxide · magnesium carbonate · magnesium trisilicate

**SEPARATION OF ADMINISTRATION** Antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Antacids are predicted to decrease the absorption of **alkylating agents (estramustine)**. Avoid. [Moderate] Study
- ▶ Antacids decrease the absorption of **antiepileptics (gabapentin)**. **Gabapentin** should be taken 2 hours after antacids. [Moderate] Study
- ▶ Antacids decrease the absorption of **antifungals, azoles (itraconazole)** (capsule). Antacids should be taken 1 hour before or 2 hours after itraconazole. [Moderate] Study
- ▶ Antacids decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **antihistamines, non-sedating (fexofenadine)**. Separate administration by 2 hours. [Mild] Study
- ▶ Antacids decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **aspirin** (high-dose). [Moderate] Study
- ▶ Antacids decrease the exposure to **bictegravir**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **bisphosphonates (alendronic acid)**. Alendronic acid should be taken at least 30 minutes before antacids. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **bisphosphonates (ibandronic acid)**. Avoid antacids for at least 6 hours before or 1 hour after ibandronic acid. [Moderate] Theoretical
- ▶ Antacids decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **bisphosphonates (sodium clodronate)**. Avoid antacids for 2 hours before or 1 hour after sodium clodronate. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ Antacids are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Oral aluminium hydroxide decreases the absorption of **chenodeoxycholic acid**. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ Antacids are predicted to decrease the absorption of **corticosteroids (deflazacort)**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Antacids decrease the absorption of **corticosteroids (dexamethasone)**. [Moderate] Study
- ▶ Antacids decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Aluminium hydroxide is predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- ▶ Antacids decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- ▶ Antacids are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ Antacids moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
- ▶ Antacids decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [Severe] Study
- ▶ Antacids moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Aluminium hydroxide increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **erlotinib**. Antacids should be taken 4 hours before or 2 hours after erlotinib. [Moderate] Theoretical
- ▶ Antacids slightly to moderately decrease the exposure to **fibrates (gemfibrozil)**. [Moderate] Study
- ▶ Antacids are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ Antacids are predicted to decrease the absorption of **HIV-protease inhibitors (atazanavir)**. **Atazanavir** should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ Antacids are predicted to decrease the absorption of **HIV-protease inhibitors (tipranavir)**. Separate administration by 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **iron (oral)**. **Iron (oral)** should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ Aluminium hydroxide is predicted to decrease the exposure to **iron chelators (deferasirox)**. Avoid. [Moderate] Theoretical
- ▶ Antacids are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ Antacids are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ Antacids decrease the exposure to **mycophenolate**. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Magnesium trisilicate decreases the absorption of **nitrofurantoin**. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ Antacids decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ Antacids decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- ▶ Antacids increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ Antacids decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- ▶ Antacids slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
- ▶ Antacids decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
- ▶ Antacids are predicted to decrease the exposure to **rilpivirine**. Antacids should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- ▶ Antacids slightly decrease the exposure to **riociguat**. Antacids should be taken 2 hours before or 1 hour after riociguat. [Mild] Study
- ▶ Antacids moderately decrease the absorption of **statins (rosuvastatin)**. Separate administration by 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ Antacids decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- ▶ Antacids are predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ Antacids are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Antacids are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical

**Antazoline** → see antihistamines, sedating

**Anthracyclines** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)

daunorubicin · doxorubicin · epirubicin · idarubicin · mitoxantrone · pixantrone

**GENERAL INFORMATION** Caution is necessary with concurrent use of cardiotoxic drugs, or drugs that reduce cardiac contractility.

- ▶ **Calcium channel blockers (verapamil)** moderately increase the exposure to **doxorubicin**. [Moderate] Study
  - ▶ **Ciclosporin** increases the concentration of anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone). [Severe] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **epirubicin**. Avoid. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone). [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **monoclonal antibodies (trastuzumab, trastuzumab emtansine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Rolapitant** is predicted to increase the exposure to anthracyclines (**doxorubicin, mitoxantrone**). Avoid or monitor. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to anthracyclines (**daunorubicin, doxorubicin, mitoxantrone**). [Moderate] Theoretical
- Anti-D (Rh<sub>0</sub>) immunoglobulin** → see immunoglobulins
- Antiarrhythmics** → see TABLE 6 p. 1376 (bradycardia), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

adenosine · amiodarone · disopyramide · dronedarone · flecainide · lidocaine · propafenone

- ▶ Amiodarone has a long half-life; there is potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped.
  - ▶ Since systemic absorption can follow topical application of **lidocaine**, the possibility of interactions should be borne in mind.
- ▶ **Dronedarone** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
  - ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
  - ▶ **Amiodarone** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **aliskiren**. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Aminophylline** is predicted to decrease the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Theoretical
  - ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**amiodarone**). Monitor and adjust dose. [Severe] Theoretical
  - ▶ Antiarrhythmics (**amiodarone**) increase the concentration of antiarrhythmics (**flecainide**). Adjust **flecainide** dose and monitor side effects. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**lidocaine**). [Moderate] Study
  - ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Amiodarone** increases the risk of bradycardia when given with **anticholinesterases, centrally acting**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
  - ▶ **Antiarrhythmics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **propafenone**. [Moderate] Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **lidocaine**. [Severe] Anecdotal
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Study
  - ▶ **Amiodarone** is predicted to slightly increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 12 p. 1378
  - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **dronedarone**. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **disopyramide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very markedly increase the exposure to **dronedarone**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **disopyramide**. Use with caution and adjust dose. [Severe] Theoretical
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine, mizolastine)**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
  - ▶ **Aprepitant** increases the exposure to **dronedarone**. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1377
  - ▶ Antiarrhythmics (**amiodarone, disopyramide, dronedarone, flecainide, lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [Severe] Study
  - ▶ **Propafenone** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective (propranolol)**. Use with caution or avoid. [Severe] Study

## Antiarrhythmics (continued)

- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, non-selective (timolol)** and **beta blockers, non-selective (timolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. [Severe] Anecdotal
- ▶ Antiarrhythmics (**amiodarone, disopyramide, dronedarone, flecainide, lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1376
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [Severe] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective (nebivolol)** and **beta blockers, selective (nebivolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. Avoid. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dronedarone**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Caffeine citrate** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the exposure to **dronedarone** and **dronedarone** increases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiodepression when given with **flecainide**. [Severe] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Dronedarone** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1376
- ▶ **Disopyramide** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers (verapamil)**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Amiodarone** increases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** potentially increases the concentration of antiarrhythmics (**amiodarone, disopyramide, flecainide, lidocaine**). [Severe] Theoretical
- ▶ **Cobicistat** very markedly increases the exposure to **dronedarone**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Propafenone** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 136. [Moderate] Study
- ▶ **Dronedarone** slightly increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Dronedarone** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of **flecainide**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Severe] Study → Also see TABLE 6 p. 1376
- ▶ **Propafenone** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Dipyridamol** increases the exposure to **adenosine**. Avoid or adjust dose. [Severe] Study
- ▶ **Dronedarone** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Severe] Anecdotal
- ▶ **Dronedarone** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Amiodarone** slightly increases the exposure to **edoxaban**. [Severe] Study
- ▶ **Dronedarone** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 126. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dronedarone**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antiarrhythmics (**dronedarone, propafenone**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dronedarone** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **gefinitib**. [Moderate] Theoretical
- ▶ **Dronedarone** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **amiodarone**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **dronedarone**. Avoid. [Severe] Study

- ▶ **Grapefruit juice** increases the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **amiodarone**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **flecainide**. Monitor and adjust dose. [Mild] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **lidocaine**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **amiodarone**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **disopyramide**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flecainide**. Avoid or monitor side effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lidocaine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 983. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **amiodarone**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Letermovir** is predicted to increase the concentration of **amiodarone**. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **lidocaine**. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dronedaron**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** increases the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedaron)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NSAIDs (celecoxib)** are predicted to increase the exposure to **antiarrhythmics (flecainide, propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **opioids (fentanyl)**. [Moderate] Theoretical → Also see TABLE 6 p. 1376
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedaron** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedaron** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Propafenone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Amiodarone** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Dronedaron** potentially increases the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedaron** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **lidocaine**. [Mild] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1377

## Antiarrhythmics (continued)

- ▶ **Amiodarone** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **amiodarone**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** is predicted to decrease the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Moderate] Theoretical
- ▶ **Rolapitant** is predicted to increase the exposure to **propafenone**. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dronedarone**. Avoid. [Severe] Theoretical
- ▶ **Amiodarone** is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **statins (fluvastatin)**. [Severe] Theoretical
- ▶ **Dronedarone** slightly increases the exposure to **statins (rosuvastatin)**. Adjust dose. [Severe] Study
- ▶ **Amiodarone** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 205. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Lidocaine** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study

- ▶ **Theophylline** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
- ▶ **Amiodarone** is predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Dronedarone** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Propafenone** is predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Dronedarone** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Anticholinesterases, centrally acting** → see TABLE 6 p. 1376 (bradycardia)

donepezil · galantamine · rivastigmine

- ▶ **Antiarrhythmics (amiodarone)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Bupropion** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Cinacalcet** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **donepezil**. [Mid] Study
  - ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical → Also see TABLE 6 p. 1376
  - ▶ **Rifampicin** is predicted to decrease the exposure to **donepezil**. [Mid] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
  - ▶ **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- Antiepileptics** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 18 p. 1379 (hyponaatraemia), TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 11 p. 1377 (CNS depressant effects)

brivaracetam · carbamazepine · eslicarbazepine · ethosuximide · fosphenytoin · gabapentin · lacosamide · lamotrigine · levetiracetam · oxcarbazepine · paraldehyde · perampanel · phenobarbital · phenytoin · pregabalin · primidone · retigabine · rufinamide · stiripentol · tiagabine · topiramate · valproate · vigabatrin · zonisamide

**FOOD AND LIFESTYLE** Avoid taking milk, dairy products, carbonated drinks, fruit juices, or caffeine-containing food and drinks at the same time as stiripentol.

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **valproate**. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially increases the risk of visual disturbances when given with **retigabine**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1379
- ▶ **Carbamazepine** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1377
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Stiripentol** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
- ▶ **Phenytoin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **gabapentin**. **Gabapentin** should be taken 2 hours after **antacids**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to slightly increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 12 p. 1378
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antiarrhythmics (lidocaine)**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**brivaracetam**). [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**brivaracetam**). [Moderate] Study
- ▶ Antiepileptics (**lamotrigine**) potentially increase the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**lamotrigine**). Adjust **lamotrigine** dose and monitor **carbamazepine** concentration, p. 318, p. 311. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) increase the concentration of antiepileptics (**phenobarbital**). Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**topiramate**) increase the risk of carbamazepine toxicity when given with antiepileptics (**carbamazepine**). [Moderate] Study
- ▶ Antiepileptics (**stiripentol**) increase the concentration of antiepileptics (**carbamazepine, phenobarbital**). Avoid in Dravet syndrome. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to antiepileptics (**eslicarbazepine, oxcarbazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). [Severe] Study
- ▶ Antiepileptics (**carbamazepine**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine**) increase the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to antiepileptics (**eslicarbazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**valproate**). [Severe] Study
- ▶ Antiepileptics (**vigabatrin**) decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Mid] Study
- ▶ Antiepileptics (**fosphenytoin**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 318. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 318. [Moderate] Study → Also see TABLE 11 p. 1377

## Antiepileptics (continued)

- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**lamotrigine**). Adjust **lamotrigine** dose and monitor rash, p. 318. [\[Severe\]](#) Study
- ▶ Antiepileptics (**lamotrigine**) are predicted to increase the concentration of antiepileptics (**oxcarbazepine**) and antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of antiepileptics (**lamotrigine**). Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of antiepileptics (**perampanel**) and antiepileptics (**perampanel**) increase the concentration of antiepileptics (**oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenobarbital**) and antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**) increase the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) affect the concentration of antiepileptics (**fosphenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) potentially decrease the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) potentially decrease the concentration of antiepileptics (**carbamazepine**). Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**primidone**). [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**primidone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**rufinamide**). Adjust **rufinamide** dose, p. 326. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to antiepileptics (**tiagabine**). Monitor and adjust **tiagabine** dose, p. 331. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**topiramate**) and antiepileptics (**topiramate**) increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**topiramate**). [\[Mild\]](#) Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of antiepileptics (**valproate**) and antiepileptics (**valproate**) increase the concentration of antiepileptics (**phenobarbital**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**topiramate**) increase the risk of toxicity when given with antiepileptics (**valproate**). [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**) and antiepileptics (**zonisamide**) affect the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**topiramate**) potentially increase the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very slightly increase the exposure to **perampanel**. [\[Mild\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** increase the risk of carbamazepine toxicity when given with **carbamazepine**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** increase the risk of phenytoin toxicity when given with **fosphenytoin**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** increase the risk of phenytoin toxicity when given with **phenytoin**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (fluconazole)** and **antifungals, azoles (fluconazole)** increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 311. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1375
- ▶ **Antifungals, azoles (fluconazole)** increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [\[Severe\]](#) Study
- ▶ **Fosphenytoin** very markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **fosphenytoin**. [\[Moderate\]](#) Study
- ▶ **Phenobarbital** decreases the concentration of **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **phenobarbital**. [\[Moderate\]](#) Study
- ▶ **Phenytoin** very markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **phenytoin**. [\[Moderate\]](#) Study
- ▶ **Primidone** is predicted to decrease the concentration of **antifungals, azoles (itraconazole)**. [\[Moderate\]](#) Theoretical
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (itraconazole, voriconazole)** and **antifungals, azoles (itraconazole, voriconazole)** increase the concentration of **carbamazepine**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1375
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** slightly increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 311. [\[Moderate\]](#) Study
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Primidone** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole, posaconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (posaconazole)** and **antifungals, azoles (posaconazole)** increase the concentration of **carbamazepine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (posaconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Fosphenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase

- the exposure to **fosphenytoin**. Avoid or adjust **voriconazole** dose and monitor phenytoin concentration, p. 599. [Moderate] Study
- ▶ **Phenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **phenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 599, p. 323. [Moderate] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
  - ▶ **Antihistamines, sedating (hydroxyzine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Antimalarials (pyrimethamine)** increase the risk of haematological toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
  - ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of haematological toxicity when given with antiepileptics (**phenobarbital, primidone**). [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) potentially increase the risk of toxicity when given with **antimalarials (quinine)**. [Unknown] Study
  - ▶ **Apalutamide** potentially decreases the exposure to **valproate**. [Mid] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study → Also see TABLE 11 p. 1377
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 1 p. 1375
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [Moderate] Theoretical
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (propranolol)**. [Moderate] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
  - ▶ **Oxcarbazepine** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1378
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) affect the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
  - ▶ **Valproate** increases the exposure to **bupropion**. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **buprisone**. Use with caution and adjust dose. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. Monitor concentration and adjust dose. [Severe] Anecdotal
  - ▶ **Calcium channel blockers (verapamil)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [Severe] Anecdotal
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** potentially increase the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ **Capecitabine** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Anecdotal
  - ▶ **Carbapenems** decrease the concentration of **valproate**. Avoid. [Severe] Anecdotal
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 592. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **certinib**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Antiepileptics (**phenobarbital, primidone**) decrease the concentration of **chloramphenicol**. [Moderate] Study
  - ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Chlordiazepoxide** affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
  - ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [Moderate] Study

## Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Oxcarbazepine** decreases the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to alter the effects of **clostazolol**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical
- ▶ **Clobazam** potentially affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Anecdotal
- ▶ **Stiripentol** increases the concentration of **clobazam**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Clonazepam** potentially affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1377
- ▶ **Carbamazepine** is predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **cobicicistat**. [Severe] Theoretical
- ▶ **Cobicicistat** is predicted to very slightly increase the exposure to **perampamel**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Danzol** moderately increases the concentration of **carbamazepine**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **lamotrigine**. [Moderate] Study
- ▶ **Diazepam** potentially affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ **Diazoxide** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ **Disulfiram** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1378
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Phenytoin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **edoxaban**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Theoretical
- ▶ **Carbamazepine** slightly decreases the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **carbamazepine**. [Severe] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **phenobarbital**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the efficacy of **primidone** and **primidone** is predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **encorfenib**. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the absorption of **phenytoin**. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Fluorouracil** increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Folates** are predicted to decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (eslicarbazepine, oxcarbazepine) potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit juice** slightly increases the exposure to carbamazepine. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (phenobarbital, primidone) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** transiently increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (phenobarbital, primidone) and antiepileptics (phenobarbital, primidone) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to carbamazepine and carbamazepine is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 983. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Oxcarbazepine** decreases the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Isoniazid** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study → Also see TABLE 12 p. 1378
- ▶ **Isoniazid** markedly increases the concentration of carbamazepine and carbamazepine increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1375

## Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **levodopa**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, oxcarbazepine**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1375
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** slightly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **Macrolides (erythromycin)** markedly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Levetiracetam** decreases the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the effects of **metypalone**. Avoid. [Moderate] Study
- ▶ **Phenytoin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Carbamazepine** markedly decreases the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to slightly decrease the exposure to **nateginide**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium)**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **nevirapine**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease

the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

- ▶ **Carbamazepine** potentially decreases the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin**) are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Carbamazepine** decreases the concentration of **opioids (tramadol)**. Adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osempifene**. [Moderate] Study
- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1377
- ▶ **Valproate** slightly increases the exposure to **paliperidone**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1375
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Valproate** increases the risk of side-effects when given with **penicillins (pivmecillinam)**. Avoid. [Severe] Anecdotal
- ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) decrease the concentration of **phenothiazines (chlorpromazine)**. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Valproate** potentially increases the concentration of **propofol**. Adjust dose. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Valproate** potentially increases the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **brivaracetam**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **lamotrigine**. Adjust **lamotrigine** dose, p. 318. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **perampam**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study

## Antiepileptics (continued)

- ▶ Oxcarbazepine is predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to phenytoin. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 491. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sofenavir**. [Moderate] Theoretical
- ▶ **SSRIs** (**fluoxetine**, **fluvoxamine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs** (**sertraline**) potentially increase the risk of toxicity when given with antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the concentration of **SSRIs** (**paroxetine**). [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **tiagabine**. Avoid. [Mild] Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine) are predicted to decrease the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1375
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) potentially decrease the exposure to **statins** (**atorvastatin**, **simvastatin**). [Moderate] Anecdotal
- ▶ **Carbamazepine** moderately decreases the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ **Eslicarbazepine** moderately decreases the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides** (**sulfadiazine**) are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides** (**sulfadiazine**) increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes** (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1378
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes** (**docetaxel**). [Severe] Theoretical → Also see TABLE 12 p. 1378
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **tetracyclines** (**doxycycline**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1375
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Carbamazepine** potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to **carbamazepine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to

- to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Antiepileptics (**fospheytoin, phenytoin**) increase the clearance of **pototecan**. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1375
  - ▶ **Carbamazepine** decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study
  - ▶ **Carbamazepine** decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1379
  - ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
  - ▶ **Trimethoprim** increases the concentration of antiepileptics (**fospheytoin, phenytoin**). [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fospheytoin, oxcarbazepine, perampnel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Oxcarbazepine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 12 p. 1378
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1378
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1378
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vismodegib**. [Moderate] Theoretical
  - ▶ Antiepileptics (**fospheytoin, phenytoin**) decrease the effects of **vitamin D substances**. [Moderate] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
  - ▶ **Carbamazepine** is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) potentially increase the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Oxcarbazepine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Valproate** slightly increases the exposure to **zidovudine**. [Moderate] Study
  - ▶ **Carbamazepine** moderately decreases the exposure to **zolidem**. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine, fospheytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- Antifungals, azoles** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 9 p. 1377 (QT-interval prolongation)
- clotrimazole · fluconazole · isavuconazole · itraconazole · ketoconazole · miconazole · posaconazole · voriconazole
- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **clotrimazole** and **ketoconazole** should be borne in mind.
  - ▶ In general, **fluconazole** interactions relate to multiple-dose treatment.
  - ▶ The use of carbonated drinks, such as cola, improves **itraconazole, ketoconazole** and **posaconazole** bioavailability.
  - ▶ Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. [Moderate] Anecdotal
  - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 193. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
  - ▶ **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
  - ▶ **Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Itraconazole** increases the risk of busulfan toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Isavuconazole** is predicted to increase the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) increase the exposure to **almotriptan**. [Mild] Study
  - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alprazolam**. [Severe] Study

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) moderately increase the exposure to **alprazolam**. Avoid. [\[Moderate\]](#) Study
- ▶ **Miconazole** is predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Miconazole** potentially decreases the exposure to **aminglycosides (tobramycin)**. [\[Moderate\]](#) Anecdotal
- ▶ **Antacids** decrease the absorption of **itraconazole** (capsule). **Antacids** should be taken 1 hour before or 2 hours after **itraconazole**. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 311. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1375
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 311. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (fosphenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fosphenytoin**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fosphenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 599. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the exposure to **ketoconazole**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **posaconazole**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital)** decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **ketoconazole**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **posaconazole**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **voriconazole**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (phenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (phenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 599, p. 323. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of **itraconazole**. [\[Moderate\]](#) Theoretical
- ▶ **Miconazole** increases the risk of carbamazepine toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Fluconazole** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1375
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of antifungals, azoles (**ketoconazole, posaconazole**). Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [\[Mild\]](#) Study
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [\[Moderate\]](#) Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ketoconazole** increases the exposure to **antimalarials (mefloquine)**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **antimalarials (piperazine)**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **apalutamide**. [\[Mild\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Itraconazole** is predicted to increase the exposure to **apixaban**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ketoconazole** slightly to moderately increases the exposure to **apixaban**. Avoid. [\[Severe\]](#) Study
- ▶ **Voriconazole** is predicted to increase the exposure to **apixaban**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **aprepitant**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **bictegravir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **bosentan**. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose, p. 971. [Severe] Study
- ▶ **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **buspiron**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **buspiron**. Adjust buspiron dose, p. 342. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **buspiron**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers (amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole (high-dose)** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 973. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 232. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
- ▶ **Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**fluconazole**, **posaconazole**). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **miconazole**, **posaconazole**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Didanosine** (buffered) decreases the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Separate administration by 2 hours. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ **Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Posaconazole** is predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Isavuconazole** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Ketoconazole** moderately increases the exposure to **drosipirenone**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Itraconazole** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Ketoconazole** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 126. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **ketoconazole**. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fosoterodine**. Adjust **fosoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fosoterodine**. Adjust **fosoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefinitib**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefinitib**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **glecaprevir**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage, p. 597. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of posaconazole oral suspension. [\[Moderate\]](#) Study
- ▶ **Itraconazole** increases the concentration of **haloperidol**. [\[Moderate\]](#) Study
- ▶ **Fluconazole** slightly increases the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to decrease the exposure to **isavuconazole**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor** with **ivacaftor** p. 294 or **tezacaftor** with **ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Letermovir** slightly decreases the exposure to **voriconazole**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1375
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1375
- ▶ **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **fluconazole**. Adjust dose. [\[Mid\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Posaconazole** moderately increases the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Metoclopramide** potentially decreases the absorption of **posaconazole** (oral suspension). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Isavuconazole** increases the exposure to **mycophenolate**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Fluconazole** slightly to moderately increases the exposure to **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** moderately decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** moderately decreases the exposure to **ketoconazole**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose, p. 1132. [Moderate] Study
- ▶ **Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **posaconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 9 p. 1377

- ▶ **Miconazole** greatly increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (varidenafil)**. Adjust dose. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage, p. 597. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage, p. 681. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** (oral suspension). Avoid. [\[Moderate\]](#) Study
- ▶ **Voriconazole** increases the exposure to **proton pump inhibitors (esomeprazole, omeprazole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **rebexetine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Miconazole** is predicted to increase the concentration of **rebexetine**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of **retroin** toxicity when given with **retinoids (tretinoin)**. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribociclib**. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [\[Severe\]](#) Study
- ▶ **Fluconazole** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ketoconazole** is predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **ketoconazole**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifabutin** decreases the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 599. [\[Severe\]](#) Study
- ▶ **Rifampicin** slightly decreases the exposure to **fluconazole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** markedly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** markedly decreases the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifampicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **posaconazole**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Rifampicin** very markedly decreases the exposure to **voriconazole**. Avoid. [\[Moderate\]](#) Study
- ▶ **Itraconazole** is predicted to increase the exposure to **riociguat**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ketoconazole** moderately increases the exposure to **riociguat**. Avoid. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **roxolitinib**. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [\[Moderate\]](#) Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **selezipag**. [Unknown] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **SSRIs (citalopram)**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Miconazole** potentially increases the exposure to **statins (atorvastatin)**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins (fluvastatin)**. [Severe] Theoretical → Also see TABLE 1 p. 1375
- ▶ **Isavuconazole** is predicted to increase the exposure to **statins (fluvastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study → Also see TABLE 1 p. 1375
- ▶ **Isavuconazole** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **taxanes (docetaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1375
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to  **vemurafenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **venlafaxine**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377
  - ▶ **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ Antifungals, azoles (**clotrimazole**, **ketoconazole**) are predicted to decrease the exposure to **vitamin D substances (colecalciferol)**. [\[Moderate\]](#) Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [\[Moderate\]](#) Study
  - ▶ **Fluconazole** slightly increases the exposure to **zidovudine**. [\[Moderate\]](#) Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- Antihistamines, non-sedating** → see TABLE 9 p. 1377 (QT-interval prolongation)
- acrivastine · azelastine · bilastine · cetirizine · desloratadine · fexofenadine · levocetirizine · loratadine · mizolastine · rupatadine

  - ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **azelastine** should be borne in mind.
  - ▶ Apple juice and orange juice decrease the exposure to fexofenadine.
- ▶ **Antacids** decrease the absorption of **fexofenadine**. Separate administration by 2 hours. [\[Mid\]](#) Study
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [\[Severe\]](#) Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [\[Severe\]](#) Study
  - ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Apalutamide** slightly decreases the exposure to **fexofenadine**. [\[Mid\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **fexofenadine**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Grapefruit juice** slightly decreases the exposure to **bilastine**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit juice**. [\[Moderate\]](#) Study
  - ▶ **Grapefruit juice** increases the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Study
  - ▶ **Letermovir** is predicted to increase the concentration of **fexofenadine**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mizolastine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **fexofenadine**. [\[Mid\]](#) Theoretical
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **fexofenadine**. [\[Mid\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **bilastine**. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** increases the clearance of **fexofenadine**. [\[Moderate\]](#) Study
  - ▶ **Terflunomide** is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **fexofenadine**. [\[Severe\]](#) Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **fexofenadine**. [\[Moderate\]](#) Theoretical

**Antihistamines, sedating** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

**GENERAL INFORMATION** Drugs with antimuscarinic effects might reduce the absorption of levodopa, see TABLE 10 p. 1377.

alimemazine · antazoline · buclizine · chlorphenamine · cinnarizine · clemastine · cyclizine · cyproheptadine · doxylamine · hydroxyzine · ketotifen · pizotifen · promethazine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- ▶ **Cyproheptadine** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [\[Moderate\]](#) Theoretical
- ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [\[Moderate\]](#) Anecdotal

**Antimalarials** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)

artemether · arteminol · atovaquone · chloroquine · lumefantrine · mefloquine · piperazine · primaquine · proguanil · pyrimethamine · quinine

**PHARMACOLOGY** Piperazine has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antacids** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Antacids** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperazine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. [\[Unknown\]](#) Study
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [\[Moderate\]](#) Study
- ▶ Antimalarials (**proguanil**) are predicted to increase the risk of side-effects when given with antimalarials (**pyrimethamine**). [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [\[Severe\]](#) Anecdotal
- ▶ **Efavirenz** decreases the concentration of **artemether**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** moderately decreases the exposure to **atovaquone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Efavirenz** affects the exposure to **proguanil**. Avoid. [\[Moderate\]](#) Study
- ▶ **Enzlutamide** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [\[Severe\]](#) Study
- ▶ **Enzlutamide** is predicted to decrease the concentration of **piperazine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Etravirine** decreases the exposure to **artemether**. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** increases the exposure to **artemether**. [\[Unknown\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **piperazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **chloroquine**. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **quinine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **methotrexate**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378

- ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Netupitant** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
  - ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Chloroquine** decreases the efficacy of **rabies vaccine**. Avoid. [Moderate] Study
  - ▶ **Rifabutin** slightly decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifampicin**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **mefloquine**. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **quinine**. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Pyrimethamine** increases the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Tetracyclines (tetracycline)** decrease the concentration of **atovaquone**. [Moderate] Study
  - ▶ **Pyrimethamine** increases the risk of side-effects when given with **trimethoprim**. [Severe] Study
  - ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- Antithymocyte immunoglobulin (rabbit)** → see immunoglobulins
- Apalutamide** → see TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Apalutamide** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** potentially decreases the exposure to **antiepileptics (valproate)**. [Mild] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** slightly decreases the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **bosutinib**. Avoid or monitor. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** is predicted to decrease the exposure to **bupirone**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **calcium channel blockers (felodipine, lercanidipine)**. Avoid or monitor. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **colchicine**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **corticosteroids (budesonide, fluticasone)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **coumarins**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **digabigatran**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **darifenacin**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **dasatinib**. Avoid or monitor. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** is predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **digoxin**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **everolimus**. Avoid or monitor. [Moderate] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ivacaftor**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **lomitapide**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid or monitor. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** is predicted to decrease the exposure to **maraviroc**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **methotrexate**. [Mild] Study
  - ▶ **Apalutamide** markedly decreases the exposure to **midazolam**. Avoid or monitor. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **naloxegol**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **opioids (alfentanil)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, sildenafil, vardenafil)**. Avoid or monitor. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** is predicted to decrease the exposure to **proton pump inhibitors (lansoprazole, rabeprazole)**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** markedly decreases the exposure to **proton pump inhibitors (omeprazole)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **quetiapine**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **sirolimus**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **SSRIs (citalopram)**. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** slightly decreases the exposure to **statins (rosuvastatin)**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **statins (simvastatin)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **temsirolimus**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** potentially decreases the exposure to **thyroid hormones (levothyroxine)**. [Mild] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ticagrelor**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid or monitor. [Moderate] Study
- Apixaban** → see TABLE 3 p. 1375 (anticoagulant effects)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease

## Apixaban (continued)

the exposure to **apixaban**. Use with caution or avoid. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly to moderately increase the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical

**Apomorphine** → see dopamine receptor agonists

**Apraclonidine** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

**Apremilast**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical

**Aprepitant**

- ▶ **Aprepitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **aprepitant**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to oral **corticosteroids (budesonide)**. [Moderate] Study
- ▶ **Aprepitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **corticosteroids (fluticasone)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study

- ▶ **Aprepitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Aprepitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to  **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Aprepitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

## Aprepitant (continued)

- ▶ **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Argatroban** → see TABLE 3 p. 1375 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [\[Severe\]](#) Theoretical
- Aripiprazole** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Bupropion** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Terbinafine** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
- Arsenic trioxide** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- Artemether** → see antimalarials
- Artenimol** → see antimalarials
- Articaine** → see TABLE 11 p. 1377 (CNS depressant effects)
- Ascorbic acid**
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [\[Severe\]](#) Theoretical
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **iron chelators (desferrioxamine)**. [\[Severe\]](#) Theoretical
- Asenapine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **SSRIs (fluvoxamine)** increase the exposure to asenapine. [\[Moderate\]](#) Study
  - ▶ **SSRIs (paroxetine)** moderately increase the exposure to asenapine. [\[Moderate\]](#) Study

**Asparaginase** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)

- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinitib**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Asparaginase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **asparaginase**, p. 933. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
- Aspirin** → see TABLE 4 p. 1375 (antiplatelet effects)
  - ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [\[Severe\]](#) Study
  - ▶ **Antacids** decrease the absorption of **aspirin** (high-dose). [\[Moderate\]](#) Study
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronic acid, ibandronic acid)**. [\[Moderate\]](#) Study
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates (sodium clodronate)**. [\[Severe\]](#) Theoretical
  - ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Moderate\]](#) Study
  - ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators (deferiasrox)**. [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Study
  - ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [\[Severe\]](#) Study
- Ataluren**
  - ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rifampicin** decreases the exposure to **ataluren**. [\[Moderate\]](#) Study
- Atazanavir** → see HIV-protease inhibitors
- Atenolol** → see beta blockers, selective
- Atezolizumab** → see monoclonal antibodies
- Atomoxetine**
  - ▶ **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. [\[Severe\]](#) Theoretical
  - ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists** (high-dose). [\[Moderate\]](#) Study
  - ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [\[Severe\]](#) Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study

**Atorvastatin** → see statins

**Atovaquone** → see antimalarials

**Atracurium** → see neuromuscular blocking drugs, non-depolarising

**Atropine** → see TABLE 10 p. 1377 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

► **Atropine** increases the risk of severe hypertension when given with **sympathomimetics**, **vasoconstrictor (phenylephrine)**. [Severe] Study

**Avanafil** → see phosphodiesterase type-5 inhibitors

**Avelumab** → see monoclonal antibodies

**Axitinib** → see TABLE 15 p. 1378 (myelosuppression)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

► **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

► **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378

► **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Macrolides (erythromycin)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378

► **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

► **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

► **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

**Azacididine** → see TABLE 15 p. 1378 (myelosuppression)

**Azathioprine** → see TABLE 15 p. 1378 (myelosuppression)

► **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal

► **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 836. [Severe] Study

► **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study

► **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical

► **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Azelastine** → see antihistamines, non-sedating

**Azilsartan** → see angiotensin-II receptor antagonists

**Azithromycin** → see macrolides

**Bacillus Calmette-Guérin vaccine** → see live vaccines

**Bacitracin** → see TABLE 2 p. 1375 (nephrotoxicity)

**Baclofen** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

► **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1376

**Balsalazide** → see TABLE 15 p. 1378 (myelosuppression)

► **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical

**Bambuterol** → see beta<sub>2</sub> agonists

**Baricitinib**

► **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical

► **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical

► **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical

**Basiliximab** → see monoclonal antibodies

**Bazedoxifene**

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical

► **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical

**Beclometasone** → see corticosteroids

**Bedaquiline** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 9 p. 1377 (QT-interval prolongation)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1377

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 1 p. 1375

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377

► **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical

► **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical

► **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study

► **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1377

► **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377

► **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study

► **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical

► **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1377

## Bedaquiline (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

## Bee venom extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

## Belatacept

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Belimumab** → see monoclonal antibodies

**Bendamustine** → see alkylating agents

**Bendroflumethiazide** → see thiazide diuretics

**Benperidol** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376

- ▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1376

- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1376

**Benzydamine** → see NSAIDs

**Benzyloxyphenillin** → see penicillins

**Beta blockers, non-selective** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation)

carvedilol · labetalol · levobunolol · nadolol · pindolol · propranolol · sotalol · timolol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **levobunolol** and **timolol**, the possibility of interactions should be borne in mind.

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 9 p. 1377
- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular side-effects when given with **propranolol**. Use with caution or avoid. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [Severe] Study

- ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ **Intravenous calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ **Oral calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. [Moderate] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanrotide**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **carvedilol**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **propranolol**. Monitor and adjust dose. [Moderate] Study
- ▶ **Propranolol** slightly to moderately increases the exposure to **rizatriptan**. Adjust rizatriptan dose and separate administration by at least 2 hours, p. 480. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [Moderate] Study
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [Moderate] Study

**Beta blockers, selective** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension)

acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol

- ▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
  - ▶ Orange juice greatly decreases the exposure to **celiprolol**.
  - ▶ **Abiraterone** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1376
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **nebivolol** and **nebivolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [Severe] Study
  - ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
  - ▶ **Intravenous calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
  - ▶ **Oral calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
  - ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Duloxetine** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
  - ▶ **Grapefruit juice** greatly decreases the exposure to **celiprolol**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
  - ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [Mild] Theoretical
  - ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **celiprolol**. [Moderate] Study
  - ▶ **Rolapitant** is predicted to moderately increase the exposure to **metoprolol**. [Severe] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Moderate] Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- Beta<sub>2</sub> agonists** → see TABLE 17 p. 1379 (reduced serum potassium)
- bambuterol · formoterol · indacaterol · olodaterol · salbutamol · salmeterol · terbutaline · vilanterol
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Alpautamide** is predicted to decrease the exposure to **salmeterol**. Avoid or monitor. [Moderate] Study
  - ▶ **Apripitant** is predicted to increase the exposure to **salmeterol**. [Moderate] Study
  - ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists (high-dose)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal
  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
  - ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **salmeterol**. [Moderate] Study
- Betahistine**
- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- Betamethasone** → see corticosteroids
- Betaxolol** → see **beta blockers, selective**
- Bevacizumab** → see monoclonal antibodies
- Bexarotene** → see retinoids
- Bezafibrate** → see fibrates
- Bicalutamide**
- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Bictegravir**
- ▶ **Antacids** decrease the exposure to **bictegravir**. Separate administration by at least 2 hours. [Moderate] Study

## Bictegvir (continued)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **bictegvir**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** moderately increase the exposure to **bictegvir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Iron (oral)** decrease the exposure to **bictegvir**. **Bictegvir** should be taken 2 hours before **iron (oral)**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bictegvir** slightly increases the exposure to **metformin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Study
- ▶ **Bictegvir** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Rifabutin** slightly decreases the exposure to **bictegvir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegvir**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegvir**. Use with caution or avoid. [Moderate] Theoretical

**Bilastine** → see antihistamines, non-selective

**Bisoprolol** → see beta blockers, selective

**Bisphosphonates** → see TABLE 2 p. 1375 (nephrotoxicity)

alendronic acid · ibandronic acid · pamidronate · risedronate · sodium clodronate · zoledronic acid

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1375
- ▶ **Antacids** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **antacids**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **ibandronic acid**. Avoid **antacids** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **sodium clodronate**. Avoid **antacids** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronic acid, ibandronic acid**). [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronic acid**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **sodium clodronate**. Avoid **calcium salts** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **sodium clodronate**. Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **sodium clodronate**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronic acid, ibandronic acid**). [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **alendronic acid**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **sodium clodronate**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study

**Bivalirudin** → see TABLE 3 p. 1375 (anticoagulant effects)

▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical

**Bleomycin** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Platinum compounds (cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1378

**Blinatumomab** → see monoclonal antibodies

**Bortezomib** → see TABLE 8 p. 1376 (hypotension), TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1378
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. [Moderate] Study

- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**.  
[Moderate] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**.  
Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**.  
[Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid.  
[Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**.  
Avoid. [Severe] Study
- Bosentan**
- ▶ **Bosentan** is predicted to decrease the exposure to antiarrhythmics (**dronedaron**). [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) affect the exposure to **bosentan**. Avoid.  
[Severe] Study
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**) are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**ketoconazole**) moderately increase the exposure to **bosentan**. [Moderate] Study
- ▶ Antifungals, azoles (**voriconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **aprepitant**.  
[Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**.  
Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **brigatinib**.  
Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cariprazine**.  
Avoid. [Severe] Theoretical
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**.  
[Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**.  
[Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**.  
For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose.  
[Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **doravirine**.  
Avoid or adjust doravirine dose, p. 644. [Severe] Theoretical
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**.  
[Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**.  
For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**.  
Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**.  
Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**.  
Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**.  
Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**.  
[Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**.  
[Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**.  
Avoid. [Severe] Study
- ▶ **Lefunomide** is predicted to increase the exposure to **bosentan**.  
[Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**.  
Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**.  
Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nevirapine**.  
[Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**.  
Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**.  
Avoid. [Moderate] Theoretical
- ▶ **Bosentan** decreases the exposure to **opioids (methadone)**.  
Monitor and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**.  
[Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **ospemifene**.  
[Moderate] Study

## Bosentan (continued)

- ▶ **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifampicin** affects the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
  - ▶ **Bosentan** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
  - ▶ **Bosentan** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **Bosentan** increases the risk of hepatotoxicity when given with **sulfonylureas (glibenclamide)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Bosutinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before **antacids**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedronarone)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Apalutamide** is predicted to decrease the exposure to **bosutinib**. Avoid or monitor. [Moderate] Study → Also see TABLE 9 p. 1377

- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
  - ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Rotizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- Botulinum toxin type A** → see TABLE 20 p. 1379 (neuromuscular blocking effects)
- Botulinum toxin type B** → see TABLE 20 p. 1379 (neuromuscular blocking effects)

## Bowel cleansing preparations

**SEPARATION OF ADMINISTRATION** Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption may be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

**Brentuximab vedotin** → see monoclonal antibodies

### Brigatinib

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 971. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 971. [\[Severe\]](#) Study
- ▶ Brigatinib decreases the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ Brigatinib potentially increases the concentration of **dabigatran**. [\[Moderate\]](#) Theoretical
- ▶ Brigatinib potentially increases the concentration of **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ **Etravirine** is predicted to decrease the exposure to brigatinib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 971. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 971. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 971. [\[Severe\]](#) Study
- ▶ Brigatinib potentially increases the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ Brigatinib potentially decreases the concentration of **opioids (alfentanil, fentanyl)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to brigatinib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ Brigatinib potentially decreases the concentration of **sirolimus**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to brigatinib. Avoid. [\[Severe\]](#) Study
- ▶ Brigatinib potentially decreases the concentration of **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical

**Brimonidine** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

### Brinzolamide

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Brivaracetam** → see antiepileptics

**Brodalumab** → see monoclonal antibodies

**Bromfenac** → see NSAIDs

**Bromocriptine** → see dopamine receptor agonists

**Bucizine** → see antihistamines, sedating

**Budesonide** → see corticosteroids

**Bumetanide** → see loop diuretics

**Bupivacaine** → see anaesthetics, local

**Buprenorphine** → see opioids

**Buspirone** → see TABLE 13 p. 1378 (serotonin syndrome)

▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to bupropion. [\[Severe\]](#) Study

▶ Antiepileptics (**valproate**) increase the exposure to bupropion.

