- Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone) are predicted to decrease the efficacy of monoclonal antibodies (atezolizumab, jpilimumab, nivolumab, pembrolizumab). Use with caution or avoid. Severel Theoretical
- ➤ Tocilizumab is predicted to decrease the exposure to corticosteroids (dexamethasone, methylprednisolone). Monitor and adjust dose. Moderate Theoretical
- Bimekizumab might affect the exposure to coumarins (warfarin). [Moderate] Theoretical
- ► Blinatumomab is predicted to transiently increase the exposure to coumarins (warfarin). Monitor and adjust dose.

 Moderate Theoretical
- ► Sarilumab potentially affects the exposure to coumarins (warfarin). Monitor and adjust dose. Severe Theoretical
- ► Tocilizumab is predicted to decrease the exposure to coumarins (warfarin). Monitor and adjust dose. [Moderate] Theoretical
- Drugs with anticoagulant effects (see TABLE 3 p. 1490) cause bleeding, as can monoclonal antibodies (bevacizumab, trastuzumab emtansine); concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- Drugs with antiplatelet effects (see TABLE 4 p. 1490) cause bleeding, as can monoclonal antibodies (bevacizumab, trastuzumab emtansine); concurrent use might increase the risk of developing this effect. Severe Theoretical
- Sarilumab might cause severe infection and neutropenia when given with etanercept. [Severe] Theoretical
- Filgotinib is predicted to increase the risk of immunosuppression when given with monoclonal antibodies (adalimumab, certolizumab pegol, golimumab, infliximab, rituximab, sarilumab, secukinumab, tocilizumab). Avoid. Severe Theoretical
- Alemtuzumab is predicted to increase the risk of generalised infection (possibly life-threatening) when given with fingolimod. Avoid. [Severe] Theoretical
- ► HIV-protease inhibitors (lopinavir, ritonavir) are predicted to increase the risk of neutropenia when given with brentuximab vedotin. Monitor and adjust dose. Severe Study
- ► HIV-protease inhibitors are predicted to increase the exposure to polatuzumab vedotin. Moderate Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to trastuzumab emtansine. Avoid. Severe Theoretical
- Idelalisib is predicted to increase the exposure to polatuzumab vedotin. [Moderate] Theoretical
- ► Idelalisib is predicted to increase the exposure to trastuzumab emtansine. Avoid. [Severe] Theoretical
- ► Immunoglobulins (normal immunoglobulin) are predicted to alter the effects of dinutuximab. Avoid. Severe Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with monoclonal antibodies. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ► Macrolides (clarithromycin) increase the risk of neutropenia when given with brentuximab vedotin. Monitor and adjust dose. Severel Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to polatuzumab vedotin. Moderate Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to trastuzumab emtansine. Avoid. [Severe] Theoretical
- Mitotane is predicted to decrease the exposure to polatuzumab vedotin. [Moderate] Theoretical
 Monoclonal antibodies (sarilumab) might cause severe infection
- and neutropenia when given with monoclonal antibodies (adalimumab, certolizumab pegol, infliximab). Severel Theoretical
- Monoclonal antibodies (sarilumab) might cause the risk of severe infection and neutropenia when given with monoclonal antibodies (golimumab). [Severe] Theoretical
- Alemtuzumab is predicted to increase the risk of generalised infection (possibly life-threatening) when given with ozanimod. Avoid. Severe Theoretical

- Alemtuzumab is predicted to increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. [Severe] Theoretical
- ► Rifamycins (rifampicin) decrease the effects of brentuximab vedotin. Severe Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to polatuzumab vedotin. [Moderate] Theoretical
- Alemtuzumab is predicted to increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid. Severe Theoretical
- ► Sarilumab potentially affects the exposure to sirolimus. Monitor and adjust dose. Moderate Theoretical
- ► Sarilumab is predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
- Tocilizumab is predicted to decrease the exposure to statins (atorvastatin, simvastatin). Monitor and adjust dose. [Moderate] Study
- Sarilumab potentially affects the exposure to tacrolimus.
 Monitor and adjust dose. Moderate Theoretical
- Blinatumomab is predicted to transiently increase the exposure to theophylline. Monitor and adjust dose. Moderate Theoretical
- Sarilumab potentially affects the exposure to theophylline.
 Monitor and adjust dose. Moderate Theoretical
- ► Tocilizumab is predicted to decrease the exposure to theophylline. Monitor and adjust dose. [Voderate] Theoretical
- ► Ipilimumab might increase the risk of hepatotoxicity when given with vemurafenib. Avoid. Severe Study

Montelukast

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to montelukast. [Mild] Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to montelukast. [Mild] Study
- ► Clopidogrel is predicted to moderately increase the exposure to montelukast. Moderate Study
- Fibrates (gemfibrozil) are predicted to moderately increase the exposure to montelukast. Moderate Study
- Iron chelators (deferasirox) are predicted to increase the exposure to montelukast. Moderate Theoretical
- ► Leflunomide is predicted to increase the exposure to montelukast. [Moderate] Theoretical
- Mifepristone is predicted to increase the exposure to montelukast. [Moderate] Theoretical
- ► Mitotane is predicted to decrease the exposure to montelukast.

 Mild Study
- Opicapone is predicted to increase the exposure to montelukast. Avoid. Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to montelukast. [Mild] Study
- Selpercatinib is predicted to increase the exposure to montelukast. Avoid. [Moderate] Study
- Teriflunomide is predicted to increase the exposure to montelukast. [Moderate] Theoretical

Morphine → see opioids

Moxifloxacin → see quinolones

Moxisylyte → see TABLE 8 p. 1491 (hypotension)

Moxonidine → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

► Tricyclic antidepressants are predicted to decrease the effects of moxonidine. Avoid. Moderate Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492

Mycophenolate

- Mycophenolate is predicted to increase the risk of haematological toxicity when given with aciclovir. [Moderate] Theoretical
- Oral antacids decrease the exposure to oral mycophenolate.
 Moderate Study
- Antifungals, azoles (isavuconazole) increase the exposure to mycophenolate. Moderate Study
- Mycophenolate is predicted to increase the risk of haematological toxicity when given with ganciclovir. [Moderate] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

- mycophenolate. UKHSA advises avoid (refer to Green Book). |Severe| Theoretical
- ► Rifamycins (rifampicin) decrease the concentration of mycophenolate. Monitor and adjust dose. Severe Study
- Mycophenolate is predicted to increase the risk of haematological toxicity when given with valaciclovir. [Moderate] Theoretical
- ► Mycophenolate is predicted to increase the risk of haematological toxicity when given with valganciclovir.

 Moderate Theoretical

Nabilone → see TABLE 11 p. 1492 (CNS depressant effects)

► Nabilone is predicted to increase the risk of cardiovascular adverse effects when given with amfetamines. Severe Theoretical

Nabumetone → see NSAIDs

Nadolol → see beta blockers, non-selective

Naldemedine

- Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to naldemedine. Avoid. [Severe] Study
- ► Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to naldemedine. Moderate Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to naldemedine. Avoid. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to naldemedine.
 Moderate Study
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to naldemedine. Avoid or monitor. Moderatel Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to naldemedine. [Moderate] Study
- Ciclosporin is predicted to increase the exposure to naldemedine. [Moderate] Study
- Cobicistat is predicted to increase the exposure to naldemedine. Avoid or monitor. Moderate Study
- ► Crizotinib is predicted to increase the exposure to
- naldemedine. [Moderate] Study
 ► Grapefruit juice is predicted to increase the exposure to
- naldemedine. Avoid or monitor. [Moderate] Theoretical

 HIV-protease inhibitors are predicted to increase the exposure
- to naldemedine. Avoid or monitor. [Moderate] Study

 Idelalisib is predicted to increase the exposure to naldemedine.

 Avoid or monitor. [Moderate] Study
- Imatinib is predicted to increase the exposure to naldemedine.
 Moderate | Study
- ► Letermovir is predicted to increase the exposure to naldemedine. Moderate Study
- Macrolides (azithromycin, erythromycin) are predicted to increase the exposure to naldemedine. Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to naldemedine. Avoid or monitor. [Moderate] Study
- ► Mitotane is predicted to markedly decrease the exposure to naldemedine. Avoid. (Severe) Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to naldemedine. Moderate Study
- Nilotinib is predicted to increase the exposure to naldemedine.
 Moderate Study
- Ranolazine is predicted to increase the exposure to naldemedine. [Moderate] Study
- Rifamycins (rifampicin) are predicted to markedly decrease the exposure to naldemedine. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to naldemedine. Avoid. Severe Study
- Vemurafenib is predicted to increase the exposure to naldemedine. [Moderate] Study

Nalmefene

► Nalmefene is predicted to decrease the efficacy of opioids. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical

Naloxegol

- Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to naloxegol. Avoid. Moderate Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate]
 Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to naloxegol.
 Avoid. [Severe] Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ► Cenobamate is predicted to decrease the exposure to naloxegol. Adjust dose. Moderate Theoretical
- Cobicistat is predicted to markedly increase the exposure to naloxegol. Avoid. Severe Study
- Crizotinib is predicted to increase the exposure to naloxegol.
 Adjust naloxegol dose and monitor adverse effects, p. 67.
 Moderate Study
- ► Grapefruit juice is predicted to increase the exposure to naloxegol. Avoid. [Moderate] Theoretical
- HIV-protease inhibitors are predicted to markedly increase the exposure to naloxegol. Avoid. Severe Study
- Idelalisib is predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ► Imatinib is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. Moderate Study
- ► Letermovir is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. Moderatel Study
- ► Macrolides (clarithromycin) are predicted to markedly increase the exposure to naloxegol. Avoid. Severe Study
- ► Macrolides (erythromycin) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. Moderate Study
- Mitotane is predicted to markedly decrease the exposure to naloxegol. Avoid. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- Nilotinib is predicted to increase the exposure to naloxegol.
 Adjust naloxegol dose and monitor adverse effects, p. 67.
 Moderate Study
- Rifamycins (rifampicin) are predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- St John's wort is predicted to decrease the exposure to naloxegol. Avoid. Moderate Theoretical
- ► Tucatinib is predicted to increase the exposure to naloxegol. Avoid or adjust dose. Moderate Theoretical

Naltrexone

➤ Naltrexone is predicted to decrease the efficacy of opioids. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical

Nandrolone

- ► Nandrolone is predicted to increase the anticoagulant effect of coumarins. Monitor and adjust dose. Severe Theoretical
- Nandrolone is predicted to increase the anticoagulant effect of phenindione. Monitor and adjust dose. Severe Theoretical

Naproxen → see NSAIDs Naratriptan → see triptans

Natalizumab → see monoclonal antibodies **Nebivolol** → see beta blockers, selective

Nefopam → see TABLE 10 p. 1492 (antimuscarinics)

▶ Nefopam is predicted to increase the risk of serious elevations in blood pressure when given with MAOIs, irreversible. Avoid. |Severe| Theoretical

Nelarabine → see TABLE 15 p. 1493 (myelosuppression)
Neomycin → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494

(nephrotoxicity), TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **neomycin**, the possibility of interactions should be borne in mind.

- ► Neomycin decreases the absorption of digoxin. Moderate Study
- Neomycin moderately decreases the exposure to sorafenib.
 Moderate
 Study

Neostigmine → see TABLE 6 p. 1491 (bradycardia)

 Aminoglycosides are predicted to decrease the effects of neostigmine. [Moderate] Theoretical

Nepafenac → see NSAIDs

Neratinib → see TABLE 1 p. 1490 (hepatotoxicity)

FOOD AND LIFESTYLE Avoid pomegranate, and pomegranate juice, as it might increase the concentration of neratinib.

- Neratinib is predicted to increase the exposure to afatinib.
 Moderatel Study
- ► Neratinib is predicted to increase the exposure to aliskiren.

 [Moderate] Study
- ► Oral antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. Mild
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to neratinib. Avoid. Severe Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to neratinib. Avoid. (Severe) Study → Also see TABLE 1 p. 1490
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe]
 Study -> Also see TABLE 1 p. 1490
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. Severe Study -> Also see TABLE 1 p. 1490
- Neratinib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). [Moderate] Study
- ▶ Neratinib is predicted to increase the exposure to berotralstat.
 |Severe| Study
- Neratinib is predicted to increase the exposure to bictegravir.
 Use with caution or avoid. Moderate Theoretical
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- Oral calcium salts (calcium carbonate) -containing antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- Ciclosporin is predicted to increase the exposure to neratinib.
 Avoid or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Theoretical
- ➤ Cobicistat is predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. [Severe] Study
- Neratinib is predicted to increase the exposure to colchicine.
 Moderate Study
- ➤ Neratinib might affect the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions.

 [Severe] Theoretical
- Crizotinib is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069.
 Severej Study

A1

- ► Neratinib slightly increases the exposure to digoxin. Moderate Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to neratinib. [Severe] Study
- Neratinib is predicted to increase the exposure to erlotinib.
 Moderate Theoretical
- Neratinib is predicted to increase the exposure to everolimus.
 Moderate Study
- Neratinib is predicted to increase the exposure to factor XA inhibitors (apixaban). Moderate Theoretical
- Neratinib is predicted to increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Study
- Neratinib is predicted to increase the exposure to fidaxomicin.
 Avoid. Moderate Study
- ► Neratinib is predicted to increase the exposure to gilteritinib.
 [Moderate] Theoretical
- ► Grapefruit juice is predicted to increase the exposure to neratinib. Avoid. Severe Theoretical
- H₂ receptor antagonists are predicted to decrease the exposure to neratinib. Avoid. Severe Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. Severe Study
- ► Idelalisib is predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. [Severe] Study
- ► Imatinib is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069.
 [Severe] Study
- Letermovir is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069.
 Severel Study
- Neratinib is predicted to increase the exposure to loperamide.
 Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to neratinib. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. Severe Study
- Macrolides (erythromycin) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- Mitotane is predicted to decrease the exposure to neratinib.
 Avoid. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. Severe
 Study
- Nilotinib is predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069.
 [Severe] Study
- Neratinib is predicted to increase the exposure to nintedanib.
 Moderate
 Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of neratinib. Avoid. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to neratinib. Severe Study
- Proton pump inhibitors are predicted to decrease the exposure to neratinib. Avoid. Severe Study
- Neratinib is predicted to increase the exposure to relugolix.
 Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- Neratinib is predicted to increase the exposure to sirolimus.
 Moderate Study
- ➤ Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- St John's wort is predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical

- ► Neratinib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe
- ► Neratinib is predicted to increase the exposure to taxanes (docetaxel) (oral). [Unknown] Theoretical
- Neratinib is predicted to increase the exposure to taxanes (paclitaxel) (oral). <u>Unknown</u> Study
 Neratinib is predicted to increase the exposure to thrombin
- inhibitors (dabigatran). Moderate Study
- Neratinib might increase the exposure to tigecycline. Mild Anecdotal → Also see TABLE 1 p. 1490
- ► Neratinib is predicted to increase the exposure to topotecan. Severe Study
- Neratinib is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ► Neratinib is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical
- ► Neratinib might increase the exposure to vinca alkaloids.

 Severel Theoretical → Also see TABLE 1 p. 1490

Netupitant → see neurokinin-1 receptor antagonists

Neurokinin-1 receptor antagonists

aprepitant · fosaprepitant · netupitant

- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to abemaciclib. (Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to acalabrutinib. Avoid or monitor. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to aldosterone antagonists (eplerenone). Adjust eplerenone dose, p. 210. Severe Study
- Netupitant very slightly increases the exposure to alkylating agents (cyclophosphamide). [Moderate] Study
- Netupitant is predicted to increase the exposure to alkylating agents (ifosfamide). [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to increase the exposure to alkylating agents (ifosfamide). Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to alpha blockers (tamsulosin). [Moderate] Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to aprepitant. Avoid.
 Moderate Study
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to netupitant. Avoid. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of anti-androgens (cyproterone) with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- Aprepitant increases the exposure to antiarrhythmics (dronedarone). Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antiarrhythmics (propafenone). Monitor and adjust dose. [Moderate] Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to fosaprepitant. Avoid. Moderate! Theoretical
 Antiepileptics (carbamazepine, fosphenytoin, phenobarbital,
- phenytoin, primidone) are predicted to decrease the exposure to netupitant. Avoid. [Severe] Study
- Antifungals, azoles (fluconazole) are predicted to increase the exposure to aprepitant. [Moderate] Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to aprepitant.

 Moderate Study

Neurokinin-1 receptor antagonists (continued)

- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to fosaprepitant. Moderate Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to netupitant. [Moderate]
 Study
- Antifungals, azoles (posaconazole) are predicted to increase the exposure to neurokinin-1 receptor antagonists (aprepitant, fosaprepitant). [Moderate] Study
- Aprepitant is predicted to increase the exposure to antifungals, azoles (isavuconazole). Moderate Theoretical
- Netupitant is predicted to decrease the exposure to antifungals, azoles (isavuconazole). Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antihistamines, nonsedating (mizolastine). [Severe] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antihistamines, nonsedating (rupatadine). Avoid. Moderate) Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of antimalarials (piperaquine). [Severe] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antipsychotics, second generation (cariprazine). Avoid. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antipsychotics, second generation (lurasidone). Adjust lurasidone dose. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to antipsychotics, second generation (quetiapine). Avoid. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to axitinib. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mild] Theoretical
- Fosaprepitant is predicted to increase the exposure to benzodiazepines (alprazolam). Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to benzodiazepines (alprazolam). [Severe] Study
- Fosaprepitant slightly increases the exposure to benzodiazepines (midazolam). [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to benzodiazepines (midazolam). Monitor adverse effects and adjust dose. Severel Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to beta₂ agonists (salmeterol). [Moderate] Study
- ► Fosaprepitant is predicted to increase the exposure to bosutinib. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to bosutinib. Avoid or adjust dose. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to brigatinib. Moderate
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to buspirone. Use with caution and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to cabozantinib. [Moderate]
 Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to aprepitant and aprepitant is predicted to increase the exposure to calcium channel blockers (diltiazem, verapamil). [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine,

- nifedipine, nimodipine). Monitor and adjust dose. Moderate
 Study
- ► Fosaprepitant is predicted to increase the exposure to ceritinib. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ceritinib. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of ciclosporin. [Severe] Study
- Cobicistat is predicted to markedly increase the exposure to aprepitant. Moderate Study
- Cobicistat is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
- Cobicistat is predicted to increase the exposure to netupitant.
 Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to cobimetinib. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to colchicine. Adjust colchicine dose with moderate CYP3A4 inhibitors, p. 1212.
 [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to oral corticosteroids (budesonide). [Moderate] Study
- Aprepitant moderately increases the exposure to corticosteroids (dexamethasone). Monitor and adjust dose. [Moderate] Study
- ► Netupitant moderately increases the exposure to
- corticosteroids (dexamethasone). Adjust dose. Moderate Study
- ➤ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to corticosteroids (fluticasone). [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to corticosteroids (methylprednisolone). Monitor and adjust dose. [Moderate] Study
- Aprepitant decreases the anticoagulant effect of coumarins.
 Moderate Study
- Fosaprepitant is predicted to decrease the anticoagulant effect of coumarins. Moderate Theoretical
- Netupitant is predicted to increase the exposure to crizotinib.
 Moderate Study
- Dabrafenib is predicted to decrease the exposure to netupitant.
 Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to dabrafenib. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to darifenacin. Moderate
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to dasatinib. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of desogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. Severel Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to slightly increase the exposure to dienogest.
 Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (saxagliptin). [Mild] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to domperidone. Avoid. [Severe] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to dopamine receptor agonists (bromocriptine). [Severe] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of dopamine receptor agonists (cabergoline). Moderate Anecdotal

- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to moderately increase the exposure to dutasteride.
 Mildl Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to elexacaftor. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYPSA4 inhibitors. [Severe] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to eliglustat. Avoid or adjust dose—consult product literature. [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to moderately increase the exposure to encorafenib.
 Moderatel Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to aprepitant. [Moderate] Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to neurokinin-1 receptor antagonists (fosaprepitant, netupitant). [Moderate] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to entrectinib. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056.
 Severel Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the risk of ergotism when given with ergometrine. [Severe] Theoretical
- ➤ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the risk of ergotism when given with ergotamine. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to erlotinib. [Moderate] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of estradiol. Moderate

 Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of etonogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Netupitant slightly increases the exposure to etoposide.
 Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of everolimus. Avoid or adjust dose. Moderate Study
- ➤ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to fedratinib. Monitor and adjust dose. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to gefitinib. Moderate Study
- ► Fosaprepitant is predicted to increase the concentration of guanfacine. [Moderate] Theoretical
- ➤ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [Moderate] Theoretical
- HIV-protease inhibitors are predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- HIV-protease inhibitors are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to netupitant. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the effects of hormone replacement therapy. [Moderate] Anecdotal
- Fosaprepitant is predicted to slightly increase the exposure to ibrutinib. Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors, p. 1062.
 [Severe] Study
- Idelalisib is predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- Idelalisib is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical

- ► Idelalisib is predicted to increase the exposure to netupitant.

 [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to imatinib. Moderate Theoretical
- Netupitant is predicted to increase the exposure to irinotecan.
 Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to increase the exposure to intravenous irinotecan.
 [Severe] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ivabradine. Adjust ivabradine dose, p. 231. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ivacaftor. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to lapatinib. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 859. Severe

 Theoretical
- ► Fosaprepitant is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Mild] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to lomitapide. Avoid.
 [Moderate] Theoretical
- Macrolides (clarithromycin) are predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- Macrolides (clarithromycin) are predicted to increase the exposure to fosaprepitant. Moderate Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to netupitant. [Moderate] Study
- Macrolides (erythromycin) are predicted to increase the exposure to aprepitant. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to maraviroc. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to midostaurin. [Moderate]
 Theoretical
- Mitotane is predicted to markedly decrease the exposure to aprepitant. Avoid. Moderate Study
- Mitotane is predicted to decrease the exposure to fosaprepitant. Avoid. Moderate Theoretical
- Mitotane is predicted to decrease the exposure to netupitant.
 Avoid. Severe Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to naldemedine. [Voderate]
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate]
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to neratinib. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. Severe
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to nilotinib. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to aprepitant. [Moderate] Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to neurokinin-1 receptor antagonists (fosaprepitant, netupitant). [Moderate] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severel
 Aperdotal
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to olaparib. Avoid

- Neurokinin-1 receptor antagonists (continued) moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Moderate Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to opioids (methadone). Moderate Theoretical
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to pazopanib. [Moderate]
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to pemigatinib. Severe Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil). Adjust avanafil dose, p. 878. Moderate Theoretical
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (sildenafil). Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (tadalafil). Severe Theoretical
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (vardenafil). Adjust dose. Severe Theoretical
- ▶ Neurokinin-1 receptor antagonists are predicted to increase the exposure to pimozide. Avoid. Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ponatinib. [Moderate] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ranolazine. Severe Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to regorafenib. Moderate
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ribociclib. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to markedly decrease the exposure to aprepitant. Avoid. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to fosaprepitant. Avoid. Moderate Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to netupitant. Avoid. Severe Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ruxolitinib. Moderate
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to selpercatinib. [Moderate]
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to selumetinib. Avoid or adjust dose-consult product literature. Severe Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken-consult product literature. Severe Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) increase the concentration of sirolimus. Monitor and adjust dose. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to SSRIs (dapoxetine). Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ▶ St John's wort is predicted to decrease the exposure to netupitant. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to neurokinin-1 receptor antagonists (aprepitant, fosaprepitant). Avoid. Moderate Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to statins (atorvastatin, simvastatin). Monitor and adjust dose. Severe Theoretical

- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to sunitinib. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of tacrolimus. Severe
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to taxanes (cabazitaxel). Moderate Theoretical
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to taxanes (docetaxel). Severe Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to taxanes (paclitaxel). Moderate Anecdotal
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of temsirolimus. Use with caution or avoid. Moderate Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to trazodone. Moderate
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to triptans (eletriptan). Moderate Study
- ▶ Netupitant is predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Moderate] Study
- ► Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to vemurafenib. Severe
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to venetoclax. Avoid or adjust dose-consult product literature. Severe Study
- ▶ Neurokinin-1 receptor antagonists are predicted to increase the exposure to vinca alkaloids. Severe Theoretical
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 20 p. 1494 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium • vecuronium

- ► Anticholinesterases, centrally acting are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. Moderate Theoretical
- ► Antiepileptics (carbamazepine) are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium). Monitor and adjust dose. Moderate Study
- ► Antiepileptics (fosphenytoin, phenytoin) decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium). Moderate Study
- ► Clindamycin increases the effects of neuromuscular blocking drugs, non-depolarising. Severe Anecdotal
- ► Corticosteroids are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. Severe
- ▶ Pancuronium is predicted to increase the risk of cardiovascular adverse effects when given with digoxin. Severe Anecdotal

- ► Irinotecan is predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. Moderate
- ► Intravenous magnesium increases the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ► Metoclopramide is predicted to increase the effects of neuromuscular blocking drugs, non-depolarising. Moderate Theoretical
- Penicillins (piperacillin) increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ► SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with mivacurium.

 Unknown Theoretical

Nevirapine → see NNRTIs

Nicardipine → see calcium channel blockers

Nicorandil → see TABLE 8 p. 1491 (hypotension)

- Aspirin is predicted to increase the risk of gastrointestinal perforation when given with nicorandil. Severe Theoretical
- Corticosteroids increase the risk of gastrointestinal perforation when given with nicorandil. Severe Anecdotal
- Nicorandil is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. (Severe) Theoretical
- Nicorandil is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. | Severe | Theoretical → Also see TABLE 8 p. 1491

Nicotinic acid → see TABLE 3 p. 1490 (anticoagulant effects)

➤ Nicotinic acid might increase the risk of rhabdomyolysis when given with statins. Use with caution or avoid. Severe Theoretical Nifedipine → see calcium channel blockers

Nilotinib → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)

- Nilotinib is predicted to increase the exposure to abemaciclib.
 [Moderate] Study
- ► Nilotinib is predicted to increase the exposure to acalabrutinib.

 Avoid or monitor. Severe Study
- ➤ Nilotinib is predicted to increase the exposure to aldosterone antagonists (eplerenone). Adjust eplerenone dose, p. 210. Severe
- Nilotinib is predicted to increase the exposure to alpha blockers (tamsulosin). [Moderate] Theoretical
- ➤ Oral antacids might affect the absorption of oral nilotinib. Separate administration by at least 2 hours. Moderate Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to moderately decrease the exposure to nilotinib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to antiarrhythmics (propafenone). Monitor and adjust dose.
 Moderate | Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to nilotinib. Avoid. [Severe] Study
- ➤ Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to nilotinib. [Moderate] Study → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to nilotinib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to antihistamines, non-sedating (mizolastine). Severe Theoretical
- ► Nilotinib is predicted to increase the exposure to
- antihistamines, non-sedating (rupatadine). Avoid. Moderate Study
 ► Nilotinib is predicted to increase the concentration of
- antimalarials (piperaquine). Severe Theoretical

 ➤ Nilotinib is predicted to increase the exposure to antipsychotics, second generation (cariprazine). Avoid. [Severe] Study
- Nilotinib is predicted to increase the exposure to antipsychotics, second generation (lurasidone). Adjust lurasidone dose.
 Moderatel Study
- Nilotinib is predicted to increase the exposure to antipsychotics, second generation (quetiapine). Avoid. [Moderate] Study
- Nilotinib is predicted to increase the exposure to avapritinib.
 Avoid or adjust avapritinib dose, p. 1045. Moderate Study
- Nilotinib is predicted to increase the exposure to axitinib.
 Moderate Study → Also see TABLE 15 p. 1493

- Nilotinib is predicted to increase the exposure to bedaquiline. Avoid prolonged use. Mild Theoretical → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to benzodiazepines (alprazolam). Severel Study
- ➤ Nilotinib is predicted to increase the exposure to benzodiazepines (midazolam). Monitor adverse effects and adjust dose. |Severe| Study
- Nilotinib is predicted to increase the exposure to bosutinib. Avoid or adjust dose. Severe Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ► Nilotinib is predicted to increase the exposure to brigatinib.

