- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (itraconazole, voriconazole)** and **antifungals, azoles (itraconazole, voriconazole)** increase the concentration of **carbamazepine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** slightly increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 309. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Study
- ▶ **Primidone** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole, posaconazole)**. Avoid. [Moderate] Study
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (posaconazole)** and **antifungals, azoles (posaconazole)** increase the concentration of **carbamazepine**. Avoid. [Moderate] Theoretical
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- ▶ **Fosphenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **fosphenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 588. [Moderate] Study
- ▶ **Phenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **phenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 588, p. 321. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
- ▶ **Antihistamines, sedating (hydroxyzine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antimalarials (artemether)** (with lumafantrine). Avoid. [Severe] Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of haematological toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of haematological toxicity when given with antiepileptics (**phenobarbital, primidone**). [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) potentially increase the risk of toxicity when given with **antimalarials (quinine)**. [Unknown] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1337
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) affect the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Valproate** increases the exposure to **bupropion**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **buprisone**. Use with caution and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Calcium channel blockers (verapamil)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** potentially increase the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1336

Antiepileptics (continued)

- ▶ **Capecitabine** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Anecdotal
- ▶ **Carbapenems** decrease the concentration of valproate. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the concentration of **caspofungin**. Adjust caspofungin dose, p. 582. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to affect the efficacy of **chondroxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (phenobarbital, primidone) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chlorthalidoxipoxide** affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Study
- ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Oxcarbazepine** decreases the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to alter the effects of **cliozastol**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical
- ▶ **Clobazam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Anecdotal
- ▶ **Stiripentol** increases the concentration of **clobazam**. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Clonazepam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Anecdotal
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1336
- ▶ **Carbamazepine** is predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **corticosteroids** (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **corticosteroids** (**fluticasone**). [Unknown] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **dacatasvir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **dacatasvir**. Avoid. [Severe] Theoretical
- ▶ **Danzol** moderately increases the concentration of carbamazepine. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **lamotrigine**. [Moderate] Study
- ▶ **Diazepam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study
- ▶ **Diazoxide** decreases the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ **Disulfiram** increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1337
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical
- ▶ **Phenytoin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study

- ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Theoretical
- ▶ **Carbamazepine** slightly decreases the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **carbamazepine**. [Severe] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **phenobarbital**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the efficacy of **primidone** and **primidone** is predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the absorption of **phenytoin**. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fosoterodine**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **finlogimol**. [Moderate] Study
- ▶ **Fluorouracil** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Folates** are predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit juice** slightly increases the exposure to **carbamazepine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** transiently increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **imatinitab**. Avoid. [Moderate] Study
- ▶ **Oxcarbazepine** decreases the exposure to **imatinitab**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure

Antiepileptics (continued)

- to iron chelators (**deferasirox**). Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Isoniazid** increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Moderate] Study → Also see TABLE 12 p. 1337
 - ▶ **Isoniazid** markedly increases the concentration of **carbamazepine** and **carbamazepine** increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
 - ▶ **Carbamazepine** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
 - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of **levodopa**. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **oxcarbazepine**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1334
 - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of **loop diuretics (furosemide)**. [Moderate] Study
 - ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Avoid. [Severe] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** slightly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
 - ▶ **Macrolides (erythromycin)** markedly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Phenytoin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Levetiracetam** decreases the clearance of **methotrexate**. [Severe] Anecdotal
 - ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
 - ▶ Antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Study
 - ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ **Carbamazepine** markedly decreases the exposure to **mianserin**. Adjust dose. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **phenobarbital**, **primidone**) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
 - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Moderate] Theoretical
 - ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to increase the effects of **monoamine-oxidase A and B inhibitors**, **irreversible**. [Severe] Theoretical
 - ▶ **Carbamazepine** is predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors**, **irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Carbamazepine** is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Theoretical
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to antiepileptics (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [Moderate] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **montelukast**. [Mild] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs**, **non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. [Moderate] Study
 - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs**, **non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [Moderate] Study
 - ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) and antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **nevirapine**. [Severe] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
 - ▶ **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
 - ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**,

- primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Carbamazepine** potentially decreases the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Phenytoin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
 - ▶ **Carbamazepine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ **Carbamazepine** decreases the concentration of **opioids (tramadol)**. Adjust dose. [Severe] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
 - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1336
 - ▶ **Valproate** slightly increases the exposure to **paliperidone**. Adjust dose. [Moderate] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1334
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
 - ▶ **Valproate** increases the risk of side-effects when given with **penicillins (pivmecillinam)**. Avoid. [Severe] Anecdotal
 - ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (phenobarbital, primidone) and antiepileptics (phenobarbital, primidone) decrease the concentration of **phenothiazines (chlorpromazine)**. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
 - ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure

to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**.

[Moderate] Theoretical

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (eslicarbazepine, oxcarbazepine) potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Valproate** potentially increases the concentration of **propofol**. Adjust dose. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Valproate** potentially increases the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** affect the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **rebexetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics (phenobarbital, primidone). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (fosphenytoin, phenytoin). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **brivaracetam**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **lamotrigine**. Adjust **lamotrigine** dose, p. 316. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical

Antiepileptics (continued)

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust sodium oxybate dose, p. 484. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **solfenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (sertraline)** potentially increase the risk of toxicity when given with antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the concentration of **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **tiagabine**. Avoid. [Mild] Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine) are predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1334
- ▶ Antiepileptics (fosphenytoin, phenytoin) potentially decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Anecdotal
- ▶ **Carbamazepine** moderately decreases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Eslicarbazepine** moderately decreases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfinpyrazone** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose, p. 967. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 12 p. 1337
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 12 p. 1337
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1334
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Carbamazepine** potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to **carbamazepine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study

- Antiepileptics (**fosphenytoin, phenytoin**) increase the clearance of **topotecan**. [Moderate] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1334
- Carbamazepine** decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study
- Carbamazepine** decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1338
- Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- Trimethoprim** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Moderate] Study
- Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- Oxcarbazepine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **venurafenib**. Avoid. [Severe] Theoretical
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 12 p. 1337
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1337
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1337
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **vitamin D substances**. [Moderate] Study
- Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- Carbamazepine** is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- Antiepileptics (**phenobarbital, primidone**) potentially increase the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1336
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- Oxcarbazepine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

- Valproate** slightly increases the exposure to **zidovudine**. [Moderate] Study
- Carbamazepine** moderately decreases the exposure to **zolpidem**. [Moderate] Study
- Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336

Antifungals, azoles → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 9 p. 1336 (QT-interval prolongation)

clotrimazole • fluconazole • isavuconazole • itraconazole • ketoconazole • miconazole • posaconazole • voriconazole

- In general, **fluconazole** interactions relate to multiple-dose treatment.
- The use of carbonated drinks, such as cola, improves **itraconazole, ketoconazole, and posaconazole** bioavailability.
- Since systemic absorption can follow topical application, the possibility of interactions with topical **ketoconazole** should be borne in mind.
- Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.

- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. [Moderate] Anecdotal
- Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 190. [Severe] Study
- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
- Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
- Itraconazole** increases the risk of busulfan toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
- Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
- Isavuconazole** is predicted to increase the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) increase the exposure to **almotriptan**. [Mild] Study
- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alprazolam**. [Severe] Study
- Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- Miconazole** is predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical

Antifungals, azoles (continued)

- ▶ **Miconazole** potentially decreases the exposure to **aminoglycosides (tobramycin)**. [Moderate] Anecdotal
- ▶ **Antacids** decrease the absorption of **itraconazole** (capsule). **Antacids** should be taken 1 hour before or 2 hours after **itraconazole**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. [Severe] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fosphenytoin**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fosphenytoin)**. Avoid or adjust **voriconazole** dose, p. 588 and monitor **phenytoin** concentration. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the exposure to **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study

- ▶ **Antiepileptics (phenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (phenytoin)**. Avoid or adjust **voriconazole** dose, p. 588 and monitor **phenytoin** concentration. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of **itraconazole**. [Moderate] Theoretical
- ▶ **Miconazole** increases the risk of **carbamazepine** toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** increases the risk of **phenytoin** toxicity when given with **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Fluconazole** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Miconazole** increases the risk of **phenytoin** toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Ketoconazole** increases the exposure to **antimalarials (mefloquine)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** slightly to moderately increases the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **bosentan**. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bupirone**. Adjust bupirone dose, p. 338. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers (amlodipine, diltiazem, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** (high-dose) is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 945. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 231. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 231. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
- ▶ **Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**fluconazole**, **posaconazole**). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **miconazole**, **posaconazole**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust colchicine dose, p. 1085. [Severe] Study
- ▶ **Corticosteroids (prednisone)** potentially decrease the exposure to **isavuconazole**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical

Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Didanosine** (buffered) decreases the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Separate administration by 2 hours. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Posaconazole** is predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Ketoconazole** moderately increases the exposure to **drosiprenone**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Itraconazole** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Ketoconazole** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **ketoconazole**. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gatifibinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gatifibinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of **posaconazole** oral suspension. [Moderate] Study
- ▶ **Itraconazole** increases the concentration of **haloperidol**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatibinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatibinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor**, p. 292 or **lumacaftor** with **ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **fluconazole**. Adjust dose. [Mild] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Metoclopramide** potentially decreases the absorption of **posaconazole** (oral suspension). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study

Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- Isavuconazole** increases the exposure to **mycophenolate**. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **netupitant**. [Moderate] Study
- Netupitant** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- Fluconazole** slightly to moderately increases the exposure to **nevirapine**. [Moderate] Study
- Nevirapine** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- Nevirapine** moderately decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- Nevirapine** moderately decreases the exposure to **ketoconazole**. Avoid. [Severe] Study
- Nevirapine** is predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose, p. 1097. [Moderate] Study
- Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- Posaconazole** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **posaconazole**. Avoid. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [Moderate] Study → Also see TABLE 9 p. 1336
- Miconazole** greatly increases the anticoagulant effect of **phenindione**. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [Severe] Study → Also see TABLE 9 p. 1336
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** (oral suspension). Avoid. [Moderate] Study
- ▶ **Voriconazole** increases the exposure to **proton pump inhibitors** (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribiciclib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribiciclib**. Avoid or adjust **ribiciclib** dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study
- ▶ **Fluconazole** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** is predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **ketoconazole**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifabutin** decreases the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 588. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **fluconazole**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Anecdotal
- ▶ **Rifampicin** very markedly decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Itraconazole** is predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Study
- ▶ **Ketoconazole** moderately increases the exposure to **riociguat**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **roxatitinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **roxatitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin**, p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **SSRIs** (**citalopram**). [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Miconazole** potentially increases the exposure to **statins** (**atorvastatin**). [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins** (**fluvastatin**). [Severe] Theoretical → Also see TABLE 1 p. 1334

Antifungals, azoles (continued)

- ▶ **Miconazole** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**fluconazole, miconazole**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **taxanes (docetaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1072. [Moderate] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **tofacitinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study

- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1334
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 9 p. 1336
- ▶ **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**clotrimazole, ketoconazole**) are predicted to decrease the exposure to **vitamin D substances (coleciferol)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

Antihistamines, non-sedating → see TABLE 9 p. 1336 (QT-interval prolongation)

acrivastine • azelastine • bilastine • cetirizine • desloratadine • fexofenadine • levocetirizine • loratadine • mizolastine • rupatadine

FOOD AND LIFESTYLE Apple juice and orange juice decrease the exposure to fexofenadine.

- ▶ **Antacids** decrease the absorption of **fexofenadine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine, mizolastine**). [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **fosfexfenadine**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Mizolastine** is predicted to increase the risk of QT-prolongation when given with **drugs that prolong the QT interval**. Avoid. [Severe] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **fosfexfenadine**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly decreases the exposure to **bilastine**. Bilastine should be taken 1 hour before or 2 hours after grapefruit juice. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **fosfexfenadine**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **fosfexfenadine**. [Mild] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bilastine**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **fosfexfenadine**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **fosfexfenadine**. [Severe] Theoretical

Antihistamines, sedating → see TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)

alimemazine • antazoline • buclizine • chlorphenamine • cinnarizine • clemastine • cyclizine • cyproheptadine • hydroxyzine • ketotifen • pizotifen • promethazine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
 - ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
 - ▶ **Cyproheptadine** decreases the effects of **metoprolol**. Avoid. [Moderate] Study
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
 - ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
 - ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [Moderate] Anecdotal
- Antimalarials** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

artemether • arteminol • atovaquone • chloroquine • lumefantrine • mefloquine • piperazine • primaquine • proguanil • pyrimethamine • quinine

PHARMACOLOGY Piperazine has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antacids** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. [Unknown] Study
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [Moderate] Study
- ▶ **Antimalarials (proguanil)** are predicted to increase the risk of side-effects when given with antimalarials (**pyrimethamine**). [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical

Antimalarials (continued)

- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
- ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Severe] Anecdotal
- ▶ **Mefloquine** is predicted to increase the risk of QT-prolongation when given with **drugs that prolong the QT interval**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the concentration of **artemether**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** moderately decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to **proguanil**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **artemether**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **artemether**. [Unknown] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **piperaquine**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** decrease the clearance of **chloroquine**. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **quinine**. [Moderate] Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [Moderate] Theoretical

- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Chloroquine** decreases the efficacy of **rabies vaccine**. Avoid. [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **mefloquine**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **quinine**. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Pyrimethamine** increases the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Tetracyclines (tetracycline)** decrease the concentration of **atovaquone**. [Moderate] Study
- ▶ **Pyrimethamine** increases the risk of side-effects when given with **trimethoprim**. [Severe] Study
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1337

Apixaban → see TABLE 3 p. 1334 (anticoagulant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly to moderately increase the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **apixaban**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical

Apomorphine → see dopamine receptor agonists

Apraclonidine → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Amfetamines** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical

Apremilast

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to apremilast. Avoid. [Severe] Theoretical

Aprepitant

- ▶ **Aprepitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 190. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedrone)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to aprepitant and aprepitant is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Aprepitant** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Aprepitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to markedly increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust guanfacine dose, p. 349. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust ivabradine dose, p. 210. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical

Aprepitant (continued)

- ▶ Aprepitant is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **niotinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Aprepitant is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Aprepitant is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Aprepitant increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **tacrolimus**. [Severe] Study

- ▶ Aprepitant is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **tofacinib**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Aprepitant decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Aprepitant is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Argatroban** → see TABLE 3 p. 1334 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- Aripiprazole** → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- Arsenic trioxide** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)
- Artemether** → see antimalarials
- Artemimol** → see antimalarials
- Articaine** → see TABLE 11 p. 1336 (CNS depressant effects)
- Ascorbic acid**
 - ▶ Ascorbic acid is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [Severe] Theoretical
 - ▶ Ascorbic acid is predicted to increase the risk of cardiovascular side-effects when given with **iron chelators (desferrioxamine)**. [Severe] Theoretical

Asenapine → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

► **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335

► **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1335

► **SSRIs (fluvoxamine)** increase the exposure to **asenapine**.

[Moderate] Study

► **SSRIs (paroxetine)** moderately increase the exposure to **asenapine**. [Moderate] Study

Asparaginase → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

► **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1337

► **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337

► **Asparaginase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 5 to 24 hours before **asparaginase**, p. 908. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337

Aspirin → see TABLE 4 p. 1334 (antiplatelet effects)

► **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [Severe] Study

► **Antacids** decrease the absorption of **aspirin** (high-dose). [Moderate] Study

► **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronic acid, ibandronic acid)**. [Moderate] Study

► **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates (sodium clodronate)**. [Severe] Theoretical

► **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study

► **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical

► **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical

► **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators (deferasirox)**. [Severe] Theoretical

► **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical

► **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical

► **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical

► **Aspirin** decreases the effects of **sulfinpyrazone**. [Moderate] Study → Also see TABLE 4 p. 1334

► **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical

► **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study

Ataluren

► **Ataluren** increases the exposure to **adefovir**. [Moderate] Study

► **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study

► **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study

Atazanavir → see HIV-protease inhibitors

Atenolol → see beta blockers, selective

Atezolizumab → see monoclonal antibodies

Atomoxetine

► **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. [Severe] Theoretical

► **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta₂ agonists** (high-dose). [Moderate] Study

► **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

► **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

► **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical

► **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical

► **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical

► **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

► **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

Atorvastatin → see statins

Atovaquone → see antimalarials

Atracurium → see neuromuscular blocking drugs, non-depolarising

Atropine → see TABLE 10 p. 1336 (antimuscarinics)

► **Atropine** increases the risk of severe hypertension when given with **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study

Avanafil → see phosphodiesterase type-5 inhibitors

Avelumab → see monoclonal antibodies

Axitinib → see TABLE 15 p. 1337 (myelosuppression)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

► **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

► **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337

► **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Macrolides (erythromycin)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337

► **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

► **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

► **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

► **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

Axitinib (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical

Azacitidine → see TABLE 15 p. 1337 (myelosuppression)

Azathioprine → see TABLE 15 p. 1337 (myelosuppression)

- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 816. [Severe] Study
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Azelastine → see antihistamines, non-sedating

Azilsartan → see angiotensin-II receptor antagonists

Azithromycin → see macrolides

Bacillus Calmette-Guérin vaccine → see live vaccines

Bacitracin → see TABLE 2 p. 1334 (nephrotoxicity)

Baclofen → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)

▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1335

Balsalazide → see TABLE 15 p. 1337 (myelosuppression)

▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical

Bambuterol → see beta₂ agonists

Baricitinib

▶ **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical

▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical

Basiliximab → see monoclonal antibodies

Bazedoxifene

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical

▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical

Beclometasone → see corticosteroids

Bedaquiline → see TABLE 9 p. 1336 (QT-interval prolongation)

▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336

▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336

▶ **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical

▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical

▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study

▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**.

Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336

▶ **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336

▶ **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336

▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study

▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical

▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336

▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336

▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical

▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336

▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study

▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

See venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Belatacept

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Belimumab → see monoclonal antibodies

Bendamustine → see alkylating agents

Bendroflumethiazide → see thiazide diuretics

Benperidol → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335

▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1335

▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1335

Benralizumab → see monoclonal antibodies

Benzydamine → see NSAIDs

Benzyllpenicillin → see penicillins

Beta blockers, non-selective → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation)

carvedilol • labetalol • levobunolol • nadolol • oxprenolol • pindolol • propranolol • sotalol • timolol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **levobunolol**, and **timolol**, the possibility of interactions should be borne in mind.

▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical

▶ **Antiarrhythmics** (**amiodarone**, **disopyramide**, **dronedaron**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1335 → Also see TABLE 9 p. 1336

- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular side-effects when given with **propranolol**. Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [\[Severe\]](#) Anecdotal
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, non-selective (**labetalol**, **levobunolol**, **nadolol**, **oxprenolol**, **pindolol**, **sotalol**). Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Moderate\]](#) Anecdotal → Also see TABLE 6 p. 1335
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, non-selective (**carvedilol**, **labetalol**). [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
 - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Intravenous calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Oral calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
 - ▶ **Rifampicin** moderately decreases the exposure to **carvedilol**. [\[Moderate\]](#) Study
 - ▶ **Rifampicin** decreases the exposure to **propranolol**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Propranolol** slightly to moderately increases the exposure to **rizatriptan**. Adjust rizatriptan dose and separate administration by at least 2 hours. [\[Moderate\]](#) Study
 - ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [\[Severe\]](#) Theoretical
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- Beta blockers, selective** → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension)
- acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol
- ▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
 - ▶ Orange juice greatly decreases the exposure to **celiprolol**.
 - ▶ **Abiraterone** is predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, selective (**acebutolol**, **atenolol**, **betaxolol**, **bisoprolol**, **celiprolol**, **esmolol**). Use with caution or avoid. [\[Severe\]](#) Study
 - ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Moderate\]](#) Anecdotal → Also see TABLE 6 p. 1335
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, selective (**acebutolol**, **bisoprolol**, **metoprolol**, **nebivolol**). [\[Moderate\]](#) Study
 - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical
 - ▶ **Bupropion** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **nebivolol**). [\[Moderate\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Intravenous calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Oral calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
 - ▶ **Cinacalcet** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **nebivolol**). [\[Moderate\]](#) Study
 - ▶ **Duloxetine** is predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
 - ▶ **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
 - ▶ **Grapefruit juice** greatly decreases the exposure to **celiprolol**. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
 - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study

Beta blockers, selective (continued)

- ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [Mild] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to beta blockers, selective (**bisoprolol**, **metoprolol**). [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to **celiprolol**. [Moderate] Study
- ▶ **Rolapitant** is predicted to moderately increase the exposure to **metoprolol**. [Severe] Study
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to beta blockers, selective (**metoprolol**, **nebivolol**). [Moderate] Study
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics**, **inotropic** (**dobutamine**). [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics**, **vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **nebivolol**). [Moderate] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical

Beta₂ agonists → see TABLE 17 p. 1338 (reduced serum potassium)

- bambuterol • formoterol • indacaterol • olodaterol • salbutamol • salmeterol • terbutaline • vilanterol
- ▶ **Antifungals**, **azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
- ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta₂ agonists** (high-dose). [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
- ▶ **Beta₂ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal
- ▶ **Beta₂ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta₂ agonists**. [Moderate] Anecdotal
- ▶ **Monoamine-oxidase B inhibitors** (**rasagiline**, **selegiline**) are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase B inhibitors** (**safinamide**) are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. [Severe] Theoretical

Betahistine

- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical

Betamethasone → see corticosteroids**Betaxolol** → see beta blockers, selective**Bevacizumab** → see monoclonal antibodies**Bexarotene** → see retinoids**Befazafibrate** → see fibrates**Bicalutamide**

- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

Bilastine → see antihistamines, non-sedating**Bisoprolol** → see beta blockers, selective**Bisphosphonates** → see TABLE 2 p. 1334 (nephrotoxicity)

alendronic acid • ibandronic acid • pamidronate • risedronate • sodium clodronate • zoledronic acid

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1334
- ▶ **Antacids** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **antacids**, p. 710. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **ibandronic acid**. Avoid **antacids** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **sodium clodronate**. Avoid **antacids** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates** (**alendronic acid**, **ibandronic acid**). [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronic acid**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **sodium clodronate**. Avoid **calcium salts** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **sodium clodronate**. Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators** (**deferasirox**). [Severe] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **sodium clodronate**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates** (**alendronic acid**, **ibandronic acid**). [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **alendronic acid**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **sodium clodronate**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study

Bivalirudin → see TABLE 3 p. 1334 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- Bleomycin** → see TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Platinum compounds (cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1337
- Blinatumomab** → see monoclonal antibodies
- Bortezomib** → see TABLE 8 p. 1335 (hypotension), TABLE 15 p. 1337 (myelosuppression), TABLE 12 p. 1337 (peripheral neuropathy)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1337
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- Bosentan**
 - ▶ **Bosentan** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **bosentan**. [Moderate] Study
 - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
 - ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
 - ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical

- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal

Bosentan (continued)

- ▶ Bosentan is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Bosentan decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Bosentan is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Bosentan decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
- ▶ Bosentan is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Bosentan is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** affects the exposure to bosentan. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of bosentan. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to bosentan. Avoid. [Moderate] Theoretical
- ▶ Bosentan slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ Bosentan moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ Bosentan increases the risk of hepatotoxicity when given with **sulfonylureas (glibenclamide)**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of bosentan. Avoid. [Severe] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ Bosentan is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ Bosentan decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Bosentan is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Bosentan is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Bosutinib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical

Botulinum toxin type A → see TABLE 20 p. 1338 (neuromuscular blocking effects)

Botulinum toxin type B → see TABLE 20 p. 1338 (neuromuscular blocking effects)

Bowel cleansing preparations

SEPARATION OF ADMINISTRATION Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption may be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing

preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

Brentuximab vedotin → see monoclonal antibodies

Brimonidine → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

Brinzolamide

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Brivaracetam → see antiepileptics

Brodalumab → see monoclonal antibodies

Bromfenac → see NSAIDs

Bromocriptine → see dopamine receptor agonists

Buclicline → see antihistamines, sedating

Budesonide → see corticosteroids

Bumetanide → see loop diuretics

Bupivacaine → see anaesthetics, local

Buprenorphine → see opioids

Bupropion → see TABLE 13 p. 1337 (serotonin syndrome)

- ▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Antiepileptics (valproate)** increase the exposure to **bupropion**. [Severe] Study
- ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **bupropion**. Adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **dopamine receptor agonists (amantadine)**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study

- ▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1337
- Buspirone** → see TABLE 13 p. 1337 (serotonin syndrome)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **buspirone**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **buspirone**. Avoid. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- Busulfan** → see alkylating agents
- Cabazitaxel** → see taxanes
- Cabergoline** → see dopamine receptor agonists
- Cabozantinib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336

Cabozantinib (continued)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to cabozantinib. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **Cobicistat** slightly increases the exposure to cabozantinib. [Moderate] Study
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** moderately decreases the exposure to cabozantinib. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** slightly increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** slightly increases the exposure to cabozantinib. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** moderately decreases the exposure to cabozantinib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to cabozantinib. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to cabozantinib. [Moderate] Theoretical

Caffeine citrate

- ▶ **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mid] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly decrease the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

Calcipotriol → see vitamin D substances

Calcitonin (salmon)

- ▶ **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Study

Calcitriol → see vitamin D substances

Calcium acetate → see calcium salts

Calcium carbonate → see calcium salts

Calcium channel blockers → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension)

amlodipine • cleveldipine • diltiazem • felodipine • lacidipine • lercanidipine • nicardipine • nifedipine • nimodipine • verapamil

- ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 190. [Severe] Study → Also see TABLE 8 p. 1335
- ▶ **Verapamil** moderately increases the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. [Moderate] Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (diltiazem, verapamil). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the exposure to **antiarrhythmics (dronedaron)** and **antiarrhythmics (dronedaron)** increase the exposure to calcium channel blockers (diltiazem, verapamil). [Moderate] Study
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. [Severe] Anecdotal → Also see TABLE 6 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. [Moderate] Anecdotal → Also see TABLE 6 p. 1335
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- ▶ **Diltiazem** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Verapamil** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **verapamil**. [Severe] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** potentially increase the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to calcium channel blockers (amlodipine, clevindipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil). Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with calcium channel blockers. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the concentration of **antimalarials (piperazine)**. [\[Severe\]](#) Theoretical
- ▶ **Verapamil** is predicted to increase the exposure to **apixaban**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ Intravenous verapamil increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ Oral verapamil increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ Intravenous verapamil increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ Oral verapamil increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335 → Also see TABLE 8 p. 1335
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem) are predicted to increase the exposure to calcium channel blockers (amlodipine). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1335
- ▶ Calcium channel blockers (verapamil) are predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1335
- ▶ Calcium channel blockers (diltiazem) are predicted to increase the exposure to calcium channel blockers (felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1335
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **certinib**. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, nicardipine, verapamil) increase the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Ciclosporin** moderately increases the exposure to lercanidipine. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to lercanidipine. Avoid. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Theoretical
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Verapamil** increases the exposure to **dabigatran**. Adjust dabigatran dose, p. 135. [\[Severe\]](#) Study
- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (diltiazem, verapamil). Avoid. [\[Severe\]](#) Anecdotal
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 6 p. 1335
- ▶ Calcium channel blockers (diltiazem, verapamil) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1335
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1335
- ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study

Calcium channel blockers (continued)

- ▶ **Verapamil** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1335
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to calcium channel blockers (**nifedipine**, **verapamil**). Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **felodipine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **nicardipine**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust guanfacine dose, p. 349. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **H₂ receptor antagonists (cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **verapamil**. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to calcium channel blockers (**diltiazem**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ibrutinib**. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1335
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Calcium channel blockers (**amlodipine**, **lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study → Also see TABLE 8 p. 1335
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine**, **clevipidine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**, **verapamil**) (in pregnant women). [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to calcium channel blockers. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust naloxegol dose and monitor side effects, p. 64. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**,

- lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 6 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Verapamil** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1335
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifampicin** greatly decreases the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
 - ▶ **Rifampicin** moderately decreases the exposure to **nifedipine**. Avoid. [Severe] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **saxagliptin**. [Mild] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Amlodipine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 203. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Sulfinpyrazone** decreases the exposure to **verapamil**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Verapamil** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Calcium chloride → see calcium salts

Calcium gluconate → see calcium salts

Calcium lactate → see calcium salts

Calcium phosphate → see calcium salts

Calcium salts

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

SEPARATION OF ADMINISTRATION Calcium carbonate-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral calcium salts decrease the absorption of **alkylating agents (estramustine)**. [Severe] Study
- ▶ Calcium carbonate decreases the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Calcium carbonate is predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study

Calcium salts (continued)

- Oral calcium salts decrease the absorption of **bisphosphonates (alendronic acid)**. Alendronic acid should be taken at least 30 minutes before calcium salts. [Moderate] Study
- Oral calcium salts are predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid calcium salts for at least 6 hours before or 1 hour after ibandronic acid. [Moderate] Theoretical
- Oral calcium salts decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- Oral calcium salts decrease the absorption of **bisphosphonates (sodium clodronate)**. Avoid calcium salts for 2 hours before or 1 hour after sodium clodronate. [Moderate] Study
- Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with calcium chloride. Avoid. [Severe] Anecdotal
- Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with intravenous calcium gluconate. Avoid. [Severe] Anecdotal
- Intravenous calcium salts increase the concentration of **digoxin**. Avoid. [Moderate] Anecdotal
- Oral calcium salts decrease the absorption of **dolutegravir**. Dolutegravir should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study
- Oral calcium salts decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after calcium salts. [Severe] Study
- Calcium carbonate decreases the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- Calcium carbonate decreases the absorption of **iron (oral)**. Calcium carbonate should be taken 1 hour before or 2 hours after iron (oral). [Moderate] Study
- Calcium carbonate is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- Calcium carbonate decreases the absorption of **quinolones (ciprofloxacin)**. Separate administration by 2 hours. [Moderate] Study
- Calcium carbonate decreases the absorption of **quinolones (norfloxacin)**. Norfloxacin should be taken 2 hours before or 4 hours after calcium carbonate. [Moderate] Study
- Calcium carbonate greatly decreases the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
- Calcium carbonate is predicted to slightly decrease the exposure to **rilpivirine**. Calcium carbonate should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- Calcium carbonate is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- Thiazide diuretics** increase the risk of hypercalcaemia when given with calcium salts. [Severe] Anecdotal
- Oral calcium salts are predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- Calcium carbonate is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
- Oral calcium salts decrease the absorption of **zinc**. [Moderate] Study

Canagliflozin → see TABLE 14 p. 1337 (antidiabetic drugs), TABLE 8 p. 1335 (hypotension)

► **Rifampicin** moderately decreases the exposure to canagliflozin. Adjust canagliflozin dose, p. 687. [Moderate] Study

Canakinumab → see monoclonal antibodies

Candesartan → see angiotensin-II receptor antagonists

Cangrelor → see TABLE 4 p. 1334 (antiplatelet effects)

Cannabis extract → see TABLE 11 p. 1336 (CNS depressant effects)

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to cannabis extract. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1336

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to cannabis extract. Use with caution and adjust dose. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to cannabis extract. Use with caution and adjust dose. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to cannabis extract. Avoid. [Severe] Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to cannabis extract. Use with caution and adjust dose. [Moderate] Theoretical
- **Idelalisib** is predicted to increase the exposure to cannabis extract. Use with caution and adjust dose. [Moderate] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to cannabis extract. Use with caution and adjust dose. [Moderate] Theoretical
- **Mitotane** is predicted to decrease the exposure to cannabis extract. Avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to cannabis extract. Avoid. [Severe] Theoretical

Capecitabine → see TABLE 15 p. 1337 (myelosuppression)

► **Allopurinol** is predicted to decrease the effects of capecitabine. Avoid. [Severe] Study

► **Capecitabine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal

► **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal

► **Folates** are predicted to increase the risk of toxicity when given with capecitabine. [Severe] Anecdotal

► **H₂ receptor antagonists (cimetidine)** are predicted to slightly increase the exposure to capecitabine. [Severe] Theoretical

► **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with capecitabine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

► **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with capecitabine. [Severe] Theoretical

Captopril → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 19 p. 1338 (ototoxicity)

Captopril → see ACE inhibitors

Carbamazepine → see antiepileptics

Carbapenems

ertapenem • imipenem • meropenem

► **Carbapenems** decrease the concentration of **antiepileptics (valproate)**. Avoid. [Severe] Anecdotal

► **Ganciclovir** is predicted to increase the risk of seizures when given with imipenem. Avoid. [Severe] Anecdotal

► **Valganciclovir** is predicted to increase the risk of seizures when given with imipenem. Avoid. [Severe] Anecdotal

Carbidopa

► **Iron (oral)** is predicted to decrease the exposure to carbidopa. [Moderate] Theoretical

Carbimazole → see TABLE 15 p. 1337 (myelosuppression)

► **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical

► **Carbimazole** decreases the effects of **metoprolol**. Avoid. [Moderate] Theoretical

Carboplatin → see platinum compounds

Carfilzomib → see TABLE 15 p. 1337 (myelosuppression)

Carmustine → see alkylating agents

Carvedilol → see beta blockers, non-selective

Caspofungin

► **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of caspofungin. Adjust caspofungin dose, p. 582. [Moderate] Theoretical

► **Ciclosporin** slightly increases the exposure to caspofungin. [Severe] Study

► **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of caspofungin. Adjust caspofungin dose, p. 582. [Moderate] Theoretical

► **Efavirenz** is predicted to decrease the concentration of caspofungin. Adjust dose. [Moderate] Study

► **Nevirapine** is predicted to decrease the concentration of caspofungin. Adjust dose. [Moderate] Theoretical

► **Rifampicin** decreases the concentration of caspofungin. Adjust caspofungin dose, p. 582. [Moderate] Study

Cefaclor → see cephalosporins

Cefadroxil → see cephalosporins

Cefalexin → see cephalosporins

Cefixime → see cephalosporins

Cefotaxime → see cephalosporins

Cefradine → see cephalosporins

Ceftaroline → see cephalosporins

Ceftazidime → see cephalosporins

Ceftobiprole → see cephalosporins

Ceftolozane → see cephalosporins

Ceftriaxone → see cephalosporins

Cefuroxime → see cephalosporins

Celecoxib → see NSAIDs

Celiprolol → see beta blockers, selective

Cephalosporins → see TABLE 2 p. 1334 (nephrotoxicity)

cefaclor • cefadroxil • cefalexin • cefixime • cefotaxime • cefradine • ceftaroline • ceftazidime • ceftobiprole • ceftolozane • ceftriaxone • cefuroxime

▶ **Ceftobiprole** is predicted to increase the exposure to **bosentan**.

[*Moderate*] Theoretical

▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts** (**calcium chloride**). Avoid. [*Severe*] Anecdotal

▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts** (**calcium gluconate**). Avoid. [*Severe*] Anecdotal

▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **coumarins**. [*Severe*] Anecdotal

▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **phenindione**. [*Severe*] Anecdotal

▶ **Ceftobiprole** is predicted to increase the concentration of

statins. [*Moderate*] Theoretical

▶ **Ceftobiprole** is predicted to increase the concentration of

sulfonyleureas (**glibenclamide**). [*Moderate*] Theoretical

Ceritinib → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**.

[*Moderate*] Theoretical

▶ **Antacids** are predicted to decrease the absorption of **ceritinib**.

Separate administration by 2 hours. [*Moderate*] Theoretical

▶ **Antiarrhythmics** (**amiodarone**, **dronedarone**) are predicted to

increase the exposure to **ceritinib**. [*Moderate*] Theoretical → Also

see TABLE 9 p. 1336

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**,

phenytoin, **primidone**) are predicted to decrease the exposure

to **ceritinib**. Avoid. [*Severe*] Study

▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**)

are predicted to increase the exposure to **ceritinib**. [*Moderate*]

Theoretical → Also see TABLE 9 p. 1336

▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are

predicted to increase the exposure to **ceritinib**. Avoid or adjust

ceritinib dose, p. 945. [*Severe*] Study → Also see TABLE 9 p. 1336

▶ **Ceritinib** is predicted to increase the exposure to

antihistamines, non-sedating (**fexofenadine**). [*Moderate*] Theoretical

▶ **Apprepitant** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical

▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to

increase the exposure to **ceritinib**. [*Moderate*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**.

Avoid. [*Severe*] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**.

Avoid or adjust **ceritinib** dose, p. 945. [*Severe*] Study

▶ **Ceritinib** is predicted to increase the exposure to **colchicine**.

[*Moderate*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **coumarins**

(**warfarin**). Avoid. [*Severe*] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9

p. 1336

▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**.

[*Moderate*] Theoretical

▶ **Ceritinib** is predicted to increase the risk of bradycardia when

given with **digoxin**. Avoid. [*Severe*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **edoxaban**.