[\[Severe\]](#) Study

▶ Antifungals, azoles (**isavuconazole**) slightly increase the exposure to bupropion. Adjust dose. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study

▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study

▶ **Bupropion** increases the risk of side-effects when given with **dopamine receptor agonists (amantadine)**. [\[Moderate\]](#) Study

▶ **Efavirenz** is predicted to decrease the exposure to bupropion. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to bupropion. [\[Moderate\]](#) Study

▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1378

▶ **Methylthionium chloride** is predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378

▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study

▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378

▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with bupropion. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378

▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 13 p. 1378

▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [\[Moderate\]](#) Theoretical

▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [\[Severe\]](#) Study → Also see TABLE 13 p. 1378

▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [\[Moderate\]](#) Study

▶ **Rifampicin** is predicted to decrease the exposure to bupropion. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study

▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [\[Moderate\]](#) Theoretical → Also see TABLE 13 p. 1378

▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study

▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 13 p. 1378

▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 13 p. 1378

**Buspirone** → see TABLE 13 p. 1378 (serotonin syndrome)

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study

▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to buspirone. Use with caution and adjust dose. [\[Severe\]](#) Study

▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study

▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to buspirone. Adjust buspirone dose, p. 342. [\[Severe\]](#) Study

## Buspirone (continued)

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to buspirone. Avoid or monitor. [\[Moderate\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to buspirone. Adjust buspirone dose, p. 342. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to buspirone. Use with caution and adjust dose. [\[Severe\]](#) Study
  - ▶ **Grapefruit juice** increases the exposure to buspirone. Avoid. [\[Mild\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to buspirone. Adjust buspirone dose, p. 342. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to buspirone. Adjust buspirone dose, p. 342. [\[Severe\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to buspirone. Adjust buspirone dose, p. 342. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to buspirone. Use with caution and adjust dose. [\[Severe\]](#) Study
  - ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the exposure to buspirone. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to buspirone. Use with caution and adjust dose. [\[Severe\]](#) Study
- Busulfan** → see alkylating agents
- Cabazitaxel** → see taxanes
- Cabergoline** → see dopamine receptor agonists
- Cabozantinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to cabozantinib. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to cabozantinib. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Aprepitant** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** slightly increases the exposure to cabozantinib. [\[Moderate\]](#) Study
  - ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Efavirenz** is predicted to decrease the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Enzalutamide** moderately decreases the exposure to cabozantinib. Avoid. [\[Moderate\]](#) Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** slightly increase the exposure to cabozantinib. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** slightly increases the exposure to cabozantinib. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** slightly increase the exposure to cabozantinib. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Mitotane** moderately decreases the exposure to cabozantinib. Avoid. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to cabozantinib. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
  - ▶ **Rifampicin** moderately decreases the exposure to cabozantinib. Avoid. [\[Moderate\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to cabozantinib. [\[Moderate\]](#) Theoretical
- Caffeine citrate**
- ▶ **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [\[Mild\]](#) Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Leflunomide** is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluvoxamine)** markedly decrease the clearance of caffeine citrate. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- Calcipotriol** → see vitamin D substances
- Calcitonin (salmon)**
- ▶ **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- Calcitriol** → see vitamin D substances
- Calcium acetate** → see calcium salts
- Calcium carbonate** → see calcium salts
- Calcium channel blockers** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension)
- amlodipine • clevidipine • diltiazem • felodipine • lacidipine • lercanidipine • nicardipine • nifedipine • nimodipine • verapamil
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
  - ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 193. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376

- ▶ **Verapamil** moderately increases the exposure to **aliskiren**.  
[Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aprazolam**. [Severe] Study
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. [Moderate] Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodaron)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the exposure to **antiarrhythmics (dronedaron)** and **antiarrhythmics (dronedaron)** increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. [Severe] Anecdotal → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. [Moderate] Anecdotal → Also see TABLE 6 p. 1376
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Diltiazem** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Verapamil** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **verapamil**. [Severe] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) potentially increase the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, clevudipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine, verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to calcium channel blockers (**felodipine, lercanidipine**). Avoid or monitor. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mil] Theoretical
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1376 → Also see TABLE 8 p. 1376
- ▶ **Verapamil** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

## Calcium channel blockers (continued)

- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. [Severe] Study
- ▶ **Nicardipine** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 136. [Severe] Study
- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (**diltiazem**, **verapamil**). Avoid. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Verapamil** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **foseterodine**. Adjust **foseterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to  **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to calcium channel blockers (**nifedipine**, **verapamil**). Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **felodipine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **nicardipine**. [Mild] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **verapamil**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to calcium channel blockers (**diltiazem**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**) (in pregnant women). [Severe] Anecdotal
- ▶ **Mexiletine** increases the risk of cardiovascular side-effects when given with **diltiazem**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **verapamil**. Avoid or monitor. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to calcium channel blockers. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 6 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
- ▶ **Verapamil** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Verapamil** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** greatly decreases the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **nifedipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **saxagliptin**. [Mid] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study

## Calcium channel blockers (continued)

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Amlodipine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 205. [\[Mild\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **temsirolimus**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [\[Moderate\]](#) Study
- ▶ **Verapamil** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Verapamil** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

**Calcium chloride** → see calcium salts

**Calcium gluconate** → see calcium salts

**Calcium lactate** → see calcium salts

**Calcium phosphate** → see calcium salts

**Calcium salts**

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

**SEPARATION OF ADMINISTRATION** Calcium carbonate-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral calcium salts decrease the absorption of **alkylating agents (estramustine)**. [\[Severe\]](#) Study
- ▶ **Calcium carbonate** decreases the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral calcium salts decrease the absorption of **bisphosphonates (alendronic acid)**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. [\[Moderate\]](#) Study
- ▶ Oral calcium salts are predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid calcium salts for at least 6 hours before or 1 hour after **ibandronic acid**. [\[Moderate\]](#) Theoretical
- ▶ Oral calcium salts decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral calcium salts decrease the absorption of **bisphosphonates (sodium clodronate)**. Avoid calcium salts for 2 hours before or 1 hour after **sodium clodronate**. [\[Moderate\]](#) Study
- ▶ **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Intravenous calcium salts increase the concentration of **digoxin**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ Oral calcium salts decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [\[Moderate\]](#) Study
- ▶ Oral calcium salts decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [\[Severe\]](#) Study
- ▶ **Calcium carbonate** decreases the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Calcium carbonate** decreases the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. [\[Moderate\]](#) Study
- ▶ **Calcium carbonate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [\[Moderate\]](#) Theoretical
- ▶ **Calcium carbonate** decreases the absorption of **quinolones (ciprofloxacin)**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Calcium carbonate** greatly decreases the exposure to **raltegravir** (high-dose). Avoid. [\[Severe\]](#) Study
- ▶ **Calcium carbonate** is predicted to slightly decrease the exposure to **rilpivirine**. **Calcium carbonate** should be taken 2 hours before or 4 hours after **rilpivirine**. [\[Severe\]](#) Theoretical
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with calcium salts. [\[Severe\]](#) Anecdotal
- ▶ Oral calcium salts are predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [\[Moderate\]](#) Anecdotal
- ▶ **Calcium carbonate** is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [\[Moderate\]](#) Anecdotal
- ▶ Oral calcium salts decrease the absorption of **zinc**. [\[Moderate\]](#) Study

**Canagliflozin** → see TABLE 14 p. 1378 (antidiabetic drugs), TABLE 8 p. 1376 (hypotension)

▶ **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 702. [\[Moderate\]](#) Study

**Canakinumab** → see monoclonal antibodies

**Candesartan** → see angiotensin-II receptor antagonists

**Cangrelor** → see TABLE 4 p. 1375 (antiplatelet effects)

**Cannabis extract** → see TABLE 11 p. 1377 (CNS depressant effects)

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

to **cannabis extract**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1377

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabis extract**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. [\[Severe\]](#) Theoretical
- Capecitabine** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [\[Severe\]](#) Study
- ▶ **Capecitabine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Anecdotal
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [\[Severe\]](#) Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to slightly increase the exposure to **capecitabine**. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [\[Severe\]](#) Theoretical
- Capreomycin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity)

**Captopril** → see ACE inhibitors

**Carbamazepine** → see antiepileptics

**Carbapenems**

ertapenem · imipenem · meropenem

- ▶ **Carbapenems** decrease the concentration of **antiepileptics (valproate)**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [\[Severe\]](#) Anecdotal
- Carbidopa**
- ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. [\[Moderate\]](#) Theoretical
- Carbimazole** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Carbimazole** decreases the effects of **metryapone**. Avoid. [\[Moderate\]](#) Theoretical

**Carboplatin** → see platinum compounds

**Carfilzomib** → see TABLE 15 p. 1378 (myelosuppression)

**Cariprazine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study

- ▶ **Apreritant** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- Carmustine** → see alkylating agents
- Carvedilol** → see beta blockers, non-selective
- Caspofungin**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 592. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [\[Severe\]](#) Study
  - ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 592. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 592. [\[Moderate\]](#) Study
- Cefaclor** → see cephalosporins
- Cefadroxil** → see cephalosporins
- Cefalexin** → see cephalosporins
- Cefixime** → see cephalosporins
- Cefotaxime** → see cephalosporins
- Cefradine** → see cephalosporins
- Ceftaroline** → see cephalosporins
- Ceftazidime** → see cephalosporins
- Ceftobiprole** → see cephalosporins
- Ceftolozane** → see cephalosporins
- Ceftriaxone** → see cephalosporins
- Cefuroxime** → see cephalosporins
- Celecoxib** → see NSAIDs
- Celiprolol** → see beta blockers, selective
- Cephalosporins** → see TABLE 2 p. 1375 (nephrotoxicity)

cefaclor · cefadroxil · cefalexin · cefixime · cefotaxime · cefradine · ceftaroline · ceftazidime · ceftobiprole · ceftolozane · ceftriaxone ·

cefuroxime

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **cefuroxime** unless specified.

- ▶ **Ceftobiprole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts (calcium chloride)**. Avoid. [Severe] Anecdotal
- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts (calcium gluconate)**. Avoid. [Severe] Anecdotal
- ▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **cefactor**. [Moderate] Theoretical
- ▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- ▶ **Ceftobiprole** is predicted to increase the concentration of **statins**. [Moderate] Theoretical
- ▶ **Ceftobiprole** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **cefactor**. [Moderate] Study
- Ceritinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Ceritinib** is predicted to increase the exposure to **antihistamines, non-sedating (xfenofenadine)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **coumarins (warfarin)**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Netupitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirinilimus**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **sulfonylureas (glimperide)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- Certolizumab pegol** → see monoclonal antibodies
- Cetirizine** → see antihistamines, non-sedating
- Cetuximab** → see monoclonal antibodies
- Chenodeoxycholic acid**
- ▶ Oral **antacids (aluminium hydroxide)** decrease the absorption of **chenodeoxycholic acid**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Oral **combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
- ▶ **Sirinilimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- Chloral hydrate** → see TABLE 11 p. 1377 (CNS depressant effects)
- ▶ Intravenous **loop diuretics (furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- Chlorambucil** → see alkylating agents
- Chloramphenicol**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ Antiepileptics (**phenobarbital**, **primidone**) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fospheytoin**, **phenytoin**) and antiepileptics (**fospheytoin**, **phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of intravenous **iron (injectable)**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonyleureas**. [Severe] Study
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- Chlordiazepoxide** → see TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Chlordiazepoxide** affects the concentration of antiepileptics (**fospheytoin**, **phenytoin**). [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlordiazepoxide**. [Moderate] Theoretical
- Chloroquine** → see antimalarials
- Chlorothiazide** → see thiazide diuretics
- Chlorphenamine** → see antihistamines, sedating
- Chlorpromazine** → see phenothiazines
- Chlortalidone** → see thiazide diuretics
- Cholera vaccine**
- ▶ Antimalarials (**chloroquine**) decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
- Cholic acid**
- ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ Antiepileptics (**phenobarbital**) decrease the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- Choline salicylate**
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
- Ciclesonide** → see corticosteroids
- Ciclosporin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 16 p. 1379 (increased serum potassium)
  - ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
  - ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1379
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 184. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone)**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fospheytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ Antifungals, azoles (**miconazole**) increase the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Aprepitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Calcium channel blockers (nicardipine)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **calcium channel blockers (lercanidipine)**. Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
- ▶ **Certinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to affect the efficacy of **chenedoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to  **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Danazol** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 126. [Severe] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Ciclosporin** decreases the exposure to **eltrombopag**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Fibrates (bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
- ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study

## Cyclosporin (continued)

- ▶ **Cyclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of cyclosporin. [Mild] Study
- ▶ **HIV-protease inhibitors** increase the concentration of cyclosporin. [Severe] Study
- ▶ **Idelalisib** increases the concentration of cyclosporin. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of cyclosporin. [Severe] Study
- ▶ **Lanreotide** is predicted to decrease the absorption of oral cyclosporin. Adjust dose. [Severe] Theoretical
- ▶ **Letermovir** increases the exposure to cyclosporin and cyclosporin increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 639. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cyclosporin. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to cyclosporin. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the concentration of cyclosporin. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of cyclosporin. [Severe] Study
- ▶ **Cyclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** decreases the concentration of cyclosporin. [Severe] Study
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to cyclosporin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to cyclosporin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to cyclosporin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of cyclosporin. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of cyclosporin. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of cyclosporin. [Severe] Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Cyclosporin** increases the concentration of **NSAIDs (diclofenac)**. [Severe] Study → Also see TABLE 2 p. 1375 → Also see TABLE 16 p. 1379
- ▶ **Octreotide** decreases the absorption of oral cyclosporin. Adjust cyclosporin dose, p. 838. [Severe] Anecdotal
- ▶ **Palbociclib** is predicted to increase the exposure to cyclosporin. Adjust dose. [Moderate] Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Pasireotide** is predicted to decrease the absorption of oral cyclosporin. Adjust dose. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to cyclosporin. Avoid. [Severe] Theoretical
- ▶ **Cyclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of cyclosporin. [Moderate] Theoretical
- ▶ **Cyclosporin** moderately increases the exposure to **repaglinide**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to cyclosporin. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of cyclosporin. [Severe] Study
- ▶ **Cyclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical

- ▶ **Rucaparib** is predicted to increase the exposure to cyclosporin. Monitor and adjust dose. [Moderate] Study
- ▶ **Cyclosporin** moderately increases the exposure to **sirinolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **St John's Wort** decreases the concentration of cyclosporin. Avoid. [Moderate] Study
- ▶ **Cyclosporin** very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 202. [Severe] Study
- ▶ **Cyclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
- ▶ **Cyclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust dose. [Severe] Study
- ▶ **Cyclosporin** markedly increases the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
- ▶ **Cyclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1375 → Also see TABLE 16 p. 1379
- ▶ **Cyclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 1375
- ▶ **Cyclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Cyclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Cyclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of cyclosporin. Use with caution and adjust dose. [Severe] Anecdotal
- ▶ **Cyclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Vitamin E Substances** affect the exposure to cyclosporin. [Moderate] Study
- ▶ **Cyclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study

**Cidofovir** → see TABLE 2 p. 1375 (nephrotoxicity)

**Cilostazol** → see TABLE 4 p. 1375 (antiplatelet effects)

**GENERAL INFORMATION** Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of cilostazol. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to cilostazol. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Enzalutamide** is predicted to alter the effects of cilostazol. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to cilostazol. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **Mitotane** is predicted to alter the effects of cilostazol. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to cilostazol. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to cilostazol. [Moderate] Theoretical

- ▶ **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
  - ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [\[Moderate\]](#) Theoretical → Also see **TABLE 4** p. 1375
  - ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- Cimetidine** → see H<sub>2</sub> receptor antagonists
- Cinacalcet**
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [\[Mid\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study

**Cinnarizine** → see antihistamines, sedating

**Ciprofibrate** → see fibrates

**Ciprofloxacin** → see quinolones

**Cisatracurium** → see neuromuscular blocking drugs, non-depolarising

**Cisplatin** → see platinum compounds

**Citalopram** → see SSRIs

**Cladribine** → see **TABLE 15** p. 1378 (myelosuppression)

**SEPARATION OF ADMINISTRATION** Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [\[Moderate\]](#) Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

**Clarithromycin** → see macrolides

**Clavulanic acid** → see **TABLE 1** p. 1375 (hepatotoxicity)

**Clemastine** → see antihistamines, sedating

**Clevidipine** → see calcium channel blockers

**Clindamycin**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal

▶ **Clindamycin** increases the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal

**Clobazam** → see **TABLE 11** p. 1377 (CNS depressant effects)

▶ **Antiepileptics (stiripentol)** increase the concentration of **clobazam**. [\[Severe\]](#) Study

▶ **Clobazam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Anecdotal

▶ **Antifungals, azoles (flucanazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical

▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical

**Clofarabine** → see **TABLE 15** p. 1378 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

**Clofazimine**

▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [\[Severe\]](#) Study

**Clomethiazole** → see **TABLE 11** p. 1377 (CNS depressant effects)

▶ **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 11** p. 1377

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see **TABLE 11** p. 1377

▶ **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study

**Clomipramine** → see tricyclic antidepressants

**Clonazepam** → see **TABLE 11** p. 1377 (CNS depressant effects)

▶ **Clonazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Anecdotal

**Clonidine** → see **TABLE 6** p. 1376 (bradycardia), **TABLE 8** p. 1376 (hypotension), **TABLE 11** p. 1377 (CNS depressant effects)

▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see **TABLE 8** p. 1376

**Clopidogrel** → see **TABLE 4** p. 1375 (antiplatelet effects)

▶ **Antifungals, azoles (flucanazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [\[Severe\]](#) Theoretical

## Clopidogrel (continued)

- ▶ **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
  - ▶ **Clopidogrel** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
  - ▶ **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 947. [Severe] Study
  - ▶ **Grapefruit juice** markedly decreases the exposure to clopidogrel. [Severe] Study
  - ▶ **Moclobemide** is predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
  - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - ▶ **Clopidogrel** increases the exposure to **repaglinide**. Avoid. [Severe] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
  - ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1375
  - ▶ **Clopidogrel** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- Clotriazole** → see antifungals, azoles
- Clozapine** → see TABLE 8 p. 1376 (hypotension), TABLE 15 p. 1378 (myelosuppression), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

▶ Dose adjustment might be necessary if smoking started or stopped during treatment.

▶ Avoid concomitant use of clozapine with drugs that have a substantial potential for causing agranulocytosis.

- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of myelosuppression when given with clozapine. Avoid. [Severe] Anecdotal
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to clozapine. [Moderate] Anecdotal → Also see TABLE 11 p. 1377
  - ▶ **Combined hormonal contraceptives** increase the concentration of clozapine. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 10 p. 1377
  - ▶ **Enzalutamide** is predicted to decrease the exposure to clozapine. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to affect the exposure to clozapine. Avoid. [Severe] Theoretical
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to clozapine. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to clozapine. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Macrolides (erythromycin)** potentially increase the risk of toxicity when given with clozapine. [Severe] Anecdotal
  - ▶ **Mexiletine** increases the concentration of clozapine. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Quinolones (ciprofloxacin)** increase the concentration of clozapine. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Rifampicin** decreases the exposure to clozapine. [Severe] Anecdotal
  - ▶ **SSRIs (fluvoxamine)** increase the concentration of clozapine. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to clozapine. [Moderate] Theoretical
- Cobicistat**
- ▶ **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
  - ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** potentially increases the concentration of **antiarrhythmics (amiodarone, disopyramide, flecainide, lidocaine)**. [Severe] Theoretical
  - ▶ **Cobicistat** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to cobicistat. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of cobicistat. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (fluconazole, posaconazole)**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to affect the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 395. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to cobicistat. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **brigatinib**. Adjust **brigatinib** dose, p. 971. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 342. [Severe] Study

- ▶ **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **edoxaban**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical

## Cobicicistat (continued)

- ▶ **Cobicicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study
  - ▶ **Rifabutin** decreases the concentration of **cobicicistat** and **cobicicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin** with **solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [Severe] Study
  - ▶ **Cobicicistat** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Cobicicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Cobicicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Cobimetinib**
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, micazazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Cobicicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical

- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- Codeine** → see opioids
- Colchicine**
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **colchicine**. [Mild] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
  - ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
  - ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Moderate] Theoretical
  - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
  - ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
  - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
- Colecalciferol** → see vitamin D substances
- Colesevelam**
- SEPARATION OF ADMINISTRATION Manufacturer advises take 4 hours before, or after, other drugs.
- Colestipol**
- SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.
- Colestyramine**
- SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.
- Colistimethate** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 20 p. 1376 (neuromuscular blocking effects)
- Combined hormonal contraceptives**
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampnel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
  - ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)**. Adjust dose. [Moderate] Study
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
  - ▶ **Brigatinib** decreases the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Oral combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical

## Combined hormonal contraceptives (continued)

- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) increase the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir)** (unboosted) increase the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Oral combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **monoamine-oxidase B inhibitors (selegiline)**. Avoid. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially decrease the exposure to **combined hormonal contraceptives**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **combined hormonal contraceptives**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [\[Severe\]](#) theoretical
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of

increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** (with sofosbuvir and velpatasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 482. [\[Moderate\]](#) Theoretical

**Corticosteroids** → see TABLE 17 p. 1379 (reduced serum potassium)

beclometasone · betamethasone · budesonide · ciclesonide · deflazacort · dexamethasone · fludrocortisone · fluticasone · hydrocortisone · methylprednisolone · mometasone · prednisolone · triamcinolone

- ▶ Interactions do not generally apply to corticosteroids used for topical action (including inhalation) unless specified.
- ▶ With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
- ▶ **Antacids** are predicted to decrease the absorption of **deflazacort**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antacids** decrease the absorption of **dexamethasone**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide, fluticasone**). Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to oral **budesonide**. [\[Moderate\]](#) Study
- ▶ **Aprepitant** moderately increases the exposure to **dexamethasone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fluticasone**. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dexamethasone** is predicted to decrease the concentration of **casopfungin**. Adjust **casopfungin** dose, p. 592. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **methylprednisolone**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Corticosteroids** (**betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone**) are predicted to decrease the efficacy of **monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to corticosteroids (**dexamethasone, methylprednisolone**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **monoclonal antibodies (dinutuximab)**. Avoid except in life-threatening situations. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to oral **budesonide**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **dexamethasone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **fluticasone**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal

**Corticosteroids** (continued)

- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Dexamethasone** is predicted to decrease the concentration of **rilpivirine**. Avoid multiple-dose dexamethasone. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal

**Coumarins** → see TABLE 3 p. 1375 (anticoagulant effects)

acenocoumarol · warfarin

**FOOD AND LIFESTYLE** The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate juice is predicted to increase the INR in response to **acenocoumarol** and **warfarin**.

- ▶ **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **coumarins**. Avoid or monitor. [\[Mild\]](#) Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **warfarin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Cranberry juice** potentially increases the anticoagulant effect of **warfarin**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [\[Severe\]](#) Study
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Glucagon** increases the anticoagulant effect of **warfarin**. [\[Severe\]](#) Study
- ▶ **Glucosamine** potentially decreases the anticoagulant effect of **acenocoumarol**. [\[Moderate\]](#) Anecdotal
- ▶ **Glucosamine** potentially increases the anticoagulant effect of **warfarin**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **warfarin**. [\[Severe\]](#) Theoretical
- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Letermovir** is predicted to decrease the concentration of **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Lomitapide** increases the exposure to **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Mexiletine** potentially affects the exposure to **warfarin**. Avoid. [\[Unknown\]](#) Theoretical

- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **warfarin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
  - ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Obeticholic acid** decreases the anticoagulant effect of **warfarin**. [\[Severe\]](#) Study
  - ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
  - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
  - ▶ **Paritaprevir** (in fixed-dose combination with dasabuvir) decreases the anticoagulant effect of **acenocoumarol**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Paritaprevir** (in fixed-dose combination) decreases the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Pitolisant** is predicted to decrease the exposure to **warfarin**. [\[Mild\]](#) Theoretical
  - ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Study
  - ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Rucaparib** slightly increases the exposure to **warfarin**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
  - ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
  - ▶ **Sucralfate** potentially decreases the effects of **warfarin**. Separate administration by 2 hours. [\[Moderate\]](#) Anecdotal
  - ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Sulfonamides (sulfamethoxazole)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
  - ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [\[Moderate\]](#) Anecdotal
  - ▶ **Tindazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Venetoclax** slightly increases the exposure to **warfarin**. [\[Moderate\]](#) Study
- Cranberry juice**
- ▶ **Cranberry juice** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [\[Severe\]](#) Anecdotal
- Crisantaspase** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **crisantaspase**, p. 933. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
- Crizotinib** → see TABLE 6 p. 1376 (bradycardia), TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- GENERAL INFORMATION** Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.
- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Crizotinib** is predicted to increase the exposure to **buspiron**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study

## Crizotinib (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see [TABLE 15 p. 1378](#) → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **fosetorodine**. Adjust **fosetorodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mild\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [\[Severe\]](#) Study → Also see [TABLE 15 p. 1378](#)
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical → Also see [TABLE 6 p. 1376](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 6 p. 1376](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [\[Moderate\]](#) Theoretical → Also see [TABLE 6 p. 1376](#) → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1378](#) → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1378](#)
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1378](#) → Also see [TABLE 9 p. 1377](#)
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study

- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Cyclizine** → see antihistamines, sedating
- Cyclopentolate** → see TABLE 10 p. 1377 (antimuscarinics)
- Cyclophosphamide** → see alkylating agents
- Cycloserine**
  - ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- Cyproheptadine** → see antihistamines, sedating
- Cytarabine** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Dabigatran** → see TABLE 3 p. 1375 (anticoagulant effects)
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 136. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **dabigatran**. [Mild] Study
- ▶ **Brigatinib** potentially increases the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 136. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Paritaprevir** (with **ritonavir** and **ombitasvir**) is predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Pibrentasvir** (with **glecaprevir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** (with **sofosbuvir** and **velpatasvir**) increases the concentration of **dabigatran**. Avoid. [Severe] Study
- Dabrafenib** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- Dacarbazine** → see alkylating agents
- Dactinomycin** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Dairy products**

- ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after dairy products. [\[Severe\]](#) Theoretical
- ▶ **Dairy products** decrease the exposure to **tetracyclines** (**demeclocycline**, **oxytetracycline**, **tetracycline**). Avoid. [\[Moderate\]](#) Study

**Dalteparin** → see low molecular-weight heparins

**Danaparoid** → see TABLE 3 p. 1375 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [\[Severe\]](#) Theoretical

**Danazol**

- ▶ **Danazol** moderately increases the concentration of **antiepileptics** (**carbamazepine**). Monitor and adjust dose. [\[Severe\]](#) Study

- ▶ **Danazol** increases the concentration of **ciclosporin**. [\[Severe\]](#) Study

- ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal

- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **statins** (**atorvastatin**). [\[Severe\]](#) Theoretical

- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **statins** (**simvastatin**). Avoid. [\[Severe\]](#) Anecdotal

- ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal

**Dantrolene** → see TABLE 1 p. 1375 (hepatotoxicity)

- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers** (**diltiazem**, **verapamil**). Avoid. [\[Severe\]](#) Anecdotal

**Dapagliflozin** → see TABLE 14 p. 1378 (antidiabetic drugs), TABLE 8 p. 1376 (hypotension)

**Dapoxetine** → see SSRIs

**Dapsone**

- ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Dapsone** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics**, **local** (**prilocaine**). Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics** (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Antimalarials** (**chloroquine**, **primaquine**) are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** decreases the exposure to **dapsone**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **dapsone**. [\[Moderate\]](#) Study
- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [\[Severe\]](#) Study

**Daptomycin**

- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [\[Severe\]](#) Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [\[Severe\]](#) Theoretical
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical

- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [\[Severe\]](#) Theoretical

**Daratumumab** → see monoclonal antibodies

**Darbepoetin alfa** → see TABLE 5 p. 1375 (thromboembolism), TABLE 16 p. 1379 (increased serum potassium)

**Darifenacin** → see TABLE 10 p. 1377 (antimuscarinics)

- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Darifenacin** is predicted to increase the concentration of **antiarrhythmics** (**flecainide**). [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals**, **azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Antifungals**, **azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **darifenacin**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides** (**erythromycin**) are predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Nupitant** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1377

**Darunavir** → see HIV-protease inhibitors

**Dasabuvir**

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Clopidogrel** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Study

- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) increase the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Efavirenz** increases the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) decreases the concentration of **HIV-protease inhibitors (darunavir)**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) increases the concentration of **loop diuretics (furosemide)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dasabuvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- Dasatinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 4 p. 1375 (antiplatelet effects)
- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Apalutamide** is predicted to decrease the exposure to **dasatinib**. Avoid or monitor. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Idealisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Dasatinib** is predicted to increase the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Theoretical
- Danorubicin** → see anthracyclines
- Decitabine** → see TABLE 15 p. 1378 (myelosuppression)
- Deferasirox** → see iron chelators
- Deferiprone** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the absorption of **deferiprone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [\[Severe\]](#) Theoretical
- Deflazacort** → see corticosteroids
- Delamanid** → see TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Idealisib** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- Demeclocycline** → see tetracyclines
- Desferrioxamine** → see iron chelators
- Desflurane** → see volatile halogenated anaesthetics
- Desloratadine** → see antihistamines, non-sedating
- Desmopressin** → see TABLE 18 p. 1379 (hyponatraemia)
- ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [\[Moderate\]](#) Study
- ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical
- Desogestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

## Desogestrel (continued)

- ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [Moderate] Study
- ▶ **Apreritant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
- Dexamethasone** → see corticosteroids
- Dexamfetamine** → see amfetamines
- Dexibuprofen** → see NSAIDs
- Dexketoprofen** → see NSAIDs
- Dexmedetomidine** → see TABLE 11 p. 1377 (CNS depressant effects)
- Dextrazoxane** → see iron chelators
- Diamorphine** → see opioids
- Diazepam** → see TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study
- Diazoxide** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1376
- Diclofenac** → see NSAIDs
- Dicycloverine** → see TABLE 10 p. 1377 (antimuscarinics)

**Didanosine** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 12 p. 1378 (peripheral neuropathy)

**ROUTE-SPECIFIC INFORMATION** Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart.

- ▶ **Allopurinol** moderately increases the exposure to **didanosine**. Avoid. [Severe] Study
  - ▶ **Didanosine** (buffered) decreases the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Separate administration by 2 hours. [Severe] Study → Also see TABLE 1 p. 1375
  - ▶ **Febuxostat** is predicted to increase the exposure to **didanosine**. [Severe] Theoretical
  - ▶ **Ganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **didanosine**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Didanosine** (buffered) decreases the exposure to **HIV-protease inhibitors (atazanavir)**. **Didanosine** should be taken 2 hours after **atazanavir**. [Severe] Study
  - ▶ **Didanosine** (buffered) is predicted to decrease the exposure to **HIV-protease inhibitors (darunavir)** boosted with ritonavir. **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [Moderate] Theoretical
  - ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
  - ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [Severe] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 12 p. 1378
  - ▶ **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. [Severe] Study
  - ▶ **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after quinolones. [Moderate] Study
  - ▶ **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. [Severe] Study
  - ▶ **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study → Also see TABLE 12 p. 1378
  - ▶ **Tenofovir disoproxil** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
  - ▶ **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- Digoxin** → see TABLE 6 p. 1376 (bradycardia)
- GENERAL INFORMATION** Drugs that reduce serum potassium are predicted to increase the risk of digoxin toxicity, see TABLE 17 p. 1379.
- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [Mild] Study
  - ▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
  - ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Severe] Study → Also see TABLE 6 p. 1376
  - ▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
  - ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [Severe] Study
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [Severe] Study
  - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical

- ▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [\[Severe\]](#) Anecdotal
  - ▶ **Apalutamide** is predicted to decrease the exposure to **digoxin**. [\[Mild\]](#) Study
  - ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Theoretical
  - ▶ **Brigatinib** potentially increases the concentration of **digoxin**. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 6](#) p. 1376
  - ▶ Intravenous **calcium salts** increase the concentration of **digoxin**. Avoid. [\[Moderate\]](#) Anecdotal
  - ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
  - ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
  - ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides** increase the concentration of **digoxin**. [\[Severe\]](#) Anecdotal
  - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
  - ▶ **Neomycin** decreases the absorption of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
  - ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [\[Severe\]](#) Study
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [\[Moderate\]](#) Study
  - ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [\[Mild\]](#) Theoretical
  - ▶ **Ranolazine** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
  - ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
  - ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
  - ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ticagrelor** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Tolvaptan** increases the concentration of **digoxin**. [\[Mild\]](#) Study
  - ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [\[Severe\]](#) Study
  - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [\[Severe\]](#) Study
  - ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [\[Severe\]](#) Theoretical
  - ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- Dihydrocodeine** → see opioids
- Dihydrochastrol** → see vitamin D substances
- Diltiazem** → see calcium channel blockers
- Dimenhydrinate** → see [TABLE 10](#) p. 1377 (antimuscarinics)
- Dimethyl fumarate**
- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Dinutuximab** → see monoclonal antibodies
- Diphenoxylate** → see opioids
- Dipipanone** → see opioids
- Dipyridamole** → see [TABLE 8](#) p. 1376 (hypotension), [TABLE 4](#) p. 1375 (antiplatelet effects)
- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
  - ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [\[Severe\]](#) Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- Disopyramide** → see antiarrhythmics
- Disulfiram** → see [TABLE 12](#) p. 1378 (peripheral neuropathy)
- ▶ **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [\[Severe\]](#) Study
  - ▶ **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 12](#) p. 1378
  - ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see [TABLE 12](#) p. 1378
  - ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- Dobutamine** → see sympathomimetics, inotropic
- Docetaxel** → see taxanes
- Docusate sodium**
- ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **docusate** unless specified.
- Dolutegravir**
- ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **antacids**. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
  - ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. [\[Moderate\]](#) Study
  - ▶ **Dolutegravir** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study

**Dolutegravir** (continued)

- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ **Dolutegravir** increases the exposure to **metformin**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [\[Moderate\]](#) Study

**Domperidone** → see TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

**Donepezil** → see anticholinesterases, centrally acting**Dopamine** → see sympathomimetics, inotropic**Dopamine receptor agonists** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 10 p. 1377 (antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pergolide · pramipexole · quinagolide · ropinirole · rotigotine

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bromocriptine**. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **cabergoline**. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **bromocriptine**. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **cabergoline**. [\[Moderate\]](#) Anecdotal
- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Bupropion** increases the risk of side-effects when given with **amantadine**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 10 p. 1377
- ▶ **Cobicistat** increases the exposure to **bromocriptine**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [\[Moderate\]](#) Anecdotal
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [\[Moderate\]](#) Anecdotal
- ▶ **Dolutegravir** is predicted to increase the exposure to **pramipexole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists (**bromocriptine, cabergoline**). [\[Moderate\]](#) Theoretical
- ▶ Dopamine receptor agonists (**cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**). Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ Dopamine receptor agonists (**bromocriptine, cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**pergolide**). Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ Dopamine receptor agonists (**amantadine**) are predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**cabergoline, pergolide**). Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**, **cabergoline**). Avoid. [Moderate] Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. [Moderate] Theoretical
  - ▶ **Flupentixol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
  - ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
  - ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
  - ▶ **Loxapine** is predicted to decrease the effects of dopamine receptor agonists. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 10 p. 1377
  - ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
  - ▶ **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). [Moderate] Theoretical
  - ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). Avoid. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
  - ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
  - ▶ **Olanzapine** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Paliperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
  - ▶ **Phenothiazines** are predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
  - ▶ **Pimozide** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
  - ▶ **Quetiapine** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
  - ▶ **Risperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Sulpiride** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of side-effects when given with **bromocriptine**. Avoid. [Severe] Anecdotal
  - ▶ **Trimethoprim** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
  - ▶ **Vandetanib** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
  - ▶ **Zuclophenthixol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
- Doravirine**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doravirine**. [Mild] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **doravirine**. [Mild] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [Mild] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [Mild] Study
  - ▶ **Lumacafor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doravirine**. [Mild] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Rifabutin** moderately decreases the exposure to **doravirine**. Adjust **doravirine** dose, p. 644. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 840. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
  - ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 841. [Moderate] Theoretical
  - ▶ **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical

**Dorzolamide**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Dosulepin** → see tricyclic antidepressants

**Doxapram**

▶ **Aminophylline** increases the risk of agitation when given with doxapram. [\[Moderate\]](#) Study

▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of doxapram. [\[Moderate\]](#) Theoretical

▶ **Theophylline** increases the risk of agitation when given with doxapram. [\[Moderate\]](#) Study

**Doxazosin** → see alpha blockers

**Doxepin** → see tricyclic antidepressants

**Doxorubicin** → see anthracyclines

**Doxycycline** → see tetracyclines

**Doxylamine** → see antihistamines, sedating

**Dronedarone** → see antiarrhythmics

**Droperidol** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)

▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377

▶ **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376

▶ **Droperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376

**Drosiprenone** → see TABLE 16 p. 1379 (increased serum potassium)

▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to drosiprenone. [\[Severe\]](#) Study

**Dulaglutide** → see TABLE 14 p. 1378 (antidiabetic drugs)

**Duloxetine** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 13 p. 1378 (serotonin syndrome), TABLE 4 p. 1375 (antiplatelet effects)

▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to duloxetine. [\[Moderate\]](#) Theoretical

▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [\[Moderate\]](#) Study

▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to duloxetine. [\[Moderate\]](#) Theoretical

▶ **Leflunomide** is predicted to decrease the exposure to duloxetine. [\[Moderate\]](#) Theoretical

▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [\[Moderate\]](#) Study

▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to duloxetine. Avoid. [\[Moderate\]](#) Theoretical

▶ **Rifampicin** is predicted to decrease the exposure to duloxetine. [\[Moderate\]](#) Theoretical

▶ **SSRIs (fluvoxamine)** markedly increase the exposure to duloxetine. Avoid. [\[Severe\]](#) Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378 → Also see TABLE 4 p. 1375

▶ **Teriflunomide** is predicted to decrease the exposure to duloxetine. [\[Moderate\]](#) Theoretical

**Dupilumab** → see monoclonal antibodies

**Durvalumab** → see monoclonal antibodies

**Dutasteride**

▶ **Antiarrhythmics (dronedarone)** are predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Aprepitant** is predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Cobicistat** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Crizotinib** is predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Idelalisib** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Imatinib** is predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Netupitant** is predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

▶ **Nilotinib** is predicted to moderately increase the exposure to dutasteride. [\[Mild\]](#) Study

**Eculizumab** → see monoclonal antibodies

**Edoxaban** → see TABLE 3 p. 1375 (anticoagulant effects)

▶ **Antiarrhythmics (amiodarone)** slightly increase the exposure to edoxaban. [\[Severe\]](#) Study

▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 126. [\[Severe\]](#) Study

▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to edoxaban. [\[Moderate\]](#) Study

▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to edoxaban. [\[Moderate\]](#) Theoretical

▶ **Antifungals, azoles (itraconazole)** are predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 126. [\[Severe\]](#) Study

▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Ceritinib** is predicted to increase the exposure to edoxaban. [\[Moderate\]](#) Theoretical

▶ **Ciclosporin** slightly increases the exposure to edoxaban. Adjust edoxaban dose, p. 126. [\[Severe\]](#) Study

▶ **Cobicistat** is predicted to increase the exposure to edoxaban. Avoid. [\[Severe\]](#) Theoretical

▶ **Eliglustat** is predicted to increase the exposure to edoxaban. Adjust dose. [\[Moderate\]](#) Study

▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Lapatinib** is predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Macrolides (azithromycin, clarithromycin)** are predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Macrolides (erythromycin)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 126. [\[Severe\]](#) Study

▶ **Mirabegron** is predicted to increase the exposure to edoxaban. [\[Mild\]](#) Theoretical

▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to edoxaban. [\[Severe\]](#) Study

▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to edoxaban. [\[Moderate\]](#) Study

▶ **Pitolisant** is predicted to decrease the exposure to edoxaban. [\[Mild\]](#) Theoretical

▶ **Ranolazine** is predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Rifampicin** is predicted to decrease the exposure to edoxaban. [\[Moderate\]](#) Study

▶ **St John's Wort** is predicted to decrease the exposure to edoxaban. [\[Moderate\]](#) Study

▶ **Velpatasvir** is predicted to increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Vemurafenib** is predicted to slightly increase the exposure to edoxaban. [\[Severe\]](#) Theoretical

▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of edoxaban. Avoid. [\[Severe\]](#) Theoretical

**Efavirenz** → see TABLE 9 p. 1377 (QT-interval prolongation)

▶ **Efavirenz** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. [\[Severe\]](#) Theoretical → Also see

TABLE 9 p. 1377

- ▶ **Antiepileptics (carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to antiepileptics (**carbamazepine**). [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**phenobarbital**). [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the efficacy of antiepileptics (**primidone**) and antiepileptics (**primidone**) are predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**ketoconazole**). [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) slightly increase the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** decreases the concentration of antimalarials (**artemether**). [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** moderately decreases the exposure to antimalarials (**atovaquone**). Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to antimalarials (**proguanil**). Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** increases the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **macrolides (clarithromycin)**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377

## Efavirenz (continued)

- ▶ **Efavirenz** is predicted to decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [\[Mild\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ribociclib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Efavirenz** slightly decreases the exposure to **statins (atorvastatin)**. [\[Mild\]](#) Study
  - ▶ **Efavirenz** moderately decreases the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **tofacinibin**. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- Elbasvir**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Unknown\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Unknown\]](#) Theoretical
  - ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study

- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Elbasvir** increases the exposure to **statins (atorvastatin)**. Adjust **atorvastatin** dose, p. 202. [\[Moderate\]](#) Study
  - ▶ **Elbasvir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust **fluvastatin** dose, p. 203. [\[Unknown\]](#) Theoretical
  - ▶ **Elbasvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
  - ▶ **Elbasvir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 205. [\[Unknown\]](#) Theoretical
  - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- Eletriptan** → see TABLE 13 p. 1378 (serotonin syndrome)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **eletriptan**. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [\[Moderate\]](#) Study
- Eliglustat**
- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antiarrhythmics (dronedaron, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, non-selective (propranolol)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
  - ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study

- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
  - ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
  - ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
  - ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **sirinilimus**. Adjust dose. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [Moderate] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Elotuzumab** → see monoclonal antibodies
- Eltrombopag**
- ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **antacids**. [Severe] Study
  - ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [Severe] Study
  - ▶ **Ciclosporin** decreases the exposure to **eltrombopag**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical
  - ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [Severe] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the concentration of **letemovir**. [Moderate] Study
  - ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
  - ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical
- Elvitegravir**
- ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with ritonavir) increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- Empagliflozin** → see TABLE 14 p. 1378 (antidiabetic drugs), TABLE 8 p. 1376 (hypotension)
- Enalapril** → see ACE inhibitors
- Encorafenib** → see TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedronare)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Aprepitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study

## Encorafenib (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
  - ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
  - ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Nepititant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- Enoxaparin** → see low molecular-weight heparins

## Entacapone

- ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Entacapone** is predicted to increase the exposure to **methyl dopa**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study

## Enteral feeds

- ▶ **Antacids (aluminium hydroxide)** increase the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **quinolones (ciprofloxacin)**. [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study

## Enzalutamide

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiepileptics (perampnel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study

- ▶ **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 947. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**fluticasone**). [Unknown] Theoretical
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 979. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 947. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefinitib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to  **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 352. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 983. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

## Enzalutamide (continued)

- ▶ Enzalutamide is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [\[Moderate\]](#) Theoretical
- ▶ Enzalutamide is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **pitolisant**. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **reboxetine**. [\[Moderate\]](#) Anecdotal
- ▶ Enzalutamide is predicted to decrease the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide markedly decreases the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **statins (simvastatin)**. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [\[Moderate\]](#) Study
- ▶ Enzalutamide decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (docetaxel)**. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tezacafort**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tivozanib**. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tofacitinib**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [\[Severe\]](#) Study

- ▶ Enzalutamide is predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vandetanib**. Avoid. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **vemurafenib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **venetoclax**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vismodegib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Enzalutamide is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ Enzalutamide is predicted to decrease the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Ephedrine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 1375 (thromboembolism), TABLE 16 p. 1379 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 1375 (thromboembolism), TABLE 16 p. 1379 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 1375 (thromboembolism), TABLE 16 p. 1379 (increased serum potassium)
- Epoprostenol** → see TABLE 4 p. 1375 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatid** → see TABLE 4 p. 1375 (antiplatelet effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
  - ▶ **Antiarrhythmics (dronedaronе)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline, pergolide)**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the concentration of **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
  - ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [\[Severe\]](#) Anecdotal
- Ergotamine**
- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [\[Severe\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [\[Severe\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the concentration of **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [\[Severe\]](#) Theoretical
  - ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after rizatriptan. [\[Severe\]](#) Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
  - ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after sumatriptan. [\[Severe\]](#) Study
  - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- Eribulin** → see TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 9 p. 1377 (QT-interval prolongation)
- Erolotinib**
- FOOD AND LIFESTYLE** Dose adjustment may be necessary if smoking started or stopped during treatment.
- ▶ **Antacids** are predicted to decrease the absorption of **erlotinib**. **Antacids** should be taken 4 hours before or 2 hours after **erlotinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [\[Severe\]](#) Theoretical

## Erlotinib (continued)

- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to decrease the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [\[Severe\]](#) Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical

**Ertapenem** → see carbapenems

**Ertugliflozin** → see TABLE 14 p. 1378 (antidiabetic drugs), TABLE 8 p. 1376 (hypotension)

**Erythromycin** → see macrolides

**Escitalopram** → see SSRIs

**Esketamine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical

**Eslicarbazepine** → see antiepileptics

**Esmolol** → see beta blockers, selective

**Esomeprazole** → see proton pump inhibitors

**Estramustine** → see alkylating agents

**Etanercept**

▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [\[Severe\]](#) Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

**Etelcalcetide**

▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical

**Ethambutol**

▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal

**Ethosuximide** → see antiepileptics

**Etodolac** → see NSAIDs

**Etomidate** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

**Etonogestrel**

▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

▶ **Apreritant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical

▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical
- Etoposide** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **etoposide**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Netupitant** slightly increases the exposure to **etoposide**. [\[Moderate\]](#) Study
- Etoricoxib** → see NSAIDs
- Etravirine**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [\[Moderate\]](#) Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **brigatinib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [\[Severe\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Unknown\]](#) Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [\[Mid\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [\[Moderate\]](#) Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **letemovir**. [\[Moderate\]](#) Theoretical
  - ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** slightly increase the exposure to **etravirine**. [\[Severe\]](#) Study
- ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
- ▶ **Etravirine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **paritaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifabutin** decreases the exposure to **etravirine**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
- Everolimus** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [\[Severe\]](#) Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **everolimus**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

## Everolimus (continued)

- everolimus. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Everolimus is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to everolimus. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of everolimus. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of everolimus. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Mirabegron** is predicted to increase the exposure to everolimus. [\[Mid\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [\[Severe\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Palbociclib** is predicted to increase the exposure to everolimus. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to everolimus. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to everolimus. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [\[Severe\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [\[Severe\]](#) Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to everolimus. [\[Severe\]](#) Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [\[Severe\]](#) Study

## Exemestane

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to exemestane. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** moderately decreases the exposure to exemestane. [\[Moderate\]](#) Study
- ▶ **Mitotane** moderately decreases the exposure to exemestane. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to exemestane. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to exemestane. [\[Moderate\]](#) Theoretical

**Xenatide** → see TABLE 14 p. 1378 (antidiabetic drugs)

**SEPARATION OF ADMINISTRATION** With standard-release xenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, xenatide injection.