 [Moderate] Study
- ► Nilotinib is predicted to increase the exposure to buspirone.

 Use with caution and adjust dose. [Moderate] Study
- Nilotinib is predicted to increase the exposure to cabozantinib.
 Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 9
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to nilotinib. Moderate Theoretical
- Nilotinib is predicted to increase the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- Oral calcium salts (calcium carbonate) -containing antacids might affect the exposure to oral nilotinib. Separate administration by at least 2 hours. Moderate Study
- Nilotinib is predicted to increase the exposure to ceritinib.
 Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the concentration of ciclosporin. Severe Study
- Cobicistat is predicted to increase the exposure to nilotinib.
 Avoid. [Severe] Study
- ► Nilotinib is predicted to increase the exposure to cobimetinib.

 Severe Study
- Nilotinib is predicted to increase the exposure to colchicine.
 Adjust colchicine dose with moderate CYP3A4 inhibitors,
 p. 1212. [Severe] Study
- Nilotinib is predicted to increase the exposure to corticosteroids (methylprednisolone). Monitor and adjust dose. Moderate Study
- ► Nilotinib is predicted to increase the risk of bleeding events when given with coumarins. (Severe) Theoretical
- Dabrafenib is predicted to decrease the exposure to nilotinib.
 Avoid. Severe Theoretical
- Nilotinib is predicted to increase the exposure to dabrafenib.
 Moderate Study
- Nilotinib is predicted to increase the exposure to darifenacin.
 Moderate Study
- Nilotinib is predicted to increase the exposure to dasatinib.
 Severe Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- Nilotinib is predicted to slightly increase the exposure to dienogest. [Moderate] Study
- Nilotinib is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (saxagliptin). [Mild] Study
- ► Nilotinib is predicted to increase the exposure to domperidone. Avoid. Severe Study
- Nilotinib is predicted to increase the exposure to dopamine receptor agonists (bromocriptine). [Severe] Theoretical
- Nilotinib is predicted to increase the concentration of dopamine receptor agonists (cabergoline). [Moderate] Anecdotal
- ► Nilotinib is predicted to moderately increase the exposure to dutasteride. [Mild] Study
- Nilotinib is predicted to increase the exposure to elexacaftor.
 Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- Nilotinib is predicted to increase the exposure to eliglustat.
 Avoid or adjust dose—consult product literature. Severe Study
- Nilotinib is predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 1492
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to nilotinib. Avoid. Severe Theoretical
- ► Nilotinib is predicted to increase the exposure to entrectinib. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492

Nilotinib (continued)

- Nilotinib is predicted to increase the risk of ergotism when given with ergometrine. Severe Theoretical
- Nilotinib is predicted to increase the risk of ergotism when given with ergotamine. [Severe] Theoretical
- Nilotinib is predicted to increase the exposure to erlotinib.
 Moderate Study
- Nilotinib is predicted to increase the concentration of everolimus. Avoid or adjust dose. Moderate Study
- Nilotinib is predicted to increase the exposure to fedratinib.
 Monitor and adjust dose. Moderate Study
- ➤ Nilotinib is predicted to increase the exposure to fesoterodine.

 Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. Mild Study
- Nilotinib is predicted to increase the exposure to gefitinib.
 Moderate Study
- ► Grapefruit juice is predicted to increase the exposure to nilotinib. Avoid. [Severe] Theoretical
- Nilotinib is predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. Moderate Theoretical
- ► H₂ receptor antagonists might affect the absorption of nilotinib. H₂ receptor antagonists should be taken 10 hours before or 2 hours after nilotinib. Mild Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to nilotinib. Avoid. Severe Study
- Nilotinib is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate CYP3A4 inhibitors, p. 1062. Severe | Study → Also see TABLE 15 p. 1493
- ► Idelalisib is predicted to increase the exposure to nilotinib.

 Avoid. Severe Study
- Nilotinib is predicted to increase the exposure to imatinib.
 Moderate Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to ivabradine. Adjust ivabradine dose, p. 231. Severel Theoretical
- Nilotinib is predicted to increase the exposure to ivacaftor.
 Adjust dose with moderate CYP5A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- Nilotinib is predicted to increase the exposure to lapatinib.
 Moderate Study → Also see TABLE 9 p. 1492
- ► Letermovir is predicted to increase the exposure to nilotinib.

 [Moderate] Study
- Nilotinib is predicted to increase the exposure to lomitapide.
 Avoid. Moderate Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to nilotinib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to nilotinib. (Moderate) Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to midostaurin.
 Moderate Theoretical
- Mitotane is predicted to moderately decrease the exposure to nilotinib. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to naldemedine.
 Moderate Study
- Nilotinib is predicted to increase the exposure to naloxegol.
 Adjust naloxegol dose and monitor adverse effects, p. 67.
 Moderatel Study
- Nilotinib is predicted to increase the exposure to neratinib.
 Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069.
 [Severe] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to nilotinib. Moderate Study
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of nilotinib. Avoid. Severe Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to nilotinib. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Theoretical → Also see TABLE 15 p. 1493
- ► Nilotinib is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study

- Nilotinib is predicted to increase the exposure to opioids (methadone). Moderate Theoretical → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to pazopanib.
 Moderate Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to pemigatinib.
 Severe Study
- ▶ Nilotinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- Nilotinib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil). Adjust avanafil dose, p. 878. [Moderate] Theoretical
- Nilotinib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (sildenafil). Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879.
 Moderate Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (tadalafil). Severe Theoretical
 Nilotinib is predicted to increase the exposure to
- phosphodiesterase type-5 inhibitors (vardenafil). Adjust dose.

 [Severe] Theoretical → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Pitolisant is predicted to decrease the exposure to nilotinib. Avoid. |Severe| Theoretical
- Nilotinib is predicted to increase the exposure to ponatinib.
 Moderate Study
- ► Nilotinib is predicted to increase the exposure to ranolazine.

 Severe Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to regorafenib.
 Moderate Study → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to ribociclib.
 Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 9
 p. 1492
- ► Rifamycins (rifampicin) are predicted to moderately decrease the exposure to nilotinib. Avoid. Severe Study
- Nilotinib is predicted to increase the exposure to ruxolitinib.
 Moderate Study → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- Nilotinib is predicted to increase the exposure to selpercatinib.
 Moderate Study → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to selumetinib.
 Avoid or adjust dose—consult product literature. Severe Study
- Nilotinib is predicted to increase the exposure to siponimod.
 Avoid depending on other drugs taken—consult product literature. Severe Study
- Nilotinib increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- Oral sodium bicarbonate -containing antacids might affect the exposure to oral nilotinib. Separate administration by at least 2 hours. Moderate Study
- ► Sodium zirconium cyclosilicate is predicted to decrease the exposure to nilotinib. Separate administration by at least 2 hours. Moderate Theoretical
- Nilotinib is predicted to increase the exposure to SSRIs (dapoxetine). Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to nilotinib. Avoid. Severe Theoretical
- Nilotinib is predicted to increase the exposure to statins (atorvastatin). Monitor and adjust dose. Moderate Theoretical
- Nilotinib is predicted to increase the exposure to statins (simvastatin). Monitor and adjust dose. [Severe] Theoretical
- Nilotinib is predicted to increase the exposure to sunitinib.
 Moderate | Study → Also see TABLE 15 p. 1493 → Also see TABLE 9
- ► Nilotinib is predicted to increase the concentration of tacrolimus. Severe Study
- Nilotinib is predicted to increase the exposure to taxanes (cabazitaxel). Moderate Theoretical → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to taxanes (docetaxel). [Severe] Study → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to taxanes (paclitaxel). [Moderate] Anecdotal → Also see TABLE 15 p. 1493

- ► Nilotinib is predicted to increase the concentration of temsirolimus. Use with caution or avoid. Moderate Theoretical → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to tezacaftor.
 Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ► Nilotinib given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- Nilotinib is predicted to increase the exposure to tolvaptan.
 Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ► Nilotinib is predicted to increase the exposure to trazodone. Moderate Theoretical
- Nilotinib is predicted to increase the exposure to ulipristal.
 Avoid if used for uterine fibroids. [Moderate] Study
- Nilotinib is predicted to increase the exposure to vemurafenib.
 Severe Theoretical → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to venetoclax.
 Avoid or adjust dose—consult product literature. Severe Study
- Nilotinib is predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- Nilotinib is predicted to increase the exposure to zopiclone.
 Adjust dose. Moderate Study

Nimodipine → see calcium channel blockers

Nintedanib → see TABLE 4 p. 1490 (antiplatelet effects)

- ► Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to nintedanib. Moderate Study
- Antiepileptics (carbamazepine) are predicted to decrease the exposure to nintedanib. Moderate Study
- Antiepileptics (phenobarbital, phenytoin) are predicted to decrease the exposure to nintedanib. Severe Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to nintedanib. Moderate Study
- ► Antifungals, azoles (voriconazole) are predicted to increase the exposure to nintedanib. Moderate Theoretical
- Calcium channel blockers (verapamil) are predicted to increase the exposure to nintedanib. [Moderate] Study
- ► Ciclosporin is predicted to increase the exposure to nintedanib.

 [Moderate] Study
- ► Cobicistat is predicted to increase the exposure to nintedanib.

 [Moderate] Theoretical
- ► HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, tipranavir) boosted with ritonavir are predicted to increase the exposure to nintedanib. [Moderate] Theoretical
- ► HIV-protease inhibitors (lopinavir, ritonavir) are predicted to increase the exposure to nintedanib. Moderate Study
- Ivacaftor is predicted to increase the exposure to nintedanib.
 [Moderate] Study
- ► Lapatinib is predicted to increase the exposure to nintedanib.

 Moderate Study
- Macrolides are predicted to increase the exposure to nintedanib. [Moderate] Study
- Neratinib is predicted to increase the exposure to nintedanib.
 Moderate Study
- Ranolazine is predicted to increase the exposure to nintedanib.
 Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to nintedanib. [Moderate] Study
- Rucaparib is predicted to increase the exposure to nintedanib.
 [Moderate] Study
- St John's wort is predicted to decrease the exposure to nintedanib. Moderate Study
- Vandetanib is predicted to increase the exposure to nintedanib.
 Moderate Study
- Vemurafenib is predicted to increase the exposure to nintedanib. Moderate Study

Niraparib → see TABLE 15 p. 1493 (myelosuppression) Nirmatrelvir

 Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of abemaciclib. Avoid or adjust abemaciclib dose, p. 1042. Severe Theoretical

- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of afatinib. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of alpha blockers (alfuzosin). Avoid. Severe Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of amfetamines. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of aminophylline. Adjust dose. [Moderate]

 Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. Severe Study
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antiarrhythmics (amiodarone, dronedarone, flecainide, propafenone). Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antiarrhythmics (lidocaine). [Severe] Theoretical
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Study
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of antiepileptics (lamotrigine, valproate).
 Severel Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antifungals, azoles (isavuconazole). Severe Theoretical
- Nirmatrelvir boosted with ritonavir increases the exposure to antifungals, azoles (itraconazole). (Severe) Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antifungals, azoles (ketoconazole). Adjust dose. [Moderate] Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of antifungals, azoles (voriconazole). Avoid. | Severe| Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of antimalarials (atovaquone). Moderate

 Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antipsychotics, second generation (clozapine, lurasidone, quetiapine). Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of antipsychotics, second generation (risperidone).
 Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of bedaquiline. Avoid or monitor. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of benzodiazepines (alprazolam). Moderate
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of benzodiazepines (clonazepam, diazepam, flurazepam). Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of benzodiazepines (midazolam). Avoid or adjust dose. Severel Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of beta₂ agonists (salmeterol). Avoid. Severe
- ► Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of bupropion. [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of buspirone. [Moderate] Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of calcium channel blockers. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ceritinib. Avoid or adjust ceritinib dose, p. 1050. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ciclosporin. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of colchicine. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of combined hormonal contraceptives

Nirmatrelvir (continued)

- (containing ethinylestradiol). Use additional contraceptive precautions. $[\underline{\mathsf{Moderate}}]$ Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of corticosteroids (beclometasone) (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone). Avoid or monitor adverse effects and consider belomethasone as an alternative. [Severe]
- Nirmatrelvir boosted with ritonavir is predicted to affect the concentration of coumarins (warfarin). [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of dasatinib. Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of delamanid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of digoxin. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of encorafenib. Avoid or monitor. Severe
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of endothelin receptor antagonists (bosentan).
 [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ergometrine. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ergotamine. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of everolimus. Severel Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of factor XA inhibitors (apixaban, rivaroxaban).
 Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of fostamatinib. Monitor adverse effects and adjust dose. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of fusidate. Avoid. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of glecaprevir. Avoid. Severe Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the
- concentration of grazoprevir. Severe Theoretical
 ➤ Nirmatrelvir boosted with ritonavir is predicted to increase the
- concentration of haloperidol. Severe Theoretical

 Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipramavir). [Moderate] Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ibrutinib. Avoid or adjust ibrutinib dose, p. 1062. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of lomitapide. Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of macrolides (erythromycin). Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of maraviroc. Refer to specialist literature.

 [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of methylphenidate. Severe Theoretical
- ► Mitotane is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of neratinib. Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of nilotinib. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of NNRTIS (efavirenz). [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of NSAIDs (piroxicam). Avoid. Severe Theoretical

- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of opioids (buprenorphine). Monitor and adjust dose. [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of opioids (fentanyl). Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of opioids (methadone). Adjust dose.
 Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of opioids (morphine). [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of opioids (pethidine). Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (sildenafil). Avoid or adjust dose—consult product literature. Severe

 Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (tadalafil).
 Adjust dose—consult product literature. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of pibrentasvir. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of pimozide. Avoid. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ranolazine. Avoid. Severe Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of rifamycins (rifabutin). Adjust dose. Severe
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of riociguat. Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of sirolimus. Severe Theoretical
- St John's wort is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of statins (atorvastatin, rosuvastatin). Adjust dose. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of statins (simvastatin). Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of tacrolimus. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of theophylline. Adjust dose. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of thrombin inhibitors (dabigatran). Avoid. Severe Theoretical
- ► Nirmatrelvir boosted with ritonavir might decrease the efficacy of thyroid hormones (levothyroxine). [Moderate] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the
- concentration of trazodone. [Moderate] Theoretical

 Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants (amitriptyline,
- imipramine, nortriptyline). [Moderate] Theoretical
 Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of venetoclax. Avoid or adjust dose—consult
- concentration of venetoclax. Avoid or adjust dose—consult product literature. [Severe Theoretical

 Nirmatrelvir boosted with ritonavir is predicted to increase the
- concentration of vinca alkaloids (vinblastine, vincristine). Severe
 Theoretical

 Nirmatrelvir boosted with ritonavir is predicted to increase the
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of zolpidem. Severe Theoretical

Nitisinone

- Nitisinone is predicted to increase the exposure to adefovir.
 Moderate Study
- ➤ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to nitisinone. Adjust dose. Moderate Theoretical

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to nitisinone. Adjust dose. Moderate Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to nitisinone. Adjust dose. Moderate Theoretical
- Nitisinone is predicted to increase the exposure to cephalosporins (cefaclor). [Moderate] Study
- Cobicistat is predicted to increase the exposure to nitisinone.
 Adjust dose. [Moderate] Theoretical
- Nitisinone is predicted to increase the exposure to coumarins (warfarin). [Moderate] Study
- Nitisinone is predicted to increase the exposure to ganciclovir.
 Moderate Study
- Nitisinone is predicted to increase the exposure to H₂ receptor antagonists (cimetidine, famotidine). [Moderate] Study
- HIV-protease inhibitors are predicted to increase the exposure to nitisinone. Adjust dose. [Moderate] Theoretical
- Idelalisib is predicted to increase the exposure to nitisinone.
 Adjust dose. [Moderate] Theoretical
- Nitisinone is predicted to increase the exposure to loop diuretics (furosemide). Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to nitisinone. Adjust dose. Moderate Theoretical
- Nitisinone is predicted to increase the exposure to methotrexate. Moderate Study
- Mitotane is predicted to decrease the exposure to nitisinone.
 Adjust dose. Moderate Theoretical
 Nitisinone is predicted to increase the exposure to NSAIDs
- (celecoxib). [Moderate] Study

 Nitisinone is predicted to increase the exposure to oseltamivir.
- Moderate Study

 ► Nitisinone is predicted to increase the exposure to penicillins
- (benzylpenicillin). [Moderate] Study

 ▶ Rifamycins (rifampicin) are predicted to decrease the exposure
- to nitisinone. Adjust dose. Moderate Theoretical
- Nitisinone is predicted to increase the exposure to sulfonylureas (glimepiride, tolbutamide). Moderate Study

Nitrates → see TABLE 7 p. 1491 (first-dose hypotension), TABLE 8 p. 1491 (hypotension)

glyceryl trinitrate • isosorbide dinitrate • isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- Acetylcysteine might increase the vasodilatory effects of glyceryl trinitrate. Moderate Theoretical
- Nitrates are predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local (prilocaine). Avoid. Severe Theoretical
- Nitrates are predicted to increase the risk of methaemoglobinaemia when given with dapsone. Severe Theoretical
- Nitrates potentially increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. Severe Study → Also see TABLE 8 p. 1491

Nitrazepam → see benzodiazepines

Nitrofurantoin → see TABLE 12 p. 1493 (peripheral neuropathy)

- Nitrofurantoin is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local (prilocaine). Use with caution or avoid. Severe Theoretical
- Nitrofurantoin is predicted to increase the risk of methaemoglobinaemia when given with dapsone. [Severe] Theoretical
- Oral magnesium trisilicate decreases the absorption of oral nitrofurantoin. [Moderate] Study

Nitroprusside > see TABLE 8 p. 1491 (hypotension)

Nitroprusside is predicted to increase the risk of methaemoglobinaemia when given with anaesthetics, local (prilocaine). Severe) Theoretical

 Nitroprusside is predicted to increase the risk of methaemoglobinaemia when given with dapsone. [Severe] Theoretical

Nitrous oxide → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

 Nitrous oxide potentially increases the risk of methotrexate toxicity when given with methotrexate. Avoid. Severe Study

Nivolumab → see monoclonal antibodies

Nizatidine → see H₂ receptor antagonists

NNRTIS → see TABLE 9 p. 1492 (QT-interval prolongation)

doravirine • efavirenz • etravirine • nevirapine • rilpivirine

- ► **Efavirenz** is predicted to decrease the exposure to **abrocitinib**. Avoid. Moderate Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to acalabrutinib. [Severe] Study
- ➤ Oral antacids are predicted to decrease the exposure to oral rilpivirine. Rilpivirine should be taken 4 hours before or 2 hours after antacids. Severe Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to doravirine. Avoid. Severe Study
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to etravirine. Avoid. Severe Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to nevirapine. (Severe) Study
- ► Anti-androgens (apalutamide, enzalutamide) markedly decrease the exposure to rilpivirine. Avoid. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of anti-androgens (cyproterone) with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to anti-androgens (darolutamide). Avoid. Moderate Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to antiarrhythmics (dronedarone). Severe Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine) slightly decrease the exposure to efavirenz and efavirenz slightly decreases the exposure to antiepileptics (carbamazepine). [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to doravirine. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to etravirine. Avoid. Severe Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) markedly decrease the exposure to rilpivirine. Avoid. [Severe] Study
- Antiepileptics (fosphenytoin, phenytoin) slightly decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Theoretical
- Antiepileptics (oxcarbazepine) are predicted to decrease the exposure to doravirine. Avoid. Severe Theoretical
- Antiepileptics (oxcarbazepine) are predicted to decrease the concentration of rilpivirine. Avoid. [Severe] Theoretical
- Antiepileptics (phenobarbital) are predicted to decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (phenobarbital). [Severe] Theoretical
- Nevirapine is predicted to decrease the concentration of antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) and antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of nevirapine. Severel Study
- ► Efavirenz is predicted to affect the efficacy of antiepileptics (primidone) and antiepileptics (primidone) are predicted to slightly decrease the exposure to efavirenz. Severe Theoretical
- ► Antifungals, azoles (fluconazole) slightly to moderately increase the exposure to nevirapine. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to antifungals, azoles (isavuconazole). Avoid. Severe Theoretical
- Efavirenz slightly decreases the exposure to antifungals, azoles (itraconazole). Avoid and for 14 days after stopping efavirenz. [Moderate] Study
- Nevirapine moderately decreases the exposure to antifungals, azoles (itraconazole). Avoid and for 14 days after stopping nevirapine. [Moderate] Study

NNRTIs (continued)

- Efavirenz moderately decreases the exposure to antifungals, azoles (ketoconazole). Severe Study
- ► Nevirapine moderately decreases the exposure to antifungals, azoles (ketoconazole). Avoid. Severe Study
- ► Efavirenz slightly decreases the exposure to antifungals, azoles (posaconazole). Avoid. [Moderate] Study
- Efavirenz moderately decreases the exposure to antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) slightly increase the exposure to efavirenz. Adjust dose. Severel Study -> Also see TABLE 9 p. 1492
- Nevirapine is predicted to decrease the exposure to antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) increase the exposure to nevirapine. Monitor and adjust dose.
 Severel Theoretical
- ► Efavirenz decreases the concentration of antimalarials (artemether). Severe Study → Also see TABLE 9 p. 1492
- Etravirine decreases the exposure to antimalarials (artemether).
 Moderate Study
- Efavirenz moderately decreases the exposure to antimalarials (atovaquone). Avoid. [Moderate] Study
- Efavirenz affects the exposure to antimalarials (proguanil).
 Avoid. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to antipsychotics, second generation (cariprazine).
 Avoid. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to antipsychotics, second generation (lurasidone).
 Monitor and adjust dose. Moderate Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to antipsychotics, second generation (quetiapine).
 Moderate) Study
- Etravirine is predicted to decrease the exposure to avapritinib.
 Avoid. Severe Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to avapritinib. Avoid. Severe Study
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to axitinib. [Moderate] Study
- Etravirine is predicted to decrease the exposure to bedaquiline.
 Avoid. Severe Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to bedaquiline. Avoid. Severe Study → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of benzodiazepines (alprazolam). [Moderate]

 Theoretical
- Etravirine has been reported to increase the concentration of benzodiazepines (clobazam). [Moderate] Anecdotal
- Nevirapine is predicted to decrease the concentration of benzodiazepines (clonazepam) and benzodiazepines (clonazepam) are predicted to decrease the concentration of nevirapine.
 Moderate] Theoretical
- Etravirine is predicted to increase the exposure to benzodiazepines (diazepam). Avoid. Severe Theoretical
- ► Efavirenz is predicted to alter the effects of benzodiazepines (midazolam). Avoid. [Moderate] Theoretical
- ► Nevirapine decreases the concentration of benzodiazepines (midazolam). Monitor and adjust dose. Moderate Study
- ► Etravirine is predicted to decrease the exposure to bosutinib. Avoid. Severe Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to bosutinib. Avoid. Severe Study → Also see TABLE 9 n. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to brigatinib. Avoid. [Moderate] Study
- Efavirenz is predicted to decrease the exposure to bupropion.
 Moderate Study
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to cabozantinib. Moderate Study → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine).
 Monitor and adjust dose. [Moderate] Theoretical

- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil).

 Moderate Theoretical
- Oral calcium salts (calcium carbonate) -containing antacids are predicted to decrease the exposure to oral rilpivirine.
 Rilpivirine should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ► Efavirenz is predicted to decrease the concentration of caspofungin. Adjust dose. [Moderate] Study
- Nevirapine is predicted to decrease the concentration of caspofungin. Adjust dose. Moderate Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to ceritinib. Severe Study → Also see TABLE 9 p. 1492
- Efavirenz decreases the concentration of ciclosporin. Monitor concentration and adjust dose. Moderate Study
- ► Nevirapine is predicted to decrease the concentration of ciclosporin. [Moderate] Study
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to cobicistat. Avoid. Severe Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to cobimetinib. Avoid. Severe Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ► Corticosteroids (dexamethasone) are predicted to decrease the concentration of rilpivirine. Avoid multiple-dose dexamethasone. | Severe| Theoretical
- Efavirenz is predicted to affect the concentration of coumarins.
 Adjust dose. Moderate Theoretical
- ► Etravirine increases the anticoagulant effect of coumarins.

 [Moderate] Theoretical
- Nevirapine potentially alters the anticoagulant effect of coumarins. [Severe] Anecdotal
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to crizotinib. Avoid. Severe Study → Also see TABLE 9
- ▶ Dabrafenib is predicted to decrease the exposure to doravirine. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- ▶ Dabrafenib is predicted to decrease the exposure to etravirine. Avoid. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to dabrafenib. Moderate Study
- Dabrafenib is predicted to decrease the exposure to rilpivirine.
 Avoid. Severe Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to dasatinib. Severe Study → Also see TABLE 9 p. 1492
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of desogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ► Efavirenz moderately decreases the exposure to dolutegravir.

 Adjust dolutegravir dose, p. 696. [Severe] Study
- Etravirine moderately decreases the exposure to dolutegravir.
 Adjust dolutegravir dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 696.
 Severel Study
- ► Nevirapine is predicted to decrease the exposure to dolutegravir. Adjust dolutegravir dose, p. 696. Severe Study
- ► Etravirine is predicted to decrease the exposure to elbasvir. Avoid. [Unknown] Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to moderately decrease the exposure to elbasvir. Avoid. Severe Study
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to eliglustat. Moderate Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to doravirine. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to etravirine. Avoid. [Severe] Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to nevirapine. [Severe] Theoretical

- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to entrectinib. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the effects of ergotamine. [Moderate] Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to erlotinib. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of estradiol. [Moderate] Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the efficacy of etonogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the concentration of everolimus. Avoid or adjust dose. Severe Study
- ► Nevirapine is predicted to decrease the exposure to factor XA inhibitors (rivaroxaban). Severe Anecdotal
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to fedratinib. Avoid. Moderate Study
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to gefitinib. Avoid. Severe Study
- NNRTIS (efavirenz, etravirine, nevirapine) are predicted to decrease the exposure to glasdegib. Avoid or adjust glasdegib dose, p. 1087. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to glecaprevir. Avoid. Severe Study
- Etravirine is predicted to decrease the exposure to grazoprevir.
 Avoid. Mild Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to markedly decrease the exposure to grazoprevir. Avoid. Severe Study
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of guanfacine. Adjust dose. Moderate Theoretical
- ► H₂ receptor antagonists are predicted to decrease the exposure to rilpivirine. H₂ receptor antagonists should be taken 12 hours before or 4 hours after rilpivirine. Severe] Study
- Efavirenz decreases the exposure to HIV-protease inhibitors.
 Refer to specialist literature. | Severe | Study
- ► HIV-protease inhibitors (tipranavir) decrease the exposure to etravirine. Avoid. [Severe] Study
- ► Etravirine increases the exposure to HIV-protease inhibitors (fosamprenavir) boosted with ritonavir. Refer to specialist literature. [Moderate] Study
- ▶ Nevirapine decreases the exposure to HIV-protease inhibitors. Refer to specialist literature. [Moderate] Study
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the effects of hormone replacement therapy. Moderate Anecdotal
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ibrutinib. Avoid or monitor. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to idelalisib. Avoid. Moderate Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to imatinib. [Moderate] Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ivacaftor. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to lapatinib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to larotrectinib. Avoid. Moderate Study
- ► Efavirenz is predicted to decrease the concentration of letermovir. [Moderate] Theoretical
- ► Etravirine is predicted to decrease the exposure to letermovir.