[*Moderate*] Theoretical

▶ **Enzalutamide** is predicted to decrease the exposure to

ceritinib. Avoid. [*Severe*] Study

▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**.

Avoid. [*Severe*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **everolimus**.

[*Moderate*] Theoretical → Also see TABLE 15 p. 1337

▶ **Grapefruit juice** is predicted to increase the exposure to

ceritinib. Avoid. [*Severe*] Theoretical

▶ **H₂ receptor antagonists** are predicted to decrease the

absorption of **ceritinib**. [*Moderate*] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure

to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. [*Severe*] Study →

Also see TABLE 9 p. 1336

▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**.

Avoid or adjust **ceritinib** dose, p. 945. [*Severe*] Study → Also see

TABLE 15 p. 1337

▶ **Imatinib** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical → Also see TABLE 15 p. 1337

▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical → Also see TABLE 9 p. 1336

▶ **Ceritinib** is predicted to increase the exposure to **loperamide**.

[*Moderate*] Theoretical

▶ **Macrolides** (**azithromycin**, **erythromycin**) are predicted to

increase the exposure to **ceritinib**. [*Moderate*] Theoretical → Also

see TABLE 9 p. 1336

▶ **Macrolides** (**clarithromycin**) are predicted to increase the

exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945.

[*Severe*] Study → Also see TABLE 9 p. 1336

▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**.

Avoid. [*Severe*] Study → Also see TABLE 15 p. 1337

▶ **Netupitant** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical

▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9

p. 1336

▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs**

(**celecoxib**, **diclofenac**). Adjust dose. [*Moderate*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **opioids**

(**alfentanil**, **fentanyl**). Avoid. [*Severe*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **pimozide**.

Avoid. [*Severe*] Theoretical → Also see TABLE 9 p. 1336

▶ **Proton pump inhibitors** are predicted to decrease the

absorption of **ceritinib**. [*Moderate*] Theoretical

▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**.

[*Moderate*] Theoretical → Also see TABLE 9 p. 1336

▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**.

Avoid. [*Severe*] Study

▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**.

Avoid. [*Severe*] Theoretical

▶ **St John's Wort** is predicted to decrease the exposure to

ceritinib. Avoid. [*Severe*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **sulfonyleureas**

(**glimepiride**). Adjust dose. [*Moderate*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**.

Avoid. [*Severe*] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **taxanes**

(**paclitaxel**). [*Moderate*] Theoretical → Also see TABLE 15 p. 1337

▶ **Ceritinib** is predicted to increase the exposure to **topotecan**.

[*Moderate*] Theoretical → Also see TABLE 15 p. 1337

Certolizumab pegol → see monoclonal antibodies

Cetirizine → see antihistamines, non-sedating

Cetuximab → see monoclonal antibodies

Chenodeoxycholic acid

▶ Oral **antacids** (**aluminium hydroxide**) decrease the absorption of

chenodeoxycholic acid. [*Moderate*] Study

▶ **Antiepileptics** (**phenobarbital**, **primidone**) are predicted to affect

the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose.

[*Moderate*] Theoretical

▶ **Ciclosporin** is predicted to affect the efficacy of

chenodeoxycholic acid. Monitor and adjust dose. [*Moderate*]

Theoretical

▶ Oral **combined hormonal contraceptives** potentially decrease

the efficacy of **chenodeoxycholic acid**. Avoid. [*Moderate*]

Theoretical

Chenodeoxycholic acid (continued)

- ▶ **Silolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical

Chloral hydrate → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ Intravenous **loop diuretics (furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal

Chlorambucil → see alkylating agents**Chloramphenicol**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of intravenous **iron (injectable)**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study

Chlordiazepoxide → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Chlordiazepoxide** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlordiazepoxide**. [Moderate] Theoretical

Chloroquine → see antimalarials**Chlorothiazide** → see TABLE 18 p. 1338 (hyponatraemia), TABLE 8 p. 1335 (hypotension), TABLE 17 p. 1338 (reduced serum potassium)**Chlorphenamine** → see antihistamines, sedating**Chlorpromazine** → see phenothiazines**Chlorthalidone** → see thiazide diuretics**Cholera vaccine**

- ▶ **Antimalarials (chloroquine)** decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical

Cholic acid

- ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mid] Theoretical
- ▶ **Antiepileptics (phenobarbital)** decrease the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study

Choline salicylate

- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study

Ciclesonide → see corticosteroids**Ciclosporin** → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 16 p. 1338 (increased serum potassium)

- ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1338
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 184. [Moderate] Study

- ▶ **Ciclosporin** increases the concentration of **anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone)**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** decrease the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** increase the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Aprepitant** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Bosentan** moderately decreases the exposure to ciclosporin and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, nicardipine, verapamil)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **calcium channel blockers (lercanidipine)**. Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Danazol** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **eluxadoline**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study

- ▶ **Fibrates (bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
 - ▶ **Fibrates (fenofibrate)** increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
 - ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
 - ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **ciclosporin**. [Mild] Study
 - ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Imatinib** increases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Laureotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin, erythromycin)** increase the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Netupitant** increases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
 - ▶ **Nilotinib** increases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ciclosporin** increases the concentration of **NSAIDs (diclofenac)**. [Severe] Study → Also see TABLE 2 p. 1334 → Also see TABLE 16 p. 1338
 - ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 818. [Severe] Anecdotal
 - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
 - ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
 - ▶ **Ciclosporin** increases the exposure to **pibrentasvir**. Avoid or monitor. [Severe] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
 - ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
 - ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
 - ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
 - ▶ **Ciclosporin** very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 200. [Severe] Study
 - ▶ **Ciclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
 - ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust dose. [Severe] Study
 - ▶ **Ciclosporin** markedly increases the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
 - ▶ **Sulfapyrazone** decreases the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1334 → Also see TABLE 16 p. 1338
 - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
 - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
 - ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- Cilostazol** → see TABLE 4 p. 1334 (antiplatelet effects)
- GENERAL INFORMATION** Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
 - ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
 - ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical

Cilostazol (continued)

- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Theoretical → Also see TABLE 4 p. 1334
- ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical

Cimetidine → see H₂ receptor antagonists

Cinacalcet

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Cinnarizine → see antihistamines, sedating

Ciprofibrate → see fibrates

Ciprofloxacin → see quinolones

Cisatracurium → see neuromuscular blocking drugs, non-depolarising

Cisplatin → see platinum compounds

Citalopram → see SSRIs

Cladribine → see TABLE 15 p. 1337 (myelosuppression)

SEPARATION OF ADMINISTRATION Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Clarithromycin → see macrolides

Clavulanic acid → see TABLE 1 p. 1334 (hepatotoxicity)

Clemastine → see antihistamines, sedating

Clevidipine → see calcium channel blockers

Clindamycin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Clobazam** → see TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Antiepileptics (stiripentol)** increase the concentration of **clobazam**. [Severe] Study
- ▶ **Clobazam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Clofarabine** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Clofazimine

- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

Clomethiazole → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [Severe] Study → Also see TABLE 11 p. 1336

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336

- ▶ **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study

- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study

- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study

Clomipramine → see tricyclic antidepressants

Clonazepam → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Clonazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal

Clonidine → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 1335

Clopamide → see thiazide diuretics

Clopidogrel → see TABLE 4 p. 1334 (antiplatelet effects)

- ▶ **Antifungals, azoles (fluconazole)** are predicted to decrease the efficacy of **clopido­grel**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of **clopido­grel**. Avoid. [Moderate] Study
- ▶ **Clopido­grel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Clopido­grel** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. [Severe] Study
- ▶ **Grapefruit juice** markedly decreases the exposure to **clopido­grel**. [Severe] Study
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopido­grel**. Avoid. [Moderate] Study
- ▶ **Clopido­grel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Clopido­grel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopido­grel**. Avoid. [Moderate] Study
- ▶ **Clopido­grel** increases the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **Clopido­grel** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 126. [Moderate] Theoretical
- ▶ **Clopido­grel** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopido­grel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1334
- ▶ **Clopido­grel** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Clopido­grel** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- Clotrimazole** → see antifungals, azoles
- Clozapine** → see TABLE 8 p. 1335 (hypotension), TABLE 15 p. 1337 (myelosuppression), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)
 - ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
 - ▶ Avoid concomitant use of **clozapine** with drugs that have a substantial potential for causing agranulocytosis.
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1336
- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 10 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **Iron chelators (deferiasirox)** are predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Macrolides (erythromycin)** potentially increase the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **quinolones (ciprofloxacin)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- Co-trimoxazole** → see sulfonamides

Cobicistat

- ▶ **Cobicistat** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Cobicistat** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to very slightly increase the exposure to **antiepileptics (perampamel)**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (fluconazole, posaconazole)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to affect the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 338. [Severe] Study
- ▶ **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

Cobicistat (continued)

- ▶ Cobicistat is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. [Severe] Study
- ▶ Cobicistat increases the concentration of **ciclosporin**. [Severe] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [Severe] Study
- ▶ Cobicistat is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study
- ▶ Cobicistat is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Cobicistat very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ Cobicistat increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Cobicistat increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ Cobicistat is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ Cobicistat is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Cobicistat slightly to moderately increases the exposure to **elbasvir**. [Moderate] Study
- ▶ Cobicistat is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Cobicistat is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ Cobicistat potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ Cobicistat is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ Cobicistat is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ Cobicistat is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ Cobicistat is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ Cobicistat markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ Cobicistat is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ Cobicistat is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to moderately increase the exposure to **niotinib**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Cobicistat is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ Cobicistat is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [Moderate] Study
- ▶ Cobicistat is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ Cobicistat is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **retinoids (all-trans-retinoic acid)**. Adjust **all-trans-retinoic acid** dose, p. 1226. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. [Moderate] Study
 - ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **roxatitidine**. Adjust dose and monitor side effects. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1072. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Cobimetinib**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- Codeine** → see opioids

Colchicine

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Appetitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Theoretical
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [\[Mild\]](#) Theoretical
- ▶ **Nutepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [\[Severe\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Theoretical
- ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Anecdotal
- ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [\[Severe\]](#) Theoretical

Colecalciferol → see vitamin D substances

Colesevelam

SEPARATION OF ADMINISTRATION Manufacturer advises take 4 hours before, or after, other drugs.

Colestipol

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.

Colestyramine

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.

Colistimethate → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 20 p. 1338 (neuromuscular blocking effects)

Combined hormonal contraceptives

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rifinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Oral combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir)** (unboosted) increase the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Oral combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical

- ▶ **Combined hormonal contraceptives** decrease the effects of **metoprolol**. Avoid. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 775. [Severe] Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **monoamine-oxidase B inhibitors (selegiline)**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially decrease the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 775. [Severe] Study
- ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **combined hormonal contraceptives**. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 775. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 775. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see **Contraceptives, interactions** p. 775. [Severe] Anecdotal
- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Theoretical

Corticosteroids → see TABLE 17 p. 1338 (reduced serum potassium)

beclomethasone • betamethasone • budesonide • ciclesonide • deflazacort • dexamethasone • fludrocortisone • fluticasone • hydrocortisone • methylprednisolone • mometasone • prednisolone • prednisone • triamcinolone

- ▶ Interactions do not generally apply to corticosteroids used for topical action (including inhalation) unless specified.
- ▶ With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
- ▶ **Antacids** are predicted to decrease the absorption of **deflazacort**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **dexamethasone**. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Prednisone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Aprepitant** moderately increases the exposure to **dexamethasone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with corticosteroids. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dexamethasone** is predicted to decrease the concentration of **casopfungin**. Adjust **casopfungin** dose, p. 582. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to corticosteroids (**dexamethasone, methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. [Moderate] Study

Corticosteroids (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **prednisone**, **triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **prednisone**, **triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ Corticosteroids are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators** (**deferasirox**). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with corticosteroids (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to corticosteroids (**methylprednisolone**, **prednisone**). Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **prednisone**, **triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ Corticosteroids are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of corticosteroids. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ Corticosteroids (**betamethasone**, **deflazacort**, **dexamethasone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisone**) are predicted to decrease the efficacy of **monoclonal antibodies** (**atezolizumab**, **ipilimumab**, **nivolumab**, **pembrolizumab**). Use with caution or avoid. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **dexamethasone**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ Corticosteroids are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ Corticosteroids increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal

- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study
- ▶ Corticosteroids are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ Corticosteroids potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Corticosteroids are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical
- ▶ Corticosteroids are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal

Coumarins → see TABLE 3 p. 1334 (anticoagulant effects)

acenocoumarol · warfarin

FOOD AND LIFESTYLE The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate increases the INR in response to **warfarin** and is predicted to increase the INR in response to **acenocoumarol**.

- ▶ **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Capcitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal

- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal
 - ▶ **Ceritinib** is predicted to increase the exposure to **warfarin**. Avoid. [Severe] Theoretical
 - ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
 - ▶ **Cranberry juice** potentially increases the anticoagulant effect of **warfarin**. Avoid. [Severe] Anecdotal
 - ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
 - ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study
 - ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
 - ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
 - ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Glucagon** increases the anticoagulant effect of **warfarin**. [Severe] Study
 - ▶ **Glucosamine** increases the anticoagulant effect of **warfarin**. Avoid. [Moderate] Anecdotal
 - ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **warfarin**. [Severe] Theoretical
 - ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Lomitapide** increases the exposure to **warfarin**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
 - ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
 - ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Monoclonal antibodies (binatumomab)** are predicted to transiently increase the exposure to **warfarin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **warfarin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **warfarin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Obeticholic acid** decreases the anticoagulant effect of **warfarin**. [Severe] Study
 - ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
 - ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
 - ▶ **Pitolisant** is predicted to decrease the exposure to **warfarin**. [Unknown] Theoretical
 - ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
 - ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
 - ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Sucralfate** potentially decreases the effects of **warfarin**. Separate administration by 2 hours. [Moderate] Anecdotal
 - ▶ **Sulfinpyrazone** increases the anticoagulant effect of **coumarins**. Avoid. [Severe] Study
 - ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
 - ▶ **Sulfonamides (sulfamethoxazole)** increase the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
 - ▶ **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
 - ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
 - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Venetoclax** slightly increases the exposure to **warfarin**. [Moderate] Study
 - Cranberry juice**
 - ▶ **Cranberry juice** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Severe] Anecdotal
- Crisantaspase** → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1337

Crisantaspase (continued)

- ▶ Crisantaspase affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- ▶ Crisantaspase potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before crisantaspase, p. 908. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- Crizotinib** → see TABLE 6 p. 1335 (bradycardia), TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

GENERAL INFORMATION Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.

- ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 190. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to crizotinib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to crizotinib. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Bosentan** is predicted to decrease the exposure to crizotinib. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to crizotinib. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to crizotinib. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to crizotinib. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to crizotinib. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust guanfacine dose, p. 349. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to crizotinib. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to crizotinib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust ivabradine dose, p. 210. [Severe] Theoretical → Also see TABLE 6 p. 1335
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to crizotinib. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to crizotinib. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust naloxegol dose and monitor side effects, p. 64. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to crizotinib. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust olaparib dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1335

- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 6 p. 1335 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Cyclizine** → see antihistamines, sedating
- Cyclopenthiiazide** → see thiazide diuretics
- Cyclopentolate** → see TABLE 10 p. 1336 (antimuscarinics)
- Cyclophosphamide** → see alkylating agents
- Cycloserine**
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- Cyproheptadine** → see antihistamines, sedating
- Cytarabine** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Dabigatran** → see TABLE 3 p. 1334 (anticoagulant effects)
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Pibrentasvir** (with **glecaprevir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Unknown] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **dabigatran**. Avoid. [Severe] Study
- Dabrafenib** → see TABLE 15 p. 1337 (myelosuppression)

Dabrafenib (continued)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Fibrates** (**gemfibrozil**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical

Dacarbazine → see alkylating agents

Daclatasvir

- ▶ **Daclatasvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics** (**amiodarone**). Refer to specialist literature. [Severe] Anecdotal

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study

- ▶ **Antiepileptics** (**oxcarbazepine**) are predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical

- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study

- ▶ **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study

- ▶ **Daclatasvir** slightly increases the concentration of **digoxin**. [Severe] Study

- ▶ **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. [Severe] Study

- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study

- ▶ **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study

- ▶ **Idelalisib** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study

- ▶ **Macrolides** (**clarithromycin**) are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study

- ▶ **Mitotane** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study

- ▶ **Nevirapine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical

Dactinomycin → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Dairy products

- ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical

- ▶ **Dairy products** decrease the exposure to **tetracyclines** (**demeclocycline**, **oxytetracycline**, **tetracycline**). Avoid. [Moderate] Study

Dalteparin → see low molecular-weight heparins

Danaparoid → see TABLE 3 p. 1334 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical

Danazol

- ▶ **Danazol** moderately increases the concentration of **antiepileptics** (**carbamazepine**). Monitor and adjust dose. [Severe] Study

- ▶ **Danazol** increases the concentration of **ciclosporin**. [Severe] Study

- ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal

- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **statins** (**atorvastatin**). [Severe] Theoretical

- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **statins** (**simvastatin**). Avoid. [Severe] Anecdotal

- ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal

Dantrolene → see TABLE 1 p. 1334 (hepatotoxicity)

- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers** (**diltiazem**, **verapamil**). Avoid. [Severe] Anecdotal

Dapagliflozin → see TABLE 14 p. 1337 (antidiabetic drugs), TABLE 8 p. 1335 (hypotension)

Dapoxetine → see SSRIs

Dapsone

- ▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics**, local (**prilocaine**). Use with caution or avoid. [Severe] Theoretical

- ▶ **Antiepileptics** (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Antimalarials** (**chloroquine**, **primaquine**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Rifabutin** decreases the exposure to **dapsone**. [Moderate] Study

- ▶ **Rifampicin** decreases the exposure to **dapsone**. [Moderate] Study

- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study

Daptomycin

- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical

- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- Daratumumab** → see monoclonal antibodies
- Darbepoetin alfa** → see TABLE 5 p. 1334 (thromboembolism), TABLE 16 p. 1338 (increased serum potassium)
- Darifenacin** → see TABLE 10 p. 1336 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of **antiarrhythmics (flecainide)**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1336
- Darunavir** → see HIV-protease inhibitors
- Dasabuvir**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
 - ▶ **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
 - ▶ **Fibrates (gemfibrozil)** very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
 - ▶ **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of **loop diuretics (furosemide)**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
 - ▶ **Dasabuvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- Dasatinib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical

Dasatinib (continued)

- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Dasatinib** is predicted to increase the exposure to **statins** (**simvastatin**). [\[Moderate\]](#) Theoretical

Daurorubicin → see anthracyclines

Decitabine → see TABLE 15 p. 1337 (myelosuppression)

Deferasirox → see iron chelators

Deferiprone → see TABLE 15 p. 1337 (myelosuppression)

▶ **Antacids (aluminium hydroxide)** are predicted to decrease the absorption of **deferiprone**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [\[Severe\]](#) Theoretical

Deflazacort → see corticosteroids

Delamanid → see TABLE 9 p. 1336 (QT-interval prolongation)

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336

▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study

▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study

▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336

▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study

▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336

▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study

▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study

Demeclocycline → see tetracyclines

Desferrioxamine → see iron chelators

Desflurane → see volatile halogenated anaesthetics

Desloratadine → see antihistamines, non-sedating

Desmopressin → see TABLE 18 p. 1338 (hyponatraemia)

▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical

▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [\[Moderate\]](#) Study

▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [\[Severe\]](#) Theoretical

Desogestrel

▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [\[Moderate\]](#) Study

▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical

▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical

▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [\[Severe\]](#) Theoretical

Dexamethasone → see corticosteroids

Dexamfetamine → see amfetamines

Dexibuprofen → see NSAIDs

Dexketoprofen → see NSAIDs

Dexmedetomidine → see TABLE 11 p. 1336 (CNS depressant effects)

Dextrazoxane → see iron chelators

Diamorphine → see opioids

Diazepam → see TABLE 11 p. 1336 (CNS depressant effects)

▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study

▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **diazepam**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [\[Moderate\]](#) Study

▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [\[Moderate\]](#) Study

Diazoxide → see TABLE 8 p. 1335 (hypotension)

▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal

▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1335

Diclofenac → see NSAIDs

Dicycloverine → see TABLE 10 p. 1336 (antimuscarinics)

Didanosine → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 12 p. 1337 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart.

▶ **Allopurinol** moderately increases the exposure to **didanosine**. Avoid. [\[Severe\]](#) Study

▶ **Didanosine** (buffered) decreases the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Separate administration by 2 hours. [\[Severe\]](#) Study → Also see TABLE 1 p. 1334

▶ **Febuxostat** is predicted to increase the exposure to **didanosine**. [\[Severe\]](#) Theoretical

▶ **Ganciclovir** is predicted to increase the exposure to **didanosine**. [\[Moderate\]](#) Study

▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **didanosine**. Separate administration by 2 hours. [\[Moderate\]](#) Study

▶ **Didanosine** (buffered) decreases the exposure to **HIV-protease inhibitors (atazanavir)**. **Didanosine** should be taken 2 hours after **atazanavir**. [\[Severe\]](#) Study

- ▶ **Didanosine** (buffered) is predicted to decrease the exposure to **HIV-protease inhibitors (darunavir)** boosted with **ritonavir**. **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [Moderate] Theoretical
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 12 p. 1337
- ▶ **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. [Severe] Study
- ▶ **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after **quinolones**. [Moderate] Study
- ▶ **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. [Severe] Study
- ▶ **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study → Also see TABLE 12 p. 1337
- ▶ **Tenofovir disoproxil** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
- ▶ **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study

Digoxin → see TABLE 6 p. 1335 (bradycardia)

GENERAL INFORMATION Drugs that reduce serum potassium are predicted to increase the risk of digoxin toxicity, see TABLE 17 p. 1335.

- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [Mild] Study
- ▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Severe] Study → Also see TABLE 6 p. 1335
- ▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
- ▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. [Severe] Anecdotal
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1335
- ▶ **Intravenous calcium salts** increase the concentration of **digoxin**. Avoid. [Moderate] Anecdotal
- ▶ **Carbamazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Daclatasvir** slightly increases the concentration of **digoxin**. [Severe] Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study

- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [Severe] Study
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Pibrentasvir** (with **glecaprevir**) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Unknown] Theoretical
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical

Dihydrocodeine → see opioids

Dihydrotrachysterol → see vitamin D substances

Diltiazem → see calcium channel blockers

Dimenhydrinate → see TABLE 10 p. 1336 (antimuscarinics)

Dimethyl fumarate

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Diphenoxylate → see opioids

Dipipanone → see opioids

Dipyridamole → see TABLE 8 p. 1335 (hypotension), TABLE 4 p. 1334 (antiplatelet effects)

- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical

Dipyridamole (continued)

- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical

Disopyramide → see antiarrhythmics**Disulfiram** → see TABLE 12 p. 1337 (peripheral neuropathy)

- ▶ **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study

- ▶ **Disulfiram** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1337

- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study

- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 1337

- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical

Dobutamine → see sympathomimetics, inotropic**Docetaxel** → see taxanes**Dolutegravir**

- ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
 - ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Antiepileptics** (**oxcarbazepine**) are predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical
 - ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study
 - ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
 - ▶ **HIV-protease inhibitors** (**fosamprenavir** boosted with ritonavir) slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
 - ▶ **HIV-protease inhibitors** (**tipranavir**) moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study
 - ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron (oral). [Moderate] Study
 - ▶ **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study
 - ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 - ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- Domperidone** → see TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antiarrhythmics** (**dronedaron**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
 - ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
 - ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists** (**bromocriptine**, **cabergoline**). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

Donepezil → see anticholinesterases, centrally acting**Dopamine** → see sympathomimetics, inotropic**Dopamine receptor agonists** → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 10 p. 1336 (antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pergolide · pramipexole · quinagolide · ropinirole · rotigotine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the concentration of **cabergoline**. [Severe] Anecdotal
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Bupropion** increases the risk of side-effects when given with **amantadine**. [Moderate] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal → Also see TABLE 8 p. 1335
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 10 p. 1336
- ▶ **Cobicistat** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Domeperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Moderate] Theoretical
 - ▶ Dopamine receptor agonists (**cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Dopamine receptor agonists (**bromocriptine**, **cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**pergolide**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ Dopamine receptor agonists (**amantadine**) are predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Droperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
 - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**cabergoline**, **pergolide**). Avoid. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**, **cabergoline**). Avoid. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. [Moderate] Theoretical
 - ▶ **Flupentixol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Haloperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
 - ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Loxapine** is predicted to decrease the effects of dopamine receptor agonists. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 10 p. 1336
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Amantadine** increases the risk of CNS toxicity when given with **mefenazine**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Mefenazine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). [Moderate] Theoretical
 - ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). Avoid. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Olanzapine** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
 - ▶ **Paliperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
 - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
 - ▶ **Phenothiazines** are predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
 - ▶ **Pimozide** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Risperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Sulpiride** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
 - ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of side-effects when given with **bromocriptine**. Avoid. [Severe] Anecdotal
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
- Dorzolamide**
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Dosulepin** → see tricyclic antidepressants
- Doxapram**
- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
 - ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- Doxazosin** → see alpha blockers
- Doxepin** → see tricyclic antidepressants
- Doxorubicin** → see anthracyclines
- Doxycycline** → see tetracyclines
- Dronedrone** → see antiarrhythmics
- Droperidol** → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Droperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
 - ▶ **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1335
- Drosiprenone** → see TABLE 16 p. 1338 (increased serum potassium)

Drosipirenone (continued)

- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **drosipirenone**. [Severe] Study
- Dulaglutide** → see TABLE 14 p. 1337 (antidiabetic drugs)
- Duloxetine** → see TABLE 18 p. 1338 (hyponaemia), TABLE 13 p. 1337 (serotonin syndrome), TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337 → Also see TABLE 4 p. 1334
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- Dupilumab** → see monoclonal antibodies
- Dutasteride**
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
 - ▶ **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
 - ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- Eculizumab** → see monoclonal antibodies
- Edoxaban** → see TABLE 3 p. 1334 (anticoagulant effects)
 - ▶ **Antiarrhythmics (amiodarone)** slightly increase the exposure to **edoxaban**. [Severe] Study
 - ▶ **Antiarrhythmics (dronedaron)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **edoxaban**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical

- ▶ **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mid] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **edoxaban**. Avoid. [Severe] Theoretical
- Efavirenz** → see TABLE 9 p. 1336 (QT-interval prolongation)
 - ▶ **Efavirenz** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical → Also see TABLE 9 p. 1336
 - ▶ **Antiepileptics (carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **antiepileptics (carbamazepine)**. [Severe] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Theoretical
 - ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (phenobarbital)**. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to affect the efficacy of **antiepileptics (primidone)** and **antiepileptics (primidone)** are predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - ▶ **Efavirenz** slightly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
 - ▶ **Efavirenz** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. [Severe] Study
 - ▶ **Efavirenz** slightly decreases the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
 - ▶ **Efavirenz** moderately decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** slightly increase the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
 - ▶ **Efavirenz** decreases the concentration of **antimalarials (artemether)**. [Severe] Study → Also see TABLE 9 p. 1336
 - ▶ **Efavirenz** moderately decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
 - ▶ **Efavirenz** affects the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
 - ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
 - ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Efavirenz** is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **macrolides** (**clarithromycin**). [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **opioids** (**methadone**). Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Unknown] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **statins** (**atorvastatin**). [Mild] Study
- ▶ **Efavirenz** moderately decreases the exposure to **statins** (**simvastatin**). [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Elbasvir

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Cobicistat** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Idelalisib** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** potentially increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 200. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 201. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 202. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 203. [Unknown] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical

Eletriptan → see TABLE 13 p. 1337 (serotonin syndrome)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study

Eliglustat

- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedrone, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). Adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, non-selective (propranolol)**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1085. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **phenothiazines (perphenazine)**. Adjust dose. [Moderate] Theoretical

- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [Moderate] Theoretical

Elotuzumab → see monoclonal antibodies

Eltrombopag

- ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **antacids**. [Severe] Study
- ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [Severe] Study
- ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [Severe] Theoretical
- ▶ **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical

Eluxadoline

- ▶ **Ciclosporin** increases the exposure to **eluxadoline**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ **Eluxadoline** is predicted to increase the exposure to **statins**. [Moderate] Study

Elvitegravir

- ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with **ritonavir**) increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical

- ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical

Empagliflozin → see TABLE 14 p. 1337 (antidiabetic drugs), TABLE 8 p. 1335 (hypotension)

Enalapril → see ACE inhibitors

Enoxaparin → see low molecular-weight heparins

Entacapone

- ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Entacapone** is predicted to increase the exposure to **methyl dopa**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study

Enteral feeds

- ▶ **Antacids (aluminium hydroxide)** increase the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **quinolones (ciprofloxacin)**. [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study

Enzalutamide

GENERAL INFORMATION Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study

Enzalutamide (continued)

- ▶ Enzalutamide moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Enzalutamide decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ Enzalutamide slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ Enzalutamide affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ Enzalutamide moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ Enzalutamide decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ Enzalutamide is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 921. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ Enzalutamide potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to slightly decrease the exposure to **deltamethrin**. Avoid. [Moderate] Study
- ▶ Enzalutamide decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 949. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Enzalutamide moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 921. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 349. [Moderate] Study
- ▶ Enzalutamide decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 952. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study

- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **reboksetine**. [Moderate] Anecdotal
- ▶ **Enzalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **statins (simvastatin)**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ **Enzalutamide** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping ulipristal. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Ephedrine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 1334 (thromboembolism), TABLE 16 p. 1338 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 1334 (thromboembolism), TABLE 16 p. 1338 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 1334 (thromboembolism), TABLE 16 p. 1338 (increased serum potassium)
- Epoprostenol** → see TABLE 4 p. 1334 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatide** → see TABLE 4 p. 1334 (antiplatelet effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
 - ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical

Ergometrine (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to ergometrine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergometrine. [\[Severe\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergometrine. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with ergometrine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline, pergolide)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to ergometrine. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with ergometrine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with ergometrine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with ergometrine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with ergometrine. [\[Severe\]](#) Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [\[Severe\]](#) Anecdotal

Ergotamine

- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after almotriptan. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to ergotamine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergotamine. [\[Severe\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergotamine. [\[Severe\]](#) Study

- ▶ **Bosentan** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to ergotamine. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to ergotamine. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to ergotamine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after rizatriptan. [\[Severe\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after sumatriptan. [\[Severe\]](#) Study
- ▶ **Ticagrelor** is predicted to increase the exposure to ergotamine. Avoid. [\[Severe\]](#) Theoretical

Eribulin → see TABLE 15 p. 1337 (myelosuppression), TABLE 12 p. 1337 (peripheral neuropathy), TABLE 9 p. 1336 (QT-interval prolongation)

Erlotinib

FOOD AND LIFESTYLE Dose adjustment may be necessary if smoking started or stopped during treatment.

- ▶ **Antacids** are predicted to decrease the absorption of erlotinib. Antacids should be taken 4 hours before or 2 hours after erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. [\[Severe\]](#) Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [\[Severe\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quinolones** (**ciprofloxacin**) slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. [\[Severe\]](#) Study
- ▶ **SSRIs** (**fluvoxamine**) are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- Ertapenem** → see carbapenems
- Erythromycin** → see macrolides
- Escitalopram** → see SSRIs
- Eslicarbazepine** → see antiepileptics
- Esmolol** → see beta blockers, selective
- Esomeprazole** → see proton pump inhibitors
- Estramustine** → see alkylating agents
- Etanercept**
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Etelcalcetide**
- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical
- Ethambutol**
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal
- Ethosuximide** → see antiepileptics
- Etodolac** → see NSAIDs
- Etomidate** → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)
- Etonogestrel**
- ▶ **Antiepileptics** (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical
- Etoposide** → see TABLE 15 p. 1337 (myelosuppression)

Etoposide (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Etoricoxib → see NSAIDs

Etravirine

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
 - ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [Moderate] Study
 - ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
 - ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
 - ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
 - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
 - ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
 - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
 - ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** (boosted with ritonavir). Refer to specialist literature. [Moderate] Study
 - ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)**. [Severe] Study
 - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
 - ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
 - ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
 - ▶ **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
 - ▶ **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- Everolimus** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical

Exemestane

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical

Exenatide → see TABLE 14 p. 1337 (antidiabetic drugs)

SEPARATION OF ADMINISTRATION With standard-release exenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.

Ezetimibe

- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal

Famotidine → see H₂ receptor antagonists

Fampridine

- ▶ **H₂ receptor antagonists** (**cimetidine**) increase the concentration of **fampridine**. Avoid. [Severe] Theoretical

Febuxostat

- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **didanosine**. [Severe] Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical

Felbinac → see NSAIDs

Felodipine → see calcium channel blockers

Fenofibrate → see fibrates

Fenoprofen → see NSAIDs

Fentanyl → see opioids

Ferric carboxymaltose → see iron (injectable)

Ferric maltol → see iron (oral)

Ferrous fumarate → see iron (oral)

Ferrous gluconate → see iron (oral)

Ferrous sulfate → see iron (oral)

Fesoterodine → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Appetitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical

Fexofenadine → see antihistamines, non-sedating

Fibrates

bezafibrate • ciprofibrate • fenofibrate • gemfibrozil

- ▶ **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. [Moderate] Study
- ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Gemfibrozil** very markedly increases the exposure to **dasabuvir**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1226. [Moderate] Theoretical

Fibrates (continued)

- **Gemfibrozil** increases the concentration of **retinoids** (**bexarotene**). Avoid. [Severe] Study
- **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [Severe] Study
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins** (**atorvastatin**). Avoid or adjust dose. [Severe] Study
- **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins** (**atorvastatin**, **fluvastatin**). [Severe] Study
- **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins** (**atorvastatin**, **simvastatin**). Adjust **fenofibrate** dose, p. 198. [Severe] Anecdotal
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins** (**fluvastatin**). [Severe] Study
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins** (**fluvastatin**). Adjust **fenofibrate** dose, p. 198. [Severe] Theoretical
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins** (**pravastatin**). Avoid. [Severe] Theoretical
- Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins** (**pravastatin**). Avoid. [Severe] Study
- **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins** (**rosuvastatin**). Adjust **fenofibrate** and **rosuvastatin** doses, p. 198, p. 202. [Severe] Anecdotal
- Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose, p. 202. [Severe] Study
- Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins** (**simvastatin**). Adjust **simvastatin** dose, p. 203. [Severe] Study
- **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- Fibrates are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- **Gemfibrozil** is predicted to increase the concentration of **taxanes** (**paclitaxel**). [Severe] Anecdotal
- Fibrates are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

Fidaxomicin

- **Antiarrhythmics** (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Antifungals**, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Calcium channel blockers** (**verapamil**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

Fingolimod → see TABLE 6 p. 1335 (bradycardia), TABLE 9 p. 1336 (QT-interval prolongation)

- **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1335
- **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Mitotane** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study

- **Rifampicin** is predicted to decrease the exposure to **fingolimod**.

[Moderate] Study

- **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical

Flavoxate → see TABLE 10 p. 1336 (antimuscarinics)

Flecainide → see antiarrhythmics

Flucloxacillin → see penicillins

Fluconazole → see antifungals, azoles

Flucytosine

- **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study

► **Cytarabine** decreases the concentration of **flucytosine**. Avoid.

[Severe] Study

Fludarabine → see TABLE 15 p. 1337 (myelosuppression)

► **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

► **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337

Fludrocortisone → see corticosteroids

Fluocinolone

ROUTE-SPECIFIC INFORMATION With intravitreal use in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).