## Ezetimibe

- ▶ **Ciclosporin** moderately increases the exposure to ezetimibe and ezetimibe slightly increases the exposure to ciclosporin. [\[Moderate\]](#) Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with ezetimibe. [\[Severe\]](#) Theoretical
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Anecdotal

**Famotidine** → see H<sub>2</sub> receptor antagonists

## Fampridine

- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of fampridine. Avoid. [\[Severe\]](#) Theoretical

## Febuxostat

- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **didanosine**. [\[Severe\]](#) Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptapurine**. Avoid. [\[Severe\]](#) Theoretical

**Felbinac** → see NSAIDs

**Felodipine** → see calcium channel blockers

**Fenofibrate** → see fibrates

**Fentanyl** → see opioids

**Ferric carboxymaltose** → see iron (injectable)

**Ferric maltol** → see iron (oral)

**Ferrous fumarate** → see iron (oral)

**Ferrous gluconate** → see iron (oral)

**Ferrous sulfate** → see iron (oral)

**Fesoterodine** → see TABLE 10 p. 1377 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to fesoterodine. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to fesoterodine. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to fesoterodine. Avoid. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [\[Mid\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to fesoterodine. Avoid. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to fesoterodine. Avoid. [\[Severe\]](#) Theoretical

**Fexofenadine** → see antihistamines, non-sedating

### Fibrates

bezafibrate · ciprofibrate · fenofibrate · gemfibrozil

- ▶ **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Gemfibrozil** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 947. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 199. [Severe] Anecdotal
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [Severe] Study
- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Adjust **fenofibrate** dose, p. 199. [Severe] Theoretical
- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] theoretical
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 199, p. 204. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 205. [Severe] Study
- ▶ **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal

- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
  - ▶ **Gemfibrozil** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
  - ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- ### Fidaxomicin
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ### Fingolimod
- see TABLE 6 p. 1376 (bradycardia), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fingolimod**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1376
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical
- Flavoxate** → see TABLE 10 p. 1377 (antimuscarinics)
- Flecainide** → see antiarrhythmics
- Flucloxacillin** → see penicillins
- Fluconazole** → see antifungals, azoles
- ### Flucytosine
- ▶ **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study
  - ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [Severe] Theoretical
- Fludarabine** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). [Severe] theoretical
  - ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- Fludrocortisone** → see corticosteroids
- ### Fluocinolone
- ROUTE-SPECIFIC INFORMATION** With intravitreal use in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).

Interactions do not generally apply to corticosteroids used for topical action unless specified.

**Fluorouracil** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Fluorouracil** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **fluorouracil**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 1378 → Also see TABLE 5 p. 1375
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study

**Fluoxetine** → see SSRIs

**Flupentixol** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1376

**Fluphenazine** → see phenothiazines

**Flurazepam** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical

**Flurbiprofen** → see NSAIDs

**Fluticasone** → see corticosteroids

**Fluvastatin** → see statins

**Fluvoxamine** → see SSRIs

### Folates

folic acid · folic acid · levofolinic acid

- ▶ **Folates** are predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
- ▶ **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- ▶ **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Folates** are predicted to alter the effects of **ralitrexed**. Avoid. [Moderate] Study
- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical

**Folic acid** → see folates

**Folinic acid** → see folates

**Fondaparinux** → see TABLE 3 p. 1375 (anticoagulant effects)

**Formoterol** → see beta<sub>2</sub> agonists

**Fosamprenavir** → see HIV-protease inhibitors

### Fosaprepitant

- ▶ **Fosaprepitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **alprazolam**. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
  - ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **northisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- Foscarnet** → see TABLE 2 p. 1375 (nephrotoxicity)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1375
- Fosinopril** → see ACE inhibitors
- Fosphenytoin** → see antiepileptics
- Frovatriptan** → see TABLE 13 p. 1378 (serotonin syndrome)

- ▶ **SSRIs (fluvoxamine)** increase the concentration of frovatriptan.

[Severe] Study → Also see TABLE 13 p. 1378

- ▶ **Fulvestrant** → see TABLE 5 p. 1375 (thromboembolism)

- ▶ **Furosemide** → see loop diuretics

### Fusidic acid

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal

- ▶ **Gabapentin** → see antiepileptics

- ▶ **Galantamine** → see anticholinesterases, centrally acting

- ▶ **Ganciclovir** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (imipenem)**. Avoid. [Severe] Anecdotal
- ▶ **Ganciclovir** is predicted to increase the exposure to **didanosine**.

[Moderate] Study

- ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study

- ▶ **Gefitinib** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study

- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study

- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal

- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical

- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study

- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [Moderate] Study

- ▶ **Idealisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 1378

- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378

- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

- ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**.

[Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical

- ▶ **Gemcitabine** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Gemfibrozil** → see fibrates

- ▶ **Gentamicin** → see aminoglycosides

### Glecaprevir

- ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **glecaprevir**. [Moderate] theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical

- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study

- ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical

- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study

- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **dabigatran**. Avoid. [Moderate] Study

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study

- ▶ **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study

- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** (boosted with ritonavir) increase the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

- ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study

- ▶ **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study

- ▶ **Glecaprevir** (with pibrentasvir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study

- ▶ **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust pravastatin dose. [Moderate] Study

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust rosuvastatin dose, p. 204. [Moderate] Study

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study

## Glecaprevir (continued)

- ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mid] Study

**Glibenclamide** → see sulfonylureas**Gliclazide** → see sulfonylureas**Glimepiride** → see sulfonylureas**Glipizide** → see sulfonylureas**Glucagon**

- ▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study

**Glucosamine**

- ▶ **Glucosamine** potentially decreases the anticoagulant effect of **coumarins (acenocoumarol)**. [Moderate] Anecdotal
- ▶ **Glucosamine** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

**Glycerol phenylbutyrate**

- ▶ **Antiepileptics (valproate)** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical

**Glyceryl trinitrate** → see nitrates**Glycopyrronium** → see TABLE 10 p. 1377 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Golimumab** → see monoclonal antibodies**Granisetron** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 13 p. 1378 (serotonin syndrome)

- ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical

**Grapefruit juice**

- ▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilastine)**. Bilastine should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperaquine)**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** greatly decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **bupirone**. Avoid. [Mid] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mid] Study
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **calcium channel blockers (ercandipine)**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nicardipine)**. [Mid] Study
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mid] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical

- ▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

#### Grass pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

#### Grazoprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 202. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 203. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 204. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 205. [Unknown] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

#### Griseofulvin

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

**Guanethidine** → see TABLE 8 p. 1376 (hypotension)

- ▶ **Amfetamines (dexamfetamine)** decrease the effects of **guanethidine**. [Severe] Study
- ▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, inotropic (dopamine)**. [Severe] Theoretical
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- ▶ **Guanethidine** increases the effects of **sympathomimetics, vasoconstrictor (metaraminol)**. [Severe] Anecdotal
- ▶ **Guanethidine** increases the effects of **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Study → Also see TABLE 8 p. 1376

**Guanfacine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

**Guselkumab** → see monoclonal antibodies

#### H<sub>2</sub> receptor antagonists

cimetidine · famotidine · nizatidine · ranitidine

- ▶ **Cimetidine** decreases the clearance of **albendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [Severe] Study

- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [Mid] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [Moderate] Study
- ▶ **Cimetidine** decreases the clearance of **antimalarials (chloroquine)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antimalarials (quinine)**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers (diltiazem, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. [Moderate] Theoretical
- ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers (nifedipine)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **calcium channel blockers (verapamil)**. [Moderate] Study
- ▶ **Cimetidine** is predicted to slightly increase the exposure to **capcatabine**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **certinib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the concentration of **ciclosporin**. [Mid] Study
- ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Cimetidine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [Severe] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **fluorouracil**. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 628. [Moderate] Study

- ▶ **Leflunomide** is predicted to increase the exposure to H<sub>2</sub> receptor antagonists (**cimetidine**, **famotidine**). [Moderate] Theoretical
  - ▶ H<sub>2</sub> receptor antagonists (**cimetidine**, **ranitidine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Cimetidine** slightly increases the exposure to **macrolides** (**erythromycin**). [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
  - ▶ **Cimetidine** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 362. [Mild] Study
  - ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the absorption of **nilotinib**. H<sub>2</sub> receptor antagonists should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
  - ▶ **Cimetidine** increases the concentration of **opioids** (**alfentanil**). Use with caution and adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **opioids** (**fentanyl**). [Moderate] Study
  - ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the exposure to **pazopanib**. H<sub>2</sub> receptor antagonists should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
  - ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study
  - ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the exposure to **rilpivirine**. H<sub>2</sub> receptor antagonists should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
  - ▶ **Cimetidine** slightly increases the exposure to **roflumilast**. [Moderate] Study
  - ▶ H<sub>2</sub> receptor antagonists potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir** with **sofosbuvir** p. 628, **sofosbuvir** with **velpatasvir** p. 629, and **sofosbuvir** with **velpatasvir** and **voxilaprevir** p. 630. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**paroxetine**, **sertraline**). [Moderate] Study
  - ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to H<sub>2</sub> receptor antagonists (**cimetidine**, **famotidine**). [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
  - ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see **sofosbuvir** with **velpatasvir** p. 629. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **venlafaxine**. [Mild] Study
  - ▶ **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 482. [Mild] Study
- Haloperidol** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
  - ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics** (**zonisamide**). Avoid in children. [Severe] Theoretical
  - ▶ **Antifungals, azoles** (**itraconazole**) increase the concentration of **haloperidol**. [Moderate] Study
  - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
  - ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
  - ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
  - ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1376
  - ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
  - ▶ **SSRIs** (**fluoxetine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
  - ▶ **SSRIs** (**fluvoxamine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1377 → Also see TABLE 11 p. 1377
- Heparin (unfractionated)** → see TABLE 16 p. 1379 (increased serum potassium), TABLE 3 p. 1375 (anticoagulant effects)
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin** (unfractionated). [Severe] Theoretical
- Hepatitis B immunoglobulin** → see immunoglobulins
- HIV-protease inhibitors** → see TABLE 9 p. 1377 (QT-interval prolongation)

atazanavir · darunavir · fosamprenavir · lopinavir · ritonavir · saquinavir · tipranavir

▶ Caution on concurrent use of **atazanavir**, **lopinavir with ritonavir**, and **ritonavir** with drugs that prolong the PR interval.

▶ Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.

▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

▶ **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. [Severe] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe] Study

▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical

▶ **Ritonavir** decreases the exposure to **albendazole**. [Moderate] Study

▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Severe] Study

▶ **HIV-protease inhibitors** (**ritonavir**, **saquinavir**) are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical

▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study

▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers** (**alfuzosin**, **tamsulosin**). Use with caution or avoid. [Moderate] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alpha blockers** (**doxazosin**). [Moderate] Study

▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study

▶ **HIV-protease inhibitors** (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical

▶ **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study

▶ **Ritonavir** is predicted to decrease the exposure to **anaesthetics, local** (**ropivacaine**). [Moderate] Theoretical

▶ **Antacids** are predicted to decrease the absorption of **atazanavir**. **Atazanavir** should be taken 2 hours before or 1 hour after **antacids**. [Severe] Theoretical

## HIV-protease inhibitors (continued)

- ▶ **Antacids** are predicted to decrease the absorption of **tipranavir**. Separate administration by 2 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Ritonavir** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. Avoid or monitor side effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (ketconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1377
- ▶ **Ritonavir** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Atazanavir** moderately increases the exposure to **bictegravir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose, p. 971. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 342. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **certinib**. Avoid or adjust certinib dose, p. 973. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 232. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust colchicine dose, p. 1120. [\[Severe\]](#) Study
- ▶ **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) decreases the concentration of **darunavir**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Didanosine** (buffered) decreases the exposure to **atazanavir**. **Didanosine** should be taken 2 hours after **atazanavir**, p. 648, p. 656. [\[Severe\]](#) Study
- ▶ **Didanosine** (buffered) is predicted to decrease the exposure to **darunavir** (boosted with ritonavir). **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [\[Moderate\]](#) Theoretical
- ▶ **Tipranavir** decreases the exposure to **didanosine**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **Fosamprenavir** (boosted with ritonavir) slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [\[Mild\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **duloxetine**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dulasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eltriptan**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with ritonavir) increase the concentration of **elvitegravir**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** increases the exposure to **fosamprenavir** (boosted with ritonavir). Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **Tipranavir** decreases the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **flurazepam**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** (boosted with ritonavir) increase the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 352. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [\[Severe\]](#) theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 983. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical

## HIV-protease inhibitors (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor**, p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ **Tipranavir** (boosted with **ritonavir**) is predicted to decrease the exposure to **ledipasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **lopinavir**) (boosted with **ritonavir**) are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Macrolides** (**clarithromycin**) increase the exposure to **saquinavir** and **saquinavir** increases the exposure to **macrolides** (**clarithromycin**). Avoid. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **saquinavir**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 9](#) p. 1377
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Tipranavir** (boosted with **ritonavir**) increases the exposure to **macrolides** (**clarithromycin**) and **macrolides** (**clarithromycin**) increase the exposure to **tipranavir** (boosted with **ritonavir**). Monitor; adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**darunavir**, **fosamprenavir**, **lopinavir**) (boosted with **ritonavir**) are predicted to increase the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **tipranavir**) are predicted to increase the exposure to **macrolides** (**erythromycin**). [\[Severe\]](#) Theoretical
- ▶ **Darunavir** (boosted with **ritonavir**) markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir**, **saquinavir**) moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Lopinavir** (boosted with **ritonavir**) moderately increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies** (**brentuximab vedotin**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies** (**trastuzumab emtansine**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
- ▶ **Ritonavir** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [\[Moderate\]](#) Study
- ▶ **Ombitasvir** (in fixed-dose combination with **dasabuvir**) decreases the concentration of **darunavir**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** (boosted with **ritonavir**) are predicted to decrease the exposure to **opioids** (**methadone**). [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids** (**morphine**). [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids** (**pthidine**). Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ **Atazanavir** (boosted with **ritonavir**) markedly increases the exposure to **paritaprevir**. Avoid or give unboosted. [\[Moderate\]](#) Study
- ▶ **Darunavir** (boosted with **ritonavir**) slightly decreases the exposure to **paritaprevir**. Avoid or give unboosted. [\[Moderate\]](#) Study
- ▶ HIV-protease inhibitors (**fosamprenavir**, **tipranavir**) (boosted with **ritonavir**) are predicted to increase the exposure to **paritaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Lopinavir** (boosted with **ritonavir**) moderately to markedly increases the exposure to **paritaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Saquinavir** is predicted to increase the exposure to **paritaprevir** (in fixed-dose combination). Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **vardenafile**). Avoid. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1377

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with ritonavir) increase the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [\[Severe\]](#) Theoretical
- ▶ **Saquinavir** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. [\[Severe\]](#) Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [\[Moderate\]](#) Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [\[Moderate\]](#) Study
- ▶ **Fosamprenavir** (boosted with ritonavir) decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** (boosted with ritonavir). Avoid. [\[Severe\]](#) Study
- ▶ **Tipranavir** (boosted with ritonavir) is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** (boosted with ritonavir) increase the exposure to **rifabutin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** slightly decreases the exposure to **ritonavir**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tipranavir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sildenafil**. Avoid. [\[Severe\]](#) Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin** with **solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SRRI (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** decreases the concentration of **thyroid hormones (levothyroxine)**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see **TABLE 9** p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical

## HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ HIV-protease inhibitors (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
  - ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Tipranavir** is predicted to increase the exposure to **velpatasvir**. [\[Severe\]](#) Theoretical
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **venurafenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **venlafaxine**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [\[Moderate\]](#) Study
  - ▶ **Atazanavir** (boosted with ritonavir) increases the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Lopinavir** (boosted with ritonavir) is predicted to increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Tipranavir** (boosted with ritonavir) is predicted to increase the concentration of **voxilaprevir**. [\[Severe\]](#) Theoretical
  - ▶ **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- Hormone replacement** → see TABLE 10 p. 1377 (antimuscarinics)
- Hormone replacement therapy**
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ Hormone replacement therapy is predicted to alter the exposure to antiepileptics (**lamotrigine**). [\[Moderate\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ **Bosentan** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ Hormone replacement therapy decreases the clearance of dopamine receptor agonists (**ropinirole**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ **Fosaprepitant** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [\[Severe\]](#) Theoretical
  - ▶ **Modafinil** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ Hormone replacement therapy is predicted to increase the exposure to monoamine-oxidase B inhibitors (**selegiline**). Avoid. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ NSAIDs (**etoricoxib**) slightly increase the exposure to hormone replacement therapy. [\[Moderate\]](#) Study
  - ▶ Hormone replacement therapy potentially opposes the effects of **ospemifene**. Avoid. [\[Severe\]](#) Theoretical

- ▶ Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [\[Severe\]](#) Theoretical
  - ▶ Hormone replacement therapy potentially opposes the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Rifabutin** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the efficacy of hormone replacement therapy. [\[Moderate\]](#) Theoretical
  - ▶ Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical
  - ▶ Oral hormone replacement therapy is predicted to decrease the effects of **thyroid hormones**. [\[Moderate\]](#) Theoretical
- Hydralazine** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- Hydrochlorothiazide** → see thiazide diuretics
- Hydrocortisone** → see corticosteroids
- Hydroflumethiazide** → see thiazide diuretics
- Hydromorphone** → see opioids
- Hydroxycarbamide** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- Hydroxychloroquine**
- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. [\[Moderate\]](#) Theoretical
  - ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
  - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
  - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [\[Moderate\]](#) Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [\[Moderate\]](#) Theoretical
  - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [\[Severe\]](#) Theoretical
  - ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [\[Moderate\]](#) Theoretical
- Hydroxyzine** → see antihistamines, sedating
- Hyoscine** → see TABLE 10 p. 1377 (antimuscarinics)
- Ibandronic acid** → see bisphosphonates
- Ibrutinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 4 p. 1375 (antiplatelet effects)
- FOOD AND LIFESTYLE** Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose, p. 983. [\[Severe\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 983. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 983. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ibrutinib. Adjust

- ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study
  - ▶ **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. **[Moderate]** Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. **[Moderate]** Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 983. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 983. **[Severe]** Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 983. **[Severe]** Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. **[Severe]** Theoretical
- Ibuprofen** → see NSAIDs
- Icecatabint**
- ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icecatabint** and **icecatabint** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. **[Moderate]** Theoretical
- Idarubicin** → see anthracyclines
- Idelalisib** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** increases the exposure to **almotriptan**. **[Mild]** Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. **[Moderate]** Study
  - ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. **[Moderate]** Theoretical
  - ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. **[Moderate]** Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. **[Mild]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperaquine)**. **[Severe]** theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **apalutamide**. **[Mild]** Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 395. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. **[Moderate]** Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. **[Mild]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. **[Moderate]** Study → Also see TABLE 15 p. 1378
  - ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. **[Moderate]** Theoretical
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Adjust **brigatinib** dose, p. 971. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 342. **[Severe]** Study
  - ▶ **Idelalisib** slightly increases the exposure to **cabozantinib**. **[Moderate]** Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. **[Moderate]** Theoretical
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **certinib**. Avoid or adjust **certinib** dose, p. 973. **[Severe]** Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** increases the concentration of **ciclosporin**. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **clostrazolol**. Adjust **clostrazolol** dose, p. 232. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. **[Moderate]** Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. **[Severe]** Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. **[Severe]** Study

## Idelalisib (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **elotriptan**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fosetoridine**. Adjust **fosetoridine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to markedly to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviric**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (methadone)**. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Study

- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1262. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 779 or tamsulosin with solifenacin p. 786 dose; avoid in hepatic and renal impairment. [Severe] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- Iloprost** → see TABLE 4 p. 1375 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **imatinib**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (flucanazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
  - ▶ **Imatinib** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study

## Imatinib (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study

- ▶ **Imatinib** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 105. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Imidapril** → see ACE inhibitors
- Impenem** → see carbapenems
- Imipramine** → see tricyclic antidepressants
- Immunoglobulins**
  - Anti-D (Rh<sub>0</sub>) immunoglobulin · antithymocyte immunoglobulin (rabbit) · hepatitis B immunoglobulin · normal immunoglobulin · rabies immunoglobulin · tetanus immunoglobulin · varicella-zoster immunoglobulin
- ▶ **Immunoglobulins** are predicted to alter the effects of **monoclonal antibodies** (**dinutuximab**). Avoid. [\[Severe\]](#) Theoretical
- Indacaterol** → see beta<sub>2</sub> agonists
- Indapamide** → see thiazide diuretics
- Indometacin** → see NSAIDs
- Indoramin** → see alpha blockers
- Infliximab** → see monoclonal antibodies
- Influenza vaccine (live)** → see live vaccines
- Inotersen** → see TABLE 4 p. 1375 (antiplatelet effects)
- Inotuzumab ozogamicin** → see monoclonal antibodies
- Insulins** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [\[Moderate\]](#) Theoretical
- Interferon alfa** → see interferons
- Interferon beta** → see interferons
- Interferons** → see TABLE 15 p. 1378 (myelosuppression)
  - interferon alfa · interferon beta · peginterferon alfa
- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Interferon alfa** is predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Peginterferon alfa** increases the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- Ipilimumab** → see monoclonal antibodies
- Ipratropium** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [\[Moderate\]](#) Anecdotal
- Irbesartan** → see angiotensin-II receptor antagonists
- Irinotecan** → see TABLE 15 p. 1378 (myelosuppression)
  - ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals**, azoles (**itraconazole**, **ketconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Fibrates** (**gemfibrozil**) are predicted to increase the exposure to **irinotecan**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Fosaprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [\[Moderate\]](#) Study
  - ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [\[Mild\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [\[Moderate\]](#) Study
  - ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
  - ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Theoretical

### Iron (injectable)

ferric carboxymaltose · iron dextran · iron isomaltoside 1000 · iron sucrose

- ▶ **Chloramphenicol** decreases the efficacy of intravenous iron (injectable). [\[Moderate\]](#) Anecdotal

### Iron (oral)

ferric maltol · ferrous fumarate · ferrous gluconate · ferrous sulfate · sodium ferredotate

- ▶ **Antacids** decrease the absorption of iron (oral). Iron (oral) should be taken 1 hour before or 2 hours after antacids. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decrease the exposure to **bictegravir**. **Bictegravir** should be taken 2 hours before iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of oral **bisphosphonates** (**ibandronic acid**). Avoid iron (oral) for at least 6 hours before or 1 hour after **ibandronic acid**. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates** (**risedronate**). Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates** (**sodium clodronate**). Avoid iron (oral) for 2 hours before or 1 hour after **sodium clodronate**. [\[Moderate\]](#) Study
- ▶ **Calcium salts** (**calcium carbonate**) decrease the absorption of iron (oral). **Calcium carbonate** should be taken 1 hour before or 2 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidoopa**. [\[Moderate\]](#) Theoretical

## Iron (oral) (continued)

- ▶ **Chloramphenicol** decreases the efficacy of oral iron (oral). [\[Moderate\]](#) Theoretical
- ▶ Iron (oral) decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ Iron (oral) is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after iron (oral). [\[Severe\]](#) Theoretical
- ▶ Iron (oral) is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Iron (oral) decreases the absorption of **levodopa**. [\[Moderate\]](#) Study
- ▶ Iron (oral) decreases the effects of **methyldopa**. [\[Moderate\]](#) Study
- ▶ Iron (oral) is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [\[Mild\]](#) Study
- ▶ Iron (oral) decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Iron (oral) decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ Iron (oral) decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Trientine** potentially decreases the absorption of iron (oral). [\[Moderate\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of iron (oral) and iron (oral) is predicted to decrease the efficacy of **zinc**. [\[Moderate\]](#) Study

## Iron chelators

deferasirox · desferrioxamine · dextrazoxane

- ▶ **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the exposure to **deferasirox**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **desferrioxamine**. [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. [\[Severe\]](#) Theoretical
  - ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [\[Severe\]](#) Theoretical
  - ▶ **Deferasirox** is predicted to increase the exposure to **clozapine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dextrazoxane**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [\[Severe\]](#) Theoretical
  - ▶ **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Deferasirox** increases the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Theoretical
- Iron dextran** → see iron (injectable)
- Iron isomaltoside 1000** → see iron (injectable)
- Iron sucrose** → see iron (injectable)
- Isavuconazole** → see antifungals, azoles
- Isocarboxazid** → see monoamine-oxidase A and B inhibitors, irreversible
- Isoflurane** → see volatile halogenated anaesthetics
- Isometheptene** → see sympathomimetics, vasoconstrictor
- Isoniazid** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 12 p. 1378 (peripheral neuropathy)
- FOOD AND LIFESTYLE** Avoid tyramine-rich foods (such as mature cheeses, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or histamine-rich foods (such as very mature cheese or fish from the scromboid family (e.g. tuna, mackerel, salmon)), as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.
- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [\[Severe\]](#) Theoretical
  - ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see TABLE 1 p. 1375
  - ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study → Also see TABLE 12 p. 1378
  - ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 12 p. 1378
  - ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal
  - ▶ **Isoniazid** decreases the effects of **levodopa**. [\[Moderate\]](#) Study
  - ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Unknown\]](#) Theoretical → Also see TABLE 1 p. 1375
  - ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [\[Severe\]](#) Theoretical → Also see TABLE 12 p. 1378
  - ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
  - ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [\[Severe\]](#) Theoretical
- Isosorbide dinitrate** → see nitrates
- Isosorbide mononitrate** → see nitrates
- Isotretinoin** → see retinoids
- Itraconazole** → see antifungals, azoles
- Ivabradine** → see TABLE 6 p. 1376 (bradycardia), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1376
  - ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 1376

- ▶ **Ivabradine** is predicted to increase the risk of torsade de pointes when given with **drugs that prolong the QT interval**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study

#### Ivacaftor

**FOOD AND LIFESTYLE** Avoid bitter (Seville) oranges as they are predicted to increase the exposure to ivacaftor.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **ivacaftor**. Avoid or monitor. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **coumarins (warfarin)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical

#### Ivermectin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study

#### Ixazomib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ixekizumab** → see monoclonal antibodies
- Kaolin**
- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical

**Ketamine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical

**Ketoconazole** → see antifungals, azoles

**Ketoprofen** → see NSAIDs

**Ketorolac** → see NSAIDs

**Ketotifen** → see antihistamines, sedating

**Labetalol** → see beta blockers, non-selective

**Lacidipine** → see calcium channel blockers

**Lacosamide** → see antiepileptics

**Lamivudine** → see TABLE 12 p. 1378 (peripheral neuropathy)

- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study

## Lamivudine (continued)

- ▶ **Zidovudine** increases the risk of toxicity when given with lamivudine. [Severe] Anecdotal

**Lamotrigine** → see antiepileptics**Lanreotide**

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with lanreotide. [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with lanreotide. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

**Lansoprazole** → see proton pump inhibitors**Lanthanum**

- ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Quinolones** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [Moderate] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study

**Lapatinib** → see TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1120. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

**Larionidase**

- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **larionidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **larionidase**. Avoid simultaneous administration. [Severe] Theoretical

**Ledipasvir**

- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
  - ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
  - ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
  - ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 628. [Moderate] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 628. [Moderate] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
  - ▶ **Ledipasvir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ledipasvir** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
  - ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
- Ledipasvir** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)

**PHARMACOLOGY** Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
  - ▶ **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1375
  - ▶ **Leflunomide** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1375
  - ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Milid] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- Lenalidomide** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical

## Lenalidomide (continued)

► **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [\[Severe\]](#) Theoretical

**Lenvatinib** → see TABLE 9 p. 1377 (QT-interval prolongation)

**Lercanidipine** → see calcium channel blockers

**Letermovir**

- **Letermovir** is predicted to increase the concentration of antiarrhythmics (**amiodarone**). [\[Moderate\]](#) Theoretical
- **Antiepileptics** (**carbamazepine**, **phenobarbital**, **primidone**) are predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to decrease the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Letermovir** slightly decreases the exposure to **antifungals**, azoles (**voriconazole**). [\[Moderate\]](#) Study
- **Letermovir** is predicted to increase the concentration of **antihistamines**, non-sedating (**exfopenadine**). [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to increase the concentration of **bosentan**. [\[Moderate\]](#) Theoretical
- **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 639. [\[Severe\]](#) Study
- **Letermovir** is predicted to decrease the concentration of **coumarins** (**warfarin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
- **Efavirenz** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Eltrombopag** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- **Letermovir** is predicted to increase the concentration of **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- **Letermovir** is predicted to increase the concentration of **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- **Etravirine** is predicted to decrease the exposure to **letermovir**. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- **Fibrates** (**gemfibrozil**) are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- **HIV-protease inhibitors** (**atazanavir**, **lopinavir**) (boosted with ritonavir) are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- **HIV-protease inhibitors** (**ritonavir**) are predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Leflunomide** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- **Letermovir** slightly to moderately increases the exposure to **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Study
- **Modafinil** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to increase the exposure to **opioids** (**alfentanil**, **fentanyl**). Monitor and adjust dose. [\[Moderate\]](#) Study
- **Letermovir** is predicted to increase the concentration of **pimozide**. Avoid. [\[Severe\]](#) Theoretical
- **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [\[Moderate\]](#) Theoretical
- **Rifabutin** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Rifampicin** is predicted to affect the concentration of **letermovir**. [\[Severe\]](#) Theoretical
- **Letermovir** moderately increases the exposure to **sirolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- **St John's Wort** is predicted to decrease the concentration of **letermovir**. [\[Moderate\]](#) Theoretical
- **Letermovir** moderately increases the exposure to **statins** (**atorvastatin**). Avoid or adjust **atorvastatin** dose, p. 202. [\[Severe\]](#) Study

- **Letermovir** is predicted to increase the exposure to **statins** (**fluvastatin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to increase the exposure to **statins** (**pravastatin**). Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- **Letermovir** is predicted to increase the exposure to **statins** (**rosuvastatin**, **simvastatin**). Avoid. [\[Severe\]](#) Study
- **Letermovir** is predicted to increase the concentration of **sulfonylureas** (**glibenclamide**). [\[Moderate\]](#) Theoretical
- **Letermovir** moderately increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- **Teriflunomide** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study

**Levamisole**

- **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [\[Moderate\]](#) Study
- **Alcohol** (**beverage**) potentially causes a disulfiram-like reaction when given with **levamisole**. [\[Moderate\]](#) Study
- **Levamisole** increases the exposure to **ivermectin**. [\[Moderate\]](#) Study
- Levetiracetam** → see antiepileptics
- Levobunolol** → see beta blockers, non-selective
- Levobupivacaine** → see anaesthetics, local
- Levocetirizine** → see antihistamines, non-sedating
- Levodopa** → see TABLE 8 p. 1376 (hypotension)

**GENERAL INFORMATION** Drugs with antimuscarinic effects might reduce the absorption of levodopa, see TABLE 10 p. 1377.

- **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [\[Severe\]](#) Theoretical
- **Antiepileptics** (**fosphenytoin**, **phenytoin**) decrease the effects of **levodopa**. [\[Moderate\]](#) Study
- **Aripiprazole** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 1376
- **Benperidol** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- **Bupropion** increases the risk of side-effects when given with **levodopa**. [\[Moderate\]](#) Study
- **Clozapine** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Droperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Haloperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- **Iron** (**oral**) decreases the absorption of **levodopa**. [\[Moderate\]](#) Study
- **Isoniazid** decreases the effects of **levodopa**. [\[Moderate\]](#) Study
- **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- **Loxapine** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Lurasidone** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- **Memantine** is predicted to increase the effects of **levodopa**. [\[Moderate\]](#) Theoretical
- **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
- **Levodopa** increases the risk of side-effects when given with **moclobemide**. [\[Moderate\]](#) Study
- **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors**, irreversible. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [\[Mild\]](#) Study → Also see TABLE 8 p. 1376

- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1376
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tryptophan** greatly increases the concentration of **levodopa**. [Moderate] Study
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1376
- Levofloxacin** → see quinolones
- Levofolinic acid** → see folates
- Levomepromazine** → see phenothiazines
- Levonorgestrel**
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- Levothyroxine** → see thyroid hormones
- Lidocaine** → see antiarrhythmics
- Linagliptin** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- Linezolid** → see TABLE 15 p. 1378 (myelosuppression), TABLE 13 p. 1378 (serotonin syndrome)
 

**FOOD AND LIFESTYLE** Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril<sup>®</sup>, Oxo<sup>®</sup>, Marmite<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1378
  - ▶ **Buspiron** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** increase the exposure to **linezolid**. [Moderate] Anecdotal
  - ▶ **Methyphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
  - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor (pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- Liothyronine** → see thyroid hormones
- Liraglutide** → see TABLE 14 p. 1378 (antidiabetic drugs)
- Lisdexamfetamine** → see amfetamines
- Lisinopril** → see ACE inhibitors

**Lithium** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **ACE inhibitors** are predicted to increase the concentration of lithium. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Acetazolamide** alters the concentration of lithium. [Severe] Anecdotal
- ▶ **Aldosterone antagonists (eplerenone)** potentially increase the concentration of lithium. Avoid. [Moderate] Theoretical
- ▶ **Aldosterone antagonists (spironolactone)** potentially increase the concentration of lithium. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of lithium. [Moderate] Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of lithium. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with lithium. [Severe] Anecdotal
- ▶ **Calcitonin (salmon)** decreases the concentration of lithium. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with lithium. [Severe] Anecdotal
- ▶ **Loop diuretics** increase the concentration of lithium. Monitor and adjust dose. [Severe] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with lithium. [Severe] Anecdotal
- ▶ **Mexiletine** potentially affects the exposure to lithium. Avoid. [Unknown] Theoretical
- ▶ **NSAIDs** increase the concentration of lithium. Monitor and adjust dose. [Severe] Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 9 p. 1377
- ▶ **Potassium-sparing diuretics (triamterene)** potentially increase the clearance of lithium. [Moderate] Study
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with lithium. [Severe] Anecdotal
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 9 p. 1377
- ▶ **Sodium bicarbonate** decreases the concentration of lithium. [Severe] Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 9 p. 1377
- ▶ **Theophylline** is predicted to decrease the concentration of lithium. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of lithium. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 13 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 9 p. 1377

#### Live vaccines

Bacillus Calmette-Guérin vaccine · influenza vaccine (live) · measles, mumps and rubella vaccine, live · rotavirus vaccine · typhoid vaccine, oral · varicella-zoster vaccine · yellow fever vaccine, live

**GENERAL INFORMATION** Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fungolimod**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **iron chelators (dexrazoxane)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirinolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes (docetaxel, paclitaxel)**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Lixisenatide** → see TABLE 14 p. 1378 (antidiabetic drugs)
- SEPARATION OF ADMINISTRATION** Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.
- Lofepramine** → see tricyclic antidepressants
- Lofexidine** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)
- Lomitapide** → see TABLE 1 p. 1375 (hepatotoxicity)
- FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.
- ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1375
  - ▶ **Antifungals, azoles (clotrimazole)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1375
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1375
  - ▶ **Apalutamide** is predicted to decrease the exposure to **lomitapide**. Avoid or monitor. [\[Moderate\]](#) Study

## Lomitapide (continued)

- ▶ **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (amlodipine, lacidipine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clofazimine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1375
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Lomitapide** increases the exposure to **statins (atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours. p. 207. [Mild] Study → Also see TABLE 1 p. 1375
  - ▶ **Lomitapide** increases the exposure to **statins (simvastatin)**. Monitor and adjust **simvastatin** dose. p. 205. [Moderate] Study → Also see TABLE 1 p. 1375
  - ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Lomustine** → see alkylating agents

**Loop diuretics** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 8 p. 1376 (hypotension), TABLE 19 p. 1379 (ototoxicity), TABLE 17 p. 1379 (reduced serum potassium)

bumetanide · furosemide · torasemide

- ▶ **Aliskiren** slightly decreases the exposure to **furosemide**. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1379
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [Moderate] Study
- ▶ Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) increases the concentration of **furosemide**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Theoretical
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **furosemide**. Adjust dose. [Moderate] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Study

**Loperamide**

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **loperamide**. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
  - ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
  - ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- Lopinavir** → see HIV-protease inhibitors
- Loprazolam** → see TABLE 11 p. 1377 (CNS depressant effects)
- Loratadine** → see antihistamines, non-sedating

**Lorazepam** → see TABLE 11 p. 1377 (CNS depressant effects)

► **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study

**Lormetazepam** → see TABLE 11 p. 1377 (CNS depressant effects)

**Losartan** → see angiotensin-II receptor antagonists

**Low molecular-weight heparins** → see TABLE 16 p. 1379 (increased serum potassium), TABLE 3 p. 1375 (anticoagulant effects)

dalteparin · enoxaparin · tinzaparin

► **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical

**Loxapine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

► **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

► **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 10 p. 1377

► **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376

► **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

► **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

► **SSRIs (fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

#### Lumacaftor

► **Lumacaftor** is predicted to decrease the exposure to **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Mild] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)**. Avoid or monitor efficacy. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **corticosteroids (methylprednisolone)**. Adjust dose. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical

► **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical

**Lumefantrine** → see antimalarials

**Lurasidone** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

► **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1377

► **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Antifungals, azoles (posaconazole)** moderately increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Apalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid or monitor. [Moderate] Study

► **Aprepitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study → Also see TABLE 8 p. 1376

► **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

► **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study

► **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical

► **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Macrolides (erythromycin)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study

► **Netupitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

► **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study

► **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study

► **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

**Lymecycline** → see tetracyclines

#### Macitentan

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **macitentan**. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study

► **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study

► **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [Moderate] Study

► **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **macitentan**. [Moderate] Study

► **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study

## Macitentan (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical

**Macrolides** → see TABLE 9 p. 1377 (QT-interval prolongation)

azithromycin - clarithromycin - erythromycin

- ▶ Interactions do not generally apply to topical use of **azithromycin** unless specified.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 967. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Erythromycin** markedly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 395. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Macrolides** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Adjust **brigatinib** dose, p. 971. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 342. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study

- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 973. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1120. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 126. [Severe] Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **clarithromycin**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Etravirine** decreases the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to **etravirine**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 777. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (darunavir, fosamprenavir, lopinavir)** (boosted with ritonavir) are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir) increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir). Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **HIV-protease inhibitors (saquinavir)** and **HIV-protease inhibitors (saquinavir)** increase the exposure to **clarithromycin**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 983. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **lumacaftor with ivacaftor** p. 294 or **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **letemovir**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin, erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **neptatin**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **opioids (methadone)**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic

- impairment avoid, p. 936. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **paritaprevir**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
  - ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. [Severe] Study
  - ▶ **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
  - ▶ **Rifampicin** decreases the concentration of **clarithromycin**. [Severe] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **saxagliptin**. [Mid] Study
  - ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin** with **solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [Severe] Study
  - ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Clarithromycin** moderately increases the exposure to **statins (pravastatin)**. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **statins (pravastatin)**. [Severe] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [Severe] Study
  - ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
  - ▶ **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. [Severe] Study

## Macrolides (continued)

- ▶ Macrolides (**azithromycin**, **clarithromycin**) are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
- ▶ **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Erythromycin** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venmarafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

## Magnesium

- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (alendronic acid)**. Alendronic acid should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (sodium clodronate)**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, clevidipine, felodipine, lacidipine, lercanidipine,**

**nicardipine, nifedipine, nimodipine, verapamil)** (in pregnant women). [Severe] Anecdotal

- ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study

**Magnesium carbonate** → see antacids

**Magnesium trisilicate** → see antacids

## Maraviroc

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **maraviroc**. Avoid or monitor. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, saquinavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir boosted with ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir boosted with ritonavir)** moderately increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ **Measles, mumps and rubella vaccine, live** → see live vaccines
- ▶ **Mebendazole**
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [Moderate] Study
- ▶ **Medroxyprogesterone**
  - ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Mefenamic acid** → see NSAIDs
- ▶ **Mefloquine** → see antimalarials
- ▶ **Melatonin** → see TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical

- ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. [Severe] Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- Meloxicam** → see NSAIDs
- Melphalan** → see alkylating agents

### Memantine

- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. [Moderate] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical

### Mepacrine

- ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials (primaquine)**. Avoid. [Moderate] Theoretical

**Mepivacaine** → see anaesthetics, local

**Meprobamate** → see TABLE 11 p. 1377 (CNS depressant effects)

**Mepizolinol** → see opioids

**Mercaptopurine** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)

- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 912. [Severe] Study
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Meropenem** → see carbapenems

### Mesalazine

**ROUTE-SPECIFIC INFORMATION** The manufacturers of some mesalazine gastro-resistant and modified-release medicines (Asacol MR tablets, Ipolcol, Salofalk granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

**Metaraminol** → see sympathomimetics, vasoconstrictor

**Metformin** → see TABLE 14 p. 1378 (antidiabetic drugs)

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [Moderate] Theoretical
  - ▶ **Bictegravir** slightly increases the exposure to **metformin**. [Moderate] Study
  - ▶ **Dolutegravir** increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
  - ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mild] Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
  - ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- Methadone** → see opioids

### Methenamine

- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- Methocarbamol** → see TABLE 11 p. 1377 (CNS depressant effects)
- Methotrexate** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity), TABLE 5 p. 1375 (thromboembolism)
- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study
  - ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
  - ▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [Severe] Anecdotal
  - ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Apalutamide** is predicted to decrease the exposure to **methotrexate**. [Mild] Study
  - ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study
  - ▶ **Brigatinib** potentially increases the concentration of **methotrexate**. [Moderate] Theoretical
  - ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
  - ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **flourouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 1378 → Also see TABLE 5 p. 1375
  - ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [Severe] Study
  - ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study → Also see TABLE 2 p. 1375
  - ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375
  - ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [Moderate] Theoretical
  - ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
  - ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
  - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
  - ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
  - ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
  - ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
  - ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical

**Methotrexate** (continued)

- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1375

**Methoxyflurane** → see volatile halogenated anaesthetics

**Methyldopa** → see TABLE 8 p. 1376 (hypotension)

- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the effects of **methyldopa**. [\[Moderate\]](#) Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376

**Methylphenidate**

- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **paliperidone**. [\[Severe\]](#) Theoretical
- ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [\[Severe\]](#) Anecdotal

**Methylprednisolone** → see corticosteroids

**Methylthionium chloride** → see TABLE 13 p. 1378 (serotonin syndrome)

- ▶ **Methylthionium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378

**Metoclopramide**

- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinemia when given with topical anaesthetics, **local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Metoclopramide** potentially decreases the absorption of **antifungals, azoles (posaconazole)** (oral suspension). [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to decrease the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study

**Metolazone** → see thiazide diuretics

**Metoprolol** → see beta blockers, selective

**Metronidazole** → see TABLE 12 p. 1378 (peripheral neuropathy)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [\[Moderate\]](#) Study
- ▶ **Metronidazole** increases the risk of toxicity when given with **alkylating agents (busulfan)**. [\[Severe\]](#) Study

- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [\[Moderate\]](#) Study
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see TABLE 12 p. 1378
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [\[Severe\]](#) Study

**Metryrapone**

- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Carbamazole** decreases the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metryrapone**. Avoid. [\[Moderate\]](#) Theoretical