Fluorouracil → see TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Fluorouracil** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Folates** (**folic acid**) are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- **Folates** (**folinic acid**) are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
- **H₂ receptor antagonists** (**cimetidine**) slightly increase the exposure to **fluorouracil**. [Severe] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study

Fluoxetine → see SSRIs

Flupentixol → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

► **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335

► **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1335

Fluphenazine → see phenothiazines

Flurazepam → see TABLE 11 p. 1336 (CNS depressant effects)

► **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical

Flurbiprofen → see NSAIDs

Fluticasone → see corticosteroids

Fluvastatin → see statins

Fluvoxamine → see SSRIs

Folates

folic acid • folinic acid • levofolinic acid

- **Folates** are predicted to decrease the concentration of **antiepileptics** (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Monitor concentration and adjust dose. [Severe] Study

- **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
- **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
- **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study
- **Sulfasalazine** is predicted to decrease the absorption of folates. [Moderate] Study
- **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- Folic acid** → see folates
- Folinic acid** → see folates
- Fondaparinux** → see TABLE 3 p. 1334 (anticoagulant effects)
- Formoterol** → see beta₂ agonists
- Fosamprenavir** → see HIV-protease inhibitors
- Fosaprepitant**
 - Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
 - Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
 - Fosaprepitant is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
 - **Cobicistat** is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
 - Fosaprepitant is predicted to increase the exposure to **corticosteroids** (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - **Enzalutamide** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - Fosaprepitant is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
 - **HIV-protease inhibitors** are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - Fosaprepitant is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
 - **Idelalisib** is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - Fosaprepitant is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - **Macrolides** (**clarithromycin**) are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
 - Fosaprepitant slightly increases the exposure to **midazolam**. [Moderate] Study
 - **Mitotane** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
 - Fosaprepitant is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - Fosaprepitant is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - **Rifampicin** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical

- **St John's Wort** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
- Fosaprepitant decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- Foscarnet** → see TABLE 2 p. 1334 (nephrotoxicity)
- Foscarnet increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1334
- Fosinopril** → see ACE inhibitors
- Fosphenytoin** → see antiepileptics
- Frovatriptan** → see TABLE 13 p. 1337 (serotonin syndrome)
- **SSRIs** (**fluvoxamine**) increase the concentration of frovatriptan. [Severe] Study → Also see TABLE 13 p. 1337
- Fulvestrant** → see TABLE 5 p. 1334 (thromboembolism)
- Furosemide** → see loop diuretics
- Fusidic acid**
 - Fusidic acid increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- Gabapentin** → see antiepileptics
- Galantamine** → see anticholinesterases, centrally acting
- Ganciclovir** → see TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems** (**imipenem**). Avoid. [Severe] Anecdotal
- **Ganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with ganciclovir. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- Gefitinib** → see TABLE 15 p. 1337 (myelosuppression)
- **Antacids** are predicted to slightly decrease the exposure to gefitinib. [Moderate] Theoretical
- **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to gefitinib. [Moderate] Theoretical
- Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to gefitinib. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to gefitinib. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to gefitinib. [Moderate] Study
- **Aprepitant** is predicted to increase the exposure to gefitinib. [Moderate] Theoretical
- **Bosentan** is predicted to decrease the exposure to gefitinib. Avoid. [Severe] Theoretical
- **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to gefitinib. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to gefitinib. [Moderate] Study
- **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Crizotinib** is predicted to increase the exposure to gefitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Efavirenz** is predicted to decrease the exposure to gefitinib. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to gefitinib. Avoid. [Severe] Study
- **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to gefitinib. [Moderate] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to gefitinib. [Moderate] Study
- **Idelalisib** is predicted to increase the exposure to gefitinib. [Moderate] Study → Also see TABLE 15 p. 1337
- **Imatinib** is predicted to increase the exposure to gefitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to gefitinib. [Moderate] Study
- **Macrolides** (**erythromycin**) are predicted to increase the exposure to gefitinib. [Moderate] Theoretical
- **Mitotane** is predicted to decrease the exposure to gefitinib. Avoid. [Severe] Study → Also see TABLE 15 p. 1337

Gefitinib (continued)

- **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- **Gemcitabine** → see TABLE 15 p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Gemfibrozil → see fibrates

Gentamicin → see aminoglycosides

Glecaprevir

- **Antiarrhythmics (dronedarone)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
- **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
- **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- **Glecaprevir** (with pibrentasvir) increases the exposure to **digabigatran**. Avoid. [Moderate] Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study
- **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** (boosted with ritonavir) increase the exposure to **glecaprevir**. Avoid. [Severe] Study
- **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **glecaprevir**. [Severe] Theoretical
- **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (atorvastatin, simvastatin)**. Avoid. [Moderate] Study
- **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
- **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 202. [Moderate] Study

Glibenclamide → see sulfonylureas

Gliclazide → see sulfonylureas

Glimepiride → see sulfonylureas

Glipizide → see sulfonylureas

Glucagon

- **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study

Glucosamine

- **Glucosamine** increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

Glucose → see TABLE 3 p. 1334 (anticoagulant effects)

Glycerol phenylbutyrate

- **Antiepileptics (valproate)** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical

Glyceril trinitrate → see nitrates

Glycopyrronium → see TABLE 10 p. 1336 (antimuscarinics)

Golimumab → see monoclonal antibodies

Granisetron → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation)

- **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical

Grapefruit juice

- **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study
- **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
- **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Study
- **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilastine)**. Bilastine should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study
- **Grapefruit juice** increases the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study
- **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperaquine)**. Avoid. [Severe] Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- **Grapefruit juice** greatly decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- **Grapefruit juice** increases the exposure to **bupirone**. Avoid. [Mild] Study
- **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- **Grapefruit juice** very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mild] Study
- **Grapefruit juice** increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Moderate] Theoretical
- **Grapefruit juice** increases the exposure to **calcium channel blockers (nicardipine)**. [Mild] Study
- **Grapefruit juice** increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mild] Study
- **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. [Severe] Study
- **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- **Grapefruit juice** moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study

- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical

- ▶ **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

Grass pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Grazoprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 200. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 201. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 202. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 203. [Unknown] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

Griseofulvin

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the effects of **griseofulvin**. [Moderate] Study

Griseofulvin (continued)

- ▶ Griseofulvin potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Griseofulvin potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Griseofulvin potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Griseofulvin decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Griseofulvin potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Griseofulvin potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Griseofulvin potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal

Guanethidine → see TABLE 8 p. 1335 (hypotension)

- ▶ **Amfetamines (dexamfetamine)** decrease the effects of **guanethidine**. [Severe] Study
- ▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, inotropic (dopamine)**. [Severe] Theoretical
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- ▶ **Guanethidine** increases the effects of **sympathomimetics, vasoconstrictor (metaraminol)**. [Severe] Anecdotal
- ▶ **Guanethidine** increases the effects of **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Study → Also see TABLE 8 p. 1335

Guanfacine → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

Guselkumab → see monoclonal antibodies

H₂ receptor antagonists

cimetidine • famotidine • nizatidine • ranitidine

- ▶ **Cimetidine** decreases the clearance of **albendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [Mild] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [Moderate] Study

- ▶ **Cimetidine** decreases the clearance of **antimalarials** (**chloroquine**). [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **antimalarials** (**quinine**). [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
 - ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers** (**diltiazem**, **nifedipine**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers** (**lercanidipine**). [Moderate] Theoretical
 - ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers** (**nifedipine**). Monitor and adjust dose. [Severe] Study
 - ▶ **Cimetidine** increases the exposure to **calcium channel blockers** (**verapamil**). [Moderate] Study
 - ▶ **Cimetidine** is predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
 - ▶ **Cimetidine** increases the concentration of **ciclosporin**. [Mild] Study
 - ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
 - ▶ **Cimetidine** slightly increases the exposure to **dopamine receptor agonists** (**pramipexole**). Adjust dose. [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [Moderate] Study
 - ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [Severe] Theoretical
 - ▶ **Cimetidine** slightly increases the exposure to **fluorouracil**. [Severe] Study
 - ▶ **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
 - ▶ **H₂ receptor antagonists** decrease the exposure to **HIV-protease inhibitors** (**atazanavir**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. [Moderate] Study
 - ▶ **H₂ receptor antagonists** (**cimetidine**, **ranitidine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Cimetidine** slightly increases the exposure to **macrolides** (**erythromycin**). [Moderate] Study
 - ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust moclobemide dose, p. 359. [Mild] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
 - ▶ **Cimetidine** increases the concentration of **opioids** (**alfentanil**). Use with caution and adjust dose. [Severe] Study
 - ▶ **Cimetidine** increases the exposure to **opioids** (**fentanyl**). [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
 - ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
 - ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H₂ receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
 - ▶ **Cimetidine** slightly increases the exposure to **roflumilast**. [Moderate] Study
 - ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**paroxetine**, **sertraline**). [Moderate] Study
 - ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
 - ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. [Moderate] Study
 - ▶ **Cimetidine** slightly increases the exposure to **venlafaxine**. [Mild] Study
 - ▶ **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 475. [Mild] Study
- Haloperidol** → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
 - ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics** (**zonisamide**). Avoid in children. [Severe] Theoretical
 - ▶ **Antifungals**, **azoles** (**itraconazole**) increase the concentration of **haloperidol**. [Moderate] Study
 - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
 - ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
 - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
 - ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
 - ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
 - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
 - ▶ **SSRIs** (**fluoxetine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
 - ▶ **SSRIs** (**fluvoxamine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
 - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1336 → Also see TABLE 11 p. 1336
- Heparin (unfractionated)** → see TABLE 16 p. 1338 (increased serum potassium), TABLE 3 p. 1334 (anticoagulant effects)
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical

HIV-protease inhibitors → see TABLE 9 p. 1336 (QT-interval prolongation)

atazanavir • darunavir • fosamprenavir • lopinavir • ritonavir • saquinavir • tipranavir

- ▶ Caution on concurrent use of **atazanavir**, **lopinavir** with **ritonavir**, or **ritonavir** with drugs that prolong the PR interval.
- ▶ Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.
- ▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

- ▶ **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Ritonavir** decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**ritonavir**, **saquinavir**) are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers** (**alfuzosin**, **tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alpha blockers** (**doxazosin**). [Moderate] Study
- ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **anaesthetics, local** (**ropivacaine**). [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **atazanavir**. **Atazanavir** should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **tipranavir**. Separate administration by 2 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics** (**amiodarone**). Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics** (**disopyramide**). [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **antiarrhythmics** (**dronedarone**). Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics** (**lidocaine**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics** (**propafenone**). Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **anticholinesterases, centrally acting** (**galantamine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiepileptics** (**carbamazepine**) and **antiepileptics** (**carbamazepine**) are predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antiepileptics** (**fosphenytoin**, **phenytoin**) and **antiepileptics** (**fosphenytoin**, **phenytoin**) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** slightly decreases the exposure to **antiepileptics** (**lamotrigine**). [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **antiepileptics** (**perampanel**). [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of **antiepileptics** (**phenobarbital**, **primidone**) and **antiepileptics** (**phenobarbital**, **primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the concentration of **antiepileptics** (**valproate**). [Severe] Anecdotal
- ▶ **Antifungals, azoles** (**fluconazole**) slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles** (**miconazole**) are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles** (**posaconazole**) are predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles** (**isavuconazole**). Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles** (**itraconazole**). Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles** (**ketoconazole**). Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antifungals, azoles** (**voriconazole**) and **antifungals, azoles** (**voriconazole**) potentially affect the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating** (**mizolastine**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating** (**rupatadine**). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **antimalarials** (**atovaquone**). Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **antimalarials** (**piperaquine**). [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **antimalarials** (**proguanil**). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antimalarials** (**quinine**). [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **beta blockers, non-selective** (**nadolol**). [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **beta blockers, selective** (**metoprolol**). [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beta₂ agonists** (**salmeterol**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bupirone**. Adjust bupirone dose, p. 338. [Severe] Study

- ▶ **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [Severe] Study
- ▶ **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** (lopinavir, ritonavir, saquinavir) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **Didanosine** (buffered) decreases the exposure to **atazanavir**. **Didanosine** should be taken 2 hours after **atazanavir**. [Severe] Study
- ▶ **Didanosine** (buffered) is predicted to decrease the exposure to **darunavir** (boosted with ritonavir). **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [Moderate] Theoretical
- ▶ **Tipranavir** decreases the exposure to **didanosine**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
- ▶ **Fosamprenavir** (boosted with ritonavir) slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Ritonavir** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (lopinavir, ritonavir, saquinavir) are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **elotriptan**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors** (atazanavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (atazanavir, lopinavir, ritonavir) (boosted with ritonavir) increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Etravirine** increases the exposure to **fosamprenavir** (boosted with ritonavir). Refer to specialist literature. [Moderate] Study
- ▶ **Tipranavir** decreases the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **HIV-protease inhibitors** (lopinavir, ritonavir, saquinavir) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical

HIV-protease inhibitors (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gatifibinib**. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **lopinavir**) (boosted with **ritonavir**) increase the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **glecaprevir**. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **H₂ receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ HIV-protease inhibitors are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **imatibinib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators** (**deferasirox**). Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) increase the exposure to **saquinavir** and **saquinavir** increases the exposure to **macrolides** (**clarithromycin**). Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **saquinavir**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [Severe] Study
- ▶ **Ritonavir** increases the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [Severe] Study
- ▶ **Tipranavir** (boosted with **ritonavir**) increases the exposure to **macrolides** (**clarithromycin**) and **macrolides** (**clarithromycin**) increase the exposure to **tipranavir** (boosted with **ritonavir**). Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**darunavir**, **fosamprenavir**, **lopinavir**) (boosted with **ritonavir**) are predicted to increase the exposure to **macrolides** (**clarithromycin**). Adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **tipranavir**) are predicted to increase the exposure to **macrolides** (**erythromycin**). [Severe] Theoretical
- ▶ **Darunavir** (boosted with **ritonavir**) markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **saquinavir**) moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Lopinavir** (boosted with **ritonavir**) moderately increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies** (**brentuximab vedotin**). Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **monoclonal antibodies** (**trastuzumab emtansine**). Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to HIV-protease inhibitors. Refer to specialist literature. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Ritonavir** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (boosted with **ritonavir**) are predicted to decrease the exposure to **opioids** (**methadone**). [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids** (**morphine**). [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids** (**petidine**). Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **paritaprevir** (with **ritonavir** and **ombitasvir**). Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [Moderate] Study → Also see TABLE 9 p. 1336

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **ildenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **lopinavir**) (boosted with **ritonavir**) increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** (boosted with **ritonavir**) decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** (boosted with **ritonavir**). Avoid. [Severe] Study
- ▶ **Tipranavir** (boosted with **ritonavir**) is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1226. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) (boosted with **ritonavir**) increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**). Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **ritonavir**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **statins** (**rosuvastatin**). Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **taxanes** (**docetaxel**). Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**) increase the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Study
- ▶ **Tipranavir** is predicted to affect the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1072. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venumafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Atazanavir** (boosted with **ritonavir**) increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Lopinavir** is predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Homatropine** → see TABLE 10 p. 1336 (antimuscarinics)
- Hormone replacement therapy**
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** is predicted to alter the exposure to **antiepileptics (lamotrigine)**. [Moderate] Theoretical
 - ▶ **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** decreases the clearance of **dopamine receptor agonists (ropinirole)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Severe] Theoretical
 - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **monoamine-oxidase B inhibitors (selegiline)**. Avoid. [Moderate] Study
 - ▶ **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **hormone replacement therapy**. [Moderate] Study
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical

- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
 - Hydralazine** → see TABLE 8 p. 1335 (hypotension)
 - ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1335
 - Hydrochlorothiazide** → see thiazide diuretics
 - Hydrocortisone** → see corticosteroids
 - Hydroflumethiazide** → see thiazide diuretics
 - Hydromorphone** → see opioids
 - Hydroxycarbamide** → see TABLE 15 p. 1337 (myelosuppression)
 - ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study
 - Hydroxychloroquine**
 - ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. [Moderate] Theoretical
 - ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
 - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
 - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
 - Hydroxyzine** → see antihistamines, sedating
 - Hyoscine** → see TABLE 10 p. 1336 (antimuscarinics)
 - Ibandronic acid** → see bisphosphonates
 - Ibrutinib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 4 p. 1334 (antiplatelet effects)
- FOOD AND LIFESTYLE** Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.
- ▶ **Antiarhythmic (amiodarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. [Severe] Theoretical
 - ▶ **Antiarhythmic (dronedarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
 - ▶ **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- Ibuprofen** → see NSAIDs
- Icatibant**
 - ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icaticabnt** and **icaticabnt** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical
- Idarubicin** → see anthracyclines
- Idelalisib** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Idelalisib** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337

Idelalisib (continued)

- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** slightly to moderately increases the exposure to **elbasvir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **elotriptan**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fosetorodine**. Adjust **fosetorodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisnone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (methadone)**. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxitinib**. Adjust dose and monitor side effects. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1337

- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment, p. 761. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1072. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Ifofosfamide** → see alkylating agents
- ▶ **Iloprost** → see TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Imatinib** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 190. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedrone)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** increases the concentration of **clisporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspace** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study

Imatinib (continued)

- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefatinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Imidapril → see ACE inhibitors

Imipenem → see carbapenems

Imipramine → see tricyclic antidepressants

Indacaterol → see beta₂ agonists

Indapamide → see thiazide diuretics

Indometacin → see NSAIDs

Indoramin → see alpha blockers

Infliximab → see monoclonal antibodies

Influenza vaccine (live) → see live vaccines

Inotuzumab ozogamicin → see monoclonal antibodies

Insulins → see TABLE 14 p. 1337 (antidiabetic drugs)

• **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical

Interferon alfa → see interferons

Interferon beta → see interferons

Interferons → see TABLE 15 p. 1337 (myelosuppression)

interferon alfa · interferon beta · peginterferon alfa

• **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical

• **Interferon alfa** is predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Theoretical

• **Peginterferon alfa** increases the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Study

• **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study

Ipilimumab → see monoclonal antibodies

Ipratropium → see TABLE 10 p. 1336 (antimuscarinics)

• **Beta₂ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal

Irbesartan → see angiotensin-II receptor antagonists

Irinotecan → see TABLE 15 p. 1337 (myelosuppression)

• **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

• **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

• **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

• **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

• **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

• **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337

• **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

• **Macrolides (clarithromycin)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

• **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337

• **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical

• **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Unknown] Theoretical

• **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

• **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [Moderate] Study

• **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study

• **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical

Iron (injectable)

ferric carboxymaltose · iron dextran · iron isomaltoside 1000 · iron sucrose

• **Chloramphenicol** decreases the efficacy of intravenous iron (injectable). [Moderate] Anecdotal

Iron (oral)

ferric maltol · ferrous fumarate · ferrous gluconate · ferrous sulfate · polysaccharide-iron complex · sodium feredetate

• **Antacids** decrease the absorption of **iron (oral)**. **Iron (oral)** should be taken 1 hour before or 2 hours after antacids. [Moderate] Study

• **Iron (oral)** is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical

• **Iron (oral)** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study

• **Iron (oral)** decreases the absorption of **bisphosphonates (sodium clodronate)**. Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study

• **Calcium salts (calcium carbonate)** decrease the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. [Moderate] Study

• **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. [Moderate] Theoretical

• **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. [Moderate] Theoretical

• **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **iron (oral)**. [Moderate] Study

• **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [Severe] Theoretical

• **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical

• **Iron (oral)** decreases the absorption of **levodopa**. [Moderate] Study

• **Iron (oral)** decreases the effects of **methyldopa**. [Moderate] Study

• **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [Mild] Study

• **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study

• **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. [Moderate] Study

• **Iron (oral)** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study

• **Trintene** potentially decreases the absorption of **iron (oral)**. [Moderate] Theoretical

• **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [Moderate] Study

Iron chelators

deferasirox · desferrioxamine · dextrazoxane

• **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical

• **Antacids (aluminium hydroxide)** are predicted to decrease the exposure to **deferasirox**. Avoid. [Moderate] Theoretical

• **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical

• **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **desferrioxamine**. [Severe] Theoretical

• **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. [Severe] Theoretical

• **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical

• **Deferasirox** is predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical

Iron chelators (continued)

- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dexrazoxane**. Avoid. [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Deferasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical

Iron dextran → see iron (injectable)

Iron isomaltoside 1000 → see iron (injectable)

Iron sucrose → see iron (injectable)

Isavuconazole → see antifungals, azoles

Isocarboxazid → see monoamine-oxidase A and B inhibitors, irreversible

Isorflurane → see volatile halogenated anaesthetics

Isometheptene → see sympathomimetics, vasoconstrictor

Isoniazid → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 12 p. 1337 (peripheral neuropathy)

FOOD AND LIFESTYLE Avoid tyramine or histamine rich foods, as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
- ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study → Also see TABLE 12 p. 1337
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 12 p. 1337
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal
- ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [Severe] Theoretical → Also see TABLE 12 p. 1337
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- Isosorbide dinitrate** → see nitrates
- Isosorbide mononitrate** → see nitrates
- Isotretinoin** → see retinoids
- Itraconazole** → see antifungals, azoles
- Ivabradine** → see TABLE 6 p. 1335 (bradycardia), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1335
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical → Also see TABLE 6 p. 1335
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study

Ivacaftor

FOOD AND LIFESTYLE Avoid bitter (Seville) oranges as they are predicted to increase the exposure to ivacaftor.

- ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **coumarins (warfarin)**. [Severe] Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- Ivermectin**
 - ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Ixazomib**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ixekizumab** → see monoclonal antibodies
- Kaolin**
 - ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical
- Ketamine** → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical
- Ketoconazole** → see antifungals, azoles
- Ketoprofen** → see NSAIDs
- Ketorolac** → see NSAIDs
- Ketotifen** → see antihistamines, sedating
- Labetalol** → see beta blockers, non-selective
- Lacidipine** → see calcium channel blockers
- Lacosamide** → see antiepileptics

- Lamivudine** → see TABLE 12 p. 1337 (peripheral neuropathy)
- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study
- Lamotrigine** → see antiepileptics
- Lanreotide**
 - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
 - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
 - ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- Lansoprazole** → see proton pump inhibitors
- Lanthanum**
 - ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
 - ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
 - ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- Lapatinib** → see TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical

Lapatinib (continued)

- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

Laronidase

- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical

Ledipasvir

- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study

Leflunomide → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

PHARMACOLOGY Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1334
- ▶ **Leflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal → Also see TABLE 15 p. 1337
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study

Levalidomide → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with levalidomide. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with levalidomide. [Severe] Theoretical

Lercanidipine → see calcium channel blockers

Levamisole

- ▶ **Albendazole** slightly decreases the exposure to levamisole and levamisole moderately decreases the exposure to albendazole. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with levamisole. [Moderate] Study
- ▶ **Levamisole** increases the exposure to ivermectin. [Moderate] Study

Levetiracetam → see antiepileptics

Levobunolol → see beta blockers, non-selective

Levobupivacaine → see anaesthetics, local

Levocetirizine → see antihistamines, non-sedating

Levodopa → see TABLE 8 p. 1335 (hypertension)

GENERAL INFORMATION Drugs with antimuscarinic effects might reduce the absorption of levodopa, see TABLE 10 p. 1336

- ▶ **Amisulpride** is predicted to decrease the effects of levodopa. Avoid. [Severe] Theoretical
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of levodopa. [Moderate] Study
 - ▶ **Aripiprazole** is predicted to decrease the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Asenapine** is predicted to decrease the effects of levodopa. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Baclofen** is predicted to increase the risk of side-effects when given with levodopa. [Severe] Anecdotal → Also see TABLE 8 p. 1335
 - ▶ **Benperidol** is predicted to decrease the effects of levodopa. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Bupropion** increases the risk of side-effects when given with levodopa. [Moderate] Study
 - ▶ **Clozapine** is predicted to decrease the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Droperidol** decreases the effects of levodopa. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Entacapone** increases the exposure to levodopa. Monitor side effects and adjust dose. [Moderate] Study
 - ▶ **Flupentixol** decreases the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Haloperidol** decreases the effects of levodopa. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Iron (oral)** decreases the absorption of levodopa. [Moderate] Study
 - ▶ **Isoniazid** decreases the effects of levodopa. [Moderate] Study
 - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with linezolid. Avoid. [Severe] Theoretical
 - ▶ **Loxapine** is predicted to decrease the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Lurasidone** is predicted to decrease the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Memantine** is predicted to increase the effects of levodopa. [Moderate] Theoretical
 - ▶ **Metoclopramide** decreases the effects of levodopa. Avoid. [Moderate] Study
 - ▶ **Levodopa** increases the risk of side-effects when given with moclobemide. [Moderate] Study
 - ▶ **Levodopa** increases the risk of a hypertensive crisis when given with monoamine-oxidase A and B inhibitors, irreversible. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the effects of levodopa. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1335
 - ▶ **Olanzapine** decreases the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1335
 - ▶ **Opicapone** increases the exposure to levodopa. Adjust dose. [Moderate] Study
 - ▶ **Paliperidone** is predicted to decrease the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Phenothiazines** decrease the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Pimozide** decreases the effects of levodopa. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Quetiapine** decreases the effects of levodopa. [Severe] Anecdotal → Also see TABLE 8 p. 1335
 - ▶ **Risperidone** is predicted to decrease the effects of levodopa. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1335
 - ▶ **Sulpiride** is predicted to decrease the effects of levodopa. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Tetrabenazine** is predicted to decrease the effects of levodopa. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Tolcapone** increases the exposure to levodopa. Monitor and adjust dose. [Moderate] Study
 - ▶ **Tryptophan** greatly decreases the concentration of levodopa. [Moderate] Study
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1335
- Levofloxacin** → see quinolones
- Levofolinic acid** → see folates
- Levomopromazine** → see phenothiazines
- Levonorgestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Aprepitant** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Griseofulvin** potentially decreases the efficacy of oral levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the efficacy of levonorgestrel. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the efficacy of levonorgestrel. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
 - ▶ **Sugammadex** is predicted to decrease the exposure to levonorgestrel. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Ulipristal** is predicted to decrease the efficacy of levonorgestrel. Avoid. [Severe] Theoretical
- Levothyroxine** → see thyroid hormones

Lidocaine → see antiarrhythmics

Linagliptin → see TABLE 14 p. 1337 (antidiabetic drugs)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study

Linezolid → see TABLE 15 p. 1337 (myelosuppression), TABLE 13 p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Beta₂ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- ▶ **Buprione** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) increase the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **Methyphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase B inhibitors** (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase B inhibitors** (**safinamide**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** (**adrenaline/epinephrine**, **ephedrine**, **isometheptene**, **noradrenaline/norepinephrine**, **phenylephrine**) are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** (**pseudoephedrine**) increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study

Liothyronine → see thyroid hormones

Liraglutide → see TABLE 14 p. 1337 (antidiabetic drugs)

Lisdexamfetamine → see amfetamines

Lisinopril → see ACE inhibitors

Lithium → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal

- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe] Anecdotal

- ▶ **Aldosterone antagonists** (**eplerenone**) potentially increase the concentration of **lithium**. Avoid. [Moderate] Theoretical
- ▶ **Aldosterone antagonists** (**spironolactone**) potentially increase the concentration of **lithium**. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Antiepileptics** (**carbamazepine**, **oxcarbazepine**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Calcitonin** (**salmon**) decreases the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336
- ▶ **Potassium-sparing diuretics** (**triarterene**) potentially increase the clearance of **lithium**. [Moderate] Study
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336

Live vaccines

Bacillus Calmette-Guérin vaccine • influenza vaccine (live) • measles, mumps and rubella vaccine, live • rotavirus vaccine • typhoid vaccine, oral • varicella-zoster vaccine • yellow fever vaccine, live

GENERAL INFORMATION Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; **mefloquine** should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **flucytosine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **iron chelators (dextrazoxane)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltITrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes (docetaxel, paclitaxel)**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

Live vaccines (continued)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

Lixisenatide → see TABLE 14 p. 1337 (antidiabetic drugs)

SEPARATION OF ADMINISTRATION Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.

Lofepramine → see tricyclic antidepressants

Lofexidine → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)

Lomitapide → see TABLE 1 p. 1334 (hepatotoxicity)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (clotrimazole)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1334
- ▶ **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (amlodipine, lacidipine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lomitapide** increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Unknown\]](#) Theoretical → Also see TABLE 1 p. 1334
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Unknown\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

► **Lomitapide** increases the exposure to **statins (atorvastatin)**.

Adjust **lomitapide** dose or separate administration by 12 hours. [Mild] Study → Also see TABLE 1 p. 1334

► **Lomitapide** increases the exposure to **statins (simvastatin)**.

Monitor and adjust **simvastatin** dose, p. 203. [Moderate] Study → Also see TABLE 1 p. 1334

► **Tacrolimus** is predicted to increase the exposure to **lomitapide**.

Separate administration by 12 hours. [Moderate] Theoretical

► **Ticagrelor** is predicted to increase the exposure to **lomitapide**.

Separate administration by 12 hours. [Moderate] Theoretical

► **Tolvaptan** is predicted to increase the exposure to **lomitapide**.

Separate administration by 12 hours. [Moderate] Theoretical

Lomustine → see alkylating agents

Loop diuretics → see TABLE 18 p. 1338 (hyponatraemia), TABLE 8 p. 1335 (hypotension), TABLE 19 p. 1338 (ototoxicity), TABLE 17 p. 1338 (reduced serum potassium)

bumetanide • furosemide • torasemide

► **Aliskiren** slightly decreases the exposure to **furosemide**.

[Moderate] Study → Also see TABLE 8 p. 1335

► **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1338

► **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [Moderate] Study

► Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal

► **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of **furosemide**. Adjust dose. [Moderate] Study

► **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study

► **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **furosemide**. Adjust dose. [Moderate] Theoretical

► **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical

Loperamide

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **loperamide**. [Severe] Theoretical

► **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical

► **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study

► **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study

► **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical

► **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical

► **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study

► **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical

Lopinavir → see HIV-protease inhibitors

► **Loprazolam** → see TABLE 11 p. 1336 (CNS depressant effects)

► **Loratadine** → see antihistamines, non-sedating

► **Lorazepam** → see TABLE 11 p. 1336 (CNS depressant effects)

► **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study

► **Lormetazepam** → see TABLE 11 p. 1336 (CNS depressant effects)

► **Losartan** → see angiotensin-II receptor antagonists

Low molecular-weight heparins → see TABLE 16 p. 1338 (increased serum potassium), TABLE 3 p. 1334 (anticoagulant effects)

dalteparin • enoxaparin • tinzaparin

► **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical

► **Loxapine** → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)

► **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

► **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 10 p. 1336

► **Loxapine** is predicted to decrease the effects of **levodopa**.

[Severe] Theoretical → Also see TABLE 8 p. 1335

► **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

► **SSRIs (fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

Lumacaftor

► **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**fluconazole**). Adjust dose. [Mild] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole, ketoconazole, posaconazole, voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to corticosteroids (**methylprednisolone, prednisone**). Adjust dose. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical

► **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

► **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical

Lumefantrine → see antimalarials

Lurasidone → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lurasidone**. [Moderate] Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1336

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lurasidone**. [Moderate] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Aprepitant** is predicted to increase the exposure to **lurasidone**. [Moderate] Study

► **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. [Moderate] Study → Also see TABLE 8 p. 1335

► **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study

► **Crizotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study

► **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

► **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study

Lurasidone (continued)

- ▶ **Grapefruit juice** is predicted to increase the exposure to lurasidone. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to lurasidone. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to lurasidone. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to lurasidone. [Moderate] Study
- ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to lurasidone. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to lurasidone. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to lurasidone. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to lurasidone. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical

Lymecycline → see tetracyclines

Macitentan

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to macitentan. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to macitentan. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to macitentan. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to macitentan. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to macitentan. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to macitentan. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Theoretical

Macrolides → see TABLE 9 p. 1336 (QT-interval prolongation)

azithromycin · clarithromycin · erythromycin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Clarithromycin** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 190. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Erythromycin** markedly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **apixaban**. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study

- ▶ **Clarithromycin** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 338. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than for other corticosteroids). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. [Severe] Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **clarithromycin**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical

Macrolides (continued)

- ▶ **Etravirine** decreases the exposure to **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (darunavir, fosamprenavir, lopinavir)** (boosted with ritonavir) are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir) increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir). Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **HIV-protease inhibitors (saquinavir)** and **HIV-protease inhibitors (saquinavir)** increase the exposure to **clarithromycin**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** increases the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin, erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical

- ▶ **Erythromycin** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **opioids** (**methadone**). [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids** (**methadone**, **sufentanil**). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **paritaprevir** (with **ritonavir** and **ombitasvir**). Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**). Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **varidenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). Use with caution or avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**varidenafil**). Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **rebexetine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1226. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** moderately increases the exposure to **statins** (**pravastatin**). [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**pravastatin**). [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical

Macrolides (continued)

- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of erythromycin. Adjust dose. [Severe] Study
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Erythromycin** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Azithromycin** decreases the exposure to **venetoclax**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust venetoclax dose, p. 974. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust venetoclax dose, p. 974. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Magnesium

- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (alendronic acid)**. Alendronic acid should be taken at least 30 minutes before **magnesium**. [Moderate] Study

- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (sodium clodronate)**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine, verapamil)** (in pregnant women). [Severe] Anecdotal
- ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- Magnesium carbonate** → see antacids
- Magnesium trisilicate** → see antacids
- Maraviroc**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
 - ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
 - ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors (atazanavir, saquinavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
 - ▶ **HIV-protease inhibitors (darunavir)** (boosted with ritonavir) markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
 - ▶ **HIV-protease inhibitors (lopinavir)** (boosted with ritonavir) moderately increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
 - ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [Severe] Study
 - ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- Measles, mumps and rubella vaccine, live** → see live vaccines
- Mebendazole**
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [Moderate] Study
- Medroxyprogesterone**
 - ▶ **Sugamadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- Mefenamic acid** → see NSAIDs
- Mefloquine** → see antimalarials
- Melatonin** → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical

Meloxicam → see NSAIDs

Melphalan → see alkylating agents

Memantine

- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. [Moderate] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical

Mepacrine

- ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials (primaquine)**. Avoid. [Moderate] Theoretical

Mepivacaine → see anaesthetics, local

Meprobamate → see TABLE 11 p. 1336 (CNS depressant effects)

Meptazinol → see opioids

Mercaptopurine → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust mercaptopurine dose, p. 887. [Severe] Study
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Meropenem → see carbapenems

Mesalazine

ROUTE-SPECIFIC INFORMATION The manufacturers of some mesalazine gastro-resistant and modified-release medicines (Asacol MR tablets, Ipocol, Salofalk granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

Metaraminol → see sympathomimetics, vasoconstrictor

Metformin → see TABLE 14 p. 1337 (antidiabetic drugs)

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [Moderate] Theoretical
 - ▶ **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Unknown] Theoretical
 - ▶ **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- Methadone** → see opioids
- Methenamine**
- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
 - ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
 - ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- Methocarbamol** → see TABLE 11 p. 1336 (CNS depressant effects)
- Methotrexate** → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity), TABLE 5 p. 1334 (thromboembolism)
- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study
 - ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
 - ▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [Severe] Anecdotal
 - ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1337
 - ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
 - ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical
 - ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. [Severe] Study → Also see TABLE 2 p. 1334
 - ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
 - ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 1 p. 1334
 - ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
 - ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. Avoid. [Severe] Anecdotal
 - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1337
 - ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
 - ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
 - ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
 - ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
 - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
 - ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Theoretical → Also see TABLE 2 p. 1334

Methoxyflurane → see volatile halogenated anaesthetics

Methyldopa → see TABLE 8 p. 1335 (hypotension)

- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the effects of **methyldopa**. [Moderate] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335

Methylphenidate

- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

Methyphenidate (continued)

- ▶ **Methyphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methyphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [\[Severe\]](#) Theoretical
- ▶ **Methyphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methyphenidate**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Risperidone** increases the risk of dyskinesias when given with **methyphenidate**. [\[Severe\]](#) Anecdotal

Methylprednisolone → see corticosteroids

Methylthioninium chloride → see TABLE 13 p. 1337 (serotonin syndrome)

- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1337

Metoclopramide

- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Metoclopramide** potentially decreases the absorption of antifungals, azoles (**posaconazole**) (oral suspension). [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine**). Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study

Metolazone → see thiazide diuretics

Metoprolol → see beta blockers, selective

Metronidazole → see TABLE 12 p. 1337 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [\[Moderate\]](#) Study
- ▶ **Metronidazole** increases the risk of toxicity when given with alkylating agents (**busulfan**). [\[Severe\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [\[Moderate\]](#) Study
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see TABLE 12 p. 1337
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [\[Severe\]](#) Study

Metyrapone

- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Carbamazole** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- Mianserin** → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1336
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [\[Unknown\]](#) Theoretical
 - ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [\[Severe\]](#) Anecdotal
- Micafungin** → see TABLE 1 p. 1334 (hepatotoxicity)
- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [\[Moderate\]](#) Study
- Miconazole** → see antifungals, azoles
- Midazolam** → see TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1336
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Mifotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study

Midodrine → see sympathomimetics, vasoconstrictor

Midostaurin

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mifotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical

Mifamurtide

- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

Mifepristone

- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical

Minocycline → see tetracyclines

Minoxidil → see TABLE 8 p. 1335 (hypotension)

Mirabegron

- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical

Mirtazapine → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study

Mirtazapine (continued)

- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to mirtazapine. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to mirtazapine. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to mirtazapine. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to mirtazapine. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to mirtazapine. Adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to mirtazapine. Adjust dose. [Moderate] Study

Mitomycin → see TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mitomycin. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Mitotane → see TABLE 15 p. 1337 (myelosuppression)

- ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Theoretical
- ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of mitotane. Avoid. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Mitotane** is predicted to alter the effects of **ciostazol**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 949. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 349. [Moderate] Study
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical

- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **roxotinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **statins (simvastatin)**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose, p. 967. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Mitotane** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1337

Mitotane (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Mitoxantrone → see anthracyclines**Mivacurium** → see neuromuscular blocking drugs, non-depolarising**Mizolastine** → see antihistamines, non-sedating**Moclobemide** → see TABLE 13 p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clodipogrel**. A. Avoid. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 359. [Mild] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the effects of **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** increases the risk of side-effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**

(ephedrine, isometheptene, phenylephrine, pseudoephedrine).