**Mexiletine**

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ **Mexiletine** increases the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** increases the risk of cardiovascular side-effects when given with **calcium channel blockers (diltiazem)**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **calcium channel blockers (verapamil)**. Avoid or monitor. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** potentially affects the exposure to **coumarins (warfarin)**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical

- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Opioids** potentially decrease the absorption of oral mexiletine. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to increase the clearance of mexiletine. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to mexiletine. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to mexiletine. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the clearance of mexiletine. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 482. [Moderate] Theoretical
- Mianserin** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to mianserin. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to mianserin. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping mianserin. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal
- Micafungin** → see TABLE 1 p. 1375 (hepatotoxicity)
- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study
- Miconazole** → see antifungals, azoles
- Midazolam** → see TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous midazolam. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral midazolam. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** markedly decreases the exposure to midazolam. Avoid or monitor. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of midazolam. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dabrafenib** decreases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to alter the effects of midazolam. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Fosaprepitant** slightly increases the exposure to midazolam. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Letermovir** slightly to moderately increases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Lumacafor** is predicted to decrease the exposure to midazolam. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Palbociclib** increases the exposure to midazolam. [Moderate] Study
- ▶ **Ribociclib** moderately increases the exposure to midazolam. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to midazolam. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** moderately decreases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Telotristat ethyl** decreases the exposure to midazolam. [Moderate] Study
- Midodrine** → see sympathomimetics, vasoconstrictor
- Midostaurin**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical

## Midostaurin (continued)

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Cobicicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical

## Mifamurtide

- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Siroliimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

## Mifepristone

- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical

## Minocycline → see tetracyclines

## Minoxidil → see TABLE 8 p. 1376 (hypotension)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

## Mirabegron

- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 781. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical

**Mirtazapine** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Cobicicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study

**Mitomycin** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Mitotane** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
  - ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampamil)**. Monitor and adjust dose. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 979. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 352. [Moderate] Study
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 983. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study

## Mitotane (continued)

- ▶ Mitotane is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to slightly decrease the exposure to **nateline**. [Mild] Study
- ▶ Mitotane is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ Mitotane is predicted to moderately decrease the exposure to **niotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **nintinone**. Adjust dose. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Mitotane decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **osempifene**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Mitotane is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Mitotane is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Mitotane markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **riwaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **statins (simvastatin)**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose, p. 999. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ Mitotane decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ Mitotane is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Mitoxantrone** → see anthracyclines

**Mivacurium** → see neuromuscular blocking drugs, non-depolarising

**Mizolastine** → see antihistamines, non-sedating

**Moclobemide** → see TABLE 13 p. 1378 (serotonin syndrome)

**FOOD AND LIFESTYLE** Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Apalutamide** is predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 362. [Mild] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** is predicted to increase the effects of **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** increases the risk of side-effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isomethoptene, phenylephrine, pseudoephedrine)**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 482. [Moderate] Study → Also see TABLE 13 p. 1378

#### Modafinil

- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin,**

**phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

**Mometasone** → see corticosteroids

**Monoamine-oxidase A and B inhibitors, irreversible** → see TABLE 8 p. 1376 (hypotension), TABLE 13 p. 1378 (serotonin syndrome)

isocarboxazid · phenelzine · tranylcypromine

**FOOD AND LIFESTYLE** Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1378
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

**Monoamine-oxidase A and B inhibitors, irreversible** (continued)

- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of monoamine-oxidase A and B inhibitors, irreversible. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Buspiron** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1376
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methylodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping safinamide. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B**

**inhibitors, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1378

- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
- ▶ **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 13 p. 1378
- ▶ **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1378

**Monoamine-oxidase B inhibitors** → see TABLE 6 p. 1376

(bradycardia), TABLE 8 p. 1376 (hypotension), TABLE 13 p. 1378 (serotonin syndrome)

rasagiline · safinamide · selegiline

**FOOD AND LIFESTYLE** Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study

- ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1376
  - ▶ Monoamine-oxidase B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **saquinamide**, p. 427. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ Monoamine-oxidase B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of a hypertensive crisis when given with **methyphenidate**. Avoid. [Severe] Theoretical
  - ▶ **Mexiletine** slightly increases the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Moclobemide** is predicted to increase the effects of monoamine-oxidase B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **saquinamide**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ Monoamine-oxidase B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 13 p. 1378
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Rasagiline** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Selegiline** increases the risk of side-effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1378
  - ▶ **Quinololones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with monoamine-oxidase B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
- Monoclonal antibodies** → see TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 4 p. 1375 (antiplatelet effects)
- adalimumab · alemtuzumab · atezolizumab · avelumab · basiliximab · belimumab · bevacizumab · blinatumomab · brentuximab vedotin · brodalumab · canakinumab · certolizumab pegol · cetuximab · daratumumab · dinutuximab · dupilumab · durvalumab · eculizumab · elotuzumab · golimumab · guselkumab · infliximab · inotuzumab · ozogamicin · ipilimumab · ixekizumab · natalizumab · necitumumab · nivolumab · obinutuzumab · ocrelizumab · olaratumab · panitumumab · pembrolizumab · pertuzumab · ramcirumab · rituximab · sarilumab · secukinumab · siltuximab · tiludrakizumab · tocilizumab · trastuzumab · trastuzumab emtansine · ustekinumab · vedolizumab
- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
  - ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (**trastuzumab, trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Antiarrhythmics (dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
  - ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
  - ▶ **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
  - ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. [Severe] Theoretical
  - ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies (**atezolizumab, ipilimumab, nivolumab, pembrolizumab**). Use with caution or avoid. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Immunoglobulins** are predicted to alter the effects of **dinutuximab**. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Monoclonal antibodies** (continued)

- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansin**. Avoid. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the effects of **brentuximab vedotin**. [Severe] Study
  - ▶ **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- Montelukast**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- Morphine** → see opioids
- Moxifloxacin** → see quinolones
- Moxisylyte** → see TABLE 8 p. 1376 (hypotension)
- Moxonidine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- Mycophenolate** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
  - ▶ **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

**Nabilone** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical

**Nabumetone** → see NSAIDs

**Nadolol** → see beta blockers, non-selective

**Nalmefene**

**GENERAL INFORMATION** Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical

**Naloxegol**

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **naloxegol**. Avoid or monitor. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- Naltrexone**
- GENERAL INFORMATION** Avoid concurrent use of opioids.
- Nandrolone**
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical

- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
- Naproxen** → see NSAIDs
- Naratriptan** → see TABLE 13 p. 1378 (serotonin syndrome)
- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- Natalizumab** → see monoclonal antibodies
- Nateglinide** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Lefunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
- Nebivololol** → see beta blockers, selective
- Necitumumab** → see monoclonal antibodies
- Nefopam** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- Nelarabine** → see TABLE 15 p. 1378 (myelosuppression)
- Neomycin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity), TABLE 20 p. 1379 (neuromuscular blocking effects)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- Neostigmine** → see TABLE 6 p. 1376 (bradycardia)
- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical
- Nepafenac** → see NSAIDs
- Netupitant**
  - ▶ **Netupitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
  - ▶ **Netupitant** very slightly increases the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
  - ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to oral **corticosteroids (budesonide)**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (dexamethasone)**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (fluticasone)**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Netupitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Netupitant** slightly increases the exposure to **etoposide**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study

## Netupitant (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **midostaurin**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **netupitant**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study

- ▶ **Netupitant** is predicted to increase the exposure to **ribociclib**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **netupitant**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** slightly increases the exposure to **taxanes (docetaxel)**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the concentration of **temsirolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Netupitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

**Neuromuscular blocking drugs, non-depolarising** → see TABLE 6 p. 1376 (bradycardia), TABLE 20 p. 1379 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium

- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1376
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium). [\[Moderate\]](#) Study
- ▶ **Clindamycin** increases the effects of neuromuscular blocking drugs, non-depolarising. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [\[Severe\]](#) Anecdotal

- ▶ **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
- ▶ Intravenous **magnesium** increases the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
- ▶ **Penicillins (piperacillin)** increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with mivacurium. [Unknown] Theoretical
- Nevirapine**
  - ▶ **Nevirapine** is predicted to decrease the exposure to antiarrhythmics (**dronedronarone**). [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of nevirapine. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to nevirapine. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** moderately decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping nevirapine. [Moderate] Study
  - ▶ **Nevirapine** moderately decreases the exposure to antifungals, azoles (**ketoconazole**). Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to nevirapine. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to nevirapine. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
  - ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **doravirine**. Avoid or adjust **doravirine** dose, p. 644. [Severe] Theoretical
  - ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to nevirapine. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nevirapine** decreases the exposure to **macrolides (clarithromycin)**. [Moderate] Study
  - ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to nevirapine. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical

## Nevirapine (continued)

- ▶ Nevirapine is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ Nevirapine decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Nevirapine is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
  - ▶ Nevirapine slightly decreases the exposure to **statins (atorvastatin)**. [Mid] Study
  - ▶ Nevirapine moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ Nevirapine is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the concentration of **temsirrolimus**. Avoid. [Severe] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
  - ▶ Nevirapine decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ Nevirapine is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ Nevirapine is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ Nevirapine is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ Nevirapine is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- Nicardipine** → see calcium channel blockers
- Nicorandil** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
  - ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal
  - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
  - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- Nicotinic acid** → see TABLE 3 p. 1375 (anticoagulant effects)
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 193. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1120. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377

- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **fosetoridine**. Adjust **fosetoridine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 777. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 983. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Idealalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 211. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 293 or **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 398. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 65. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 205. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377

## Nilotinib (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

**Nimodipine** → see calcium channel blockers

**Nintedanib**

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study

**Nitisinone**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical

**Nitrates** → see TABLE 7 p. 1376 (first-dose hypotension), TABLE 8 p. 1376 (hypotension)

glyceryl trinitrate · isosorbide dinitrate · isosorbide mononitrate

**PHARMACOLOGY** Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376

**Nitrazepam** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [\[Moderate\]](#) Study

**Nitrofurantoin** → see TABLE 12 p. 1378 (peripheral neuropathy)

- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antacids (magnesium trisilicate)** decrease the absorption of **nitrofurantoin**. [\[Moderate\]](#) Study
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical

**Nitrous oxide** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [\[Severe\]](#) Study

**Nivolumab** → see monoclonal antibodies

**Nizatidine** → see H<sub>2</sub> receptor antagonists

**Noradrenaline/norepinephrine** → see sympathomimetics, vasoconstrictor

**Norethisterone**

- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
  - ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [\[Severe\]](#) Theoretical
- Normal immunoglobulin** → see immunoglobulins
- Nortriptyline** → see tricyclic antidepressants
- NSAIDs** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 2 p. 1375 (nephrotoxicity), TABLE 16 p. 1379 (increased serum potassium), TABLE 4 p. 1375 (antiplatelet effects)

aceclofenac · benzydamine · bromfenac · celecoxib · dexibuprofen · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid

- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Celecoxib** is predicted to increase the exposure to **antiarrhythmics (flecainide, propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1132. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronic acid, ibandronic acid)**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (sodium clodronate)**. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to NSAIDs (**celecoxib, diclofenac**). Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **diclofenac**. [Severe] Study → Also see TABLE 2 p. 1375 → Also see TABLE 16 p. 1379
- ▶ **Etoricoxib** slightly increases the exposure to **combined hormonal contraceptives**. [Moderate] Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Indometacin** increases the concentration of **digoxin**. [Severe] Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Etoricoxib** slightly increases the exposure to **hormone replacement therapy**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to NSAIDs (**indometacin, ketoprofen**). [Moderate] Theoretical
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study → Also see TABLE 2 p. 1375
- ▶ **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1375
- ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
- ▶ **Regorafenib** is predicted to increase the exposure to **mefenamic acid**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1375
- ▶ **Rifampicin** moderately decreases the exposure to NSAIDs (**celecoxib, diclofenac, etoricoxib**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to NSAIDs (**indometacin, ketoprofen**). [Moderate] Theoretical
- ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 1379
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [Severe] Study → Also see TABLE 2 p. 1375

## Obeticholic acid

- ▶ **Obeticholic acid** decreases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- ▶ **Obinutuzumab** → see monoclonal antibodies
- ▶ **Ocrelizumab** → see monoclonal antibodies
- ▶ **Octreotide**
- ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 838. [Severe] Anecdotal
- ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study
- ▶ **Ofloxacin** → see quinolones
- ▶ **Olanzapine** → see TABLE 8 p. 1376 (hypotension), TABLE 15 p. 1378 (myelosuppression), TABLE 11 p. 1377 (CNS depressant effects)

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Olaparib** → see TABLE 15 p. 1378 (myelosuppression)

**FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to olaparib.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical

## Olaparib (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1005. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- Olaratumab** → see monoclonal antibodies
- Omesartan** → see angiotensin-II receptor antagonists
- Olodaterol** → see beta<sub>2</sub> agonists
- Olsalazine** → see TABLE 15 p. 1378 (myelosuppression)
- Ombitasvir**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin)** are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Ombitasvir** (in fixed-dose combination with dasabuvir) decreases the concentration of **HIV-protease inhibitors (darunavir)**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- Omega-3-acid ethyl esters** → see TABLE 3 p. 1375 (anticoagulant effects)
- Omeprazole** → see proton pump inhibitors
- Ondansetron** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study

- ▶ **Dopamine receptor agonists (apomorphine)** increase the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study

**Opicapone**

- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Theoretical

**Opioids** → see TABLE 6 p. 1376 (bradycardia), TABLE 13 p. 1378 (serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)

alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · papaveretum · pentazocine · pethidine · remifentanyl · sufentanil · tapentadol · tramadol

- ▶ **Alcohol (beverage)** causes rapid release of opioids (**hydromorphone, morphine**) (from extended-release preparations). Avoid. [Severe] Study → Also see TABLE 11 p. 1377
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **fentanyl**. [Moderate] Theoretical → Also see TABLE 6 p. 1376
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (**methadone, sufentanil**). [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **methadone**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Apalutamide** is predicted to decrease the exposure to **alfentanil**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Bosentan** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Brigatinib** potentially decreases the concentration of opioids (**alfentanil, fentanyl**). Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study → Also see [TABLE 13 p. 1378](#)
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 6 p. 1376](#)
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical → Also see [TABLE 6 p. 1376](#)
- ▶ **Ceritinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 6 p. 1376](#)
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical → Also see [TABLE 6 p. 1376](#) → Also see [TABLE 9 p. 1377](#)
- ▶ **Efavirenz** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **fentanyl**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** (boosted with ritonavir) are predicted to decrease the exposure to **methadone**. [\[Moderate\]](#) Study → Also see [TABLE 9 p. 1377](#)
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **morphine**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** increase the risk of CNS toxicity when given with **pethidine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **methadone**. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **methadone**. [\[Severe\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 13 p. 1378](#)
- ▶ **Monoamine-oxidase B inhibitors (rasagiline)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. [\[Severe\]](#) Theoretical → Also see [TABLE 13 p. 1378](#)
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. [\[Severe\]](#) Theoretical → Also see [TABLE 13 p. 1378](#)
- ▶ **Monoamine-oxidase B inhibitors (selegiline)** increase the risk of side-effects when given with **pethidine**. Avoid. [\[Severe\]](#) Anecdotal → Also see [TABLE 13 p. 1378](#)
- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**methadone, sufentanil**). [\[Moderate\]](#) Theoretical → Also see [TABLE 9 p. 1377](#)
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**). [\[Severe\]](#) Theoretical → Also see [TABLE 11 p. 1377](#)
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone,**

## Opioids (continued)

- papaveretum**. [Severe] Theoretical → Also see TABLE 13 p. 1378 → Also see TABLE 11 p. 1377
- ▶ Opioids (**buprenorphine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**codeine**, **diamorphine**, **dihydrocodeine**, **dipipanone**, **fentanyl**, **hydromorphone**, **meptazinol**, **methadone**, **morphine**, **oxycodone**, **papaveretum**, **pentazocine**, **pethidine**, **remifentanyl**, **sufentanil**, **tapentadol**, **tramadol**). [Severe] Theoretical → Also see TABLE 11 p. 1377
  - ▶ Opioids (**pentazocine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**pethidine**, **remifentanyl**, **tapentadol**, **tramadol**). [Severe] Theoretical → Also see TABLE 13 p. 1378 → Also see TABLE 11 p. 1377
  - ▶ Opioids (**pentazocine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**sufentanil**). [Severe] Anecdotal → Also see TABLE 11 p. 1377
  - ▶ **Palbociclib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Adjust dose. [Moderate] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **morphine**. [Mid] Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to opioids (**alfentanil**, **fentanyl**). [Moderate] Study
  - ▶ **Rifampicin** decreases the exposure to opioids (**codeine**, **morphine**). [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Monitor and adjust dose. [Moderate] Study
  - ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
  - ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 1378
  - ▶ **St John's Wort** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1378
  - ▶ **St John's Wort** moderately decreases the exposure to **oxycodone**. Adjust dose. [Moderate] Study
  - ▶ **Terbinafine** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
  - ▶ **Terbinafine** is predicted to decrease the efficacy of **tramadol**. [Severe] Study

## Orlistat

**SEPARATION OF ADMINISTRATION** Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

**Orphenadrine** → see TABLE 10 p. 1377 (antimuscarinics)

## Osetamivir

- ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- Osimertinib** → see TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **Osimertinib** slightly increases the exposure to **statins** (**rosuvastatin**). [Moderate] Study

## Ospemifene

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**) increase the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- Oxaliplatin** → see platinum compounds
- Oxazepam** → see TABLE 11 p. 1377 (CNS depressant effects)
- Oxcarbazepine** → see antiepileptics
- Oxybuprocaine** → see anaesthetics, local
- Oxybutynin** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [Severe] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mid] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mid] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mid] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mid] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **oxybutynin**. [Mid] Study

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
  - Oxycodone** → see opioids
  - Oxymetholone**
  - ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
  - Oxytetracycline** → see tetracyclines
  - Paclitaxel** → see taxanes
  - Palbociclib**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 992. [Severe] Study
  - ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **sirinilimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
  - Paliperidone** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1377
  - ▶ **Antiepileptics (valproate)** slightly increase the exposure to **paliperidone**. Adjust dose. [Moderate] Study
  - ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
  - ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Methylphenidate** increases the risk of dyskinesias when given with **paliperidone**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **paliperidone**. [Severe] Theoretical
  - Palonosetron** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 13 p. 1378 (serotonin syndrome)
  - ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
  - Pamidronate** → see bisphosphonates
  - Pancreatin**
  - ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical
  - Pancuronium** → see neuromuscular blocking drugs, non-depolarising
  - Panitumumab** → see monoclonal antibodies
  - Panobinostat** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- FOOD AND LIFESTYLE** Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [Mild] Theoretical
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 936. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377

## Panobinostat (continued)

- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Pantoprazole** → see proton pump inhibitors
- ▶ **Papaveretum** → see opioids
- ▶ **Paracetamol** → see TABLE 1 p. 1375 (hepatotoxicity)
  - ▶ **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [Severe] Study → Also see TABLE 1 p. 1375
  - ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [Moderate] Theoretical
  - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1375
  - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
  - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
  - ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
  - ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **penicillins (flucoxacinil)**. [Severe] Theoretical → Also see TABLE 1 p. 1375
  - ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Paraldehyde** → see antiepileptics
- ▶ **Parathyroid hormone**
  - ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- ▶ **Parecoxib** → see NSAIDs
- ▶ **Paricalcitol** → see vitamin D substances
- ▶ **Paritaprevir**
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Paritaprevir** (in fixed-dose combination with dasabuvir) decreases the anticoagulant effect of **coumarins (acenocoumarol)**. Monitor INR and adjust dose. [Severe] Anecdotal

- ▶ **Paritaprevir** (in fixed-dose combination) decreases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **edoxaban**. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **paritaprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir markedly increase the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir slightly decrease the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** (boosted with ritonavir) are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately to markedly increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to **paritaprevir** (in fixed-dose combination). Avoid. [Severe] Study
- ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loop diuretics (furosemide)**. Adjust dose. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **paritaprevir**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **statins (fluvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (pravastatin)**. Adjust pravastatin dose. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **thyroid hormones (levothyroxine)**. Monitor and adjust dose. [Moderate] Theoretical

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [Moderate] Study

**Paroxetine** → see SSRIs

- ▶ **Pasireotide** → see TABLE 6 p. 1376 (bradycardia), TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

#### Patitomer

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

- ▶ **Pazopanib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after **antacids**. [Moderate] Theoretical

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 9 p. 1377

- ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study

- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377

- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical

- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 9 p. 1377

- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 15 p. 1378

- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 993. [Moderate] Study → Also see TABLE 9 p. 1377

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377

- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377

- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical

- ▶ **Pazopanib** is predicted to affect the exposure to **statins (atorvastatin)**. [Moderate] Anecdotal

- ▶ **Pazopanib** is predicted to affect the exposure to **statins (pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical

- ▶ **Pegaspargase** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)

- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378

- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378

- ▶ **Peginterferon alpha** → see interferons

- ▶ **Peginterferon beta-1a** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Pembrolizumab** → see monoclonal antibodies

- ▶ **Pemetrexed** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity)

- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1378

- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1375

- ▶ **Penicillamine** → see TABLE 2 p. 1375 (nephrotoxicity)

- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study

- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical

- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal

- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical

- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [Mild] Study

- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study

- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [Mild] Theoretical

- ▶ **Penicillins** → see TABLE 1 p. 1375 (hepatotoxicity)

- ▶ amoxicillin · ampicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin · ticarcillin

- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [Moderate] Study

- ▶ **Antiepileptics (valproate)** increase the risk of side-effects when given with **pivmecillinam**. Avoid. [Severe] Anecdotal

- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal

- ▶ **Leflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Theoretical

- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1375

- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study

- ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **flucloxacillin**. [Severe] Theoretical → Also see TABLE 1 p. 1375

- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

## Penicillins (continued)

- ▶ **Piperacillin** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Study
- Pentamidine** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity)
- ▶ **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. [\[Severe\]](#) Study
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1375
- Pentazocine** → see opioids
- Pentostatin** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)
- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1378
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1378

## Pentoxifylline

- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study

## Peppermint oil

- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

## Perampanel → see antiepileptics

## Pergolide → see dopamine receptor agonists

## Pericyazine → see phenothiazines

## Perindopril → see ACE inhibitors

## Pertuzumab → see monoclonal antibodies

## Pethidine → see opioids

## Phenelzine → see monoamine-oxidase A and B inhibitors, irreversible

**Phenindione** → see TABLE 3 p. 1375 (anticoagulant effects)

**FOOD AND LIFESTYLE** The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Study

- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical

**Phenobarbital** → see antiepileptics

**Phenothiazines** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimuscarinics)

chlorpromazine · fluphenazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine

**FOOD AND LIFESTYLE** **Chlorpromazine** and **fluphenazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **phenothiazines**. [\[Moderate\]](#) Anecdotal
- ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1377
- ▶ **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
- ▶ **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 1377
- ▶ **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Moclobemide** increases the risk of side-effects when given with **levomepromazine**. [Moderate] Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Phenoxymethylpenicillin** → see penicillins
- ▶ **Phenylephrine** → see sympathomimetics, vasoconstrictor
- ▶ **Phenytoin** → see antiepileptics
- ▶ **Pholcodine**
  - ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation)
  - ▶ **avanafil** • **sildenafil** • **tadalafil** • **vardenafile**
- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1376
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vardenafile**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafile**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafile**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafile**). Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Apalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, sildenafil, vardenafile**). Avoid or monitor. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Aprepitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **vardenafile**. Adjust dose. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 8 p. 1376
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vardenafile**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafile**). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **vardenafile**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafile**). [Moderate] Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafile**). Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafile**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [Moderate] Study

## Phosphodiesterase type-5 inhibitors (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 813. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **ildenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **ildenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. [\[Moderate\]](#) Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 812. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 813. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Nitrates** potentially increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1376
- ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **ildenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
- ▶ **St John's Wort** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. [\[Moderate\]](#) Theoretical

## Pibrentasvir

- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **dabigatran**. Avoid. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **edoxaban**. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with ritonavir) increase the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **sirolimus**. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **statins (fluvastatin)**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust pravastatin dose. [\[Moderate\]](#) Study

- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 204. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical

#### Pilocarpine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

#### Pimecrolimus

- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 10 p. 1377 (antimutagenic)
- ▶ **Antiarrhythmics (dronedronare)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377 → Also see TABLE 10 p. 1377
- ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377

- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Pindolol** → see beta blockers, non-selective
- ▶ **Pioglitazone** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Piperacillin** → see penicillins
- ▶ **Pirferquaine** → see antimalarials
- ▶ **Pirfenidone**

**FOOD AND LIFESTYLE** Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Piroxicam** → see NSAIDs
- ▶ **Pitolisant**
  - ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

## Pitolisant (continued)

- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **edoxaban**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mild] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mild] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirinolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical

- ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
- Pivmecillinam** → see penicillins
- Pixantrone** → see anthracyclines
- Pizotifen** → see antihistamines, sedating
- Platinum compounds** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity), TABLE 12 p. 1378 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Polymyxins** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 20 p. 1379 (neuromuscular blocking effects)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Polystyrene sulfonate**

**SEPARATION OF ADMINISTRATION** Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- ▶ **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- Pomalidomide** → see TABLE 15 p. 1378 (myelosuppression), TABLE 5 p. 1375 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 961. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 961. [Moderate] Study

**Ponatinib**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 994. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical

**Posaconazole** → see antifungals, azoles

**Potassium aminobenzoate** → see TABLE 16 p. 1379 (increased serum potassium)

- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [\[Severe\]](#) Theoretical

**Potassium canrenoate** → see TABLE 16 p. 1379 (increased serum potassium)

**Potassium chloride** → see TABLE 16 p. 1379 (increased serum potassium)

#### Potassium citrate

- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. [\[Moderate\]](#) Theoretical

**Potassium-sparing diuretics** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 16 p. 1379 (increased serum potassium)

amiloride · triamterene

- ▶ **Triamterene** potentially increases the clearance of **lithium**. [\[Moderate\]](#) Study

**Pramipexole** → see dopamine receptor agonists

**Prasugrel** → see TABLE 4 p. 1375 (antiplatelet effects)

**Pravastatin** → see statins

#### Praziquantel

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. [\[Mid\]](#) Study
- ▶ **Antimalarials (chloroquine)** moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [\[Mid\]](#) Study
- ▶ **Corticosteroids (dexamethasone)** decrease the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [\[Mid\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [\[Mid\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. [\[Mid\]](#) Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study

**Prazosin** → see alpha blockers

**Prednisolone** → see corticosteroids

**Pregabalin** → see antiepileptics

**Prilocaine** → see anaesthetics, local

**Primaquine** → see antimalarials

**Primidone** → see antiepileptics

**Procarbazine** → see TABLE 15 p. 1378 (myelosuppression), TABLE 13 p. 1378 (serotonin syndrome)

**FOOD AND LIFESTYLE** Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **procarbazine**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. [\[Severe\]](#) Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Prochlorperazine** → see phenothiazines
- ▶ **Procyclidine** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ **SSRIs (paroxetine)** slightly increase the exposure to **procyclidine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Proguanil** → see antimalarials
- ▶ **Promazine** → see phenothiazines
- ▶ **Promethazine** → see antihistamines, sedating
- ▶ **Propafenone** → see antiarrhythmics
- ▶ **Propanetheline** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ **Propiverine** → see TABLE 10 p. 1377 (antimuscarinics)
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Propofol** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Propranolol** → see beta blockers, non-selective
- ▶ **Propylthiouracil** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metypapone**. Avoid. [\[Moderate\]](#) Theoretical

#### Proton pump inhibitors

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- ▶ **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole, omeprazole**). Adjust dose. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** (oral suspension). Avoid. [\[Moderate\]](#) Study
- ▶ **Apalutamide** markedly decreases the exposure to **omeprazole**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to proton pump inhibitors (**lansoprazole, rabeprazole**). Avoid or monitor. [\[Mid\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [\[Moderate\]](#) Theoretical
- ▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 232. [\[Moderate\]](#) Study
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) potentially increase the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [\[Severe\]](#) Study

## Proton pump inhibitors (continued)

- ▶ **Proton pump inhibitors** increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see **ledipasvir with sofosbuvir** p. 628. [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir with sofosbuvir** p. 628, **sofosbuvir with velpatasvir** p. 629, and **sofosbuvir with velpatasvir and voxilaprevir** p. 630. [\[Moderate\]](#) Study
- ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see **sofosbuvir with velpatasvir** p. 629. [\[Moderate\]](#) Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see **sofosbuvir with velpatasvir and voxilaprevir** p. 630. [\[Moderate\]](#) Study
- Proxymetacaine** → see anaesthetics, local
- Pseudoephedrine** → see sympathomimetics, vasoconstrictor
- Pyrazinamide**
  - ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [\[Moderate\]](#) Theoretical
- Pyridostigmine** → see TABLE 6 p. 1376 (bradycardia)
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [\[Moderate\]](#) Theoretical
- Pyrimethamine** → see antimalarials
- Quetiapine** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1377
  - ▶ **Antiepileptics (valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **quetiapine**. Avoid or monitor. [\[Moderate\]](#) Study
  - ▶ **Apreritant** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1376
  - ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quetiapine** decreases the effects of **levodopa**. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study

**Quinagolide** → see dopamine receptor agonists  
**Quinapril** → see ACE inhibitors  
**Quinine** → see antimalarials

**Quinolones** → see TABLE 9 p. 1377 (QT-interval prolongation)  
 ciprofloxacin · levofloxacin · moxifloxacin · ofloxacin

- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ Interactions do not generally apply to topical use of **moxifloxacin** unless specified.

- ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **antacids**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [\[Mild\]](#) Study
- ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after **quinolones**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 983. [\[Severe\]](#) Theoretical

- ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [\[Moderate\]](#) Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal
  - ▶ **Ciprofloxacin** slightly increases the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
  - ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust pomalidomide dose, p. 961. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
  - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **ciprofloxacin**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust tolvaptan dose, p. 669. [\[Moderate\]](#) Theoretical
  - ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 482. [\[Moderate\]](#) Theoretical
- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
- ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [\[Moderate\]](#) Theoretical
- Raloxifene** → see TABLE 5 p. 1375 (thromboembolism)
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
- Raltegravir**
- ▶ **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [\[Severe\]](#) Study
  - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (fosamprenavir)** (boosted with ritonavir) decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** (boosted with ritonavir). Avoid. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir) are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [\[Moderate\]](#) Study
- Raltitrexed** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Ramipril** → see ACE inhibitors
- Ramucicromab** → see monoclonal antibodies
- Ranibizumab**
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [\[Severe\]](#) Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [\[Moderate\]](#) Theoretical
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [\[Severe\]](#) Theoretical
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [\[Severe\]](#) Theoretical
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [\[Severe\]](#) Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- Ranitidine** → see H<sub>2</sub> receptor antagonists
- Ranolazine** → see TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Aprepitant** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [\[Moderate\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1120. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1377
  - ▶ **Ranolazine** is predicted to increase the exposure to **digabigran**. [\[Severe\]](#) Theoretical
  - ▶ **Ranolazine** increases the concentration of **digoxin**. [\[Moderate\]](#) Study

## Ranolazine (continued)

- ▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of ranolazine. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentavir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 205. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

**Rasagiline** → see monoamine-oxidase B inhibitors

**Reboxetine**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to reboxetine. Avoid. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
  - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- Regorafenib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 4 p. 1375 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Mitotane** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Regorafenib** is predicted to increase the exposure to **NSAIDs (mefenamic acid)**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1375
  - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1378
- Remifentanyl** → see opioids
- Repaglinide** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to repaglinide. Monitor blood glucose and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to repaglinide. [Moderate] Study
  - ▶ **Ciclosporin** moderately increases the exposure to repaglinide. [Moderate] Study
  - ▶ **Clopidogrel** increases the exposure to repaglinide. Avoid. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Iron chelators (deferasirox)** moderately increase the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Pitolisat** is predicted to decrease the exposure to **repaglinide**. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [Moderate] Theoretical

**Retigabine** → see antiepileptics

**Retinoids** → see TABLE 5 p. 1375 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.
- ▶ **Alcohol (beverage)** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of **bexarotene**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1262. [Moderate] Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

#### Ribavirin

- ▶ **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. [Severe] Study
- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study

**Ribociclib** → see TABLE 9 p. 1377 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Aprepitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 997. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377

**Ribociclib** (continued)

- ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **statins (pravastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical

**Rifabutin**

**GENERAL INFORMATION** Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 599. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **dapsone**. [Moderate] Study

- ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Rifabutin** moderately decreases the exposure to **doravirine**. Adjust **doravirine** dose, p. 644. [Severe] Study
  - ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** (boosted with ritonavir) increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **norhisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. [Severe] Study
  - ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Rifampicin**
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **alisikren**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** transiently increases the exposure to **ambrisentan**. [Moderate] Study
  - ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before **antacids**. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust lamotrigine dose, p. 318. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping rifampicin. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
- ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antimalarials (quinine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **basedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** greatly decreases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust canagliflozin dose, p. 702. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust caspofungin dose, p. 592. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlorthalidoxepoxide**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cliostrazol**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical

## Rifampicin (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 979. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to  **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 352. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **HIV-protease inhibitors (ritonavir)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 983. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinitib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 794. [\[Severe\]](#) Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [\[Moderate\]](#) Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** markedly decreases the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **sifrolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Atorvastatin should be taken at the same time as rifampicin. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [\[Unknown\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Terflunomide** is predicted to increase the exposure to rifampicin. [\[Moderate\]](#) theoretical
- ▶ **Rifampicin** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [\[Severe\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [\[Mild\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tofacinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [\[Severe\]](#) Study

## Rifampicin (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
- ▶ **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

## Rifaximin

- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study

## Rilpivirine

- ▶ **Antacids** are predicted to decrease the exposure to rilpivirine. **Antacids** should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to slightly decrease the exposure to rilpivirine. **Calcium carbonate** should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of rilpivirine. Avoid multiple-dose dexamethasone. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to rilpivirine. **H<sub>2</sub> receptor antagonists** should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
- ▶ **Mitotane** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to rilpivirine. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical

## Riluzole

**FOOD AND LIFESTYLE** Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Mexiletine** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical

**Riociguat** → see TABLE 8 p. 1376 (hypotension)

- ▶ **Antacids** slightly decrease the exposure to **riociguat**. **Antacids** should be taken 2 hours before or 1 hour after **riociguat**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **riociguat**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376

**Risedronate** → see bisphosphonates

**Risperidone** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1377
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1377
- ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study

**Ritonavir** → see HIV-protease inhibitors

**Rituximab** → see monoclonal antibodies

**Rivaroxaban** → see TABLE 3 p. 1375 (anticoagulant effects)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **rivaroxaban**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study

**Rivastigmine** → see anticholinesterases, centrally acting

**Rizatriptan** → see TABLE 13 p. 1378 (serotonin syndrome)

- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust rizatriptan dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378

**Rocuronium** → see neuromuscular blocking drugs, non-depolarising

**Roflumilast**

- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical

**Rolapitant**

- ▶ **Rolapitant** is predicted to increase the exposure to **alkylating agents (bendamustine)**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **anthracyclines (doxorubicin, mitoxantrone)**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to antiarrhythmics (**propafenone**). [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study

- ▶ **Rolapitant** is predicted to moderately increase the exposure to **beta blockers, selective (metoprolol)**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
  - ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [Moderate] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study
  - ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **statins (rosuvastatin)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**. [Severe] Study
  - ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study
- Ropinirole** → see dopamine receptor agonists
- Ropivacaine** → see anaesthetics, local
- Rosuvastatin** → see statins
- Rotavirus vaccine** → see live vaccines
- Rotigotine** → see dopamine receptor agonists
- Rucaparib**
- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** slightly increases the exposure to **midazolam**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **tizanidine**. Monitor and adjust dose. [Moderate] Study
- Rufinamide** → see antiepileptics
- Rupatadine** → see antihistamines, non-sedating
- Ruxolitinib** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study

## Ruxolitinib (continued)

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Efavirenz** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to ruxolitinib. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Netupitant** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sacubitril** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Sacubitril** is predicted to increase the exposure to **statins**. [Severe] Study
- ▶ **Safinamide** → see monoamine-oxidase B inhibitors
- ▶ **Salbutamol** → see beta<sub>2</sub> agonists
- ▶ **Salmeterol** → see beta<sub>2</sub> agonists
- ▶ **Sapropterin** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Methotrexate** is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with sapropterin. [Moderate] Theoretical → Also see TABLE 8 p. 1376
- ▶ **Trimethoprim** is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical
- ▶ **Saquinavir** → see HIV-protease inhibitors
- ▶ **Sarilumab** → see monoclonal antibodies
- ▶ **Saxagliptin** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Antiarrhythmics (dronedronone)** are predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Cobicistat** is predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to saxagliptin. [Mid] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Nilotinib** is predicted to increase the exposure to saxagliptin. [Mid] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- ▶ **Secukinumab** → see monoclonal antibodies
- ▶ **Selegiline** → see monoamine-oxidase B inhibitors
- ▶ **Selenium**
  - ▶ **ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.
- ▶ **Oral selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after selenium. [Severe] Theoretical
- ▶ **Selexipag**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical
  - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical
  - ▶ **Clopidogrel** is predicted to increase the exposure to selexipag. Adjust dose. [Moderate] Study
  - ▶ **Fibrates (gemfibrozil)** increase the exposure to selexipag. Avoid. [Severe] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to selexipag. Adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to selexipag. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to selexipag. Adjust dose. [Moderate] Theoretical
- ▶ **Semaglutide** → see TABLE 14 p. 1378 (antidiabetic drugs)
- ▶ **Sertraline** → see SSRIs
- ▶ **Sevoflurane** → see volatile halogenated anaesthetics
- ▶ **Sildenafil** → see phosphodiesterase type-5 inhibitors
- ▶ **Siltuximab** → see monoclonal antibodies
- ▶ **Silver sulfadiazine**
  - ▶ **PHARMACOLOGY** Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

**Simvastatin** → see statins

**Sirolimus**

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **sirolimus**. [\[Severe\]](#) Anecdotal
  - ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **sirolimus**. Avoid or monitor. [\[Moderate\]](#) Study
  - ▶ **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 840. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [\[Moderate\]](#) Theoretical
  - ▶ **Letermovir** moderately increases the exposure to **sirolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [\[Mild\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **sirolimus**. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [\[Severe\]](#) Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [\[Severe\]](#) Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- Sitagliptin** → see TABLE 14 p. 1378 (antidiabetic drugs)
- Sodium aurothiomalate**
- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [\[Severe\]](#) Anecdotal
  - ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [\[Severe\]](#) Study
- Sodium bicarbonate**
- ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.
- ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [\[Moderate\]](#) Study
  - ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [\[Severe\]](#) Anecdotal
  - ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
- Sodium citrate**
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [\[Moderate\]](#) Theoretical
- Sodium clodronate** → see bisphosphonates
- Sodium ferredetate** → see iron (oral)
- Sodium nitroprusside** → see TABLE 8 p. 1376 (hypotension)
- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
  - ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- Sodium oxybate** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 491. [\[Moderate\]](#) Study
- Sodium phenylbutyrate**
- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
  - ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
  - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
- Sodium picosulfate** → see TABLE 18 p. 1379 (hyponatraemia)

**Sodium stibogluconate**

- ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [\[Severe\]](#) Study

**Sofosbuvir**

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir with sofosbuvir** p. 628, **sofosbuvir with velpatasvir** p. 629, and **sofosbuvir with velpatasvir and voxilaprevir** p. 630. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir with sofosbuvir** p. 628, **sofosbuvir with velpatasvir** p. 629, and **sofosbuvir with velpatasvir and voxilaprevir** p. 630. [\[Moderate\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [\[Severe\]](#) Study

**Solifenacin** → see TABLE 10 p. 1377 (antimuscarinics)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 779 or **tamsulosin with solifenacin** p. 786 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [\[Moderate\]](#) Theoretical

**Somatropin**

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [\[Moderate\]](#) Theoretical

**Sorafenib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [\[Moderate\]](#) Study

- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical

**Sotalol** → see beta blockers, non-selective**Spirolonactone** → see aldosterone antagonists**SSRIs** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 13 p. 1378

(serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 4 p. 1375 (antiplatelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** moderately increases the exposure to **alprazolam**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1375
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [\[Moderate\]](#) Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of **SSRIs**. [\[Moderate\]](#) Anecdotal
- ▶ **Apalutamide** is predicted to decrease the exposure to **citalopram**. Avoid or monitor. [\[Mild\]](#) Study → Also see TABLE 9 p. 1377
- ▶ **Aprépitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 395. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** increases the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **Paroxetine** moderately increases the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical → Also see TABLE 13 p. 1378
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 232. [Moderate] Theoretical → Also see TABLE 4 p. 1375
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1375
- ▶ **Fluvoxamine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [MilI] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **diazepam**. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378 → Also see TABLE 4 p. 1375
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** increases the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1378
- ▶ **Grapefruit juice** moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram, escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine, sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
- ▶ **Idealisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 821. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine, paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 821. [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately increases the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1378
- ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 961. [Moderate] Study
- ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to SSRIs (**citalopram, escitalopram**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to SSRIs (**citalopram, escitalopram**). Monitor and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **roflumilast**. [Moderate] Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378 → Also see TABLE 4 p. 1375
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (**citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline**). [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine, fluvoxamine**) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1105. [Moderate] Study

## SSRIs (continued)

- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
- ▶ Fluvoxamine increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
- ▶ Fluvoxamine markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1378 → Also see TABLE 4 p. 1375
- ▶ Fluvoxamine is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 482. [Severe] Theoretical → Also see TABLE 13 p. 1378
- St John's Wort** → see TABLE 13 p. 1378 (serotonin syndrome)
- ▶ **St John's Wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
- ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **antidepressants (briaracetam)**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mild] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, ncardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p.794. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p.794. [Severe] Theoretical
- ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p.794. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to  **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **imatinitib**. [Moderate] Study
  - ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
  - ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1378
  - ▶ **St John's Wort** moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **paliperidone**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mid] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** slightly decreases the exposure to **statins (atorvastatin)**. [Mid] Study
  - ▶ **St John's Wort** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
  - ▶ **St John's Wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 1375 (hepatotoxicity)
- atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin
- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Antacids** moderately decrease the absorption of **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 205. [Severe] Study

## Statins (continued)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1375
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **simvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 1](#) p. 1375
- ▶ **Antiepileptics (eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** potentially decrease the exposure to statins (**atorvastatin, simvastatin**). [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1375
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1375
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [\[Severe\]](#) Theoretical → Also see [TABLE 1](#) p. 1375
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1375
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 1](#) p. 1375
- ▶ **Antifungals, azoles (miconazole)** potentially increase the exposure to **atorvastatin**. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to statins (**fluvastatin, rosuvastatin**). [\[Moderate\]](#) Theoretical
- ▶ **Apalutamide** slightly decreases the exposure to **rosuvastatin**. [\[Mild\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Apreritant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Apreritant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Bosentan** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Bosentan** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 205. [\[Mild\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of statins. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 202. [\[Severe\]](#) Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Ciclosporin** markedly increases the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [\[Severe\]](#) Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with statins. [\[Severe\]](#) Anecdotal
- ▶ Statins (**fluvastatin, rosuvastatin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. [\[Severe\]](#) Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Statins are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [\[Severe\]](#) Theoretical
- ▶ **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Efavirenz** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Elbasvir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 203. [\[Unknown\]](#) Theoretical
- ▶ **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 205. [\[Unknown\]](#) Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to statins. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simvastatin**. [\[Severe\]](#) Study
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with statins. [\[Severe\]](#) Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Severe\]](#) Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [\[Severe\]](#) Study
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 199. [\[Severe\]](#) Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 199, p. 204. [\[Severe\]](#) Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with statins. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with statins (**atorvastatin, fluvastatin**). [\[Severe\]](#) Study

- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with statins (**atorvastatin**, **simvastatin**). Adjust **fenofibrate** dose, p. 199. [\[Severe\]](#) Anecdotal
- ▶ **Fusidic acid** increases the risk of rhabdomyolysis when given with statins. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Glecaprevir** (with pibrentasvir) markedly increases the exposure to **atorvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **fluvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 203. [\[Moderate\]](#) Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **simvastatin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** increases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Grapefruit juice** increases the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 203. [\[Unknown\]](#) Theoretical
- ▶ **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 205. [\[Unknown\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1375
- ▶ **Leflunomide** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). [\[Moderate\]](#) Study → Also see TABLE 1 p. 1375
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 202. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin**, **simvastatin**). Avoid. [\[Severe\]](#) Study
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 207. [\[Mild\]](#) Study → Also see TABLE 1 p. 1375
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 205. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1375
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pravastatin**. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simvastatin**. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). [\[Moderate\]](#) Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Nevirapine** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Nevirapine** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with statins. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 205. [\[Severe\]](#) Study
- ▶ **Osimertinib** slightly increases the exposure to **rosuvastatin**. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 203. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Pazopanib** is predicted to affect the exposure to **atorvastatin**. [\[Moderate\]](#) Anecdotal
- ▶ **Pazopanib** is predicted to affect the exposure to statins (**pravastatin**, **rosuvastatin**, **simvastatin**). [\[Moderate\]](#) Theoretical
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **atorvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fluvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 203. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 204. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **simvastatin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 205. [\[Moderate\]](#) Study

## Statins (continued)

- ▶ **Regorafenib** is predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to simvastatin. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to statins (pravastatin, rosuvastatin). [Moderate] Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to atorvastatin. Atorvastatin should be taken at the same time as rifampicin, p. 202, p. 582. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to fluvastatin. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** very markedly decreases the exposure to simvastatin. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to rosuvastatin. Monitor and adjust dose. [Severe] Study
- ▶ **Sacubitril** is predicted to increase the exposure to statins. [Severe] Study
- ▶ **St John's Wort** slightly decreases the exposure to atorvastatin. [Mild] Study
- ▶ **St John's Wort** moderately decreases the exposure to simvastatin. [Moderate] Study
- ▶ **Fluvastatin** slightly increases the exposure to sulfonylureas (glibenclamide). [Mild] Study
- ▶ **Tedizolid** is predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Avoid. [Moderate] Study
- ▶ **Teriflumidomide** moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 204. [Moderate] Study
- ▶ **Teriflumidomide** is predicted to increase the exposure to statins (atorvastatin, fluvastatin, pravastatin, simvastatin). [Moderate] Study
- ▶ **Ticagrelor** slightly increases the exposure to simvastatin. Adjust simvastatin dose, p. 205. [Moderate] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to rosuvastatin. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to atorvastatin. Avoid. [Severe] Study
- ▶ **Velpatasvir** increases the exposure to rosuvastatin. Adjust rosuvastatin dose and monitor side effects, p. 204. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to simvastatin. Monitor side effects and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to atorvastatin. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to statins (fluvastatin, pravastatin, rosuvastatin, simvastatin). [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the exposure to atorvastatin. Avoid. [Moderate] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to pravastatin. Monitor and adjust pravastatin dose, p. 203. [Moderate] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to rosuvastatin. Avoid. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to statins (fluvastatin, simvastatin). Avoid. [Moderate] Theoretical
- ▶ **Stavudine** → see TABLE 12 p. 1378 (peripheral neuropathy)
- ▶ **Didanosine** increases the risk of toxicity when given with stavudine. Avoid. [Severe] Study → Also see TABLE 12 p. 1378
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with stavudine. Avoid. [Severe] Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with stavudine. [Severe] Theoretical → Also see TABLE 12 p. 1378
- ▶ **Ribavirin** increases the risk of toxicity when given with stavudine. Avoid. [Severe] Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of stavudine. Avoid. [Severe] Theoretical

**Stiripentol** → see antiepileptics

**Streptokinase** → see TABLE 3 p. 1375 (anticoagulant effects)

**Streptomycin** → see aminoglycosides

**Streptozocin** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 2 p. 1375 (nephrotoxicity)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with streptozocin. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Sucralfate**

- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** potentially decreases the effects of **coumarins** (**warfarin**). Separate administration by 2 hours. [Moderate] Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
  - ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
  - ▶ **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] theoretical
  - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Sucralfate** decreases the absorption of **thyroid hormones** (**levothyroxine**). Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
- Sufentanil** → see opioids
- Sugammadex**
- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical
- Sulfadiazine** → see sulfonamides
- Sulfadoxine** → see sulfonamides
- Sulfamethoxazole** → see sulfonamides
- Sulfasalazine** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antifungals, azoles** (**isavuconazole**) are predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
  - ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
  - ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
  - ▶ **Teriflumidomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study

- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
  - ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical
- Sulfonamides** → see TABLE 15 p. 1378 (myelosuppression)
- sulfadiazine - sulfadoxine - sulfamethoxazole
- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Anecdotal
  - ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Sulfadiazine** increases the concentration of **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
  - ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
  - ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical
  - ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
  - ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
- Sulfonylureas** → see TABLE 14 p. 1378 (antidiabetic drugs)
- glibenclamide - gliclazide - glimepiride - glipizide - tolbutamide
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Bosentan** increases the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
  - ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical
  - ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
  - ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
  - ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mild] Study
  - ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical

**Sulindac** → see NSAIDs

- ▶ **Sulpiride** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antacids** decrease the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
  - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1377
  - ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- Sumatriptan** → see TABLE 13 p. 1378 (serotonin syndrome)
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
  - ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1378
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1378
- Sunitinib** → see TABLE 15 p. 1378 (myelosuppression), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study
  - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
  - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
  - ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1377

## Sunitinib (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1378
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 999. [\[Moderate\]](#) Study

**Suxamethonium** → see TABLE 20 p. 1379 (neuromuscular blocking effects)

- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Theoretical
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Unknown\]](#) Theoretical

**Sympathomimetics, inotropic**

dobutamine · dopamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [\[Moderate\]](#) Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [\[Moderate\]](#) Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Guanethidine** is predicted to increase the effects of **dopamine**. [\[Severe\]](#) Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Theoretical
- ▶ **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [\[Severe\]](#) Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [\[Severe\]](#) Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [\[Moderate\]](#) Theoretical

**Sympathomimetics, vasoconstrictor**

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of side-effects when given with **aminophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [\[Severe\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
- ▶ **Isometheptene** potentially increases the risk of side-effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Moderate\]](#) Study
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [\[Severe\]](#) Anecdotal
- ▶ **Guanethidine** increases the effects of **metaraminol**. [\[Severe\]](#) Anecdotal
- ▶ **Guanethidine** increases the effects of **phenylephrine**. [\[Severe\]](#) Study
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Moderate\]](#) Study
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Study
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mianserin** decreases the effects of **ephedrine**. [\[Severe\]](#) Anecdotal
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Theoretical
- ▶ **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [\[Severe\]](#) Study

- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine). Avoid. [\[Severe\]](#) Study
- Tacalcitol** → see vitamin D substances
- Tacrolimus** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 16 p. 1379 (increased serum potassium)
  - ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
  - ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 2 p. 1375 → Also see TABLE 16 p. 1379
- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 841. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mild\]](#) Study
- ▶ **Grapefruit juice** greatly increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Letermovir** moderately increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mild\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [\[Severe\]](#) Study
- ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Tacrolimus** increases the exposure to **tofacinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [\[Severe\]](#) Anecdotal
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Tamoxifen** → see TABLE 5 p. 1375 (thromboembolism)
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [\[Unknown\]](#) Study
- ▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**. [\[Severe\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- Tamsulosin** → see alpha blockers
- Tapentadol** → see opioids
- Taxanes** → see TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy)
  - cabazitaxel · docetaxel · paclitaxel

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 1378
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1378
  - ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
  - ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
  - ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal → Also see TABLE 15 p. 1378
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel, paclitaxel**). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **docetaxel**. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Mitotane** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 1378
  - ▶ **Netupitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Netupitant** slightly increases the exposure to **docetaxel**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mild] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
  - ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- Tazarotene** → see retinoids
- Tedizolid**
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Moderate] Study
  - ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
  - ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- Tegafur**
- ▶ **Tegafur** potentially increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
  - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with tegafur. [Severe] Theoretical

### Tecoplanin

**GENERAL INFORMATION** If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

- ▶ **Telavancin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity), TABLE 9 p. 1377 (QT-interval prolongation)

### Telbivudine

- ▶ **Interferons (interferon alfa)** are predicted to increase the risk of peripheral neuropathy when given with telbivudine. Avoid. [Severe] Theoretical
- ▶ **Interferons (peginterferon alfa)** increase the risk of peripheral neuropathy when given with telbivudine. Avoid. [Severe] Study

- ▶ **Telmisartan** → see angiotensin-II receptor antagonists

### Telotristat ethyl

- ▶ **Telotristat ethyl** is predicted to decrease the exposure to doravirine. Avoid or adjust doravirine dose, p. 644. [Severe] Theoretical
- ▶ **Telotristat ethyl** decreases the exposure to midazolam. [Moderate] Study
- ▶ **Octreotide** (short-acting) decreases the exposure to telotristat ethyl. Telotristat ethyl should be taken at least 30 minutes before octreotide. [Moderate] Study

- ▶ **Temazepam** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Temocillin** → see penicillins

- ▶ **Temozolomide** → see alkylating agents

- ▶ **Temozolomide** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to tamsirolimus. Avoid or monitor. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Efavirenz** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of tamsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of tamsirolimus. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tamsirolimus. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical

- ▶ **Mitotane** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Study → Also see TABLE 15 p. 1378
- ▶ **Netupitant** is predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of tamsirolimus. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Pitolisant** is predicted to decrease the exposure to tamsirolimus. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of tamsirolimus. Avoid. [Severe] Theoretical

- ▶ **Tenecteplase** → see TABLE 3 p. 1375 (anticoagulant effects)

### Tenofovir alafenamide

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to tenofovir alafenamide. Avoid or adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- Tenofovir disoproxil** → see TABLE 2 p. 1375 (nephrotoxicity)
- ▶ **Ciclosporin** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical → Also see TABLE 2 p. 1375
  - ▶ **Tenofovir disoproxil** increases the risk of toxicity when given with didanosine. Avoid. [Severe] Study
  - ▶ **Eltrombopag** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with tenofovir disoproxil. [Severe] Anecdotal
  - ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to tenofovir disoproxil. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to tenofovir disoproxil. [Severe] Study
  - ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of tenofovir disoproxil. [Severe] Study
- Tenoxicam** → see NSAIDs
- Terazosin** → see alpha blockers

### Terbinafine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Terbinafine** is predicted to increase the exposure to anticholinesterases, centrally acting (galantamine). Monitor and adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 395. [Moderate] Study
- ▶ **Terbinafine** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to beta blockers, selective (metoprolol, nebivolol). [Moderate] Study

## Terbinafine (continued)

- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **meixelite**. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Terbutaline** → see beta<sub>2</sub> agonists

**Teriflunomide**

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins (cefactor)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letemovir**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the clearance of **meixelite**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **meixelite**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study
- ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 204. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical

**Tetanus immunoglobulin** → see immunoglobulins

**Tetrabenazine** → see TABLE 9 p.1377 (QT-interval prolongation)

**Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical

**Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

**Tetracaine** → see anaesthetics, local

**Tetracycline** → see tetracyclines

**Tetracyclines** → see TABLE 1 p.1375 (hepatotoxicity)

demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline · tigecycline

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **oxytetracycline** unless specified.

- ▶ **ACE inhibitors (quinapril)** (tablet) decrease the absorption of oral **tetracycline**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p.1375

- ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [Moderate] Study
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
  - ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
  - ▶ **Dairy products** decrease the exposure to tetracyclines (demeclocycline, oxytetracycline, tetracycline). Avoid. [Moderate] Study
  - ▶ **Enzalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron (oral). [Moderate] Study
  - ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical
  - ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Mitotane** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
  - ▶ **Rifampicin** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
  - ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- Tezacaftor**
- FOOD AND LIFESTYLE** Avoid bitter (Seville) oranges as they are predicted to increase the exposure to tezacaftor.
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Appetitant** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor with ivacaftor** p. 295 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Rifabutin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- Thalidomide** → see TABLE 6 p. 1376 (bradycardia), TABLE 15 p. 1378 (myelosuppression), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 5 p. 1375 (thromboembolism), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical
- Theophylline** → see TABLE 17 p. 1379 (reduced serum potassium)
- FOOD AND LIFESTYLE** Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.
- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mid] Study
  - ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [Moderate] Anecdotal
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
  - ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
  - ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
  - ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [Moderate] Study

**Theophylline** (continued)

- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **riflumilast**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [\[Symptomatic\]](#) Study
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical

**Thiazide diuretics** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 8 p. 1376 (hypotension), TABLE 17 p. 1379 (reduced serum potassium)

benfroflumethiazide · chlorothiazide · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide

- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [\[Severe\]](#) Theoretical
- ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [\[Severe\]](#) Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1379
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [\[Moderate\]](#) Anecdotal
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical

- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [\[Moderate\]](#) Theoretical
- Thiopental** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1376

**Thiotepa** → see alkylating agents

**Thyroid hormones**

- levothyroxine · liothyronine
- ▶ **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Anecdotal
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [\[Moderate\]](#) Theoretical
- ▶ **Apalutamide** potentially decreases the exposure to **levothyroxine**. [\[Mild\]](#) Theoretical
- ▶ **Oral calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [\[Moderate\]](#) Anecdotal
- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **levothyroxine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study

**Tiagabine** → see antiepileptics

**Tiaprofenic acid** → see NSAIDs

**Tibolone** → see TABLE 5 p. 1375 (thromboembolism)

**Ticagrelor** → see TABLE 4 p. 1375 (antiplatelet effects)

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **ticagrelor**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [\[Moderate\]](#) Study

- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 205. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- Ticarcillin** → see penicillins
- Tigecycline** → see tetracyclines
- Tildrakizumab** → see monoclonal antibodies
- Timolol** → see beta blockers, non-selective
- Tinidazole**
  - ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. [Moderate] Theoretical
  - ▶ **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
- Tinzaparin** → see low molecular-weight heparins
- Tioguanine** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Tiotropium** → see TABLE 10 p. 1377 (antimuscarinics)
- Tipranavir** → see HIV-protease inhibitors
- Tirofiban** → see TABLE 4 p. 1375 (antiplatelet effects)
- Tivozanib**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
  - ▶ **Tivozanib** is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical
- Tizanidine** → see TABLE 6 p. 1376 (bradycardia), TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
  - ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
  - ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tizanidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- Tobramycin** → see aminoglycosides
- Tocilizumab** → see monoclonal antibodies
- Tofacitinib**
  - ▶ **Antiarrhythmics (dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Aprepitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Netupitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study

**Tofacitinib** (continued)

- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1105. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study

**Tolbutamide** → see sulfonyleureas

**Tolcapone**

- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical

**Tolfenamic acid** → see NSAIDs

**Tolterodine** → see TABLE 9 p. 1377 (QT-interval prolongation), TABLE 10 p. 1377 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1377
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1377

**Tolvaptan** → see TABLE 16 p. 1379 (increased serum potassium)

**GENERAL INFORMATION** Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer

advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study

- ▶ **Alpalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid or monitor. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 669. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 669. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 669. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical

**Topiramate** → see antiepileptics

**Topotecan** → see TABLE 15 p. 1378 (myelosuppression)

- ▶ **Antiarrhythmics (amiodaron, dronedaron)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study

- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1378
- ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [Severe] Theoretical
- Torsemide** → see loop diuretics
- Toremifene** → see TABLE 5 p. 1375 (thromboembolism), TABLE 9 p. 1377 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical
- Trabectedin** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1375
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1375
- ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- Tramadol** → see opioids
- Trametinib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- Trandolapril** → see ACE inhibitors
- Tranexamic acid** → see TABLE 5 p. 1375 (thromboembolism)
- Tranlycypromine** → see monoamine-oxidase A and B inhibitors, irreversible
- Trastuzumab** → see monoclonal antibodies
- Trastuzumab emtansine** → see monoclonal antibodies
- Trazodone** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 11 p. 1377 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Apprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

**Trazodone** (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical

**Tree pollen extract**

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Treosulfan** → see alkylating agents

**Tretinoin** → see retinoids

**Triamcinolone** → see corticosteroids

**Triamterene** → see potassium-sparing diuretics

**Tricyclic antidepressants** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 8 p. 1376 (hypotension), TABLE 13 p. 1378 (serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 10 p. 1377 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1377
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1377
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 18 p. 1379
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 13 p. 1378
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1376
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [\[Mild\]](#) Study
- ▶ **Darfifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1377
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1376
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1378 → Also see TABLE 9 p. 1377

- ▶ **Amitriptyline** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1378
  - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 13 p. 1378
  - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1376
  - ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [\[Mild\]](#) Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
  - ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
  - ▶ **SSRIs (fluvoxamine)** increase the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1379 → Also see TABLE 13 p. 1378
  - ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [\[Moderate\]](#) Study
  - ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
  - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1376
- Trintine**
- ▶ **Trintine** potentially decreases the absorption of **iron (oral)**. [\[Moderate\]](#) Theoretical
  - ▶ **Trintine** potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical
- Trifluoperazine** → see phenothiazines
- Trihexyphenidyl** → see TABLE 10 p. 1377 (antimuscarinics)
- Trimethoprim** → see TABLE 18 p. 1379 (hyponatraemia), TABLE 2 p. 1375 (nephrotoxicity), TABLE 16 p. 1379 (increased serum potassium)
- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study
  - ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with **trimethoprim**. [\[Severe\]](#) Study
  - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Dapson** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [\[Severe\]](#) Study
  - ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [\[Moderate\]](#) Study
  - ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1375
  - ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [\[Moderate\]](#) Study
  - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [\[Moderate\]](#) Theoretical
- Trimipramine** → see tricyclic antidepressants
- Tropicamide** → see TABLE 10 p. 1377 (antimuscarinics)

**Trospium** → see TABLE 10 p. 1377 (antimuscarinics)

**Tryptophan** → see TABLE 13 p. 1378 (serotonin syndrome)

► **Tryptophan** greatly decreases the concentration of **levodopa**.

[Moderate] Study

► **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. [Severe]

Anecdotal → Also see TABLE 13 p. 1378

**Typhoid vaccine, oral** → see live vaccines

**Ulipristal**

► **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids.

[Moderate] Study

► **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study

► **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study

► **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical

► **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical

► **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical

► **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical

► **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical

► **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study

► **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study

► **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study

► **Macrolides (erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids.

[Moderate] Study

► **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

► **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical

► **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

► **St John's Wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 794. [Severe] Anecdotal

**Umeclidinium** → see TABLE 10 p. 1377 (antimuscarinics)

**Urokinase** → see TABLE 3 p. 1375 (anticoagulant effects)

**Ursodeoxycholic acid**

► **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours.

[Moderate] Theoretical

► **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal

► **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

**Ustekinumab** → see monoclonal antibodies

**Valaciclovir** → see TABLE 2 p. 1375 (nephrotoxicity)

► **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal

► **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical

► **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

**Valganciclovir** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity)

► **Valganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (imipenem)**. Avoid. [Severe] Anecdotal

► **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study

► **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1378

**Valproate** → see antiepileptics

**Valsartan** → see angiotensin-II receptor antagonists

**Vancomycin** → see TABLE 2 p. 1375 (nephrotoxicity), TABLE 19 p. 1379 (ototoxicity)

**Vandetanib** → see TABLE 9 p. 1377 (QT-interval prolongation)

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study

► **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

► **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study

► **Vandetanib** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study

► **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study

► **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study

► **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study

► **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

## Vandetanib (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- Vardenafil** → see phosphodiesterase type-5 inhibitors
- Varicella-zoster immunoglobulin** → see immunoglobulins
- Varicella-zoster vaccine** → see live vaccines
- Vedolizumab** → see monoclonal antibodies
- Velpatasvir**
  - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
  - ▶ **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
  - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
  - ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 629. [Moderate] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 629. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose and monitor side effects, p. 204. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **statins (simvastatin)**. Monitor side effects and adjust dose. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical

- ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
  - Vemurafenib** → see TABLE 9 p. 1377 (QT-interval prolongation)
  - ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1120. [Severe] Theoretical
  - ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
  - ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Venetoclax**
- FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
  - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Venlafaxine** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects), TABLE 4 p. 1375 (antiplatelet effects)
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
  - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1377 → Also see TABLE 11 p. 1377
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1377
  - ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
  - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
  - ▶ **Verapamil** → see calcium channel blockers
  - ▶ **Verteporfin**
- GENERAL INFORMATION** Caution on concurrent use with other photosensitising drugs.
- ▶ **Vigabatrin** → see antiepileptics
  - ▶ **Vilanterol** → see beta<sub>2</sub> agonists
  - ▶ **Vildagliptin** → see TABLE 14 p. 1378 (antidiabetic drugs)
  - ▶ **Vinblastine** → see vinca alkaloids
  - ▶ **Vinca alkaloids** → see TABLE 1 p. 1375 (hepatotoxicity), TABLE 15 p. 1378 (myelosuppression), TABLE 19 p. 1379 (ototoxicity), TABLE 12 p. 1378 (peripheral neuropathy), TABLE 5 p. 1375 (thromboembolism), TABLE 9 p. 1377 (QT-interval prolongation)
- vinblastine · vincristine · vindesine · vinflunine · vinorelbine
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1377
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1378
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1378
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 12 p. 1378
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1375 → Also see TABLE 9 p. 1377
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before asparaginase. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical

## Vinca alkaloids (continued)

- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Enzalutamide** is predicted to decrease the exposure to vinca alkaloids (**vinblastine**, **vincristine**, **vindesine**). [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1377
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1378 → Also see TABLE 9 p. 1377
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1375 → Also see TABLE 15 p. 1378
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- Vincristine** → see **vinca alkaloids**
- Vindesine** → see **vinca alkaloids**
- Vinflunine** → see **vinca alkaloids**
- Vinorelbine** → see **vinca alkaloids**
- Vismodegib** → see TABLE 15 p. 1378 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1378
- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- Vitamin A**
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical

- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

## Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotychsterol · ergocalciferol · paricalcitol · tacalcitol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Vitamin E substances**
- alpha tocopherol · alpha tocopheryl acetate
- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- Volatile halogenated anaesthetics** → see TABLE 8 p. 1376 (hypotension), TABLE 11 p. 1377 (CNS depressant effects)
- desflurane · isoflurane · methoxyflurane · sevoflurane
- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1377
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- Voriconazole** → see **antifungals, azoles**
- Vortioxetine** → see TABLE 13 p. 1378 (serotonin syndrome), TABLE 4 p. 1375 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1378
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1378 → Also see TABLE 4 p. 1375
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Voxilaprevir**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** (with sofosbuvir and velpatasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) increases the concentration of **dabigatran**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of **edoxaban**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 630. [\[Moderate\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of **tenofovir disoproxil**. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

**Warfarin** → see coumarins

**Wasp venom extract**

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Xipamide** → see thiazide diuretics

**Xylometazoline** → see sympathomimetics, vasoconstrictor

**Yellow fever vaccine, live** → see live vaccines

- Zidovudine** → see TABLE 15 p. 1378 (myelosuppression), TABLE 2 p. 1375 (nephrotoxicity)
- ▶ **Antiepileptics (valproate)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
  - ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **zidovudine**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [\[Severe\]](#) Study
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Zidovudine** increases the risk of toxicity when given with **lamivudine**. [\[Severe\]](#) Anecdotal
  - ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1378
  - ▶ **Macrolides (clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [\[Severe\]](#) Theoretical
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1375
  - ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical

**Zinc**

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ **Oral zinc** decreases the absorption of oral **bisphosphonates (alendronic acid)**. Zinc should be taken at least 30 minutes before **alendronic acid**. [\[Moderate\]](#) Study
- ▶ **Oral zinc** is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid zinc for at least 6 hours before or 1 hour after **ibandronic acid**. [\[Moderate\]](#) Theoretical
- ▶ **Oral zinc** decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Oral zinc** decreases the absorption of oral **bisphosphonates (sodium clodronate)**. Avoid zinc for 2 hours before or 1 hour after **sodium clodronate**. [\[Moderate\]](#) Study
- ▶ **Oral calcium salts** decrease the absorption of **zinc**. [\[Moderate\]](#) Study
- ▶ **Oral zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [\[Severe\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [\[Moderate\]](#) Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Oral zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Trintene** potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical

**Zoledronic acid** → see bisphosphonates

**Zolmitriptan** → see TABLE 13 p. 1378 (serotonin syndrome)

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 482. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 482. [\[Mild\]](#) Study

## Zolmitriptan (continued)

- ▶ **Mexiletine** is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 482. [Moderate](#)  
Theoretical
- ▶ **Moclobemide** slightly increases the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 482. [Moderate](#) Study → Also see TABLE 13 p. 1378
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to zolmitriptan. [Severe](#)  
Theoretical → Also see TABLE 13 p. 1378
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 482. [Moderate](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 482. [Severe](#)  
Theoretical → Also see TABLE 13 p. 1378

**Zolpidem** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to zolpidem. [Moderate](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to zolpidem. [Moderate](#) Study

**Zonisamide** → see antiepileptics

**Zopiclone** → see TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to zopiclone. Adjust dose. [Moderate](#) Study → Also see TABLE 11 p. 1377
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to zopiclone. Adjust dose. [Moderate](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to zopiclone. Adjust dose. [Moderate](#) Study

**Zuclopenthixol** → see TABLE 8 p. 1376 (hypotension), TABLE 9 p. 1377 (QT-interval prolongation), TABLE 11 p. 1377 (CNS depressant effects)

- ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate](#) Theoretical → Also see TABLE 8 p. 1376 → Also see TABLE 9 p. 1377
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe](#)  
Theoretical → Also see TABLE 8 p. 1376
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe](#) Anecdotal → Also see TABLE 9 p. 1377

# Appendix 2

## Borderline substances

### CONTENTS

<b>Enteral feeds (non-disease specific)</b>	page 1558	Flavouring preparations	page 1575
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1558	<b>Foods for special diets</b>	1576
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1560	Gluten-free foods	1576
<b>Nutritional supplements (non-disease specific)</b>	1562	Low-protein foods	1579
Nutritional supplements: less than 5 g protein/100 mL	1562	<b>Nutritional supplements for metabolic diseases</b>	1581
Nutritional supplements: 5 g (or more) protein/100 mL	1563	Glutaric aciduria (type 1)	1581
<b>Specialised formulas</b>	1567	Glycogen storage disease	1581
Specialised formulas for specific clinical conditions	1568	Homocystinuria or hypermethioninaemia	1581
<b>Feed supplements</b>	1570	Hyperlysinaemia	1582
High-energy supplements	1570	Isovaleric acidemia	1582
Fibre, vitamin, and mineral supplements	1572	Maple syrup urine disease	1582
<b>Feed additives</b>	1575	Methylmalonic or propionic acidemia	1583
Special additives for conditions of intolerance	1575	Other inborn errors of metabolism	1583
Feed thickeners and pre-thickened drinks	1575	Phenylketonuria	1584
		Tyrosinaemia	1586

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

#### Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

#### Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

**Note** Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

#### Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is

also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

**Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

#### Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

#### Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

##### Dermatitis, Eczema and Pruritus

*Aveeno*<sup>®</sup> Cream; *Aveeno*<sup>®</sup> Lotion; *E45*<sup>®</sup> Emollient Bath Oil; *E45*<sup>®</sup> Emollient Wash Cream

##### Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

*Covermark*<sup>®</sup> classic foundation and finishing powder; *Dermacolour*<sup>®</sup> Camouflage cream and fixing powder; *Keromask*<sup>®</sup> finishing powder and masking cream; *Veil*<sup>®</sup> Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

##### Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

##### Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. *AS Saliva Orthana*<sup>®</sup>; *Biotène Oralbalance*<sup>®</sup>; *Glandosane*<sup>®</sup>; *Saliveze*<sup>®</sup>

**Photodermatoses (skin protection in)**

*LA Roche-Posay Anthelios*<sup>®</sup> XL SPF 50+ cream; *Sunsense*<sup>®</sup> Ultra (Ego) SPF 50+; *Uvistat*<sup>®</sup> Lipscreen SPF 50, *Uvistat*<sup>®</sup> Suncream SPF 30 and 50

**Standard ACBS indications:** Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Prices quoted in Appendix 2 are basic NHS net prices; for further information see Prices in BNF.

**Table 1 Enteral feeds (non-disease specific)**

Less than 5 g protein/100 mL

**Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL**

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1557 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £14.58
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1557	Fresubin Original drink: blackcurrant, nut, peach, chocolate, vanilla 200 ml = £2.36; Fresubin Original tube feed liquid: 500 ml = £4.57; 1000 ml = £9.07; 1500 ml = £13.60
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1557 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 500 ml = £5.18; 1000 ml = £10.34
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 0.47 g)	3.47 g	1.76 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 500 ml = £5.83; 1000 ml = £10.99; 1500 ml = £16.45
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557	Nutrison liquid: 500 ml = £5.39; 500 ml = £4.85; 1000 ml = £9.47; 1500 ml = £14.20
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557 except bowel fistula	Nutrison Multi Fibre liquid: 500 ml = £5.83; 500 ml = £5.47; 1000 ml = £10.97; 1500 ml = £16.43
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 0.63 g)	3.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557	Osmolite liquid: 500 ml = £5.40; 1000 ml = £9.48; 1500 ml = £14.22

SOYA PROTEIN FORMULA									
Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Borderline substances standard ACBS indications p. 1557; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 ml = £5.35
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1557; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 ml = £5.82; 1000 ml = £11.66
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1557 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £19.39
PEPTIDE-BASED FORMULA									
Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison Peptisorb® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47%)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 500 ml = £7.72; 500 ml = £8.49; 1000 ml = £15.30
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 0.48 g)	3.7 g (MCT 70%)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: vanilla 800 ml = £13.04; unflavoured 500 ml = £7.33; 1000 ml = £13.76
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51%)	0.1 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1557; also growth failure	Survimed OPD: liquid 500 ml = £7.64; 800 ml = £13.56; 1000 ml = £15.28; HN liquid 500 ml = £7.36
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS)									
Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental O28® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental O28 Extra liquid: summer fruits, orange & pineapple, grapefruit 250 ml = £3.99
	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35%)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental O28 Extra powder: plain, banana, orange 100 gram = £7.75
Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g. To flavour unflavoured products, see Modjul® Flavour System p. 1576.									

## Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

**Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL**

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1557	Fresubin 2250 Complete liquid: 1.5 litre = £16.28
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars)	5.8 g	Nil	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1557 Strawberry flavour may contain traces of wheat starch and egg.	Fresubin Energy liquid: unflavoured 200 ml = £1.40; blackcurrant, tropical fruits, strawberry, chocolate, lemon, vanilla, cappuccino, banana 200 ml = £1.40
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.4 g)	5.8 g	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1557	Fresubin Energy liquid: 500 ml = £5.60; 1000 ml = £11.01; 1500 ml = £14.77
Fresubin® Energy Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars)	5.8 g	2 g	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1557	Fresubin Energy Fibre liquid: banana, caramel, cherry, chocolate, strawberry 200 ml = £2.20

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Foodlink <sup>®</sup> Complete with Fibre (Nutra Ltd)	Powder per 100 g	1779 kJ (423 kcal)	19 g cows' milk soya protein	52 g (sugars 40 g)	14 g	7.2 g	Contains lactose Gluten-free	Borderline substances standard ACBS indications p. 1557 Not to be prescribed for any child under one year; use with caution for young children up to five years of age.	Foodlink Complete powder with fibre 63g sachets: banana, chocolate, natural, strawberry, vanilla 7 sachet = £4.97; Foodlink Complete powder with fibre Starter Pack: 5 sachet = £3.55
Recommended serving = the contents of a 63-g sachet in 200 mL full cream milk provides: protein 19 g, carbohydrate 42 g, fat 16 g, fibre 4.5 g, energy 1667 kJ (397 kcal).									
Forticreme <sup>®</sup> Complete (Nutricia Ltd)	Semi-solid per 100 g	675 kJ (160 kcal)	9.5 g cows' milk	19.2 g (sugars 10.6 g)	5 g	0.1 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Forticreme Complete dessert: banana, chocolate, forest fruits, vanilla 500 gram = £7.84
Fortisip <sup>®</sup> Compact (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1010 kJ (240 kcal)	9.6 g cows' milk	29.7 g (sugars 15 g)	9.3 g	Nil	Residual lactose	Borderline substances standard ACBS indications p. 1557	Fortisip Compact liquid: apricot, banana, chocolate, forest fruit, mocha, strawberry, vanilla 500 ml = £5.32
Fortisip <sup>®</sup> Compact Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1000 kJ (240 kcal)	9.4 g cows' milk	25.2 g (sugars 13.9 g)	10.4 g	3.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Compact Fibre Starter Pack liquid: 500 ml = £8.36; Fortisip Compact Fibre liquid: mocha, strawberry, vanilla 500 ml = £8.36
Fortisip <sup>®</sup> Compact Protein (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1010 kJ (240 kcal)	14.4 g cows' milk	24.4 g (sugars 13.3 g)	9.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557	Fortisip Compact Protein Starter Pack liquid: 750 ml = £12.00; Fortisip Compact Protein liquid: banana, berries, ginger, hot tropical mango, mocha, neutral, peach & strawberry, vanilla 500 ml = £8.00
Fortisip <sup>®</sup> Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	675 kJ (160 kcal)	10 g cows' milk	18.1 g (sugars 9 g)	5.3 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1557 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Extra liquid: strawberry, vanilla 200 ml = £2.30
Fresubin <sup>®</sup> 2 kcal Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1-5 years.	Fresubin 2kcal drink: apricot-peach, cappuccino, fruits of the forest, neutral, toffee 200 ml = £2.17
Fresubin <sup>®</sup> 2 kcal Fibre Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	1.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1557; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1-5 years.	Fresubin 2kcal Fibre drink: apricot-peach, cappuccino, chocolate, lemon, neutral 200 ml = £2.17

Fresubin® Powder Extra (Fresenius Kabi Ltd)	Powder per 100 g	1764 kJ (420 kcal)	17.5 g cows' milk whey protein	63 g (sugars 24.7 g)	10.9 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 1 year; use with caution in child 1-5 years.	Fresubin Powder Extra oral powder 62g sachets: chocolate, neutral, strawberry, vanilla 7 sachet = £4.90
Powder 62 g reconstituted with 200 ml whole milk provides: protein 17.7 g, carbohydrate 48.5 g, fat 14.8 g, energy 1658 kJ (397 kcal).									
Nutilis® Complete Crème Level 3 (Nutricia Ltd)	Semi-solid per 100 g	1030 kJ (245 kcal)	9.6 g cows' milk	29.1 g (sugars 11.8 g)	9.4 g	3.2 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 3 years; use with caution in child 3-6 years.	Nutilis Complete Crème Level 3 custard: chocolate, strawberry, vanilla 500 gram = £8.84
Nutilis® Complete Drink Level 3 (Nutricia Ltd)	Liquid (pre-thickened) per 100 mL	1010 kJ (240 kcal)	9.6 g cows' milk	29.1 g (sugars 5.4 g)	9.3 g	3.2 g	Residual lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 3 years; use with caution in child 3-5 years.	Nutilis Complete Drink Level 3 liquid: chocolate, lemon tea, mango & passionfruit, strawberry, vanilla 500 ml = £8.84
Nutricrem® (Nutra Ltd)	Semi-solid per 100 g	756 kJ (180 kcal)	10 g cows' milk soya protein	18.8 g (sugars 9.7 g)	7.2 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 3 years; use with caution in child 3-6 years.	Nutricrem dessert: strawberry, vanilla 500 gram = £6.59
Renilon® 7.5 (Nutricia Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	7.5 g cows' milk	20 g (sugars 4.8 g)	10 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 3 years; use with caution in child 3-5 years.	Renilon 7.5 liquid: apricot, caramel 500 ml = £9.47
Resource® 2.0 Fibre (Nestle Health Science)	Liquid (sip feed) per 100 mL	836 kJ (200 kcal)	9 g cows' milk	21.4 g (sugars 5.5 g)	8.7 g	2.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p.1557 Not suitable for child under 6 years; use with caution in child 6-10 years.	Resource Fibre 2.0 liquid: apricot, coffee, neutral, strawberry, summer fruit, vanilla 200 ml = £2.02

## Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
KetoCal® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	602 kJ (146 kcal)	3.1 g cows' milk with additional amino acids	0.6 g (sugars 0.12 g)	14.6 g (LCT 100 %)	Nil	Electrolytes/100 mL: Na <sup>+</sup> 4.3 mmol K <sup>+</sup> 4.1 mmol Ca <sup>2+</sup> 2.15 mmol P <sup>+</sup> 2.77 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of epilepsy resistant to drug therapy, in children over 1 year, only on the advice of secondary care physician with experience of ketogenic diet.	KetoCal 4:1 powder: vanilla, unflavoured 300 gram = £33.04
Powder provides: protein 15.25 g, carbohydrate 3 g, fat 73 g, energy 3011 kJ (730 kcal)/100 g.									
KetoCal® 3:1 (Nutricia Ltd)	Standard dilution (9.5%) of powder per 100 mL	276 kJ (66 kcal)	1.5 g	0.68 g (sugars 0.57 g)	6.4 g	Nil	Electrolytes/100 mL: Na <sup>+</sup> 1.3 mmol K <sup>+</sup> 2.4 mmol Ca <sup>2+</sup> 2 mmol P <sup>+</sup> 1.7 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children from birth to 6 years; as a nutritional supplement in children over 6 years.	KetoCal 3:1 powder: 300 gram = £31.98
Powder provides: protein 15.3 g, carbohydrate 7.2 g, fat 67.7 g, energy 2927 kJ (699 kcal)/100 g.									
KetoCal® 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.09 g casein and whey with additional amino acids	0.61 g (sugars 0.23 g)	14.8 g (LCT 100 %)	1.12 g	Residual lactose Electrolytes/100 mL: Na <sup>+</sup> 4.9 mmol K <sup>+</sup> 4.7 mmol Ca <sup>2+</sup> 2.4 mmol P <sup>+</sup> 3.1 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children 1–10 years; as a nutritional supplement in children over 10 years.	KetoCal 4:1 LQ liquid: unflavoured 200 ml = £4.71; vanilla 200 ml = £4.71
Kindergen® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	421 kJ (101 kcal)	1.5 g whey protein	11.8 g (sugars 1.2 g)	5.3 g (LCT 93 %)	Nil	Electrolytes/100 mL: Na <sup>+</sup> 2 mmol K <sup>+</sup> 0.6 mmol Ca <sup>2+</sup> 2.8 mmol P <sup>+</sup> 3 mmol Low Vitamin A	Enteral feed or nutritional supplement for children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £31.50
Powder provides: protein 7.5 g, carbohydrate 59 g, fat 26.3 g, energy 2104 kJ (504 kcal)/100 g.									

Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished	Modulen IBD powder: 400 gram = £16.19
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g.									
ProSure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	536 kJ (127 kcal)	6.65 g cows' milk	18.3 g (sugars 2.95 g)	2.56 g	2.07 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement for patients with pancreatic cancer. Not suitable for child under 1 year; use with caution in child 1-4 years.	ProSure liquid: 220 ml = £3.60
Renamil® (Stanningley Pharma)	Powder (sip or tube feed when reconstituted) per 100 g	2003 kJ (477 kcal)	4.6 g cows' milk	70.8 g	19.3 g	Nil	Contains lactose Gluten-free Electrolytes/100 g: Na <sup>+</sup> 1.04 mmol K <sup>+</sup> 0.13 mmol Ca <sup>2+</sup> 10.22 mmol P <sup>+</sup> 1.06 mmol Contains no vitamin A or vitamin D	Enteral feed or nutritional supplement for adults and children over 1 year with chronic renal failure.	Renamil powder: 1000 gram = £25.40
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free Do not use in cow's milk allergy, or where absorption and digestive problems are present Electrolytes/100 g: Na <sup>+</sup> 15.65 mmol K <sup>+</sup> 4.60 mmol Ca <sup>2+</sup> 4.74 mmol Mg <sup>+</sup> 0.82 mmol P <sup>+</sup> 3.55 mmol	Nutritional supplement for biochemically proven hypoproteinaemia and patients undergoing dialysis. Not suitable for child under 1 year.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder provides: protein 18 g, energy 312 kJ (74 kcal)/20-g sachet.									
Renastart® (Vitafo International Ltd)	Standard dilution (20%) of powder per 100 mL	414 kJ (99 kcal)	1.5 g cows' milk soya	12.5 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Electrolytes/100 mL: Na <sup>+</sup> 2.1 mmol K <sup>+</sup> 0.6 mmol Ca <sup>2+</sup> 0.6 mmol P <sup>+</sup> 0.6 mmol	Dietary management of renal failure in child from birth to 10 years.	Renastart powder: 400 gram = £28.96
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 23.8 g, energy 2071 kJ (494 kcal)/100 g.									
Respifor® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	633 kJ (150 kcal)	7.5 g cows' milk	22.5 g (sugars 6.4 g)	3.3 g	Nil	Contains lactose	Nutritional supplement for dietary management of disease-related malnutrition in patients with chronic obstructive pulmonary disease and body-mass index less than 20.	Respifor milkshake style liquid: chocolate, strawberry, vanilla 500 ml = £9.30
Supportan® (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 7.5 g)	6.7 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with pancreatic cancer or with lung cancer undergoing chemotherapy Not suitable for child under 1 year; use with caution in child 1-4 years	Supportan drink: cappuccino 800 ml = £11.28; tropical fruits 200 ml = £2.82; 800 ml = £11.28

**Table 4 Feed supplements****High-energy supplements****High-energy supplements: carbohydrate**

Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul <sup>®</sup> Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g Glucose polymer (sugars 8.6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble: powder 132g sachets 4 sachet = £7.03; powder 200 gram = £2.82; 25000 gram = £168.65
Polycal <sup>®</sup> (Nutricia Ltd)	Powder per 100 g	1630 kJ (384 kcal)	Nil	96 g Maltodextrin (sugars 6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £4.70
	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g Maltodextrin (sugars 12.2 g)	Nil	Nil		Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Liquid not suitable for child under 3 years.	Polycal liquid: neutral, orange, 200 ml = £1.87
S.O.S. <sup>®</sup> (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil	S.O.S. products are age-range specific-consult product literature.	For use as an emergency regimen in the dietary management of inborn errors of metabolism in adults and children from birth.	S.O.S.: 20 oral powder 42g sachets 30 sachet = £16.06; 10 oral powder 21g sachets 30 sachet = £8.03; 15 oral powder 31g sachets 30 sachet = £11.85; 25 oral powder 52g sachets 30 sachet = £19.86
Contents of each sachet should be reconstituted with water to a total volume of 200 mL									
Vitajoule <sup>®</sup> (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g Dried glucose syrup (sugars 9 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.	Vitajoule powder: 500 gram = £4.80

<b>High-energy supplements: fat</b>									
Liquid supplements should be diluted before use in child under 5 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g	50 g (LCT 100 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Calogen emulsion: neutral 200 ml = £4.78; 500 ml = £11.76; strawberry 200 ml = £4.78; 500 ml = £11.76; banana 500 ml = £11.76 supplement.
Fresubin® 5 kcal Shot (Fresenius Kabi Ltd)	Liquid (emulsion) per 100 mL	2100 kJ (500 kcal)	Nil	4.0 g (sucrose)	53.8 g	0.4 g	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Not suitable for child under 3 years.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £11.96
Liquigen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	Nil	50 g (MCT 97 %) Fractionated coconut oil	Nil	Gluten-free Lactose-free	Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in epilepsy, and in type 1 lipoproteinaemia Not suitable for child under 1 year	Liquigen emulsion: 250 ml = £10.04
Medium-chain Triglyceride (MCT) Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	MCT 100 %	Nil		Nutritional supplement for steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease and liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia	MCT oil: 500 ml = £15.92
<b>FAT AND CARBOHYDRATE</b>									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 35 %)	Nil		Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Duocal Super Soluble powder: 400 gram = £19.60
Energivit® (Nutricia Ltd)	Standard dilution (15%) of powder per 100 mL	309 kJ (74 kcal)	Nil	10 g (sugars 0.99 g)	3.75 g	Nil	Lactose-free With vitamins, minerals, and trace elements	For children requiring additional energy, vitamins, minerals, and trace elements following a protein-restricted diet	Energivit powder: 400 gram = £23.84
Powder provides: carbohydrate 66.7 g, fat 25 g, energy 2059 kJ (492 kcal)/100 g.									

<b>High-energy supplements: protein</b>									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® Jelly (Nutrinovo Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein hydrolysate whey protein isolate	Less than 1 g	Nil	Less than 1 g	Gluten-free Lactose-free Contains porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource jelly: fruit punch, orange 118 ml = £1.94
Protifar® (Nutricia Ltd)	Powder per 100 g	1580 kJ (373 kcal)	88.5 g cows' milk	less than 1.5 g	1.6 g	Nil	Gluten-free Residual lactose Electrolytes/100 mL: Na <sup>+</sup> 1.3 mmol K <sup>+</sup> 1.28 mmol Ca <sup>2+</sup> 33.75 mmol P <sup>-</sup> 22.58 mmol	Nutritional supplement for use in biochemically proven hypoproteinaemia.	Protifar powder: 225 gram = £9.55
Powder provides: protein 2.2 g per 2.5 g.									
<b>PROTEIN AND CARBOHYDRATE</b>									
Not recommended for child under 3 years unless otherwise stated									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (essential and non-essential amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Contains vitamin C	Hypoproteinaemia, chronic renal failure, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake, and haemodialysis. Not suitable for child under 6 months.	Dialamine powder: 400 gram = £79.64
Powder provides: protein equivalent 25 g, carbohydrate 65 g, vitamin C 125 mg, energy 1530 kJ (360 kcal)/100 g.									
ProSource® Liquid (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	10 g collagen protein whey protein isolate	15 g (sugars 8 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Biochemically proven hypoproteinaemia Not recommended for child under 3 years.	ProSource liquid 30ml sachets: citrus berry, lemon, neutral, orange creme 100 sachet = £104.80
ProSource® Plus (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	15 g collagen protein whey protein isolate	11 g (sugars 10 g)	Nil	Nil	Gluten-free Residual lactose Contains porcine derivatives	Hypoproteinaemia	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 100 sachet = £149.08

PROTEIN, FAT, AND CARBOHYDRATE									
Not suitable for child under 3 years.									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen <sup>®</sup> Extra (Nutricia Ltd)	Liquid per 100 mL	1650 kJ (400 kcal)	5g cows' milk	4.5g (sugars 3.5g)	40.3g	Nil	Gluten-free Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra emulsion: neutral, strawberry 200 ml = £4.98
Calogen <sup>®</sup> Extra Shots (Nutricia Ltd)	Liquid per 100 mL	1650 kJ (400 kcal)	5g cows' milk	4.5g (sugars 3.5g)	40.3g	Nil	Gluten-free Residual lactose With vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £5.75
Calshake <sup>®</sup> (Fresenius Kabi Ltd)	Powder per 87 g	2504 kJ (598.5 kcal)	12g cows' milk	70.2g (sugars 22.4g)	29.9g	Nil	Contains lactose Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Calshake powder 87g sachets: banana, neutral, strawberry, vanilla 7 sachet = £18.41; Calshake powder 90g sachets chocolate: 7 sachet = £18.41
Powder: one sachet reconstituted with 240 mL whole milk provides approx. 600 kcal and 12g protein.									
Enshake <sup>®</sup> (Abbott Laboratories Ltd)	Powder per 100 g	1893 kJ (450 kcal)	8.4g cows' milk, soy protein isolate	69g (sugars 14.5g)	15.6g	Nil	Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year; use with caution in child 1-6 years.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £15.22
Powder: 96.5g reconstituted with 240 mL whole milk provides approx. 2 kcal/mL and protein 16g.									
MCT Procal <sup>®</sup> (Vitaflor International Ltd)	Powder per 100 g	2742 kJ (657 kcal)	12.5g cows' milk	20.6g (sugars 3.1g)	63.1g (MCT 99%)	Nil	Contains lactose	Dietary management of disorders of long-chain fatty acid oxidation, fat malabsorption, and other disorders requiring a low LCT, high MCT supplement. Not suitable for child under 1 year.	MCTProcal oral powder 16g sachets: 30 sachet = £26.09

## Feed additives

### Special additives for conditions of intolerance

#### Colief®

- ▶ Transient Lactase Deficiency. For dosage and administration details, consult product literature.

LIQUID, lactase 50 000 units/g

**Colief 50,000units/g infant drops** (Forum Health Products Ltd)

7 ml (ACBS) · NHS indicative price = £8.40

#### Fructose

- ▶ (Laevulose) For proven glucose/galactose intolerance

**Dietade dietary foods fruit sugar** (Margetts)

250 gram · No NHS indicative price available

#### Glucose

- ▶ (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

### Feed thickeners and pre-thickened drinks

#### Carobel, Instant®

- ▶ For thickening feeds in the treatment of vomiting.

POWDER, carob seed flour.

**Instant Carobel powder** (Cow & Gate Ltd)

135 gram (ACBS) · NHS indicative price = £2.91

#### Multi-thick®

- ▶ For thickening of liquids and foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.

POWDER, modified maize starch, gluten- and lactose-free.

**Multi-thick powder** (Abbot Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

#### Nutilis® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, dried glucose syrup, xanthan gum, guar gum, gluten- and lactose-free.

**Nutilis Clear powder** (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

#### Nutilis® Powder

- ▶ For thickening of food and fluid in dysphagia. Not suitable for child under 3 years.

POWDER, carbohydrate 87.5 g, energy 1545 kJ (363 kcal)/100 g, contains modified starch. Gluten-free and lactose-free.

**Nutilis powder** (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £5.50

#### Resource® Thickened Drink

- ▶ For dysphagia. Not suitable for children under 3 years.

LIQUID, carbohydrate: orange 21 g; apple 23 g, energy: orange 376 kJ (89 kcal); apple 396 kJ (93 kcal)/100 mL.

**Resource Thickened Drink custard apple** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

**Resource Thickened Drink custard orange** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

**Resource Thickened Drink syrup apple** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

**Resource Thickened Drink syrup orange** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

#### Resource® ThickenUp Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, maltodextrin, xanthum gum, gluten- and lactose-free.

**Resource ThickenUp Clear powder** (Nestle Health Science)

28.8 gram (ACBS) · NHS indicative price = £5.28 | 127 gram (ACBS) · NHS indicative price = £8.46

#### Resource® ThickenUp®

- ▶ For thickening of foods in dysphagia. Suitable for children above 3 years of age.

POWDER, modified maize starch. Gluten-free.

**Resource ThickenUp powder** (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.66

#### SLO Drinks®

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

**SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### SLO Milkshakes®

- ▶ Nutritional supplement in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (2 consistencies available), see product literature.

**SLO Milkshake+ Stage 1 oral powder chocolate** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ Stage 1 oral powder strawberry** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ Stage 2 oral powder chocolate** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ Stage 2 oral powder strawberry** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

#### Thick and Easy®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.

POWDER, Modified maize starch

**Thick & Easy powder** (Fresenius Kabi Ltd)

225 gram (ACBS) · NHS indicative price = £5.41 | 4540 gram (ACBS) · NHS indicative price = £94.02

**Thick & Easy powder 9g sachets** (Fresenius Kabi Ltd)

100 sachet (ACBS) · NHS indicative price = £34.25

#### Thicken Aid®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.

POWDER, modified maize starch, maltodextrin, gluten- and lactose-free.

**Thicken Aid powder** (M & A Pharmachem Ltd)

225 gram (ACBS) · NHS indicative price = £3.71

**Thicken Aid powder 9g sachets** (M & A Pharmachem Ltd)

100 sachet (ACBS) · NHS indicative price = £22.40

#### Thixo-D®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.

POWDER, modified maize starch, gluten-free.

**Thixo-D powder** (Sutherland Health Ltd)

375 gram (ACBS) · NHS indicative price = £8.10

**Thixo-D Cal-Free powder** (Sutherland Health Ltd)

30 gram · NHS indicative price = £3.00

### Flavouring preparations

#### FlavourPac®

- ▶ For use with Vitaflo's range of unflavoured protein substitutes for metabolic diseases; not suitable for child under 3 years.

POWDER

**FlavourPac oral powder 4g sachets blackcurrant** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £15.14

**FlavourPac oral powder 4g sachets lemon** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £15.14

**FlavourPac oral powder 4g sachets orange** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £15.14

**FlavourPac oral powder 4g sachets raspberry** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £15.14

**FlavourPac oral powder 4g sachets tropical** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £15.14

#### **Modjul® Flavour System**

- For use with unflavoured amino acid and peptide-based Nutricia products used for the dietary management of various conditions including metabolic disorders and gastrointestinal disease.

#### **POWDER**

**Nutricia Flavour Modjul powder blackcurrant** (Nutricia Ltd)  
100 gram (ACBS) · NHS indicative price = £13.20

**Nutricia Flavour Modjul powder orange** (Nutricia Ltd)  
100 gram (ACBS) · NHS indicative price = £13.20

**Nutricia Flavour Modjul powder pineapple** (Nutricia Ltd)  
100 gram (ACBS) · NHS indicative price = £13.20

## Foods for special diets

### Gluten-free foods

**ACBS indications:** established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

#### **Bread**

##### **LOAVES**

##### **Barkat® Loaf**

GLUTEN-FREE

**Barkat gluten free brown rice bread** (Gluten Free Foods Ltd)  
500 gram (ACBS) · NHS indicative price = £5.84

**Barkat gluten free par baked white bread sliced** (Gluten Free Foods Ltd)

**Ener-G gluten free Seattle brown loaf** (Gluten Free Foods Ltd)  
454 gram (ACBS) · NHS indicative price = £6.22

**Ener-G gluten free white rice bread** (Gluten Free Foods Ltd)  
456 gram (ACBS) · NHS indicative price = £5.47

##### **Genius Gluten Free® Loaf**

GLUTEN-FREE

**Genius gluten free brown sandwich bread sliced** (Genius Foods Ltd)  
535 gram (ACBS) · NHS indicative price = £3.80

**Genius gluten free white sandwich bread sliced** (Genius Foods Ltd)  
535 gram (ACBS) · NHS indicative price = £3.80

##### **Glutafin® Loaves**

GLUTEN-FREE

**Glutafin gluten free fibre loaf sliced** (Dr Schar UK Ltd)  
300 gram (ACBS) · NHS indicative price = £2.89

**Glutafin gluten free white loaf sliced** (Dr Schar UK Ltd)  
300 gram (ACBS) · NHS indicative price = £2.89

##### **Glutafin® Select Loaves**

GLUTEN-FREE

**Glutafin gluten free Select fibre loaf sliced** (Dr Schar UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select fresh brown loaf sliced** (Dr Schar UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select fresh white loaf sliced** (Dr Schar UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select seeded loaf sliced** (Dr Schar UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.72

**Glutafin gluten free Select white loaf sliced** (Dr Schar UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.43

##### **Juvela® Loaf**

GLUTEN-FREE

**Juvela gluten free fresh fibre loaf sliced** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.39

**Juvela gluten free fresh white loaf sliced** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.69

**Juvela gluten free fibre loaf sliced** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.54

**Juvela gluten free part baked loaf** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.95

**Juvela gluten free part baked fibre loaf** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.80

**Juvela gluten free loaf unsliced** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.54

**Juvela gluten free fibre loaf unsliced** (Hero UK Ltd)  
400 gram (ACBS) · NHS indicative price = £3.54

##### **Lifestyle® Loaf**

GLUTEN-FREE

**Lifestyle gluten free brown bread sliced** (Ultraparm Ltd)  
400 gram (ACBS) · NHS indicative price = £2.82

**Lifestyle gluten free high fibre bread sliced** (Ultraparm Ltd)  
400 gram · NHS indicative price = £2.82

**Lifestyle gluten free white bread sliced** (Ultraparm Ltd)  
400 gram · NHS indicative price = £2.82

##### **Warburtons® Loaf**

GLUTEN-FREE

**Warburtons gluten free brown bread sliced** (Warburtons Ltd)  
400 gram (ACBS) · NHS indicative price = £3.06

**Warburtons gluten free white bread sliced** (Warburtons Ltd)  
400 gram (ACBS) · NHS indicative price = £3.06

##### **Wellfoods® Loaf**

GLUTEN-FREE

**Wellfoods gluten free loaf sliced** (Wellfoods Ltd)  
600 gram · NHS indicative price = £5.05

**Wellfoods gluten free loaf unsliced** (Wellfoods Ltd)  
600 gram · NHS indicative price = £4.95

#### **BAGUETTES, BUNS AND ROLLS**

##### **Barkat® Baguettes and rolls**

GLUTEN-FREE

**Barkat gluten free par baked rolls** (Gluten Free Foods Ltd)  
200 gram (ACBS) · NHS indicative price = £4.05

500 gram (ACBS) · NHS indicative price = £201.74

**HCU Maxamum<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria. POWDER, protein equivalent (essential and non-essential amino acids except methionine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see Modjil Flavour System p. 1576. Maxamum products are generally intended for use in children over 8 years.

**HCU Maxamum powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £170.70

**Hyperlysinaemia**

- ▶ Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years.

**HYPER LYS Anamix<sup>®</sup> Infant**

- ▶ Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except lysine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**HYPER LYS Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**Isovaleric acidaemia**

- ▶ Nutritional supplement for the dietary management of proven isovaleric acidaemia or other proven disorders of leucine metabolism in children from birth to 3 years.

**IVA Anamix<sup>®</sup> Infant**

- ▶ Nutritional supplement for the dietary management of proven isovaleric acidaemia or other proven disorders of leucine metabolism in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except leucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**IVA Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**Maple syrup urine disease****MSUD Aid III<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modjil Flavour System p. 1576.

**MSUD Aid 111 powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £201.74

**MSUD Anamix<sup>®</sup> Infant**

- ▶ Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MSUD Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**MSUD Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years. LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**MSUD Anamix Junior LQ liquid** (Nutricia Ltd)  
125 ml (ACBS) · NHS indicative price = £9.78

**MSUD cooler® 15**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/150-mL pouch, with vitamins, minerals, and trace elements.

**MSUD orange cooler 15 liquid** (Vitaflor International Ltd)  
130 ml (ACBS) · NHS indicative price = £12.31

**XMTVI Asadon powder** (Nutricia Ltd)  
200 gram (ACBS) · NHS indicative price = £80.69

**MMA/PA Maxamum®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see Modjul Flavour System p. 1576. Maxamum products are generally intended for use in children over 8 years.

**MMA/PA Maxamum powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £170.70

**Other inborn errors of metabolism****Cystine500®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from 3 years. POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 64 kJ (15 kcal)/4 g

**Cystine500 oral powder sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £59.28

**DocOmega®**

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth. POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

**DocOmega oral powder 4g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £42.90

**EAA® Supplement**

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years. POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

**EAA Supplement oral powder 12.5g sachets** (Vitaflor International Ltd)  
50 sachet (ACBS) · NHS indicative price = £223.68

**Isoleucine50**<sup>®</sup>

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Isoleucine50 oral powder 4g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £59.28

**KeyOmega**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism.

POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

**KeyOmega oral powder 4g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £43.87

**Leucine100**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Leucine100 oral powder sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £59.28

**Low protein drink**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Termed *Milupa*<sup>®</sup> *lp-drink* by manufacturer.

**Milupa LP drink** (Nutricia Ltd)  
400 gram (ACBS) · NHS indicative price = £10.00

**Phenylalanine50**<sup>®</sup>

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.

POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Phenylalanine50 oral powder sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £57.56

**ProZero**<sup>®</sup>

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.

LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

**ProZero liquid** (Vitaflor International Ltd)  
250 ml (ACBS) · NHS indicative price = £1.58 | 1000 ml (ACBS)  
· NHS indicative price = £6.31

**Tyrosine1000**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

**Tyrosine1000 oral powder 4g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £5.42

**Valine50**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Valine50 oral powder 4g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £59.28

**Phenylketonuria****Easiphen**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years.

LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

**Easiphen liquid** (Nutricia Ltd)  
250 ml (ACBS) · NHS indicative price = £10.46

**L-Tyrosine**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

**L-Tyrosine powder** (Nutricia Ltd)  
100 gram (ACBS) · NHS indicative price = £23.76

**Lophlex**<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

**Lophlex powder 27.8g sachets berry** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £314.10

**Lophlex powder 27.8g sachets orange** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £314.10

**Lophlex powder 27.8g sachets unflavoured** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £314.10

**Loprofin**<sup>®</sup> **PKU Drink**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults.

LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

**Loprofin PKU drink** (Nutricia Ltd)  
200 ml (ACBS) · NHS indicative price = £0.81

**Loprofin**<sup>®</sup> **Sno-Pro**

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 275 kJ (65 kcal)/100 mL. Contains lactose.

**Loprofin SNO-PRO drink** (Nutricia Ltd)  
200 ml (ACBS) · NHS indicative price = £1.35

**Phlexy-10**<sup>®</sup> **Exchange System**

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

**Phlexy-10 500mg capsules** (Nutricia Ltd)  
200 capsule (ACBS) · NHS indicative price = £47.03

**TABLETS**, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

**Phlexy-10 tablets** (Nutricia Ltd)  
75 tablet (ACBS) · NHS indicative price = £30.24

**DRINK MIX**, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

**Phlexy-10 drink mix 20g sachets apple & blackcurrant** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £139.28

**PKU Maxamum powder orange** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £97.44

**PKU Maxamum powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £97.44

## Tyrosinaemia

**Methionine-free TYR Anamix<sup>®</sup> Infant**

- Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years.  
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix infant methionine free powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**TYR Anamix<sup>®</sup> Infant**

- Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix infant methionine free powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**TYR Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £42.17

**TYR Anamix<sup>®</sup> Junior**

- Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**TYR Anamix Junior oral powder 29g sachets** (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £206.40

**TYR Anamix<sup>®</sup> Junior LQ**

- Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 1067), type II, and type III, in children over 1 year.  
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

**TYR Anamix Junior LQ liquid** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £9.78

**TYR cooler<sup>®</sup> 15**

- Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.  
LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g,

fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

**TYR orange cooler 15 liquid** (Vitaflo International Ltd)  
130 ml (ACBS) · NHS indicative price = £12.31

**TYR red cooler 10 liquid** (Vitaflo International Ltd)  
87 ml (ACBS) · NHS indicative price = £7.60

**TYR red cooler 15 liquid** (Vitaflo International Ltd)  
130 ml (ACBS) · NHS indicative price = £12.31

**TYR red cooler 20 liquid** (Vitaflo International Ltd)  
174 ml (ACBS) · NHS indicative price = £15.89

**TYR express15**®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults.  
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1575.

**TYR express 15 oral powder 25g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £362.37

**TYR express20**®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years.  
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1575.

**TYR express 20 oral powder 34g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £468.17

**TYR Gel**®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years.  
GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1575.

**TYR gel oral powder 24g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £233.29

**TYR Lophlex**® LQ 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 4 years and adults, including pregnant women (in conjunction with standard folic acid supplementation).  
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

**TYR Lophlex LQ 20 liquid** (Nutricia Ltd)  
125 ml (ACBS) · NHS indicative price = £17.39

**XPHEN TYR Tyrosidon**®

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modul Flavour System p. 1576.

**XPHEN TYR Tyrosidon Free AA Mix powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £201.74

**XPTM Tyrosidon**®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.  
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modul Flavour System p. 1576.

**XPTM Tyrosidon powder** (Nutricia Ltd)  
500 gram · NHS indicative price = £91.31

# Appendix 3

## Cautionary and advisory labels for dispensed medicines

### Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

### Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

### Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

### Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

### Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

### Labels

#### 1 Warning: This medicine may make you sleepy

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd  
To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

#### 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd.  
**Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol**  
To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an *offence to drive while under the influence of drink or drugs*.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk

and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning:** This medicine may make you sleepy. If this happens, do not drive or use tools or machines

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning:** Do not drink alcohol

**Rhybudd:** Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdrefliad 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdrefliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd llaeth, meddyginiaethau camdrefliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl chymryd y feddyginiaeth hon**

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of

physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning:** Do not stop taking this medicine unless your doctor tells you to stop

**Rhybudd:** Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddwy yn dweud wrthywch am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

**Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cynygwr i stopio**

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning:** Read the additional information given with this medicine

**Rhybudd:** Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

**Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul**

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

**Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

**Gadewch i dodd i mewn dŵr cyn ei gymryd**

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**

**Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg**

To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**  
 Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau  
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.*
- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**  
 Rhwch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl eich hagor  
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**  
 Peidiwch â chymryd mwy na... mewn 24 awr  
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.  
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**  
 Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos  
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**  
 Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol  
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night*.  
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**  
 Cymerwch gyda neu ar ôl bwyd  
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.  
 Patients should be advised that a *small amount of food is sufficient*.
- 22 Take 30 to 60 minutes before food**  
 Cymerwch 30 i 60 munud cyn bwyd  
 To be used on some preparations *whose absorption is thereby improved*.  
 Most oral antibacterials require label 23 instead (see below).
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**  
 Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd  
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24 Suck or chew this medicine**  
 Bydd angen cnoi neu sugno'r feddyginiaeth hon  
 To be used on *preparations that should be sucked or chewed*.  
 The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**  
 Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân  
 To be used on *preparations that are enteric-coated or designed for modified-release*.  
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.  
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**  
 Gadewch i'r feddyginiaeth hon doddî o dan y tafod  
 To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**  
 Cymerwch gyda llond gwydr o ddŵr  
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose)*. The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**  
 Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig  
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**  
 Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr  
 To be used on containers of *dispensed solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.  
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**  
 Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn  
 To be used on all containers of *dispensed preparations containing paracetamol*.
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic

debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

#### Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

## Wound contact material for different types of wounds

Wound PINK (epithelialising)		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1591 Vapour-permeable film p. 1595 Soft polymer p. 1596 Hydrocolloid p. 1598	Soft ploymer p. 1596 Foam, low absorbent p. 1599 Alginate p. 1600	
Wound RED (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1591 Soft polymer p. 1596 Hydrocolloid p. 1598 Foam, low absorbent p. 1599	Hydrocolloid-fibrous p. 1598 Foam p. 1599 Alginate p. 1600	Foam with extra absorbency p. 1599 Hydrocolloid-fibrous p. 1598 Alginate p. 1600
Wound YELLOW (Sloughy) (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1594 Hydrocolloid p. 1598	Hydrocolloid-fibrous p. 1598 Alginate p. 1600	Hydrocolloid-fibrous p. 1598 Alginate p. 1600 Capillary-action p. 1601
Wound BLACK (Necrotic/ Eschar)		
Consider mechanical debridement alongside autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1594 Hydrocolloid p. 1598	Hydrocolloid p. 1598 Hydrocolloid-fibrous p. 1598 Foam p. 1599	Seek advice from wound care specialist
Wounds with signs of infection		
Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodorous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence with honey p. 1602 Low adherence with iodine p. 1602 Low adherence with silver p. 1603 Hydrocolloid with silver p. 1604	Hydrocolloid-fibrous with silver p. 1604 Foam with silver p. 1603 Alginate with silver p. 1603 Honey-topical p. 1602 Cadexomer-iodine p. 1602	Hydrocolloid-fibrous with silver p. 1604 Foam extra absorbent, with silver p. 1603 Alginate with honey p. 1602 Alginate with silver p. 1603
<b>Note</b> In each section of this table the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing		

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet<sup>®</sup>) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

**Knitted polyester primary dressing****Atrauman**

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.80, 20cm × 30cm= £2.20, 5cm × 5cm= £0.34, 7.5cm × 10cm= £0.35

**Knitted viscose primary dressing****N-A Dressing**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

**N-A Ultra**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A Ultra dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.64, 9.5cm × 9.5cm= £0.34

**Profore**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Profore** (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.33

**Tricotex**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Tricotex dressing** (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.35

**Paraffin Gauze Dressing****Cuticell**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Cuticell** (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.30

**Jelonet**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Jelonet** (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.42

**Neotulle**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Neotulle** (Neomedic Ltd) dressing 10cm × 10cm= £0.29

## Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

### Absorbent cellulose dressing

#### CelluDress

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**CelluDress dressing** (Medicareplus International Ltd) 10cm × 10cm = £0.19, 10cm × 15cm = £0.20, 10cm × 20cm = £0.22, 15cm × 20cm = £0.30, 20cm × 25cm = £0.40, 20cm × 30cm = £0.85

#### Eclipse

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Eclipse** (Advancis Medical) Boot dressing 60cm × 70cm = £13.88, dressing 15cm × 15cm = £0.98, 20cm × 30cm = £2.16, 60cm × 40cm = £8.21

#### Exu-Dry

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Exu-Dry dressing** (Smith & Nephew Healthcare Ltd) 10cm × 15cm = £1.16, 15cm × 23cm = £2.36, 23cm × 38cm = £5.49

#### Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

**Mesorb dressing** (Molnlycke Health Care Ltd) 10cm × 10cm = £0.63, 10cm × 15cm = £0.82, 10cm × 20cm = £1.01, 15cm × 20cm = £1.44, 20cm × 25cm = £2.27, 20cm × 30cm = £2.57

#### Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

**Zetuvit** (Paul Hartmann Ltd) E non-sterile dressing 10cm × 10cm = £0.07, 10cm × 20cm = £0.09, 20cm × 20cm = £0.15, 20cm × 40cm = £0.28, sterile dressing 10cm × 10cm = £0.22, 10cm × 20cm = £0.25, 20cm × 20cm = £0.40, 20cm × 40cm = £1.12

### Absorbent perforated dressing

#### Adpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Adpore dressing** (Medicareplus International Ltd) 10cm × 10cm = £0.10, 10cm × 15cm = £0.16, 10cm × 20cm = £0.30, 10cm × 25cm = £0.34, 10cm × 30cm = £0.42, 10cm × 35cm = £0.50, 7cm × 8cm = £0.08

#### Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cosmopore E dressing** (Paul Hartmann Ltd) 10cm × 20cm = £0.46, 10cm × 25cm = £0.57, 10cm × 35cm = £0.79, 5cm × 7.2cm = £0.08, 8cm × 10cm = £0.18, 8cm × 15cm = £0.28

#### Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cutiplast Steril dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm = £0.32, 10cm × 25cm = £0.33, 10cm × 30cm = £0.44, 8cm × 10cm = £0.11, 8cm × 15cm = £0.25

#### Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Leukomed dressing** (BSN medical Ltd) 10cm × 20cm = £0.44, 10cm × 25cm = £0.50, 10cm × 30cm = £0.64, 10cm × 35cm = £0.74, 5cm × 7.2cm = £0.09, 8cm × 10cm = £0.19, 8cm × 15cm = £0.33

#### Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medipore + Pads dressing** (3M Health Care Ltd) 10cm × 10cm = £0.16, 10cm × 15cm = £0.25, 10cm × 20cm = £0.38, 10cm × 25cm = £0.46, 10cm × 35cm = £0.65, 5cm × 7.2cm = £0.08

#### Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medisafe dressing** (Neomedic Ltd) 6cm × 8cm = £0.08, 8cm × 10cm = £0.13, 8cm × 12cm = £0.23, 9cm × 15cm = £0.29, 9cm × 20cm = £0.34, 9cm × 25cm = £0.36

#### Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Mepore dressing** (Molnlycke Health Care Ltd) 10cm × 11cm = £0.22, 11cm × 15cm = £0.36, 7cm × 8cm = £0.11, 9cm × 20cm = £0.44, 9cm × 25cm = £0.61, 9cm × 30cm = £0.70, 9cm × 35cm = £0.76

#### PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**PremierPore dressing** (Shermond) 10cm × 10cm = £0.12, 10cm × 15cm = £0.18, 10cm × 20cm = £0.32, 10cm × 25cm = £0.36, 10cm × 30cm = £0.45, 10cm × 35cm = £0.52, 5cm × 7cm = £0.05

#### Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Primapore dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm = £0.45, 10cm × 25cm = £0.51, 10cm × 30cm = £0.64, 10cm × 35cm = £0.99, 6cm × 8.3cm = £0.18, 8cm × 10cm = £0.20, 8cm × 15cm = £0.34

#### Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Softpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm = £0.13, 10cm × 15cm = £0.20, 10cm × 20cm = £0.35, 10cm × 25cm = £0.40, 10cm × 30cm = £0.49, 10cm × 35cm = £0.58, 6cm × 7cm = £0.06

#### Telfa Island

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Telfa Island dressing** (H & R Healthcare Ltd) 10cm × 12.5cm = £0.27, 10cm × 20cm = £0.35, 10cm × 25.5cm = £0.45, 10cm × 35cm = £0.62, 5cm × 10cm = £0.08

### Absorbent perforated plastic film faced dressing

#### Absopad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Absopad dressing** (Medicareplus International Ltd) 10cm × 10cm = £0.13, 20cm × 10cm = £0.28

#### Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Askina** (B.Braun Medical Ltd) Pad dressing 10cm × 10cm = £0.21

#### Melolin

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm = £0.28, 20cm × 10cm = £0.55, 5cm × 5cm = £0.17

#### Skintact

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Skintact dressing** (Robinson Healthcare) 10cm × 10cm = £0.17, 20cm × 10cm = £0.34, 5cm × 5cm = £0.10

#### Solvaline N

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Solvaline N dressing** (Lohmann & Rauscher) 10cm × 10cm = £0.18, 20cm × 10cm = £0.37, 5cm × 5cm = £0.10

#### Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Telfa dressing** (H & R Healthcare Ltd) 10cm × 7.5cm = £0.16, 15cm × 7.5cm = £0.18, 20cm × 7.5cm = £0.29, 7.5cm × 5cm = £0.12

*Super absorbent cellulose and polymer primary dressing***Curea P1**

Super absorbent cellulose and polymer primary dressing.

**Curea P1 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.17, 10cm × 20cm rectangular= £3.67, 10cm × 30cm rectangular= £5.25, 12cm × 12cm square= £2.67, 20cm × 20cm square= £6.95, 20cm × 30cm rectangular= £10.11, 7.5cm × 7.5cm square= £1.73

**Curea P2**

Super absorbent cellulose and polymer primary dressing (non-adherent)

**Curea P2 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 20cm rectangular= £4.53, 11cm × 11cm square= £2.49, 20cm × 20cm square= £7.88, 20cm × 30cm rectangular= £10.68

**Cutisorb Ultra**

Super absorbent cellulose and polymer primary dressing

**Cutisorb Ultra dressing** (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

**DryMax Extra**

Super absorbent cellulose and polymer primary dressing

**DryMax Extra Soft dressing** (Espere Healthcare Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

**ELECT Superabsorber**

Super absorbent cellulose and polymer primary dressing

**Zetuvit Plus**

Super absorbent cellulose primary dressing

**Zetuvit Plus dressing** (Paul Hartmann Ltd) 10cm × 10cm= £0.83, 10cm × 20cm= £1.15, 15cm × 20cm= £1.32, 20cm × 25cm= £1.80, 20cm × 40cm= £2.79

*Super absorbent hydroconductive dressing***Drawtex**

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton

**Drawtex dressing** (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

**Advanced wound dressings**

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

**Hydrogel dressings**

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

*Hydrogel application (amorphous)***ActivHeal Hydrogel**

Hydrogel containing guar gum and propylene glycol

**ActivHeal** (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

**AquaForm**

Hydrogel containing modified starch copolymer

**AquaForm** (Aspen Medical Europe Ltd) Hydrogel dressing= £2.04

**Askina Gel**

Hydrogel containing modified starch and glycerol

**Askina** (B. Braun Medical Ltd) Gel dressing= £2.06

**Cutimed**

Hydrogel

**Cutimed** (BSN medical Ltd) Gel dressing= £3.10

**Flexigran**

Hydrogel containing modified starch and glycerol

**Flexigran** (A1 Pharmaceuticals) Gel dressing= £1.90

**GranuGel**

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

**GranuGel** (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.39

**Intrasite Gel**

Hydrogel containing modified carmellose polymer and propylene glycol

**IntraSite** (Smith & Nephew Healthcare Ltd) Gel dressing= £3.68

**Nu-Gel**

Hydrogel containing alginate and propylene glycol

**Nu-Gel** (Systagenix Wound Management Ltd) dressing= £2.11

**Purilon Gel**

Hydrogel containing carboxymethylcellulose and calcium alginate

**Purilon** (Coloplast Ltd) Gel dressing= £2.33

*Hydrogel sheet dressings***ActiFormCool**

Hydrogel dressing

**ActiFormCool sheet** (L&R Medical UK Ltd) 10cm × 10cm square= £2.71, 10cm × 15cm rectangular= £3.89, 20cm × 20cm square= £8.14, 5cm × 6.5cm rectangular= £1.84

**Aquaflfo**

Hydrogel dressing

**Aquaflfo** (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

**Coolie**

Hydrogel dressing (without adhesive border)

**Coolie** (Zeroderma Ltd) sheet 7cm discs= £1.96

**Gel FX**

Hydrogel dressing (without adhesive border)

**Gel FX sheet** (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

**Geliperm**

Hydrogel sheets

**Geliperm** (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

**Hydrosorb**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film

**Hydrosorb sheet** (Paul Hartmann Ltd) 10cm × 10cm square= £2.29, 20cm × 20cm square= £6.87, 5cm × 7.5cm rectangular= £1.60

**Hydrosorb Comfort**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

**Hydrosorb Comfort sheet** (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.66, 4.5cm × 6.5cm rectangular= £1.90, 7.5cm × 10cm rectangular= £2.52

**Intrasite Conformable**

Soft non-woven dressing impregnated with Intrasite<sup>®</sup> gel

**IntraSite Conformable dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.85, 10cm × 20cm rectangular= £2.50, 10cm × 40cm rectangular= £4.47

**Novogel**

Glycerol-based hydrogel sheets (standard or thin)

**Novogel sheet** (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £2.92

**SanoSkin NET**

Hydrogel sheet (without adhesive border)

**SanoSkin** (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

**Vacunet**

Non-adherent, hydrogel coated polyester net dressing

**Vacunet dressing** (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

#### **Sodium hyaluronate dressings**

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

**Hiodine**® should be used with caution in thyroid disorders.

#### **Hiodine**

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

#### **Vapour-permeable films and membranes**

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

*Non-woven fabric dressing with viscose-rayon pad.*

#### **Niko Fix**

For intravenous and subcutaneous catheter sites  
**Niko** (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.20

#### **Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

#### **Askina Derm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Askina Derm dressing** (B.Braun Medical Ltd) 10cm × 12cm= £1.11, 10cm × 20cm= £2.12, 15cm × 20cm= £2.57, 20cm × 30cm= £4.59, 6cm × 7cm= £0.38

#### **C-View**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**C-View dressing** (Aspen Medical Europe Ltd) 10cm × 12cm= £1.03, 12cm × 12cm= £1.10, 15cm × 20cm= £2.38, 6cm × 7cm= £0.38

#### **Dressfilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Dressfilm** (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

#### **Hydrofilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hydrofilm dressing** (Paul Hartmann Ltd) 10cm × 12.5cm= £0.43, 10cm × 15cm= £0.54, 10cm × 25cm= £0.83, 12cm × 25cm= £0.88, 15cm × 20cm= £0.99, 20cm × 30cm= £1.63, 6cm × 7cm= £0.23

#### **Hypafix Transparent**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hypafix Transparent** (BSN medical Ltd) dressing 10cm × 2m= £9.03

#### **Leukomed T**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Leukomed T dressing** (BSN medical Ltd) 10cm × 12.5cm= £1.05, 11cm × 14cm= £1.27, 15cm × 20cm= £2.44, 15cm × 25cm= £2.60, 7.2cm × 5cm= £0.39, 8cm × 10cm= £0.72

#### **Mepitel Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepitel Film dressing** (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.32, 10.5cm × 25cm= £2.57, 15.5cm × 20cm= £3.26, 6.5cm × 7cm= £0.49

#### **Mepore Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepore Film dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £1.24, 10cm × 25cm= £2.41, 15cm × 20cm= £3.06, 6cm × 7cm= £0.46

#### **OpSite Flexifix**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexifix dressing** (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.78, 5cm × 1m= £4.02

#### **OpSite Flexigrid**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexigrid dressing** (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.16, 15cm × 20cm= £2.93, 6cm × 7cm= £0.41

#### **Polyskin II**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Kendall Film dressing** (H & R Healthcare Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

#### **ProtectFilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**ProtectFilm dressing** (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

#### **Suprasorb F**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Suprasorb F dressing** (Lohmann & Rauscher) 10cm × 12cm= £0.83, 15cm × 20cm= £2.58, 5cm × 7cm= £0.34

#### **Tegaderm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Film dressing** (3M Health Care Ltd) 12cm × 12cm= £1.11, 15cm × 20cm= £2.41, 6cm × 7cm= £0.39

#### **Tegaderm diamond**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Diamond dressing** (3M Health Care Ltd) 10cm × 12cm= £1.21, 6cm × 7cm= £0.45

**Vellafilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Film dressing in single-use pieces

**Vellafilm dressing** (Advancis Medical) 12cm × 12cm= £1.11, 12cm × 35cm= £2.77, 15cm × 20cm= £2.12

**Vapour-permeable Adhesive Film Dressing with adsorbent pad Adpore Ultra**

Film dressing with adsorbent pad

**Adpore Ultra dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

**Vapour-permeable Adhesive Film Dressing with adsorbent pad Alldress**

Film dressing with adsorbent pad

**Alldress dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £0.97, 15cm × 15cm= £2.11, 15cm × 20cm= £2.61

**C-View Post-Op**

Film dressing with adsorbent pad

**C-View Post-Op dressing** (Aspen Medical Europe Ltd) 10cm × 12cm= £1.11, 10cm × 25cm= £1.61, 10cm × 35cm= £2.62, 6cm × 7cm= £0.40

Film dressing with adsorbent pad

**Mepore Film & Pad dressing** (Molnlycke Health Care Ltd) 4cm × 5cm= £0.24, 5cm × 7cm= £0.25, 9cm × 10cm= £0.63, 9cm × 15cm= £0.92, 9cm × 20cm= £1.37, 9cm × 25cm= £1.51, 9cm × 30cm= £2.03, 9cm × 35cm= £2.52

**Mepore Ultra**

Film dressing with adsorbent pad

**Mepore Ultra dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.81, 11cm × 15cm= £1.19, 7cm × 8cm= £0.41, 9cm × 20cm= £1.52, 9cm × 25cm= £1.68, 9cm × 30cm= £2.77

**OpSite Plus**

Film dressing with adsorbent pad

**OpSite Plus dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.23, 10cm × 20cm= £2.07, 10cm × 35cm= £3.43, 6.5cm × 5cm= £0.33, 8.5cm × 9.5cm= £0.91

**OpSite Post-op**

Film dressing with adsorbent pad

**OpSite Post-Op dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.21, 10cm × 20cm= £2.03, 10cm × 25cm= £2.56, 10cm × 30cm= £3.03, 10cm × 35cm= £3.37, 8.5cm × 15.5cm= £1.23, 8.5cm × 9.5cm= £0.89

**Pharmapore-PU**

Film dressing with adsorbent pad

**Pharmapore-PU dressing** (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

**PremierPore VP**

Film dressing with adsorbent pad

**PremierPore VP dressing** (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

**Tegaderm**

Film dressing with adsorbent pad

**Tegaderm + Pad dressing** (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.96, 9cm × 20cm= £1.41, 9cm × 25cm= £1.58, 9cm × 35cm= £2.62

**Tegaderm Absorbent Clear**

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

**Tegaderm Absorbent Clear Acrylic dressing** (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.14, 14.2cm × 15.8cm oval= £5.83, 14.9cm × 15.2cm rectangular= £8.73, 16.8cm × 19cm sacral= £10.45, 20cm × 20.3cm rectangular= £14.02, 7.6cm × 9.5cm oval= £3.20

*Vapour-permeable transparent film dressing with adhesive foam border.*

**Central Gard**

For intravenous and subcutaneous catheter sites

**Central Gard dressing** (Unomedical Ltd) 16cm × 7cm= £0.98, 16cm × 8.8cm= £1.07

**East-V**

For intravenous and subcutaneous catheter sites

**East-V** (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

*Vapour-permeable transparent, adhesive film dressing.*

**Hydrofilim I.V. Control**

For intravenous and subcutaneous catheter sites

**Hydrofilim** (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.31

*Vapour-permeable, transparent, adhesive film dressing.*

**IV3000**

For intravenous and subcutaneous catheter sites

**IV3000 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.44, 5cm × 6cm= £0.43, 6cm × 7cm= £0.57, 7cm × 9cm= £0.75, 9cm × 12cm= £1.49

**Mepore IV**

For intravenous and subcutaneous catheter sites

**Mepore IV dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £1.09, 5cm × 5.5cm= £0.31, 8cm × 9cm= £0.40

**Pharmapore-PU IV**

For intravenous and subcutaneous catheter sites

**Pharmapore-PU-IV dressing** (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

**Tegaderm IV**

For intravenous and subcutaneous catheter sites

**Tegaderm IV Advanced dressing with securing tapes** (3M Health Care Ltd) 10cm × 15.5cm= £1.67, 7cm × 8.5cm= £0.59

**Soft polymer dressings**

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

**Cellulose dressings****Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

**Cutimed Sorbion Sachet Border dressing** (BSN medical Ltd) 10cm × 10cm square= £3.03, 15cm × 15cm square= £4.61, 25cm × 15cm rectangular= £7.18

**Sorbion Sachet EXTRA**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Extra dressing** (BSN medical Ltd) 10cm × 10cm = £2.31, 20cm × 10cm = £3.83, 20cm × 20cm = £7.19, 30cm × 20cm = £10.26, 5cm × 5cm = £1.49, 7.5cm × 7.5cm = £1.83

#### **Sorbion Sachet Multi Star**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Multi Star dressing** (BSN medical Ltd) 14cm × 14cm = £5.02, 8cm × 8cm = £3.07

#### **Sorbion Sachet S Drainage**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('V' shaped dressing)

**Cutimed** (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm = £2.71

#### **Suprasorb X**

Biosynthetic cellulose fibre dressing

**Suprasorb X dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular = £8.67, 2cm × 21cm rope = £6.74, 5cm × 5cm square = £2.10, 9cm × 9cm square = £4.38

*With absorbent pad*

#### **Advazorb Border**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border dressing** (Advancis Medical) 10cm × 10cm = £2.12, 10cm × 20cm = £2.92, 10cm × 30cm = £4.28, 12.5cm × 12.5cm = £2.60, 15cm × 15cm = £3.17, 20cm × 20cm = £5.50, 7.5cm × 7.5cm = £1.20

#### **Advazorb Border Lite**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border Lite dressing** (Advancis Medical) 10cm × 10cm = £1.90, 10cm × 20cm = £2.63, 10cm × 30cm = £3.86, 12.5cm × 12.5cm = £2.34, 15cm × 15cm = £2.86, 20cm × 20cm = £4.95, 7.5cm × 7.5cm = £1.08

#### **Advazorb Silfix**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix dressing** (Advancis Medical) 10cm × 10cm = £1.86, 10cm × 20cm = £3.20, 12.5cm × 12.5cm = £2.61, 15cm × 15cm = £3.38, 20cm × 20cm = £5.02, 7.5cm × 7.5cm = £1.00

#### **Advazorb Silfix Lite**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix Lite dressing** (Advancis Medical) 10cm × 10cm = £1.68, 10cm × 20cm = £2.88, 12.5cm × 12.5cm = £2.35, 15cm × 15cm = £3.04, 20cm × 20cm = £4.51, 7.5cm × 7.5cm = £0.90

#### **Allevyn Gentle**

Soft gel wound contact dressing, with polyurethane foam film backing

#### **Allevyn Gentle Border**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border** (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm = £9.90, dressing 10cm × 10cm = £2.25, 12.5cm × 12.5cm = £2.75, 17.5cm × 17.5cm = £5.43, 7.5cm × 7.5cm = £1.53

#### **Allevyn Gentle Border Lite**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border Lite dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm = £2.22, 15cm × 15cm = £3.91, 5.5cm × 12cm = £1.90, 5cm × 5cm = £0.92, 8cm × 15cm = £3.52

#### **Allevyn Life**

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border

**Allevyn Life dressing** (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm = £1.74, 12.9cm × 12.9cm = £2.55, 15.4cm × 15.4cm = £3.12, 21cm × 21cm = £6.14

#### **Cutimed Siltec**

Soft silicone wound contact dressing, with polyurethane foam film backing

**Cutimed Siltec** (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm = £4.58, 23cm × 23cm = £6.25, dressing 10cm × 10cm =

£2.28, 10cm × 20cm = £3.76, 15cm × 15cm = £4.25, 20cm × 20cm = £6.45, 5cm × 6cm = £1.22