Avoid. [Severe] Study

- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Study → Also see TABLE 13 p. 1337

Modafinil

- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Mometasone → see corticosteroids

Monoamine-oxidase A and B inhibitors, irreversible → see TABLE 8 p. 1335 (hypotension), TABLE 13 p. 1337 (serotonin syndrome)

isocarboxazid · phenelzine · tranylcypromine

FOOD AND LIFESTYLE Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when

- given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta₂ agonists**. [Moderate] Anecdotal
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
 - ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1335
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping safinamide. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1335
 - ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
 - ▶ **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
 - ▶ **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 13 p. 1337
 - ▶ **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1337
 - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- Monoamine-oxidase B inhibitors** → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 13 p. 1337 (serotonin syndrome)
- rasagiline • safinamide • selegiline
- FOOD AND LIFESTYLE** Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ Monoamine-oxidase B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - ▶ Monoamine-oxidase B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. Avoid. [Severe] Theoretical
 - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. [Severe] Theoretical

Monoamine-oxidase B inhibitors (continued)

- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1337
 - **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. [Moderate] Study
 - **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
 - **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
 - **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1335
 - Monoamine-oxidase B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - **Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - Monoamine-oxidase B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
 - **Moclobemide** is predicted to increase the effects of monoamine-oxidase B inhibitors (**rasagiline**, **selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - **Moclobemide** is predicted to increase the risk of side-effects when given with **saquinamide**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - Monoamine-oxidase B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 13 p. 1337
 - **Safinamide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - **Rasagiline** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - **Safinamide** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
 - **Selegiline** increases the risk of side-effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1337
 - **Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
 - **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with monoamine-oxidase B inhibitors (**rasagiline**, **selegiline**). Avoid. [Severe] Theoretical
 - **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
 - **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
- Monoclonal antibodies** → see TABLE 15 p. 1337 (myelosuppression), TABLE 12 p. 1337 (peripheral neuropathy), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 4 p. 1334 (antiplatelet effects)

adalimumab • alemtuzumab • atezolizumab • avelumab • basiliximab • belimumab • benralizumab • bevacizumab • blinatumomab • brentuximab vedotin • brodalumab • canakinumab • certolizumab pegol • cetuximab • daratumumab • dupilumab • ecizumab • elotuzumab • golimumab • guselkumab • infliximab • inotuzumab • ozogamicin • ipilimumab • ixekizumab • natalizumab • necitumumab • nivolumab • obinutuzumab • ocrelizumab • ofatumumab • olatumab • panitumumab • pembrolizumab • pertuzumab • ramucirumab • rituximab • sarilumab • secukinumab • siltuximab • tocilizumab • trastuzumab • trastuzumab emtansine • ustekinumab • vedolizumab

- **Tocilizumab** is predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical

- **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (**trastuzumab**, **trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- **Antiarrhythmics (dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
- **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [Severe] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Moderate] Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [Moderate] Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone, prednisone)** are predicted to decrease the efficacy of monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab). Use with caution or avoid. [Severe] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
- **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical

- **Tocilizumab** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- **Rifampicin** decreases the effects of **brentuximab vedotin**. [Severe] Study
- **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
- **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical

Montelukast

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical

Morphine

→ see opioids

Moxifloxacin

→ see quinolones

Moxisylyte

→ see TABLE 8 p. 1335 (hypotension)

Moxonidine

→ see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335

Mycophenolate

→ see TABLE 15 p. 1337 (myelosuppression)

- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
- **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
- **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

Nabilone

→ see TABLE 11 p. 1336 (CNS depressant effects)

- **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical

Nabumetone

→ see NSAIDs

Nadolol

→ see beta blockers, non-selective

Nalmefene

GENERAL INFORMATION Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical

Naloxegol

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical

Naltrexone

GENERAL INFORMATION Avoid concurrent use of opioids.

Nandrolone

► **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical

► **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

Naproxen

→ see NSAIDs

Naratriptan

→ see TABLE 13 p. 1337 (serotonin syndrome)

Naratriptan

► **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical

Natalizumab

→ see monoclonal antibodies

Nateglinide

→ see TABLE 14 p. 1337 (antidiabetic drugs)

Nateglinide (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Sulfapyrazone** slightly increases the exposure to **nateglinide**. [Mild] Study

Nebivolol → see beta blockers, selective

Necitumumab → see monoclonal antibodies

Nefopam → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors**, **irreversible**. Avoid. [Severe] Theoretical

Nelarabine → see TABLE 15 p. 1337 (myelosuppression)

Neomycin → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 19 p. 1338 (ototoxicity), TABLE 20 p. 1338 (neuromuscular blocking effects)

- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study

Neostigmine → see TABLE 6 p. 1335 (bradycardia), TABLE 20 p. 1338 (neuromuscular blocking effects)

- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical → Also see TABLE 20 p. 1338

Nepafenac → see NSAIDs

Netupitant

- ▶ **Netupitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 190. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Netupitant** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (dexamethasone)**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study

- ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 6 p. 1335 (bradycardia), TABLE 20 p. 1338 (neuromuscular blocking effects)

- atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium
- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical → Also see TABLE 6 p. 1335
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium). Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium). [Moderate] Study
 - ▶ **Clindamycin** increases the effects of neuromuscular blocking drugs, non-depolarising. [Severe] Anecdotal
 - ▶ **Corticosteroids** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Severe] Anecdotal
 - ▶ **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
 - ▶ **Irinotecan** is predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
 - ▶ Intravenous **magnesium** increases the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
 - ▶ **Metoclopramide** is predicted to increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
 - ▶ **Penicillins (piperacillin)** increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
 - ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with mivacurium. [Unknown] Theoretical

Nevirapine

- ▶ **Nevirapine** is predicted to decrease the exposure to **antiarrhythmics (dronedrone)**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical

Nevirapine (continued)

- ▶ Nevirapine is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ Nevirapine potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ Nevirapine is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ Nevirapine is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ Nevirapine decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ Nevirapine decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ Nevirapine decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ Nevirapine is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Nevirapine decreases the exposure to **macrolides** (**clarithromycin**). [Moderate] Study
- ▶ Nevirapine decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Nevirapine is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Nevirapine decreases the exposure to **opioids** (**methadone**). Monitor and adjust dose. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **ribiciclib**. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
- ▶ Nevirapine slightly decreases the exposure to **statins** (**atorvastatin**). [Mild] Study
- ▶ Nevirapine moderately decreases the exposure to **statins** (**simvastatin**). [Moderate] Study
- ▶ Nevirapine is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ Nevirapine decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ Nevirapine is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ Nevirapine is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Nevirapine is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Nicardipine** → see calcium channel blockers
- ▶ **Nicorandil** → see TABLE 8 p. 1335 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal

- ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
- Nicotinic acid** → see TABLE 3 p. 1334 (anticoagulant effects)
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 190. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study

Nilotinib (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids** (**methadone**, **sufentanil**). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**). Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**vardenafl**). Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ruixolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Nilotinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
 - ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Nimodipine** → see calcium channel blockers
- Nintedanib**
- ▶ **Antiarrhythmics** (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Antiepileptics** (**carbamazepine**) are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Calcium channel blockers** (**verapamil**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study

Nitisinone

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical

Nitrates → see TABLE 7 p. 1335 (first-dose hypotension), TABLE 8 p. 1335 (hypotension)

glyceryl trinitrate • isosorbide dinitrate • isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics**, local (**prilocaine**). Avoid. [Severe] Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical

► **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1335

Nitrazepam → see TABLE 11 p. 1336 (CNS depressant effects)

► **Rifampicin** increases the clearance of **nitrazepam**. [\[Moderate\]](#) Study

Nitrofurantoin → see TABLE 12 p. 1337 (peripheral neuropathy)

► **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical

► **Antacids (magnesium trisilicate)** decrease the absorption of **nitrofurantoin**. [\[Moderate\]](#) Study

► **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical

Nitrous oxide → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

Nivolumab → see monoclonal antibodies

Nizatidine → see H₂ receptor antagonists

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone

► **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [\[Severe\]](#) Anecdotal

► **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

► **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [\[Severe\]](#) Theoretical

Norflaxacin → see quinolones

Nortriptyline → see tricyclic antidepressants

NSAIDs → see TABLE 18 p. 1338 (hyponaemia), TABLE 2 p. 1334 (nephrotoxicity), TABLE 16 p. 1338 (increased serum potassium), TABLE 4 p. 1334 (platelet effects)

aceclofenac · acetaminophen · benzydamine · bromfenac · celecoxib · dexibuprofen · dextketoprofen · diclofenac · etodolac · etoricoxib · felbinac · fenoprofen · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepadfenac · parecoxib · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid ·

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

► **Celecoxib** is predicted to increase the exposure to **antiarrhythmics (flecainide, propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

► **Antifungals, azoles (fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1097. [\[Moderate\]](#) Study

► **Antifungals, azoles (fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. [\[Moderate\]](#) Study

► **Antifungals, azoles (voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [\[Moderate\]](#) Study

► **Antifungals, azoles (voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. [\[Moderate\]](#) Study

► **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronic acid, ibandronic acid)**. [\[Moderate\]](#) Study

► **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (sodium clodronate)**. [\[Severe\]](#) Theoretical

► **Certitinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [\[Moderate\]](#) Theoretical

► **Ciclosporin** increases the concentration of **diclofenac**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1334 → Also see TABLE 16 p. 1338

► **Etoricoxib** slightly increases the exposure to **combined hormonal contraceptives**. [\[Moderate\]](#) Study

► **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study

► **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical

► **Indometacin** increases the concentration of **digoxin**. [\[Severe\]](#) Study

► **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical

► **Etoricoxib** slightly increases the exposure to **hormone replacement therapy**. [\[Moderate\]](#) Study

► **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [\[Severe\]](#) Theoretical

► **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study

► **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 2 p. 1334

► **NSAIDs (high-dose)** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical

► **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical

► **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1334

► **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical

► **Regorafenib** is predicted to increase the exposure to **mefenamic acid**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1334

► **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [\[Moderate\]](#) Study

► **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1338

► **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1334

Obeticholic acid

► **Obeticholic acid** decreases the anticoagulant effect of **coumarins (warfarin)**. [\[Severe\]](#) Study

► **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical

► **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [\[Severe\]](#) Theoretical

Obinutuzumab → see monoclonal antibodies

Ocrelizumab → see monoclonal antibodies

Octreotide

► **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 818. [\[Severe\]](#) Anecdotal

Octreotide (continued)

- ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study

Ofatumumab → see monoclonal antibodies

ofloxacin → see quinolones

Olanzapine → see TABLE 8 p. 1335 (hypotension), TABLE 15 p. 1337 (myelosuppression), TABLE 11 p. 1336 (CNS depressant effects)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1335
- ▶ **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

Olaparib → see TABLE 15 p. 1337 (myelosuppression)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to **olaparib**.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical

Olarmumab → see monoclonal antibodies

Olmesartan → see angiotensin-II receptor antagonists

Olodaterol → see beta₂ agonists

Olsalazine → see TABLE 15 p. 1337 (myelosuppression)

Ombitasvir

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical

Omega-3-acid ethyl esters → see TABLE 3 p. 1334 (anticoagulant effects)

Omeprazole → see proton pump inhibitors

Onansetron → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Dopamine receptor agonists (apomorphine)** increase the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study

Opicapone

- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical

- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Theoretical

Opioids → see TABLE 6 p. 1335 (bradycardia), TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)

alfentanil • buprenorphine • codeine • diamorphine • dihydrocodeine • diphenoxylate • dipipanone • fentanyl • hydromorphone • meptazinol • methadone • morphine • oxycodone • papaveretum • pentazocine • pethidine • remifentanyl • sufentanil • tapentadol • tramadol

- ▶ **Alcohol (beverage)** causes rapid release of opioids (hydromorphone, morphine) (from extended-release preparations). Avoid. [Severe] Study → Also see TABLE 11 p. 1336
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of fentanyl. [Moderate] Theoretical → Also see TABLE 6 p. 1335
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to (methadone, sufentanil). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of tramadol. Adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to methadone. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to oxycodone. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids (alfentanil, fentanyl). [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to methadone. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to alfentanil. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil). Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical
- ▶ **Bosentan** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study
- ▶ **Bupropion** is predicted to decrease the efficacy of codeine. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of tramadol. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical → Also see TABLE 6 p. 1335
- ▶ **Ceritinib** is predicted to increase the exposure to opioids (alfentanil, fentanyl). Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of codeine. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of tramadol. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil). Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1335
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical → Also see TABLE 6 p. 1335 → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to opioids (alfentanil, fentanyl). [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to oxycodone. Monitor and adjust dose. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of alfentanil. Use with caution and adjust dose. [Severe] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to fentanyl. [Moderate] Study
- ▶ **HIV-protease inhibitors (boosted with ritonavir)** are predicted to decrease the exposure to methadone. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of morphine. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** increase the risk of CNS toxicity when given with pethidine. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil). Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to methadone. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil). Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of methadone. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil). Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (methadone, sufentanil). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to opioids (alfentanil, fentanyl). [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to oxycodone. Monitor and adjust dose. [Moderate] Study
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1337

Opioids (continued)

- ▶ **Monoamine-oxidase B inhibitors (rasagiline)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase B inhibitors (selegiline)** increase the risk of side-effects when given with **pethidine**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [Moderate] Theoretical
- ▶ **Nevirapine** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**). [Severe] Theoretical → Also see TABLE 11 p. 1336
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**, **codeine**, **diamorphine**, **dihydrocodeine**, **dipipanone**, **fentanyl**, **hydromorphone**, **meptazinol**, **methadone**, **morphine**, **oxycodone**, **papaveretum**). [Severe] Theoretical → Also see TABLE 13 p. 1337 → Also see TABLE 11 p. 1336
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**codeine**, **diamorphine**, **dihydrocodeine**, **dipipanone**, **fentanyl**, **hydromorphone**, **meptazinol**, **methadone**, **morphine**, **oxycodone**, **papaveretum**, **pentazocine**, **pethidine**, **remifentanil**, **sufentanil**, **tapentadol**, **tramadol**). [Severe] Theoretical → Also see TABLE 11 p. 1336 → Also see TABLE 13 p. 1337
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**pethidine**, **remifentanil**, **tapentadol**, **tramadol**). [Severe] Theoretical → Also see TABLE 11 p. 1336 → Also see TABLE 13 p. 1337
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**sufentanil**). [Severe] Anecdotal → Also see TABLE 11 p. 1336
- ▶ **Palbociclib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **morphine**. [Unknown] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to opioids (**alfentanil**, **fentanyl**). [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to opioids (**codeine**, **morphine**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **St John's Wort** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **St John's Wort** moderately decreases the exposure to **oxycodone**. Adjust dose. [Moderate] Study

- ▶ **Terbinafine** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tramadol**. [Severe] Study

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine → see TABLE 10 p. 1336 (antimuscarinics)

Osimertinib → see TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
- ▶ **Flaviriz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **Osimertinib** slightly increases the exposure to **statins (rosuvastatin)**. [Moderate] Study

Oxaliplatin → see platinum compounds

Oxazepam → see TABLE 11 p. 1336 (CNS depressant effects)

Oxcarbazepine → see antiepileptics

Oxprenolol → see beta blockers, non-selective

Oxybuprocaine → see anaesthetics, local

Oxybutynin → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- Oxycodone** → see opioids
- Oxymetholone**
- ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal

Oxytetracycline → see tetracyclines

Paclitaxel → see taxanes

Palbociclib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 961. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 961. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to palbociclib. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 961. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 961. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 961. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical

Paliperidone → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to paliperidone. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (valproate)** slightly increase the exposure to paliperidone. Adjust dose. [Moderate] Study
- ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to paliperidone. Monitor and adjust dose. [Severe] Study
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Mitotane** is predicted to decrease the exposure to paliperidone. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to paliperidone. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to paliperidone. [Severe] Theoretical

Palonosetron → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with palonosetron. [Severe] Theoretical

Pamidronate → see bisphosphonates

Pancreatin

- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical

Pancuronium → see neuromuscular blocking drugs, non-depolarising

Panitumumab → see monoclonal antibodies

Panobinostat → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [Mild] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 911. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Lapatinib** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 911. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Panobinostat** is predicted to increase the exposure to **phenothiazines (perphenazine)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Ranolazine** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336

Pantoprazole → see proton pump inhibitors

Papaveretum → see opioids

Paracetamol → see TABLE 1 p. 1334 (hepatotoxicity)

Paracetamol (continued)

- ▶ **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [\[Severe\]](#) Study → Also see TABLE 1 p. 1334
- ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [\[Moderate\]](#) Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1334
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [\[Unknown\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [\[Moderate\]](#) Study
- Paraldehyde** → see antiepileptics
- Parathyroid hormone**
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [\[Moderate\]](#) Study
- Parecoxib** → see NSAIDs
- Paricalcitol** → see vitamin D substances
- Paritaprevir**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **antifungals, azoles (posaconazole)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loop diuretics (furosemide)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **statins (fluvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (pravastatin)**. Adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 202. [\[Moderate\]](#) Study
- Paroxetine** → see SSRIs
- Pasireotide** → see TABLE 6 p. 1335 (bradycardia), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [\[Severe\]](#) Theoretical
- Patiromer**

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

- Pazopanib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after **antacids**. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1337
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1337

- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. [\[Severe\]](#) Theoretical
- Pegaspargase** → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1337
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **pegaspargase**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- Peginterferon alfa** → see interferons
- Peginterferon beta-1a** → see TABLE 15 p. 1337 (myelosuppression)
- Pembrolizumab** → see monoclonal antibodies
- Pemetrexed** → see TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity)
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **pemetrexed**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1337
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1334
- Penicillamine** → see TABLE 2 p. 1334 (nephrotoxicity)
- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [\[Mild\]](#) Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [\[Mild\]](#) Study
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [\[Severe\]](#) Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical
- Penicillins** → see TABLE 1 p. 1334 (hepatotoxicity)

amoxicillin • ampicillin • benzylpenicillin • flucloxacillin • phenoxymethylpenicillin • piperacillin • pivmecillinam • temocillin • ticarcillin

- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [\[Moderate\]](#) Study
- ▶ **Antiepileptics (valproate)** increase the risk of side-effects when given with pivmecillinam. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1334
- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study

- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Piperacillin** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- Pentamidine** → see TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. [\[Severe\]](#) Study
- ▶ Intravenous **pentamidine** potentially increases the risk of QT-prolongation when given with **drugs that prolong the QT interval**. [\[Severe\]](#) Anecdotal
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1334
- Pentazocine** → see opioids
- Pentostatin** → see TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)
- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1337 → Also see TABLE 5 p. 1334
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1337
- Pentoxifylline**
- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
- Peppermint oil**
- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- Perampanel** → see antiepileptics
- Pergolide** → see dopamine receptor agonists
- Pericyazine** → see phenothiazines
- Perindopril** → see ACE inhibitors
- Perphenazine** → see phenothiazines
- Pertuzumab** → see monoclonal antibodies
- Pethidine** → see opioids
- Phenelzine** → see monoamine-oxidase A and B inhibitors, irreversible
- Phenindione** → see TABLE 3 p. 1334 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K₁, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical

Phenindione (continued)

- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **H₂ receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [Severe] Anecdotal
- **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

Phenobarbital → see antiepileptics

Phenothiazines → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)

chlorpromazine · fluphenazine · levomepromazine · pericyazine · perphenazine · prochlorperazine · promazine · trifluoperazine

- **Chlorpromazine** dose adjustment might be necessary if smoking started or stopped during treatment.
- **Fluphenazine** dose adjustment might be necessary if smoking started or stopped during treatment.
- **Amfetamines** are predicted to decrease the effects of **chlorpromazine**. [Moderate] Study
- **Phenothiazines** are predicted to decrease the effects of **amfetamines**. [Moderate] Study
- **Antacids** decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 1336
- **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
- **Eliglustat** is predicted to increase the exposure to **perphenazine**. Adjust dose. [Moderate] Theoretical
- **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1335

- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1335
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336
- **Chlorpromazine** decreases the effects of **metirapone**. Avoid. [Moderate] Theoretical
- **Moclobemide** increases the risk of side-effects when given with **levomepromazine**. [Moderate] Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- **Panobinostat** is predicted to increase the exposure to **perphenazine**. Monitor and adjust dose. [Severe] Theoretical
- **SSRIs (paroxetine)** markedly increase the exposure to **perphenazine**. [Severe] Study

Phenoxymethylpenicillin → see penicillins**Phenylephrine** → see sympathomimetics, vasoconstrictor**Phenytoin** → see antiepileptics**Pholcodine**

- **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

Phosphodiesterase type-5 inhibitors → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation)

avanafil · sildenafil · tadalafil · vardenafil

- **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1335
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [Moderate] Theoretical
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [Moderate] Study → Also see TABLE 9 p. 1336
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1336
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [Severe] Study → Also see TABLE 9 p. 1336
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1335
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1335
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1335
- ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1336
- ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1335
- ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical

Phosphodiesterase type-5 inhibitors (continued)

- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical

Pibrentasvir

- ▶ **Antiarrhythmics (dronedaron)** potentially increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **pibrentasvir**. Avoid or monitor. [Severe] Study
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **daigabigatran**. Avoid. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** (boosted with ritonavir) increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (atorvastatin, simvastatin)**. Avoid. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust pravastatin dose. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust rosuvastatin dose, p. 202. [Moderate] Study

Pilocarpine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus

- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

Pimozide → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects), TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336 → Also see TABLE 10 p. 1336
- ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see TABLE 14 p. 1337 (antidiabetic drugs)

Pioglitazone potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical

- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
 - ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- Piperacillin** → see penicillins
Piperaquine → see antimalarials

Pirfenidone

FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical

Piroxicam → see NSAIDs

Pitolisant

- ▶ **Abiraterone** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Unknown] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Unknown] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical

- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see TABLE 15 p. 1337 (myelosuppression),

TABLE 2 p. 1334 (nephrotoxicity), TABLE 19 p. 1338 (ototoxicity), TABLE 12 p. 1337 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1337
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Polymyxins → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 20 p. 1338 (neuromuscular blocking effects)

Polysaccharide-iron complex → see iron (oral)

Polystyrene sulfonate

- ▶ **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ **Polystyrene sulfonate** is predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Theoretical

Pomalidomide → see TABLE 15 p. 1337 (myelosuppression), TABLE 5 p. 1334 (thromboembolism)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. [Moderate] Study

Ponatinib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study

Ponatinib (continued)

- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- Posaconazole** → see antifungals, azoles
- Potassium canrenoate** → see TABLE 16 p. 1338 (increased serum potassium)
- Potassium chloride** → see TABLE 16 p. 1338 (increased serum potassium)
- Potassium citrate**
 - ▶ Potassium citrate is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
 - ▶ Potassium citrate increases the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 1338 (hyponatraemia), TABLE 16 p. 1338 (increased serum potassium)
 - amiloride · triamterene
- ▶ **Triamterene** potentially increases the clearance of **lithium**. [Moderate] Study
- Pramipexole** → see dopamine receptor agonists
- Prasugrel** → see TABLE 4 p. 1334 (antiplatelet effects)
- Pravastatin** → see statins
- Praziquantel**
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ Antimalarials (**chloroquine**) moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Corticosteroids (dexamethasone)** decrease the exposure to **praziquantel**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to **praziquantel**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- Prazosin** → see alpha blockers
- Prednisolone** → see corticosteroids
- Prednisone** → see corticosteroids

Pregabalin → see antiepileptics**Prilocaine** → see anaesthetics, local**Primaquine** → see antimalarials**Primidone** → see antiepileptics**Procarbazine** → see TABLE 15 p. 1337 (myelosuppression), TABLE 13 p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **procarbazine**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin**) are predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Prochlorperazine → see phenothiazines**Procydiline** → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **SSRIs (paroxetine)** slightly increase the exposure to **procydiline**. Monitor and adjust dose. [Moderate] Study

Proguanil → see antimalarials**Promazine** → see phenothiazines**Promethazine** → see antihistamines, sedating**Propafenone** → see antiarrhythmics**Propanteline** → see TABLE 10 p. 1336 (antimuscarinics)**Propiverine** → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

Propofol → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ Antiepileptics (**valproate**) potentially increase the concentration of **propofol**. Adjust dose. [Severe] Theoretical

Propranolol → see beta blockers, non-selective**Propylthiouracil** → see TABLE 15 p. 1337 (myelosuppression)

- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

Proton pump inhibitors

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- ▶ Antifungals, azoles (**voriconazole**) increase the exposure to proton pump inhibitors (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- ▶ Proton pump inhibitors decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ Proton pump inhibitors decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ Proton pump inhibitors decrease the absorption of **antifungals, azoles (posaconazole)** (oral suspension). Avoid. [Moderate] Study
- ▶ Proton pump inhibitors are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ Proton pump inhibitors are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Study
- ▶ Proton pump inhibitors (**esomeprazole**, **omeprazole**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ Proton pump inhibitors (**esomeprazole**, **omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study

- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to proton pump inhibitors. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study
- ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study

Proxymetacaine

→ see anaesthetics, local

Pseudoephedrine

→ see sympathomimetics, vasoconstrictor

Pyrazinamide

- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical
- ▶ **Pyrazinamide** is predicted to decrease the effects of **sulfipyrazole**. [Moderate] Theoretical

Pyridostigmine → see TABLE 6 p. 1335 (bradycardia), TABLE 20 p. 1338 (neuromuscular blocking effects)

- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical → Also see TABLE 20 p. 1338

Pyrimethamine → see antimalarials

Quetiapine → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antiepileptics (valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1335

- ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1335
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study

Quinagolide → see dopamine receptor agonists

Quinapril → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see TABLE 9 p. 1336 (QT-interval prolongation)

ciprofloxacin • levofloxacin • moxifloxacin • norfloxacin • ofloxacin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin, norfloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **antacids**. [Moderate] Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mild] Study
- ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **norfloxacin**. **Norfloxacin** should be taken 2 hours before or 4 hours after **calcium carbonate**. [Moderate] Study
- ▶ **Ciprofloxacin** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal

Quinolones (continued)

- ▶ **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after **quinolones**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [Moderate] Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. [Severe] Theoretical
- ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. Avoid. [Severe] Anecdotal
- ▶ **Ciprofloxacin** slightly increases the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
- ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Norflaxacin** is predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Theoretical

Rabeprazole → see proton pump inhibitors

Rabies vaccine

- ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine**. Avoid. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical

Raloxifene → see TABLE 5 p. 1334 (thromboembolism)

Raltegravir

- ▶ **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** (boosted with ritonavir) decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** (boosted with ritonavir). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** (boosted with ritonavir) are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study

Raltitrexed → see TABLE 15 p. 1337 (myelosuppression)

- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Ramipril → see ACE inhibitors

Ramcicumab → see monoclonal antibodies

Ranibizumab

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

Ranitidine → see H₂ receptor antagonists

Ranolazine → see TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical

- ▶ **Enzalutamide** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of ranolazine. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 203. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

Rasagiline → see monoamine-oxidase B inhibitors

Reboxetine

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- Regorafenib** → see TABLE 15 p. 1337 (myelosuppression), TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1337
 - ▶ **Mitotane** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1337
 - ▶ **Regorafenib** is predicted to increase the exposure to **NSAIDs (mefenamic acid)**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1334
 - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. [Severe] Theoretical
- Remifentanyl** → see opioids
- Repaglinide** → see TABLE 14 p. 1337 (antidiabetic drugs)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to repaglinide. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to repaglinide. [Moderate] Study
 - ▶ **Ciclosporin** moderately increases the exposure to repaglinide. [Moderate] Study
 - ▶ **Clopidogrel** increases the exposure to repaglinide. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to repaglinide. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to repaglinide. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Fibrates (gemfibrozil)** increase the exposure to repaglinide. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to repaglinide. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to repaglinide. [Moderate] Study
 - ▶ **Iron chelators (deferasirox)** moderately increase the exposure to repaglinide. Avoid. [Moderate] Study

Repaglinide (continued)

- ▶ **Leflunomide** is predicted to increase the exposure to repaglinide. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to repaglinide. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to repaglinide. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the exposure to repaglinide. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to repaglinide. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to repaglinide. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to repaglinide. [Moderate] Study
- ▶ **Trimethoprim** slightly increases the exposure to repaglinide. Avoid or monitor blood glucose. [Moderate] Study

Retigabine → see antiepileptics

Retinoids → see TABLE 5 p. 1334 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin**, the possibility of interactions should be borne in mind.
- ▶ **Alcohol (beverage)** potentially increases the concentration of acitretin. Avoid and for 2 months after stopping acitretin, p. 1225. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with tretinoin. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of bexarotene. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ **Sulfapyrazone** is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Ribavirin

- ▶ **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. [Severe] Study

- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study

- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study

Ribociclib → see TABLE 9 p. 1336 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to ribociclib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to ribociclib. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to ribociclib. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ribociclib. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 965. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Efavirenz** is predicted to decrease the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to ribociclib. Avoid. [Severe] Study
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to ribociclib. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 965. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to ribociclib. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 965. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to ribociclib. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to ribociclib. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to ribociclib. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical

Rifabutin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 588. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** (boosted with ritonavir) increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Rifampicin

- ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** transiently increases the exposure to **ambrisentan**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before **antacids**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust **lamotrigine** dose, p. 316. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal

Rifampicin (continued)

- ▶ Rifampicin very markedly decreases the exposure to antifungals, azoles (**voriconazole**). Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to antihistamines, non-sedating (**bilastine**). [Moderate] Theoretical
- ▶ Rifampicin increases the clearance of antihistamines, non-sedating (**fexofenadine**). [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to antimalarials (**artemether**) (with lumafantrine). Avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to antimalarials (**atovaquone**) and antimalarials (**atovaquone**) slightly increase the exposure to rifampicin. Avoid. [Moderate] Study
- ▶ Rifampicin moderately decreases the exposure to antimalarials (**mefloquine**). [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of antimalarials (**piperaquine**). Avoid. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to antimalarials (**quinine**). [Severe] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **ataluren**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **beta blockers, non-selective** (**carvedilol**). [Moderate] Study
- ▶ Rifampicin decreases the exposure to **beta blockers, non-selective** (**propranolol**). Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **beta blockers, selective** (**bisoprolol, metoprolol**). [Mild] Study
- ▶ Rifampicin moderately decreases the exposure to **beta blockers, selective** (**celiprolol**). [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ Rifampicin affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin greatly decreases the exposure to **calcium channel blockers** (**diltiazem, verapamil**). [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **calcium channel blockers** (**nifedipine**). Avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **canagliflozin**. Adjust canagliflozin dose, p. 687. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ Rifampicin decreases the concentration of **caspofungin**. Adjust caspofungin dose, p. 582. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ Rifampicin decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **chlorthalidoxipoxide**. [Moderate] Theoretical
- ▶ Rifampicin decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ Rifampicin is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **corticosteroids** (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **corticosteroids** (**fluticasone**). [Unknown] Theoretical
- ▶ Rifampicin decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ Rifampicin decreases the exposure to **dapsone**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ Rifampicin moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **digoxin**. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to increase the exposure to **eluxadoline**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 949. [Severe] Study
- ▶ Rifampicin is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefinitib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **HIV-protease inhibitors (ritonavir)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study

Rifampicin (continued)

- ▶ Rifampicin moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Rifampicin markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Rifampicin moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ Rifampicin markedly decreases the exposure to **statins** (**atorvastatin**). Atorvastatin should be taken at the same time as rifampicin, p. 200, p. 571. [Moderate] Study
- ▶ Rifampicin moderately decreases the exposure to **statins** (**fluvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin very markedly decreases the exposure to **statins** (**simvastatin**). [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Rifampicin markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ Rifampicin is predicted to decrease the exposure to **taxanes** (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **taxanes** (**docetaxel**). [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study

- ▶ Rifampicin is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ Rifampicin decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
 - ▶ Rifampicin decreases the exposure to **tetracyclines** (**doxycycline**). Monitor and adjust dose. [Moderate] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ Rifampicin is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **tivozanib**. [Severe] Study
 - ▶ Rifampicin moderately decreases the exposure to **tizanidine**. [Mild] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
 - ▶ Rifampicin decreases the exposure to **trimethoprim**. [Moderate] Study
 - ▶ Rifampicin decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ Rifampicin is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ Rifampicin is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
 - ▶ Rifampicin is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids** (**vinblastine**, **vincristine**, **vindesine**). [Severe] Theoretical
 - ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids** (**vinflunine**). Avoid. [Severe] Theoretical
 - ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids** (**vinorelbine**). Use with caution or avoid. [Severe] Theoretical
 - ▶ Rifampicin is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ Rifampicin potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics** (**methoxyflurane**). Avoid. [Severe] Theoretical
 - ▶ Rifampicin is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
 - ▶ Rifampicin is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
 - ▶ Rifampicin markedly decreases the exposure to **zaleplon**. [Moderate] Study
 - ▶ Rifampicin moderately decreases the exposure to **zolidem**. [Moderate] Study
 - ▶ Rifampicin is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Rifaximin**
- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study
- Rilpivirine**
- ▶ **Antacids** are predicted to decrease the exposure to **rilpivirine**. Antacids should be taken 2 hours before or 4 hours after **rilpivirine**, p. 634. [Severe] Theoretical
 - ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
 - ▶ **Antiepileptics** (**oxcarbazepine**) are predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
 - ▶ **Calcium salts** (**calcium carbonate**) are predicted to slightly decrease the exposure to **rilpivirine**. Calcium carbonate should be taken 2 hours before or 4 hours after **rilpivirine**. [Severe] Theoretical

- ▶ **Efavirenz** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to rilpivirine. H₂ receptor antagonists should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
- ▶ **Mitotane** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to rilpivirine. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- Riociguat** → see TABLE 8 p. 1335 (hypotension)
- ▶ **Antacids** slightly decrease the exposure to riociguat. Antacids should be taken 2 hours before or 1 hour after riociguat. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to riociguat. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to riociguat. Avoid. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to riociguat. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to riociguat. Avoid. [Moderate] Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335

Risedronate → see bisphosphonates

- Risperidone** → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Bupropion** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idealalisib** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1335
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1336

- ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- Ritonavir** → see HIV-protease inhibitors
- Rituximab** → see monoclonal antibodies
- Rivaroxaban** → see TABLE 3 p. 1334 (anticoagulant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to rivaroxaban. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to moderately increase the exposure to rivaroxaban. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to rivaroxaban. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- Rivastigmine** → see anticholinesterases, centrally acting
- Rizatriptan** → see TABLE 13 p. 1337 (serotonin syndrome)
- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to rizatriptan. Adjust rizatriptan dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after rizatriptan. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to rizatriptan. Avoid. [Moderate] Study → Also see TABLE 13 p. 1337
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to rizatriptan. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337
- Rocuronium** → see neuromuscular blocking drugs, non-depolarising
- Roflumilast**
- ▶ **Aminophylline** is predicted to slightly increase the exposure to roflumilast. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to roflumilast. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to roflumilast. [Moderate] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to roflumilast. Avoid. [Moderate] Theoretical

Rolapitant

- ▶ **Rolapitant** is predicted to increase the exposure to **alkylating agents (bendamustine)**. Avoid or monitor. [Moderate] Study

Rolapitant (continued)

- ▶ **Rolapitant** is predicted to increase the exposure to **anthracyclines (doxorubicin, mitoxantrone)**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to moderately increase the exposure to **beta blockers, selective (metoprolol)**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **statins (rosuvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study

Ropinirole → see dopamine receptor agonists

Ropivacaine → see anaesthetics, local

Rosuvastatin → see statins

Rotavirus vaccine → see live vaccines

Rotigotine → see dopamine receptor agonists

Rufinamide → see antiepileptics

Rupatadine → see antihistamines, non-sedating

Ruxolitinib → see TABLE 15 p. 1337 (myelosuppression)

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study

▶ **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study

▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

▶ **Efavirenz** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Enzalutamide** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1337

▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1337

▶ **Netupitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Nevirapine** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

▶ **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study

▶ **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical

Sacubitril → see TABLE 8 p. 1335 (hypotension)

▶ **Sacubitril** is predicted to increase the exposure to **statins**. [Severe] Study

Safinamide → see monoamine-oxidase B inhibitors

Salbutamol → see beta₂ agonists

Salmeterol → see beta₂ agonists

Sapropterin → see TABLE 8 p. 1335 (hypotension)

▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical

▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1335

▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical

Saquinavir → see HIV-protease inhibitors

Sarilumab → see monoclonal antibodies

Saxagliptin → see TABLE 14 p. 1337 (antidiabetic drugs)