#### **Cutimed Siltec B**

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

**Cutimed Siltec B dressing** (BSN medical Ltd) 12.5cm × 12.5cm = £2.32, 15cm × 15cm = £3.09, 17.5cm × 17.5cm = £4.99, 22.5cm × 22.5cm = £6.09, 7.5cm × 7.5cm = £1.36

#### **Cutimed Siltec L**

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

**Cutimed Siltec L dressing** (BSN medical Ltd) 10cm × 10cm = £1.58, 15cm × 15cm = £3.48, 5cm × 6cm = £1.08

#### **Eclipse Adherent**

Soft silicone wound contact layer with absorbent pad and film backing

**Eclipse Adherent dressing** (Advancis Medical) 10cm × 10cm = £3.01, 10cm × 20cm = £3.78, 15cm × 15cm = £5.03, 20cm × 30cm = £10.06, 17cm × 19cm sacral = £3.79, 22cm × 23cm sacral = £6.28

#### **Flivisorb**

Absorbent polymer dressing with non-adherent wound contact layer

#### **Flivisorb Adhesive**

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

**Flivisorb Adhesive dressing** (Lohmann & Rauscher) 12cm × 12cm square = £3.43, 15cm × 15cm square = £4.70

#### **Mepilex**

Absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex** (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm = £5.50, 15cm × 22cm = £6.38, XT dressing 10cm × 11cm = £2.68, 11cm × 20cm = £4.43, 15cm × 16cm = £4.86, 20cm × 21cm = £7.34, dressing 5cm × 5cm = £1.22

#### **Mepilex Border**

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border** (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm = £6.63, Sacrum dressing 18cm × 18cm = £4.85, 23cm × 23cm = £7.91, dressing 10cm × 12.5cm = £2.72, 10cm × 20cm = £3.72, 10cm × 30cm = £5.58, 15cm × 17.5cm = £4.18, 17cm × 20cm = £6.07

#### **Mepilex Border Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border Lite dressing** (Molnlycke Health Care Ltd) 15cm × 15cm = £3.94, 4cm × 5cm = £0.92, 5cm × 12.5cm = £2.01, 7.5cm × 7.5cm = £1.35

#### **Mepilex Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm = £2.17, 15cm × 15cm = £4.22, 20cm × 50cm = £26.66, 6cm × 8.5cm = £1.82

#### **Mepilex Transfer**

Soft silicone exudate transfer dressing

**Mepilex Transfer dressing** (Molnlycke Health Care Ltd) 10cm × 12cm = £3.54, 15cm × 20cm = £10.72, 20cm × 50cm = £27.39, 7.5cm × 8.5cm = £2.25

#### **Sorbion Sana**

Non-adherent polyethylene wound contact dressing with absorbent core

**Cutimed Sorbion Sana Gentle dressing** (BSN medical Ltd) 12cm × 12cm = £2.56, 12cm × 22cm = £4.61, 22cm × 22cm = £8.21, 8.5cm × 8.5cm = £2.04

#### **UrgotulDuo**

Non-adherent soft polymer wound contact dressing with absorbent pad

**UrgotulDuo dressing** (Urigo Ltd) 10cm × 12cm = £3.93, 15cm × 20cm = £9.13, 5cm × 10cm = £2.54

Without absorbent pad

#### Adaptic Touch

Non-adherent soft silicone wound contact dressing

**Adaptic Touch dressing** (Systagenix Wound Management Ltd) 12.7cm × 15cm = £4.65, 20cm × 32cm = £12.50, 5cm × 7.6cm = £1.13, 7.6cm × 11cm = £2.25

#### Askina SilNet

Soft silicone-coated wound contact dressing

**Askina SilNet dressing** (B.Braun Medical Ltd) 10cm × 18cm = £5.12, 20cm × 30cm = £12.53, 5cm × 7.5cm = £1.16, 7.5cm × 10cm = £2.35

#### Mepitel

Soft silicone, semi-transparent wound contact dressing

**Mepitel dressing** (Molnlycke Health Care Ltd) 12cm × 15cm = £5.65, 5cm × 7cm = £1.41, 8cm × 10cm = £2.82

#### Mepitel One

Soft silicone, thin, transparent wound contact dressing

**Mepitel One dressing** (Molnlycke Health Care Ltd) 13cm × 15cm = £4.98, 24cm × 27.5cm = £14.25, 6cm × 7cm = £1.22, 9cm × 10cm = £2.41

#### Physiotulle

Non-adherent soft polymer wound contact dressing

**Physiotulle dressing** (Coloplast Ltd) 10cm × 10cm = £2.32, 15cm × 20cm = £7.07

#### Sifixflex

Soft silicone-coated polyester wound contact dressing

**Sifixflex dressing** (Advancis Medical) 12cm × 15cm = £4.61, 20cm × 30cm = £11.88, 35cm × 60cm = £39.83, 5cm × 7cm = £1.12, 8cm × 10cm = £2.29

#### Silon-TSR

Soft silicone polymer wound contact dressing

**Silon-TSR dressing** (Bio Med Sciences) 13cm × 13cm = £3.52, 13cm × 25cm = £5.47, 28cm × 30cm = £7.37

#### Sorbion Contact

Non-adherent soft polymer wound contact dressing

**Cutimed Sorbion Contact dressing** (BSN medical Ltd) 10cm × 10cm = £2.04, 10cm × 20cm = £4.10, 20cm × 20cm = £7.18, 20cm × 30cm = £10.26, 7.5cm × 7.5cm = £1.53

#### Tegaderm Contact

Non-adherent soft polymer wound contact dressing

**Tegaderm Contact dressing** (3M Health Care Ltd) 20cm × 25cm = £10.94, 7.5cm × 10cm = £2.29

#### Urgotul

Non-adherent soft polymer wound contact dressing

**Urgotul dressing** (Urgo Ltd) 10cm × 10cm = £3.13, 10cm × 40cm = £10.53, 15cm × 15cm = £6.66, 15cm × 20cm = £8.86, 20cm × 30cm = £14.25, 5cm × 5cm = £1.57

#### Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

#### Hydrocolloid-fibrous dressings

##### Aquacel

Soft non-woven pad containing hydrocolloid-fibres

**Aquacel** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm = £1.89, 2cm × 45cm = £2.52, dressing 10cm × 10cm square = £2.49, 15cm × 15cm square = £4.68, 4cm × 10cm rectangular = £1.34, 4cm × 20cm rectangular = £1.97, 4cm × 30cm rectangular = £2.97, 5cm × 5cm square = £1.05

##### Aquacel Foam

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

**Aquacel Foam dressing (adhesive)** (ConvaTec Ltd) 10cm × 10cm = £2.20, 12.5cm × 12.5cm = £2.72, 17.5cm × 17.5cm = £5.45, 19.8cm × 14cm heel = £5.57, 20cm × 16.9cm sacral = £5.00, 21cm × 21cm = £7.97, 25cm × 30cm = £10.32, 8cm × 8cm = £1.44, (**non-adhesive**) 10cm × 10cm = £2.60, 15cm × 15cm = £4.37, 15cm × 20cm = £5.97, 20cm × 20cm = £7.12

##### UrgoClean Pad

Pad, hydrocolloid fibres coated with soft-adherent lipocolloidal wound contact layer

**UrgoClean Pad dressing** (Urgo Ltd) 10cm × 10cm square = £2.16, 20cm × 15cm rectangular = £4.06, 6cm × 6cm square = £0.97

##### UrgoClean Rope

Rope, non-woven rope containing hydrocolloid fibres

**UrgoClean rope dressing** (Urgo Ltd) 2.5cm × 40cm = £2.43, 5cm × 40cm = £3.21

#### Polyurethane matrix dressing

##### Cutinova Hydro

Polyurethane matrix with absorbent particles and waterproof polyurethane film

**Cutinova Hydro dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £2.61, 15cm × 20cm rectangular = £5.53, 5cm × 6cm rectangular = £1.30

#### With adhesive border

##### Biatain Super

Semi-permeable hydrocolloid dressing; without adhesive border

**Biatain Super dressing (adhesive)** (Coloplast Ltd) 10cm × 10cm square = £2.21, 12.5cm × 12.5cm square = £3.66, 12cm × 20cm rectangular = £3.67, 15cm × 15cm square = £4.41, 20cm × 20cm square = £6.87

##### Granuflex Bordered

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex Bordered dressing** (ConvaTec Ltd) 10cm × 10cm square = £3.42, 10cm × 13cm triangular = £4.04, 15cm × 15cm square = £6.53, 15cm × 18cm triangular = £6.29, 6cm × 6cm square = £1.81

##### Hydrocol Border

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

**Hydrocol Border (bevelled edge) dressing** (Paul Hartmann Ltd) 10cm × 10cm square = £2.46, 12cm × 18cm sacral = £3.69, 15cm × 15cm square = £4.63, 5cm × 5cm square = £1.03, 7.5cm × 7.5cm square = £1.69, 8cm × 12cm concave = £2.17

##### Tegaderm Hydrocolloid

Hydrocolloid dressing with adhesive border; normal or thin **Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 12cm oval = £1.56, 13cm × 15cm oval = £2.92, dressing 10cm × 12cm oval = £2.34, 13cm × 15cm oval = £4.37, 17.1cm × 16.1cm sacral = £4.89

##### Ultec Pro

Semi-permeable hydrocolloid dressing with adhesive border **Ultec Pro dressing (adhesive)** (Covidien (UK) Commercial Ltd) 15cm × 18cm sacral = £3.30, 19.5cm × 23cm sacral = £4.98, 21cm × 21cm square = £4.67

#### Without adhesive border

##### ActivHeal Hydrocolloid

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

**ActivHeal Hydrocolloid** (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square = £1.58, 15cm × 15cm square = £3.43, 15cm × 18cm sacral = £3.98, 5cm × 7.5cm rectangular = £0.78, foam backed dressing 10cm × 10cm square = £1.55, 15cm × 15cm square = £2.91, 15cm × 18cm sacral = £3.36, 5cm × 7.5cm rectangular = £0.97

##### Askina Biofilm Transparent

Semi-permeable, polyurethane film dressing with hydrocolloid adhesive

**Askina Biofilm Transparent dressing** (B.Braun Medical Ltd) 10cm × 10cm square = £1.10, 20cm × 20cm square = £3.25

**Biatain Super**

Semi-permeable, hydrocolloid film dressing without adhesive border

**Biatain Super dressing (non-adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.21, 12.5cm × 12.5cm square= £3.66, 12cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.41, 20cm × 20cm square= £6.87

**Comfeel Plus Contour**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Contour dressing** (Coloplast Ltd) 6cm × 8cm= £2.27, 9cm × 11cm= £3.93

**Comfeel Plus Pressure Relieving**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Pressure Relief dressing** (Coloplast Ltd) 10cm diameter circular= £4.74, 15cm diameter circular= £7.14, 7cm diameter circular= £3.54

**Comfeel Plus Transparent**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Transparent dressing** (Coloplast Ltd) 10cm × 10cm square= £1.31, 15cm × 15cm square= £3.41, 15cm × 20cm rectangular= £3.46, 20cm × 20cm square= £3.48, 5cm × 15cm rectangular= £1.62, 5cm × 25cm rectangular= £2.63, 5cm × 7cm rectangular= £0.68, 9cm × 14cm rectangular= £2.49, 9cm × 25cm rectangular= £3.53

**Comfeel Plus Ulcer**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus dressing** (Coloplast Ltd) 10cm × 10cm square= £2.50, 20cm × 20cm square= £7.72, 4cm × 6cm rectangular= £0.98

**DuoDERM Extra Thin**

Semi-permeable hydrocolloid dressing

**DuoDERM Extra Thin dressing** (ConvaTec Ltd) 10cm × 10cm square= £1.36, 15cm × 15cm square= £2.93, 5cm × 10cm rectangular= £0.78, 7.5cm × 7.5cm square= £0.82, 9cm × 15cm rectangular= £1.81, 9cm × 25cm rectangular= £2.90, 9cm × 35cm rectangular= £4.05

**DuoDERM Signal**

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

**DuoDERM Signal dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.17, 11cm × 19cm oval= £3.33, 14cm × 14cm square= £3.81, 18.5cm × 19.5cm heel= £5.33, 20cm × 20cm square= £7.58, 22.5cm × 20cm sacral= £6.23

**Flexigran**

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

**Flexigran** (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

**Granuflex**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex (modified) dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.87, 15cm × 15cm square= £5.45, 15cm × 20cm rectangular= £5.90, 20cm × 20cm square= £8.20

**Hydrocoll Basic**

Hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll** (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.50

**Hydrocoll Thin Film**

Thin hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Thin Film dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £1.18, 15cm × 15cm square= £2.65, 7.5cm × 7.5cm square= £0.71

**Nu-Derm**

Semi-permeable hydrocolloid dressing (normal and thin)

**Nu-Derm dressing** (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.57, 15cm × 15cm square= £3.21, 15cm × 18cm

sacral= £4.49, 20cm × 20cm square= £6.41, 5cm × 5cm square= £0.86, 8cm × 12cm heel/elbow= £3.21, thin 10cm × 10cm square= £1.07

**Tegaderm Hydrocolloid**

Hydrocolloid dressing without adhesive border; normal and thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.57, dressing 10cm × 10cm square= £2.39

**Ultec Pro**

Semi-permeable hydrocolloid dressing; without adhesive border

**Ultec Pro dressing** (Covidien (UK) Commercial Ltd) 10cm × 10cm square= £2.28, 15cm × 15cm square= £4.44, 20cm × 20cm square= £6.69

**Foam dressings**

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

**Cavi-Care**

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

*Polyurethane Foam Dressing***Cutimed Cavity**

**Cutimed Cavity dressing** (BSN medical Ltd) 10cm × 10cm= £3.20, 15cm × 15cm= £4.81, 5cm × 6cm= £1.93

**Kendall**

**Kendall Foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £1.06, 10cm × 20cm rectangular= £2.05, 12.5cm × 12.5cm square= £1.80, 15cm × 15cm square= £2.60, 20cm × 20cm square= £3.01, 5cm × 5cm square= £0.71, 7.5cm × 7.5cm square= £1.21, 8.5cm × 7.5cm rectangular (fenestrated)= £0.91

*Polyurethane Foam Film Dressing with Adhesive Border***ActivHeal Foam Adhesive**

**ActivHeal Foam Adhesive dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.63, 12.5cm × 12.5cm square= £1.68, 15cm × 15cm square= £2.15, 20cm × 20cm square= £4.50, 7.5cm × 7.5cm square= £1.18

**Allevyn Dressing**

**Allevyn Adhesive dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.24, 12.5cm × 12.5cm square= £2.74, 12.5cm × 22.5cm rectangular= £4.27, 17.5cm × 17.5cm square= £5.41, 17cm × 17cm anatomically shaped sacral= £4.07, 22.5cm × 22.5cm square= £7.88, 22cm × 22cm anatomically shaped sacral= £5.86, 7.5cm × 7.5cm square= £1.53

**Biatain Adhesive**

**Biatain Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square= £1.80, 12.5cm × 12.5cm square= £2.62, 17cm diameter contour= £5.09, 18cm × 18cm square= £5.29, 18cm × 28cm rectangular= £7.84, 19cm × 20cm heel= £5.29, 23cm × 23cm sacral= £4.53

**PolyMem WIC**

**PolyMem** (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £3.72

**Tegaderm Foam**

**Tegaderm Foam dressing** (3M Health Care Ltd) 10cm × 10cm square= £2.20, 10cm × 20cm rectangular= £3.74, 10cm × 60cm rectangular= £12.64, 20cm × 20cm square= £5.97, 8.8cm × 8.8cm square (fenestrated)= £2.25

**Transorbent**

**Transorbent dressing (adhesive)** (B.Braun Medical Ltd) 10cm × 10cm square= £2.02, 15cm × 15cm square= £3.71, 20cm × 20cm square= £5.92, 5cm × 7cm rectangular= £1.07

**UrigoCell TLC**

**UrigoTul Absorb dressing** (Urigo Ltd) 10cm × 10cm= £2.38, 15cm × 20cm= £4.20, 6cm × 6cm= £1.21, 12cm × 19cm heel= £4.80

**Alginate dressings**

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for

tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

#### **ActivHeal Alginate**

Calcium sodium alginate dressing

**ActivHeal Alginate dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

#### **ActivHeal Aquafiber**

Non-woven, calcium sodium alginate dressing

**ActivHeal Aquafiber** (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.48, 15cm × 15cm= £2.79, 5cm × 5cm= £0.62

#### **Kendall**

Calcium alginate dressing

**Kendall Calcium Alginate** (H & R Healthcare Ltd) Rope dressing 30cm= £2.89, 61cm= £5.07, 91cm= £5.46, dressing 10cm × 10cm= £1.52, 10cm × 14cm= £2.45, 10cm × 20cm= £2.98, 15cm × 25cm= £5.25, 30cm × 61cm= £27.56, 5cm × 5cm= £0.72

#### **Kendall Plus**

Calcium alginate dressing

**Kendall** (H & R Healthcare Ltd) Foam Plus dressing 10cm × 10cm square= £1.47

#### **Melgisorb**

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

**Melgisorb** (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

#### **Sorbalgon**

Calcium alginate dressing

**Sorbalgon** (Paul Hartmann Ltd) T dressing 2g= £3.56, dressing 10cm × 10cm= £1.74, 5cm × 5cm= £0.83

#### **Sorbsan Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads

**Sorbsan Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

#### **Sorbsan Plus**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

#### **Sorbsan Ribbon**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.06

#### **Sorbsan Surgical Packing**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Packing dressing 2g= £3.50

#### **Suprasorb A**

Calcium alginate dressing

**Suprasorb A** (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.26, 5cm × 5cm= £0.64, cavity dressing 2g= £2.34

#### **Tegaderm Alginate**

Calcium alginate dressing

**Tegaderm Alginate dressing** (3M Health Care Ltd) 10cm × 10cm= £1.73, 2cm × 30.4cm= £2.89, 5cm × 5cm= £0.82

#### **Urgosorb**

Alginate and carboxymethylcellulose dressing without adhesive border

**Urgosorb** (Urgo Ltd) Pad dressing 10cm × 10cm= £2.17, 10cm × 20cm= £3.97, 5cm × 5cm= £0.90, Rope dressing 30cm= £2.84

#### **Capillary-acting dressings**

##### **Vacutex**

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

**Vacutex dressing** (Haddenham Healthcare Ltd) 10cm × 10cm= £1.70, 10cm × 15cm= £2.29, 10cm × 20cm= £2.75, 5cm × 5cm= £0.96

##### **Odour absorbent dressings**

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

##### **Askina Carbosorb**

Activated charcoal and non-woven viscose rayon dressing

**Askina Carbosorb dressing** (B.Braun Medical Ltd) 10cm × 10cm= £2.97, 10cm × 20cm= £5.73

##### **CarboFLEX**

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

**CarboFlex dressing** (ConvaTec Ltd) 10cm × 10cm= £3.30, 15cm × 20cm= £7.50, 8cm × 15cm oval= £3.96

##### **Carbopad VC**

Activated charcoal non-absorbent dressing

**Carbopad VC dressing** (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

##### **CliniSorb Odour Control Dressings**

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

**CliniSorb dressing** (CliniMed Ltd) 10cm × 10cm= £1.94, 10cm × 20cm= £2.58, 15cm × 25cm= £4.15

#### **Antimicrobial dressings**

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release

the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

### Honey dressings

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Activon Tulle*<sup>®</sup>, where no size is stated by the prescriber the 5 cm size is to be supplied.

*Medihoney<sup>®</sup> Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

#### Honey-based topical application

##### Activon Honey

Medical grade manuka honey

*Activon* (Advancis Medical) Medical Grade Manuka Honey dressing= £2.77

##### L-Mesitran SOFT ointment dressing

Honey (medical grade) 40%

*L-Mesitran* (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.62

##### MANUKApli Honey

Medical grade manuka honey

*MANUKApli* (Manuka Medical Ltd) dressing= £5.90

##### Medihoney Antibacterial Medical Honey

Medical grade, *Leptospermum* sp.

*Medihoney* (Derma Sciences Europe, Ltd) Antibacterial Medical Honey dressing= £9.97

##### Medihoney Antibacterial Wound Gel

Medical grade, *Leptospermum* sp. 80% in natural waxes and oils

*Medihoney* (Derma Sciences Europe, Ltd) Antibacterial Wound Gel dressing= £4.05

##### Melladerm Plus Honey

Medical grade; Bulgarian (mountain flower) 45% in basis containing polyethylene glycol

*Melladerm* (SanoMed Manufacturing BV) Plus dressing= £8.50

#### Sheet dressing

##### Actilite

Knitted viscose impregnated with medical grade manuka honey and manuka oil

*Actilite gauze dressing* (Advancis Medical) 10cm × 10cm= £1.23, 10cm × 20cm= £2.38, 5cm × 5cm= £0.71

##### Activon Tulle

Knitted viscose impregnated with medical grade manuka honey

*Activon Tulle gauze dressing* (Advancis Medical) 10cm × 10cm= £3.71, 5cm × 5cm= £2.25

##### Algivon

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey

*Algivon dressing* (Advancis Medical) 10cm × 10cm= £4.25, 5cm × 5cm= £2.48

##### Algivon Plus

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

*Algivon Plus* (Advancis Medical) Ribbon dressing 2.5cm × 20cm= £4.20, dressing 10cm × 10cm= £4.20, 5cm × 5cm= £2.45

##### L-Mesitran Border

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border

*L-Mesitran* (Aspen Medical Europe Ltd) Border sheet 10cm × 10cm square= £2.76

##### L-Mesitran Hydro

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border

*L-Mesitran Hydro sheet* (Aspen Medical Europe Ltd) 10cm × 10cm square= £2.65, 15cm × 20cm rectangular= £5.48

##### L-Mesitran Net

Hydrogel, non-adherent wound contact layer, without adhesive border

*L-Mesitran* (Aspen Medical Europe Ltd) Net sheet 10cm × 10cm square= £2.55

##### Medihoney Antibacterial Honey Apinate

Non-adherent calcium alginate dressing, impregnated with medical grade honey

*Medihoney Antibacterial Honey Apinate* (Derma Sciences Europe, Ltd) dressing 10cm × 10cm square= £3.42, 5cm × 5cm square= £2.01, rope dressing 1.9cm × 30cm= £4.23

##### Medihoney Antibacterial Honey Tulle

Woven fabric impregnated with medical grade manuka honey

*Medihoney* (Derma Sciences Europe, Ltd) Tulle dressing 10cm x 10cm= £3.00

##### Medihoney Gel sheet

Sodium alginate dressing impregnated with medical grade honey

*Medihoney Gel Sheet dressing* (Derma Sciences Europe, Ltd) 10cm × 10cm= £4.23, 5cm × 5cm= £1.76

##### MelMax

Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis

##### Melladerm Plus Tulle

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

*Melladerm* (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10

### Iodine dressings

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

*IodoFlex<sup>®</sup>* and *Iodosorb<sup>®</sup>* are used for the treatment of chronic exuding wounds; max. single application 50g, max. weekly application 150g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

*Iodozyme*<sup>®</sup> is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Oxyzyme*<sup>®</sup> is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Povidone-iodine Fabric Dressing* is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

#### **Iodoflex Paste**

Iodine 0.9% as cadexomer-iodine in a paste basis with gauze backing

*Iodoflex paste* (Smith & Nephew Healthcare Ltd) dressing 5g = £4.23, 10g = £8.45, 17g = £13.39

#### **Iodosorb Ointment**

Iodine 0.9% as cadexomer-iodine in an ointment basis

*Iodosorb* (Smith & Nephew Healthcare Ltd) ointment dressing= £9.25

#### **Iodosorb Powder**

Iodine 0.9% as cadexomer-iodine microbeads, 3-g sachet  
*Iodosorb* (Smith & Nephew Healthcare Ltd) powder dressing sachets= £1.98

#### *Povidone-iodine fabric dressing*

##### **Inadine**

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone-iodine ointment 10%  
*Inadine dressing* (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

#### **Silver dressings**

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

#### *Alginate dressings*

##### **Algisite Ag**

Calcium alginate dressing, with silver

*Algisite Ag dressing* (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.27, 10cm × 20cm= £7.85, 2g= £5.90, 5cm × 5cm= £1.71

##### **Askina Calgitrol Ag**

Calcium alginate and silver alginate dressing with polyurethane foam backing

*Askina Calgitrol Ag dressing* (B.Braun Medical Ltd) 10cm × 10cm square= £3.29, 15cm × 15cm square= £6.37, 20cm × 20cm square= £14.86

##### **Askina Calgitrol Thin**

Calcium alginate and silver alginate matrix, for use with absorbent secondary dressings

*Askina Calgitrol Thin dressing* (B.Braun Medical Ltd) 10cm × 10cm square= £4.19, 15cm × 15cm square= £9.41, 20cm × 20cm square= £16.62, 5cm × 5cm square= £2.02

##### **Melgisorb Ag**

Alginate and carboxymethylcellulose dressing, with ionic silver

*Melgisorb Ag* (Molnlycke Health Care Ltd) Cavity dressing 3cm × 4cm= £4.61, dressing 10cm × 10cm= £3.69, 15cm × 15cm= £7.82, 5cm × 5cm= £1.85

##### **Silvercel**

Alginate and carboxymethylcellulose dressing impregnated with silver

*Silvercel dressing* (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.74, 11cm × 11cm square= £4.17, 2.5cm × 30.5cm rectangular= £4.49, 5cm × 5cm square= £1.69

##### **Silvercel Non-adherent**

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

*Silvercel Non-Adherent* (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.94, dressing 10cm × 20cm rectangular= £7.25, 11cm × 11cm square= £3.89, 5cm × 5cm square= £1.62

##### **Sorbsan Silver Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

*Sorbsan Silver Flat dressing* (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

##### **Sorbsan Silver Plus**

Calcium alginate dressing with absorbent backing, with silver

*Sorbsan Silver Plus dressing* (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

##### **Sorbsan Silver Ribbon**

With silver

*Sorbsan* (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.18

##### **Sorbsan Silver Surgical Packing**

With silver

*Sorbsan* (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.80

##### **Suprasorb A + Ag**

Calcium alginate dressing, with silver

*Suprasorb A + Ag* (Lohmann & Rauscher) dressing 10cm × 10cm= £4.21, 10cm × 20cm= £7.78, 5cm × 5cm= £1.67, rope dressing 2g= £6.23

##### **Tegaderm Alginate Ag**

Calcium alginate and carboxymethylcellulose dressing, with silver

*Tegaderm Alginate Ag dressing* (3M Health Care Ltd) 10cm × 10cm= £3.27, 3cm × 30cm= £3.73, 5cm × 5cm= £1.40

##### **Urgosorb Silver**

Alginate and carboxymethylcellulose dressing, impregnated with silver

*Urgosorb Silver* (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.77, dressing 10cm × 10cm= £3.75, 10cm × 20cm= £7.06, 5cm × 5cm= £1.57

#### *Foam dressings*

##### **Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

*Acticoat Moisture Control dressing* (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.23, 10cm × 20cm rectangular= £33.58, 5cm × 5cm square= £7.37

##### **Allevyn Ag**

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

*Allevyn Ag* (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm × 10cm square= £5.65, 12.5cm × 12.5cm square= £7.42, 17.5cm × 17.5cm square= £14.27, 17cm × 17cm sacral= £11.14, 22cm × 22cm sacral= £14.93, 7.5cm × 7.5cm square= £3.59, Heel Non-

Adhesive dressing 10.5cm × 13.5cm = £11.05, Non-Adhesive dressing 10cm × 10cm square = £6.31, 15cm × 15cm square = £11.95, 20cm × 20cm square = £17.51, 5cm × 5cm square = £3.35

#### **Biatain Ag**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**Biatain Ag** (Coloplast Ltd) cavity dressing 5cm × 8cm = £4.13, dressing 10cm × 10cm square = £8.29, 10cm × 20cm rectangular = £15.24, 12.5cm × 12.5cm square = £9.48, 15cm × 15cm square = £16.64, 18cm × 18cm square = £19.03, 19cm × 20cm heel = £18.77, 20cm × 20cm square = £23.47, 23cm × 23cm sacral = £19.94, 5cm × 7cm rectangular = £3.41

#### **PolyMem Silver**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**PolyMem Silver** (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm = £7.10, dressing 10.8cm × 10.8cm square = £8.93, 12.7cm × 8.8cm oval = £5.64, 17cm × 19cm rectangular = £17.89, 5cm × 7.6cm oval = £2.29

#### **UrgoCell Silver**

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

**UrgoCell Silver dressing** (Urgo Ltd) 10cm × 10cm = £6.05, 15cm × 20cm = £11.08, 6cm × 6cm = £4.40

#### *Hydrocolloid dressings*

##### **Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

**Aquacel Ag** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm = £3.17, 2cm × 45cm = £4.84, dressing 10cm × 10cm square = £4.81, 15cm × 15cm square = £9.06, 20cm × 30cm rectangular = £22.48, 4cm × 10cm rectangular = £2.93, 4cm × 20cm rectangular = £3.82, 4cm × 30cm rectangular = £5.72

##### **Physiotulle Ag**

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

**Physiotulle** (Coloplast Ltd) dressing 10cm × 10cm = £2.32

#### *Low adherence dressing*

##### **Acticoat**

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £8.79, 10cm × 20cm rectangular = £13.75, 20cm × 40cm rectangular = £47.04, 5cm × 5cm square = £3.60

##### **Acticoat 7**

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular = £18.64, 15cm × 15cm square = £33.51, 5cm × 5cm square = £6.26

##### **Acticoat Flex 3**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat Flex 3 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £8.89, 10cm × 20cm rectangular = £13.90, 20cm × 40cm rectangular = £47.56, 5cm × 5cm square = £3.64

##### **Acticoat Flex 7**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat Flex 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular = £18.85, 15cm × 15cm square = £33.89, 5cm × 5cm square = £6.33

##### **Atrauman Ag**

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

**Atrauman Ag dressing** (Paul Hartmann Ltd) 10cm × 10cm = £1.28, 10cm × 20cm = £2.51, 5cm × 5cm = £0.53

#### *Soft polymer dressings*

##### **Allevyn Ag Gentle**

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

**Allevyn Ag Gentle** (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm = £6.53, 12.5cm × 12.5cm = £8.40, 17.5cm × 17.5cm = £16.00, 7.5cm × 7.5cm = £4.35, dressing 10cm × 10cm = £6.34, 10cm × 20cm = £10.48, 15cm × 15cm = £11.80, 20cm × 20cm = £17.48, 5cm × 5cm = £3.40

##### **Mepilex Ag**

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

**Mepilex** (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm = £6.21, 10cm × 20cm = £10.24, 15cm × 15cm = £11.53, 20cm × 20cm = £17.09, 20cm × 50cm = £64.13, Border Ag dressing 10cm × 12.5cm = £6.25, 10cm × 20cm = £9.10, 10cm × 30cm = £13.66, 15cm × 17.5cm = £11.48, 17cm × 20cm = £14.87, 7cm × 7.5cm = £3.46, Border Sacrum Ag dressing 18cm × 18cm = £12.00, 20cm × 20cm = £14.59, 23cm × 23cm = £19.17, Heel Ag dressing 13cm × 20cm = £12.97, 15cm × 22cm = £14.53

##### **Urgotul Silver**

Non-adherent soft polymer wound contact dressing, with silver

**Urgotul Silver dressing** (Urgo Ltd) 10cm × 12cm = £3.64, 15cm × 20cm = £9.91

#### *With charcoal*

##### **Actisorb Silver 220**

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

**Actisorb Silver 220 dressing** (Systagenix Wound Management Ltd) 10.5cm × 10.5cm = £2.60, 10.5cm × 19cm = £4.73, 6.5cm × 9.5cm = £1.66

#### **Other antimicrobials**

##### **Cutimed Siltec Sorbact**

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border  
**Cutimed Siltec Sorbact dressing** (BSN medical Ltd) 12.5cm × 12.5cm = £6.62, 15cm × 15cm = £8.20, 17.5cm × 17.5cm = £11.47, 22.5cm × 22.5cm = £17.45, 7.5cm × 7.5cm = £2.58, 17.5cm × 17.5cm sacral = £8.29, 23cm × 23cm sacral = £12.46

##### **Cutimed Sorbact**

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

**Cutimed Sorbact** (BSN medical Ltd) Ribbon dressing 2cm × 50cm = £4.14, 5cm × 200cm = £8.16, Round swab 3cm = £3.39, dressing pad 10cm × 10cm = £5.65, 10cm × 20cm = £8.81, 7cm × 9cm = £3.61, swab 4cm × 6cm = £1.69, 7cm × 9cm = £2.82

##### **Cutimed Sorbact Gel**

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

**Cutimed Sorbact Gel dressing** (BSN medical Ltd) 7.5cm × 15cm rectangular = £4.60, 7.5cm × 7.5cm square = £2.72

##### **Cutimed Sorbact Hydroactive**

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

**Cutimed Sorbact Hydroactive dressing** (BSN medical Ltd) 14cm × 14cm = £5.51, 14cm × 24cm = £8.83, 19cm × 19cm = £10.38, 24cm × 24cm = £15.73, 7cm × 8.5cm = £3.78

##### **Cutimed Sorbact Hydroactive B**

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border  
**Cutimed Sorbact Hydroactive B dressing** (BSN medical Ltd) 10cm × 10cm = £7.28, 10cm × 20cm = £11.66, 15cm × 15cm = £13.70, 5cm × 6.5cm = £4.08

##### **Flaminal Forte gel**

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

**Flaminal Forte gel dressing** (Flen Health UK Ltd) 15g = £7.87

**Flaminal Hydro gel**

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

**Flaminal Hydro gel dressing** (Flen Health UK Ltd) 15g = £7.87

**Kendall AMD**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £4.71, 10cm × 20cm rectangular= £8.92, 15cm × 15cm square= £8.92, 20cm × 20cm square= £13.07, 5cm × 5cm square= £2.50, 8.8cm × 7.5cm rectangular (fenestrated)= £4.23

**Kendall AMD Plus**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial Plus foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £4.94, 8.8cm × 7.5cm rectangular (fenestrated)= £4.43

**Ocitenil Wound gel**

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

**Ocitenil Wound Gel dressing** (Schulke & Mayr UK Ltd) 20ml= £4.78, 250ml= £25.21

**Prontosan Wound Gel**

Hydrogel containing betaine surfactant and polyhexanide

**Prontosan** (B.Braun Medical Ltd) Wound Gel dressing= £6.55

**Suprasorb X + PHMB**

Biosynthetic cellulose fibre dressing with polyhexanide

**Suprasorb X + PHMB dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular= £11.93, 2cm × 21cm rope= £7.43, 5cm × 5cm square= £2.63, 9cm × 9cm square= £5.24

**Telfa AMD**

Low adherence absorbent perforated plastic film faced dressing with polyhexanide

**Telfa AMD dressing** (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

**Telfa AMD Island**

Low adherence dressing with adhesive border and absorbent pad, with polyhexanide

**Telfa AMD Island dressing** (H & R Healthcare Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

**Chlorhexidine gauze dressing****Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

**Bactigras gauze dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= no price available, 5cm × 5cm= no price available

**Irrigation fluids****Ocitenil Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

**Ocitenil irrigation solution 350ml bottles** (Schulke & Mayr UK Ltd) bottle £4.60

**Prontosan Wound Irrigation Solution**

Aqueous solution containing betaine surfactant and polyhexanide

**Prontosan irrigation solution** (B.Braun Medical Ltd) 350ml bottles= £4.90, 40ml unit dose= £14.57

**Specialised dressings****Protease-modulating matrix dressings****Cadesorb Ointment**

**Cadesorb** (Smith & Nephew Healthcare Ltd) ointment= £9.47

**Catrix**

**Catrix dressing** (Cranage Healthcare Ltd) sachets= £3.80

**Promogran**

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran dressing** (Systagenix Wound Management Ltd) 123 square cm= £15.75, 28 square cm= £5.23

**Promogran Prisma Matrix**

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran Prisma dressing** (Systagenix Wound Management Ltd) 123 square cm= £18.12, 28 square cm= £6.36

**UrgoStart**

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

**UrgoStart dressing** (Urigo Ltd) 10cm × 10cm= £6.26, 15cm × 20cm= £11.26, 6cm × 6cm= £4.53, 12cm × 19cm heel= £8.63

**UrgoStart Contact**

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

**UrgoStart** (Urigo Ltd) Contact dressing 5cm × 7cm= £3.03

**Silicone keloid dressings**

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

*Silicone gel***Bapsarcare**

Silicone gel

**Bapsarcare** (Espere Healthcare Ltd) gel= £17.12

**Ciltech**

Silicone gel

**Ciltech** (Su-Med International (UK) Ltd) gel= £50.00

**Dermatix**

Silicone gel

**Dermatix gel** (Meda Pharmaceuticals Ltd) = £60.53

**Kelo-cote UV**

Silicone gel with SPF 30 UV protection

**Kelo-cote** (Alliance Pharmaceuticals Ltd) UV gel= £17.88

**Kelo-cote gel**

Silicone gel

**Kelo-cote** (Alliance Pharmaceuticals Ltd) gel= £51.00

**Kelo-cote spray**

Silicone spray

**Kelo-cote** (Alliance Pharmaceuticals Ltd) spray= £51.00

**ScarSil**

Silicone gel

**ScarSil** (Jobskin Ltd) gel= £15.19

**Silgel STC-SE**

Silicone gel

**Silgel** (Nagor Ltd) STC-SE gel= £19.00

*Silicone sheets***Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Advasil Conform sheet** (Advancis Medical) 10cm × 10cm square= £5.24, 15cm × 10cm rectangular= £9.24

**Bapsarcare T**

Self-adhesive silicone gel sheet

**Bapsarcare T sheet** (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.07, 5cm × 30cm rectangular= £9.07, 5cm × 7cm rectangular= £3.17

**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

**Cica-Care sheet** (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £29.30, 6cm × 12cm rectangular= £15.03

**Ciltech**

Silicone gel sheet

**Ciltech sheet** (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

**Dermatix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

**Dermafix** (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

#### **Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Mepiform sheet** (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.20, 5cm × 7cm rectangular= £3.54, 9cm × 18cm rectangular= £13.86

#### **Scar FX**

Self-adhesive, transparent, silicone gel sheet

**Scar Fx sheet** (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

#### **Silgel**

Silicone gel sheet

**Silgel sheet** (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

## **Adjunct dressings and appliances**

### **Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

#### *Cotton*

##### **Absorbent Cotton, BP**

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

##### **Absorbent Cotton, Hospital Quality**

As for absorbent cotton but lower quality materials, shorter staple length etc.

**Absorbent** (Robert Bailey & Son Plc) cotton hospital quality

#### *Gauze and cotton tissue*

##### **Gamgee Tissue (blue)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2  
**Gamgee** (Robinson Healthcare) tissue blue label

##### **Gamgee Tissue (pink)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2  
**Gamgee** (Robinson Healthcare) tissue pink label DT

#### *Gauze and tissue*

##### **Absorbent Cotton Gauze, BP 1988**

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988

**Vernaid** (Synergy Health (UK) Ltd) absorbent cotton BP 1988

##### **Absorbent Cotton and Viscose Ribbon Gauze, BP 1988**

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

**Vernaid Fast Edge ribbon gauze sterile** (Synergy Health (UK) Ltd) 1.25cm, 2.5cm

#### *Lint*

##### **Absorbent Lint, BPC**

Cotton cloth of plain weave with nap raised on one side from warp yarns

**Absorbent** (Robinson Healthcare) lint

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

**Clini** (CliniSupplies Ltd) absorbent lint BPC

#### *Pads*

##### **Drisorb**

Absorbent Dressing Pads, Sterile

**Drisorb** (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

##### **PremierPad**

Absorbent Dressing Pads, Sterile

**PremierPad dressing pad** (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

##### **XuPad**

Absorbent Dressing Pads, Sterile

**Xupad dressing pad** (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

### **Wound drainage pouches**

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

#### **Biotrol Draina S**

Wound drainage pouch

**Biotrol Draina S wound drainage bag** (B.Braun Medical Ltd) large (Transparent)= £98.03, medium (Transparent)= £79.71, mini (Transparent)= £79.95

#### **Biotrol Draina S Vision**

Wound drainage pouch

**Draina S Vision** (B.Braun Medical Ltd) 50 wound drainage bag= £103.84, 75 wound drainage bag= £109.70

#### **Eakin Access window**

For use with Eakin<sup>®</sup> pouches

**Eakin** (Pelican Healthcare Ltd) access window large= £38.76

#### **Eakin Wound pouch, bung closure**

Wound pouch, bung closure

**Eakin wound drainage bag with bung closure** (Pelican Healthcare Ltd) large= £105.22, medium= £77.53, small= £55.38, and access window for horizontal wounds, extra large= £105.22, for horizontal wounds, extra large= £94.14, for vertical incision wounds, extra large= £94.14, wounds, extra large= £94.14

#### **Eakin Wound pouch, fold and tuck closure**

Wound pouch, fold and tuck closure

**Eakin wound drainage bag with fold and tuck closure** (Pelican Healthcare Ltd) large= £94.14, medium= £71.99, small= £49.84, extra large= £83.07

#### **Option Wound Manager**

Wound drainage bag

**Option wound manager bag** (Oakmed Ltd) large= £162.58, medium= £136.41, small= £133.44, square= £142.34, extra small= £119.97

#### **Option Wound Manager with access port**

Wound drainage bag, with access port

**Option wound manager bag with access port** (Oakmed Ltd) large= £173.79, medium= £142.34, small= £139.37, square= £148.27, extra small= £131.18

#### **Option Wound Manager, cut to fit**

Wound drainage bag, cut to fit

**Option wound manager bag** (Oakmed Ltd) large= £85.47, medium= £81.61, small= £73.66

#### **Welland Fistula bag**

Wound drainage bag, cut-to-fit

**Welland** (Welland Medical Ltd) Fistula wound drainage bag= £84.29

**Physical debridement pads**

DebriSoft<sup>®</sup> is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. DebriSoft<sup>®</sup> must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

**DebriSoft Pad**

Polyester fibres with bound edges and knitted outer surface coated with polyacrylate

**DebriSoft** (Lohmann & Rauscher) pad 10cm × 10cm= £6.61

**Complex adjunct therapies****Topical negative pressure therapy***Accessories***Renasys**

Soft port and connector

**Renasys** (Smith & Nephew Healthcare Ltd) Soft Port= £11.38, connector for use with soft port= £3.34

**V.A.C.**

Drape, gel for canister, Sensa T.R.A.C. Pad

**Sensa T.R.A.C.** (KCI Medical Ltd) pad= £11.04

**T.R.A.C.** (KCI Medical Ltd) connector= £3.16

**V.A.C.** (KCI Medical Ltd) drape= £9.46, gel strips= £3.79

**Venturi**

Gel patches, adhesive, and connector

**Venturi** (Talley Group Ltd) adhesive gel patch= £15.00, connector= £15.00

**WoundASSIST gel strip**

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

*Vacuum assisted closure products***Exsu-Fast kit 1**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 1= £28.04

**Exsu-Fast kit 2**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 2= £35.83

**Exsu-Fast kit 3**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 3= £35.83

**Exsu-Fast kit 4**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 4= £28.04

**V.A.C. GranuFoam**

Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver

**V.A.C. GranuFoam** (KCI Medical Ltd) Bridge dressing kit= £32.29,

Silver with Sensa T.R.A.C dressing kit medium= £38.33, small=

£33.05, dressing kit large= £31.94, medium= £27.53, small=

£23.13

**V.A.C. Simplace**

Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)

**V.A.C. Simplace EX dressing kit** (KCI Medical Ltd) medium= £30.82, small= £26.81

**V.A.C. WhiteFoam**

Polyvinyl alcohol foam dressing or dressing kit

**V.A.C. WhiteFoam dressing** (KCI Medical Ltd) large= £17.17, small=

£10.73, kit large= £33.80, small= £26.11

**Venturi**

Wound sealing kit, flat drain; with or without channel drain

**Venturi wound sealing kit with flat drain**, (Talley Group Ltd) large=

£17.50, standard= £15.00

**WoundASSIST**

Wound pack and channel drain

**WoundASSIST TNP dressing pack** (Huntleigh Healthcare Ltd)

medium/large= £23.85, small/medium= £20.81, channel drain

medium/large= £23.85, small/medium= £20.81, extra large=

£34.05

*Wound drainage collection devices***ActiV.A.C.**

Canister with gel

**ActiV.A.C.** (KCI Medical Ltd) canister with gel= £28.64

**S-Canister**

Canister kit

**S-Canister** (Smith & Nephew Healthcare Ltd) kit= £19.00

**V.A.C Freedom**

Canister with gel

**V.A.C.** (KCI Medical Ltd) Freedom Canister with gel= £29.08

**Venturi**

Canister kit with solidifier

**Venturi** (Talley Group Ltd) Compact canister kit= £12.50, canister

kit= £12.50

**WoundASSIST wound pack**

Canister

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP canister= £20.30

**Wound care accessories****Dressing packs**

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

**Multiple Pack Dressing No. 1**

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wave bandages (banded)

**VernaId** (Synergy Health (UK) Ltd) multiple pack dressing

*Non-drug tariff specification sterile dressing packs***Dressit**

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field

**Dressit sterile dressing pack** (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

**Nurse It**

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

**Nurse It sterile dressing pack** (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

**Polyfield Nitrile Patient Pack**

Contains powder-free nitrile gloves, laminate sheet, non-

woven swabs, towel, polythene disposable bag, apron

**Polyfield Nitrile Patient Pack** (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

*Sterile Dressing Pack with Non-Woven Pads***VernaId**

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**VernaId** (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

*Sterile dressing packs***VernaId**

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls,

absorbent paper towel, water repellent inner wrapper

**VernaId** (Synergy Health (UK) Ltd) sterile dressing pack

**Woven and fabric swabs****Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

**Alvita gauze swab 8ply** (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CS** (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

**Clini gauze swab 8ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Gauze** (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

**MeCoBo gauze swab 8ply** (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Propax gauze** (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

**Sovereign** (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Steraid** (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Vernaid gauze swab 8ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

#### Non-woven Fabric Swab

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

**CS** (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Clini non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CliniMed** (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**MeCoBo** (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Multisorb** (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm

**Sofisorb non-woven fabric swab 4ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Softswab non-woven fabric swab 4ply** (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Topper** (Systagenix Wound Management Ltd) 8 non-woven fabric swab 4ply non-sterile 10cm × 10cm

#### Filmated non-woven Fabric Swab

##### Regal

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

**Regal** (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

#### Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

#### Occlusive adhesive tapes

##### Blenderm

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

**Blenderm tape** (3M Health Care Ltd) 2.5cm= £1.78, 5cm= £3.39

##### Sleek

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

**Leukoplast Sleek tape** (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

#### Permeable adhesive tapes

##### 3m Kind Removal Silicone Tape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**3M Micropore Silicone tape** (3M Health Care Ltd) 2.5cm= £3.61, 5cm= £6.53

#### Chemifix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Chemifix tape** (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

#### Chemipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Chemipore tape** (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

#### Clinipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Clinipore tape** (CliniSupplies Ltd) 1.25cm= £0.35, 2.5cm= £0.74, 5cm= £1.00

#### Elastoplast

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

**Tensoplast** (BSN medical Ltd) elastic adhesive tape 2.5cm

#### Hypafix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Hypafix tape** (BSN medical Ltd) 10cm= £4.80, 15cm= £7.11, 2.5cm= £1.73, 20cm= £9.43, 30cm= £13.63, 5cm= £2.75

#### Insil

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Insil tape** (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

#### Leukofix

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukofix tape** (BSN medical Ltd) 1.25cm= £0.57, 2.5cm= £0.92, 5cm= £1.61

#### Leukopore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukopore tape** (BSN medical Ltd) 1.25cm= £0.51, 2.5cm= £0.79, 5cm= £1.39

#### Mediplast

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Mediplast tape** (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

#### Medioplast

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Medioplast Zinc Oxide plaster** (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

#### Mefix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Mefix tape** (Molnlycke Health Care Ltd) 10cm= £2.92, 15cm= £3.98, 2.5cm= £1.03, 20cm= £5.10, 30cm= £7.32, 5cm= £1.83

#### Mepitac

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Mepitac tape** (Molnlycke Health Care Ltd) 2cm= £7.01, 4cm= £7.01

#### Micropore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Micropore tape** (3M Health Care Ltd) 1.25cm= £0.62, 2.5cm= £0.92, 5cm= £1.63

#### **Omnifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Omnifix tape** (Paul Hartmann Ltd) 10cm= £4.14, 15cm= £6.11, 5cm= £2.46

#### **OpSite Flexifix Gentle**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**OpSite Flexifix Gentle tape** (Smith & Nephew Healthcare Ltd) 2.5cm= £10.60, 5cm= £19.87

#### **Primafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Primafix tape** (Smith & Nephew Healthcare Ltd) 10cm= £2.40, 15cm= £3.54, 20cm= £4.36, 5cm= £1.63

#### **Scanpor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Scanpor tape** (Bio-Diagnostics Ltd) 1.25cm= £0.56, 2.5cm= £0.92, 5cm= £1.76, 7.5cm= £2.58

#### **Siltape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Siltape** (Advancis Medical) 2cm= £5.64, 4cm= £5.64

#### **Strappal**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Strappal adhesive tape** (BSN medical Ltd) 2.5cm= £1.42, 5cm= £2.41, 7.5cm= £3.62

#### **Transpore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Transpore tape** (3M Health Care Ltd) 2.5cm= £0.85, 5cm= £1.49

#### **Zinc Oxide Adhesive Tape, BP 1988**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Fast Aid zinc oxide adhesive tape** (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

### **Skin closure dressings**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

#### *Skin closure strips, sterile*

##### **Leukostrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Leukostrip** (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.48

##### **Omnistrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Omnistrip** (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £24.68

##### **Steri-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Steri-strip** (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.83

### **Bandages**

#### **Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used

for closure of minor skin wounds and for additional suture support.

#### **Open-weave Bandage, Type 1 BP 1988**

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

**Clini open weave bandage Type 1 BP 1988** (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Vernaid white open weave bandage** (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**White open weave bandage** (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

#### **Triangular Calico Bandage, BP 1980**

Unbleached calico right-angled triangle

**Clini** (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

**Triangular** (BSN medical Ltd) calico bandage 90cm × 127cm

#### **Light-weight conforming bandages**

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

#### **Acti-Wrap**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Acti-Wrap (cohesive/latex free) bandage** (L&R Medical UK Ltd) 10cm × 4m= £0.83, 6cm × 4m= £0.48, 8cm × 4m= £0.70

#### **Cotton Conforming Bandage, BP 1988**

Cotton fabric, plain weave, treated to impart some elasticity to warp and weft

**Easifix Crinx bandage** (BSN medical Ltd) 10cm × 3.5m= £1.06, 15cm × 3.5m= £1.45, 5cm × 3.5m= £0.70, 7.5cm × 3.5m= £0.86

#### **Easifix**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Easifix bandage** (BSN medical Ltd) 10cm × 4m= £0.52, 15cm × 4m= £0.89, 5cm × 4m= £0.36, 7.5cm × 4m= £0.44

#### **Easifix K**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Easifix K bandage** (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.33, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.17

#### **Hospiform**

Fabric, plain weave, warp of polyamide, weft of viscose

**Hospiform bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.19, 12cm × 4m= £0.24, 6cm × 4m= £0.14, 8cm × 4m= £0.17

#### **K-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**K-Band bandage** (Urigo Ltd) 10cm × 4m= £0.29, 15cm × 4m= £0.50, 5cm × 4m= £0.21, 7cm × 4m= £0.26

#### **Knit Fix**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Knit Fix bandage** (Robert Bailey & Son Plc) 10cm × 4m= £0.17, 15cm × 4m= £0.33, 5cm × 4m= £0.12, 7cm × 4m= £0.17

#### **Knit-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Knit-Band bandage** (CliniSupplies Ltd) 10cm × 4m= £0.17, 15cm × 4m= £0.31, 5cm × 4m= £0.10, 7cm × 4m= £0.15

#### **Kontour**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Kontour bandage** (Easigrip Ltd) 10cm × 4m= £0.40, 15cm × 4m= £0.66, 5cm × 4m= £0.28, 7.5cm × 4m= £0.35

**Mollelast**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Mollelast** (Lohmann & Rauscher) bandage 4cm × 4m= £0.31

**Peha-haft**

Polyamide and Cellulose Contour Bandage, cohesive, latex-free

**Peha-haft bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.78, 12cm × 4m= £0.92, 2.5cm × 4m= £0.75, 4cm × 4m= £0.48, 6cm × 4m= £0.57, 8cm × 4m= £0.68

**PremierBand**

Polyamide and Cellulose Contour Bandage

**PremierBand bandage** (Shermond) 10cm × 4m= £0.17, 15cm × 4m= £0.25, 5cm × 4m= £0.12, 7.5cm × 4m= £0.14

**Slinky**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Slinky bandage** (Molnlycke Health Care Ltd) 10cm × 4m= £0.72, 15cm × 4m= £1.05, 7.5cm × 4m= £0.60

**Stayform**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Stayform bandage** (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.68, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

**Tubular bandages and garments**

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

*Elasticated Surgical Tubular Stockinette, Foam padded* is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

*Non-elasticated Cotton Stockinette, Bleached, BP 1988* 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

**Elasticated****Acti-Fast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

**Acti-Fast 2-way stretch stockinette** (L&R Medical UK Ltd) 10.75cm= £5.74, 17.5cm= £1.85, 20cm= £3.23, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.78

**Clinifast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

#### DreamSkin

Knitted silk fabric, hypoallergenic, sericin-free, with methacrylate copolymer and zinc-based antibacterial  
**DreamSkin** (DreamSkin Health Ltd) baby leggings with foldaway feet 0-3 months = £25.66, 12-18 months = £28.59, 18-24 months = £29.13, 3-4 years = £30.72, 3-6 months = £26.17, 6-9 months = £27.53, 9-12 months = £28.06, body suit 0-3 months = £36.15, 12-18 months = £39.20, 18-24 months = £39.74, 3-4 years = £41.33, 3-6 months = £36.66, 6-9 months = £38.14, 9-12 months = £38.70, boxer shorts 11-12 years = £21.79, boxer shorts 3-4 years = £21.79, boxer shorts 5-6 years = £21.79, boxer shorts 7-8 years = £21.79, boxer shorts 9-10 years = £21.79, boxer shorts male adult XX large = £34.27, extra large = £34.27, large = £34.27, medium = £34.27, small = £34.27, briefs 11-12 years = £21.79, briefs 3-4 years = £21.79, briefs 5-6 years = £21.79, briefs 7-8 years = £21.79, briefs 9-10 years = £21.79, briefs female adult XX large = £32.19, extra large = £32.19, large = £32.19, medium = £32.19, small = £32.19, eye mask = £10.35, footless leggings 11-12 years = £33.80, footless leggings 3-4 years = £30.72, footless leggings 5-6 years = £32.24, footless leggings 7-8 years = £32.76, footless leggings 9-10 years = £33.28, footless leggings adult female XX large = £77.74, extra large = £77.74, large = £77.74, medium = £77.74, small = £77.74, footless leggings adult male XX large = £77.74, extra large = £77.74, large = £77.74, medium = £77.74, small = £77.74, gloves extra large adult = £20.41, gloves large adult = £20.41, gloves medium adult = £20.41, child = £14.54, gloves small adult = £20.41, child = £14.54, head mask child = £15.91, infant = £15.91, teenager = £20.76, heel-less undersocks = £24.05, liner socks adult female 4-5 1/2 = £18.29, 6-8 1/2 = £18.29, liner socks adult male 6-8 1/2 = £18.29, 9-11 = £18.29, liner socks child 12 1/2 - 3 1/2 = £18.29, 3-5 1/2 = £18.29, 4-5 1/2 = £18.29, 6-8 1/2 = £18.29, 9-12 = £18.29, polo neck shirt 11-12 years = £54.03, polo neck shirt 3-4 years = £46.75, polo neck shirt 5-6 years = £49.87, polo neck shirt 7-8 years = £51.95, polo neck shirt 9-10 years = £52.99, polo neck shirt adult female XX large = £76.84, extra large = £76.84, large = £76.84, medium = £76.84, small = £76.84, polo neck shirt adult male XX large = £76.84, extra large = £76.84, large = £76.84, medium = £76.84, small = £76.84, pyjamas 11-12 years = £79.52, 3-4 years = £68.91, 5-6 years = £73.16, 7-8 years = £76.34, 9-10 years = £77.96, round neck shirt 3-4 years = £46.76, round neck shirt 5-6 years = £48.84, round neck shirt 7-8 years = £50.92, round neck shirt 9-10 years = £51.96, round neck shirt adult female XX large = £76.84, extra large = £76.84, large = £76.84, medium = £76.84, small = £76.84, tubular sleeves = £33.42, sleeves = £26.87

#### Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

##### CliniLite

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniLite bandage** (CliniSupplies Ltd) 10cm × 4.5m = £0.81, 15cm × 4.5m = £1.17, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.61

##### CliniPlus

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniPlus** (CliniSupplies Ltd) bandage 10cm × 8.7m = £1.81

##### Cotton Crepe Bandage

Light support bandage, 4.5 m stretched (all)

**Hospicrepe 239 bandage** (Paul Hartmann Ltd) 10cm × 4.5m = £0.81, 15cm × 4.5m = £1.18, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.63

##### Cotton Crepe Bandage, BP 1988

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

**Elastocrepe bandage** (BSN medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Flexocrepe bandage** (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

**Sterocrepe bandage** (Steroplast Healthcare Ltd) 10cm × 4.5m, 7.5cm × 4.5m

#### **Cotton Suspensory Bandage**

(Drug Tariff). Type 1: cotton net bag with draw tapes and webbing waistband; small, medium, and large (all)

#### **Crepe Bandage, BP 1988**

Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched

**Alvita crepe bandage** (Alliance Healthcare (Distribution) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Clinicrepe bandage** (CliniSupplies Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Crepe bandage** (Robert Bailey & Son Plc) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Propax crepe bandage** (BSN medical Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Vernaid crepe bandage** (Synergy Health (UK) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

#### **Elset**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Elset** (Molnlycke Health Care Ltd) S bandage 15cm × 12m= £5.64, bandage 10cm × 6m= £2.63, 10cm × 8m= £3.37, 15cm × 6m= £2.82

#### **Hospicrepe 233**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**Hospicrepe 233 bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.96, 15cm × 4.5m= £1.36, 5cm × 4.5m= £0.52, 7.5cm × 4.5m= £0.72

#### **Hospilite**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Hospilite bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.63, 15cm × 4.5m= £0.92, 5cm × 4.5m= £0.37, 7.5cm × 4.5m= £0.52

#### **K-Lite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Lite** (Urgo Ltd) Long bandage 10cm × 5.25m= £1.16, bandage 10cm × 4.5m= £1.02, 15cm × 4.5m= £1.47, 5cm × 4.5m= £0.56, 7cm × 4.5m= £0.78

#### **K-Plus**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Plus** (Urgo Ltd) Long bandage 10cm × 10.25m= £2.67, bandage 10cm × 8.7m= £2.31

#### **Knit-Firm**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Knit-Firm bandage** (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

#### **L3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**L3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.26

#### **Neosport**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Neosport bandage** (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

#### **PremierBand**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**PremierBand bandage** (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

#### **Profore #2**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Profore #2** (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.39, latex free bandage 10cm × 4.5m= £1.47

#### **Profore #3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Profore #3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.03, latex free bandage 10cm × 8.7m= £4.38

#### **Setocrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Setocrepe** (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.21

#### **Soffcrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Soffcrepe bandage** (BSN medical Ltd) 10cm × 4.5m= £1.27, 15cm × 4.5m= £1.85, 5cm × 4.5m= £0.71, 7.5cm × 4.5m= £1.00

#### **Adhesive bandages**

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

#### **Elastic Adhesive Bandage, BP 1993**

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

**Tensoplast bandage** (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

#### **Cohesive bandages**

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

#### *Cohesive extensible bandages*

#### **Coban**

Bandage

**Coban** (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.95

#### **K Press**

Bandage

**K Press bandage** (Urgo Ltd) 10cm × 6.5m= £2.96, 10cm × 7.5m= £3.45, 12cm × 7.5m= £4.34, 8cm × 7.5cm= £3.25

#### **Profore #4**

Bandage

**Profore #4** (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.33, latex free bandage 10cm × 2.5m= £3.62

#### **Ultra Fast**

Bandage

**Ultra** (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.59

#### **Compression bandages**

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful

graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 234 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

#### High compression bandages

##### High Compression Bandage

Cotton, viscose, nylon, and Lycra® extensible bandage, 3 m (unstretched)

**K-ThreeC** (Urgo Ltd) bandage 10cm × 3m= £2.87

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.71

##### PEC High Compression Bandages

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

**Setopress** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.58

##### VEC High Compression Bandages

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

**Tensopress bandage** (BSN medical Ltd) 10cm × 3m= £3.54, 7.5cm × 3m= £2.75

#### Short stretch compression bandages

##### Actico

Bandage

**Actico bandage** (L&R Medical UK Ltd) 10cm × 6m= £3.43, 12cm × 6m= £4.38, 4cm × 6m= £2.46, 6cm × 6m= £2.88, 8cm × 6m= £3.31

##### Comprilan

Bandage

**Comprilan bandage** (BSN medical Ltd) 10cm × 5m= £3.46, 12cm × 5m= £4.22, 6cm × 5m= £2.74, 8cm × 5m= £3.22

##### Rosidal K

Bandage

**Rosidal K bandage** (Lohmann & Rauscher) 10cm × 10m= £6.17, 10cm × 5m= £3.55, 12cm × 5m= £4.30, 6cm × 5m= £2.72, 8cm × 5m= £3.25

#### Sub-compression wadding bandage

##### Cellona Undercast Padding

Padding

**Cellona Undercast padding bandage** (Lohmann & Rauscher) 10cm × 2.75m= £0.48, 15cm × 2.75m= £0.62, 5cm × 2.75m= £0.32, 7.5cm × 2.75m= £0.39

##### Flexi-Ban

Padding

**Flexi-Ban** (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.51

##### K Tech Reduced

Padding

**K Tech Reduced bandage 10cm x** (Urgo Ltd) 6m= £4.79, 7.3m= £5.23

##### K-Soft

Padding

**K-Soft** (Urgo Ltd) Long bandage 10cm × 4.5m= £0.58, bandage 10cm × 3.5m= £0.46

##### K-Tech (K Tech in DMD)

Padding

**K Tech** (Urgo Ltd) Reduced bandage 10cm × 7.3m= £5.23, bandage 10cm × 5m= £3.99, 10cm × 6m= £4.79, 12cm × 6m= £6.04, 12cm × 7.3m= £6.60, 8cm × 6m= £4.52, 8cm × 7.3m= £4.93

##### Ortho-Band Plus

Padding

**Ortho-Band** (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

##### Profore #1

Padding

**Profore #1** (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.72, latex free bandage 10cm × 3.5m= £0.78

##### Softex

Padding

**Softex** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

##### SurePress

Padding

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.71

##### Ultra Soft

Padding

**Ultra** (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

##### Velband

Padding

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.75

#### Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

#### Four layer systems

##### K-Four

Padding

##### K-Four

Multi-layer compression bandaging kit, four layer system  
**K-Four** (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference = £4.55, multi-layer compression bandage kit 18cm-25cm ankle circumference= £6.96, 25cm-30cm ankle circumference= £6.96, greater than 30cm ankle circumference= £9.58, less than 18cm ankle circumference= £7.27

##### Profore

Wound contact layer

##### Profore

Multi-layer compression bandaging kit, four layer system  
**Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.10, multi-layer compression bandage kit= £5.61, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.39, multi-layer compression bandage kit 18cm-25cm ankle circumference= £9.72, 25cm-30cm ankle circumference= £8.07, above 30cm ankle circumference= £12.09, up to 18cm ankle circumference= £10.43

#### Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

*Ziproc*<sup>®</sup> can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

#### Zinc Paste Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol, hydroxybenzoates

*Viscopaste* (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.74

#### Zinc Paste and Ichthammol Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

*Excipients: may include* cetostearyl alcohol

*Ichthopaste* (Evolan Pharma AB) bandage 7.5cm × 6m= £3.78

#### Ziproc

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

*Ziproc* (Evolan Pharma AB) stockings= £34.70

### Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

*Graduated Compression hosiery, Class 1 Light Support* is used for superficial or early varices, varicosis during pregnancy.

*Graduated Compression hosiery, Class 2 Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

*Graduated Compression hosiery, Class 3 Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

#### Compression values for hosiery and lymphoedema garments

*Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

### Graduated compression hosiery

#### Class 1 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

#### Class 2 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

#### Accessories

#### Suspender

Suspender, for thigh stockings

#### Anklets

#### Class 2 Medium Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Class 3 Strong Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Knee caps

#### Class 2 Medium Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Class 3 Strong Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

### Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

# Dental Practitioners' Formulary

## List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred. Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP  
 Aciclovir Oral Suspension, BP, 200 mg/5 mL  
 Aciclovir Tablets, BP, 200 mg  
 Aciclovir Tablets, BP, 800 mg  
 Amoxicillin Capsules, BP  
 Amoxicillin Oral Powder, DPF  
 Amoxicillin Oral Suspension, BP  
 Artificial Saliva Gel, DPF  
 Artificial Saliva Oral Spray, DPF  
 Artificial Saliva Pastilles, DPF  
 Artificial Saliva Protective Spray, DPF  
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):  
*BioXtra*<sup>®</sup> Gel Mouthspray  
*BioXtra*<sup>®</sup> Moisturising Gel  
*Glandosane*<sup>®</sup>  
*Saliveze*<sup>®</sup>  
 Artificial Saliva Substitute Spray, DPF  
 Aspirin Tablets, Dispersible, BP  
 Azithromycin Capsules, 250 mg, DPF  
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF  
 Azithromycin Tablets, 250 mg, DPF  
 Azithromycin Tablets, 500 mg, DPF  
 Beclometasone Pressurised Inhalation, BP,  
 50 micrograms/metered inhalation, CFC-free, as:  
*Clenil Modulite*<sup>®</sup>  
 Benzylamine Mouthwash, BP 0.15%  
 Benzylamine Oromucosal Spray, BP 0.15%  
 Betamethasone Soluble Tablets, 500 micrograms, DPF  
 Carbamazepine Tablets, BP  
 Cefalexin Capsules, BP  
 Cefalexin Oral Suspension, BP  
 Cefalexin Tablets, BP  
 Cefradine Capsules, BP  
 Cetirizine Oral Solution, BP, 5 mg/5 mL  
 Cetirizine Tablets, BP, 10 mg  
 Chlorhexidine Gluconate Gel, BP  
 Chlorhexidine Mouthwash, BP  
 Chlorhexidine Oral Spray, DPF  
 Chlorphenamine Oral Solution, BP  
 Chlorphenamine Tablets, BP  
 Choline Salicylate Dental Gel, BP  
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF  
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF  
 Clarithromycin Tablets, BP  
 Clindamycin Capsules, BP  
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)  
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL  
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL  
 Diazepam Oral Solution, BP, 2 mg/5 mL  
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP  
 Dihydrocodeine Tablets, BP, 30 mg  
 Doxycycline Tablets, Dispersible, BP  
 Doxycycline Capsules, BP, 100 mg  
 Doxycycline Tablets, 20 mg, DPF  
 Ephedrine Nasal Drops, BP  
 Erythromycin Ethyl Succinate Oral Suspension, BP  
 Erythromycin Ethyl Succinate Tablets, BP  
 Erythromycin Stearate Tablets, BP  
 Erythromycin Tablets, Gastro-resistant, BP  
 Fluconazole Capsules, 50 mg, DPF  
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF  
 Hydrocortisone Cream, BP, 1%  
 Hydrocortisone Oromucosal Tablets, BP  
 Hydrogen Peroxide Mouthwash, BP, 6%  
 Ibuprofen Oral Suspension, BP, sugar-free  
 Ibuprofen Tablets, BP  
 Lansoprazole Capsules, Gastro-resistant, BP  
 Lidocaine Ointment, BP, 5%  
 Lidocaine Spray 10%, DPF  
 Loratadine Syrup, 5 mg/5 mL, DPF  
 Loratadine Tablets, BP, 10 mg  
 Menthol and Eucalyptus Inhalation, BP 1980  
 Metronidazole Oral Suspension, BP  
 Metronidazole Tablets, BP  
 Miconazole Cream, BP  
 Miconazole Oromucosal Gel, BP  
 Miconazole and Hydrocortisone Cream, BP  
 Miconazole and Hydrocortisone Ointment, BP  
 Nystatin Oral Suspension, BP  
 Omeprazole Capsules, Gastro-resistant, BP  
 Oxytetracycline Tablets, BP  
 Paracetamol Oral Suspension, BP  
 Paracetamol Tablets, BP  
 Paracetamol Tablets, Soluble, BP  
 Phenoxymethylpenicillin Oral Solution, BP  
 Phenoxymethylpenicillin Tablets, BP  
 Promethazine Hydrochloride Tablets, BP  
 Promethazine Oral Solution, BP  
 Saliva Stimulating Tablets, DPF  
 Sodium Chloride Mouthwash, Compound, BP  
 Sodium Fluoride Mouthwash, BP  
 Sodium Fluoride Oral Drops, BP  
 Sodium Fluoride Tablets, BP  
 Sodium Fluoride Toothpaste 0.619%, DPF  
 Sodium Fluoride Toothpaste 1.1%, DPF  
 Sodium Fusidate Ointment, BP  
 Temazepam Oral Solution, BP  
 Temazepam Tablets, BP  
 Tetracycline Tablets, BP  
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

## Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

### Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

**Artificial Saliva Gel**

(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

**Artificial Saliva Oral Spray**

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

**Artificial Saliva Pastilles**

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

**Artificial Saliva Protective Spray**

(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

**Artificial Saliva Substitute Spray**

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

**Azithromycin Capsules**

azithromycin 250 mg

**Azithromycin Oral Suspension 200 mg/5 mL**

azithromycin 200 mg/5 mL when reconstituted with water

**Azithromycin Tablets**

azithromycin 250 mg and 500 mg

**Betamethasone Soluble Tablets 500 micrograms**

betamethasone (as sodium phosphate) 500 micrograms

**Chlorhexidine Oral Spray**

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

**Clarithromycin Oral Suspension 125 mg/5 mL**

clarithromycin 125 mg/5 mL when reconstituted with water

**Clarithromycin Oral Suspension 250 mg/5 mL**

clarithromycin 250 mg/5 mL when reconstituted with water

**Doxycycline Tablets 20 mg**

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

**Fluconazole Capsules 50 mg**

fluconazole 50 mg

**Fluconazole Oral Suspension 50 mg/5 mL**

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

**Lidocaine Spray 10%**

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

**Loratadine Syrup 5 mg/5 mL**

loratadine 5 mg/5 mL

**Saliva Stimulating Tablets**

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

**Sodium Fluoride Toothpaste 0.619%**

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

**Sodium Fluoride Toothpaste 1.1%**

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

# Nurse Prescribers' Formulary (NPF)

## Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

### Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP  
 Arachis Oil Enema, NPF  
 Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)  
 Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)  
 Bisacodyl Tablets, BP  
 Catheter Maintenance Solution, Sodium Chloride, NPF  
 Catheter Maintenance Solution, 'Solution G', NPF  
 Catheter Maintenance Solution, 'Solution R', NPF  
 Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%  
 Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%  
 Choline Salicylate Dental Gel, BP  
 Clotrimazole Cream 1%, BP  
 Co-danthramer Capsules, NPF  
 Co-danthramer Capsules, Strong, NPF  
 Co-danthramer Oral Suspension, NPF  
 Co-danthramer Oral Suspension, Strong, NPF  
 Co-danthrusate Capsules, BP  
 Co-danthrusate Oral Suspension, NPF  
 Crotonitron Cream, BP  
 Crotonitron Lotion, BP  
 Dimeticone barrier creams containing at least 10%  
 Dimeticone Lotion, NPF  
 Docusate Capsules, BP  
 Docusate Enema, NPF  
 Docusate Oral Solution, BP  
 Docusate Oral Solution, Paediatric, BP  
 Econazole Cream 1%, BP  
 Emollients as listed below:  
 Aquadrate<sup>®</sup> 10% w/w Cream  
 Arachis Oil, BP  
 Balneum<sup>®</sup> Plus Cream  
 Cetraben<sup>®</sup> Emollient Cream  
 Dermamist<sup>®</sup>  
 Diprobase<sup>®</sup> Cream  
 Diprobase<sup>®</sup> Ointment  
 Doublebase<sup>®</sup>  
 Doublebase<sup>®</sup> Dayleve Gel  
 E45<sup>®</sup> Cream  
 E45<sup>®</sup> Itch Relief Cream  
 Emulsifying Ointment, BP  
 Eucerin<sup>®</sup> Intensive 10% w/w Urea Treatment Cream  
 Eucerin<sup>®</sup> Intensive 10% w/w Urea Treatment Lotion  
 Hydromol<sup>®</sup> Cream  
 Hydromol<sup>®</sup> Intensive

Hydrous Ointment, BP  
 Lipobase<sup>®</sup>  
 Liquid and White Soft Paraffin Ointment, NPF  
 Neutrogena<sup>®</sup> Norwegian Formula Dermatological Cream  
 Nutraplus<sup>®</sup> Cream  
 Oilatum<sup>®</sup> Cream  
 Oilatum<sup>®</sup> Junior Cream  
 Paraffin, White Soft, BP  
 Paraffin, Yellow Soft, BP  
 Ultrabase<sup>®</sup>  
 Unguentum M<sup>®</sup>  
 Emollient Bath and Shower Preparations as listed below:  
 Aqueous Cream, BP  
 Balneum<sup>®</sup> (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))  
 Balneum Plus<sup>®</sup> Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))  
 Cetraben<sup>®</sup> Emollient Bath Additive  
 Dermalmo<sup>®</sup> Bath Emollient  
 Doublebase<sup>®</sup> Emollient Bath Additive  
 Doublebase<sup>®</sup> Emollient Shower Gel  
 Doublebase<sup>®</sup> Emollient Wash Gel  
 Hydromol<sup>®</sup> Bath and Shower Emollient  
 Oilatum<sup>®</sup> Emollient  
 Oilatum<sup>®</sup> Gel  
 Oilatum<sup>®</sup> Junior Bath Additive  
 Zerolatum<sup>®</sup> Emollient Medicinal Bath Oil  
 Folic Acid Tablets 400 micrograms, BP  
 Glycerol Suppositories, BP  
 Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)  
 Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)  
 Ispaghula Husk Granules, BP  
 Ispaghula Husk Granules, Effervescent, BP  
 Ispaghula Husk Oral Powder, BP  
 Lactulose Solution, BP  
 Lidocaine Ointment, BP  
 Lidocaine and Chlorhexidine Gel, BP  
 Macrogol Oral Liquid, Compound, NPF  
 Macrogol Oral Powder, Compound, NPF  
 Macrogol Oral Powder, Compound, Half-strength, NPF  
 Magnesium Hydroxide Mixture, BP  
 Magnesium Sulfate Paste, BP  
 Malathion aqueous lotions containing at least 0.5%  
 Mebendazole Oral Suspension, NPF  
 Mebendazole Tablets, NPF  
 Methylcellulose Tablets, BP  
 Miconazole Cream 2%, BP  
 Miconazole Oromucosal Gel, BP  
 Mouthwash Solution-tablets, NPF  
 Nicotine Inhalation Cartridge for Oromucosal Use, NPF  
 Nicotine Lozenge, NPF  
 Nicotine Medicated Chewing Gum, NPF  
 Nicotine Nasal Spray, NPF  
 Nicotine Oral Spray, NPF  
 Nicotine Sublingual Tablets, NPF  
 Nicotine Transdermal Patches, NPF  
 Nystatin Oral Suspension, BP  
 Olive Oil Ear Drops, BP  
 Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)  
 Paracetamol Tablets, Soluble, BP (includes 120-mg and 500-mg tablets; max. 96 tablets; max. pack size 32 tablets)  
 Permethrin Cream, NPF  
 Phosphates Enema, BP  
 Povidone–Iodine Solution, BP  
 Senna Oral Solution, NPF  
 Senna Tablets, BP  
 Senna and Ispaghula Granules, NPF  
 Sodium Chloride Solution, Sterile, BP  
 Sodium Citrate Compound Enema, NPF  
 Sodium Picosulfate Capsules, NPF  
 Sodium Picosulfate Elixir, NPF  
 Spermicidal contraceptives as listed below:  
   Gygel® Contraceptive Jelly  
 Sterculia Granules, NPF  
 Sterculia and Frangula Granules, NPF  
 Titanium Ointment, BP  
 Water for Injections, BP  
 Zinc and Castor Oil Ointment, BP  
 Zinc Oxide and Dimeticone Spray, NPF  
 Zinc Oxide Impregnated Medicated Bandage, NPF  
 Zinc Oxide Impregnated Medicated Stocking, NPF  
 Zinc Paste Bandage, BP 1993  
 Zinc Paste and Ichthammol Bandage, BP 1993

## Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

**Appliances** (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales:  
[www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)

Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)

Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

## Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

**Arachis Oil Enema**  
 arachis oil 100%

**Catheter Maintenance Solution, Sodium Chloride**  
 (proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

**Catheter Maintenance Solution, 'Solution G'**  
 (proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

**Catheter Maintenance Solution, 'Solution R'**  
 (proprietary products: *OptiFlo R*; *Uro-Tainer Solution R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

**Chlorhexidine gluconate alcoholic solutions**  
 (proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

**Chlorhexidine gluconate aqueous solutions**  
 (proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

**Co-danthramer Capsules** PoM  
 co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

**Co-danthramer Capsules, Strong** PoM  
 co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

**Co-danthramer Oral Suspension** PoM  
 (proprietary product: *Codalax*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

**Co-danthramer Oral Suspension, Strong** PoM  
 (proprietary product: *Codalax Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

**Co-danthrusate Oral Suspension** PoM  
 (proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

**Dimeticone barrier creams**  
 (proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

**Dimeticone Lotion**  
 (proprietary product: *Hedrin*), dimeticone 4%

**Docusate Enema**  
 (proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

**Liquid and White Soft Paraffin Ointment**  
 liquid paraffin 50%, white soft paraffin 50%

**Macrogol Oral Liquid, Compound**  
 (proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

**Macrogol Oral Powder, Compound**  
 (proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K<sup>+</sup> 5.4 mmol/litre)

**Macrogol Oral Powder, Compound, Half-strength**  
 (proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

**Malathion aqueous lotions**

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

**Mebendazole Oral Suspension** [PoM]

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

**Mebendazole Tablets** [PoM]

(proprietary products: *Ovex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

**Mouthwash Solution-tablets**

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

**Nicotine Inhalation Cartridge for Oromucosal Use**

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

**Nicotine Lozenge**

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

**Nicotine Medicated Chewing Gum**

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

**Nicotine Nasal Spray**

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

**Nicotine Oral Spray**

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

**Nicotine Sublingual Tablets**

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

**Nicotine Transdermal Patches**

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

**Permethrin Cream**

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

**Senna Oral Solution**

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

**Senna and Ispaghula Granules**

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

**Sodium Citrate Compound Enema**

(proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

**Sodium Picosulfate Capsules**

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

**Sodium Picosulfate Elixir**

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

**Sterculia Granules**

(proprietary product: *Normacol Granules*), sterculia 62%

**Sterculia and Frangula Granules**

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

**Zinc Oxide and Dimeticone Spray**

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

**Zinc Oxide Impregnated Medicated Bandage**

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

**Zinc Oxide Impregnated Medicated Stocking**

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

# Non-medical prescribing

## Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at [www.dh.gov.uk/health/2012/04/prescribing-change](http://www.dh.gov.uk/health/2012/04/prescribing-change).

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at [www.gov.uk/government/uploads/system/uploads/attachment\\_data/file/213885/dh\\_116360.pdf](http://www.gov.uk/government/uploads/system/uploads/attachment_data/file/213885/dh_116360.pdf)).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

## Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 456, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary (NPF) p. 1617 for Community Practitioners provides information on prescribing.

## Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 456, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

## Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 463, transdermal fentanyl p. 458 and oral diazepam p. 343, dihydrocodeine tartrate p. 456, lorazepam p. 339, oxycodone hydrochloride p. 466 or temazepam p. 488.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

## Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

## Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

## Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 343, dihydrocodeine tartrate p. 456, lorazepam p. 339 and temazepam p. 488.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

## Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

# Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

**3M Health Care Ltd**, Tel: 01509 61161

**A S Pharma Ltd**, Tel: 01264 332172, info@ccmed.co.uk

**A. Menarini Farmaceutica Internazionale SRL**, Tel: 0800 0858678, menarini@medinformation.co.uk

**A1 Pharmaceuticals**, Tel: 01708 528900, enquiries@alplc.co.uk

**Abbott Healthcare Products Ltd**, Tel: 0800 1701177, ukabbottnutrition@abbott.com

**AbbVie Ltd**, Tel: 01628 561092, ukmedinfo@abbvie.com

**Accord Healthcare Ltd**, Tel: 01271 385257, medinfo@accord-healthcare.com

**Actavis UK Ltd**, Tel: 01271 385257, medinfo@accord-healthcare.com

**Actelion Pharmaceuticals UK Ltd**, Tel: 0208 9873333, medinfo.uk@its.jnj.com

# Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at [tinyurl.com/cdsfkle](http://tinyurl.com/cdsfkle).

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; [www.pro-file.nhs.uk](http://www.pro-file.nhs.uk)) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies ([www.apsm-uk.com](http://www.apsm-uk.com)).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

## England

### London

#### Barts and the London NHS Trust

Mr J. A. Rickard, Head of Barts Health Pharmaceuticals  
Barts Health NHS Trust  
The Royal London Hospital  
Pathology and Pharmacy Building  
80 Newark St  
Whitechapel  
London  
E1 2ES  
(020) 3246 0394 (order/enquiry)  
[barts.pharmaceuticals@bartshealth.nhs.uk](mailto:barts.pharmaceuticals@bartshealth.nhs.uk)

#### Guy's and St. Thomas' NHS Foundation Trust

Mr P. Forsey, Associate Chief Pharmacist  
Guy's and St. Thomas' NHS Foundation Trust  
Guy's Hospital  
Pharmacy Department  
Great Maze Pond  
London

# YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:  
[www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

## REPORT OF SUSPECTED ADVERSE DRUG REACTIONS

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard) for guidance. Do not be put off reporting because some details are not known.

**PATIENT DETAILS** Patient Initials: \_\_\_\_\_ Sex: M / F Is the patient pregnant? Y / N Ethnicity: \_\_\_\_\_

Age (at time of reaction): \_\_\_\_\_ Weight (kg): \_\_\_\_\_ Identification number (e.g. Practice or Hospital Ref): \_\_\_\_\_

### SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

### SUSPECTED REACTION(S) Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):

**Outcome**

- Recovered
- Recovering
- Continuing
- Other

Date reaction(s) started: \_\_\_\_\_ Date reaction(s) stopped: \_\_\_\_\_

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

- Patient died due to reaction
- Life threatening
- Congenital abnormality
- Involved or prolonged inpatient hospitalisation
- Involved persistent or significant disability or incapacity
- Medically significant; please give details: \_\_\_\_\_

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

- Mild
- Unpleasant, but did not affect everyday activities
- Bad enough to affect everyday activities

It's easy to report online: [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

**OTHER DRUG(S) (including self-medication and complementary remedies)**

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

**Additional relevant information** e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

# Adult Advanced Life Support Algorithm

Resuscitation Council (UK)

Adult Advanced Life Support

- During CPR**
- Ensure high quality chest compressions
  - Minimise interruptions to compressions
  - Give oxygen
  - Use waveform capnography
  - Continuous compressions when advanced airway in place
  - Vascular access (intravenous or intraosseous)
  - Give adrenaline every 3-5 min
  - Give amiodarone after 3 shocks

- Treat Reversible Causes**
- Hypoxia
  - Hypovolaemia
  - Hypo-/hyperkalaemia/metabolic
  - Hypothermia
  - Thrombosis - coronary or pulmonary
  - Tension pneumothorax
  - Tamponade – cardiac
  - Toxins

- Consider**
- Ultrasound imaging
  - Mechanical chest compressions to facilitate transfer/treatment
  - Coronary angiography and percutaneous coronary intervention
  - Extracorporeal CPR

# Medical emergencies in the community

## Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

## Acute coronary syndromes

### ▶ ANGINA: UNSTABLE

**Aspirin dispersible tablets p. 121** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

### ▶ PLUS

### ▶ EITHER **Glyceryl trinitrate aerosol spray p. 218**

(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ OR **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

### ▶ MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION

Treat as for Angina: unstable

### ▶ MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION

**Aspirin dispersible tablets** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

**Glyceryl trinitrate aerosol spray** (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ OR **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

**Metoclopramide hydrochloride injection p. 432** (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

**Diamorphine hydrochloride injection p. 456** (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients, reduce dose by half

### ▶ OR **Morphine sulfate injection p. 463** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

**Oxygen**, if appropriate

## Airways disease, obstructive

### ▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

### ▶ **EITHER Salbutamol aerosol inhaler p. 252**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

### ▶ **OR Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

### ▶ **OR Terbutaline sulfate nebuliser solution p. 255** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

### ▶ **PLUS (in all cases)**

### ▶ **EITHER Prednisolone tablets p. 678 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

### ▶ **OR Hydrocortisone p. 676 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta<sub>2</sub> agonist** (as above) and give with

### **Ipratropium bromide nebuliser solution p. 246**

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

### ▶ **CROUP**

#### **Dexamethasone oral solution p. 675** (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

---

## **Anaphylaxis**

### ▶ **ANAPHYLAXIS**

#### **Adrenaline/epinephrine injection p. 222** (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

#### **Chlorphenamine maleate injection p. 283**

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction..

#### **Hydrocortisone (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

---

## **Bacterial infection**

### ▶ **MENINGOCOCCAL DISEASE**

#### **Benzylpenicillin sodium injection p. 547** (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

**NOTE** A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

### ▶ **OR if history of allergy to penicillin**

#### **Cefotaxime injection p. 527** (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

#### **Chloramphenicol injection p. 568** (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 511.

---

## **Hypoglycaemia**

### ▶ **DIABETIC HYPOGLYCAEMIA**

#### **Glucose or sucrose**

BY MOUTH

- ▶ Adult and child over 2 years: approx. 10–20 g (110–220 mL *Lucozade<sup>®</sup> Energy Original* or 100–200 mL *Coca-Cola<sup>®</sup>*—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

#### **Glucagon injection p. 724** (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

#### **Glucose intravenous infusion p. 1041** (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)

#### **Glucose intravenous infusion** (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 50 mL

---

## **Seizures**

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 343** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 340**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

# Approximate Conversions and Units

## Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

## Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

## Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

## Length

1 metre (m) = 1000 millimetres (mm)  
 1 centimetre (cm) = 10 mm  
 1 inch (in) = 25.4 mm  
 1 foot (ft) = 12 inches  
 12 inches = 304.8 mm

## Mass

1 kilogram (kg) = 1000 grams (g)  
 1 gram (g) = 1000 milligrams (mg)  
 1 milligram (mg) = 1000 micrograms  
 1 microgram = 1000 nanograms  
 1 nanogram = 1000 picograms

## Volume

1 litre = 1000 millilitres (mL)  
 1 millilitre (1 mL) = 1000 microlitres  
 1 pint ≈ 568 mL

## Other units

1 kilocalorie (kcal) = 4186.8 joules (J)  
 1000 kilocalories (kcal) = 4.1868 megajoules (MJ)  
 1 megajoule (MJ) = 238.8 kilocalories (kcal)  
 1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)  
 1 kilopascal (kPa) = 7.5 mmHg (pressure)

## Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

## Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK- WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

# Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1588

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

## Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

<b>a. c.</b>	= ante cibum (before food)
<b>b. d.</b>	= bis die (twice daily)
<b>o. d.</b>	= omni die (every day)
<b>o. m.</b>	= omni mane (every morning)
<b>o. n.</b>	= omni nocte (every night)
<b>p. c.</b>	= post cibum (after food)
<b>p. r. n.</b>	= pro re nata (when required)
<b>q. d. s.</b>	= quater die sumendum (to be taken four times daily)
<b>q. q. h.</b>	= quarta quaque hora (every four hours)
<b>stat</b>	= immediately
<b>t. d. s.</b>	= ter die sumendum (to be taken three times daily)
<b>t.i.d.</b>	= ter in die (three times daily)

## E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol