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study

▶ **Aprepitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study

▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study

▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study

▶ **Enzalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study

- ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study

Secukinumab → see monoclonal antibodies

Selegiline → see monoamine-oxidase B inhibitors

Selenium

- ▶ **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**, p. 1001, p. 1037. [Severe] Theoretical

Selexipag

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **selexipag**. Adjust dose. [Severe] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical

Sertraline

→ see SSRIs

Sevoflurane → see volatile halogenated anaesthetics

Sildenafil → see phosphodiesterase type-5 inhibitors

Siltuximab → see monoclonal antibodies

Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simeprevir

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Simeprevir** is predicted to increase the concentration of **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Simeprevir** moderately increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Simeprevir** is predicted to increase the exposure to **statins (pravastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Simeprevir** moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Simeprevir** slightly increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study

Simvastatin → see statins

Sirolimus

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study

Sirolimus (continued)

- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical

Sitagliptin → see TABLE 14 p. 1337 (antidiabetic drugs)

Sodium aurothiomalate

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [Severe] Anecdotal
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study

Sodium bicarbonate

- ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [Moderate] Study
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

Sodium citrate

- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical

Sodium clodronate → see bisphosphonates

Sodium ferredetate → see iron (oral)

Sodium nitroprusside → see TABLE 8 p. 1335 (hypotension)

- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

Sodium oxybate → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 484. [Moderate] Study

Sodium phenylbutyrate

- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal

Sodium picosulfate → see TABLE 18 p. 1338 (hyponatraemia)

Sodium stibogluconate

- ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study

Sofosbuvir

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

Solifenacin → see TABLE 10 p. 1336 (antimuscarinics)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin** with **solifenacin** p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin**

with solifenacin p. 768 dose; avoid in hepatic and renal impairment. [Severe] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

Somatropin

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical

Sorafenib → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal

- ▶ **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337

- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study

- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

Sotalol → see beta blockers, non-selective

Spironolactone → see aldosterone antagonists

SSRIs → see TABLE 18 p. 1338 (hyponatraemia), TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 4 p. 1334 (antiplatelet effects)

citalopram • dapoxetine • escitalopram • fluoxetine • fluvoxamine • paroxetine • sertraline

- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [Severe] Study

- ▶ **Fluvoxamine** moderately increases the exposure to **alprazolam**. Adjust dose. [Moderate] Study

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1337

- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [Severe] Study

- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [Moderate] Study

- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1334

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [Severe] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [Moderate] Study

- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal

- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study

- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [Severe] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of **SSRIs**. [Moderate] Anecdotal

- ▶ **Aprepitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study

- ▶ **Fluvoxamine** increases the exposure to **asenapine**. [Moderate] Study

- ▶ **Paroxetine** moderately increases the exposure to **asenapine**. [Moderate] Study

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study

- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical → Also see TABLE 13 p. 1337

- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. [Moderate] Theoretical → Also see TABLE 4 p. 1334

- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical

- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical

- ▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical

- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1334

- ▶ **Fluvoxamine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study

- ▶ **Fluvoxamine** moderately increases the exposure to **diazepam**. [Moderate] Study

- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study

- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337 → Also see TABLE 4 p. 1334

- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Theoretical

- ▶ **Fluvoxamine** increases the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1337

- ▶ **Grapefruit juice** moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study

- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **SSRIs (citalopram, escitalopram)**. Adjust dose. [Moderate] Study

- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **SSRIs (paroxetine, sertraline)**. [Moderate] Study

- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal

SSRIs (continued)

- **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- **Netupitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. [Moderate] Theoretical
- **Fluvoxamine** moderately increases the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
- **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1337
- **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- **Paroxetine** markedly increases the exposure to **phenothiazines (perphenazine)**. [Severe] Study
- **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. [Moderate] Study
- **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
- **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Theoretical
- **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Study
- **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- **Fluvoxamine** is predicted to increase the exposure to **roflumilast**. [Moderate] Study
- **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337 → Also see TABLE 4 p. 1334

- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
 - **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
 - **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
 - **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
 - **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
 - **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
 - **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
 - **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
 - **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
 - **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1337 → Also see TABLE 4 p. 1334
 - **Fluvoxamine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Severe] Theoretical → Also see TABLE 13 p. 1337
- St John's Wort** → see TABLE 13 p. 1337 (serotonin syndrome)
- **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
 - **St John's Wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
 - **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
 - **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
 - **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mild] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - **St John's Wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
 - **St John's Wort** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **certitinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cobicicistat**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the exposure to **opioids** (**methadone**). Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **St John's Wort** moderately decreases the exposure to **opioids** (**oxycodone**). Adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **paliperidone**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study

St John's Wort (continued)

- ▶ St John's Wort is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ St John's Wort slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ St John's Wort is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ St John's Wort slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ St John's Wort moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ St John's Wort decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ St John's Wort is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Statins → see TABLE 1 p. 1334 (hepatotoxicity)

atorvastatin • fluvastatin • pravastatin • rosuvastatin • simvastatin

- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antacids** moderately decrease the absorption of **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 203. [Severe] Study

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antiepileptics (eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** potentially decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (miconazole)** potentially increase the exposure to **atorvastatin**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Bosentan** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Bosentan** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of **statins**. [Moderate] Theoretical
- ▶ **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 200. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. [Severe] Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Efavirenz** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Elbasvir** potentially increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 200. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 201. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. [Unknown] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Eluxadoline** is predicted to increase the exposure to **statins**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 198. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 198, p. 202. [Severe] Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 198. [Severe] Anecdotal
- ▶ **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 202. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (atorvastatin, simvastatin)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 200. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 201. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1334
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 206. [Mild] Study → Also see TABLE 1 p. 1334
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 203. [Moderate] Study → Also see TABLE 1 p. 1334
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study

Statins (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [\[Severe\]](#) Study
- ▶ **Nevirapine** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Nevirapine** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. [\[Severe\]](#) Study
- ▶ **Osimertinib** slightly increases the exposure to **rosuvastatin**. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fluvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to statins (**atorvastatin**, **simvastatin**). Avoid. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. [\[Moderate\]](#) Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **rosuvastatin**). [\[Severe\]](#) Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **atorvastatin**. **Atorvastatin** should be taken at the same time as rifampicin, p. 200, p. 571. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **fluvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** very markedly decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Rolapitant** is predicted to increase the exposure to **rosuvastatin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Sacubitril** is predicted to increase the exposure to statins. [\[Severe\]](#) Study
- ▶ **Simeprevir** moderately increases the exposure to **atorvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Simeprevir** is predicted to increase the exposure to **pravastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Simeprevir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Simeprevir** slightly increases the exposure to **simvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's Wort** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **St John's Wort** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Sulfinpyrazone** is predicted to increase the exposure to **fluvastatin**. [\[Severe\]](#) Theoretical
- ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas** (**glibenclamide**). [\[Mild\]](#) Study
- ▶ **Tedizolid** increases the exposure to **rosuvastatin**. Avoid. [\[Moderate\]](#) Study

- ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. [\[Moderate\]](#) Study
- ▶ **Ticagrelor** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. [\[Moderate\]](#) Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Velpatasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor side effects, p. 202. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to statins (**atorvastatin**, **simvastatin**). Monitor side effects and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 202. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **simvastatin**). Avoid. [\[Severe\]](#) Theoretical
- Stavudine** → see TABLE 12 p. 1337 (peripheral neuropathy)
- ▶ **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 12 p. 1337
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [\[Severe\]](#) Theoretical → Also see TABLE 12 p. 1337
- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [\[Severe\]](#) Theoretical
- Stiripentol** → see antiepileptics
- Streptokinase** → see TABLE 3 p. 1334 (anticoagulant effects)
- Streptomycin** → see aminoglycosides
- Sucralfate**
- ▶ **Sucralfate** potentially decreases the effects of **coumarins** (**warfarin**). Separate administration by 2 hours. [\[Moderate\]](#) Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [\[Moderate\]](#) Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [\[Moderate\]](#) Study
- ▶ **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Sucralfate** decreases the absorption of **thyroid hormones** (**levothyroxine**). Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [\[Moderate\]](#) Study
- Sufentanil** → see opioids
- Sugammadex**
- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study

- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study

- ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Theoretical

Sulfipyrazone → see TABLE 4 p. 1334 (antiplatelet effects)

- ▶ **Sulfipyrazone** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study

- ▶ **Aspirin** decreases the effects of **sulfipyrazone**. [Moderate] Study → Also see TABLE 4 p. 1334

- ▶ **Sulfipyrazone** decreases the exposure to **calcium channel blockers (verapamil)**. [Moderate] Study

- ▶ **Sulfipyrazone** decreases the concentration of **ciclosporin**. [Severe] Study

- ▶ **Sulfipyrazone** increases the anticoagulant effect of **coumarins**. Avoid. [Severe] Study

- ▶ **Sulfipyrazone** slightly increases the exposure to **netelgeline**. [Mild] Study

- ▶ **Pyrazinamide** is predicted to decrease the effects of **sulfipyrazone**. [Moderate] Theoretical

- ▶ **Sulfipyrazone** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1226. [Moderate] Theoretical

- ▶ **Sulfipyrazone** is predicted to increase the exposure to **statins (fluvastatin)**. [Severe] Theoretical

- ▶ **Sulfipyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

Sulfonamides → see TABLE 15 p. 1337 (myelosuppression)

co-trimoxazole · sulfadiazine · sulfadoxine · sulfamethoxazole

- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Anecdotal

- ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Moderate] Study

- ▶ **Sulfadiazine** increases the concentration of **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study

- ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1337

- ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical

- ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study

- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical

- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337

- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study

- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical

Sulfonylureas → see TABLE 14 p. 1337 (antidiabetic drugs)

glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

- ▶ **Bosentan** increases the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study

- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical

- ▶ **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical

- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study

- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study

- ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mild] Study

- ▶ **Sulfipyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study

Sulindac → see NSAIDs

Sulpiride → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antacids** decrease the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study

- ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336

- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1335

- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336

- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study

Sumatriptan → see TABLE 13 p. 1337 (serotonin syndrome)

- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study

- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1337

- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1337

Sunitinib → see TABLE 15 p. 1337 (myelosuppression), TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336

- ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study

- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

Sunitinib (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. [Moderate] Study

Suxamethonium → see TABLE 20 p. 1338 (neuromuscular blocking effects)

- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
- ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical

Sympathomimetics, inotropic

dobutamine · dopamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
- ▶ **Guanethidine** is predicted to increase the effects of **dopamine**. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Isometheptene** potentially increases the risk of side-effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Severe] Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [Severe] Anecdotal
- ▶ **Guanethidine** increases the effects of **metaraminol**. [Severe] Anecdotal
- ▶ **Guanethidine** increases the effects of **phenylephrine**. [Severe] Study
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated

blood pressure when given with **linezolid**. Avoid. [Severe]

Theoretical

- ▶ **Mianserin** decreases the effects of **ephedrine**. [Severe] Anecdotal
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor (**ephedrine**, **isometheptene**, **phenylephrine**, **pseudoephedrine**). Avoid. [Severe] Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor. Avoid and for 14 days after stopping the MAOI. [Severe] Study
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor. Avoid. [Severe] Anecdotal
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Theoretical
- ▶ **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**, **phenylephrine**). Avoid. [Severe] Study

Tacalcitol → see vitamin D substances

Tacrolimus → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 16 p. 1338 (increased serum potassium)

- ▶ Pomelo might greatly increase the concentration of **tacrolimus**.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Appetitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Calcium channel blockers (nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1334 → Also see TABLE 16 p. 1338
- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal

Tadalafil → see phosphodiesterase type-5 inhibitors

Tamoxifen → see TABLE 5 p. 1334 (thromboembolism)

▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**.

Avoid. [Severe] Study

▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**.

Avoid. [Severe] Study

▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**.

[Severe] Study

▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**.

[Unknown] Study

▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**.

[Severe] Study

Tamoxifen (continued)

- **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study

Tamsulosin → see alpha blockers

Tapentadol → see opioids

Taxanes → see TABLE 15 p. 1337 (myelosuppression), TABLE 12 p. 1337 (peripheral neuropathy)

cabazitaxel · docetaxel · paclitaxel

- **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 1337
- **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1337
- **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- **Antifungals**, azoles (**miconazole**) are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
- **Aprepitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Bosentan** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Efavirenz** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
- **Fibrates** (**gemfibrozil**) are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1337

- **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
- **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal → Also see TABLE 15 p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel**, **paclitaxel**). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Macrolides** (**clarithromycin**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- **Macrolides** (**erythromycin**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
- **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- **Mitotane** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- **Netupitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical

Tazarotene → see retinoids

Tedizolid

- **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- **Tedizolid** increases the exposure to **statins** (**rosuvastatin**). Avoid. [Moderate] Study
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Theoretical

Tegafur

- **Tegafur** potentially increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- **H₂ receptor antagonists** (**cimetidine**) are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical

Tecoplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

- **Telavancin** → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 19 p. 1338 (ototoxicity), TABLE 9 p. 1336 (QT-interval prolongation)

Telbivudine

- **Interferons (interferon alfa)** are predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Theoretical
- **Interferons (peginterferon alfa)** increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Study
- **Telmisartan** → see angiotensin-II receptor antagonists

Telotristat ethyl

- **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study
- **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**, p. 864, p. 924. [Moderate] Study

- **Temazepam** → see TABLE 11 p. 1336 (CNS depressant effects)

- **Temocillin** → see penicillins

- **Temozolomide** → see alkylating agents

- **Temsilolimus** → see TABLE 15 p. 1337 (myelosuppression)

- **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Appetizant** is predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Bosentan** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Crizotinib** is predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Efavirenz** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Study
- **Grapefruit juice** is predicted to increase the concentration of **temsilolimus**. Use with caution or avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Idealisib** is predicted to increase the concentration of **temsilolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- **Imatinib** is predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsilolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsilolimus**. Avoid. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Macrolides (erythromycin)** are predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Mitotane** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1337
- **Netupitant** is predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical
- **Nevirapine** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Theoretical

- **Nilotinib** is predicted to increase the concentration of **temsilolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- **Pitolisant** is predicted to decrease the exposure to **temsilolimus**. Avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the concentration of **temsilolimus**. Avoid. [Severe] Theoretical
- **Tenecteplase** → see TABLE 3 p. 1334 (anticoagulant effects)
- **Tenofovir alafenamide**
 - **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - **HIV-protease inhibitors (atazanavir, darunavir)** increase the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Study
 - **HIV-protease inhibitors (tipranavir)** are predicted to affect the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - **Rifampicin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- **Tenofovir disoproxil** → see TABLE 2 p. 1334 (nephrotoxicity)
 - **Tenofovir disoproxil** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
 - **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
 - **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
 - **Voxilaprevir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- **Tenoxicam** → see NSAIDs
- **Terazosin** → see alpha blockers
- **Terbinafine**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 391. [Moderate] Study
- **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- **Terbinafine** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- **Terbinafine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
- **Terbinafine** is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
- **Terbinafine** moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study

Terbinafine (continued)

- ▶ Terbinafine is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Terbutaline → see beta₂ agonists**Teriflunomide**

- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
 - ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. [Moderate] Theoretical
 - ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- Tetrabenazine** → see TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- Tetracaine** → see anaesthetics, local
- Tetracycline** → see tetracyclines
- Tetracyclines** → see TABLE 1 p. 1334 (hepatotoxicity)
- demeclocycline • doxycycline • lymecycline • minocycline • oxytetracycline • tetracycline • tigecycline
- ▶ **ACE inhibitors (quinapril)** (tablet) decrease the absorption of oral **tetracycline**. Avoid. [Moderate] Study
 - ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1334
 - ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [Moderate] Study
 - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
 - ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal

- ▶ **Dairy products** decrease the exposure to tetracyclines (**demeclocycline, oxytetracycline, tetracycline**). Avoid. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron (oral). [Moderate] Study
- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Rifampicin** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical

Thalidomide → see TABLE 6 p. 1335 (bradycardia), TABLE 15 p. 1337 (myelosuppression), TABLE 12 p. 1337 (peripheral neuropathy), TABLE 5 p. 1334 (thromboembolism), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study

- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical

Theophylline → see TABLE 17 p. 1338 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study
- ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study

- ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [Moderate] Study
 - ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
 - ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
 - ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
 - ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [Severe] Study
 - ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
 - ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
 - ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Quinolones (norfloxacin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
 - ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
 - ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [Severe] Study
 - ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
 - ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
 - ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **theophylline**. Avoid in children. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- Thiazide diuretics** → see TABLE 18 p. 1338 (hyponatraemia), TABLE 8 p. 1335 (hypotension), TABLE 17 p. 1338 (reduced serum potassium)
- benfroflumethiazide • chlortalidon • clopamide • cyclopenthiiazide • hydrochlorothiazide • hydroflumethiazide • indapamide • metolazone • xipamide

- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 1338
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical

- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Thiopental** → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 1335
- Thiotepa** → see alkylating agents
- Thyroid hormones**
 - levothyroxine • liothyronine
- ▶ **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Oral calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Polystyrene sulfonate** is predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- Tiagabine** → see antiepileptics
- Tiaprofenic acid** → see NSAIDs
- Tibolone** → see TABLE 5 p. 1334 (thromboembolism)
- Ticagrelor** → see TABLE 4 p. 1334 (antiplatelet effects)
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study

Ticagrelor (continued)

- **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- **Ticagrelor** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 203. [Moderate] Study
- **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study

Ticarcillin → see penicillins

Tigecycline → see tetracyclines

Timolol → see beta blockers, non-selective

Tinidazole

- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. [Moderate] Theoretical
- **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical

Tinzaparin → see low molecular-weight heparins

Tioguanine → see TABLE 15 p. 1337 (myelosuppression)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Tiotropium → see TABLE 10 p. 1336 (antimuscarinics)

Tipranavir → see HIV-protease inhibitors

Tirofiban → see TABLE 4 p. 1334 (antiplatelet effects)

Tivozanib

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- **Tivozanib** is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical

Tizanidine → see TABLE 6 p. 1335 (bradycardia), TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)

- **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
- **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies

Tofacitinib

- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **tofacitinib**. [Moderate] Theoretical
- **Aprepitant** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Bosentan** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- **Crizotinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- **Imatinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. [Moderate] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- **Netupitant** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Nevirapine** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **tofacitinib**. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study

Tolbutamide → see sulfonylureas

Tolcapone

- **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical

Tolfenamic acid → see NSAIDs

Tolerodine → see TABLE 9 p. 1336 (QT-interval prolongation), TABLE 10 p. 1336 (antimuscarinics)

- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1336
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1336

Tolvaptan → see TABLE 16 p. 1338 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- Topiramate** → see antiepileptics
- Topotecan** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- Toraseamide** → see loop diuretics
- Toremifene** → see TABLE 5 p. 1334 (thromboembolism), TABLE 9 p. 1336 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical

Toremifene (continued)

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical

Trabectedin → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1334
- ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical

Tramadol → see opioids

Trametinib

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

Trandolapril → see ACE inhibitors

Tranexamic acid → see TABLE 5 p. 1334 (thromboembolism)

Tranylcypromine → see monoamine-oxidase A and B inhibitors, irreversible

Trastuzumab → see monoclonal antibodies

Trastuzumab emtansine → see monoclonal antibodies

Trazodone → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Treosulfan → see alkylating agents

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see TABLE 18 p. 1338 (hyponatraemia), TABLE 8 p. 1335 (hypotension), TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 10 p. 1336 (antimuscarinics)

amitriptyline • clomipramine • dosulepin • doxepin • imipramine • lofepramine • nortriptyline • trimipramine

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1336
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1338
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 1337
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 1335
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1336
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [Moderate] Theoretical

- ▶ **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Study → Also see TABLE 8 p. 1335
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Amitriptyline** decreases the effects of **metoprolol**. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1337
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 13 p. 1337
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
- ▶ **SSRIs (fluvoxamine)** increase the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1338 → Also see TABLE 13 p. 1337
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
- ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 1335

Trientine

- ▶ **Trientine** potentially decreases the absorption of **iron (oral)**. [Moderate] Theoretical
- ▶ **Trientine** potentially decreases the absorption of **zinc**. [Moderate] Theoretical

Trifluoperazine → see phenothiazines

Trihexyphenidyl → see TABLE 10 p. 1336 (antimuscarinics)

Trimethoprim → see TABLE 18 p. 1338 (hyponatraemia), TABLE 2 p. 1334 (nephrotoxicity), TABLE 16 p. 1338 (increased serum potassium)

- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with **trimethoprim**. [Severe] Study
- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study
- ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study
- ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Theoretical → Also see TABLE 2 p. 1334

- ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [Moderate] Study
 - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
 - Trimipramine** → see tricyclic antidepressants
 - Tropicamide** → see TABLE 10 p. 1336 (antimuscarinics)
 - Trospium** → see TABLE 10 p. 1336 (antimuscarinics)
 - Tryptophan** → see TABLE 13 p. 1337 (serotonin syndrome)
 - ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
 - ▶ **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1337
- #### Typhoid vaccine, oral
- see live vaccines
- #### Ulipristal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
 - ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**, p. 785. [Severe] Theoretical
 - ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
 - ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
 - ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
 - ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

Ulipristal (continued)

- **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical
- **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. [Severe] Anecdotal
- Umeclidinium** → see TABLE 10 p. 1336 (antimuscarinics)
- Urokinase** → see TABLE 3 p. 1334 (anticoagulant effects)
- Ursodeoxycholic acid**
 - **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
 - **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
 - **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- Ustekinumab** → see monoclonal antibodies
- Valaciclovir** → see TABLE 2 p. 1334 (nephrotoxicity)
- **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- Valganciclovir** → see TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity)
- **Valganciclovir** is predicted to increase the risk of seizures when given with **carbamazepine (imipenem)**. Avoid. [Severe] Anecdotal
- **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- Valproate** → see antiepileptics
- Valsartan** → see angiotensin-II receptor antagonists
- Vancomycin** → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 19 p. 1338 (ototoxicity)
- Vandetanib** → see TABLE 9 p. 1336 (QT-interval prolongation)
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study

- **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- Vardenafil** → see phosphodiesterase type-5 inhibitors
- Varicella-zoster vaccine** → see live vaccines
- Vecuronium** → see neuromuscular blocking drugs, non-depolarising
- Vedolizumab** → see monoclonal antibodies
- Velpatasvir**
 - **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
 - **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
 - **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
 - **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
 - **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Severe] Theoretical
 - **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
 - **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
 - **Velpatasvir** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
 - **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
 - **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
 - **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
 - **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with **velpatasvir** p. 619. [Moderate] Study
 - **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
 - **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with **velpatasvir** p. 619. [Moderate] Study
 - **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
 - **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - **Velpatasvir** is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor side effects and adjust dose. [Severe] Theoretical
 - **Velpatasvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose and monitor side effects, p. 202. [Severe] Study
 - **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
 - **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
 - **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
- Vemurafenib** → see TABLE 9 p. 1336 (QT-interval prolongation)

- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. [Severe] Theoretical
- ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

Venetoclax

FOOD AND LIFESTYLE Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
- ▶ **Appetitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study

- ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (azithromycin)** decrease the exposure to **venetoclax**. [Mild] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Nevirapine** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. [Severe] Study
 - ▶ **Nanolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Venlafaxine** → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects), TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Abiraterone** potentially increases the exposure to **venlafaxine**. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1336
 - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
 - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1336 → Also see TABLE 11 p. 1336

Venlafaxine (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to venlafaxine. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to venlafaxine. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to venlafaxine. [Moderate] Study → Also see TABLE 9 p. 1336
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with venlafaxine. [Severe] Anecdotal

Verapamil → see calcium channel blockers

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta₂ agonists

Vildagliptin → see TABLE 14 p. 1337 (antidiabetic drugs)

Vinblastine → see vinca alkaloids

Vinca alkaloids → see TABLE 1 p. 1334 (hepatotoxicity), TABLE 15 p. 1337 (myelosuppression), TABLE 19 p. 1338 (ototoxicity), TABLE 12 p. 1337 (peripheral neuropathy), TABLE 5 p. 1334 (thromboembolism), TABLE 9 p. 1336 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1337
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinorelbine. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1337
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 12 p. 1337
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 1 p. 1334 → Also see TABLE 9 p. 1336
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of vinca alkaloids. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before asparaginase. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before crisantaspase. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- ▶ **Crizotinib** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Enzalutamide** is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to vinorelbine. Use with caution or avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Idelalisib** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Imatinib** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 15 p. 1337

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with vinca alkaloids. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 9 p. 1336
- ▶ **Mitotane** is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Mitotane** is predicted to decrease the exposure to vinorelbine. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Netupitant** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical → Also see TABLE 15 p. 1337 → Also see TABLE 9 p. 1336
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before pegaspargase. [Severe] Anecdotal → Also see TABLE 1 p. 1334 → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to vinorelbine. Use with caution or avoid. [Severe] Theoretical
- ▶ **Vincristine** → see vinca alkaloids
- ▶ **Vindesine** → see vinca alkaloids
- ▶ **Vinflunine** → see vinca alkaloids
- ▶ **Vinorelbine** → see vinca alkaloids
- ▶ **Vismodegib** → see TABLE 15 p. 1337 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Rifampicin** is predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical

Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with vitamin A. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. [Severe] Study

Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotychsterol · ergocalciferol · paricalcitol · tacalcitol

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of vitamin D substances. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of vitamin D substances. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of vitamin D substances. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to colecalciferol. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to paricalcitol. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to paricalcitol. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with digoxin. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

Vitamin E substances

alpha tocopherol · alpha tocopheryl acetate

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study

Volatile halogenated anaesthetics → see TABLE 8 p. 1335 (hypotension), TABLE 11 p. 1336 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1336
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- Voriconazole** → see antifungals, azoles
- Vortioxetine** → see TABLE 13 p. 1337 (serotonin syndrome), TABLE 4 p. 1334 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1337
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1337 → Also see TABLE 4 p. 1334
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Voxilaprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **dabigatran**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **edoxaban**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir)** (boosted with ritonavir) increase the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** are predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 619. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, simvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the exposure to **statins (pravastatin)**. Monitor and adjust **pravastatin** dose. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zaleplon → see TABLE 11 p. 1336 (CNS depressant effects)

- ▶ **Rifampicin** markedly decreases the exposure to **zaleplon**. [Moderate] Study

Zidovudine → see TABLE 15 p. 1337 (myelosuppression), TABLE 2 p. 1334 (nephrotoxicity)

- ▶ **Antiepileptics (valproate)** slightly increase the exposure to **zidovudine**. [Moderate] Study
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1337
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [Severe] Study → Also see TABLE 2 p. 1334
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [Severe] Theoretical

Zinc

- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (alendronic acid)**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (sodium clodronate)**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study
- ▶ **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [Moderate] Study

Zinc (continued)

- Zinc is predicted to decrease the absorption of **penicillamine**. [Mild] Theoretical
- Zinc is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- Oral zinc is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- **Trientine** potentially decreases the absorption of zinc. [Moderate] Theoretical

Zoledronic acid → see bisphosphonates

- **Zolmitriptan** → see TABLE 13 p. 1337 (serotonin syndrome)
- **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Theoretical
- **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Mild] Study
- **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Study → Also see TABLE 13 p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1337
- **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Moderate] Theoretical
- **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. [Severe] Theoretical → Also see TABLE 13 p. 1337

Zolpidem → see TABLE 11 p. 1336 (CNS depressant effects)

- **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [Moderate] Study
- **Rifampicin** moderately decreases the exposure to **zolpidem**. [Moderate] Study

Zonisamide → see antiepileptics**Zopiclone** → see TABLE 11 p. 1336 (CNS depressant effects)

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1336
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- **Zuclophenixol** → see TABLE 8 p. 1335 (hypotension), TABLE 9 p. 1336 (QT-interval prolongation), TABLE 11 p. 1336 (CNS depressant effects)
- **Zuclophenixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1335 → Also see TABLE 9 p. 1336
- **Zuclophenixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1335
- **Zuclophenixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1336

Appendix 2

Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page 1502
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1502
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1504
Enteral feeds (non-disease specific): Child under 12 years	1507
Nutritional supplements (non-disease specific)	1507
Nutritional supplements: less than 5 g protein/100 mL	1507
Nutritional supplements: 5 g (or more) protein/100 mL	1507
Specialised formulas	1512
Specialised formulas: Infant and child	1512
Specialised formulas for specific clinical conditions	1512
Feed supplements	1514
High-energy supplements	1514
Fibre, vitamin, and mineral supplements	1518
Feed additives	1520
Special additives for conditions of intolerance	1520

Feed thickeners and pre-thickened drinks	page 1520
Flavouring preparations	1521
Foods for special diets	1521
Gluten-free foods	1521
Low-protein foods	1524
Nutritional supplements for metabolic diseases	1527
Glutaric aciduria (type 1)	1527
Glycogen storage disease	1527
Homocystinuria or hypermethioninaemia	1527
Hyperlysinaemia	1528
Isovaleric acidemia	1528
Maple syrup urine disease	1528
Methylmalonic or propionic acidemia	1529
Other inborn errors of metabolism	1529
Phenylketonuria	1530
Tyrosinaemia	1532

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table,

below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Birthmarks

Dermatitis

Excema and Pruritus

Aveeno® Bath Oil; *Aveeno*® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream; *E45*® Lotion

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark® classic foundation and finishing powder; *Dermablend*® Ultra corrective foundation; *Dermacolor*® Camouflage cream and fixing powder; *Keromask*® masking cream and finishing powder; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for

the treatment of patients, but not for general hygienic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

AS Saliva Orthana®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

Photodermatoses (skin protection in)

Anthelios® XL SPF 50+ Melt-in cream; *Sunsense*® Ultra; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £14.05
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200 ml = £2.28; Fresubin Original tube feed liquid: 1000 ml = £8.74; 1500 ml = £13.10; 500 ml = £4.41
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 500 ml = £4.99; 1000 ml = £9.96
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 470 mg)	3.47 g	1.76 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 1000 ml = £10.59; 1500 ml = £15.85; 500 ml = £5.62
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500	Nutrison liquid: 500 ml = £5.20; 500 ml = £4.68; 1000 ml = £9.12; 1500 ml = £13.68
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 except bowel fistula	Nutrison Multi Fibre liquid: 1500 ml = £15.83; 500 ml = £5.62; 500 ml = £5.27; 1000 ml = £10.57
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 630 mg)	3.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500	Osmolite liquid: 500 ml = £5.21; 1000 ml = £9.14; 1500 ml = £13.71

SOYA PROTEIN FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Borderline substances standard ACBS indications p. 1500; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 ml = £5.16
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1500; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 ml = £5.61; 1000 ml = £11.23
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 700 mg)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1500 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £18.68
PEPTIDE-BASED FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison Peptisorb® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 500 ml = £7.44; 1000 ml = £14.74; 500 ml = £8.18
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: vanilla 800 ml = £12.56; unflavoured 500 ml = £7.06; 1000 ml = £13.25
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51 %)	0.1 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500; also growth failure	Survimed OPD: liquid 500 ml = £7.36; 800 ml = £13.60; 1000 ml = £14.72; HN liquid 500 ml = £7.09
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS)									
Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental 028 Extra liquid: orange & pineapple, grapefruit, summer fruits 250 ml = £3.86
	Standard dilution (20 %) of powder (sip or tube feed) per 100 mL	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental 028 Extra powder: plain, orange, banana 100 gram = £7.49
Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g.									

Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin 2250 Complete liquid: 1.5 litre = £15.68
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars content varies with flavour)	5.8 g	Nil	Gluten-free Residual lactose Contains fish gelatin Strawberry flavour may contain traces of wheat starch and egg.	Borderline substances standard ACBS indications p. 1500	Fresubin Energy liquid: banana, blackcurrant, cappuccino, chocolate, lemon, strawberry, tropical fruits, vanilla 200 ml = £1.40; unflavoured 200 ml = £1.40; 500 ml = £5.40
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.4 g)	5.8 g	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin Energy liquid: 1000 ml = £10.61; 1500 ml = £14.23
Fresubin® Energy Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars content varies with flavour)	5.8 g	2 g	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin Energy Fibre liquid: unflavoured 500 ml = £5.92; 1000 ml = £11.30; banana, caramel, cherry, chocolate, strawberry 200 ml = £2.17
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin Energy Fibre liquid unflavoured: 500 ml = £5.92; 1000 ml = £11.30
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g cows' milk	17 g (sugars 1 g)	5.8 g (MCT 57 %)	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500; also CAPD and haemodialysis	Fresubin HP Energy liquid: 500 ml = £5.50; 1000 ml = £11.00
Jevity® 1.5 kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates and soy isolate	20.1 g (sugars 1.47 g)	4.9 g	2.2 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 2 years; not recommended for child 2-10 years	Jevity 1.5kcal liquid: 1500 ml = £19.55; 500 ml = £6.73; 1000 ml = £12.67

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Ensure® Plus Advance (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	9.1 g cows' milk soya protein isolate whey protein concentrate	16.8 g (sugars 6.8 g)	4.8 g	0.75 g	Gluten-free Residual lactose	Frail elderly people (this is defined as older than 65 years with BMI less than or equal to 23 kg/m ² where clinical assessment and nutritional screening show the individual to be at risk of undernutrition). Not suitable as the sole source of nutrition.	Ensure Plus Advance liquid: banana, chocolate, coffee, strawberry, vanilla 200 mL = £2.08
Ensure® Plus Commence (Abbott Laboratories Ltd)	Starter pack (5-10 day's supply), contains <i>Ensure® Plus Commence</i> (various flavours), 1 pack (10 × 200ml) = £11.10								
Ensure® Plus Fibre (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	652 kJ (155 kcal)	6.25 g cows' milk soya protein isolate	20.2 g (sugars 5.5 g)	4.92 g	2.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis.	Ensure Plus Fibre liquid: banana, chocolate, raspberry, strawberry, vanilla 200 mL = £2.07
Ensure® Plus Milkshake style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soya protein isolate	20.2 g (sugars 6.89 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis	Ensure Plus milkshake style liquid: banana, chocolate, coffee, fruits of the forest, neutral, peach, raspberry, strawberry, vanilla 200 mL = £1.11
Ensure® Plus Savoury (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soy protein isolate	20.2 g (sugars 1.13 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis.	Ensure Plus savoury liquid: chicken, 200 mL = £1.11
Ensure® Plus Yoghurt style (Abbott Laboratories Ltd)	Liquid (sip feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk	20.2 g (sugars 11.7 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis	Ensure Plus yoghurt style liquid: orchard peach, strawberry swirl 200 mL = £1.11
Fortisip® Bottle (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.4 g	5.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Bottle: banana, caramel, chocolate, neutral, orange, strawberry, tropical fruit, vanilla 200 mL = £1.12
Fortisip® Range (Nutricia Ltd)	Starter pack contains 4 × Fortisip® Bottle, 4 × Fortijuice®, 2 × Fortisip® Yoghurt Style, 1 pack (10 × 200ml) = £20.20								
Fortisip® Yoghurt Style (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.7 g (sugars 10.8 g)	5.8 g	0.2 g	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years	Fortisip Yogurt Style liquid: vanilla & lemon, raspberry 200 mL = £2.14
Fresubin® Protein Energy Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 6.4 g)	6.7 g	Nil	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis.	Fresubin Protein Energy drink: cappuccino, chocolate, tropical fruits, vanilla, wild strawberry 200 mL = £2.10

Fresubin® Thickened (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.2 g (sugars 7.1 g)	6.7 g	0.48 g	Gluten-free Residual lactose	Dysphagia or disease-related malnutrition. Not suitable for child under 3 years; use with caution in child 3-4 years.	Fresubin Thickened Stage 1 syrup: vanilla, wild strawberry 800 ml = £9.40; Fresubin Thickened Stage 2 custard: vanilla, wild strawberry 800 ml = £9.40
Fresubin® YOcrème (Fresenius Kabi Ltd)	Semi-solid per 100 g	630 kJ (150 kcal)	7.5 g whey protein	19.5 g (sugars 16.8 g)	4.7 g	Nil	Gluten-free Contains lactose	Dysphagia, or presence or risk of malnutrition Not suitable for child under 3 years	Fresubin YOcrème dessert: apricot-peach, biscuit, lemon, raspberry 500 gram = £8.16
Nutritional supplements: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL Not suitable for use in child under 1 year; use with caution in child 1-5 years unless otherwise stated.									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Ensure® Plus Crème (Abbott Laboratories Ltd)	Semi-solid per 100 g	574 kJ (137 kcal)	5.68 g cow's milk soy protein isolates	18.4 g (sugars 12.4 g)	4.47 g	Nil	Gluten-free Residual lactose Contains soya	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Ensure Plus Crème: banana, chocolate, neutral, vanilla 500 gram = £7.72
Nutrilis® Fruit Stage 3 (Nutricia Ltd)	Semi-Solid per 100 g	560 kJ (133 kcal)	7 g whey isolate	16.7 g (sugars 11.3 g)	4 g	2.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 except bowel fistula; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Nutrilis Fruit Stage 3: apple, strawberry 450 gram = £7.35
Oral Impact® (Nestle Health Science)	Standard dilution of powder (74 g in 250 mL water) (sip feed) per 100 mL	425 kJ (101 kcal)	5.6 g cows' milk	13.4 g (sugars 7.4 g)	2.8 g	1 g	Residual lactose Contains fish oil	Pre-operative nutritional supplement for malnourished patients or patients at risk of malnourishment Not suitable for child under 3 years; use with caution in child 3-5 years.	Oral Impact oral powder 74g sachets: citrus, tropical 5 sachet = £17.62
Powder provides: protein 16.8 g, carbohydrate 40.2 g, fat 8.3 g, fibre 3 g, energy 1276 kJ (303 kcal)/74 g.									
Nutritional supplements: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL Not suitable for use in child under 1 year; use with caution in child 1-5 years unless otherwise stated.

Altraplen® Compact (Nualtra Ltd)	Liquid (sip feed) per 100 mL	1008 kJ (240 kcal)	9.6 g cows' milk soya protein	28.8 g (sugars 11.6 g)	9.6 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-6 years.	Altraplen Compact liquid: vanilla 500 ml = £5.32; strawberry 500 ml = £5.32
Complan® Shake (Nutricia Ltd)	Powder per 57 g	1057 kJ (251 kcal)	8.8 g cows' milk	35.2 g (sugars 22.7 g)	8.4 g	Trace	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1500	Complan Shake Starter Pack sachets: 5 sachet = £4.39; Complan Shake oral powder 57g sachets: strawberry, vanilla 4 sachet = £2.80; banana, chocolate, milk 4 sachet = £2.80
Powder 57 g reconstituted with 200 mL whole milk provides: protein 15.6 g, carbohydrate 44.5 g, fat 16.4 g, energy 1621 kJ (387 kcal).									

Nutritional supplements: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)									
Not suitable for use in child under 1 year; use with caution in child 1-5 years unless otherwise stated.									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Ensure® Compact (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	1008 kJ (240 kcal)	10.2 g cows' milk	28.8 g (sugars 6.2 g)	9.35 g	Nil	Gluten-free Residual lactose	As a sole source of nutrition or as a nutritional supplement for the dietary management of patient with, or at risk of developing disease-related malnutrition.	Ensure Compact liquid: banana, strawberry, vanilla 4 × 125 mL = £5.40
Ensure® Shake (Abbott Laboratories Ltd)	Powder per 100 g	1852 kJ (443 kcal)	17.8 g cows' milk whey protein concentrate	59 g (sugars 33.7 g)	15.1 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500	Ensure Shake oral powder 57 g sachets: banana, chocolate, strawberry, vanilla 7 sachet = £4.20
Powder 57 g reconstituted with 200 mL whole milk provides: protein 17 g, carbohydrate 43.2 g, fat 16.6 g, energy 1626 kJ (389 kcal)									
Foodlink® Complete (Nutra Ltd)	Powder per 100 g	1842 kJ (437 kcal)	20.3 g cows' milk soya protein	58.7 g (sugars 42.7 g)	13.5 g	Nil	Contains lactose Gluten-free	Borderline substances standard ACBS indications p. 1500	Foodlink Complete powder: banana, chocolate, natural, strawberry, vanilla 399 gram = £4.20
Recommended serving = the contents of a 57-g sachet in 200 mL full cream milk provides: protein 18.4 g, carbohydrate 43 g, fat 15.7 g, energy 1614 kJ (385 kcal).									
Foodlink® Complete with Fibre (Nutra Ltd)	Powder per 100 g	1899 kJ (452 kcal)	20.3 g cows' milk soya protein	58.6 g (sugars 42.6 g)	13.5 g	7.2 g	Contains lactose Gluten-free	Borderline substances standard ACBS indications p. 1500	Foodlink Complete powder with fibre: vanilla 441 gram = £4.97
Recommended serving = the contents of a 63-g sachet in 200 mL full cream milk provides: protein 19.6 g, carbohydrate 46.4 g, fat 16.5 g, fibre 4.5 g, energy 1760 kJ (421 kcal).									
Forticreme® Complete (Nutricia Ltd)	Semi-solid per 100 g	675 kJ (160 kcal)	9.5 g cows' milk	19.2 g (sugars 10.6 g)	5 g	0.1 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Forticreme Complete dessert: banana, chocolate, forest fruits, vanilla 500 gram = £7.84
Fortisip® Compact (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1010 kJ (240 kcal)	9.6 g cows' milk	29.7 g (sugars 15 g)	9.3 g	Nil	Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Compact liquid: apricot, mocha 500 ml = £5.80; chocolate 500 ml = £5.80; banana, forest fruit, strawberry, vanilla 500 ml = £5.80
Fortisip® Compact Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1000 kJ (240 kcal)	9.4 g cows' milk	25.2 g (sugars 13.9 g)	10.4 g	3.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Compact Fibre Starter Pack liquid: 500 ml = £8.36; Fortisip Compact Fibre liquid: mocha, strawberry, vanilla 500 ml = £8.36
Fortisip® Compact Protein (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1010 kJ (240 kcal)	14.4 g cows' milk	24.4 g (sugars 13.3 g)	9.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Compact Protein Starter Pack liquid: 750 ml = £12.00; Fortisip Compact Protein liquid: banana, mocha, strawberry, vanilla 500 ml = £8.00
Fortisip® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	675 kJ (160 kcal)	10 g cows' milk	18.1 g (sugars 9 g)	5.3 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Extra liquid: strawberry, vanilla 200 ml = £2.30

Fresubin® 2 kcal Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1-5 years.	Fresubin 2kcal drink: apricot-peach, cappuccino, fruits of the forest, neutral, toffee, vanilla 200 ml = £2.10
Fresubin® 2 kcal Fibre Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	1.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1-5 years.	Fresubin 2kcal Fibre drink: apricot- peach, cappuccino, chocolate, lemon, neutral 200 ml = £2.10
Fresubin® Powder Extra (Fresenius Kabi Ltd)	Powder per 100 g	1764 kJ (420 kcal)	17.5 g cows' milk whey protein	63 g (sugars 24.7 g)	10.9 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 1 year; use with caution in child 1-5 years.	Fresubin Powder Extra oral powder 62g sachets: neutral, strawberry 7 sachet = £4.90; chocolate, vanilla 7 sachet = £4.90
Powder 62 g reconstituted with 200 ml whole milk provides: protein 17.7 g, carbohydrate 48.5 g, fat 14.8 g, energy 1658 kJ (397 kcal).									
Nutrilis® Complete Stage 1 (Nutricia Ltd)	Liquid (pre- thickened) per 100 mL	1010 kJ (240 kcal)	9.6 g cows' milk	29.1 g (sugars 5.4 g)	9.3 g	3.2 g	Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Nutrilis Complete Stage 1 liquid: strawberry, vanilla 500 ml = £8.84
Nutrilis® Complete Stage 2 (Nutricia Ltd)	Semi-solid per 100 g	1030 kJ (245 kcal)	9.6 g cows' milk	29.1 g (sugars 11.8 g)	9.4 g	3.2 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-6 years.	Nutrilis Complete Stage 2 custard: chocolate, strawberry, vanilla 500 gram = £8.84
Nutricrem® (Nutra Ltd)	Semi-solid per 100 g	756 kJ (180 kcal)	10 g cows' milk soya protein	18.8 g (sugars 9.7 g)	7.2 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-6 years.	Nutricrem dessert: strawberry, vanilla 500 gram = £6.36
Renilon® 7.5 (Nutricia Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	7.5 g cows' milk	20 g (sugars 4.8 g)	10 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 3 years; use with caution in child 3-5 years.	Renilon 7.5 liquid: apricot, caramel 500 ml = £9.12
Resource® 2.0 Fibre (Nestle Health Science)	Liquid (sip feed) per 100 mL	836 kJ (200 kcal)	9 g cows' milk	21.4 g (sugars 5.5 g)	8.7 g	2.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 Not suitable for child under 6 years; use with caution in child 6-10 years.	Resource Fibre 2.0 liquid: apricot, coffee, neutral, strawberry, summer fruit, vanilla 200 ml = £1.95

Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alicalm [®] (Nutricia Ltd)	Standard dilution (30%) of powder per 100 mL	567 kJ (135 kcal)	4.5 g caseinate whey	17.4 g (sugars 3.2 g)	5.3 g	Nil	Residual lactose	Crohn's disease Not suitable for child under 1 year; use as nutritional supplement only in children 1–6 years.	Alicalm oral powder: 400 gram = £22.53
Powder provides: protein 15 g, carbohydrate 58 g, fat 17.5 g, energy 1889 kJ (450 kcal)/100 g.									
Forticare [®] (Nutricia Ltd)	Liquid (sip feed) per 100 mL	675 kJ (160 kcal)	9 g cows' milk	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with lung cancer undergoing chemotherapy, or with pancreatic cancer Not suitable in child under 3 years	Forticare liquid: cappuccino, orange & lemon, peach & ginger 500 ml = £9.40
Heparon [®] Junior (Nutricia Ltd)	Standard dilution (18%) of powder per 100 mL	363 kJ (86 kcal)	2 g cows' milk	11.6 g (sugars 2.9 g)	3.6 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 0.56 mmol K ⁺ 1.9 mmol Ca ²⁺ 2.3 mmol P ⁺ 1.6 mmol	Enteral feed or nutritional supplement for children with acute or chronic liver failure	Heparon Junior powder: 400 gram = £22.70
Powder provides: protein 11.1 g, carbohydrate 64.2 g, fat 19.9 g, energy 2016 kJ (480 kcal)/100 g.									
KetoCal [®] (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	602 kJ (146 kcal)	3.1 g cows' milk with additional amino acids	600 mg (sugars 120 mg)	14.6 g (LCT 100%)	Nil	Electrolytes/100 mL: Na ⁺ 4.3 mmol K ⁺ 4.1 mmol Ca ²⁺ 2.15 mmol P ⁺ 2.77 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of epilepsy resistant to drug therapy, in children over 1 year, only on the advice of secondary care physician with experience of ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £31.96
Powder provides: protein 15.25 g, carbohydrate 3 g, fat 73 g, energy 3011 kJ (730 kcal)/100 g.									
KetoCal [®] 3:1 (Nutricia Ltd)	Standard dilution (9.5%) of powder per 100 mL	276 kJ (66 kcal)	1.5 g	680 mg (sugars 570 mg)	6.4 g	Nil	Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 2.4 mmol Ca ²⁺ 2 mmol P ⁺ 1.7 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children from birth to 6 years; as a nutritional supplement in children over 6 years.	KetoCal 3:1 powder: 300 gram = £30.93
Powder provides: protein 15.3 g, carbohydrate 7.2 g, fat 67.7 g, energy 2927 kJ (699 kcal)/100 g.									
KetoCal [®] 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.09 g casein and whey with additional amino acids	610 mg (sugars 230 mg)	14.8 g (LCT 100%)	1.12 g	Residual lactose Electrolytes/100 mL: Na ⁺ 4.9 mmol K ⁺ 4.7 mmol Ca ²⁺ 2.4 mmol P ⁺ 3.1 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children 1–10 years; as a nutritional supplement in children over 10 years.	KetoCal 4:1 LQ liquid: unflavoured, vanilla 200 ml = £4.56

Kindergen® (Nutricia Ltd)	Standard dilution (20 %) of powder per 100 mL	421 kJ (101 kcal)	1.5 g whey protein	11.8 g (sugars 1.2 g)	5.3 g (LCT 93 %)	Nil	Electrolytes/100 mL: Na ⁺ 2 mmol K ⁺ 0.6 mmol Ca ²⁺ 2.8 mmol P ⁺ 3 mmol Low Vitamin A	Enteral feed or nutritional supplement for children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £30.47
Powder provides: protein 7.5 g, carbohydrate 59 g, fat 26.3 g, energy 2104 kJ (504 kcal)/100 g.									
Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished	Modulen IBD powder: 400 gram = £15.59
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g.									
ProSure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	536 kJ (127 kcal)	6.65 g cows' milk	18.3 g (sugars 2.95 g)	2.56 g	2.07 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement for patients with pancreatic cancer. Not suitable for child under 1 year; use with caution in child 1-4 years.	ProSure liquid: 220 ml = £3.47
Renamil® (Stanningley Pharma Ltd)	Powder (sip or tube feed when reconstituted) per 100 g	2003 kJ (477 kcal)	4.6 g cows' milk	70.8 g	19.3 g	Nil	Contains lactose Gluten-free Electrolytes/100 g: Na ⁺ 1.04 mmol K ⁺ 0.13 mmol Ca ²⁺ 10.22 mmol P ⁺ 1.06 mmol Contains no vitamin A or vitamin D	Enteral feed or nutritional supplement for adults and children over 1 year with chronic renal failure.	Renamil powder: 1000 gram = £25.40
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1580 kJ (372 kcal)	90 g whey protein	800 mg	1 g	Nil	Gluten-free Residual lactose Electrolytes/100 g: Na ⁺ 23 mmol K ⁺ 2 mmol Ca ²⁺ 4.99 mmol P ⁺ 4.84 mmol	Nutritional supplement for biochemically proven hypoproteinaemia and patients undergoing dialysis. Not suitable for child under 1 year.	Renapro powder: 600 gram = £69.60
Powder provides: protein 18 g, energy 316 kJ (74 kcal)/20-g sachet.									
Renastart® (Vitafo International Ltd)	Standard dilution (20%) of powder per 100 mL	414 kJ (99 kcal)	1.5 g cows' milk soya	12.5 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 2.1 mmol K ⁺ 0.6 mmol Ca ²⁺ 0.6 mmol P ⁺ 0.6 mmol	Dietary management of renal failure in child from birth to 10 years.	Renastart powder: 400 gram = £27.92
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 23.8 g, energy 2071 kJ (494 kcal)/100 g.									

Specialised formulas for specific clinical conditions (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Respifor [®] (Nutricia Ltd)	Liquid (sip feed) per 100 mL	633 kJ (150 kcal)	7.5 g cows' milk	22.5 g (sugars 6.4 g)	3.3 g	Nil	Contains lactose	Nutritional supplement for dietary management of disease-related malnutrition in patients with chronic obstructive pulmonary disease and body-mass index less than 20.	Respifor milkshake style liquid: chocolate, strawberry, vanilla 500 ml = £8.96
Supportan [®] (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 7.5 g)	6.7 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with pancreatic cancer or with lung cancer undergoing chemotherapy Not suitable for child under 1 year; use with caution in child 1-4 years	Supportan drink: cappuccino, tropical fruits 800 ml = £11.28

Table 4 Feed supplements**High-energy supplements****High-energy supplements: carbohydrate**

Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul [®] Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g Glucose polymer (sugars 8.6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble powder: 200 gram = £2.73; 528 gram = £6.80; 25000 gram = £163.10
Polycal [®] (Nutricia Ltd)	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g Maltodextrin (sugars 12.2 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Liquid not suitable for child under 3 years.	Polycal liquid: neutral, orange 200 ml = £1.81
	Powder per 100 g	1630 kJ (384 kcal)	Nil	96 g Maltodextrin (sugars 6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £4.53
S.O.S. [®] (Vitaflo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil	S.O.S. products are age-range specific—consult product literature	For use as an emergency regimen in the dietary management of inborn errors of metabolism in adults and children from birth.	S.O.S.: 10 oral powder 21g sachets 30 sachet = £7.74; 15 oral powder 31g sachets 30 sachet = £11.43; 20 oral powder 42g sachets 30 sachet = £15.48; 25 oral powder 52g sachets 30 sachet = £19.15

Contents of each sachet should be reconstituted with water to a total volume of 200ml

Vitajoule® (Vitaflo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g Dried glucose syrup (sugars 9 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Vitajoule powder: 500 gram = £4.63
High-energy supplements: fat Liquid supplements should be diluted before use in child under 5 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	100 mg	50 g (LCT 100 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Calogen emulsion: banana 500 ml = £11.33; neutral 200 ml = £4.61; 500 ml = £11.33; strawberry 200 ml = £4.61; 500 ml = £11.33
Fresubin® 5 kcal Shot (Fresenius Kabi Ltd)	Liquid (emulsion) per 100 mL	2100 kJ (500 kcal)	Nil	4.0 g (sucrose)	53.8 g	400 mg	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Not suitable for child under 3 years.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £11.84
Liquigen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	Nil	50 g (MCT 97 %) Fractionated coconut oil	Nil	Gluten-free Lactose-free	Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in epilepsy, and in type 1 lipoproteinaemia Not suitable for child under 1 year	Liquigen emulsion: 250 ml = £9.71
Medium-chain Triglyceride (MCT) Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	MCT 100 %	Nil		Nutritional supplement for steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease and liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia	MCT oil: 500 ml = £15.40

FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal [®] Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 35 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Duocal Super Soluble powder: 400 gram = £18.96
Energivit [®] (Nutricia Ltd)	Standard dilution (15%) of powder per 100 mL	309 kJ (74 kcal)	Nil	10 g (sugars 900 mg)	3.75 g	Nil	Lactose-free With vitamins, minerals, and trace elements	For children requiring additional energy, vitamins, minerals, and trace elements following a protein-restricted diet	Energivit powder: 400 gram = £23.06
Powder provides: carbohydrate 66.7 g, fat 25 g, energy 2059 kJ (492 kcal)/100 g.									
High-energy supplements: protein									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource [®] Jelly (Nutrinovo Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein hydrolysate whey protein isolate	Less than 1 g	Nil	Less than 1 g	Gluten-free Lactose-free Contains porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource jelly: fruit punch, orange 118 ml = £1.87
Protifar [®] (Nutricia Ltd)	Powder per 100 g	1580 kJ (373 kcal)	88.5 g cows' milk	less than 1.5 g	1.6 g	Nil	Gluten-free Residual lactose Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 1.28 mmol Ca ²⁺ 33.75 mmol P ⁻ 22.58 mmol	Nutritional supplement for use in biochemically proven hypoproteinaemia.	Protifar powder: 225 gram = £9.20
Powder provides: protein 2.2 g per 2.5 g scoopful.									
PROTEIN AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine [®] (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (essential and non-essential amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Contains vitamin C	Hypoproteinaemia, chronic renal failure, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake, and haemodialysis. Not suitable for child under 6 months.	Dialamine powder: 400 gram = £77.02
Powder provides: protein equivalent 25 g, carbohydrate 65 g, vitamin C 125 mg, energy 1530 kJ (360 kcal)/100 g.									
ProSource [®] Liquid (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	10 g collagen protein whey protein isolate	15 g (sugars 8 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Biochemically proven hypoproteinaemia Not recommended for child under 3 years.	ProSource liquid 30ml sachets: citrus berry, lemon, orange creme, neutral 100 sachet = £101.16

ProSource® Plus (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	15 g collagen protein whey protein isolate	11 g (sugars 10 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource Plus liquid 30ml sachets neutral: 100 sachet = £143.90
PROTEIN, FAT, AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® Extra (Nutricia Ltd)	Liquid per 100 mL	1650 kJ (400 kcal)	5 g cows' milk	4.5 g (sugars 3.5 g)	40.3 g	Nil	Gluten-free Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra emulsion: neutral, strawberry 200 ml = £4.98

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria in children and adults; requires additional source of vitamins, minerals, and trace elements. POWDER, protein equivalent (essential and non-essential amino acids except lysine and tryptophan) 79 g, carbohydrate 4 g, energy 1411 kJ (332 kcal)/100 g.

XLYS TRY Glutaridon powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £195.11

Glycogen storage disease

Corn flour and corn starch

- ▶ For glycogen storage disease
- Glycosade[®]**
 - ▶ A nutritional supplement for use in the dietary management of glycogen storage disease and other metabolic conditions where a constant supply of glucose is essential. Not suitable for use in children under 2 years. POWDER, protein 200 mg, carbohydrate (maize starch) 47.6 g, fat 100 mg, fibre less than 600 mg, energy 803 kJ (192 kcal)/60 g.
- Glycosade oral powder 60g sachets** (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £118.21

Homocystinuria or hypermethioninaemia

HCU Anamix[®] Infant

- ▶ Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine) 13.1 g, carbohydrate 49.5 g, fat 23 g,

fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

HCU Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £40.79

HCU cooler[®] 15

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 3 years with homocystinuria. LIQUID, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements.

HCU orange cooler 15 liquid (Vitafo International Ltd)
130 ml (ACBS) • NHS indicative price = £11.87

HCU Express[®] 15

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

HCU express 15 oral powder 25g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £349.27

HCU Express[®] 20

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 4.7 g, fat 70 mg, energy 416 kJ (99 kcal)/34 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521

HCU express 20 oral powder 34g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £451.25

HCU gel[®]

- ▶ A methionine-free protein substitute for use as a nutritional supplement for the dietary management of children 1–10 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 10 g, carbohydrate 10.3 g, fat 20 mg, energy 339 kJ (81 kcal)/24 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

HCU gel oral powder 24g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £224.86

HCU Lophlex[®] LQ 20

- ▶ Nutritional supplement for the dietary management of homocystinuria in children over 3 years. LIQUID, protein equivalent (essential and non-essential amino acids except methionine) 20 g, carbohydrate 8.8 g, fat 440 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

130 mL (ACBS) • NHS indicative price = £11.87

MSUD express® 15

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 3.8 g, fat less than 100 mg, energy 315 kJ (75 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

MSUD express 15 oral powder 25g sachets (Vitaflor International Ltd)

30 sachet (ACBS) • NHS indicative price = £349.27

MSUD express® 20

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

MSUD express 20 oral powder 34g sachets (Vitaflor International Ltd)

30 sachet (ACBS) • NHS indicative price = £451.25

MSUD Gel®

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

MSUD gel 24g sachets (Vitaflor International Ltd)

30 sachet (ACBS) • NHS indicative price = £227.50

MSUD Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years.

LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

MSUD Lophlex LQ 20 liquid (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £16.82

MSUD Maxamum[®]

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

MSUD Maxamum powder orange (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £165.09

MSUD Maxamum powder unflavoured (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £165.09

Methylmalonic or propionic acidemia

MMA/PA Anamix[®] Infant

- ▶ Nutritional supplement for the dietary management of proven methylmalonic acidemia or propionic acidemia in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

MMA / PA Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £40.79

XMTVI Asadon[®]

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia in children and adults.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XMTVI Asadon powder (Nutricia Ltd)
200 gram (ACBS) • NHS indicative price = £78.04

MMA/PA Maxamum[®]

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

MMA/PA Maxamum powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £165.09

Other inborn errors of metabolism

Cystine500[®]

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 63 kJ (15 kcal)/4 g

Cystine500 oral powder sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £57.14

DocOmega[®]

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth.

POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

DocOmega oral powder 4g sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £41.35

EAA[®] Supplement

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.

POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

EAA Supplement oral powder 12.5g sachets (VitaFlo International Ltd)
50 sachet (ACBS) • NHS indicative price = £215.60

Isoleucine50[®]

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Isoleucine50 oral powder 4g sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £57.14

KeyOmega[®]

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism.

POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

KeyOmega oral powder 4g sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £42.29

Leucine100[®]

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

Leucine100 oral powder sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £57.14

Low protein drink

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Termed *Milupa[®] lp-drink* by manufacturer.

Milupa LP drink (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £9.68

Phenylalanine50[®]

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.

POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Phenylalanine50 oral powder sachets (VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £55.48

ProZero[®]

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.

LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

ProZero liquid (VitaFlo International Ltd)
250 ml (ACBS) • NHS indicative price = £1.52 | 1000 ml (ACBS)
• NHS indicative price = £6.09

Tyrosine1000[®]

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

Tyrosine1000 oral powder 4g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £5.23

Valine50®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Valine50 oral powder 4g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £57.14

Phenylketonuria

Add-Ins®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 4 years.
POWDER, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate nil, fat 5.1 g, energy 359 kJ (86 kcal)/18.2-g sachet, with vitamins, minerals, and trace elements.

Add Ins oral powder 18.2g sachets (Nutricia Ltd)
60 sachet (ACBS) • NHS indicative price = £394.20

Easiphen®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years.
LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

Easiphen liquid (Nutricia Ltd)
250 mL (ACBS) • NHS indicative price = £10.12

L-Tyrosine

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

L-Tyrosine powder (Nutricia Ltd)
100 gram (ACBS) • NHS indicative price = £22.98

Lophlex®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

Lophlex powder 27.8g sachets berry (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £303.90

Lophlex powder 27.8g sachets orange (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £303.90

Lophlex powder 27.8g sachets unflavoured (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £303.90

Loprofin® PKU Drink

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults.
LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

Loprofin PKU drink (Nutricia Ltd)
200 mL (ACBS) • NHS indicative price = £0.79

Loprofin® Sno-Pro

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 273 kJ (65 kcal)/100 mL. Contains lactose.

Loprofin SNO-PRO drink (Nutricia Ltd)

200 mL (ACBS) • NHS indicative price = £1.31

Phlexy-10® Exchange System

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

Phlexy-10 500mg capsules (Nutricia Ltd)

200 capsule (ACBS) • NHS indicative price = £45.49

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

Phlexy-10 tablets (Nutricia Ltd)

75 tablet (ACBS) • NHS indicative price = £29.25

DRINK MIX, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

Phlexy-10 drink mix apple & blackcurrant (Nutricia Ltd)

600 gram (ACBS) • NHS indicative price = £134.70

Phlexy-10 drink mix citrus burst (Nutricia Ltd)

Tyrosinaemia

Methionine-free TYR Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £40.79

TYR Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £40.79

TYR Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £40.79

TYR Anamix® Junior

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

TYR Anamix Junior oral powder 29g sachets (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £206.40

TYR Anamix® Junior LQ

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 1035), type II, and type III, in children over 1 year.

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

TYR Anamix Junior LQ liquid (Nutricia Ltd)
125 mL (ACBS) • NHS indicative price = £9.46

TYR cooler® 15

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

TYR orange cooler 15 liquid (Vitafo International Ltd)
130 mL (ACBS) • NHS indicative price = £11.87

TYR red cooler 10 liquid (Vitafo International Ltd)
87 mL (ACBS) • NHS indicative price = £7.60

TYR red cooler 15 liquid (Vitafo International Ltd)
130 mL (ACBS) • NHS indicative price = £11.87

TYR red cooler 20 liquid (Vitafo International Ltd)
174 mL (ACBS) • NHS indicative price = £15.89

TYR express15®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR express 15 oral powder 25g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £349.27

TYR express20®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR express 20 oral powder 34g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £451.25

TYR Gel®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years. GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR gel oral powder 24g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £224.86

TYR Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

TYR Lophlex LQ 20 liquid (Nutricia Ltd)
125 mL (ACBS) • NHS indicative price = £16.82

XPHEN TYR Tyrosidon®

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £195.11

XPTM Tyrosidon®

- Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPTM Tyrosidon powder (Nutricia Ltd)

500 gram • NHS indicative price = £91.31

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 Warning: This medicine may make you sleepy

Rhybudd: Gall y feddyginiath hon eich gwneud yn gysgld

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Gall y feddyginiath hon eich gwneud yn gysgld. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an *offence to drive while under the influence of drink or drugs*.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk

and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**

Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdrefuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdrefuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd laeth, meddyginiaethau camdrefuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of

physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthywch am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cynghor i stopio

To be used on *preparations where a course of treatment should be completed to reduce the incidence of relapse or failure of treatment*.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymlog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

Gadewch i doddli mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**

Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg

To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**
Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.
- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**
Rhowch y dabled i doddî dan eich tafod - peidiwch â'i lyncu.
 Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**
Peidiwch â chymryd mwy na... mewn 24 awr
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**
Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**
Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**
Cymerwch gyda neu ar ôl bwyd
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.
 Patients should be advised that a small amount of food is sufficient.
- 22 Take 30 to 60 minutes before food**
Cymerwch 30 i 60 munud cyn bwyd
 To be used on some preparations *whose absorption is thereby improved*.
 Most oral antibacterials require label 23 instead (see below).
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**
Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24 Suck or chew this medicine**
Bydd angen cnoi neu sugno'r feddyginiaeth hon
 To be used on *preparations that should be sucked or chewed*.
 The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**
Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
 To be used on *preparations that are enteric-coated or designed for modified-release*.
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**
Gadewch i'r feddyginiaeth hon doddî o dan y tafod
 To be used on *preparations designed for sublingual use*.
 Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**
Cymerwch gyda llond gwydr o ddŵr
 To be used on *preparations that should be well diluted* (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**
Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**
Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**
Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
 To be used on all containers of dispensed *preparations containing paracetamol*.
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**
Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

Basic wound contact dressings

Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings.

Wound contact material for different types of wounds		
Wound PINK (epithelialising)		
Low Exudate	Moderate Exudate	
Low adherence p. 1537 Vapour-permeable film p. 1541 Soft polymer p. 1542 Hydrocolloid p. 1544	Soft ploymer p. 1542 Foam, low absorbent p. 1545 Alginate p. 1547	
Wound RED (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1537 Soft polymer p. 1542 Hydrocolloid p. 1544 Foam, low absorbent p. 1545	Hydrocolloid-fibrous p. 1544 Foam p. 1545 Alginate p. 1547	Foam with extra absorbency p. 1545 Hydrocolloid-fibrous p. 1544 Alginate p. 1547
Wound YELLOW (Sloughy) (granulating)		
Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1540 Hydrocolloid p. 1544	Hydrocolloid-fibrous p. 1544 Alginate p. 1547	Hydrocolloid-fibrous p. 1544 Alginate p. 1547 Capillary-action p. 1547
Wound BLACK (Necrotic/ Eschar)		
Consider mechanical debridement alongside autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1540 Hydrocolloid p. 1544	Hydrocolloid p. 1544 Hydrocolloid-fibrous p. 1544 Foam p. 1545	Seek advice from wound care specialist
Wounds with signs of infection		
Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodorous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement		
Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence with honey p. 1548 Low adherence with iodine p. 1548 Low adherence with silver p. 1550 Hydrocolloid with silver p. 1550	Hydrocolloid-fibrous with silver p. 1550 Foam with silver p. 1550 Alginate with silver p. 1549 Honey-topical p. 1548 Cadexomer-iodine p. 1548	Hydrocolloid-fibrous with silver p. 1550 Foam extra absorbent, with silver p. 1550 Alginate with honey p. 1548 Alginate with silver p. 1549
Note In each section of this table the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing		

Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet[®]) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

Knitted polyester primary dressing

Atrauman

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

Atrauman dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.80, 20cm × 30cm= £2.20, 5cm × 5cm= £0.34, 7.5cm × 10cm= £0.35

Knitted viscose primary dressing

N-A Dressing

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.63, 9.5cm × 9.5cm= £0.33

Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.32

Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.35

Paraffin Gauze Dressing

Cuticell

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Cuticell (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.29

Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Jelonet dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.42

Neotulle

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Neotulle (Neomedic Ltd) dressing 10cm × 10cm= £0.29

Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

Absorbent cellulose dressing**CelluDress**

Absorbent Cellulose Dressing with Fluid Repellent Backing
CelluDress dressing (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Eclypse

Absorbent Cellulose Dressing with Fluid Repellent Backing
Eclypse (Advancis Medical) Boot dressing 60cm × 70cm= £13.88, dressing 15cm × 15cm= £0.98, 20cm × 30cm= £2.16, 60cm × 40cm= £8.21

Exu-Dry

Absorbent Cellulose Dressing with Fluid Repellent Backing
Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.15, 15cm × 23cm= £2.34, 23cm × 38cm= £5.44

Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

Mesorb dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.63, 10cm × 15cm= £0.82, 10cm × 20cm= £1.01, 15cm × 20cm= £1.44, 20cm × 25cm= £2.27, 20cm × 30cm= £2.57

Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

Zetuvit (Paul Hartmann Ltd) E non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.28, sterile dressing 10cm × 10cm= £0.22, 10cm × 20cm= £0.25, 20cm × 20cm= £0.40, 20cm × 40cm= £1.12

Absorbent perforated dressing**Adpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Adpore dressing (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cosmopore E dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.57, 10cm × 35cm= £0.79, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.28

Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.31, 10cm × 25cm= £0.32, 10cm × 30cm= £0.43, 8cm × 10cm= £0.11, 8cm × 15cm= £0.25

Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Leukomed dressing (BSN medical Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.49, 10cm × 30cm= £0.64, 10cm × 35cm= £0.74, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.19, 8cm × 15cm= £0.33

Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medipore + Pads dressing (3M Health Care Ltd) 10cm × 10cm= £0.15, 10cm × 15cm= £0.25, 10cm × 20cm= £0.37, 10cm × 25cm= £0.46, 10cm × 35cm= £0.64, 5cm × 7.2cm= £0.07

Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medisafe dressing (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Mepore dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.36, 7cm × 8cm= £0.11, 9cm × 20cm= £0.44, 9cm × 25cm= £0.61, 9cm × 30cm= £0.70, 9cm × 35cm= £0.76

PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore dressing (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Primapore dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.51, 10cm × 30cm= £0.64, 10cm × 35cm= £0.98, 6cm × 8.3cm= £0.18, 8cm × 10cm= £0.20, 8cm × 15cm= £0.34

Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Softpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

Telfa Island

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Telfa Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.27, 10cm × 20cm= £0.35, 10cm × 25.5cm= £0.45, 10cm × 35cm= £0.62, 5cm × 10cm= £0.08

Absorbent perforated plastic film faced dressing**AbsoPad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

AbsoPad dressing (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Askina (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.21

Melolin

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Melolin dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.28, 20cm × 10cm= £0.55, 5cm × 5cm= £0.17

Skintact

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Skintact dressing (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

Solvaline N

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Solvaline N dressing (Lohmann & Rauscher) 10cm × 10cm= £0.18, 20cm × 10cm= £0.36, 5cm × 5cm= £0.10

Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Telfa dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

Super absorbent cellulose and polymer primary dressing

Curea P1

Super absorbent cellulose and polymer primary dressing.

Curea P1 dressing (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.15, 10cm × 20cm rectangular= £3.64, 10cm × 30cm rectangular= £5.20, 12cm × 12cm square= £2.65, 20cm × 20cm square= £6.89, 20cm × 30cm rectangular= £10.03, 7.5cm × 7.5cm square= £1.72

Curea P2

Super absorbent cellulose and polymer primary dressing (non-adherent)

Curea P2 dressing (Charles S. Bullen Stomacare Ltd) 10cm × 20cm rectangular= £4.49, 11cm × 11cm square= £2.47, 20cm × 20cm square= £7.82, 20cm × 30cm rectangular= £10.60

Cutisorb Ultra

Super absorbent cellulose and polymer primary dressing

Cutisorb Ultra dressing (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

DryMax Extra

Super absorbent cellulose and polymer primary dressing

DryMax Extra Soft dressing (Espere Healthcare Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

Zetuvit Plus

Super absorbent cellulose primary dressing

Zetuvit Plus dressing (Paul Hartmann Ltd) 10cm × 10cm= £0.83, 10cm × 20cm= £1.15, 15cm × 20cm= £1.32, 20cm × 25cm= £1.80, 20cm × 40cm= £2.79

Super absorbent hydroconductive dressing

Drawtex

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton

Drawtex dressing (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)

ActivHeal Hydrogel

Hydrogel containing guar gum and propylene glycol

ActivHeal (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

Aquaform

Hydrogel containing modified starch copolymer

AquaForm (Aspen Medical Europe Ltd) Hydrogel dressing= £2.04

Askina Gel

Hydrogel containing modified starch and glycerol

Askina (B.Braun Medical Ltd) Gel dressing= £2.05

Cutimed

Hydrogel

Cutimed (BSN medical Ltd) Gel dressing= £3.08

Flexigran

Hydrogel containing modified starch and glycerol

Flexigran (A1 Pharmaceuticals) Gel dressing= £1.90

GranuGel

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

GranuGel (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.37

Intrasite Gel

Hydrogel containing modified carmellose polymer and propylene glycol

IntraSite (Smith & Nephew Healthcare Ltd) Gel dressing= £3.65

Nu-Gel

Hydrogel containing alginate and propylene glycol

Nu-Gel (Systagenix Wound Management Ltd) dressing= £2.09

Purilon Gel

Hydrogel containing carboxymethylcellulose and calcium alginate

Purilon (Coloplast Ltd) Gel dressing= £2.31

Hydrogel sheet dressings

ActiFormCool

Hydrogel dressing

ActiFormCool sheet (L&R Medical UK Ltd) 10cm × 10cm square= £2.68, 10cm × 15cm rectangular= £3.86, 20cm × 20cm square= £8.08, 5cm × 6.5cm rectangular= £1.83

Aquaflor

Hydrogel dressing

Aquaflor (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

Coolie

Hydrogel dressing (without adhesive border)

Coolie (Zeroderma Ltd) sheet 7cm discs= £1.96

Gel FX

Hydrogel dressing (without adhesive border)

Gel FX sheet (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

Geliperm

Hydrogel sheets

Geliperm (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

Hydrosorb

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film

Hydrosorb sheet (Paul Hartmann Ltd) 10cm × 10cm square= £2.29, 20cm × 20cm square= £6.87, 5cm × 7.5cm rectangular= £1.60

Hydrosorb Comfort

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

Hydrosorb Comfort sheet (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.66, 4.5cm × 6.5cm rectangular= £1.90, 7.5cm × 10cm rectangular= £2.52

Intrasite Conformable

Soft non-woven dressing impregnated with Intrasite[®] gel

IntraSite Conformable dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.84, 10cm × 20cm rectangular= £2.48, 10cm × 40cm rectangular= £4.43

Novogel

Glycerol-based hydrogel sheets (standard or thin)

Novogel sheet (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £2.89

SanoSkin NET

Hydrogel sheet (without adhesive border)

SanoSkin (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

Vacunet

Non-adherent, hydrogel coated polyester net dressing

Vacunet dressing (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

Sodium hyaluronate dressings

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

Hydiodine® should be used with caution in thyroid disorders.

Hydiodine

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Vapour-permeable films and membranes

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginate or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad.

Niko Fix

For intravenous and subcutaneous catheter sites

Niko (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.20

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Askina Derm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Askina Derm dressing (B.Braun Medical Ltd) 10cm × 12cm= £1.10, 10cm × 20cm= £2.10, 15cm × 20cm= £2.54, 20cm × 30cm= £4.55, 6cm × 7cm= £0.38

C-View

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

C-View dressing (Aspen Medical Europe Ltd) 10cm × 12cm= £1.03, 12cm × 12cm= £1.10, 15cm × 20cm= £2.38, 6cm × 7cm= £0.38

Dressfilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Dressfilm (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

Hydrofilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hydrofilm dressing (Paul Hartmann Ltd) 10cm × 12.5cm= £0.43, 10cm × 15cm= £0.54, 10cm × 25cm= £0.83, 12cm × 25cm= £0.88, 15cm × 20cm= £0.99, 20cm × 30cm= £1.63, 6cm × 7cm= £0.23

Hypafix Transparent

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hypafix Transparent (BSN medical Ltd) dressing 10cm × 2m= £8.95

Leukomed T

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Leukomed T dressing (BSN medical Ltd) 10cm × 12.5cm= £1.04, 11cm × 14cm= £1.26, 15cm × 20cm= £2.42, 15cm × 25cm= £2.58, 7.2cm × 5cm= £0.38, 8cm × 10cm= £0.71

Mepitel Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepitel Film dressing (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.32, 10.5cm × 25cm= £2.57, 15.5cm × 20cm= £3.26, 6.5cm × 7cm= £0.49

Mepore Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepore Film dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £1.24, 10cm × 25cm= £2.41, 15cm × 20cm= £3.06, 6cm × 7cm= £0.46

OpSite Flexifix

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexifix dressing (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.72, 5cm × 1m= £3.98

OpSite Flexigrid

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexigrid dressing (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.15, 15cm × 20cm= £2.91, 6cm × 7cm= £0.40

Polyskin II

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Kendall Film dressing (H & R Healthcare Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

ProtectFilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

ProtectFilm dressing (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

Suprasorb F

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Suprasorb F dressing (Lohmann & Rauscher) 10cm × 12cm= £0.82, 15cm × 20cm= £2.56, 5cm × 7cm= £0.34

Tegaderm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Tegaderm Film dressing (3M Health Care Ltd) 12cm × 12cm= £1.11, 15cm × 20cm= £2.41, 6cm × 7cm= £0.39

Tegaderm diamond

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Tegaderm Diamond dressing (3M Health Care Ltd) 10cm × 12cm= £1.21, 6cm × 7cm= £0.45

Vellafilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Vellafilm dressing (Advancis Medical) 12cm × 12cm= £1.11, 12cm × 35cm= £2.77, 15cm × 20cm= £2.12

Vapour-permeable Adhesive Film Dressing with adsorbent pad
Adpore Ultra

Film dressing with adsorbent pad
Adpore Ultra dressing (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

Vapour-permeable Adhesive Film Dressing with adsorbent pad
Alldress

Film dressing with adsorbent pad
Alldress dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.97, 15cm × 15cm= £2.11, 15cm × 20cm= £2.61

C-View Post-Op

Film dressing with adsorbent pad
C-View Post-Op dressing (Aspen Medical Europe Ltd) 10cm × 12cm= £1.11, 10cm × 25cm= £1.61, 10cm × 35cm= £2.62, 6cm × 7cm= £0.40

Clearpore

Film dressing with adsorbent pad
Clearpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

Hydrofilm Plus

Film dressing with adsorbent pad
Hydrofilm Plus dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.61, 10cm × 30cm= £0.69, 7.2cm × 5cm= £0.18, 9cm × 10cm= £0.27, 9cm × 15cm= £0.30

Leukomed T Plus

Film dressing with adsorbent pad
Leukomed T plus dressing (BSN medical Ltd) 10cm × 20cm= £1.37, 10cm × 25cm= £1.54, 10cm × 30cm= £2.58, 10cm × 35cm= £3.13, 7.2cm × 5cm= £0.27, 8cm × 10cm= £0.55, 8cm × 15cm= £0.82

Mepore Film & Pad

Film dressing with adsorbent pad
Mepore Film & Pad dressing (Molnlycke Health Care Ltd) 4cm × 5cm= £0.24, 5cm × 7cm= £0.25, 9cm × 10cm= £0.63, 9cm × 15cm= £0.92, 9cm × 20cm= £1.37, 9cm × 25cm= £1.51, 9cm × 30cm= £2.03, 9cm × 35cm= £2.52

Mepore Ultra

Film dressing with adsorbent pad
Mepore Ultra dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.81, 11cm × 15cm= £1.19, 7cm × 8cm= £0.41, 9cm × 20cm= £1.52, 9cm × 25cm= £1.68, 9cm × 30cm= £2.77

OpSite Plus

Film dressing with adsorbent pad
OpSite Plus dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.22, 10cm × 20cm= £2.06, 10cm × 35cm= £3.41, 6.5cm × 5cm= £0.33, 8.5cm × 9.5cm= £0.90

OpSite Post-op

Film dressing with adsorbent pad
OpSite Post-Op dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.20, 10cm × 20cm= £2.01, 10cm × 25cm= £2.54, 10cm × 30cm= £3.01, 10cm × 35cm= £3.34, 8.5cm × 15.5cm= £1.22, 8.5cm × 9.5cm= £0.88

Pharmapore-PU

Film dressing with adsorbent pad
Pharmapore-PU dressing (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

PremierPore VP

Film dressing with adsorbent pad
PremierPore VP dressing (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

Tegaderm

Film dressing with adsorbent pad
Tegaderm + Pad dressing (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.95, 9cm × 20cm= £1.40, 9cm × 25cm= £1.57, 9cm × 35cm= £2.60

Tegaderm Absorbent Clear

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad
Tegaderm Absorbent Clear Acrylic dressing (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.11, 14.2cm × 15.8cm oval= £5.78, 14.9cm × 15.2cm rectangular= £8.66, 16.8cm × 19cm sacral= £10.37, 20cm × 20.3cm rectangular= £13.91, 7.6cm × 9.5cm oval= £3.17

Vapour-permeable transparent film dressing with adhesive foam border.

Central Gard

For intravenous and subcutaneous catheter sites
Central Gard dressing (Unomedical Ltd) 16cm × 7cm= £0.97, 16cm × 8.8cm= £1.06

Easi-V

For intravenous and subcutaneous catheter sites
Easi-V (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

Vapour-permeable transparent, adhesive film dressing.

Hydrofilm I.V. Control

For intravenous and subcutaneous catheter sites
Hydrofilm (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.31

Vapour-permeable, transparent, adhesive film dressing.

IV3000

For intravenous and subcutaneous catheter sites
IV3000 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.42, 5cm × 6cm= £0.43, 6cm × 7cm= £0.57, 7cm × 9cm= £0.74, 9cm × 12cm= £1.48

Mepore IV

For intravenous and subcutaneous catheter sites
Mepore IV dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £1.08, 5cm × 5.5cm= £0.31, 8cm × 9cm= £0.40

Pharmapore-PU IV

For intravenous and subcutaneous catheter sites
Pharmapore-PU-IV dressing (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

Tegaderm IV

For intravenous and subcutaneous catheter sites
Tegaderm IV dressing with securing tapes (3M Health Care Ltd) 10cm × 15.5cm= £1.67, 7cm × 8.5cm= £0.59

Soft polymer dressings

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

Cellulose dressings**Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border
Cutimed Sorbion Sachet Border dressing (BSN medical Ltd) 10cm × 10cm square= £3.01, 15cm × 15cm square= £4.57, 25cm × 15cm rectangular= £7.12

Sorbion Sachet EXTRA

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Extra dressing (BSN medical Ltd) 10cm × 10cm= £2.29, 20cm × 10cm= £3.80, 20cm × 20cm= £7.14, 30cm × 20cm= £10.18, 5cm × 5cm= £1.48, 7.5cm × 7.5cm= £1.81

Sorbion Sachet Multi Star

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Multi Star dressing (BSN medical Ltd) 14cm × 14cm= £4.98, 8cm × 8cm= £3.05

Sorbion Sachet S Drainage

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)

Cutimed (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm= £2.69

Suprasorb X

Biosynthetic cellulose fibre dressing

Suprasorb X dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.59, 2cm × 21cm rope= £6.67, 5cm × 5cm square= £2.08, 9cm × 9cm square= £4.33

With absorbent pad

Advazorb Border

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border dressing (Advancis Medical) 10cm × 10cm= £2.12, 10cm × 20cm= £2.92, 10cm × 30cm= £4.28, 12.5cm × 12.5cm= £2.60, 15cm × 15cm= £3.17, 20cm × 20cm= £5.50, 7.5cm × 7.5cm= £1.20

Advazorb Border Lite

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border Lite dressing (Advancis Medical) 10cm × 10cm= £1.90, 10cm × 20cm= £2.63, 10cm × 30cm= £3.86, 12.5cm × 12.5cm= £2.34, 15cm × 15cm= £2.86, 20cm × 20cm= £4.95, 7.5cm × 7.5cm= £1.08

Advazorb Silfix

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix dressing (Advancis Medical) 10cm × 10cm= £1.86, 10cm × 20cm= £3.20, 12.5cm × 12.5cm= £2.61, 15cm × 15cm= £3.38, 20cm × 20cm= £5.02, 7.5cm × 7.5cm= £1.00

Advazorb Silfix Lite

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix Lite dressing (Advancis Medical) 10cm × 10cm= £1.68, 10cm × 20cm= £2.88, 12.5cm × 12.5cm= £2.35, 15cm × 15cm= £3.04, 20cm × 20cm= £4.51, 7.5cm × 7.5cm= £0.90

Allevyn Gentle

Soft gel wound contact dressing, with polyurethane foam film backing

Allevyn Gentle dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.55, 10cm × 20cm= £4.10, 15cm × 15cm= £4.28, 20cm × 20cm= £6.84, 5cm × 5cm= £1.29

Allevyn Gentle Border

Silicone gel wound contact dressing, with polyurethane foam film backing

Allevyn Gentle Border (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £9.82, dressing 10cm × 10cm= £2.23, 12.5cm × 12.5cm= £2.73, 17.5cm × 17.5cm= £5.38, 7.5cm × 7.5cm= £1.52

Allevyn Gentle Border Lite

Silicone gel wound contact dressing, with polyurethane foam film backing

Allevyn Gentle Border Lite dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.20, 15cm × 15cm= £3.88, 5.5cm × 12cm= £1.88, 5cm × 5cm= £0.91, 8cm × 15cm= £3.49

Allevyn Life

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border

Allevyn Life dressing (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.72, 12.9cm × 12.9cm= £2.53, 15.4cm × 15.4cm= £3.09, 21cm × 21cm= £6.09

Cutimed Siltec

Soft silicone wound contact dressing, with polyurethane foam film backing

Cutimed Siltec (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm= £4.54, 23cm × 23cm= £6.20, dressing 10cm × 10cm= £2.26, 10cm × 20cm= £3.73, 15cm × 15cm= £4.22, 20cm × 20cm= £6.40, 5cm × 6cm= £1.21

Cutimed Siltec B

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

Cutimed Siltec B dressing (BSN medical Ltd) 12.5cm × 12.5cm= £2.30, 15cm × 15cm= £3.06, 17.5cm × 17.5cm= £4.95, 22.5cm × 22.5cm= £6.04, 7.5cm × 7.5cm= £1.35

Cutimed Siltec L

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

Cutimed Siltec L dressing (BSN medical Ltd) 10cm × 10cm= £1.57, 15cm × 15cm= £3.45, 5cm × 6cm= £1.07

Eclipse Adherent

Soft silicone wound contact layer with absorbent pad and film backing

Eclipse Adherent dressing (Advancis Medical) 10cm × 10cm= £3.01, 10cm × 20cm= £3.78, 15cm × 15cm= £5.03, 20cm × 30cm= £10.06, 17cm × 19cm sacral= £3.79, 22cm × 23cm sacral= £6.28

Fliivasorb

Absorbent polymer dressing with non-adherent wound contact layer

Fliivasorb dressing (Lohmann & Rauscher) 10cm × 10cm square= £0.89, 10cm × 20cm rectangular= £1.06, 20cm × 20cm square= £1.88, 20cm × 30cm rectangular= £2.37

Fliivasorb Adhesive

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

Fliivasorb Adhesive dressing (Lohmann & Rauscher) 12cm × 12cm square= £3.39, 15cm × 15cm square= £4.65

Mepilex

Absorbent soft silicone dressing with polyurethane foam film backing

Mepilex (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.45, 15cm × 22cm= £6.31, XT dressing 10cm × 11cm= £2.68, 11cm × 20cm= £4.43, 15cm × 16cm= £4.86, 20cm × 21cm= £7.34, dressing 5cm × 5cm= £1.22

Mepilex Border

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

Mepilex Border (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm= £6.63, Sacrum dressing 18cm × 18cm= £4.85, 23cm × 23cm= £7.91, dressing 10cm × 12.5cm= £2.72, 10cm × 20cm= £3.72, 10cm × 30cm= £5.58, 15cm × 17.5cm= £4.18, 17cm × 20cm= £6.07

Mepilex Border Lite

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

Mepilex Border Lite dressing (Molnlycke Health Care Ltd) 15cm × 15cm= £3.94, 4cm × 5cm= £0.92, 5cm × 12.5cm= £2.01, 7.5cm × 7.5cm= £1.35

Mepilex Lite

Thin absorbent soft silicone dressing with polyurethane foam film backing

Mepilex Lite dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £2.17, 15cm × 15cm= £4.22, 20cm × 50cm= £26.66, 6cm × 8.5cm= £1.82

Mepilex Transfer

Soft silicone exudate transfer dressing

Mepilex Transfer dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £3.54, 15cm × 20cm= £10.72, 20cm × 50cm= £27.39, 7.5cm × 8.5cm= £2.25

Sorbion Sana

Non-adherent polyethylene wound contact dressing with absorbent core

Cutimed Sorbion Sana Gentle dressing (BSN medical Ltd) 12cm × 12cm= £2.54, 12cm × 22cm= £4.57, 22cm × 22cm= £8.14, 8.5cm × 8.5cm= £2.03

Urgotul Duo

Non-adherent soft polymer wound contact dressing with absorbent pad

UrgotulDuo dressing (Urgo Ltd) 10cm × 12cm= £3.90, 15cm × 20cm= £9.06, 5cm × 10cm= £2.52

Without absorbent pad

Adaptic Touch

Non-adherent soft silicone wound contact dressing

Adaptic Touch dressing (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.65, 20cm × 32cm= £12.50, 5cm × 7.6cm= £1.13, 7.6cm × 11cm= £2.25

Askina SilNet

Soft silicone-coated wound contact dressing

Askina SilNet dressing (B.Braun Medical Ltd) 10cm × 18cm= £5.08, 20cm × 30cm= £12.42, 5cm × 7.5cm= £1.15, 7.5cm × 10cm= £2.33

Mepitel

Soft silicone, semi-transparent wound contact dressing

Mepitel dressing (Molnlycke Health Care Ltd) 12cm × 15cm= £5.60, 5cm × 7cm= £1.40, 8cm × 10cm= £2.80

Mepitel One

Soft silicone, thin, transparent wound contact dressing

Mepitel One dressing (Molnlycke Health Care Ltd) 13cm × 15cm= £4.98, 24cm × 27.5cm= £14.25, 6cm × 7cm= £1.22, 9cm × 10cm= £2.41

Physiutulle

Non-adherent soft polymer wound contact dressing

Physiutulle dressing (Coloplast Ltd) 10cm × 10cm= £2.30, 15cm × 20cm= £7.02

Silflex

Soft silicone-coated polyester wound contact dressing

Silflex dressing (Advancis Medical) 12cm × 15cm= £4.61, 20cm × 30cm= £11.88, 35cm × 60cm= £39.83, 5cm × 7cm= £1.12, 8cm × 10cm= £2.29

Silon-TSR

Soft silicone polymer wound contact dressing

Silon-TSR dressing (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

Sobion Contact

Non-adherent soft polymer wound contact dressing

Cutimed Sorbion Contact dressing (BSN medical Ltd) 10cm × 10cm= £2.03, 10cm × 20cm= £4.06, 20cm × 20cm= £7.12, 20cm × 30cm= £10.18, 7.5cm × 7.5cm= £1.52

Tegaderm Contact

Non-adherent soft polymer wound contact dressing

Tegaderm Contact dressing (3M Health Care Ltd) 20cm × 25cm= £10.86, 7.5cm × 10cm= £2.27

Urgotul

Non-adherent soft polymer wound contact dressing

Urgotul dressing (Urgo Ltd) 10cm × 10cm= £3.13, 10cm × 40cm= £10.53, 15cm × 15cm= £6.66, 15cm × 20cm= £8.86, 20cm × 30cm= £14.25, 5cm × 5cm= £1.57

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorbent and suitable for moderately to heavily exuding wounds.

Hydrocolloid-fibrous dressings**Aquacel**

Soft non-woven pad containing hydrocolloid-fibres

Aquacel (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £1.88, 2cm × 45cm= £2.50, dressing 10cm × 10cm square= £2.47, 15cm × 15cm square= £4.64, 4cm × 10cm rectangular= £1.33, 4cm × 20cm rectangular= £1.95, 4cm × 30cm rectangular= £2.94, 5cm × 5cm square= £1.04

Aquacel Foam

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

Aquacel Foam dressing (adhesive) (ConvaTec Ltd) 10cm × 10cm= £2.18, 12.5cm × 12.5cm= £2.70, 17.5cm × 17.5cm= £5.40, 19.8cm × 14cm heel= £5.53, 20cm × 16.9cm sacral= £4.96, 21cm × 21cm= £7.91, 25cm × 30cm= £10.24, 8cm × 8cm= £1.42, (**non-adhesive**) 10cm × 10cm= £2.58, 15cm × 15cm= £4.33, 15cm × 20cm= £5.92, 20cm × 20cm= £7.07

UrgoClean Pad

Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer

UrgoClean Pad dressing (Urgo Ltd) 10cm × 10cm square= £2.16, 20cm × 15cm rectangular= £4.06, 6cm × 6cm square= £0.97

UrgoClean Rope

Rope, non-woven rope containing hydrocolloid fibres

UrgoClean rope dressing (Urgo Ltd) 2.5cm × 40cm= £2.43, 5cm × 40cm= £3.21

Polyurethane matrix dressing**Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film

Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.59, 15cm × 20cm rectangular= £5.48, 5cm × 6cm rectangular= £1.29

With adhesive border

Biatain Super

Semi-permeable hydrocolloid dressing; without adhesive border

Biatain Super dressing (adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.21, 12.5cm × 12.5cm square= £3.66, 12cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.41, 20cm × 20cm square= £6.87

Granuflex Bordered

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

Granuflex Bordered dressing (ConvaTec Ltd) 10cm × 10cm square= £3.39, 10cm × 13cm triangular= £4.01, 15cm × 15cm square= £6.48, 15cm × 18cm triangular= £6.24, 6cm × 6cm square= £1.79

Hydrocoll Border

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

Hydrocoll Border (bevelled edge) dressing (Paul Hartmann Ltd) 10cm × 10cm square= £2.46, 12cm × 18cm sacral= £3.69, 15cm × 15cm square= £4.63, 5cm × 5cm square= £1.03, 7.5cm × 7.5cm square= £1.69, 8cm × 12cm concave= £2.17

Tegaderm Hydrocolloid

Hydrocolloid dressing with adhesive border; normal or thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.55, 13cm × 15cm oval= £2.89, dressing 10cm × 12cm oval= £2.33, 13cm × 15cm oval= £4.34, 17.1cm × 16.1cm sacral= £4.85

Ultac Pro

Semi-permeable hydrocolloid dressing with adhesive border

Ultac Pro dressing (adhesive) (Covidien (UK) Commercial Ltd) 15cm × 18cm sacral= £3.30, 19.5cm × 23cm sacral= £4.98, 21cm × 21cm square= £4.67

Without adhesive border

ActivHeal Hydrocolloid

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

ActivHeal Hydrocolloid (Advanced Medical Solutions Ltd) dressing
 10cm × 10cm square= £1.58, 15cm × 15cm square= £3.43, 15cm × 18cm sacral= £3.98, 5cm × 7.5cm rectangular= £0.78, foam backed dressing 10cm × 10cm square= £1.55, 15cm × 15cm square= £2.91, 15cm × 18cm sacral= £3.36, 5cm × 7.5cm rectangular= £0.97

Askina Biofilm Transparent

Semi-permeable, polyurethane film dressing with hydrocolloid adhesive

Askina Biofilm Transparent dressing (B.Braun Medical Ltd) 10cm × 10cm square= £1.09, 20cm × 20cm square= £3.22

Biatain Super

Semi-permeable, hydrocolloid film dressing without adhesive border

Biatain Super dressing (non-adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.21, 12.5cm × 12.5cm square= £3.66, 12cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.41, 20cm × 20cm square= £6.87

Comfeel Plus Contour

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Contour dressing (Coloplast Ltd) 6cm × 8cm= £2.24, 9cm × 11cm= £3.89

Comfeel Plus Pressure Relieving

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Pressure Relief dressing (Coloplast Ltd) 10cm diameter circular= £4.69, 15cm diameter circular= £7.06, 7cm diameter circular= £3.50

Comfeel Plus Transparent

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Transparent dressing (Coloplast Ltd) 10cm × 10cm square= £1.29, 15cm × 15cm square= £3.37, 15cm × 20cm rectangular= £3.42, 20cm × 20cm square= £3.44, 5cm × 15cm rectangular= £1.60, 5cm × 25cm rectangular= £2.61, 5cm × 7cm rectangular= £0.68, 9cm × 14cm rectangular= £2.46, 9cm × 25cm rectangular= £3.49

Comfeel Plus Ulcer

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus dressing (Coloplast Ltd) 10cm × 10cm square= £2.48, 20cm × 20cm square= £7.64, 4cm × 6cm rectangular= £0.97

DuoDERM Extra Thin

Semi-permeable hydrocolloid dressing

DuoDERM Extra Thin dressing (ConvaTec Ltd) 10cm × 10cm square= £1.34, 15cm × 15cm square= £2.90, 5cm × 10cm rectangular= £0.78, 7.5cm × 7.5cm square= £0.81, 9cm × 15cm rectangular= £1.80, 9cm × 25cm rectangular= £2.87, 9cm × 35cm rectangular= £4.02

DuoDERM Signal

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

DuoDERM Signal dressing (ConvaTec Ltd) 10cm × 10cm square= £2.16, 11cm × 19cm oval= £3.31, 14cm × 14cm square= £3.78, 18.5cm × 19.5cm heel= £5.29, 20cm × 20cm square= £7.52, 22.5cm × 20cm sacral= £6.18

Flexigran

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

Flexigran (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

Graunuflex

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

Graunuflex (modified) dressing (ConvaTec Ltd) 10cm × 10cm square= £2.85, 15cm × 15cm square= £5.40, 15cm × 20cm square= £5.86, 20cm × 20cm square= £8.13

Hydrocoll Basic

Hydrocolloid dressing with absorbent wound contact pad

Hydrocoll (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.50

Hydrocoll Thin Film

Thin hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Thin Film dressing (Paul Hartmann Ltd) 10cm × 10cm square= £1.18, 15cm × 15cm square= £2.65, 7.5cm × 7.5cm square= £0.71

Nu-Derm

Semi-permeable hydrocolloid dressing (normal and thin)

Nu-Derm dressing (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.56, 15cm × 15cm square= £3.18, 15cm × 18cm sacral= £4.45, 20cm × 20cm square= £6.36, 5cm × 5cm square= £0.85, 8cm × 12cm heel/elbow= £3.18, thin 10cm × 10cm square= £1.06

Tegaderm Hydrocolloid

Hydrocolloid dressing without adhesive border; normal and thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.55, dressing 10cm × 10cm square= £2.37

Ultec Pro

Semi-permeable hydrocolloid dressing; without adhesive border

Ultec Pro dressing (Covidien (UK) Commercial Ltd) 10cm × 10cm square= £2.28, 15cm × 15cm square= £4.44, 20cm × 20cm square= £6.69

Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Cavi-Care

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

Polyurethane Foam Dressing

Cutimed Cavity

Cutimed Cavity dressing (BSN medical Ltd) 10cm × 10cm= £3.17, 15cm × 15cm= £4.77, 5cm × 6cm= £1.91

Transorbent dressing (adhesive) (B.Braun Medical Ltd) 10cm × 10cm square= £2.00, 15cm × 15cm square= £3.68, 20cm × 20cm square= £5.87, 5cm × 7cm rectangular= £1.06

UrgoCell TLC

UrgoTul Absorb dressing (Urgo Ltd) 10cm × 10cm= £2.38, 15cm × 20cm= £4.20, 6cm × 6cm= £1.21, 12cm × 19cm heel= £4.80

Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

ActivHeal Alginate

Calcium sodium alginate dressing

ActivHeal Alginate dressing (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

ActivHeal Aquafiber

Non-woven, calcium sodium alginate dressing

ActivHeal Aquafiber (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.80, 15cm × 15cm= £3.40, 5cm × 5cm= £0.76

Algisite M

Calcium alginate fibre, non-woven dressing

Algisite M (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.53, dressing 10cm × 10cm= £1.95, 15cm × 20cm= £5.23, 5cm × 5cm= £0.94

Calcium alginate dressing

Kendall Calcium Alginate (H & R Healthcare Ltd) Rope dressing 30cm= £2.89, 61cm= £5.07, 91cm= £5.46, dressing 10cm × 10cm= £1.52, 10cm × 14cm= £2.45, 10cm × 20cm= £2.98, 15cm × 25cm= £5.25, 30cm × 61cm= £27.56, 5cm × 5cm= £0.72

Kendall Plus

Calcium alginate dressing

Kendall (H & R Healthcare Ltd) Foam Plus dressing 10cm × 10cm square= £1.47

Melgisorb

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

Melgisorb (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

Sorbalgon

Calcium alginate dressing

Sorbalgon (Paul Hartmann Ltd) T dressing 2g= £3.56, dressing 10cm × 10cm= £1.74, 5cm × 5cm= £0.83

Sorbsan Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads

Sorbsan Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

Sorbsan Plus

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

Sorbsan Ribbon

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.06

Sorbsan Surgical Packing

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan (Aspen Medical Europe Ltd) Packing dressing 2g= £3.50

Suprasorb A

Calcium alginate dressing

Suprasorb A (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.25, 5cm × 5cm= £0.64, cavity dressing 2g= £2.32

Tegaderm Alginate

Calcium alginate dressing

Tegaderm Alginate dressing (3M Health Care Ltd) 10cm × 10cm= £1.72, 2cm × 30.4cm= £2.87, 5cm × 5cm= £0.81

Urgosorb

Alginate and carboxymethylcellulose dressing without adhesive border

Urgosorb (Urgo Ltd) Pad dressing 10cm × 10cm= £2.15, 10cm × 20cm= £3.94, 5cm × 5cm= £0.90, Rope dressing 30cm= £2.81

Capillary-acting dressings**Vacutex**

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

Vacutex dressing (Haddenham Healthcare Ltd) 10cm × 10cm= £1.69, 10cm × 15cm= £2.27, 10cm × 20cm= £2.72, 5cm × 5cm= £0.95

Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb

Activated charcoal and non-woven viscose rayon dressing

Askina Carbosorb dressing (B.Braun Medical Ltd) 10cm × 10cm= £2.95, 10cm × 20cm= £5.68

CarboFLEX

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

CarboFlex dressing (ConvaTec Ltd) 10cm × 10cm= £3.27, 15cm × 20cm= £7.44, 8cm × 15cm oval= £3.92

Carbopad VC

Activated charcoal non-absorbent dressing

Carbopad VC dressing (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

CliniSorb Odour Control Dressings

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

CliniSorb dressing (CliniMed Ltd) 10cm × 10cm= £1.92, 10cm × 20cm= £2.56, 15cm × 25cm= £4.12

Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide

(polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

Honey

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Activon Tulle*®, where no size is stated by the prescriber the 5 cm size is to be supplied.

Medihoney® *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

Honey-based topical application**Activon Honey**

Medical grade manuka honey

Activon Medical Grade Manuka Honey dressing (Advancis Medical) 25 gram= £2.77

L-Mesitran SOFT ointment dressing

Honey (medical grade) 40%

L-Mesitran (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.62

Sodium alginate dressing impregnated with medical grade honey

Medihoney Gel Sheet dressing (Derma Sciences Europe, Ltd) 10cm × 10cm= £4.23, 5cm × 5cm= £1.76

MelMax

Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis

MelMax dressing (DoubleWing Medical) 5cm × 6cm rectangular= £1.68, 8cm × 10cm rectangular= £2.00, 8cm × 20cm rectangular= £3.75

Melladerm Plus Tulle

Knitted viscose impregnated with medical grade honey (*Bulgarian, mountain flower*) 45% in a basis containing polyethylene glycol

Melladerm (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10

Iodine

Cadexomer-iodine, like povidone-iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the

presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

Iodoflex® and **Iodosorb®** are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

Iodozyme® is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Oxyzyme® is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodoflex Paste

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

Iodoflex paste dressing (Smith & Nephew Healthcare Ltd) 5 gram= £4.19, 10 gram= £8.37, 17 gram= £13.25

Iodosorb Ointment

Iodine 0.9% as cadexomer–iodine in an ointment basis
Iodosorb (Smith & Nephew Healthcare Ltd) ointment dressing= £9.25

Iodosorb Powder

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet
Iodosorb (Smith & Nephew Healthcare Ltd) powder dressing sachets= £1.98

Povidone-iodine fabric dressing

Inadine

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%
Inadine dressing (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

Silver

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Algisite Ag

Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.23, 10cm × 20cm= £7.79, 2g= £5.85, 5cm × 5cm= £1.69

Askina Calgitrol Ag

Calcium alginate and silver alginate dressing with polyurethane foam backing

Askina Calgitrol Ag dressing (B.Braun Medical Ltd) 10cm × 10cm square= £3.26, 15cm × 15cm square= £6.32, 20cm × 20cm square= £14.74

Askina Calgitrol Thin

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

Askina Calgitrol Thin dressing (B.Braun Medical Ltd) 10cm × 10cm square= £4.16, 15cm × 15cm square= £9.33, 20cm × 20cm square= £16.48, 5cm × 5cm square= £2.00

Melgisorb Ag

Alginate and carboxymethylcellulose dressing, with ionic silver

Melgisorb Ag (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.57, dressing 10cm × 10cm= £3.67, 15cm × 15cm= £7.76, 5cm × 5cm= £1.83

Silvercel

Alginate and carboxymethylcellulose dressing impregnated with silver

Silvercel dressing (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.68, 11cm × 11cm square= £4.14, 2.5cm × 30.5cm rectangular= £4.45, 5cm × 5cm square= £1.68

Silvercel Non-adherent

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

Silvercel Non-Adherent (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.94, dressing 10cm × 20cm rectangular= £7.25, 11cm × 11cm square= £3.89, 5cm × 5cm square= £1.62

Sorbsan Silver Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

Sorbsan Silver Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

Sorbsan Silver Plus

Calcium alginate dressing with absorbent backing, with silver

Sorbsan Silver Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

Sorbsan Silver Ribbon

With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.18

Sorbsan Silver Surgical Packing

With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.80

Suprasorb A + Ag

Calcium alginate dressing, with silver

Suprasorb A + Ag (Lohmann & Rauscher) dressing 10cm × 10cm= £4.17, 10cm × 20cm= £7.70, 5cm × 5cm= £1.66, rope dressing 2g= £6.17

Tegaderm Alginate Ag

Calcium alginate and carboxymethylcellulose dressing, with silver

Tegaderm Alginate Ag dressing (3M Health Care Ltd) 10cm × 10cm= £3.24, 3cm × 30cm= £3.70, 5cm × 5cm= £1.39

Urgosorb Silver

Alginate and carboxymethylcellulose dressing, impregnated with silver

Urgosorb Silver (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.74, dressing 10cm × 10cm= £3.71, 10cm × 20cm= £7.00, 5cm × 5cm= £1.56

*Foam dressings***Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

Acticoat Moisture Control dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.09, 10cm × 20cm rectangular= £33.31, 5cm × 5cm square= £7.31

Allevyn Ag

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

Allevyn Ag (Smith & Nephew Healthcare Ltd) (Adhesive dressing) 10cm × 10cm square= £5.60, 12.5cm × 12.5cm square= £7.36, 17.5cm × 17.5cm square= £14.16, 17cm × 17cm sacral= £11.05, 22cm × 22cm sacral= £14.81, 7.5cm × 7.5cm square= £3.56, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £10.96, (Non-Adhesive dressing) 10cm × 10cm square= £6.25, 15cm × 15cm square= £11.85, 20cm × 20cm square= £17.36, 5cm × 5cm square= £3.32

Biatain Ag

Silver impregnated polyurethane foam film dressing, with or without adhesive border

Biatain Ag (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.10, dressing 10cm × 10cm square= £8.23, 10cm × 20cm rectangular= £15.12, 12.5cm × 12.5cm square= £9.41, 15cm × 15cm square= £16.51, 18cm × 18cm square= £18.88, 19cm × 20cm heel= £18.62, 20cm × 20cm square= £23.29, 23cm × 23cm sacral= £19.79, 5cm × 7cm rectangular= £3.38

PolyMem Silver

Silver impregnated polyurethane foam film dressing, with or without adhesive border

PolyMem Silver (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £7.10, dressing 10.8cm × 10.8cm square= £8.93, 12.7cm × 8.8cm oval= £5.64, 17cm × 19cm rectangular= £17.89, 5cm × 7.6cm oval= £2.29

UrgoCell Silver

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

UrgoCell Silver dressing (Urgo Ltd) 10cm × 10cm= £6.00, 15cm × 20cm= £10.99, 6cm × 6cm= £4.36

*Hydrocolloid dressings***Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated),

Aquacel Ag (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.14, 2cm × 45cm= £4.80, dressing 10cm × 10cm square= £4.77, 15cm × 15cm square= £8.99, 20cm × 30cm rectangular= £22.30, 4cm × 10cm rectangular= £2.91, 4cm × 20cm rectangular= £3.79, 4cm × 30cm rectangular= £5.67

Physiotulle Ag

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

Physiotulle (Coloplast Ltd) dressing 10cm × 10cm= £2.30

*Low adherence dressing***Acticoat**

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.72, 10cm × 20cm rectangular= £13.64, 20cm × 40cm rectangular= £46.66, 5cm × 5cm square= £3.57

Acticoat 7

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.49, 15cm × 15cm square= £33.24, 5cm × 5cm square= £6.21

Acticoat Flex 3

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat Flex 3 dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.80, 10cm × 20cm rectangular= £13.75, 20cm × 40cm rectangular= £47.07, 5cm × 5cm square= £3.60

Acticoat Flex 7

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat Flex 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.65, 15cm × 15cm square= £33.54, 5cm × 5cm square= £6.26

Atrauman Ag

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

Atrauman Ag dressing (Paul Hartmann Ltd) 10cm × 10cm= £1.28, 10cm × 20cm= £2.51, 5cm × 5cm= £0.53

*Soft polymer dressings***Allevyn Ag Gentle**

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

Allevyn Ag Gentle (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.48, 12.5cm × 12.5cm= £8.33, 17.5cm × 17.5cm= £15.87, 7.5cm × 7.5cm= £4.31, dressing 10cm × 10cm= £6.29, 10cm × 20cm= £10.40, 15cm × 15cm= £11.70, 20cm × 20cm= £17.33, 5cm × 5cm= £3.38

Mepilex Ag

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

Mepilex (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.17, 10cm × 20cm= £10.17, 15cm × 15cm= £11.44, 20cm × 20cm= £16.96, 20cm × 50cm= £63.64, Border Ag dressing 10cm × 12.5cm= £6.21, 10cm × 20cm= £9.03, 10cm × 30cm= £13.55, 15cm × 17.5cm= £11.39, 17cm × 20cm= £14.76, 7cm × 7.5cm= £3.43, Border Sacrum Ag dressing 18cm × 18cm= £11.91, 20cm × 20cm= £14.48, 23cm × 23cm= £19.02, Heel Ag dressing 13cm × 20cm= £12.87, 15cm × 22cm= £14.42

Urgotul Silver

Non-adherent soft polymer wound contact dressing, with silver

Urgotul Silver dressing (Urgo Ltd) 10cm × 12cm= £3.61, 15cm × 20cm= £9.83

*With charcoal***Actisorb Silver 220**

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

Actisorb Silver 220 dressing (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.58, 10.5cm × 19cm= £4.70, 6.5cm × 9.5cm= £1.64

Other antimicrobials**Cutimed Siltec Sorbact**

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

Cutimed Siltec Sorbact dressing (BSN medical Ltd) 12.5cm × 12.5cm= £6.56, 15cm × 15cm= £8.13, 17.5cm × 17.5cm= £11.38, 22.5cm × 22.5cm= £17.31, 7.5cm × 7.5cm= £2.56, 17.5cm × 17.5cm sacral= £8.22, 23cm × 23cm sacral= £12.36

Cutimed Sorbact

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

Cutimed Sorbact (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.11, 5cm × 200cm= £8.10, Round swab 3cm= £3.36, dressing pad 10cm × 10cm= £5.60, 10cm × 20cm= £8.74, 7cm × 9cm= £3.58, swab 4cm × 6cm= £1.68, 7cm × 9cm= £2.80

Cutimed Sorbact Gel

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

Cutimed Sorbact Gel dressing (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.56, 7.5cm × 7.5cm square= £2.70

Cutimed Sorbact Hydroactive

Non-adhesive gel dressing with hypopolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

Cutimed Sorbact Hydroactive dressing (BSN medical Ltd) 14cm × 14cm= £5.47, 14cm × 24cm= £8.76, 19cm × 19cm= £10.29, 24cm × 24cm= £15.60, 7cm × 8.5cm= £3.75

Cutimed Sorbact Hydroactive B

Gel dressing with hypopolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

Cutimed Sorbact Hydroactive B dressing (BSN medical Ltd) 10cm × 10cm= £7.22, 10cm × 20cm= £11.56, 15cm × 15cm= £13.58, 5cm × 6.5cm= £4.05

Flaminal Forte gel

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

Flaminal Forte gel dressing (Flen Health UK Ltd) 15g= £7.79, 50g= £25.78

Flaminal Hydro gel

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

Flaminal Hydro gel dressing (Flen Health UK Ltd) 15g= £7.79, 50g= £25.78

Kendall AMD

Foam dressing with polyhexanide, without adhesive border

Kendall AMD Antimicrobial foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.71, 10cm × 20cm rectangular= £8.92, 15cm × 15cm square= £8.92, 20cm × 20cm square= £13.07, 5cm × 5cm square= £2.50, 8.8cm × 7.5cm rectangular (fenestrated)= £4.23

Kendall AMD Plus

Foam dressing with polyhexanide, without adhesive border

Kendall AMD Antimicrobial Plus foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.94, 8.8cm × 7.5cm rectangular (fenestrated)= £4.43

Octenilin Wound gel

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

Octenilin Wound Gel dressing (Schulke & Mayr Ltd) 20ml= £4.78

Prontosan Wound Gel

Hydrogel containing betaine surfactant and polyhexanide

Prontosan Wound Gel dressing (B.Braun Medical Ltd) 30ml= £6.50

Suprasorb X + PHMB

Biosynthetic cellulose fibre dressing with polyhexanide

Suprasorb X + PHMB dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £11.80, 2cm × 21cm rope= £7.35, 5cm × 5cm square= £2.61, 9cm × 9cm square= £5.19

Telfa AMD

Low adherence absorbent perforated plastic film faced dressing with polyhexanide

Telfa AMD dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

Telfa AMD Island

Low adherence dressing with adhesive border and absorbent pad, with polyhexanide

Telfa AMD Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

Chlorhexidine gauze dressing**Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

Bactigras gauze dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= no price available, 5cm × 5cm= no price available

Irrigation fluids**Octenilin Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerol and octenidine hydrochloride

Octenilin irrigation solution (Schulke & Mayr Ltd) 350mL bottles= £4.60

Prontosan Wound Irrigation Solution

Aqueous solution containing betaine surfactant and polyhexanide

Prontosan irrigation solution (B.Braun Medical Ltd) 350ml bottles= £4.86, 40ml unit dose= £14.45

Specialised dressings**Protease-modulating matrix dressings****Cadesorb Ointment**

Cadesorb (Smith & Nephew Healthcare Ltd) ointment= £9.40

Catrix

Catrix dressing (Cranage Healthcare Ltd) sachets= £3.80

Promogran

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran dressing (Systagenix Wound Management Ltd) 123 square cm= £15.62, 28 square cm= £5.19

Promogran Prisma Matrix

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran Prisma dressing (Systagenix Wound Management Ltd) 123 square cm= £17.98, 28 square cm= £6.31

UrgoStart

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

UrgoStart dressing (Urgo Ltd) 10cm × 10cm= £6.21, 15cm × 20cm= £11.17, 6cm × 6cm= £4.49, 12cm × 19cm heel= £8.56

UrgoStart Contact

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

UrgoStart (Urgo Ltd) Contact dressing 5cm × 7cm= £3.03

Silicone keloid dressings

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

Silicone gel**Bapscarcare**

Silicone gel

Bapscarcare (Espere Healthcare Ltd) gel= £17.12

Ciltech

Silicone gel

Ciltech (Su-Med International (UK) Ltd) gel= £50.00

Dermatix

Silicone gel

Dermatix gel (Meda Pharmaceuticals Ltd) = £60.53

Kelo-cote UV

Silicone gel with SPF 30 UV protection

Kelo-cote (Alliance Pharmaceuticals Ltd) UV gel= £17.88

Kelo-cote gel

Silicone gel

Kelo-cote (Alliance Pharmaceuticals Ltd) gel= £51.00

Kelo-cote spray

Silicone spray

Kelo-cote (Alliance Pharmaceuticals Ltd) spray= £51.00

NewGel+E

Silicone gel with vitamin E

NewGel+E (Advantech Surgical Ltd) gel= £17.70

ScarSil

Silicone gel

ScarSil (Jobskin Ltd) gel= £15.19

Silgel STC-SE

Silicone gel

Silgel (Nagor Ltd) STC-SE gel= £19.00**Silicone sheets****Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

Advasil Conform sheet (Advancis Medical) 10cm × 10cm square= £5.24, 15cm × 10cm rectangular= £9.24**Bapsarcare T**

Self-adhesive silicone gel sheet

Bapsarcare T sheet (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.07, 5cm × 30cm rectangular= £9.07, 5cm × 7cm rectangular= £3.17**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

Cica-Care sheet (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £29.06, 6cm × 12cm rectangular= £14.91**Ciltech**

Silicone gel sheet

Ciltech sheet (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00**Dermatrix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

Dermatrix (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88**Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

Mepiform sheet (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.10, 5cm × 7cm rectangular= £3.51, 9cm × 18cm rectangular= £13.75**Scar FX**

Self-adhesive, transparent, silicone gel sheet

Scar FX sheet (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50**Silgel**

Silicone gel sheet

Silgel sheet (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00**Adjunct dressings and appliances****Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

Cotton**Absorbent Cotton, BP**

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

Absorbent (Robert Bailey & Son Plc) cotton BP 1988**Absorbent Cotton, Hospital Quality**

As for absorbent cotton but lower quality materials, shorter staple length etc.

Absorbent (Robert Bailey & Son Plc) cotton hospital quality**Gauze and cotton tissue****Gamgee Tissue (blue)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue blue label**Gamgee Tissue (pink)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue pink label DT**Gauze and tissue****Absorbent Cotton Gauze, BP 1988**

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

Absorbent (Robert Bailey & Son Plc) cotton BP 1988**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988**Vernaïd** (Synergy Health (UK) Ltd) absorbent cotton BP 1988**Absorbent Cotton and Viscose Ribbon Gauze, BP 1988**

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

Vernaïd Fast Edge ribbon gauze sterile (Synergy Health (UK) Ltd) 1.25cm, 2.5cm**Lint****Absorbent Lint, BPC**

Cotton cloth of plain weave with nap raised on one side from warp yarns

Wound care accessories**Dressing packs**

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wave bandages (banded)

Vernaid (Synergy Health (UK) Ltd) multiple pack dressing

Non-drug tariff specification sterile dressing packs**Dressit**

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field

Dressit sterile dressing pack (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

Nurse It

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

Nurse It sterile dressing pack (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

Polyfield Nitrile Patient Pack

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron
Polyfield Nitrile Patient Pack (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

Sterile Dressing Pack with Non-Woven Pads**Vernaïd**

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

Vernaïd (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

Sterile dressing packs**Vernaïd**

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

Vernaïd (Synergy Health (UK) Ltd) sterile dressing pack

Woven and fabric swabs**Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CS (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

Clini gauze swab 8ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Gauze (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

MeCoBo gauze swab 8ply (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Propax gauze (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

Sovereign (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

Steraid (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

Vernaïd gauze swab 8ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Non-woven Fabric Swab

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

CS (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

Clini non-woven fabric swab 4ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CliniMed (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

MeCoBo (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

Multisorb (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm

Sofisorb non-woven fabric swab 4ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Softswab non-woven fabric swab 4ply (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Topper 8 non-woven fabric swab 4ply (Systagenix Wound Management Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Filmated non-woven Fabric Swab**Regal**

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile
Regal (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may

sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

Occlusive adhesive tapes**Blenderm**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

Blenderm tape (3M Health Care Ltd) 2.5cm= £1.77, 5cm= £3.37

Triangular Calico Bandage, BP 1980

Unbleached calico right-angled triangle

Clini (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

Triangular (BSN medical Ltd) calico bandage 90cm × 127cm

Light-weight conforming bandages

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

Acti-Wrap

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Acti-Wrap (cohesive/latex free) bandage (L&R Medical UK Ltd) 10cm × 4m= £0.82, 6cm × 4m= £0.47, 8cm × 4m= £0.69

Stayform bandage (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.68, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the

recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For **Elasticated Tubular Bandage, BP 1993**, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For **Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988**, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated**Acti-Fast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

Acti-Fast 2-way stretch stockinette (L&R Medical UK Ltd) 10.75cm= £6.04, 17.5cm= £1.83, 20cm= £3.20, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77

Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

CliniLite

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniLite bandage (CliniSupplies Ltd) 10cm × 4.5m= £0.81, 15cm × 4.5m= £1.17, 5cm × 4.5m= £0.44, 7.5cm × 4.5m= £0.61

CliniPlus

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniPlus (CliniSupplies Ltd) bandage 10cm × 8.7m= £1.81

Cotton Crepe Bandage

Light support bandage, 4.5 m stretched (all)

Hospicrepe 239 bandage (Paul Hartmann Ltd) 10cm × 4.5m= £0.81, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.44, 7.5cm × 4.5m= £0.63

Cotton Crepe Bandage, BP 1988

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

Elastocrepe bandage (BSN medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

Flexocrepe bandage (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Neosport bandage (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

PremierBand

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

PremierBand bandage (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

Profore #2

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Profore #2 (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.37, latex free bandage 10cm × 4.5m= £1.46

Profore #3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Profore #3 (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.00, latex free bandage 10cm × 8.7m= £4.34

Setocrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Setocrepe (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.21

Soffcrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Soffcrepe bandage (BSN medical Ltd) 10cm × 4.5m= £1.26, 15cm × 4.5m= £1.84, 5cm × 4.5m= £0.71, 7.5cm × 4.5m= £1.00

Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

Tenosoplast bandage (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Cohesive extensible bandages

Coban

Bandage

Coban (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.93

K Press

Bandage

K Press bandage (Urgo Ltd) 10cm × 6.5m= £2.96, 10cm × 7.5m= £3.45, 12cm × 7.5m= £4.34, 8cm × 7.5cm= £3.25

Profore #4

Bandage

Profore #4 (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.30, latex free bandage 10cm × 2.5m= £3.59

Ultra Fast

Bandage

Ultra (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.59

Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 233 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

High compression bandages

High Compression Bandage

Cotton, viscose, nylon, and Lycra[®] extensible bandage, 3 m (unstretched)

K-ThreeC (Urgo Ltd) bandage 10cm × 3m= £2.87

SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.68

PEC High Compression Bandages

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

Setopress (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.58

VEC High Compression Bandages

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

Tenospress bandage (BSN medical Ltd) 10cm × 3m= £3.51, 7.5cm × 3m= £2.73

Short stretch compression bandages

Actico

Bandage

Actico bandage (L&R Medical UK Ltd) 10cm × 6m= £3.41, 12cm × 6m= £4.34, 4cm × 6m= £2.44, 6cm × 6m= £2.85, 8cm × 6m= £3.28

Comprilan

Bandage

Comprilan bandage (BSN medical Ltd) 10cm × 5m= £3.44, 12cm × 5m= £4.19, 6cm × 5m= £2.72, 8cm × 5m= £3.20

Rosidal K

Bandage

Rosidal K bandage (Lohmann & Rauscher) 10cm × 10m= £6.11, 10cm × 5m= £3.51, 12cm × 5m= £4.26, 6cm × 5m= £2.69, 8cm × 5m= £3.21

Sub-compression wadding bandage

Cellona Undercast Padding

Padding

Cellona Undercast padding bandage (Lohmann & Rauscher) 10cm × 2.75m= £0.48, 15cm × 2.75m= £0.61, 5cm × 2.75m= £0.32, 7.5cm × 2.75m= £0.39

Flexi-Ban

Padding

Flexi-Ban (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.51

K Tech Reduced

Padding

K Tech Reduced bandage 10cm x (Urgo Ltd) 6m= £4.79, 7.3m= £5.23

K-Soft

Padding

K-Soft (Urgo Ltd) Long bandage 10cm × 4.5m= £0.58, bandage 10cm × 3.5m= £0.46

K-Tech (K Tech in DMD)

Padding

K Tech (Urgo Ltd) Reduced bandage 10cm × 7.3m= £5.23, bandage 10cm × 5m= £3.99, 10cm × 6m= £4.79, 12cm × 6m= £6.04, 12cm × 7.3m= £6.60, 8cm × 6m= £4.52, 8cm × 7.3m= £4.93

Ortho-Band Plus

Padding

Ortho-Band (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

Profore #1

Padding

Profore #1 (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.72, latex free bandage 10cm × 3.5m= £0.77

Softex

Padding

Softex (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

SurePress

Padding

SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.68

Ultra Soft

Padding

Ultra (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

Velband

Padding

Velband (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.74

Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

Four layer systems

K-Four

Padding

K-Four

Multi-layer compression bandaging kit, four layer system
K-Four (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference= £4.55, multi-layer compression bandage kit 18cm-25cm ankle circumference= £6.96, 25cm-30cm ankle circumference= £6.96, greater than 30cm ankle circumference= £9.58, less than 18cm ankle circumference= £7.27

Profore

Wound contact layer

Profore

Multi-layer compression bandaging kit, four layer system
Profore (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.05, multi-layer compression bandage kit= £5.57, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.30, multi-layer compression bandage kit 18cm-25cm ankle circumference= £9.64, 25cm-30cm ankle circumference= £8.00, above 30cm ankle circumference= £11.99, up to 18cm ankle circumference= £10.35

Ultra Four

Wound contact layer

Ultra Four

Multi-layer compression bandaging kit, four layer system
Ultra Four (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.14, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.67, up to 18cm ankle circumference= £6.41

*Two layer systems***Coban 2**

Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

Coban 2 (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.24, multi-layer compression bandage kit= £8.24

K Two

Multi-layer compression bandaging kit, two layer system
UrgoKTwo (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.75, 25cm-32cm ankle circumference= £9.56, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.24, 25cm-32cm ankle circumference= £9.01, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.75, 25cm-32cm ankle circumference= £9.56, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.24, 25cm-32cm ankle circumference= £9.00, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.39, 25cm-32cm ankle circumference= £11.35, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.77, 25cm-32cm ankle circumference= £8.45, multi-layer compression bandage kit size 0 short 18cm-25cm ankle circumference= £6.95, with UrgoStart multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.27, 25cm-32cm ankle circumference= £10.95

Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

Zipzoc® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

Zinc Paste Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging

Excipients: may include cetostearyl alcohol, hydroxybenzoates

Viscopaste (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.72

Zinc Paste and Ichthammol Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

Excipients: may include cetostearyl alcohol

Ichthopaste (Evolan Pharma AB) bandage 7.5cm × 6m= £3.75

Medicated stocking**Zipzoc**

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Zipzoc (Evolan Pharma AB) stockings= £34.70

Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

Graduated Compression hosiery, Class 1 Light Support is used for superficial or early varices, varicosis during pregnancy.

Graduated Compression hosiery, Class 2 Medium Support is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

Graduated Compression hosiery, Class 3 Strong Support is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

Compression values for hosiery and lymphoedema garments

Class 1: Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; **Class 2** Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; **Class 3** Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; **Class 4** Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; **Class 4 super** Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

Graduated compression hosiery**Class 1 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Class 2 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

*Accessories***Suspender**

Suspender, for thigh stockings

*Anklets***Class 2 Medium Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

*Knee caps***Class 2 Medium Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either

flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note: There are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments p. 1560.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred.

Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP

Aciclovir Oral Suspension, BP, 200 mg/5 mL

Aciclovir Tablets, BP, 200 mg

Aciclovir Tablets, BP, 800 mg

Amoxicillin Capsules, BP

Amoxicillin Oral Powder, DPF

Amoxicillin Oral Suspension, BP

Artificial Saliva Gel, DPF

Artificial Saliva Oral Spray, DPF

Artificial Saliva Pastilles, DPF

Artificial Saliva Protective Spray, DPF

Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):

BioXtra[®] Gel Mouthspray

BioXtra[®] Moisturising Gel

Glandosane[®]

Saliveze[®]

Artificial Saliva Substitute Spray, DPF

Aspirin Tablets, Dispersible, BP

Azithromycin Capsules, 250 mg, DPF

Azithromycin Oral Suspension, 200 mg/5 mL, DPF

Azithromycin Tablets, 250 mg, DPF

Azithromycin Tablets, 500 mg, DPF

Beclometasone Pressurised Inhalation, BP,
50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite[®]

Benzydamine Mouthwash, BP 0.15%

Benzydamine Oromucosal Spray, BP 0.15%

Betamethasone Soluble Tablets, 500 micrograms, DPF

Carbamazepine Tablets, BP

Cefalexin Capsules, BP

Cefalexin Oral Suspension, BP

Cefalexin Tablets, BP

Cefradine Capsules, BP

Cetirizine Oral Solution, BP, 5 mg/5 mL

Cetirizine Tablets, BP, 10 mg

Chlorhexidine Gluconate Gel, BP

Chlorhexidine Mouthwash, BP

Chlorhexidine Oral Spray, DPF

Chlorphenamine Oral Solution, BP

Chlorphenamine Tablets, BP

Choline Salicylate Dental Gel, BP

Clarithromycin Oral Suspension, 125 mg/5 mL, DPF

Clarithromycin Oral Suspension, 250 mg/5 mL, DPF

Clarithromycin Tablets, BP

Clindamycin Capsules, BP

Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)

Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL

Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL

Diazepam Oral Solution, BP, 2 mg/5 mL

Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP

Dihydrocodeine Tablets, BP, 30 mg

Doxycycline Tablets, Dispersible, BP

Doxycycline Capsules, BP, 100 mg

Doxycycline Tablets, 20 mg, DPF

Ephedrine Nasal Drops, BP

Erythromycin Ethyl Succinate Oral Suspension, BP

Erythromycin Ethyl Succinate Tablets, BP

Erythromycin Stearate Tablets, BP

Erythromycin Tablets, Gastro-resistant, BP

Fluconazole Capsules, 50 mg, DPF

Fluconazole Oral Suspension, 50 mg/5 mL, DPF

Hydrocortisone Cream, BP, 1%

Hydrocortisone Oromucosal Tablets, BP

Hydrogen Peroxide Mouthwash, BP, 6%

Ibuprofen Oral Suspension, BP, sugar-free

Ibuprofen Tablets, BP

Lansoprazole Capsules, Gastro-resistant, BP

Lidocaine Ointment, BP, 5%

Lidocaine Spray 10%, DPF

Loratadine Syrup, 5 mg/5 mL, DPF

Loratadine Tablets, BP, 10 mg

Menthol and Eucalyptus Inhalation, BP 1980

Metronidazole Oral Suspension, BP

Metronidazole Tablets, BP

Miconazole Cream, BP

Miconazole Oromucosal Gel, BP

Miconazole and Hydrocortisone Cream, BP

Miconazole and Hydrocortisone Ointment, BP

Nystatin Oral Suspension, BP

Omeprazole Capsules, Gastro-resistant, BP

Oxytetracycline Tablets, BP

Paracetamol Oral Suspension, BP

Paracetamol Tablets, BP

Paracetamol Tablets, Soluble, BP

Phenoxymethylpenicillin Oral Solution, BP

Phenoxymethylpenicillin Tablets, BP

Promethazine Hydrochloride Tablets, BP

Promethazine Oral Solution, BP

Saliva Stimulating Tablets, DPF

Sodium Chloride Mouthwash, Compound, BP

Sodium Fluoride Mouthwash, BP

Sodium Fluoride Oral Drops, BP

Sodium Fluoride Tablets, BP

Sodium Fluoride Toothpaste 0.619%, DPF

Sodium Fluoride Toothpaste 1.1%, DPF

Sodium Fusidate Ointment, BP

Temazepam Oral Solution, BP

Temazepam Tablets, BP

Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations.

For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF.

Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel

(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray

(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules

azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL

azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets

azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms

betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL

clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL

clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg

fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL

loratadine 5 mg/5 mL

Saliva Stimulating Tablets

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%

(proprietary product: *Duraphat* '2800 ppm' Toothpaste), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%

(proprietary product: *Duraphat* '5000 ppm' Toothpaste), sodium fluoride 1.1%

Nurse Prescribers' Formulary

Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP
 Arachis Oil Enema, NPF
 Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)
 Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)
 Bisacodyl Tablets, BP
 Catheter Maintenance Solution, Sodium Chloride, NPF
 Catheter Maintenance Solution, 'Solution G', NPF
 Catheter Maintenance Solution, 'Solution R', NPF
 Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%
 Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%
 Choline Salicylate Dental Gel, BP
 Clotrimazole Cream 1%, BP
 Co-danthramer Capsules, NPF
 Co-danthramer Capsules, Strong, NPF
 Co-danthramer Oral Suspension, NPF
 Co-danthramer Oral Suspension, Strong, NPF
 Co-danthrusate Capsules, BP
 Co-danthrusate Oral Suspension, NPF
 Crotamiton Cream, BP
 Crotamiton Lotion, BP
 Dimeticone barrier creams containing at least 10%
 Dimeticone Lotion, NPF
 Docusate Capsules, BP
 Docusate Enema, NPF
 Docusate Oral Solution, BP
 Docusate Oral Solution, Paediatric, BP
 Econazole Cream 1%, BP
 Emollients as listed below:
 Aquadrate[®] 10% w/w Cream
 Arachis Oil, BP
 Balneum[®] Plus Cream
 Cetaben[®] Emollient Cream
 Dermamist[®]
 Diprobace[®] Cream
 Diprobace[®] Ointment
 Doublebase[®]
 Doublebase[®] Dayleve Gel
 E45[®] Cream
 E45[®] Itch Relief Cream
 Emulsifying Ointment, BP
 Eucerin[®] Intensive 10% w/w Urea Treatment Cream
 Eucerin[®] Intensive 10% w/w Urea Treatment Lotion
 Hydromol[®] Cream

Hydromol[®] Intensive
 Hydrous Ointment, BP
 Lipobase[®]
 Liquid and White Soft Paraffin Ointment, NPF
 Neutrogena[®] Norwegian Formula Dermatological Cream
 Nutraplus[®] Cream
 Oilatum[®] Cream
 Oilatum[®] Junior Cream
 Paraffin, White Soft, BP
 Paraffin, Yellow Soft, BP
 Ultrabase[®]
 Unguentum M[®]
 Emollient Bath and Shower Preparations as listed below:
 Aqueous Cream, BP
 Balneum[®] (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 Balneum Plus[®] Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 Cetaben[®] Emollient Bath Additive
 Dermal[®] Bath Emollient
 Doublebase[®] Emollient Bath Additive
 Doublebase[®] Emollient Shower Gel
 Doublebase[®] Emollient Wash Gel
 Hydromol[®] Bath and Shower Emollient
 Oilatum[®] Emollient
 Oilatum[®] Gel
 Oilatum[®] Junior Bath Additive
 Zerolatum[®] Emollient Medicinal Bath Oil
 Folic Acid Tablets 400 micrograms, BP
 Glycerol Suppositories, BP
 Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)
 Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)
 Ispaghula Husk Granules, BP
 Ispaghula Husk Granules, Effervescent, BP
 Ispaghula Husk Oral Powder, BP
 Lactulose Solution, BP
 Lidocaine Ointment, BP
 Lidocaine and Chlorhexidine Gel, BP
 Macrogol Oral Liquid, Compound, NPF
 Macrogol Oral Powder, Compound, NPF
 Macrogol Oral Powder, Compound, Half-strength, NPF
 Magnesium Hydroxide Mixture, BP
 Magnesium Sulfate Paste, BP
 Malathion aqueous lotions containing at least 0.5%
 Mebendazole Oral Suspension, NPF
 Mebendazole Tablets, NPF
 Methylcellulose Tablets, BP
 Miconazole Cream 2%, BP
 Miconazole Oromucosal Gel, BP
 Mouthwash Solution-tablets, NPF
 Nicotine Inhalation Cartridge for Oromucosal Use, NPF
 Nicotine Lozenge, NPF
 Nicotine Medicated Chewing Gum, NPF
 Nicotine Nasal Spray, NPF
 Nicotine Oral Spray, NPF
 Nicotine Sublingual Tablets, NPF
 Nicotine Transdermal Patches, NPF
 Nystatin Oral Suspension, BP
 Olive Oil Ear Drops, BP
 Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)
 Paracetamol Tablets, Soluble, BP (includes 120-mg and 500-mg tablets; max. 96 tablets; max. pack size 32 tablets)
 Permethrin Cream, NPF
 Phosphates Enema, BP
 Povidone–Iodine Solution, BP
 Senna Oral Solution, NPF
 Senna Tablets, BP
 Senna and Ispaghula Granules, NPF
 Sodium Chloride Solution, Sterile, BP
 Sodium Citrate Compound Enema, NPF
 Sodium Picosulfate Capsules, NPF
 Sodium Picosulfate Elixir, NPF
 Spermicidal contraceptives as listed below:
 Gygel® Contraceptive Jelly
 Sterculia Granules, NPF
 Sterculia and Frangula Granules, NPF
 Titanium Ointment, BP
 Water for Injections, BP
 Zinc and Castor Oil Ointment, BP
 Zinc Oxide and Dimeticone Spray, NPF
 Zinc Oxide Impregnated Medicated Bandage, NPF
 Zinc Oxide Impregnated Medicated Stocking, NPF
 Zinc Paste Bandage, BP 1993
 Zinc Paste and Ichthammol Bandage, BP 1993

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:
 National Health Service Drug Tariff for England and Wales:
www.ppa.org.uk/ppa/edt_intro.htm
 Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm
 Scottish Drug Tariff: www.isds.scotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

Arachis Oil Enema

arachis oil 100%

Catheter Maintenance Solution, Sodium Chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

Catheter Maintenance Solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

Catheter Maintenance Solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solution R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

Co-danthramer Capsules [PoM]

co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

Co-danthramer Capsules, Strong [PoM]

co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

Co-danthramer Oral Suspension [PoM]

(proprietary product: *Codalax*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

Co-danthramer Oral Suspension, Strong [PoM]

(proprietary product: *Codalax Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

Co-danthrusate Oral Suspension [PoM]

(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Stiople Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

Dimeticone Lotion

(proprietary product: *Hedrin*), dimeticone 4%

Docusate Enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

Liquid and White Soft Paraffin Ointment

liquid paraffin 50%, white soft paraffin 50%

Macrogol Oral Liquid, Compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

Macrogol Oral Powder, Compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K⁺ 5.4 mmol/litre)

Macrogol Oral Powder, Compound, Half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

Mebendazole Oral Suspension [PoM]

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

Mebendazole Tablets [PoM]

(proprietary products: *Oxex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

Mouthwash Solution-tablets

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

Nicotine Inhalation Cartridge for Oromucosal Use

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

Nicotine Lozenge

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

Nicotine Medicated Chewing Gum

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

Nicotine Nasal Spray

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

Nicotine Oral Spray

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

Nicotine Sublingual Tablets

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

Nicotine Transdermal Patches

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

Permethrin Cream

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

Senna Oral Solution

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

Senna and Ispaghula Granules

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

Sodium Citrate Compound Enema

(proprietary products: *Micolette Micro-enema*; *Micralax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium Picosulfate Capsules

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

Sodium Picosulfate Elixir

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

Sterculia Granules

(proprietary product: *Normacol Granules*), sterculia 62%

Sterculia and Frangula Granules

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

Zinc Oxide and Dimeticone Spray

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

Zinc Oxide Impregnated Medicated Bandage

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

Zinc Oxide Impregnated Medicated Stocking

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/uploads/system/uploads/attachment_data/file/213885/dh_116360.pdf).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 449, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary p. 1564 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 449, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 456, transdermal fentanyl p. 451 and oral diazepam p. 340, dihydrocodeine tartrate p. 450, lorazepam p. 335, oxycodone hydrochloride p. 459 or temazepam p. 481.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 340, dihydrocodeine tartrate p. 450, lorazepam p. 335 and temazepam p. 481.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Index of proprietary manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdslike.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:
www.mhra.gov.uk/yellowcard**REPORT OF SUSPECTED ADVERSE DRUG REACTIONS**

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or www.mhra.gov.uk/yellowcard for guidance. Do not be put off reporting because some details are not known.

PATIENT DETAILS Patient Initials: _____ Sex: M / F Is the patient pregnant? Y / N Ethnicity: _____
Age (at time of reaction): _____ Weight (kg): _____ Identification number (e.g. Practice or Hospital Ref): _____

SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

SUSPECTED REACTION(S) Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):**Outcome**

Recovered ☐
Recovering ☐
Continuing ☐
Other ☐

Date reaction(s) started: _____ Date reaction(s) stopped: _____

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

<input type="checkbox"/> Patient died due to reaction	<input type="checkbox"/> Involved or prolonged inpatient hospitalisation
<input type="checkbox"/> Life threatening	<input type="checkbox"/> Involved persistent or significant disability or incapacity
<input type="checkbox"/> Congenital abnormality	Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

☐ Mild ☐ Unpleasant, but did not affect everyday activities ☐ Bad enough to affect everyday activities

It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

Additional relevant information e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

Adult Advanced Life Support Algorithm

Resuscitation Council (UK)

Adult Advanced Life Support

During CPR

- Ensure high quality chest compressions
- Minimise interruptions to compressions
- Give oxygen
- Use waveform capnography
- Continuous compressions when advanced airway in place
- Vascular access (intravenous or intraosseous)
- Give adrenaline every 3-5 min
- Give amiodarone after 3 shocks

Treat Reversible Causes

- Hypoxia
- Hypovolaemia
- Hypo-/hyperkalaemia/metabolic
- Hypothermia
- Thrombosis - coronary or pulmonary
- Tension pneumothorax
- Tamponade - cardiac
- Toxins

Consider

- Ultrasound imaging
- Mechanical chest compressions to facilitate transfer/treatment
- Coronary angiography and percutaneous coronary intervention
- Extracorporeal CPR

Medical emergencies in the community

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

▶ **ANGINA: UNSTABLE**

Aspirin dispersible tablets p. 121 (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

▶ **PLUS**

▶ **EITHER** **Glyceryl trinitrate aerosol spray p. 217**
(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

▶ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

▶ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

Aspirin dispersible tablets (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

Glyceryl trinitrate aerosol spray (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

Metoclopramide hydrochloride injection p. 426 (5 mg/mL)

BY INTRAVENOUS INJECTION

- ▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg
- ▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg
- ▶ Adult over 19 years: 10 mg

Diamorphine hydrochloride injection p. 449 (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

- ▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary
- ▶ Elderly or frail patients: reduce dose by half

▶ **OR** **Morphine sulfate injection p. 456** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

- ▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary
- ▶ Elderly or frail patients: reduce dose by half

Oxygen, if appropriate

Airways disease, obstructive

▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

▶ **EITHER** **Salbutamol aerosol inhaler p. 252**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

- ▶ Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR** **Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
- ▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary
- ▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary
- ▶ Adult: 5 mg every 20–30 minutes or as necessary

▶ **OR** **Terbutaline sulfate nebuliser solution p. 254** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary
- ▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary
- ▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary
- ▶ Adult: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER** **Prednisolone tablets p. 664 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

- ▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
- ▶ Child 12–17 years: 40–50 mg once daily for at least 5 days
- ▶ Adult: 40–50 mg once daily for at least 5 days

▶ **OR** **Hydrocortisone p. 662 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

- ▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
- ▶ Child 1 year and below: 25 mg
- ▶ Child 2–4 years: 50 mg
- ▶ Child 5–17 years: 100 mg
- ▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 246
(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

▶ **CROUP**

Dexamethasone oral solution p. 660 (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 221 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

Chlorphenamine maleate injection p. 283

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone (preferably as sodium succinate)

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial infection

▶ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 537 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ **OR if history of allergy to penicillin**

Cefotaxime injection p. 519 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 558 (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 504.

Hypoglycaemia

▶ **DIABETIC HYPOGLYCAEMIA**

Glucose or sucrose

BY MOUTH

- ▶ Adult and child over 2 years: approx. 10–20 g (110–220 mL *Lucozade® Energy Original* or 100–200 mL *Coca-Cola®*—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

Glucagon injection p. 707 (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

Glucose intravenous infusion p. 1009 (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)

Glucose intravenous infusion (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 50 mL

Seizures

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 340** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 336**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1534

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

ACBS	Advisory Committee on Borderline Substances, see Borderline Substances
ACE	Angiotensin-converting enzyme
ADHD	Attention deficit hyperactivity disorder
AIDS	Acquired immunodeficiency syndrome
approx.	approximately
AV	atrioventricular
AWMSG	All Wales Medicines Strategy Group
BAN	British Approved Name
BMI	body mass index
BP	British Pharmacopoeia 2013, unless otherwise stated
BPC	British Pharmaceutical Codex 1973 and Supplement 1976, unless otherwise stated
BRCA	breast cancer gene
CAPD	Continuous ambulatory peritoneal dialysis
CD1	preparation in Schedule 1 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD2	preparation in Schedule 2 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD3	preparation in Schedule 3 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD4-1	preparation in Schedule 4 (Part I) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD4-2	preparation in Schedule 4 (Part II) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD5	preparation in Schedule 5 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CHM	Commission on Human Medicines
CHMP	Committee for Medicinal Products for Human Use
CNS	central nervous system
CMS	Committee on Safety of Medicines (now subsumed under Commission on Human Medicines)
d. c.	direct current
DMARD	Disease-modifying antirheumatic drug
DPF	Dental Practitioners' Formulary
DT	Drug Tariff price
e/c	enteric-coated (termed gastro-resistant in BP)
ECG	electrocardiogram
EEG	electro-encephalogram
eGFR	estimated glomerular filtration rate, see Prescribing in renal impairment p. 19
f/c	film-coated
G6PD	glucose 6-phosphate dehydrogenase
GSL	general sales list
HDL	high-density lipoprotein cholesterol
cholesterol	
HIV	Human immunodeficiency virus
HRT	Hormone replacement therapy
i/m	intramuscular
i/v	intravenous
INR	international normalised ratio
LDL	low-density lipoprotein cholesterol
cholesterol	
MAOI	Monoamine-oxidase inhibitor
max.	maximum
MHRA	Medicines and Healthcare products Regulatory Agency
m/r	modified-release
NCL	no cautionary labels (prescription endorsement made by prescriber when recommended cautionary labels are not required)
NHS	National Health Service
NICE	National Institute for Health and Care Excellence
NPF	Nurse Prescribers' Formulary
NSAID	Non-steroidal anti-inflammatory drug
NSTEMI	non-ST-segment elevation myocardial infarction
P	pharmacy only medicine
PARP	poly (ADP-ribose) polymerase
PGD	patient group direction
PHE	Public Health England (formerly Health Protection Agency (HPA))

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t.i.d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E211	Sodium Benzoate
E104	Quinoline Yellow
E223	Sodium Metabisulfite
E110	Sunset Yellow FCF
E320	Butylated Hydroxyanisole
E123	Amaranth
E321	Butylated Hydroxytoluene
E124	Ponceau 4R
E322	Lecithins
E127	Erythrosine BS
E420	Sorbitol
E132	Indigo Carmine
E421	Mannitol
E142	Green S
E422	Glycerol
E171	Titanium Dioxide
E901	Beeswax (white and yellow)
E172	Iron oxides, iron hydroxides
E1520	Propylene Glycol
E200	Sorbic Acid