 [Moderate] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ► Lumacaftor is predicted to decrease the exposure to doravirine. Avoid. Severe Theoretical
 ► Macrolides (erythromycin) are predicted to increase the
- Macrolides (erythromycin) are predicted to increase the exposure to nevirapine. [Moderate] Theoretical
- ► Etravirine decreases the exposure to macrolides (clarithromycin) and macrolides (clarithromycin) slightly increase the exposure to etravirine. Severe Study

- ► NNRTIs (efavirenz, nevirapine) decrease the exposure to macrolides (clarithromycin). [Moderate] Study → Also see TABLE 9 n 1492
- ► Efavirenz decreases the exposure to maraviroc. Refer to specialist literature. Severe Theoretical
- Etravirine slightly decreases the exposure to maraviroc. Refer to specialist literature. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to midostaurin. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to mifepristone. Severe Theoretical
- ► Mitotane is predicted to decrease the exposure to doravirine. Avoid. Severe Study
- ► Mitotane is predicted to decrease the exposure to etravirine.

 Avoid. Severe | Theoretical
- Mitotane is predicted to decrease the exposure to nevirapine.
 Severe Theoretical
- Mitotane markedly decreases the exposure to rilpivirine.
 Avoid. Severe Study
- Modafinil is predicted to decrease the exposure to doravirine.
 Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to neratinib. Severe Study
- ➤ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to neurokinin-1 receptor antagonists (aprepitant).

 Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to neurokinin-1 receptor antagonists (fosaprepitant, netupitant). [Moderate] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to nilotinib. Avoid. Severe Theoretical → Also see
 TABLE 9 p. 1492
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of efavirenz. [Moderate] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to NNRTIs (doravirine). Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ► NNRTIS (etravirine) are predicted to decrease the exposure to NNRTIS (doravirine). Avoid. [Severe] Theoretical
- NNRTIs (nevirapine) decrease the concentration of NNRTIs (efavirenz). Avoid. Severe Study
- ► NNRTIs (efavirenz) are predicted to decrease the exposure to NNRTIs (etravirine). Avoid. Severe Study
- NNRTIs (nevirapine) are predicted to decrease the exposure to NNRTIs (etravirine). Avoid. [Severe] Study
- ► NNRTIs (efavirenz, etravirine, nevirapine) are predicted to decrease the exposure to NNRTIs (rilpivirine). Avoid. Severe
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ► Nevirapine is predicted to slightly decrease the exposure to NRTIs (zidovudine). Refer to specialist literature. Severe Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- Efavirenz moderately decreases the exposure to opioids (buprenorphine). Adjust dose. [Moderate] Study
- NNRTIs (efavirenz, nevirapine) decrease the exposure to opioids (methadone). Monitor and adjust dose. Severe Study → Also see TABLE 9 p. 1492
- ► Etravirine is predicted to decrease the exposure to osimertinib.

 Use with caution or avoid. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to osimertinib. Use with caution or avoid. Severe Study → Also see TABLE 9 p. 1492
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ospemifene. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to pazopanib. Severe Study → Also see TABLE 9 p. 1492
- Efavirenz is predicted to decrease the exposure to pemigatinib and pemigatinib might decrease the exposure to efavirenz.
 Avoid or monitor. Severe Study

NNRTIs (continued)

- Nevirapine is predicted to decrease the exposure to pemigatinib. Avoid or monitor. Severe Study
- ► Etravirine moderately decreases the exposure to phosphodiesterase type-5 inhibitors. Adjust dose. Moderate
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to pibrentasvir. Avoid. Severe Study
- ▶ Pitolisant is predicted to decrease the exposure to efavirenz. Mild Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ponatinib. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to oral rilpivirine. Avoid. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to regorafenib. Severe Study
- ▶ Efavirenz is predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ribociclib. Moderate Study → Also see TABLE 9 p. 1492
- ▶ Rifamycins (rifabutin) moderately decrease the exposure to doravirine. Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Moderate Study
- ▶ Rifamycins (rifabutin) decrease the exposure to etravirine. Moderate Study
- ▶ Rifamycins (rifabutin) modestly decrease the exposure to rilpivirine. Avoid or adjust dose—consult product literature.
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to doravirine. Avoid. Severe Study
- ▶ Rifamycins (rifampicin) slightly decrease the exposure to efavirenz. Adjust dose. Severe Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to etravirine. Avoid. Severe Theoretical
- ► Rifamycins (rifampicin) decrease the concentration of nevirapine. Avoid. Severe Study
- ▶ Rifamycins (rifampicin) markedly decrease the exposure to rilpivirine. Avoid. Severe Study
- ► Efavirenz slightly decreases the exposure to rifamycins (rifabutin). Adjust dose. Severe Study
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. Moderate
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to selpercatinib. Moderate Study → Also see TABLE 9
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. Severe
- ▶ Doravirine is predicted to decrease the exposure to sirolimus. Monitor sirolimus concentration and adjust dose, p. 906. Moderate Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of sirolimus. Monitor and adjust dose. Moderate
- ▶ Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral rilpivirine. Rilpivirine should be taken 4 hours before or 2 hours after antacids. Severe
- ► Sodium zirconium cyclosilicate is predicted to decrease the exposure to rilpivirine. Separate administration by at least 2 hours. Moderate Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to sorafenib. Moderate Study → Also see TABLE 9 p. 1492
- ▶ St John's wort is predicted to decrease the exposure to etravirine. Avoid. Severe Study
- ▶ St John's wort is predicted to decrease the exposure to NNRTIS (doravirine, rilpivirine). Avoid. Severe Theoretical

- ► St John's wort is predicted to decrease the concentration of NNRTIS (efavirenz, nevirapine). Avoid. Severe Theoretical
- ▶ Etravirine slightly decreases the exposure to statins (atorvastatin). Monitor and adjust dose. Moderate Study
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). Moderate Study
- ▶ Etravirine is predicted to increase the exposure to statins (fluvastatin). Adjust dose. Severe Theoretical
- ► Etravirine is predicted to decrease the exposure to statins (simvastatin). Adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to sunitinib. Moderate Study → Also see TABLE 9 p. 1492
- ▶ Doravirine is predicted to decrease the exposure to tacrolimus. Monitor tacrolimus concentration and adjust dose, p. 907. Moderate Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of tacrolimus. Monitor and adjust dose. Moderate Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to taxanes (cabazitaxel). Moderate Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to taxanes (docetaxel). Severe Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to taxanes (paclitaxel). Avoid. Severe Study
- ► Telotristat ethyl is predicted to decrease the exposure to doravirine. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of temsirolimus. Avoid. Severe Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ticagrelor. Moderate Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to tofacitinib. Moderate Study
- ▶ NNRTIs (efavirenz, nevirapine) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to vandetanib. Moderate Study → Also see TABLE 9 p. 1492
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to velpatasvir. Avoid. Moderate Theoretical
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to vemurafenib. Severe Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to venetoclax. Avoid. Severe Study
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone

- ► Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ Endothelin receptor antagonists (bosentan) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ Griseofulvin potentially decreases the efficacy of norethisterone. For FSRH guidance, see Contraceptives. interactions p. 859. Severe Anecdotal
- ► HIV-protease inhibitors (ritonavir) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ Modafinil is predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ► Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe
- ▶ NNRTIs (efavirenz, nevirapine) are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal

- ► Rifamycins are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ► St John's wort is predicted to decrease the efficacy of norethisterone. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ➤ Sugammadex is predicted to decrease the exposure to norethisterone. Use additional contraceptive precautions.

 Severe Theoretical
- Norethisterone might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of norethisterone. Avoid or use additional contraceptive precautions. Severe Theoretical Normal immunoglobulin → see immunoglobulins

Nortriptyline → see tricyclic antidepressants

NRTIS → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 12 p. 1493 (peripheral neuropathy)

abacavir • emtricitabine • lamivudine • zidovudine

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to abacavir. [Moderate] Theoretical
- ► Antiepileptics (valproate) slightly increase the exposure to zidovudine. [Moderate] Study
- Antifungals, azoles (fluconazole) slightly increase the exposure to zidovudine. [Moderate] Study
- ► Antimalarials (pyrimethamine) are predicted to increase the risk of adverse effects when given with zidovudine. Severe

 Theoretical
- Zidovudine increases the risk of haematological toxicity when given with aspirin (high-dose). [Severe] Study
- Zidovudine increases the risk of haematological toxicity when given with flucytosine. Monitor and adjust dose. Severe Theoretical
- HIV-protease inhibitors (tipranavir) slightly decrease the exposure to abacavir. Avoid. Severe Study
- ► HIV-protease inhibitors (tipranavir) slightly decrease the exposure to zidovudine. Avoid. Moderate Study
- ► Leflunomide is predicted to increase the exposure to zidovudine. Moderate Theoretical
- Macrolides (clarithromycin) decrease the absorption of zidovudine. Separate administration by at least 2 hours.
 Moderate Study
- ► NNRTIs (nevirapine) are predicted to slightly decrease the exposure to zidovudine. Refer to specialist literature. Severe Theoretical
- NRTIs (zidovudine) increase the risk of toxicity when given with NRTIs (lamivudine). [Severe] Anecdotal
- ► Zidovudine increases the risk of haematological toxicity when given with NSAIDs. Severe Study → Also see TABLE 2 p. 1490
- ▶ Ribavirin increases the risk of anaemia and/or leucopenia when given with zidovudine. Avoid. Severe Study
- ► Teriflunomide is predicted to increase the exposure to zidovudine. Moderate Theoretical
- ► Trimethoprim slightly increases the exposure to lamivudine.

 [Moderate] Study
- NSAIDs → see TABLE 18 p. 1494 (hyponatraemia), TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium), TABLE 4 p. 1490 (antiplatelet effects)

aceclofenac · benzydamine · bromfenac · celecoxib · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · phenazone · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **NSAIDs**, the possibility of interactions should be borne in mind.

- Celecoxib is predicted to increase the exposure to antiarrhythmics (flecainide, propafenone). Monitor and adjust dose. [Moderate] Theoretical
- ► Antifungals, azoles (fluconazole) moderately increase the exposure to celecoxib. Adjust celecoxib dose, p. 1225. [Moderate] Study

- ► Antifungals, azoles (fluconazole) increase the exposure to parecoxib. Monitor and adjust dose. Moderate Study
- ► Antifungals, azoles (voriconazole) slightly increase the exposure to diclofenac. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (voriconazole) moderately increase the exposure to ibuprofen. Adjust dose. [Moderate] Study
- ► NSAIDs are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (alendronate, ibandronate). [Moderate] Study
- NSAIDs are predicted to increase the risk of renal impairment when given with bisphosphonates (clodronate). Moderate Study
- Ceritinib is predicted to increase the exposure to NSAIDs (celecoxib, diclofenac). Adjust dose. Moderate Theoretical
- ► Ciclosporin increases the concentration of diclofenac. Severe

 Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494
- ► Sulindac might increases the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- Etoricoxib increases the exposure to combined hormonal contraceptives. [Moderate] Study
- NSAIDs increase the risk of gastrointestinal bleeding when given with corticosteroids. Severe Study
- ► NSAIDs increase the risk of renal impairment when given with daptomycin. [Moderate] Theoretical
- ► Indometacin increases the concentration of digoxin. Severe Study
- Erlotinib is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. Severe Theoretical
- Etoricoxib increases the exposure to hormone replacement therapy. [Moderate] Study
- NSAIDs are predicted to increase the risk of gastrointestinal bleeding when given with iron chelators (deferasirox). Severe Theoretical
- Diclofenac is predicted to increase the exposure to iron chelators (deferiprone). [Moderate] Theoretical
- ► Leflunomide is predicted to increase the exposure to NSAIDS (indometacin, ketoprofen). Moderate Theoretical
- ► NSAIDs increase the concentration of lithium. Monitor and adjust dose. |Severe| Study
- ► NSAIDs are predicted to increase the risk of toxicity when given with methotrexate. [Severe] Study → Also see TABLE 2 p. 1490
- NSAIDs (high-dose) are predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- Nicorandil is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of piroxicam. Avoid. Severe Theoretical
- Nitisinone is predicted to increase the exposure to celecoxib.
 Moderate Study
- NRTIs (zidovudine) increase the risk of haematological toxicity when given with NSAIDs. Severe Study → Also see TABLE 2 p. 1490
- NSAIDs are predicted to increase the exposure to pemetrexed.
 Use with caution or avoid. Severe Theoretical → Also see TABLE 2
- ► NSAIDs potentially increase the risk of seizures when given with quinolones. Severe Theoretical
- ► Mefenamic acid is predicted to increase the exposure to regorafenib. Avoid. Moderate Theoretical → Also see TABLE 4 p. 1490
- ► Rifamycins (rifampicin) moderately decrease the exposure to NSAIDs (celecoxib, diclofenac, etoricoxib). Moderate Study
- ► Teriflunomide is predicted to increase the exposure to NSAIDS (indometacin, ketoprofen). [Moderate] Theoretical
- NSAIDs increase the risk of acute renal failure when given with thiazide diuretics. Severe Theoretical → Also see TABLE 18 p. 1494
- Obeticholic acid
- Obeticholic acid decreases the anticoagulant effect of coumarins (warfarin). [Severe] Study
- Obeticholic acid is predicted to increase the exposure to theophylline. Severe Theoretical
- Obeticholic acid is predicted to increase the exposure to tizanidine. Severe Theoretical

Obinutuzumab → see monoclonal antibodies **Ocrelizumab** → see monoclonal antibodies

Octreotide

- ➤ Octreotide decreases the absorption of oral ciclosporin. Adjust ciclosporin dose, p. 904. [Severe] Anecdotal
- Octreotide (short-acting) decreases the exposure to telotristat ethyl. Telotristat ethyl should be taken at least 30 minutes before octreotide. [Moderate] Study

Ofatumumab → see monoclonal antibodies

Ofloxacin → see quinolones

Olanzapine → see antipsychotics, second generation **Olaparib** → see TABLE 15 p. 1493 (myelosuppression)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to olaparib.

- ► Olaparib might increase the exposure to aliskiren. Moderate
 Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to olaparib. Avoid. [Moderate] Theoretical
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. [Moderate] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to olaparib. Avoid moderate CYPSA4 inhibitors or adjust olaparib dose, p. 1088.
 Moderate Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to olaparib. Avoid potent CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Study
- Olaparib might increase the exposure to antihistamines, nonsedating (fexofenadine). [Moderate] Theoretical
- Olaparib might alter the exposure to antipsychotics, second generation (quetiapine). Moderate Theoretical
- ➤ Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. [Moderate] Theoretical
- ► Olaparib might alter the exposure to ciclosporin. Moderate
 Theoretical
- Cobicistat is predicted to increase the exposure to olaparib.
 Avoid potent CYP3A4 inhibitors or adjust olaparib dose,
 p. 1088. Moderate Study
- ➤ Olaparib might increase the exposure to colchicine. [Moderate] Theoretical
- Olaparib potentially affects the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions.
 Moderate Theoretical
- Crizotinib is predicted to increase the exposure to olaparib.
 Avoid moderate CYP3A4 inhibitors or adjust olaparib dose,
 p. 1088. Moderate Theoretical
- ▶ Dabrafenib is predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- ➤ Olaparib might increase the exposure to digoxin. Moderate Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to olaparib. Avoid. [Moderate] Theoretical
- ► Olaparib might alter the exposure to ergometrine. Moderate Theoretical
- ➤ Olaparib might alter the exposure to ergotamine. Moderate Theoretical
- ► Olaparib might increase the exposure to everolimus. Moderate Theoretical
- Olaparib might increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Theoretical
- ► Grapefruit juice is predicted to increase the exposure to olaparib. Avoid. [Moderate] Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to olaparib. Avoid potent CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Study
- Idelalisib is predicted to increase the exposure to olaparib.
 Avoid potent CYP3A4 inhibitors or adjust olaparib dose,
 p. 1088. Moderate Study
- ► Imatinib is predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Theoretical → Also see TABLE 15 p. 1493

- ► Letermovir is predicted to increase the exposure to olaparib.

 Avoid moderate CYP3A4 inhibitors or adjust olaparib dose,
 p. 1088. Moderate Theoretical
- ► Olaparib might increase the exposure to loperamide. Moderate
 Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to olaparib. Avoid potent CYP3A4 inhibitors or adjust olaparib dose, p. 1088. [Moderate] Study
- Macrolides (erythromycin) are predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. [Moderate] Theoretical
- Mitotane is predicted to decrease the exposure to olaparib. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088.
 Moderate Theoretical
- Nilotinib is predicted to increase the exposure to olaparib. Avoid moderate CYP3A4 inhibitors or adjust olaparib dose, p. 1088. Moderate Theoretical → Also see TABLE 15 p. 1493
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- Olaparib might alter the exposure to opioids (alfentanil).
 Moderate Theoretical
- Olaparib might alter the exposure to pimozide. Moderate
 Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to olaparib. Avoid. [Moderate] Theoretical
- ➤ Olaparib might increase the exposure to sirolimus. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- Olaparib is predicted to increase the exposure to statins.
 Moderate Theoretical
- ► Olaparib might alter the exposure to tacrolimus. [Moderate]
 Theoretical
- ► Olaparib might increase the exposure to talazoparib. [Moderate]
 Theoretical → Also see TABLE 15 p. 1493
- ► Olaparib might increase the exposure to taxanes (docetaxel, paclitaxel). [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ➤ Olaparib might alter the exposure to temsirolimus. Moderate Theoretical → Also see TABLE 15 p. 1493
- ► Olaparib might increase the exposure to thrombin inhibitors (dabigatran). [Moderate] Theoretical
- ► Olaparib might increase the exposure to topotecan. [Moderate]
 Theoretical → Also see TABLE 15 p. 1493

 $\textbf{Olmesartan} \ \, \textbf{\rightarrow} \, \text{see angiotensin-II receptor antagonists}$

Olodaterol → see beta₂ agonists

Omega-3-acid ethyl esters → see TABLE 4 p. 1490 (antiplatelet effects)

- Omega-3-acid ethyl esters might enhance the blood pressurelowering effects of beta blockers, non-selective. Moderate Study
- ➤ Omega-3-acid ethyl esters might enhance the blood pressure-lowering effects of beta blockers, selective. Moderate Study
 Omeprazole → see proton pump inhibitors

Ondansetron → see 5-HT3-receptor antagonists

Opicapone

- ➤ Opicapone increases the exposure to levodopa. Adjust dose. Moderate Study
- Opicapone is predicted to increase the exposure to loperamide.
 Avoid. [Moderate] Study
- Opicapone is predicted to increase the risk of elevated blood pressure when given with MAOIs, irreversible. Avoid. Severel
- ► Opicapone is predicted to increase the exposure to meglitinides (repaglinide). Avoid. [Moderate] Study
- Opicapone is predicted to increase the risk of elevated blood pressure when given with moclobemide. Avoid. Severe Theoretical
- Opicapone is predicted to increase the exposure to montelukast. Avoid. Moderate Study
- ► Opicapone is predicted to increase the exposure to pioglitazone. Avoid. Moderate Study

- Opicapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, inotropic.
 Severel Theoretical
- Opicapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [Severe] Theoretical
- Opioids → see TABLE 6 p. 1491 (bradycardia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)
 - alfentanil buprenorphine codeine diamorphine dihydrocodeine diphenoxylate dipipanone fentanyl hydromorphone meptazinol methadone morphine oxycodone pentazocine pethidine remifentanil tapentadol tramadol
- ► Alcohol causes rapid release of opioids (hydromorphone, morphine) from extended-release preparations. Avoid. Severe Study → Also see TABLE 11 p. 1492
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. [Moderate] Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) decrease the exposure to methadone. Monitor and adjust dose. Severe Study → Also see TABLE 9 p. 1492
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to oxycodone. Monitor and adjust dose.

 Moderate) Study
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to opioids (alfentanil, fentanyl).
 Moderate Study
- Antiarrhythmics (amiodarone) are predicted to increase the concentration of fentanyl. Moderate Theoretical → Also see
 TABLE 6 p. 1491
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to methadone. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- Antiepileptics (carbamazepine) decrease the concentration of tramadol. Adjust dose. Severe Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. Moderate

 Theoretical → Also see TABLE 11 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to methadone. Monitor and adjust dose. Severel Study → Also see TABLE 11 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to oxycodone. Monitor and adjust dose. Moderate Study → Also see TABLE 11 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to opioids (alfentanil, fentanyl). Moderate Study → Also see TABLE 11 p. 1492
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to methadone. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to methadone. Adjust dose.

 [Severe] Theoretical → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (miconazole) are predicted to increase the exposure to alfentanil. Use with caution and adjust dose.

 Moderate Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose.
 [Severe] Study
- Antipsychotics, second generation (clozapine) can cause constipation, as can opioids; concurrent use might increase

- the risk of developing intestinal obstruction. Severe
 Anecdotal → Also see TABLE 11 p. 1492
- Berotralstat is predicted to increase the exposure to opioids (alfentanil, fentanyl). Monitor and adjust dose. [Moderate] Study
- Bictegravir is predicted to increase the exposure to methadone. [Moderate] Theoretical
- ► Brigatinib potentially decreases the concentration of opioids (alfentanil, fentanyl). Avoid. Moderate Theoretical → Also see

 TABLE 6 p. 1491
- Bupropion is predicted to decrease the efficacy of codeine.
 Moderate Theoretical
- Bupropion is predicted to decrease the efficacy of tramadol.
 Severe Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to methadone. [Moderate] Theoretical
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate]
 Study -> Also see TABLE 6 p. 1491
- ► Cenobamate is predicted to decrease the exposure to alfentanil. Adjust dose. Moderate Theoretical → Also see TABLE 11 p. 1492
- ► Ceritinib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Avoid. Severe Theoretical → Also see TABLE 6 p. 1491
- Cinacalcet is predicted to decrease the efficacy of codeine.
 Moderate Theoretical
- Cinacalcet is predicted to decrease the efficacy of tramadol.
 Severe Study
- Cobicistat is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Severe] Study
- ► Crizotinib is predicted to increase the exposure to methadone.

 Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Crizotinib is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ Dabrafenib decreases the exposure to methadone. Monitor and adjust dose. Severe Study
- ► Tapentadol is predicted to increase the risk of serotonin syndrome when given with drugs that cause serotonin syndrome (see TABLE 13 p. 1493). Severe Theoretical
- ► Endothelin receptor antagonists (bosentan) decrease the exposure to methadone. Monitor and adjust dose. Severe Study
- ► Entrectinib is predicted to increase the exposure to opioids (alfentanil, fentanyl). [Mild] Theoretical

 ► Fedratinib is predicted to increase the exposure to alfentanil.
- Monitor and adjust dose. Moderate Theoretical

 H₂ receptor antagonists (cimetidine) increase the concentration
- of alfentanil. Use with caution and adjust dose. Severe Study
- ► H₂ receptor antagonists (cimetidine) increase the exposure to fentanyl. (Moderate) Study
- ► HIV-protease inhibitors boosted with ritonavir are predicted to decrease the exposure to methadone. [Moderate] Study
- HIV-protease inhibitors (ritonavir) are predicted to decrease the concentration of morphine. Moderate Theoretical
- HIV-protease inhibitors (ritonavir) increase the risk of CNS toxicity when given with pethidine. Avoid. [Severe] Study
- HIV-protease inhibitors are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone).
 Monitor and adjust dose. Severe Study
- ► Idelalisib is predicted to increase the exposure to methadone.

 Severe Theoretical
- ► Idelalisib is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Severel Study
- ► Imatinib is predicted to increase the exposure to methadone. Moderate Theoretical
- ► Imatinib is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. [Moderate] Study
- ► Interferons (ropeginterferon alfa) are predicted to increase the exposure to methadone. [Moderate] Theoretical

Opioids (continued)

- Larotrectinib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Use with caution and adjust dose. Mild
- ▶ Letermovir is predicted to increase the exposure to methadone. Moderate Theoretical
- ▶ Letermovir is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Moderate Study
- Lorlatinib is predicted to decrease the exposure to opioids (alfentanil, fentanyl). Avoid. Moderate Theoretical
- ▶ Macrolides (clarithromycin) are predicted to increase the concentration of methadone. Severe Theoretical → Also see **TABLE 9** p. 1492
- ► Macrolides (erythromycin) are predicted to increase the exposure to methadone. Moderate Theoretical → Also see TABLE 9
- ► Macrolides (clarithromycin) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Severe Study
- ► Macrolides (erythromycin) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Moderate Study
- ► MAO-B inhibitors (rasagiline) are predicted to increase the risk of adverse effects when given with pethidine. Avoid and for 14 days after stopping rasagiline. Severe Theoretical → Also see TABLE 13 p. 1493
- ► MAO-B inhibitors (safinamide) are predicted to increase the risk of adverse effects when given with pethidine. Avoid and for 1 week after stopping safinamide. Severe Theoretical → Also see TABLE 13 p. 1493
- ► MAO-B inhibitors (selegiline) increase the risk of adverse effects when given with pethidine. Avoid. Severe Anecdotal → Also see **TABLE 13 p. 1493**
- ▶ Opioids are predicted to increase the risk of CNS excitation or depression when given with MAOIs, irreversible. Avoid. Severe Study → Also see TABLE 13 p. 1493
- ▶ Opioids potentially decrease the absorption of oral mexiletine. Moderate Study
- ▶ Mifepristone is predicted to increase the exposure to alfentanil. Severe Theoretical
- ▶ Mitotane is predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. Moderate Theoretical
- ▶ Mitotane decreases the exposure to methadone. Monitor and adjust dose. Severe Study
- Mitotane is predicted to decrease the exposure to opioids (alfentanil, fentanyl). Moderate Study
- ▶ Mitotane is predicted to decrease the exposure to oxycodone. Monitor and adjust dose. Moderate Study
- ► Nalmefene is predicted to decrease the efficacy of opioids. Avoid except in an emergency situation-consult product literature. Severe Theoretical
- ▶ Naltrexone is predicted to decrease the efficacy of opioids. Avoid except in an emergency situation—consult product literature. Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to methadone. Moderate Theoretica
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Moderate Study
- Nilotinib is predicted to increase the exposure to methadone. Moderate Theoretical → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to opioids (alfentanil, buprenorphine, fentanyl, oxycodone). Monitor and adjust dose. Moderate Study
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of buprenorphine. Monitor and adjust dose. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of fentanyl. Severe Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of methadone. Adjust dose. Moderate Theoretical

- ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of morphine. Moderate Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of pethidine. Avoid. Severe Theoretical
- ▶ NNRTIS (efavirenz) moderately decrease the exposure to buprenorphine. Adjust dose. Moderate Study
- ▶ NNRTIS (efavirenz, nevirapine) decrease the exposure to methadone. Monitor and adjust dose. Severe Study → Also see TABLE 9 p. 1492
- ▶ Olaparib might alter the exposure to alfentanil. Moderate Theoretical
- ▶ Opioids (buprenorphine) are predicted to increase the risk of opiate withdrawal when given with opioids (alfentanil). Severe Theoretical → Also see TABLE 11 p. 1492
- ▶ Opioids (pentazocine) are predicted to increase the risk of opiate withdrawal when given with opioids (alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone). Severe Theoretical → Also see TABLE 13 p. 1493 → Also see TABLE 11 p. 1492
- ▶ Opioids (buprenorphine) are predicted to increase the risk of opiate withdrawal when given with opioids (codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, pentazocine, pethidine, remifentanil, tapentadol, tramadol). Severe Theoretical → Also see TABLE 11 p. 1492
- ▶ Opioids (pentazocine) are predicted to increase the risk of opiate withdrawal when given with opioids (pethidine, remifentanil, tapentadol, tramadol). Severe Theoretical → Also see TABLE 13 p. 1493 → Also see TABLE 11 p. 1492
- ▶ Opioids might increase the risk of adverse effects when given with ozanimod. Severe Theoretical → Also see TABLE 6 p. 1491
- ▶ Palbociclib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Adjust dose. Moderate Theoretical
- ▶ Pemigatinib might decrease the exposure to methadone. Moderate Theoretical
- ▶ Pitolisant is predicted to decrease the exposure to morphine. Mild Theoretical
- ▶ Ribociclib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Use with caution and adjust dose. Moderate Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. Moderate
- ▶ Rifamycins (rifampicin) decrease the exposure to methadone. Monitor and adjust dose. Severe Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to oxycodone. Monitor and adjust dose. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to opioids (alfentanil, fentanyl). Moderate Study
- ▶ Rifamycins (rifampicin) decrease the exposure to opioids (codeine, morphine). Moderate Study
- ▶ Rucaparib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Monitor and adjust dose. Moderate Study
- ▶ Selpercatinib is predicted to increase the exposure to opioids
- (alfentanil, buprenorphine). Avoid. Moderate Study ▶ Sotorasib is predicted to decrease the exposure to alfentanil. Avoid or adjust dose. [Moderate] Theoretical
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of codeine. Moderate Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of tramadol. Severe Study → Also see TABLE 13 p. 1493
- ▶ St John's wort decreases the exposure to methadone. Monitor and adjust dose. Severe Study → Also see TABLE 13 p. 1493
- ► St John's wort moderately decreases the exposure to
- oxycodone. Adjust dose. Moderate Study Terbinafine is predicted to decrease the efficacy of codeine.
- Moderate Theoretical ▶ Terbinafine is predicted to decrease the efficacy of tramadol.
- Severe Study ► Tucatinib is predicted to increase the exposure to alfentanil.
- Avoid or adjust dose. Moderate Theoretical
- **Opium** → see interactions of codeine and morphine under opioids

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine → see TABLE 10 p. 1492 (antimuscarinics)

➤ Antipsychotics, second generation (clozapine) can cause constipation, as can orphenadrine; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Oseltamivir

- ► Leflunomide is predicted to increase the exposure to oseltamivir. Moderate Theoretical
- Nitisinone is predicted to increase the exposure to oseltamivir.
 Moderate Study
- ► Teriflunomide is predicted to increase the exposure to oseltamivir. Moderate Study

Osilodrostat → see TABLE 9 p. 1492 (QT-interval prolongation)

- Osilodrostat is predicted to increase the exposure to agomelatine. [Moderate] Study
- Osilodrostat is predicted to increase the exposure to aminophylline. Adjust dose. Moderate Theoretical
- Osilodrostat is predicted to increase the exposure to anaesthetics, local (ropivacaine). Moderate Theoretical
- ► Osilodrostat is predicted to increase the exposure to anagrelide. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to osilodrostat. Moderate Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to osilodrostat. Moderate Theoretical
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to osilodrostat. [Moderate]
 Theoretical → Also see TABLE 9 p. 1492
- Osilodrostat increases the concentration of antipsychotics, second generation (clozapine). Monitor adverse effects and adjust dose. Severe Study
- Osilodrostat is predicted to increase the exposure to antipsychotics, second generation (olanzapine). Adjust dose.
 Moderate Anecdotal
- Cobicistat is predicted to increase the exposure to osilodrostat.
 [Moderate] Theoretical
- Osilodrostat is predicted to increase the exposure to dopamine receptor agonists (ropinirole). Adjust dose. [Moderate] Study
- ➤ Osilodrostat are predicted to increases the exposure to erlotinib. Monitor adverse effects and adjust dose. Moderate Study
- ► HIV-protease inhibitors are predicted to increase the exposure to osilodrostat. Moderate Theoretical
- Idelalisib is predicted to increase the exposure to osilodrostat.
 Moderate Theoretical
 Osilodrostat is predicted to increase the exposure to loxapine.
- Osilodrostat is predicted to increase the exposure to loxapine.
 Avoid. Unknown Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to osilodrostat. Moderate Theoretical → Also see TABLE 9 p. 1492
- ➤ Osilodrostat slightly increases the exposure to MAO-B inhibitors (rasagiline). Moderate Study
- Osilodrostat is predicted to increase the exposure to melatonin. [Moderate] Theoretical
- Mitotane is predicted to decrease the exposure to osilodrostat.
 Moderate Theoretical
- ➤ Osilodrostat is predicted to increase the exposure to phenothiazines (chlorpromazine). Moderate Theoretical → Also see TABLE 9 p. 1492
- Osilodrostat is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Moderate Theoretical
- Osilodrostat is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to osilodrostat. Moderate Theoretical

- Osilodrostat is predicted to increase the exposure to riluzole.
 Moderate Theoretical
- Osilodrostat is predicted to increase the exposure to SNRIs (duloxetine). [Moderate] Theoretical
- ► Osilodrostat is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical
- ► Osilodrostat increases the exposure to tizanidine. Avoid. Moderate Study → Also see TABLE 9 p. 1492
- Osilodrostat is predicted to increase the exposure to triptans (zolmitriptan). Adjust zolmitriptan dose, p. 515. Moderate

 Theoretical
- **Osimertinib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ► Osimertinib is predicted to increase the exposure to aliskiren.

 Moderate Study
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to moderately decrease the exposure to osimertinib. Avoid. Moderatel Study → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to osimertinib. Avoid. [Moderate] Study
- Osimertinib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). [Moderate] Study
- Osimertinib is predicted to increase the exposure to colchicine.
 Moderate Study
- Dabrafenib is predicted to decrease the exposure to osimertinib. Use with caution or avoid. Severe Study
- Osimertinib is predicted to increase the exposure to digoxin.
 [Moderate] Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to osimertinib. Use with caution or avoid. [Severe] Study
- Osimertinib is predicted to increase the exposure to everolimus. [Moderate] Study
- Osimertinib is predicted to increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Study
- Osimertinib is predicted to increase the exposure to loperamide. [Moderate] Study
- Mitotane is predicted to moderately decrease the exposure to osimertinib. Avoid. Moderate Study
- ► Modafinil is predicted to decrease the exposure to osimertinib. Use with caution or avoid. Severe Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to osimertinib. Use with caution or avoid. Severe Study → Also see TABLE 9 p. 1492
- ► NNRTIS (etravirine) are predicted to decrease the exposure to osimertinib. Use with caution or avoid. Severe Theoretical
- ► Rifamycins (rifampicin) are predicted to moderately decrease the exposure to osimertinib. Avoid. Moderate Study
- Osimertinib is predicted to increase the exposure to sirolimus.
 Moderate Study
- ► St John's wort is predicted to decrease the exposure to osimertinib. Avoid. Severe Study
- ► Osimertinib causes a small increase in the exposure to statins (rosuvastatin). Severe Study
- ► Osimertinib is predicted to increase the exposure to talazoparib. Moderate Study
- ➤ Osimertinib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). [Moderate] Study
- Osimertinib is predicted to increase the exposure to thrombin inhibitors (dabigatran). [Moderate] Study
- ► Osimertinib is predicted to increase the exposure to topotecan.

 [Moderate] Study

Ospemifene

- Anti-androgens (apalutamide, enzalutamide) are predicted to moderately decrease the exposure to ospemifene. Moderate
 Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to ospemifene. [Moderate] Study
- Antifungals, azoles (fluconazole) increase the exposure to ospemifene. Use with caution or avoid. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to ospemifene. Avoid in poor CYP2C9 metabolisers. [Moderate] Study

Ospemifene (continued)

- ► Cobicistat is predicted to increase the exposure to ospemifene. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ► Combined hormonal contraceptives potentially oppose the effects of ospemifene. Avoid. Severe Theoretical
- Dabrafenib is predicted to decrease the exposure to ospemifene. Moderate Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to ospemifene. [Moderate] Study
- HIV-protease inhibitors are predicted to increase the exposure to ospemifene. Avoid in poor CYP2C9 metabolisers. Moderate Study
- ► Hormone replacement therapy potentially opposes the effects of ospemifene. Avoid. Severe Theoretical
- Idelalisib is predicted to increase the exposure to ospemifene.
 Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- Macrolides (clarithromycin) are predicted to increase the exposure to ospemifene. Avoid in poor CYP2C9 metabolisers.
 Moderate Study
- Mitotane is predicted to moderately decrease the exposure to ospemifene. Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ospemifene. [Moderate] Study
- Rifamycins (rifampicin) are predicted to moderately decrease the exposure to ospemifene. Moderate Study
- St John's wort is predicted to decrease the exposure to ospemifene. Moderate Study

Oxaliplatin → see platinum compounds
Oxazepam → see benzodiazepines
Oxcarbazepine → see antiepileptics
Oxybuprocaine → see anaesthetics, local

Oxybutynin → see TABLE 10 p. 1492 (antimuscarinics)

- Oxybutynin potentially increases the risk of overheating and dehydration when given with antiepileptics (zonisamide). Avoid in children. Severe Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to oxybutynin. Mild Study
- ➤ Antipsychotics, second generation (clozapine) can cause constipation, as can oxybutynin; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492
- ► Cobicistat is predicted to increase the exposure to oxybutynin.

 Mild Study
- ► HIV-protease inhibitors are predicted to increase the exposure to oxybutynin. Mild Study
- Idelalisib is predicted to increase the exposure to oxybutynin.
 Mild Study
- Macrolides (clarithromycin) are predicted to increase the exposure to oxybutynin. Mild Study

Oxycodone → see opioids

Oxymetholone

- ➤ Oxymetholone increases the anticoagulant effect of coumarins. Severe Anecdotal
- Oxymetholone increases the anticoagulant effect of phenindione. Severe Anecdotal

Oxytetracycline → see tetracyclines

Oxytocin

 Misoprostol can cause uterine contractions, as can oxytocin; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping misoprostol.
 [Severe] Theoretical

Ozanimod → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Tyramine-rich foods might increase the risk of hypertensive crisis when given ozanimod.

- ► Ciclosporin is predicted to increase the exposure to the active metabolites of ozanimod. Avoid. [Moderate] Study
- Clopidogrel is predicted to increase the exposure to the active metabolites of ozanimod. Moderate Study
- Eltrombopag is predicted to increase the exposure to the active metabolites of ozanimod. Avoid. [Moderate] Study
- ► Fibrates (gemfibrozil) are predicted to increase the exposure to the active metabolites of ozanimod. [Moderate] Study
- Leflunomide is predicted to increase the exposure to the active metabolites of ozanimod. Avoid. [Moderate] Study

- Ozanimod might increase the risk of a hypertensive crisis when given with linezolid. Avoid. Severe Theoretical
- ► Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with ozanimod. Avoid and for 3 months after stopping ozanimod. Severe Theoretical
- Ozanimod might increase the risk of a hypertensive crisis when given with MAO-B inhibitors and MAO-B inhibitors might decrease the exposure to the active metabolites of ozanimod. Avoid. Severe Theoretical → Also see TABLE 6 p.1491
- Ozanimod might increase the risk of a hypertensive crisis when given with MAOIs, irreversible. Avoid. [Severe] Theoretical
- ► Methylphenidate is predicted to increase the risk of a hypertensive crisis when given with ozanimod. Severe Theoretical
- Ozanimod might increase the risk of a hypertensive crisis when given with moclobemide. Avoid. Severe Theoretical
- Monoclonal antibodies (alemtuzumab) are predicted to increase the risk of generalised infection (possibly life-threatening) when given with ozanimod. Avoid. [Severe] Theoretical
- ► Opioids might increase the risk of adverse effects when given with ozanimod. Severe Theoretical → Also see TABLE 6 p. 1491
- Rifamycins (rifampicin) moderately decrease the exposure to the active metabolites of ozanimod. Avoid. [Moderate] Study
- ► SNRIs (duloxetine) might increase the risk of adverse effects when given with ozanimod. [Severe] Theoretical
- ► SSRIs might increase the risk of adverse effects when given with ozanimod. [Severe] Theoretical
- ➤ Sympathomimetics, vasoconstrictor might increase the risk of a hypertensive crisis when given with ozanimod. Severe

 Theoretical
- Teriflunomide is predicted to increase the exposure to the active metabolites of ozanimod. Avoid. Moderate Study
- ► Tricyclic antidepressants might increase the risk of adverse effects when given with ozanimod. Severe Theoretical

Paclitaxel → see taxanes

- Palbociclib → see TABLE 15 p. 1493 (myelosuppression)

 Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to palbociclib. Avoid. Severe Study
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 1072. [Severe] Study
- Palbociclib increases the exposure to benzodiazepines (midazolam). Moderatel Study
- ▶ Palbociclib is predicted to increase the exposure to ciclosporin. Adjust dose. Moderate Theoretical
- Cobicistat is predicted to increase the exposure to palbociclib.
 Avoid or adjust palbociclib dose, p. 1072. Severe Study
- ► Palbociclib is predicted to increase the exposure to ergotamine. Adjust dose. Moderate Theoretical
- ► Palbociclib is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Theoretical
- Grapefruit juice is predicted to increase the exposure to palbociclib. Avoid. Severel Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 1072. [Severe]
- ► Idelalisib is predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 1072, Severel Study
- Macrolides (clarithromycin) are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 1072. [Severe] Study
- Mitotane is predicted to decrease the exposure to palbociclib. Avoid. Severe Study → Also see TABLE 15 p. 1493
- Palbociclib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Adjust dose. Moderate Theoretical
- Palbociclib is predicted to increase the exposure to pimozide.
 Adjust dose. Moderate Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- Palbociclib is predicted to increase the exposure to sirolimus.
 Adjust dose. Moderate Theoretical

- St John's wort is predicted to decrease the exposure to palbociclib. Avoid. Severe Theoretical
- Palbociclib is predicted to increase the exposure to tacrolimus.
 Adjust dose. [Moderate] Theoretical

Paliperidone → see antipsychotics, second generation

Palonosetron → see 5-HT3-receptor antagonists

Pamidronate → see bisphosphonates

Pancreatin

► Pancreatin is predicted to decrease the effects of acarbose.

Avoid. [Moderate] Theoretical

Pancuronium → see neuromuscular blocking drugs, non-depolarising Panitumumab → see monoclonal antibodies

Panobinostat → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to panobinostat. Avoid. [Moderate]
 Theoretical → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 1009. [Moderate] Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (posaconazole) are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- Panobinostat is predicted to increase the exposure to atomoxetine. Monitor and adjust dose. [Severe] Theoretical
- Panobinostat is predicted to increase the exposure to beta blockers, selective (metoprolol). Monitor and adjust dose.
 Moderate Theoretical
- Panobinostat is predicted to increase the exposure to beta blockers, selective (nebivolol). Monitor and adjust dose. Mild Theoretical
- Calcium channel blockers (verapamil) are predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical
- ► Ciclosporin is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- ► Cobicistat is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 1009. Moderate Study
- ► HIV-protease inhibitors are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 1009. Moderate Study
- ► Idelalisib is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 1009. Moderate Study
- ► Lapatinib is predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Macrolides (azithromycin, erythromycin) are predicted to increase the exposure to panobinostat. Adjust dose. Moderate

 Theoretical → Also see TABLE 9 p. 1492
- Macrolides (clarithromycin) are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 1009. [Moderate] Study → Also see TABLE 9 p. 1492
- Mitotane is predicted to decrease the exposure to panobinostat. Avoid. Moderate Theoretical → Also see TABLE 15 p. 1493
- Panobinostat is predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Ranolazine is predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to panobinostat. Avoid. Moderate Theoretical

► Vemurafenib is predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical → Also see TABLE 9 p. 1492

Pantoprazole → see proton pump inhibitors

Paracetamol → see TABLE 1 p. 1490 (hepatotoxicity)

- Alcohol (in those who drink heavily) causes severe liver damage when given with paracetamol. Severe Study → Also see TABLE 1 p. 1490
- Paracetamol is predicted to decrease the clearance of alkylating agents (busulfan). [Moderate] Theoretical
- ▶ Paracetamol is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local (prilocaine). Use with caution or avoid. Severe Theoretical
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to paracetamol.

 Moderate] Study → Also see TABLE 1 p. 1490
- Paracetamol increases the anticoagulant effect of coumarins.
 Moderate Study
- Paracetamol is predicted to increase the risk of methaemoglobinaemia when given with dapsone. Severe Theoretical
- ► Imatinib increases the risk of hepatotoxicity when given with paracetamol. [Severe] Anecdotal
- ► Paracetamol has been reported to cause high anion gap metabolic acidosis when given with penicillins (flucloxacillin). Severe) Anecdotal → Also see TABLE 1 p. 1490
- Paracetamol is predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- Pitolisant is predicted to decrease the exposure to paracetamol. [Mild] Theoretical
- Rifamycins (rifampicin) decrease the exposure to paracetamol.
 Moderate Study

Paraldehyde → see antiepileptics

Parathyroid hormone

► Bisphosphonates are predicted to decrease the effects of parathyroid hormone. Avoid. Moderate Study

Parecoxib → see NSAIDs

Paricalcitol → see vitamin D substances

Paroxetine → see SSRIs

Pasireotide → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

 Pasireotide is predicted to decrease the absorption of oral ciclosporin. Adjust dose. Severe Theoretical

Patiromer

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

Pazopanib → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

- ➤ Oral antacids are predicted to decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. Moderate Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to pazopanib. Avoid. Severe

 Theoretical → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1492
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to pazopanib. Avoid. Severe Theoretical
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1073. [Moderate] Study → Also see TABLE 9 p. 1492
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to pazopanib. [Moderate] Study
- Oral calcium salts (calcium carbonate) -containing antacids might decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids.
 Moderatel Theoretical
- ► Cobicistat is predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1073. Moderate Study

Pazopanib (continued)

- Pazopanib is predicted to increase the risk of bleeding events when given with coumarins. Severe Theoretical
- ► Crizotinib is predicted to increase the exposure to pazopanib.

 Moderate Study → Also see TABLE 9 p. 1492
- ▶ Dabrafenib is predicted to decrease the exposure to pazopanib. Severe Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to pazopanib. Severe Study
- Grapefruit juice is predicted to increase the exposure to pazopanib. Avoid. Severe Theoretical
- ► H₂ receptor antagonists are predicted to decrease the exposure to pazopanib. H₂ receptor antagonists should be taken 10 hours before or 2 hours after pazopanib. Moderate | Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1073. Moderate
- ► Idelalisib is predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1073. [Moderate] Study
- ► Imatinib is predicted to increase the exposure to pazopanib.
 Moderate Study → Also see TABLE 4 p. 1490
- ► Lapatinib increases the exposure to pazopanib. Avoid. Severe
 Study → Also see TABLE 9 p. 1492
 ► Letermovir is predicted to increase the exposure to pazopanib.
- Moderate Study
 ➤ Pazopanib is predicted to increase the exposure to lomitapide.
- Separate administration by 12 hours. Mild Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to pazopanib. Avoid or adjust pazopanib dose, p. 1073. Moderate Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to pazopanib. [Moderate] Study → Also see TABLE 9 p. 1492
- Mitotane is predicted to decrease the exposure to pazopanib.
 Avoid. Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to pazopanib. Moderate
- Nilotinib is predicted to increase the exposure to pazopanib.
 Moderate Study → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to pazopanib. Severe Study → Also see TABLE 9 p. 1492
- ► Pazopanib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ► Proton pump inhibitors are predicted to decrease the exposure to pazopanib. Avoid or administer concurrently without food.

 Moderate Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to pazopanib. Avoid. [Severe] Theoretical
- Pazopanib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- ➤ Oral sodium bicarbonate -containing antacids might decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to pazopanib. Severe Study
- Pazopanib might affect the exposure to statins (atorvastatin, pravastatin, rosuvastatin). [Moderate] Theoretical
 Pazopanib might cause increased ALT concentrations when
- given with statins (simvastatin). Moderate Study

 Pegaspargase → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15
- Pegaspargase → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)
- ▶ Pegaspargase is predicted to increase the risk of hepatotoxicity when given with imatinib. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ Pegaspargase affects the efficacy of methotrexate. Severe Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- Pegaspargase potentially increases the risk of neurotoxicity when given with vinca alkaloids (vincristine). Vincristine should be taken 3 to 24 hours before pegaspargase. Severe Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493

Peginterferon alfa → see interferons

Pembrolizumab → see monoclonal antibodies

Pemetrexed → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

- ► Antimalarials (pyrimethamine) are predicted to increase the risk of adverse effects when given with pemetrexed. Severe

 Theoretical
- Aspirin (high-dose) potentially increases the exposure to pemetrexed. Use with caution or avoid. Severe Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with pemetrexed. UKHSA advises avoid (refer to Green Book).
 Severel Theoretical
- ► NSAIDs are predicted to increase the exposure to pemetrexed.

 Use with caution or avoid. Severe Theoretical → Also see TABLE 2
 p. 1490

Pemigatinib

- Pemigatinib might increase the exposure to the active metabolite of alkylating agents (cyclophosphamide). [Moderate]
 Theoretical
- Pemigatinib might decrease the exposure to alkylating agents (ifosfamide). Moderate Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to pemigatinib. Avoid. Severe Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to pemigatinib. [Severe] Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to pemigatinib. Avoid. [Severe] Study
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to pemigatinib. Severe
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are
 predicted to increase the exposure to pemigatinib. Avoid or
 adjust pemigatinib dose, p. 1074. [Severe] Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to pemigatinib. Severe Study
- ► Cobicistat is predicted to increase the exposure to pemigatinib. Avoid or adjust pemigatinib dose, p. 1074. Severe Study
- Pemigatinib might increase the exposure to colchicine.
 Separate administration by at least 6 hours. Moderate
 Theoretical
- Crizotinib is predicted to increase the exposure to pemigatinib.
 Severel Study
- Dabrafenib is predicted to decrease the exposure to pemigatinib. Avoid or monitor. [Severe] Study
- ► Pemigatinib might increase the exposure to digoxin. Separate administration by at least 6 hours. [Moderate] Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to pemigatinib. Avoid or monitor.

 [Severe] Study
- ► Pemigatinib might increase the exposure to everolimus.

 Separate administration by at least 6 hours. Moderate

 Theoretical
- ▶ Pemigatinib might increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). Separate administration by at least 6 hours. Moderate Theoretical
- Grapefruit and grapefruit juice is predicted to increase the exposure to pemigatinib. Avoid. [Severe] Study
- ► HIV-protease inhibitors are predicted to increase the exposure to pemigatinib. Avoid or adjust pemigatinib dose, p. 1074.

 | Severel Study - ► Idelalisib is predicted to increase the exposure to pemigatinib. Avoid or adjust pemigatinib dose, p. 1074. Severe Study
- ► Imatinib is predicted to increase the exposure to pemigatinib.

 Severe Study
- Letermovir is predicted to increase the exposure to pemigatinib. Severe Study
- ► Macrolides (clarithromycin) are predicted to increase the exposure to pemigatinib. Avoid or adjust pemigatinib dose, p. 1074. [Severe] Study
- Macrolides (erythromycin) are predicted to increase the exposure to pemigatinib. Severel Study
- Mitotane is predicted to decrease the exposure to pemigatinib.
 Avoid. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to pemigatinib. [Severe] Study
- Nilotinib is predicted to increase the exposure to pemigatinib.

 | Severe | Study |

- ▶ NNRTIS (efavirenz) are predicted to decrease the exposure to pemigatinib and pemigatinib might decrease the exposure to NNRTIS (efavirenz). Avoid or monitor. Severe Study
- ▶ NNRTIS (nevirapine) are predicted to decrease the exposure to pemigatinib. Avoid or monitor. Severe Study
- ▶ Pemigatinib might decrease the exposure to opioids (methadone). Moderate Theoretical
- ▶ Pemigatinib is predicted to increase the risk of hyperphosphataemia when given with phosphate. [Moderate] Theoretical
- ▶ Proton pump inhibitors have been reported to decrease the exposure to pemigatinib. Avoid. Severe Anecdotal
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to pemigatinib. Avoid. Severe Study
- Pemigatinib might increase the exposure to sirolimus. Separate administration by at least 6 hours. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to pemigatinib. Avoid. Severe Study
- ▶ Pemigatinib might increase the exposure to thrombin inhibitors (dabigatran). Separate administration by at least 6 hours. Moderate Theoretical
- Penicillamine → see TABLE 2 p. 1490 (nephrotoxicity)
- ▶ Oral antacids decrease the absorption of oral penicillamine. Separate administration by 2 hours. [Mild] Study
- ► Antimalarials (chloroquine) are predicted to increase the risk of haematological toxicity when given with penicillamine. Avoid. Severe Theoretical
- ▶ Penicillamine potentially decreases the concentration of digoxin. Separate administration by 2 hours. Severe Anecdotal
- Hydroxychloroquine is predicted to increase the risk of haematological toxicity when given with penicillamine. Avoid. Severe Theoretical
- ▶ Oral iron is predicted to decrease the absorption of oral penicillamine. Separate administration by at least 2 hours.
- ▶ Zinc is predicted to decrease the absorption of penicillamine. Mild Theoretical

Penicillins → see TABLE 1 p. 1490 (hepatotoxicity)

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin • flucloxacillin • phenoxymethylpenicillin • piperacillin · pivmecillinam · temocillin

- ▶ Allopurinol increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). Moderate Study
- ► Antiepileptics (valproate) increase the risk of adverse effects when given with pivmecillinam. Avoid, Severe Anecdotal
- ▶ Penicillins potentially alter the anticoagulant effect of coumarins. Monitor INR and adjust dose. Severe Anecdotal
- ▶ Leflunomide is predicted to increase the exposure to benzylpenicillin. Moderate Theoretical
- ▶ Penicillins are predicted to increase the risk of toxicity when given with methotrexate. Severe Anecdotal → Also see TABLE 1 n. 1490
- ▶ Piperacillin increases the effects of neuromuscular blocking drugs, non-depolarising. Moderate Study
- ▶ Nitisinone is predicted to increase the exposure to benzylpenicillin. Moderate Study
- ▶ Paracetamol has been reported to cause high anion gap metabolic acidosis when given with flucloxacillin. Severe Anecdotal → Also see TABLE 1 p. 1490
- ▶ Penicillins are predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ Piperacillin increases the effects of suxamethonium. Moderate
- ▶ Teriflunomide is predicted to increase the exposure to benzylpenicillin. Moderate Study

Pentamidine → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 9 p. 1492 (QT-interval prolongation)

► Foscarnet increases the risk of hypocalcaemia when given with pentamidine. Severe Anecdotal → Also see TABLE 2 p. 1490

Pentazocine → see opioids

Pentostatin → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

- ► Alkylating agents (cyclophosphamide) (high-dose) increase the risk of toxicity when given with pentostatin. Avoid. Severe Anecdotal → Also see TABLE 15 p. 1493 → Also see TABLE 5 p. 1491
- ▶ Fludarabine increases the risk of pulmonary toxicity when given with pentostatin. Avoid. Severe Study → Also see TABLE 15 p. 1493

Pentoxifylline

- ▶ Pentoxifylline is predicted to increase the concentration of aminophylline. Use with caution or avoid. Severe Theoretical
- Quinolones (ciprofloxacin) very slightly increase the exposure to pentoxifylline. Moderate Study
- ► SSRIs (fluvoxamine) are predicted to increase the exposure to pentoxifylline. Moderate Theoretical
- ▶ Pentoxifylline increases the concentration of theophylline. Monitor and adjust dose. Severe Study

Peppermint

▶ Peppermint oil is predicted to increase the exposure to Iomitapide. Separate administration by 12 hours. Moderate Theoretical

Perampanel → see antiepileptics **Pericyazine** → see phenothiazines Perindopril → see ACE inhibitors

Pertuzumab → see monoclonal antibodies

Pethidine → see opioids Phenazone → see NSAIDs

Phenelzine → see MAOIs, irreversible

Phenindione → see TABLE 3 p. 1490 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ► Antiarrhythmics (propafenone) are predicted to increase the anticoagulant effect of phenindione. Monitor and adjust dose. Moderate Theoretical
- ► Antifungals, azoles (miconazole) greatly increase the anticoagulant effect of phenindione. Severe Theoretical
- ► Cephalosporins (cefazolin, ceftriaxone) potentially increase the risk of bleeding events when given with phenindione. Severe
- Ceritinib is predicted to increase the exposure to phenindione. Severe Theoretical
- ► Corticosteroids are predicted to increase the effects of phenindione. Moderate Anecdotal
- ► Crizotinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ Dabrafenib is predicted to decrease the exposure to phenindione. Moderate Study
- Disulfiram is predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- ▶ Enteral feeds (vitamin-K containing) potentially decrease the effects of phenindione. Severe Theoretical
- ▶ Erlotinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ Fibrates are predicted to increase the anticoagulant effect of phenindione. Monitor INR and adjust dose. Severe Study
- ► Gefitinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ H₂ receptor antagonists (cimetidine) increase the exposure to phenindione. Severe Anecdotal
- ► Imatinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ Lapatinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ▶ Nandrolone is predicted to increase the anticoagulant effect of phenindione. Monitor and adjust dose. Severe Theoretical
- ▶ Nilotinib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ► Oxymetholone increases the anticoagulant effect of phenindione. Severe Anecdotal
- ▶ Paracetamol is predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- ▶ Pazopanib is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical

Phenindione (continued)

- Penicillins are predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- Ranibizumab is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- Selumetinib might increase the risk of bleeding when given with phenindione. Severel Theoretical
 Severel Theoretical
- Sorafenib is predicted to increase the risk of bleeding events when given with phenindione. [Severe] Theoretical
- Statins (rosuvastatin) are predicted to increase the anticoagulant effect of phenindione. Monitor INR and adjust dose. [Severe] Theoretical
- ► Tetracyclines are predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- Tigecycline is predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- ► Tofacitinib is predicted to increase the risk of bleeding when given with phenindione. [Severe] Theoretical
- Vemurafenib is predicted to increase the exposure to phenindione. [Moderate] Study

Phenobarbital → see antiepileptics

Phenothiazines → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

chlorpromazine • levomepromazine • pericyazine • prochlorperazine • promazine • trifluoperazine

FOOD AND LIFESTYLE Chlorpromazine dose adjustment might be necessary if smoking started or stopped during treatment.

- Phenothiazines are predicted to decrease the effects of amfetamines and amfetamines are predicted to decrease the effects of phenothiazines. Moderate Study
- Oral antacids decrease the absorption of oral phenothiazines.
 Moderate Anecdotal
- Chlorpromazine decreases the concentration of antiepileptics (phenobarbital, primidone) and antiepileptics (phenobarbital, primidone) decrease the concentration of chlorpromazine.
 Moderatej Study → Also see TABLE 11 p. 1492
- ► Antipsychotics, second generation (clozapine) can cause constipation, as can phenothiazines; concurrent use might increase the risk of developing intestinal obstruction. (Severe) Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ► Combined hormonal contraceptives is predicted to increase the exposure to chlorpromazine. Moderate Theoretical
- Chlorpromazine is predicted to increase the risk of hyponatraemia when given with desmopressin. Severel Theoretical
- Phenothiazines are predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ Phenothiazines decrease the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. Severe Study → Also see TABLE 8 p. 1491
- ► Phenothiazines potentially increase the risk of neurotoxicity when given with lithium. Severe Anecdotal → Also see TABLE 9 n. 1402
- ► MAOIs, irreversible are predicted to increase the risk of neuroleptic malignant syndrome when given with phenothiazines. Severe Theoretical → Also see TABLE 8 p. 1491
- ► Chlorpromazine decreases the effects of metyrapone. Avoid. Moderate Theoretical
- Mexiletine is predicted to increase the exposure to chlorpromazine. [Moderate] Theoretical
- Moclobemide increases the risk of adverse effects when given with levomepromazine. [Moderate] Study
- ► Osilodrostat is predicted to increase the exposure to chlorpromazine. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- Quinolones (ciprofloxacin) are predicted to increase the exposure to chlorpromazine. Moderate Theoretical
- Rucaparib is predicted to increase the exposure to chlorpromazine. [Moderate] Theoretical
- ► SSRIs (fluvoxamine) are predicted to increase the exposure to chlorpromazine. Moderate Theoretical

► Vemurafenib is predicted to increase the exposure to chlorpromazine. Moderate Theoretical → Also see TABLE 9 p. 1492 Phenoxymethylpenicillin → see penicillins

Phenylephrine → see sympathomimetics, vasoconstrictor

Phenytoin → see antiepileptics

Pholcodine

- Pholcodine is predicted to increase the risk of CNS excitation or depression when given with MAOIs, irreversible. Avoid and for 14 days after stopping the MAOI. Severe Theoretical Phosphate
- Pemigatinib is predicted to increase the risk of hyperphosphataemia when given with phosphate. [Moderate]

 Theoretical

Phosphodiesterase type-4 inhibitors

apremilast · roflumilast

- Aminophylline is predicted to slightly increase the exposure to roflumilast. Avoid. [Moderate] Theoretical
- Anti-androgens (apalutamide, enzalutamide) moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to roflumilast. Avoid. Moderate Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ► Combined hormonal contraceptives is predicted to increase the exposure to roflumilast. Moderate Theoretical
- H₂ receptor antagonists (cimetidine) slightly increase the exposure to roflumilast. [Moderate] Study
- Mexiletine is predicted to increase the exposure to roflumilast.
 Moderate Theoretical
- Mitotane moderately decreases the exposure to apremilast.
 Avoid. [Severe] Study
- Mitotane is predicted to decrease the exposure to roflumilast. Avoid. Moderate Study
- Osilodrostat is predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- Quinolones (ciprofloxacin) are predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- Rifamycins (rifampicin) moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to roflumilast. Avoid. Moderate Study
- Rucaparib is predicted to increase the exposure to roflumilast.
 [Moderate] Theoretical
- ► SSRIs (fluvoxamine) are predicted to increase the exposure to roflumilast. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to apremilast. Avoid. Severe Theoretical
- ► Theophylline is predicted to slightly increase the exposure to roflumilast. Avoid. Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to roflumilast. [Moderate] Theoretical

Phosphodiesterase type-5 inhibitors → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation)

avanafil • sildenafil • tadalafil • vardenafil

- Alpha blockers cause significant hypotensive effects when given with phosphodiesterase type-5 inhibitors. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. Severe Study → Also see TABLE 8 p. 1491
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, tadalafil). Avoid. [Severe] Study
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (sildenafil, vardenafil). Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to avanafil. Adjust avanafil dose, p. 878. Moderate Theoretical

- Antiarrhythmics (dronedarone) are predicted to increase the exposure to sildenafil. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to tadalafil. [Severe] Theoretical
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to vardenafil. Adjust dose. Severe Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, tadalafil). Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (sildenafil, vardenafil).
 Moderate) Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to avanafil. Adjust avanafil dose, p. 878. Moderate Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to sildenafil. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879.
 Moderate] Study → Also see TABLE 9 p. 1492
- ➤ Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to tadalafil. Severe
 Theoretical
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to vardenafil. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to sildenafil. Avoid potent CYP3A4 inhibitors or adjust sildenafil dose, p. 879. [Severe]
 Study -> Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to tadalafil. Use with caution or avoid. <u>Severe</u> Study
- Antifungals, azoles (miconazole) are predicted to increase the exposure to sildenafil. Use with caution and adjust dose.
 Severe Theoretical
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to avanafil. Adjust avanafil dose, p. 878.

 Moderate Theoretical → Also see TABLE 8 p. 1491
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to sildenafil. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate]
 Study -> Also see TABLE 8 p. 1491
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to tadalafil. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to vardenafil. Adjust dose. Severe

 Theoretical → Also see TABLE 8 p. 1491
- Cenobamate is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, sildenafil, vardenafil). Adjust dose. [Moderate] Theoretical
- Cobicistat is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. [Severe] Study
- Cobicistat is predicted to increase the exposure to sildenafil.
 Avoid potent CYP3A4 inhibitors or adjust sildenafil dose,
 p. 879. Severe Study
- ► Cobicistat is predicted to increase the exposure to tadalafil.

 Use with caution or avoid. [Severe] Study
- Crizotinib is predicted to increase the exposure to avanafil.
 Adjust avanafil dose, p. 878. [Moderate] Theoretical
- ► Crizotinib is predicted to increase the exposure to sildenafil.

 Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- Crizotinib is predicted to increase the exposure to tadalafil.
 Severe Theoretical

- ► Crizotinib is predicted to increase the exposure to vardenafil. Adjust dose. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Endothelin receptor antagonists (bosentan) decrease the exposure to phosphodiesterase type-5 inhibitors. [Moderate] Study
- ► Grapefruit juice is predicted to increase the exposure to phosphodiesterase type-5 inhibitors. Use with caution or avoid.

 Moderate | Study |
- ► HIV-protease inhibitors are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. [Severe] Study
- ► HIV-protease inhibitors are predicted to increase the exposure to sildenafil. Avoid potent CYP3A4 inhibitors or adjust sildenafil dose, p. 879. [Severe] Study
- ► HIV-protease inhibitors are predicted to increase the exposure to tadalafil. Use with caution or avoid. [Severe] Study
- Idelalisib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid.
 Severe Study
- ► Idelalisib is predicted to increase the exposure to sildenafil. Avoid potent CYP3A4 inhibitors or adjust sildenafil dose, p. 879. [Severe] Study
- Idelalisib is predicted to increase the exposure to tadalafil. Use with caution or avoid. Severe Study
- ► Imatinib is predicted to increase the exposure to avanafil.

 Adjust avanafil dose, p. 878. Moderate Theoretical
- Imatinib is predicted to increase the exposure to sildenafil.
 Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
- Imatinib is predicted to increase the exposure to tadalafil.
 Severe Theoretical
- Imatinib is predicted to increase the exposure to vardenafil.
 Adjust dose. [Severe] Theoretical
- ► Letermovir is predicted to increase the exposure to avanafil.

 Adjust avanafil dose, p. 878. Moderate Theoretical
- ► Letermovir is predicted to increase the exposure to sildenafil.

 Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
- Letermovir is predicted to increase the exposure to tadalafil.
 Severe Theoretical
- Letermovir is predicted to increase the exposure to vardenafil.

 Adjust dose. Severe Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to sidenafil. Avoid potent CYP3A4 inhibitors or adjust sidenafil dose, p. 879. [Severe] Study → Also see TABLE 9 0.1492
- ► Macrolides (clarithromycin) are predicted to increase the exposure to tadalafil. Use with caution or avoid. [Severe] Study
- Macrolides (erythromycin) are predicted to increase the exposure to avanafil. Adjust avanafil dose, p. 878. [Moderate]
- Macrolides (erythromycin) are predicted to increase the exposure to sildenafil. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to tadalafil. Severe Theoretical
- ► Macrolides (erythromycin) are predicted to increase the exposure to vardenafil. Adjust dose. Severe Theoretical → Also see TABLE 9 p. 1492
- Macrolides (clarithromycin) are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. Severe Study → Also see TABLE 9 p. 1492
- Mitotane is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, tadalafil). Avoid.
 Severel Study
- Mitotane is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (sildenafil, vardenafil).
 Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to avanafil. Adjust avanafil dose, p. 878. [Moderate] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to sildenafil. Monitor or

- Phosphodiesterase type-5 inhibitors (continued) adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. Moderate | Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to tadalafil. Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to vardenafil. Adjust dose. Severe Theoretical
- ► Nicorandil is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid.

 Severe | Theoretical → Also see TABLE 8 p. 1491
- Nilotinib is predicted to increase the exposure to avanafil.
 Adjust avanafil dose, p. 878. [Moderate] Theoretical
- Nilotinib is predicted to increase the exposure to sildenafil. Monitor or adjust sildenafil dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ► Nilotinib is predicted to increase the exposure to tadalafil.

 Severe | Theoretical
- Nilotinib is predicted to increase the exposure to vardenafil.
 Adjust dose. (Severe) Theoretical → Also see TABLE 9 p. 1492
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid. [Severe] Theoretical
- ➤ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of sildenafil. Avoid or adjust dose—consult product literature. Severe Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of tadalafil. Adjust dose—consult product literature. [Severe] Theoretical
- Nitrates potentially increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. Severe Study → Also see TABLE 8 p. 1491
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. Moderate
 Theoretical → Also see TABLE 9 p. 1492
- NNRTIs (etravirine) moderately decrease the exposure to phosphodiesterase type-5 inhibitors. Adjust dose. [Moderate]
- ► Ribociclib is predicted to increase the exposure to sildenafil. Avoid. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, tadalafil). Avoid. [Severe] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (sildenafil, vardenafil).

 Moderate Theoretical
- ► Phosphodiesterase type-5 inhibitors are predicted to increase the risk of hypotension when given with sapropterin. Moderate

 Theoretical → Also see TABLE 8 p. 1491
- ► St John's wort is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. [Moderate] Theoretical
- Tucatinib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid or adjust dose. [Moderate] Theoretical

Pibrentasvir

- Pibrentasvir with glecaprevir is predicted to increase the exposure to aliskiren. Moderate Study
- Anti-androgens (apalutamide, enzalutamide) are predicted to moderately to markedly decrease the exposure to pibrentasvir.
 Avoid. [Severe] Study
- Antiarrhythmics (amiodarone) are predicted to increase the exposure to pibrentasvir. Moderate Theoretical
- Antiarrhythmics (dronedarone) potentially increase the exposure to pibrentasvir. [Moderate] Theoretical
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately to markedly decrease the exposure to pibrentasvir. Avoid. Severe Study
- Antiepileptics (eslicarbazepine, oxcarbazepine) potentially decrease the exposure to pibrentasvir. Avoid. Severe Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to pibrentasvir. Moderate Theoretical
- Pibrentasvir with glecaprevir is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine).
 Moderate Study

- ► Calcium channel blockers (verapamil) are predicted to increase the exposure to pibrentasvir. [Moderate] Theoretical
- Pibrentasvir with glecaprevir is predicted to increase the exposure to colchicine. Moderate Study
- Combined hormonal contraceptives (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with pibrentasvir. Avoid. [Severe] Study
- Crizotinib potentially decreases the exposure to pibrentasvir.
 Avoid. [Severe] Theoretical
- Dabrafenib is predicted to decrease the exposure to pibrentasvir. Avoid. Severe Study
- Pibrentasvir with glecaprevir increases the exposure to digoxin. Moderate Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to pibrentasvir. Avoid. [Severe] Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to everolimus. Moderate Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to factor XA inhibitors (edoxaban). Moderate Study
- ► HIV-protease inhibitors (atazanavir, lopinavir) boosted with ritonavir increase the exposure to pibrentasvir. Avoid. Severe Study
- ► HIV-protease inhibitors (ritonavir) potentially increase the exposure to pibrentasvir. [Severe] Theoretical
- ► Lapatinib is predicted to increase the exposure to pibrentasvir. Moderate Theoretical
- Pibrentasvir with glecaprevir is predicted to increase the exposure to loperamide. Moderate Study
- ► Lumacaftor potentially decreases the exposure to pibrentasvir.

 Avoid. Severe | Theoretical
- Macrolides are predicted to increase the exposure to pibrentasvir. [Moderate] Theoretical
- ► Mitotane is predicted to moderately to markedly decrease the exposure to pibrentasvir. Avoid. [Severe] Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of pibrentasvir. Avoid. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to pibrentasvir. Avoid. [Severe] Study
- Ranolazine is predicted to increase the exposure to pibrentasvir. [Moderate] Theoretical
- ▶ Rifamycins (rifampicin) are predicted to moderately to markedly decrease the exposure to pibrentasvir. Avoid. Severe
- Pibrentasvir with glecaprevir is predicted to increase the exposure to sirolimus. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to pibrentasvir. Avoid. Severe Study
- ► Pibrentasvir with glecaprevir markedly increases the exposure to statins (atorvastatin). Avoid. [Severe] Study
- ▶ Pibrentasvir with glecaprevir is predicted to increase the exposure to statins (fluvastatin). Moderate Theoretical
- ► Pibrentasvir with glecaprevir moderately increases the exposure to statins (pravastatin). Use with caution and adjust pravastatin dose. [Moderate] Study
- Pibrentasvir with glecaprevir moderately increases the exposure to statins (rosuvastatin). Use with caution and adjust rosuvastatin dose, p. 221. [Moderate] Study
- Pibrentasvir with glecaprevir moderately increases the exposure to statins (simvastatin). Avoid. [Moderate] Study
- ► Pibrentasvir with glecaprevir slightly increases the exposure to tacrolimus. Monitor and adjust dose. [Mild] Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to taxanes (paclitaxel). [Moderate] Study
- Pibrentasvir with glecaprevir increases the exposure to thrombin inhibitors (dabigatran). Avoid. Moderate Study
- ➤ Pibrentasvir with glecaprevir is predicted to increase the exposure to topotecan. Moderate Study
- Vemurafenib is predicted to increase the exposure to pibrentasvir. Moderate Theoretical

Pilocarpine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus

- ► Alcohol increases the risk of facial flushing and skin irritation when given with topical pimecrolimus. [Moderate] Study
- Pimecrolimus is predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- Pimozide → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to pimozide. Avoid.

 | Severe | Theoretical → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to pimozide. Avoid. Severe Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (miconazole) are predicted to increase the exposure to pimozide. Avoid. Moderate Theoretical
- ► Antipsychotics, second generation (clozapine) can cause constipation, as can pimozide; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ► Berotralstat is predicted to increase the exposure to pimozide. Avoid. Moderate Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 8 p. 1491
- ► Ceritinib is predicted to increase the exposure to pimozide.

 Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- Cobicistat is predicted to increase the exposure to pimozide.
 Avoid. Severe Study
- ► Crizotinib is predicted to increase the exposure to pimozide.

 Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Pimozide is predicted to decrease the effects of dopamine receptor agonists. Avoid. Moderate Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- Grapefruit juice increases the exposure to pimozide. Avoid.
 Severe Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to pimozide. Avoid. Severe Study
- ► Idelalisib is predicted to increase the exposure to pimozide.

 Avoid. Severe Study
- Imatinib is predicted to increase the exposure to pimozide.
 Avoid. Severe Theoretical
- ► Larotrectinib is predicted to increase the exposure to pimozide. Use with caution and adjust dose. Mild Theoretical
- Letermovir is predicted to increase the exposure to pimozide.
 Avoid. Severe Theoretical
- ▶ Pimozide decreases the effects of levodopa. Severe Theoretical → Also see TABLE 8 p. 1491
- Lorlatinib is predicted to decrease the exposure to pimozide.
 Avoid. Moderate Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to pimozide. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► Macrolides (erythromycin) are predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- Neurokinin-1 receptor antagonists are predicted to increase the exposure to pimozide. Avoid. Severe Theoretical
- Nilotinib is predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of pimozide. Avoid. Severe Theoretical
- Olaparib might alter the exposure to pimozide. Moderate
 Theoretical
- ► Palbociclib is predicted to increase the exposure to pimozide.

 Adjust dose. Moderate Theoretical
- Panobinostat is predicted to increase the exposure to pimozide. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ▶ Pitolisant is predicted to decrease the exposure to pimozide. Avoid. Severel Theoretical

- Ribociclib (high-dose) is predicted to increase the exposure to pimozide. Avoid. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Rucaparib is predicted to increase the exposure to pimozide.

 Monitor and adjust dose. [Moderate] Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see TABLE 14 p. 1493 (antidiabetic drugs)

- Pioglitazone potentially decreases the exposure to antifungals, azoles (isavuconazole). Use with caution or avoid. [Moderate]
 Theoretical
- Clopidogrel increases the exposure to pioglitazone. Monitor blood glucose and adjust dose. [Severe] Study
- ► Fenfluramine might decrease blood glucose concentrations when given with pioglitazone. Moderate Theoretical
- ► Fibrates (gemfibrozil) increase the exposure to pioglitazone.

 Monitor blood glucose and adjust dose. Severe Study
- ► Iron chelators (deferasirox) are predicted to increase the exposure to pioglitazone. Moderate Study
- Leflunomide is predicted to increase the exposure to pioglitazone. [Moderate] Study
- Mifepristone is predicted to increase the exposure to pioglitazone. [Moderate] Theoretical
- ► Opicapone is predicted to increase the exposure to pioglitazone. Avoid. Moderate Study
- ► Rifamycins (rifampicin) moderately decrease the exposure to pioglitazone. Monitor and adjust dose. Moderate Study
- St John's wort slightly decreases the exposure to pioglitazone.
 Mild Study
- Teriflunomide is predicted to increase the exposure to pioglitazone. Moderate Study

Piperacillin → see penicillins Piperaquine → see antimalarials Pirfenidone

FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- before and during treatment with pirfenidone.

 ➤ Antiepileptics (fosphenytoin, phenytoin) are predicted to
- decrease the exposure to pirfenidone. Moderate Theoretical

 ➤ Axitinib is predicted to increase the exposure to pirfenidone.

 Moderate Theoretical
- Combined hormonal contraceptives is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose.
 Moderate Study
- HIV-protease inhibitors (ritonavir) are predicted to decrease the exposure to pirfenidone. Moderate Theoretical
- ► Leflunomide is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ► Mexiletine is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- Osilodrostat is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ► Quinolones (ciprofloxacin) are predicted to increase the exposure to pirfenidone. Use with caution and adjust dose.

 Moderate] Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to pirfenidone. Avoid. Moderate Theoretical
- Rucaparib is predicted to increase the exposure to pirfenidone.
 Use with caution and adjust dose. [Moderate] Study
- SSRIs (fluvoxamine) are predicted to moderately increase the exposure to pirfenidone. Avoid. [Moderate] Study
- ► Teriflunomide is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ► Vemurafenib is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. Moderate Study Piroxicam → see NSAIDs

Pitolisant

- Pitolisant is predicted to decrease the exposure to aliskiren.
 Mild Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to moderately decrease the exposure to pitolisant. Moderate Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- Pitolisant is predicted to decrease the exposure to antihistamines, non-sedating (fexofenadine). [Mild] Theoretical

Pitolisant (continued)

- Antihistamines, sedating are predicted to decrease the efficacy of pitolisant. Moderate Theoretical
- ► Pitolisant is predicted to decrease the exposure to bosutinib.

 Avoid. Severe Theoretical
- Bupropion is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- Pitolisant is predicted to decrease the exposure to ciclosporin.
 Avoid. Severe Theoretical
- Cinacalcet is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- Pitolisant is predicted to decrease the exposure to colchicine.
 Mild Theoretical
- ▶ Pitolisant is predicted to decrease the efficacy of combined hormonal contraceptives. Avoid. Severe Theoretical
- ► Pitolisant is predicted to decrease the exposure to coumarins (warfarin). [Mild] Theoretical
- Pitolisant is predicted to decrease the exposure to crizotinib.
 Avoid. (Severe) Theoretical
- Pitolisant is predicted to decrease the exposure to dasatinib.
 Avoid. Severe Theoretical
- ▶ Pitolisant is predicted to decrease the exposure to digoxin. Mild Theoretical
- ▶ Pitolisant is predicted to decrease the exposure to everolimus. Avoid. Severe Theoretical
- Pitolisant is predicted to decrease the exposure to factor XA inhibitors (edoxaban). [Mild] Theoretical
- Pitolisant is predicted to decrease the exposure to irinotecan.
 Mild Theoretical
- Pitolisant is predicted to decrease the exposure to lapatinib.
 Avoid. (Severe) Theoretical
- Pitolisant is predicted to decrease the exposure to loperamide.
 Mild Theoretical
- ► Pitolisant is predicted to decrease the exposure to meglitinides (repaglinide). [Mild] Theoretical
- Pitolisant is predicted to increase the exposure to metformin.
 Mild | Theoretical
- Mianserin is predicted to decrease the efficacy of pitolisant.
 Moderate Theoretical
- Mirtazapine is predicted to decrease the efficacy of pitolisant.
 Moderate Theoretical
- Mitotane is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- Pitolisant is predicted to decrease the exposure to nilotinib.
 Avoid. Severe Theoretical
- ► Pitolisant is predicted to decrease the exposure to NNRTIS (efavirenz). [Mild] Theoretical
- Pitolisant is predicted to decrease the exposure to opioids (morphine). [Mild] Theoretical
- ► Pitolisant is predicted to decrease the exposure to paracetamol. [Mild] Theoretical
- Pitolisant is predicted to decrease the exposure to pimozide.
 Avoid. Severe Theoretical
- Rifamycins (rifampicin) are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- Pitolisant is predicted to decrease the exposure to sirolimus.
 Avoid. Severe Theoretical
- SNRIs (duloxetine) are predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ► SNRIS (venlafaxine) are predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Mild] Theoretical
- SSRIs (fluoxetine, paroxetine) are predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- St John's wort is predicted to decrease the exposure to pitolisant. Monitor and adjust dose. [Moderate] Theoretical
- Pitolisant is predicted to decrease the exposure to tacrolimus.
 Avoid. Severe Theoretical
- ► Pitolisant is predicted to decrease the exposure to taxanes (docetaxel). Avoid. Severe Theoretical
- ► Pitolisant is predicted to decrease the exposure to taxanes (paclitaxel). [Mild] Theoretical
- Pitolisant is predicted to decrease the exposure to temsirolimus. Avoid. [Severe] Theoretical

- Terbinafine is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- Pitolisant is predicted to decrease the exposure to thrombin inhibitors (dabigatran). [Mild] Theoretical
- ▶ Pitolisant is predicted to decrease the exposure to topotecan. Mild | Theoretical
- Tricyclic antidepressants are predicted to decrease the efficacy of pitolisant. [Mild] Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity), TABLE 12 p. 1493 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ► Cisplatin increases the risk of pulmonary toxicity when given with bleomycin. Severe Study → Also see TABLE 15 p. 1493
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with platinum compounds. UKHSA advises avoid (refer to Green Book).
 [Severe] Theoretical

Polatuzumab vedotin → see monoclonal antibodies

Polymyxin b → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.

Polystyrene sulfonate

SEPARATION OF ADMINISTRATION Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

 Oral antacids increase the risk of metabolic alkalosis when given with oral polystyrene sulfonate. Severe Anecdotal

Pomalidomide → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

- ➤ Combined hormonal contraceptives are predicted to increase the risk of venous thromboembolism when given with pomalidomide. Avoid. Severe Theoretical
- ► Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with pomalidomide.

 Severel Theoretical
- ➤ Quinolones (ciprofloxacin) are predicted to increase the exposure to pomalidomide. Adjust pomalidomide dose, p. 1035.

 [Moderate] Theoretical
- ➤ SSRIs (fluvoxamine) moderately increase the exposure to pomalidomide. Adjust pomalidomide dose, p. 1035. Moderate Study

Ponatinib → see TABLE 4 p. 1490 (antiplatelet effects)

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to ponatinib. Moderate Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to ponatinib. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to slightly increase the exposure to ponatinib.
 Monitor and adjust ponatinib dose, p. 1075. Moderate Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to ponatinib. [Moderate] Study
- ➤ Cobicistat is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. Moderate Study
- ▶ Ponatinib might affect the effects of combined hormonal contraceptives. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- Crizotinib is predicted to increase the exposure to ponatinib.
 [Moderate] Study

- ► Dabrafenib is predicted to decrease the exposure to ponatinib.

 Severe Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to ponatinib. [Severe] Study
- Grapefruit juice is predicted to increase the exposure to ponatinib. Moderate Theoretical
- ► HIV-protease inhibitors are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. Moderatel Study
- Idelalisib is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. Moderate Study
- ► Imatinib is predicted to increase the exposure to ponatinib.
 Moderate Study → Also see TABLE 4 p. 1490
- ► Letermovir is predicted to increase the exposure to ponatinib.

 [Moderate] Study
- ► Macrolides (clarithromycin) are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. [Moderate] Study
- Macrolides (erythromycin) are predicted to increase the exposure to ponatinib. [Moderate] Study
- Mitotane is predicted to decrease the exposure to ponatinib.
 Avoid. Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ponatinib. Moderate Study
- Nilotinib is predicted to increase the exposure to ponatinib.
 Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ponatinib. Severe Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to ponatinib. Avoid. Severe Theoretical

Ponesimod → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

- ► Anti-androgens (apalutamide, enzalutamide) might decrease the exposure to ponesimod. [Moderate] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) might decrease the exposure to ponesimod. [Moderate] Theoretical
- ► Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. Avoid and for 1 week after stopping ponesimod. Severe Theoretical
- ► Mitotane might decrease the exposure to ponesimod. Moderate
 Theoretical
- ► Monoclonal antibodies (alemtuzumab) are predicted to increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. Severel Theoretical
- Rifamycins (rifampicin) might decrease the exposure to ponesimod. Moderate Theoretical

Posaconazole → see antifungals, azoles

Potassium aminobenzoate → see TABLE 16 p. 1494 (increased serum potassium)

- Potassium aminobenzoate increases the concentration of methotrexate. Moderate Theoretical
- Potassium aminobenzoate is predicted to affect the efficacy of sulfonamides. Avoid. Severe Theoretical
 Potassium canrenoate → see TABLE 16 p. 1494 (increased serum

potassium) **Potassium chloride** → see TABLE 16 p. 1494 (increased serum

potassium)

potassium)

potassium)

Potassium citrate

- Potassium citrate is predicted to decrease the efficacy of methenamine. Avoid. Moderate Theoretical
- Potassium citrate increases the risk of adverse effects when given with sucralfate. Avoid. Moderate Theoretical

Potassium-sparing diuretics → see TABLE 18 p. 1494 (hyponatraemia), TABLE 16 p. 1494 (increased serum potassium) amiloride • triamterene

Triamterene potentially increases the clearance of lithium.
 Moderate Study

Pramipexole → see dopamine receptor agonists

Prasugrel → see TABLE 4 p. 1490 (antiplatelet effects)

 Selumetinib might increase the risk of bleeding when given with prasugrel. Severe Theoretical Pravastatin → see statins

Praziquantel

- Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to praziquantel. Avoid.
 Moderate Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- Antimalarials (chloroquine) moderately decrease the exposure to praziquantel. Use with caution and adjust dose. Moderate
- ► Cobicistat is predicted to moderately increase the exposure to praziquantel. Mild Study
- Corticosteroids (dexamethasone) decrease the exposure to praziquantel. Moderate Study
- ► Grapefruit juice is predicted to increase the exposure to
- praziquantel. [Moderate] Study

 ► H₂ receptor antagonists (cimetidine) moderately increase the
- exposure to praziquantel. [Moderate] Study

 HIV-protease inhibitors are predicted to moderately increase
- the exposure to praziquantel. Mild Study

 Idelalisib is predicted to moderately increase the exposure to
- praziquantel. Mild Study

 ► Macrolides (clarithromycin) are predicted to moderately
- increase the exposure to praziquantel. [Mild] Study

 Mitotane is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- Rifamycins (rifampicin) are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study

Prazosin → see alpha blockers

Prednisolone → see corticosteroids

Pregabalin → see antiepileptics

Pridinol → see TABLE 10 p. 1492 (antimuscarinics)

 Antipsychotics, second generation (clozapine) can cause constipation, as can pridinol; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical > Also see TABLE 10 p. 1492

Prilocaine → see anaesthetics, local

Primaquine → see antimalarials **Primidone** → see antiepileptics

Procarbazine → see TABLE 15 p. 1493 (myelosuppression)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, $Bovril^{\otimes}$, Oxo^{\otimes} , $Marmite^{\otimes}$ or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ► Alcohol potentially causes a disulfiram-like reaction when given with procarbazine. [Moderate] Anecdotal
- Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone) are predicted to increase the risk of hypersensitivity reactions when given with procarbazine.
 Severej Anecdotal
- ► Antiepileptics (fosphenytoin) are predicted to increase the risk of hypersensitivity when given with procarbazine. Severe
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with procarbazine. UKHSA advises avoid (refer to Green Book).
 Severel Theoretical

Prochlorperazine → see phenothiazines

Procyclidine → see TABLE 10 p. 1492 (antimuscarinics)

- ➤ Antipsychotics, second generation (clozapine) can cause constipation, as can procyclidine; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492
- SSRIs (paroxetine) slightly increase the exposure to procyclidine. Monitor and adjust dose. [Moderate] Study

Progestogen-only contraceptives

► Lumacaftor might decrease the efficacy of oral progestogenonly contraceptives. Use additional contraceptive precautions. [Severe] Theoretical Proguanil → see antimalarials

Promazine → see phenothiazines

Promethazine → see antihistamines, sedating **Propafenone** → see antiarrhythmics

Propantheline → see TABLE 10 p. 1492 (antimuscarinics)

► Antipsychotics, second generation (clozapine) can cause constipation, as can propantheline; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Propiverine → see TABLE 10 p. 1492 (antimuscarinics)

- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) given with carbimazole are predicted to increase the exposure to propiverine. Adjust starting dose. Moderate Theoretical
- ► Antipsychotics, second generation (clozapine) can cause constipation, as can propiverine; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ► Carbimazole given with a potent CYP3A4 inhibitor is predicted to increase the exposure to propiverine. Adjust starting dose. Moderate Theoretical
- ► Cobicistat given with carbimazole is predicted to increase the exposure to propiverine. Adjust starting dose. Moderate
- ► HIV-protease inhibitors given with carbimazole are predicted to increase the exposure to propiverine. Adjust starting dose. Moderate Theoretical
- ▶ Idelalisib given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate]
- ▶ Propiverine is predicted to increase the exposure to **Iomitapide.** Separate administration by 12 hours. Moderate Theoretical
- ► Macrolides (clarithromycin) given with carbimazole are predicted to increase the exposure to propiverine. Adjust starting dose. Moderate Theoretical

Propofol → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

- ► Antiepileptics (valproate) potentially increase the
- concentration of propofol. Adjust dose. Severe Theoretical ▶ Propofol is predicted to increase the exposure to the active
- component of sacituzumab govitecan. Severe Theoretical Propranolol → see beta blockers, non-selective

Propylthiouracil

▶ Propylthiouracil is predicted to decrease the effects of metyrapone. Avoid. Moderate Theoretical

Proton pump inhibitors

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- ▶ Proton pump inhibitors are predicted to decrease the exposure to acalabrutinib. Avoid. Moderate Study
- Pantoprazole is predicted to increase the exposure to alpelisib. Moderate Theoretical
- ► Anti-androgens (apalutamide) markedly decrease the exposure to omeprazole. Avoid or monitor. Moderate Study
- ► Anti-androgens (apalutamide) are predicted to decrease the exposure to proton pump inhibitors (lansoprazole, rabeprazole). Avoid or monitor. Mild Study
- ► Antifungals, azoles (voriconazole) increase the exposure to proton pump inhibitors (esomeprazole, omeprazole). Adjust dose. Moderate Study
- ▶ Proton pump inhibitors decrease the absorption of antifungals. azoles (itraconazole). Administer itraconazole capsules with an acidic beverage. Moderate Study
- ▶ Proton pump inhibitors decrease the absorption of antifungals, azoles (ketoconazole). Administer ketoconazole with an acidic beverage. Moderate Study
- Proton pump inhibitors decrease the absorption of antifungals, azoles (posaconazole) oral suspension. Avoid. Moderate Study
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) potentially increase the exposure to benzodiazepines (clobazam). Adjust dose. Moderate Theoretical
- Proton pump inhibitors are predicted to decrease the absorption of bosutinib. Moderate Study
- ▶ Esomeprazole is predicted to increase the exposure to cannabidiol. [Moderate] Theoretical

- ► Cenobamate moderately increases the exposure to omeprazole. Adjust dose. Moderate Study
- ▶ Proton pump inhibitors are predicted to decrease the absorption of ceritinib. [Moderate] Theoretical
- ▶ Esomeprazole is predicted to increase the exposure to cilostazol. Moderate Theoretical
- Omeprazole is predicted to increase the exposure to cilostazol. Adjust cilostazol dose, p. 252. Moderate Study
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) are predicted to decrease the efficacy of clopidogrel. Avoid. Moderate Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to dacomitinib. Avoid. Moderate Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to dasatinib. Avoid. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the absorption of dipyridamole (immediate release tablets). Moderate Theoretical
- ▶ Proton pump inhibitors are predicted to decrease the exposure to erlotinib. Avoid. Moderate Study
- ► Fedratinib moderately increases the exposure to omeprazole. Monitor and adjust dose. Moderate Study
- Proton pump inhibitors are predicted to decrease the exposure to gefitinib. Severe Theoretical
- ► HIV-protease inhibitors (tipranavir) decrease the exposure to proton pump inhibitors. Avoid. Severe Study
- ▶ Proton pump inhibitors decrease the exposure to HIV-protease inhibitors (atazanavir). Avoid or adjust dose. [Severe] Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to ledipasvir. Adjust dose, see ledipasvir with sofosbuvir p. 683. Moderate Theoretical
- ▶ Proton pump inhibitors decrease the clearance of methotrexate (high-dose). Use with caution or avoid. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to neratinib. Avoid. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to oral NNRTIs (rilpivirine). Avoid. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to pazopanib. Avoid or administer concurrently without food. Moderate Study
- ▶ Proton pump inhibitors have been reported to decrease the exposure to pemigatinib. Avoid. Severe Anecdotal
- ▶ Proton pump inhibitors are predicted to decrease the exposure to selpercatinib. Manufacturer advises take selpercatinib with food, p. 1079. Moderate Study
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Theoretical
- ▶ Proton pump inhibitors potentially decrease the exposure to sofosbuvir. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to sotorasib. Avoid. Moderate Study
- ► Esomeprazole is predicted to slightly to moderately increase the exposure to SSRIs (citalopram). Monitor and adjust dose. Severe Theoretical
- ▶ Omeprazole slightly to moderately increases the exposure to SSRIs (citalopram). Monitor and adjust dose. Severe Study
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) are predicted to increase the exposure to SSRIs (escitalopram). Use with caution and adjust dose. Severe Study
- ▶ Proton pump inhibitors are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 685. Moderate Study
- ▶ Proton pump inhibitors are predicted to decrease the exposure to voxilaprevir. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study

Proxymetacaine → see anaesthetics, local

Pseudoephedrine → see sympathomimetics, vasoconstrictor **Pyrazinamide**

▶ Allopurinol is predicted to increase the risk of hyperuricaemia when given with pyrazinamide. Moderate Theoretical **Pyridostigmine** → see TABLE 6 p. 1491 (bradycardia)

 Aminoglycosides are predicted to decrease the effects of pyridostigmine. Moderate Theoretical

Pyrimethamine → see antimalarials

Quetiapine → see antipsychotics, second generation

Quinagolide → see dopamine receptor agonists

Quinapril → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see TABLE 9 p. 1492 (QT-interval prolongation)

ciprofloxacin • delafloxacin • levofloxacin • moxifloxacin • ofloxacin

- Avoid concurrent administration of dairy products and mineral-fortified drinks with *oral* ciprofloxacin due to reduced exposure.
- ➤ Since systemic absorption can follow topical application of ciprofloxacin, levofloxacin, and ofloxacin the possibility of interactions should be borne in mind.
- Interactions do not generally apply to topical use of moxifloxacin unless specified.
- ► Ciprofloxacin is predicted to increase the exposure to agomelatine. Moderate Study
- ► Ciprofloxacin is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- Ciprofloxacin is predicted to increase the exposure to anaesthetics, local (ropivacaine). Moderate Theoretical
- Ciprofloxacin is predicted to increase the exposure to anagrelide. Moderate Theoretical
- Oral antacids decrease the absorption of oral quinolones.
 Quinolones should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- ► Ciprofloxacin slightly increases the exposure to antiarrhythmics (lidocaine). [Mild] Study
- ► Ciprofloxacin affects the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. Severe Study
- Ciprofloxacin increases the concentration of antipsychotics, second generation (clozapine). Monitor adverse effects and adjust dose. Severel Study
- Ciprofloxacin is predicted to increase the exposure to antipsychotics, second generation (olanzapine). Adjust dose.
 Moderate Anecdotal
- ► Calcium salts (calcium carbonate) decrease the absorption of ciprofloxacin. Separate administration by 2 hours. Moderate
- Quinolones increase the anticoagulant effect of coumarins.
 Severel Anecdotal
- Ciprofloxacin is predicted to increase the exposure to dopamine receptor agonists (ropinirole). Adjust dose. Moderate Study
- ► Ciprofloxacin is predicted to increase the exposure to eliglustat. Avoid or adjust dose—consult product literature.

 [Severe] Theoretical
- ► Enteral feeds decrease the exposure to ciprofloxacin. Moderate
- ► Ciprofloxacin are predicted to increases the exposure to erlotinib. Monitor adverse effects and adjust dose. Moderate Study
- Ciprofloxacin is predicted to increase the exposure to ibrutinib.
 Adjust ibrutinib dose, p. 1062. Severe Theoretical
- ► Oral iron decreases the exposure to oral quinolones. Separate administration by at least 2 hours. Moderate Study
- ► Lanthanum moderately decreases the exposure to quinolones.

 Quinolones should be taken 2 hours before or 4 hours after lanthanum. [Moderate] Study
- ► Leflunomide is predicted to increase the exposure to ciprofloxacin. [Moderate] Theoretical
- Ciprofloxacin is predicted to increase the exposure to loxapine.
 Avoid. <u>Unknown</u> Theoretical
- ► Ciprofloxacin slightly increases the exposure to MAO-B inhibitors (rasagiline). Moderate Study
- Ciprofloxacin is predicted to increase the exposure to melatonin. Moderate Theoretical
- Ciprofloxacin potentially increases the risk of toxicity when given with methotrexate. [Severe] Anecdotal
- ► NSAIDs potentially increase the risk of seizures when given with quinolones. Severe Theoretical

- ► Ciprofloxacin very slightly increases the exposure to pentoxifylline. [Moderate] Study
- ► Ciprofloxacin is predicted to increase the exposure to phenothiazines (chlorpromazine). [Moderate] Theoretical
- ► Ciprofloxacin is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Moderate Theoretical
- ${\scriptstyle\blacktriangleright}$ Ciprofloxacin is predicted to increase the exposure to
- pirfenidone. Use with caution and adjust dose. Moderate Study
 ► Ciprofloxacin is predicted to increase the exposure to
- pomalidomide. Adjust pomalidomide dose, p. 1035. [Moderate]
 Theoretical
- Ciprofloxacin is predicted to increase the exposure to riluzole.
 [Moderate] Theoretical
- ► Ciprofloxacin is predicted to increase the exposure to SNRIs (duloxetine). Avoid. Moderate Theoretical
- ➤ Strontium is predicted to decrease the absorption of quinolones. Avoid. Moderate Theoretical
- ► Sucralfate decreases the exposure to quinolones. Separate administration by 2 hours. [Moderate] Study
- ► Teriflunomide is predicted to increase the exposure to ciprofloxacin. [Moderate] Theoretical
- ► Ciprofloxacin is predicted to increase the exposure to theophylline. Monitor and adjust dose. Moderate Theoretical
- Ciprofloxacin increases the exposure to tizanidine. Avoid.
 Moderate Study
- Ciprofloxacin is predicted to increase the exposure to tolvaptan. Use with caution and adjust tolvaptan dose, p. 724.
 Moderate Theoretical
- ➤ Ciprofloxacin is predicted to increase the exposure to triptans (zolmitriptan). Adjust zolmitriptan dose, p. 515. [Moderate]
 Theoretical
- ► Ciprofloxacin is predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature.

 Severe Theoretical
- Zinc is predicted to decrease the exposure to quinolones.
 Separate administration by 2 hours. Moderate Study

Rabeprazole → see proton pump inhibitors Rabies immunoglobulin → see immunoglobulins Rabies vaccine

- ➤ Antimalarials (chloroquine) decrease the efficacy of rabies vaccine (intradermal). Avoid. [Moderate] Study
- Hydroxychloroquine is predicted to decrease efficacy rabies vaccine. [Moderate] Theoretical

Raloxifene → see TABLE 5 p. 1491 (thromboembolism)

- Combined hormonal contraceptives potentially oppose the effects of raloxifene. Avoid. Severe Theoretical
- ► Hormone replacement therapy potentially opposes the effects of raloxifene. Avoid. Severe Theoretical

Raltegravir

- Oral antacids decrease the exposure to oral raltegravir. Avoid.
 Moderate Study
- ► Antiepileptics (carbamazepine) are predicted to affect the exposure to raltegravir. [Moderate] Theoretical
- ➤ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to affect the exposure to raltegravir. Use with caution or avoid. Moderate Theoretical
- ► Calcium salts (calcium carbonate) greatly decrease the exposure to raltegravir (high-dose). Avoid. [Severe] Study
- Encorafenib is predicted to increase the exposure to raltegravir. [Moderate] Theoretical
- ► HIV-protease inhibitors (atazanavir) increase the exposure to raltegravir (high-dose). Avoid. Moderate Study
- ► HIV-protease inhibitors (darunavir) increase the risk of rash when given with raltegravir. [Moderate] Study
- HIV-protease inhibitors (fosamprenavir) boosted with ritonavir decrease the exposure to raltegravir and raltegravir decreases the exposure to HIV-protease inhibitors (fosamprenavir) boosted with ritonavir. Avoid. [Severe] Study
- ► HIV-protease inhibitors (tipranavir) boosted with ritonavir are predicted to decrease the exposure to raltegravir (high-dose). Avoid. [Moderate] Study
- ▶ Rifamycins (rifampicin) slightly decrease the exposure to raltegravir. Avoid or adjust dose—consult product literature. Moderate Study

Raltegravir (continued)

► Sodium zirconium cyclosilicate is predicted to decrease the exposure to raltegravir. Separate administration by at least 2 hours. Moderate Theoretical

Raltitrexed → see TABLE 15 p. 1493 (myelosuppression)

- ▶ Folates are predicted to alter the effects of raltitrexed. Avoid. Moderate Study
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with raltitrexed. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Ramipril → see ACE inhibitors

Ramucirumab → see monoclonal antibodies

Ranihizumah

- ▶ Ranibizumab increases the risk of bleeding events when given with coumarins. Severe Theoretical
- ▶ Ranibizumab is predicted to increase the risk of bleeding events when given with danaparoid. Severe Theoretical
- ▶ Ranibizumab increases the risk of bleeding events when given with heparin. Severe Theoretical
- ▶ Ranibizumab increases the risk of bleeding events when given with low molecular-weight heparins. Severe Theoretical
- Ranibizumab is predicted to increase the risk of bleeding events when given with phenindione. Severe Theoretical
- ► Ranibizumab is predicted to increase the risk of bleeding events when given with thrombin inhibitors (argatroban). Severe Theoretical
- Ranibizumab is predicted to increase the risk of bleeding events when given with thrombin inhibitors (bivalirudin). Moderate Theoretical

Ranitidine → see H₂ receptor antagonists

Ranolazine → see TABLE 9 p. 1492 (OT-interval prolongation)

- Ranolazine is predicted to increase the exposure to afatinib. Moderate Study
- Ranolazine is predicted to increase the exposure to aliskiren. Moderate Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to ranolazine. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to ranolazine. Severe Study → Also see TABLE 9 p. 1492
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to ranolazine. Avoid. Severe Study
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to ranolazine. Severe Study → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to ranolazine. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ▶ Ranolazine is predicted to increase the exposure to berotralstat. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to beta blockers, non-selective (nadolol). Moderate Study
- ▶ Ranolazine is predicted to increase the exposure to bictegravir. Use with caution or avoid. Moderate Theoretical
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to ranolazine. Severe Study
- ▶ Ciclosporin is predicted to increase the concentration of ranolazine and ranolazine is predicted to increase the concentration of ciclosporin, Moderate Theoretical
- Cobicistat is predicted to increase the exposure to ranolazine. Avoid. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to colchicine. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1212. Severe Theoretical
- Crizotinib is predicted to increase the exposure to ranolazine. Severe Study → Also see TABLE 9 p. 1492
- ► Ranolazine increases the concentration of digoxin. Moderate ▶ Ranolazine is predicted to increase the exposure to dopamine
- receptor agonists (pramipexole). Adjust dose. Moderate Study ► Ranolazine is predicted to increase the exposure to erlotinib.
- Moderate Theoretical

- ▶ Ranolazine is predicted to increase the exposure to factor XA inhibitors (apixaban). Moderate Theoretical
- ▶ Ranolazine is predicted to slightly increase the exposure to factor XA inhibitors (edoxaban). Severe Theoretical
- ▶ Ranolazine is predicted to increase the exposure to fidaxomicin. Avoid. Moderate Study
- ▶ Ranolazine is predicted to increase the exposure to gilteritinib. Moderate Theoretical
- ► Grapefruit juice is predicted to increase the concentration of ranolazine. Avoid. Severe Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to ranolazine. Avoid. Severe Study
- ▶ Idelalisib is predicted to increase the exposure to ranolazine. Avoid. Severe Study
- ▶ Imatinib is predicted to increase the exposure to ranolazine. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to larotrectinib. Mild Theoretical
- ▶ Letermovir is predicted to increase the exposure to ranolazine. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. Mild Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to ranolazine. Avoid. Severe Study → Also see TABLE 9
- ▶ Macrolides (erythromycin) are predicted to increase the exposure to ranolazine. Severe Study → Also see TABLE 9 p. 1492
- ▶ Mitotane is predicted to decrease the exposure to ranolazine. Avoid. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to naldemedine. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ranolazine. Severe Study
- Nilotinib is predicted to increase the exposure to ranolazine. Severe Study → Also see TABLE 9 p. 1492
- ▶ Ranolazine is predicted to increase the exposure to nintedanib. Moderate Study
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of ranolazine. Avoid. Severe Theoretical
- ▶ Ranolazine is predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical → Also see **TABLE 9 p. 1492**
- ▶ Ranolazine is predicted to increase the exposure to pibrentasvir. Moderate Theoretical
- ▶ Ranolazine is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to ranolazine. Avoid. Severe Study
- ▶ St John's wort is predicted to decrease the exposure to ranolazine. Avoid. Severe Study
- ▶ Ranolazine is predicted to increase the exposure to statins (atorvastatin). Moderate Theoretical
- Ranolazine slightly increases the exposure to statins
- (simvastatin). Adjust simvastatin dose, p. 222. Moderate Study ▶ Ranolazine increases the concentration of tacrolimus. Adjust
- dose. Severe Anecdotal ▶ Ranolazine is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe
- ► Ranolazine is predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). Unknown Theoretical
- ▶ Ranolazine is predicted to increase the exposure to thrombin inhibitors (dabigatran). Severe Theoretical
- ▶ Ranolazine is predicted to increase the exposure to ticagrelor. Use with caution or avoid. Severe Study
- ▶ Ranolazine might increase the exposure to tigecycline. Mild Anecdotal
- ▶ Ranolazine is predicted to increase the exposure to topotecan. Severe Study
- ▶ Ranolazine is predicted to increase the concentration of trametinib. Moderate Theoretical
- ▶ Vemurafenib might increase the exposure to ranolazine. Use with caution or avoid. Moderate Theoretical → Also see TABLE 9 p. 1492

- Ranolazine is predicted to increase the exposure to venetoclax.
 Avoid or monitor for toxicity. Severe Theoretical
- Ranolazine might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492

Rasagiline → see MAO-B inhibitors

Reboxetine

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to reboxetine. Avoid.
 Moderate) Study
- ► Antifungals, azoles (miconazole) are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. Moderate] Theoretical
- Cobicistat is predicted to increase the exposure to reboxetine.
 Avoid. Moderate Study
- HIV-protease inhibitors are predicted to increase the exposure to reboxetine. Avoid. Moderate Study
- Idelalisib is predicted to increase the exposure to reboxetine.
 Avoid. Moderate Study
- ► Reboxetine is predicted to increase the risk of a hypertensive crisis when given with linezolid. Avoid. Severe Theoretical
- ► Reboxetine is predicted to increase the risk of hypokalaemia when given with loop diuretics. [Moderate] Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to reboxetine. Avoid. Moderate Study
- Reboxetine is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors (rasagiline, selegiline).
 Avoid. Severe Theoretical
- ▶ Reboxetine is predicted to increase the risk of a hypertensive crisis when given with MAOIs, irreversible. Avoid. Severe Theoretical
- ► Mitotane is predicted to decrease the exposure to reboxetine. Moderate Anecdotal
- Reboxetine is predicted to increase the risk of a hypertensive crisis when given with moclobemide. Avoid. Severe Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- Reboxetine is predicted to increase the risk of hypokalaemia when given with thiazide diuretics. Moderate Anecdotal

Regorafenib → see TABLE 15 p. 1493 (myelosuppression), TABLE 4 p. 1490 (antiplatelet effects)

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to regorafenib. Moderate Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to regorafenib.
 Moderate Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to regorafenib. Avoid.
 Moderatel Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to regorafenib. Moderate Study
- Cobicistat is predicted to increase the exposure to regorafenib.
 Avoid. Moderate Study
- Crizotinib is predicted to increase the exposure to regorafenib.
 Moderate Study
- ► Dabrafenib is predicted to decrease the exposure to regorafenib. [Severe] Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to regorafenib. Severe Study
- ► Grapefruit juice is predicted to increase the exposure to regorafenib. Avoid. Moderate Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to regorafenib. Avoid. Moderate Study
- ► Idelalisib is predicted to increase the exposure to regorafenib.

 Avoid. Moderate Study

- ► Imatinib is predicted to increase the exposure to regorafenib.

 Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 4

 p. 1490
- ► Letermovir is predicted to increase the exposure to regorafenib. [Moderate] Study
- Macrolides (clarithromycin) are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
- Macrolides (erythromycin) are predicted to increase the exposure to regorafenib. Moderate Study
- Regorafenib is predicted to increase the exposure to methotrexate. Moderate Theoretical → Also see TABLE 15 p. 1493
- Mitotane is predicted to decrease the exposure to regorafenib. Avoid. Moderate Study → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to regorafenib. [Moderate]
- Nilotinib is predicted to increase the exposure to regorafenib.
 Moderate Study → Also see TABLE 15 p. 1493
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to regorafenib. Severe Study
- NSAIDs (mefenamic acid) are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1490
- Rifamycins (rifampicin) are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
- Regorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to regorafenib. Avoid. Severe Study
- Regorafenib is predicted to increase the exposure to statins (atorvastatin, fluvastatin). [Moderate] Study
- Regorafenib is predicted to increase the exposure to statins (rosuvastatin). Adjust rosuvastatin dose, p. 221. [Moderate] Study
- Regorafenib is predicted to increase the exposure to sulfasalazine. Moderate Study → Also see TABLE 15 p. 1493
- Regorafenib is predicted to increase the exposure to topotecan.
 Moderate Study → Also see TABLE 15 p. 1493

Pelugolix

- Aminoglycosides (gentamicin) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate]
 Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- ➤ Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- Antiarrhythmics (propafenone) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to relugolix. Avoid. [Moderate] Study
- Antiepileptics (oxcarbazepine, topiramate) are predicted to decrease the exposure to relugolix. Avoid. [Moderate] Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ➤ Beta blockers, non-selective (carvedilol) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
- Calcium channel blockers (verapamil) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- Ciclosporin is predicted to increase the exposure to relugolix.
 Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- HIV-protease inhibitors (lopinavir, ritonavir) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- Ivacaftor is predicted to increase the exposure to relugolix.
 Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study

Relugolix (continued)

- Lapatinib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Macrolides are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Mitotane is predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- Neratinib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ▶ NNRTIs (efavirenz) are predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- ► Ranolazine is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- ► Rucaparib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ▶ St John's wort is predicted to decrease the exposure to relugolix. Avoid. Moderate Study
- ► Tetracyclines (tetracycline) are predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- ▶ Vandetanib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ► Vemurafenib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study

- ▶ Anti-androgens (apalutamide, enzalutamide) might decrease the exposure to remdesivir. Avoid. Moderate Theoretical
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) might decrease the exposure to remdesivir. Avoid. Moderate Theoretical
- Antimalarials (chloroquine) might decrease the effects of remdesivir. Avoid. Moderate Theoretical
- ► Hydroxychloroquine might decrease the effects of remdesivir. Avoid. Moderate Theoretical
- Mitotane might decrease the exposure to remdesivir. Avoid. Moderate Theoretical
- ▶ Rifamycins (rifampicin) might decrease the exposure to remdesivir. Avoid. Moderate Theoretical

Remifentanil → see opioids

Remimazolam → see benzodiazepines

Repaglinide → see meglitinides

Retigabine → see antiepileptics

Retinoids → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking acitretin and isotretinoin.
- ▶ Since systemic absorption can follow topical application of isotretinoin and tretinoin, the possibility of interactions should be borne in mind.
- Alcohol potentially increases the concentration of acitretin. Avoid and for 2 months after stopping acitretin. Moderate Study
- ► Antiarrhythmics (amiodarone) are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- ► Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole) are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- ► Antifungals, azoles (fluconazole, ketoconazole, voriconazole) are predicted to increase the risk of tretinoin toxicity when given with tretinoin. Moderate Study

- ► Antifungals, azoles (posaconazole) are predicted to increase the risk of tretinoin toxicity when given with tretinoin. Monitor and adjust dose. Severe Theoretical
- ► Clopidogrel is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- ► Cobicistat is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- ▶ Fibrates (gemfibrozil) are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- Fibrates (gemfibrozil) increase the concentration of bexarotene. Avoid. Severe Study
- ► HIV-protease inhibitors are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate
- ▶ Idelalisib is predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- ▶ Macrolides (clarithromycin) are predicted to increase the exposure to alitretinoin. Adjust alitretinoin dose, p. 1356. Moderate Theoretical
- · Acitretin is predicted to increase the concentration of methotrexate. Avoid. Moderate Anecdotal
- ▶ Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin) increase the risk of benign intracranial hypertension when given with tetracyclines. Avoid. Severe Anecdotal
- ▶ Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin) increase the risk of benign intracranial hypertension when given with tigecycline. Avoid. Severe Anecdotal
- ▶ Bexarotene is predicted to increase the risk of toxicity when given with vitamin A. Adjust dose. Moderate Theoretical
- ▶ Retinoids (acitretin, alitretinoin, isotretinoin) are predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. Severe Theoretical
- ► Tretinoin is predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. Severe Study

► Ribavirin increases the risk of anaemia and/or leucopenia when given with NRTIS (zidovudine). Avoid. Severe Study

Ribociclib → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ Ribociclib (high-dose) is predicted to increase the exposure to alpha blockers (alfuzosin). Avoid. Moderate Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to ribociclib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to ribociclib. Moderate Study → Also see TABLE 9 p. 1492
- ▶ Ribociclib (high-dose) is predicted to increase the exposure to antiarrhythmics (amiodarone). Avoid. Moderate Theoretical → Also
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to ribociclib. Avoid. Severe Study
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to ribociclib. [Moderate] Study → Also see TABLE 9 p. 1492
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 1077. Moderate Study → Also see TABLE 9
- ▶ Ribociclib (high-dose) is predicted to increase the exposure to antipsychotics, second generation (quetiapine). Avoid. Moderate
- ▶ Ribociclib moderately increases the exposure to benzodiazepines (midazolam). Avoid. Moderate Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to ribociclib. Moderate Study
- ▶ Ribociclib is predicted to increase the exposure to ciclosporin. Use with caution and adjust dose. Moderate Theoretical
- ► Cobicistat is predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 1077. Moderate Study
- ► Crizotinib is predicted to increase the exposure to ribociclib. Moderate Study → Also see TABLE 9 p. 1492

- Ribociclib is predicted to increase the exposure to digoxin.
 Moderate Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to ribociclib. [Moderate] Study
- Ribociclib (high-dose) is predicted to increase the exposure to ergotamine. Avoid. [Moderate] Theoretical
- Ribociclib is predicted to increase the exposure to everolimus.
 Use with caution and adjust dose. Moderate Theoretical
- ► Grapefruit juice is predicted to increase the exposure to ribociclib. Avoid. [Moderate] Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 1077. Moderate Study
- ► Idelalisib is predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 1077. [Moderate] Study
- ► Imatinib is predicted to increase the exposure to ribociclib.

 [Moderate] Study → Also see TABLE 15 p. 1493
- Letermovir is predicted to increase the exposure to ribociclib.
 Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to ribociclib. Avoid or adjust ribociclib dose, p. 1077.
 [Moderate] Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to ribociclib. Moderate Study → Also see TABLE 9 p. 1492
- Ribociclib is predicted to increase the exposure to metformin.
 Moderate Theoretical
- Mitotane is predicted to markedly decrease the exposure to ribociclib. Avoid. Severe Study → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ribociclib. Moderate Study
- Nilotinib is predicted to increase the exposure to ribociclib.
 Moderate | Study → Also see TABLE 15 p. 1493 → Also see TABLE 9
 n. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ribociclib. Moderate Study → Also see TABLE 9 p. 1492
- Ribociclib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Use with caution and adjust dose.
 Moderate Theoretical
- ► Ribociclib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (sildenafil). Avoid. Moderate Theoretical → Also see TABLE 9 p. 1492
- Ribociclib (high-dose) is predicted to increase the exposure to pimozide. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ► Rifamycins (rifampicin) are predicted to markedly decrease the exposure to ribociclib. Avoid. [Severe] Study
- Ribociclib is predicted to increase the exposure to sirolimus.
 Use with caution and adjust dose. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to ribociclib. Avoid. Severe Study
- ► Ribociclib is predicted to increase the exposure to statins (pravastatin, rosuvastatin). Moderate Theoretical
- Ribociclib (high-dose) is predicted to increase the exposure to statins (simvastatin). Avoid. [Moderate] Theoretical
- Ribociclib is predicted to increase the exposure to tacrolimus.
 Use with caution and adjust dose. [Moderate] Theoretical

Rifabutin → see rifamycins

Rifampicin → see rifamycins Rifamycins

rifabutin • rifampicin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ Rifampicin is predicted to decrease the exposure to 5-HT3-receptor antagonists (ondansetron). [Moderate] Study
- Rifampicin is predicted to markedly decrease the exposure to abemaciclib. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to abrocitinib.
 Avoid. Moderate Study
- ► Rifampicin is predicted to decrease the exposure to acalabrutinib. Avoid. Severe Study

- ► Rifampicin is predicted to decrease the exposure to afatinib.

 Moderate Study
- ► Rifampicin is predicted to decrease the exposure to agomelatine. Moderate Theoretical
- Rifampicin is predicted to decrease the exposure to aldosterone antagonists (eplerenone). Avoid. [Moderate] Theoretical
- ► Rifampicin decreases the exposure to aliskiren. [Moderate] Study
- Rifampicin decreases the exposure to aminophylline. Adjust dose. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to anaesthetics, local (ropivacaine). Moderate Theoretical
- ➤ Oral antacids decrease the absorption of oral rifampicin. Rifampicin should be taken 1 hour before antacids. [Moderate]
 Study.
- ▶ Rifampicin is predicted to decrease the exposure to antiandrogens (abiraterone). Avoid. Severe Study
- Rifamycins are predicted to decrease the efficacy of antiandrogens (cyproterone) with ethinylestradiol (co-cyprindiol).
 Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. Severel Study
- ► Rifampicin is predicted to decrease the exposure to antiandrogens (darolutamide). Avoid. Moderate Study
- Rifampicin is predicted to decrease the exposure to antiarrhythmics (disopyramide, dronedarone). Avoid. Severe Study
- Rifampicin is predicted to decrease the efficacy of antiarrhythmics (propafenone). [Moderate] Study
- Rifampicin is predicted to decrease the exposure to anticholinesterases, centrally acting (donepezil). [Mild] Study
- Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to rifampicin and rifampicin is predicted to decrease the exposure to antiepileptics (phenobarbital, primidone). Use with caution and adjust dose. [Moderate] Study
- ► Rifampicin slightly decreases the exposure to antiepileptics (brivaracetam). Adjust dose. Moderate Study
- ► Rifampicin decreases the concentration of antiepileptics (fosphenytoin, phenytoin). Use with caution and adjust dose.

 Moderate Study
- ► Rifampicin markedly increases the clearance of antiepileptics (lamotrigine). Adjust lamotrigine dose, p. 346. Moderate Study
- Rifampicin is predicted to decrease the exposure to antiepileptics (perampanel). Monitor and adjust dose. [Moderate]
 Study
- Antifungals, azoles (fluconazole) increase the risk of uveitis when given with rifabutin. Adjust dose. Severe Study
- Antifungals, azoles (itraconazole, posaconazole) increase the concentration of rifabutin and rifabutin decreases the concentration of antifungals, azoles (itraconazole, posaconazole). Avoid. [Severe] Study
- Antifungals, azoles (ketoconazole) are predicted to increase the concentration of rifabutin and rifabutin is predicted to decrease the concentration of antifungals, azoles (ketoconazole). Avoid. [Severe] Theoretical
- Antifungals, azoles (miconazole) are predicted to increase the concentration of rifabutin. Use with caution and adjust dose.
 Moderate Theoretical
- Rifampicin slightly decreases the exposure to antifungals, azoles (fluconazole). Adjust dose. [Moderate] Study
- Rifabutin is predicted to decrease the exposure to antifungals, azoles (isavuconazole). Avoid. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to antifungals, azoles (isavuconazole). Avoid. (Severe) Study
- Rifampicin markedly decreases the exposure to antifungals, azoles (itraconazole). Avoid and for 14 days after stopping rifampicin. Moderate Study
- Rifampicin markedly decreases the exposure to antifungals, azoles (ketoconazole) and antifungals, azoles (ketoconazole) potentially decrease the exposure to rifampicin. Avoid. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to antifungals, azoles (posaconazole). Avoid. [Moderate] Anecdotal
- Rifabutin decreases the concentration of antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) increase

Rifamycins (continued)

- the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 654. <u>Severe</u> Study
- Rifampicin very markedly decreases the exposure to antifungals, azoles (voriconazole). Avoid. [Moderate] Study
- ► Rifampicin is predicted to decrease the exposure to antihistamines, non-sedating (bilastine). Moderate Theoretical
- Rifampicin increases the clearance of antihistamines, nonsedating (fexofenadine). [Moderate] Study
- Rifampicin is predicted to decrease the exposure to antimalarials (artemether) with lumefantrine. Avoid. Severel Study
- Rifabutin slightly decreases the exposure to antimalarials (atovaquone). Avoid. Moderate Study
- Rifampicin moderately decreases the exposure to antimalarials (atovaquone) and antimalarials (atovaquone) slightly increase the exposure to rifampicin. Avoid. Moderate Study
- Rifampicin moderately decreases the exposure to antimalarials (mefloquine). Severe Study
- Rifampicin is predicted to decrease the concentration of antimalarials (piperaquine). Avoid. [Moderate] Theoretical
- ► Rifampicin decreases the exposure to antimalarials (quinine).

 Severe Study
- Rifampicin is predicted to moderately decrease the exposure to antipsychotics, second generation (aripiprazole). Adjust aripiprazole dose, p. 427. Moderate Study
- Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (cariprazine). Avoid. [Severe] Theoretical
- ► Rifampicin decreases the exposure to antipsychotics, second generation (clozapine). Severe Anecdotal
- ► Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (lurasidone). Avoid. [Moderate]
- Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (olanzapine). Monitor and adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (paliperidone). Monitor and adjust dose. Severe Study
- Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (quetiapine). Moderate Study
- Rifampicin is predicted to decrease the exposure to antipsychotics, second generation (risperidone). Adjust dose.
 Moderate Study
- Rifampicin decreases the exposure to ataluren. [Moderate] Study
 Rifampicin is predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
- Rifampicin is predicted to decrease the exposure to avatrombopag. Adjust avatrombopag dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
- ► **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to bazedoxifene. [Moderate] Theoretical
- Rifampicin decreases the exposure to bedaquiline. Avoid.
 Severe Study
- ► Rifampicin is predicted to decrease the exposure to benzodiazepines (alprazolam). Adjust dose, Moderate Theoretical
- ► Rifampicin is predicted to decrease the exposure to
- benzodiazepines (chlordiazepoxide). Moderate Theoretical

 Rifampicin moderately decreases the exposure to
- benzodiazepines (diazepam). Avoid. Moderate Study
- Rifampicin increases the clearance of benzodiazepines (lorazepam, nitrazepam). [Moderate] Study
 Rifampicin is predicted to decrease the exposure to
- benzodiazepines (midazolam). Monitor and adjust dose.

 Moderate Study
- Rifampicin is predicted to decrease the concentration of berotralstat. Avoid. [Severe] Theoretical
- Rifampicin moderately decreases the exposure to beta blockers, non-selective (carvedilol). [Moderate] Study
- Rifampicin decreases the exposure to beta blockers, nonselective (propranolol). Monitor and adjust dose. [Moderate] Study

- Rifampicin slightly decreases the exposure to beta blockers, selective (bisoprolol, metoprolol). Mild Study
- Rifampicin moderately decreases the exposure to beta blockers, selective (celiprolol). [Moderate] Study
- Rifabutin slightly decreases the exposure to bictegravir. Avoid.
 Moderate Study
- ► **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. Moderate Study
- Rifampicin slightly decreases the exposure to bortezomib.
 Avoid. [Severe] Study
- Rifampicin is predicted to very markedly decrease the exposure to bosutinib. Avoid. [Severe] Study
- ► Rifampicin is predicted to decrease the exposure to brigatinib.

 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to bupropion.
 Moderate Study
- ► Rifampicin is predicted to decrease the exposure to buspirone.

 Use with caution and adjust dose. (Severe) Study
- ► Rifabutin has been reported to cause a small decrease in the exposure to cabotegravir. Avoid intramuscular cabotegravir, p. 696. [Moderate] Study
- ► Rifampicin modestly decreases the exposure to cabotegravir. Avoid. (Severe) Study
- ► Rifampicin moderately decreases the exposure to cabozantinib.

 Avoid. Moderatel Study
- Rifampicin is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- Rifampicin greatly decreases the exposure to calcium channel blockers (diltiazem, verapamil). [Severe] Study
- ► Rifampicin moderately decreases the exposure to calcium channel blockers (nifedipine). Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to cannabidiol. Adjust dose. [Moderate] Study
- Rifampicin decreases the concentration of caspofungin. Adjust caspofungin dose, p. 646. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to ceritinib.
 Avoid. Severe Study
- Rifampicin decreases the concentration of chloramphenicol.
 Moderatel Study
- ► Rifampicin decreases the concentration of ciclosporin. Severe
- ► Rifampicin is predicted to alter the effects of cilostazol.

 [Moderate] Theoretical
- Rifampicin is predicted to decrease the exposure to cinacalcet.
 Monitor and adjust dose. Moderate Study
- ► Rifampicin decreases the exposure to clomethiazole. Monitor and adjust dose. Moderate Study
- Rifampicin moderately increases the exposure to the active metabolite of clopidogrel. Avoid. Moderate Study
- Rifabutin decreases the concentration of cobicistat and cobicistat increases the exposure to rifabutin. Avoid or adjust dose. [Severe] Study
- ► Rifampicin is predicted to decrease the exposure to cobicistat.

 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to cobimetinib. Avoid. Severe Theoretical
- Rifamycins are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 859. Severe|Study
- Rifampicin is predicted to decrease the exposure to corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone). Monitor and adjust dose.
 Moderatel Study
- ► Rifampicin is predicted to decrease the exposure to corticosteroids (fluticasone). [Unknown] Theoretical
- Rifabutin might decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- Rifampicin decreases the anticoagulant effect of coumarins.
 Severe Study

- Rifampicin is predicted to markedly decrease the exposure to crizotinib. Avoid. Severe Study
- ► Rifampicin is predicted to decrease the exposure to dabrafenib.

 Avoid. Moderate Theoretical
- ▶ Rifamycins decrease the exposure to dapsone. Moderate Study
- Rifampicin is predicted to decrease the exposure to darifenacin. [Moderate] Theoretical
- Rifampicin is predicted to markedly decrease the exposure to dasatinib. Avoid. Severe Study
- Rifampicin is predicted to slightly decrease the exposure to delamanid. Avoid. Moderate Study
- ▶ Rifamycins are predicted to decrease the efficacy of desogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- Rifampicin is predicted to markedly decrease the exposure to dienogest. [Severe] Study
- Rifampicin decreases the concentration of digoxin. [Moderate]
 Study
- Rifampicin is predicted to decrease the exposure to dipeptidylpeptidase-4 inhibitors (linagliptin). Moderate Study
- Rifampicin is predicted to moderately decrease the exposure to dipeptidylpeptidase-4 inhibitors (saxagliptin). [Moderate] Study
- Rifampicin moderately decreases the exposure to dolutegravir.
 Adjust dolutegravir dose, p. 696. Severe Study
- Rifampicin is predicted to decrease the exposure to dronabinol.
 Avoid or adjust dose. Mild Study
- ► **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. <u>Severe</u> Study
- Rifabutin is predicted to decrease the exposure to elexacaftor.
 Avoid. Severe Theoretical
- Rifampicin is predicted to decreases the exposure to elexacaftor. Avoid. [Severe] Theoretical
- Rifampicin is predicted to decrease the exposure to eliglustat.
 Avoid. Severe Study
- ► Rifampicin is predicted to decrease the exposure to eltrombopag and eltrombopag is predicted to increase the concentration of rifampicin. Moderate Theoretical
- Rifampicin is predicted to decrease the concentration of elvitegravir. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to encorafenib. Severe Theoretical
- ► Rifampicin transiently increases the exposure to endothelin receptor antagonists (ambrisentan). Moderate Study
- Rifampicin affects the exposure to endothelin receptor antagonists (bosentan). Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to endothelin receptor antagonists (macitentan). Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to entrectinib.
 Avoid. Severe Study
- Rifampicin is predicted to decrease the effects of ergotamine.
 Moderate Theoretical
 Diffusion is predicted to decrease the exposure to experinible.
- ► Rifampicin is predicted to decrease the exposure to erlotinib.

 Avoid or adjust erlotinib dose, p. 1057. [Severe] Study
- Rifampicin is predicted to decrease the exposure to esketamine. Adjust dose. [Moderate] Theoretical
- Rifamycins are predicted to decrease the efficacy of estradiol.
 Moderate Theoretical
- Rifamycins are predicted to decrease the efficacy of etonogestrel. For FSRH guidance, see Contraceptives, interactions p. 859. Severel Theoretical
- Rifampicin is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- Rifampicin moderately decreases the exposure to exemestane.
 Moderate Study
- Rifampicin is predicted to decrease the exposure to factor XA inhibitors (apixaban). Use with caution or avoid. [Severe] Study
- Rifampicin is predicted to decrease the exposure to factor XA inhibitors (edoxaban). Moderate Study
- Rifampicin is predicted to decrease the exposure to factor XA inhibitors (rivaroxaban). Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- Rifampicin is predicted to decrease the exposure to fedratinib.
 Avoid. Moderate Study
- Rifampicin is predicted to decrease the concentration of fenfluramine. Severe Theoretical

- ► Rifampicin is predicted to decrease the exposure to fesoterodine. Avoid. Moderate Study
- Rifampicin is predicted to decrease the exposure to fostamatinib. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to the active metabolite of fostemsavir. Avoid. (Severe) Study
- Rifampicin is predicted to decrease the exposure to gefitinib.
 Avoid. Severe Study
- Rifampicin moderately decreases the exposure to gilteritinib.
 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to glasdegib.
 Avoid. Severe Study
- ► Rifampicin markedly affects the exposure to glecaprevir. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to grazoprevir. Avoid. Severe Study
- Rifampicin is predicted to decrease the concentration of guanfacine. Adjust guanfacine dose, p. 384. [Moderate] Study
- Rifampicin decreases the concentration of haloperidol. Adjust dose. [Moderate] Study
- ► HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir) boosted with ritonavir increase the
- exposure to rifabutin. Monitor and adjust dose. [Severe] Study

 HIV-protease inhibitors (ritonavir) markedly increase the
 exposure to rifabutin. Avoid or adjust dose. [Severe] Study
- ➤ Rifampicin is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir). Avoid. [Severe] Study
- ► Rifampicin slightly decreases the exposure to HIV-protease inhibitors (ritonavir). Severe Study
- Rifampicin is predicted to decrease the exposure to HIVprotease inhibitors (tipranavir). Avoid. Severe Study
- Rifamycins are predicted to decrease the effects of hormone replacement therapy. Moderate Anecdotal
- ► Rifampicin is predicted to decrease the exposure to ibrutinib. Avoid or monitor. (Severe) Study
- ► Rifampicin is predicted to decrease the exposure to idelalisib.

 Avoid. | Severe | Study
- Rifampicin is predicted to decrease the exposure to imatinib.
 Avoid. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to irinotecan.
 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to iron chelators (deferasirox). Monitor serum ferritin and adjust dose.
 Moderate Study
- Rifampicin is predicted to decrease the exposure to ivabradine.
 Adjust dose. [Moderate] Theoretical
- Rifampicin is predicted to decrease the exposure to ivacaftor.
 Avoid. Severe Study
- ► Rifampicin is predicted to decrease the exposure to ixazomib.

 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to lapatinib.
 Avoid. |Severe| Study
- Rifampicin is predicted to moderately decrease the exposure to larotrectinib. Avoid. [Moderate] Study
- Rifabutin is predicted to decrease the exposure to ledipasvir.
 Avoid. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to ledipasvir.
 Avoid. Severe Study
- Leflunomide is predicted to increase the exposure to rifampicin. [Moderate] Theoretical
- Rifabutin is predicted to decrease the concentration of letermovir. Moderate Theoretical
- ► Rifampicin is predicted to affect the concentration of letermovir. Severe Theoretical
- ▶ Rifamycins are predicted to decrease the efficacy of levonorgestrel. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Rifampicin slightly decreases the exposure to linezolid.
 Moderate Study
- Rifampicin is predicted to decrease the exposure to lomitapide.
 Monitor and adjust dose. Moderate Theoretical
- Rifampicin is predicted to decrease the exposure to lorlatinib.
 Avoid. Severe Study

Interactions | Appendix 1

Rifamycins (continued)

- Lumacaftor is predicted to decrease the exposure to rifabutin. Adjust dose. Moderate Theoretical
- ► Macrolides (erythromycin) are predicted to increase the concentration of rifabutin and rifabutin is predicted to decrease the concentration of macrolides (erythromycin). Monitor and adjust dose. Severe Theoretical
- ▶ Rifabutin has been reported to cause neutropenia when given with macrolides (azithromycin). Severe Study
- Rifabutin decreases the concentration of macrolides (clarithromycin) and macrolides (clarithromycin) increase the concentration of rifabutin. Monitor and adjust dose. Severe
- Rifampicin greatly decreases the concentration of macrolides (clarithromycin). Severe Study
- ► Rifampicin is predicted to decrease the exposure to maraviroc. Adjust dose. Severe Study
- Rifampicin is predicted to decrease the exposure to meglitinides (repaglinide). Monitor blood glucose and adjust dose. Moderate
- ▶ Rifampicin is predicted to decrease the exposure to melatonin. Moderate Theoretical
- Rifampicin is predicted to increase the clearance of mexiletine. Monitor and adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to midostaurin. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to mifepristone. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to mirtazapine. Adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to modafinil. Moderate Theoretical
- ▶ Rifampicin decreases the effects of monoclonal antibodies (brentuximab vedotin). Severe Study
- ▶ Rifampicin is predicted to decrease the exposure to monoclonal antibodies (polatuzumab vedotin). [Moderate] Theoretical
- Rifampicin is predicted to decrease the exposure to montelukast. [Mild] Study
- Rifampicin decreases the concentration of mycophenolate. Monitor and adjust dose. Severe Study ▶ Rifampicin is predicted to markedly decrease the exposure to
- naldemedine. Avoid. Severe Study ▶ Rifampicin is predicted to markedly decrease the exposure to
- naloxegol. Avoid. Moderate Study
- Rifampicin is predicted to decrease the exposure to neratinib. Avoid. Severe Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to neurokinin-1 receptor antagonists (aprepitant). Avoid. Moderate Study
- ► Rifampicin is predicted to decrease the exposure to neurokinin-1 receptor antagonists (fosaprepitant). Avoid. Moderate Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to neurokinin-1 receptor antagonists (netupitant). Avoid. Severe Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to nilotinib. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to nintedanib. Moderate Study
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of rifabutin. Adjust dose. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir, Avoid, Severe Study
- ▶ Rifampicin is predicted to decrease the exposure to nitisinone. Adjust dose. Moderate Theoretical
- ▶ NNRTIS (efavirenz) slightly decrease the exposure to rifabutin. Adjust dose. Severe Study
- ► Rifabutin moderately decreases the exposure to NNRTIS (doravirine). Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Moderate Study
- ► Rifampicin is predicted to decrease the exposure to NNRTIS (doravirine). Avoid. Severe Study
- ► Rifampicin slightly decreases the exposure to NNRTIS (efavirenz). Adjust dose. Severe Study
- Rifabutin decreases the exposure to NNRTIs (etravirine). Moderate Study

- ▶ Rifampicin is predicted to decrease the exposure to NNRTIS (etravirine). Avoid. Severe Theoretical
- ► Rifampicin decreases the concentration of NNRTIs (nevirapine). Avoid. Severe Study
- ▶ Rifabutin modestly decreases the exposure to NNRTIS (rilpivirine). Avoid or adjust dose—consult product literature. Severe Study
- ► Rifampicin markedly decreases the exposure to NNRTIS (rilpivirine). Avoid. Severe Study
- ▶ Rifamycins are predicted to decrease the efficacy of norethisterone. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ▶ Rifampicin moderately decreases the exposure to NSAIDs (celecoxib, diclofenac, etoricoxib). Moderate Study
- Rifampicin is predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to opioids (alfentanil, fentanyl). Moderate Study
- ▶ Rifampicin is predicted to decrease the exposure to opioids (buprenorphine). Monitor and adjust dose. Moderate Theoretical
- ▶ Rifampicin decreases the exposure to opioids (codeine, morphine). Moderate Study
- Rifampicin decreases the exposure to opioids (methadone). Monitor and adjust dose. Severe Study
- ► Rifampicin is predicted to decrease the exposure to opioids (oxycodone). Monitor and adjust dose. Moderate Study
- ▶ Rifampicin is predicted to decrease the exposure to osilodrostat. Moderate Theoretical
- ▶ Rifampicin is predicted to moderately decrease the exposure to osimertinib. Avoid. Moderate Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to ospemifene. Moderate Study
- ▶ Rifampicin moderately decreases the exposure to the active metabolites of ozanimod. Avoid. Moderate Study
- ▶ Rifampicin is predicted to decrease the exposure to palbociclib. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to panobinostat. Avoid. Moderate Theoretical
- ► Rifampicin decreases the exposure to paracetamol. Moderate
- ▶ Rifampicin is predicted to decrease the exposure to pazopanib. Avoid. Severe Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to pemigatinib. Avoid. Severe Study
- ▶ Rifampicin moderately decreases the exposure to phosphodiesterase type-4 inhibitors (apremilast). Avoid. Severe
- ▶ Rifampicin is predicted to decrease the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Avoid. Moderate Study
- ▶ Rifampicin is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (avanafil, tadalafil). Avoid. Severe Study
- ▶ Rifampicin is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (sildenafil, vardenafil). Moderate Theoretical
- ▶ Rifampicin is predicted to moderately to markedly decrease the exposure to pibrentasvir. Avoid. Severe Study
- ▶ Rifampicin moderately decreases the exposure to pioglitazone. Monitor and adjust dose. Moderate Study
- ▶ Rifampicin is predicted to decrease the exposure to pirfenidone. Avoid. Moderate Theoretical
- ▶ Rifampicin is predicted to moderately decrease the exposure to pitolisant. Moderate Study
- Rifampicin is predicted to decrease the exposure to ponatinib. Avoid. Moderate Theoretical
- Rifampicin might decrease the exposure to ponesimod. Moderate Theoretical
- Rifampicin is predicted to markedly decrease the exposure to praziquantel. Avoid. Moderate Study
- ▶ Rifampicin slightly decreases the exposure to raltegravir. Avoid or adjust dose—consult product literature. Moderate
- Rifampicin is predicted to decrease the exposure to ranolazine. Avoid. Severe Study

- Rifampicin is predicted to decrease the exposure to reboxetine.
 [Moderate] Anecdotal
- Rifampicin is predicted to decrease the exposure to regorafenib. Avoid. Moderate Study
- Rifampicin is predicted to decrease the exposure to relugolix.
 Avoid. Moderate Study
- Rifampicin might decrease the exposure to remdesivir. Avoid.
 Moderate Theoretical
- ► Rifampicin is predicted to markedly decrease the exposure to ribociclib. Avoid. [Severe] Study
- Rifampicin might decrease the exposure to roxadustat.
 Monitor haemoglobin and adjust roxadustat dose, p. 1103.
 Moderate Study
- Rifampicin is predicted to decrease the exposure to ruxolitinib.
 Monitor and adjust dose. Moderate Study
- ► Rifampicin is predicted to decrease the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- Rifampicin moderately decreases the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to selpercatinib. Avoid. [Moderate] Study
- ► Rifampicin is predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ► **Rifampicin** is predicted to decrease the exposure to **siponimod**.

 Severe Study
- Rifampicin is predicted to decrease the concentration of sirolimus. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to SNRIs (duloxetine). Moderate Theoretical
- Rifampicin moderately decreases the exposure to sodium glucose co-transporter 2 inhibitors (canagliflozin). Adjust canagliflozin dose, p. 772. [Moderate] Study
- Rifampicin might decrease the exposure to sodium glucose cotransporter 2 inhibitors (empagliflozin). Avoid or monitor diabetic control. [Moderate] Theoretical
- ► Rifampicin is predicted to decrease the exposure to sofosbuvir.

 Avoid. [Severe] Study
- ► Rifampicin is predicted to decrease the exposure to solifenacin.

 [Moderate] Theoretical
- ► Rifampicin is predicted to decrease the exposure to sorafenib.
- Moderate Theoretical

 ► Rifampicin is predicted to decrease the exposure to sotorasib.

 Avoid. [Severe] Study
- ► Rifampicin markedly decreases the exposure to statins (atorvastatin). Manufacturer advises take both drugs at the same time. [Moderate] Study
- ► Rifampicin moderately decreases the exposure to statins (fluvastatin). Monitor and adjust dose. Moderate Study
- ► Rifampicin very markedly decreases the exposure to statins (simvastatin). Moderate Study
- Rifampicin is predicted to decrease the exposure to sulfonylureas. [Moderate] Study
- ► Rifampicin is predicted to decrease the exposure to sunitinib.

 Avoid or adjust sunitinib dose, p. 1080. Moderate Study
- ► Rifampicin decreases the concentration of tacrolimus. Monitor and adjust dose. [Severe] Study
- ► Rifampicin markedly decreases the exposure to tamoxifen.

 [Unknown] Study
- ► Rifabutin is predicted to decrease the exposure to taxanes (cabazitaxel). Avoid. Moderate Theoretical
- Rifampicin is predicted to decrease the exposure to taxanes (cabazitaxel). Avoid. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to taxanes (docetaxel). Severe Theoretical
- ► Rifampicin is predicted to decrease the exposure to taxanes (paclitaxel). Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of temsirolimus. Avoid. Severe Study
- Rifamycins are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ► **Rifampicin** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- ► Rifampicin decreases the exposure to terbinafine. Adjust dose.

 Moderate Study

- ► Teriflunomide is predicted to increase the exposure to rifampicin. Moderate Theoretical
- Rifampicin modestly decreases the exposure to tetracyclines (doxycycline). Adjust dose. [Moderate] Study
- Rifamycins are predicted to decrease the exposure to tezacaftor. Avoid. Severe Theoretical
- ► Rifampicin is predicted to decrease the exposure to theophylline. Adjust dose. Moderate Study
- Rifampicin is predicted to decrease the exposure to thrombin inhibitors (dabigatran). Avoid. [Severe] Study
- Rifampicin is predicted to markedly decrease the exposure to ticagrelor. Avoid. Severe Study
- ► Rifampicin might decrease the exposure to tigecycline. Mild
- ► Rifampicin is predicted to decrease the exposure to tivozanib.

 Severe Study
- ► Rifampicin moderately decreases the exposure to tizanidine.

 Mild Study
- Rifampicin is predicted to decrease the exposure to tofacitinib.

 Avoid. [Severe] Study
- Rifampicin is predicted to decrease the exposure to tolvaptan.

 Use with caution or avoid depending on indication. Severe
- ► **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- ► Rifampicin is predicted to decrease the exposure to trabectedin. Avoid. Severe Theoretical
- Rifampicin slightly decreases the exposure to treprostinil.
 Adjust dose. Mild Study
- Rifampicin decreases the exposure to trimethoprim. Moderate Study
- Rifampicin is predicted to decrease the exposure to tucatinib.
 Avoid. Severe Study
- ► Rifamycins decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- Rifampicin is predicted to decrease the exposure to upadacitinib. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to vandetanib. Avoid. Moderate Study
- Rifampicin is predicted to moderately decrease the exposure to velpatasvir. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to vemurafenib. Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to venetoclax.
 Avoid. Severe Study
- Rifampicin is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). [Severe] Theoretical
- ► Rifampicin is predicted to decrease the exposure to vinca alkaloids (vinflunine). Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to vinca alkaloids (vinorelbine). Use with caution or avoid. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to vismodegib. Avoid. Moderate Theoretical
- Rifampicin potentially increases the risk of nephrotoxicity when given with volatile halogenated anaesthetics (methoxyflurane). Avoid. [Severe] Theoretical
- Rifampicin is predicted to decrease the exposure to vortioxetine. Monitor and adjust dose. Moderate Study
- Rifabutin is predicted to decrease the concentration of voxilaprevir. Avoid. Severel Theoretical
- ► Rifampicin is predicted to decrease the concentration of voxilaprevir. Avoid. Severe Study
- Rifampicin moderately decreases the exposure to zolpidem.
 Moderatel Study
- ► Rifampicin is predicted to decrease the exposure to zopiclone.

 Adjust dose. Moderate Study

Rifaximin

- ► Ciclosporin very markedly increases the exposure to rifaximin.

 Severe Study
- ► Rifaximin has been reported to decrease the anticoagulant effect of coumarins (warfarin). Monitor INR and adjust dose. | Severe | Anecdotal

Rilpivirine → see NNRTIs

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ► Combined hormonal contraceptives is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- Mexiletine is predicted to increase the exposure to riluzole.
 Moderate Theoretical
- ➤ Osilodrostat is predicted to increase the exposure to riluzole. Moderate Theoretical
- Quinolones (ciprofloxacin) are predicted to increase the exposure to riluzole. Moderate Theoretical
- Rucaparib is predicted to increase the exposure to riluzole.
 Moderate Theoretical
- ► SSRIs (fluvoxamine) are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- Vemurafenib is predicted to increase the exposure to riluzole.
 Moderate Theoretical

Riociguat → see TABLE 8 p. 1491 (hypotension)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking is started or stopped during treatment.

- ➤ Oral antacids decrease the exposure to oral riociguat. Riociguat should be taken 1 hour before or 2 hours after antacids. Mild Study
- ➤ Antifungals, azoles (itraconazole, posaconazole) are predicted to increase the exposure to riociguat. Adjust riociguat dose and monitor blood pressure, p. 200. Moderate Theoretical
- Antifungals, azoles (ketoconazole) moderately increase the exposure to riociguat. Adjust riociguat dose and monitor blood pressure, p. 200. Moderate Study
- Ciclosporin is predicted to increase the exposure to riociguat.
 Moderate Theoretical
- ► HIV-protease inhibitors (ritonavir) are predicted to increase the exposure to riociguat. Adjust dose and monitor blood pressure. Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of riociguat. Avoid. Severe Theoretical

Risankizumab → see monoclonal antibodies

 Risdiplam is predicted to increase the concentration of metformin. Monitor and adjust dose. [Moderate] Theoretical

Risedronate → see bisphosphonates

Risperidone → see antipsychotics, second generation

Ritonavir → see HIV-protease inhibitors

Rituximab → see monoclonal antibodies

Rivaroxaban → see factor XA inhibitors **Rivastigmine** → see anticholinesterases, centrally acting

Rizatriptan → see triptans

Rocuronium → see neuromuscular blocking drugs, non-depolarising

Roflumilast → see phosphodiesterase type-4 inhibitors

Ropeginterferon alfa → see interferons

Ropinirole → see dopamine receptor agonists

Ropivacaine → see anaesthetics, local

Rosuvastatin → see statins

Rotavirus vaccine → see live vaccines

Rotigotine → see dopamine receptor agonists

Roxadustat

- ► Aluminium hydroxide might decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after aluminium hydroxide. Moderate Theoretical
- ► Antacids might decrease the exposure to roxadustat.

 Roxadustat should be taken at least 1 hour after antacids.

 Moderate Theoretical
- Roxadustat is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Monitor adverse effects and adjust dose. Moderate Study
- ► Calcium salts (calcium acetate) minimally decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after calcium acetate. [Moderate] Study
- Roxadustat is predicted to increase the exposure to endothelin receptor antagonists (bosentan). Monitor adverse effects and adjust dose. [Moderate] Study
- ► Fibrates (gemfibrozil) moderately increase the exposure to roxadustat. Monitor haemoglobin and adjust dose. Moderate Study

- ► Iron might decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after iron. Moderate Theoretical
- ► Magnesium might decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after magnesium. Moderate Theoretical
- ▶ Roxadustat is predicted to increase the exposure to meglitinides (repaglinide). Monitor adverse effects and adjust dose. Moderate Study
- ► Rifamycins (rifampicin) might decrease the exposure to roxadustat. Monitor haemoglobin and adjust roxadustat dose, p. 1103. [Moderate] Study
- ➤ Sevelamer modestly decreases the exposure to roxadustat.

 Roxadustat should be taken at least 1 hour after sevelamer.

 Moderate Study
- ➤ Roxadustat is predicted to increase the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). Monitor adverse effects and adjust dose. Moderate Study
- Roxadustat might increase the exposure to statins (fluvastatin).
 Monitor adverse effects and adjust dose. [Moderate] Theoretical
- Sucroferric oxyhydroxide might decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after sucroferric oxyhydroxide. Moderate Theoretical
- Roxadustat might increase the exposure to sulfasalazine.
 Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ➤ Roxadustat is predicted to increase the exposure to sulfonylureas (glibenclamide). Monitor adverse effects and adjust dose. [Moderate] Study
- Roxadustat might increase the exposure to topotecan. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Rucaparib** → see TABLE 15 p. 1493 (myelosuppression)
- Rucaparib is predicted to increase the exposure to afatinib.
 Moderate Study
- Rucaparib is predicted to increase the exposure to agomelatine. [Moderate] Study
- Rucaparib is predicted to increase the exposure to aminophylline. Adjust dose. Moderate Theoretical
- Rucaparib is predicted to increase the exposure to anaesthetics, local (ropivacaine). [Moderate] Theoretical
- Rucaparib is predicted to increase the exposure to anagrelide.
 Moderate Theoretical
- Rucaparib is predicted to increase the exposure to antiepileptics (phenytoin). Monitor and adjust dose. Moderate Study
 Rucaparib increases the concentration of antipsychotics, second
- generation (clozapine). Monitor adverse effects and adjust dose. [Severe] Study
- Rucaparib is predicted to increase the exposure to antipsychotics, second generation (olanzapine). Adjust dose.
 Moderate Anecdotal
- Rucaparib slightly increases the exposure to benzodiazepines (midazolam). Monitor and adjust dose. Severe Study
- Rucaparib is predicted to increase the exposure to berotralstat.
 Severe Study
- ► Rucaparib is predicted to increase the exposure to bictegravir. Use with caution or avoid. [Moderate] Theoretical
- Rucaparib is predicted to increase the exposure to ciclosporin.
 Monitor and adjust dose. Moderate Study
- Rucaparib slightly increases the exposure to coumarins (warfarin). Monitor and adjust dose. [Severe] Study
- ► Rucaparib is predicted to increase the exposure to dopamine receptor agonists (ropinirole). Adjust dose. Moderate Study
- Rucaparib is predicted to increase the exposure to ergotamine.
 Monitor and adjust dose. Moderate Study
- ► Rucaparib are predicted to increases the exposure to erlotinib.

 Monitor adverse effects and adjust dose. Moderate Study
- Rucaparib is predicted to increase the exposure to fidaxomicin.
 Avoid. Moderate Study
- Rucaparib is predicted to increase the exposure to loxapine.
 Avoid. Unknown Theoretical
- Rucaparib slightly increases the exposure to MAO-B inhibitors (rasagiline). [Moderate] Study
- Rucaparib is predicted to increase the exposure to melatonin.
 Moderate Theoretical
- Rucaparib is predicted to increase the exposure to nintedanib.
 Moderate Study

- Rucaparib is predicted to increase the exposure to opioids (alfentanil, fentanyl). Monitor and adjust dose. Moderate Study
- Rucaparib is predicted to increase the exposure to phenothiazines (chlorpromazine). [Moderate] Theoretical
- Rucaparib is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). [Moderate]
 Theoretical
- Rucaparib is predicted to increase the exposure to pimozide.
 Monitor and adjust dose. Moderate Study
- ► Rucaparib is predicted to increase the exposure to pirfenidone.

 Use with caution and adjust dose. Moderate Study
- ► Rucaparib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rucaparib is predicted to increase the exposure to riluzole.
 Moderate Theoretical
- Rucaparib is predicted to increase the exposure to sirolimus.
 Monitor and adjust dose. [Moderate] Study
- Rucaparib is predicted to increase the exposure to SNRIs (duloxetine). Monitor and adjust dose. Moderate Study
- Rucaparib is predicted to increase the exposure to tacrolimus.
 Monitor and adjust dose. Moderate Study
- ► Rucaparib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study → Also see TABLE 15 p. 1493
- ► Rucaparib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). Unknown Theoretical → Also see TABLE 15 p. 1493
- Rucaparib is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical
- Rucaparib increases the exposure to tizanidine. Avoid.
 Moderate Study
- ► Rucaparib is predicted to increase the exposure to topotecan.
 Severe Study → Also see TABLE 15 p. 1493
- Rucaparib is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ► Rucaparib is predicted to increase the exposure to triptans (zolmitriptan). Adjust zolmitriptan dose, p. 515. Moderate
 Theoretical
- ► Rucaparib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 15 p. 1493

Rufinamide → see antiepileptics

Rupatadine → see antihistamines, non-sedating

- Ruxolitinib → see TABLE 15 p. 1493 (myelosuppression)

 Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose.
- Moderate Study
 ➤ Antiarrhythmics (dronedarone) are predicted to increase the exposure to ruxolitinib. Moderate Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. Moderate Study
- Antifungals, azoles (fluconazole) are predicted to increase the exposure to ruxolitinib. Avoid or adjust dose. [Moderate]
 Theoretical
- Antifungals, azoles (isavuconazole, posaconazole) are predicted to increase the exposure to ruxolitinib. [Moderate] Study
 Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are
- predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study Stu
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to ruxolitinib. Moderate Study
- ► Cobicistat is predicted to increase the exposure to ruxolitinib.

 Adjust dose and monitor adverse effects. [Moderate] Study
- ► Crizotinib is predicted to increase the exposure to ruxolitinib.

 [Moderate] Study
- Dabrafenib is predicted to decrease the exposure to ruxolitinib.
 Monitor and adjust dose. Moderate Study
- ➤ Drugs with anticoagulant effects (see TABLE 3 p. 1490) cause bleeding, as can ruxolitinib; concurrent use might increase the risk of developing this effect. (Severe) Theoretical
- ➤ Drugs with antiplatelet effects (see TABLE 4 p. 1490) cause bleeding, as can ruxolitinib; concurrent use might increase the risk of developing this effect. (Severe) Theoretical

- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose.

 Moderate Study
- ► Grapefruit juice is predicted to increase the exposure to ruxolitinib. Severe Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor adverse effects.

 Moderate Study
- Idelalisib is predicted to increase the exposure to ruxolitinib.
 Adjust dose and monitor adverse effects. [Moderate] Study
- ► Imatinib is predicted to increase the exposure to ruxolitinib.
 Moderate Study → Also see TABLE 15 p. 1493
- ► Letermovir is predicted to increase the exposure to ruxolitinib.

 [Moderate] Study
- ► Macrolides (clarithromycin) are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor adverse effects. [Moderate] Study
- Macrolides (erythromycin) slightly increase the exposure to ruxolitinib. [Mild] Study
- ► Mitotane is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. Moderate Study → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to ruxolitinib. Moderate Study
- Nilotinib is predicted to increase the exposure to ruxolitinib.
 Moderate Study → Also see TABLE 15 p. 1493
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. Moderate Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- St John's wort is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. Moderate Study

Sacituzumab govitecan

- Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- ➤ Antifungals, azoles (ketoconazole) are predicted to increase the exposure to the active component of sacituzumab govitecan.

 [Severe] Theoretical
- ► Encorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- Erlotinib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- Gefitinib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir) boosted with ritonavir are predicted to decrease the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- ► HIV-protease inhibitors (ritonavir) are predicted to decrease the exposure to the active component of sacituzumab govitecan.

 [Severe] Theoretical
- ▶ Lapatinib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- Nilotinib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- Pazopanib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- Propofol is predicted to increase the exposure to the active component of sacituzumab govitecan. Severel Theoretical
- Regorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. Severe Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to the active component of sacituzumab govitecan. Severe

 Theoretical
- ➤ Sorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical

Sacubitril → see TABLE 8 p. 1491 (hypotension)

Safinamide → see MAO-B inhibitors

Salbutamol → see beta₂ agonists

Salmeterol → see beta₂ agonists **Sapropterin** → see TABLE 8 p. 1491 (hypotension)

Sapropterin (continued)

- Methotrexate is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical
- ► Phosphodiesterase type-5 inhibitors are predicted to increase the risk of hypotension when given with sapropterin. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- Trimethoprim is predicted to decrease the efficacy of sapropterin. Moderate Theoretical

Sarilumab → see monoclonal antibodies

Saxagliptin → see dipeptidylpeptidase-4 inhibitors

Secukinumab → see monoclonal antibodies

Selegiline → see MAO-B inhibitors

Selenium

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- Oral selenium might decrease the concentration of the active metabolite of oral baloxavir marboxil. Avoid. [Severe] Theoretical
- ➤ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical

Selexipa

- Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study
- Antiepileptics (valproate) are predicted to increase the exposure to selexipag. <u>Unknown</u> Theoretical
- Antifungals, azoles (fluconazole) are predicted to increase the exposure to selexipag. <u>Unknown</u> Theoretical
- Clopidogrel is predicted to increase the exposure to selexipag.
 Adjust selexipag dose, p. 198. Moderate Study
- ► Fibrates (gemfibrozil) increase the exposure to selexipag. Avoid. Severe Study
- ► Iron chelators (deferasirox) are predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 198. Moderate Study
- Leflunomide is predicted to increase the exposure to selexipag.
 Adjust selexipag dose, p. 198. Moderate Study
- ► Rifamycins (rifampicin) moderately decrease the exposure to the active metabolite of selexipag. Adjust dose. [Moderate] Study
- Selpercatinib is predicted to increase the exposure to selexipag. Avoid. Moderate Study
- ► Teriflunomide is predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 198. Moderate Study

Selpercatinib → see TABLE 9 p. 1492 (QT-interval prolongation)

- Antacids are predicted to decrease the exposure to selpercatinib. Moderate Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to selpercatinib. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to selpercatinib. Moderate Study → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to selpercatinib. Avoid. [Moderate] Study
- ► Antifungals, azoles (fluconazole, isavuconazole) are predicted to increase the exposure to selpercatinib. Moderate Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to selpercatinib. Adjust selpercatinib dose, p. 1079. [Moderate]
 Study -> Also see TABLE 9 p. 1492
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to selpercatinib. [Moderate] Study
- Cobicistat is predicted to increase the exposure to selpercatinib. Adjust selpercatinib dose, p. 1079. Moderate Study
- ► Crizotinib is predicted to increase the exposure to selpercatinib. Moderate Study → Also see TABLE 9 p. 1492
- ▶ Dabrafenib is predicted to decrease the exposure to selpercatinib. Moderate Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to selpercatinib. Moderate Study
- ► Selpercatinib is predicted to increase the exposure to ergotamine. Avoid. [Moderate] Study

- Selpercatinib is predicted to increase the exposure to everolimus. Avoid. Moderate Study
- ► H₂ receptor antagonists are predicted to decrease the exposure to selpercatinib. Manufacturer advises take 2 hours before or 10 hours after H₂ receptor antagonists. Moderate Study
- ► HIV-protease inhibitors are predicted to increase the exposure to selpercatinib. Adjust selpercatinib dose, p. 1079. Moderate
- Idelalisib is predicted to increase the exposure to selpercatinib.
 Adjust selpercatinib dose, p. 1079. Moderate Study
- Imatinib is predicted to increase the exposure to selpercatinib.
 [Moderate] Study
- ► Letermovir is predicted to increase the exposure to selpercatinib. [Moderate] Study
- Selpercatinib is predicted to increase the exposure to loop diuretics (torasemide). Avoid. Severe Study
- Macrolides (clarithromycin) are predicted to increase the exposure to selpercatinib. Adjust selpercatinib dose, p. 1079. Moderate Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to selpercatinib. Moderate Study → Also see TABLE 9 p. 1492
- Selpercatinib increases the exposure to meglitinides (repaglinide). Avoid. Moderatel Study
- Mitotane is predicted to decrease the exposure to selpercatinib. Avoid. Moderate Study
- ► Selpercatinib is predicted to increase the exposure to montelukast. Avoid. Moderate Study
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to selpercatinib. [Moderate] Study
- Nilotinib is predicted to increase the exposure to selpercatinib.
 Moderate Study → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to selpercatinib. Moderate Study → Also see TABLE 9 p. 1492
- ► Selpercatinib is predicted to increase the exposure to opioids (alfentanil, buprenorphine). Avoid. [Moderate] Study
- Proton pump inhibitors are predicted to decrease the exposure to selpercatinib. Manufacturer advises take selpercatinib with food, p. 1079. [Moderate] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to selpercatinib. Avoid. [Moderate] Study
- Selpercatinib is predicted to increase the exposure to selexipag. Avoid. Moderate Study
- ► Selpercatinib is predicted to increase the exposure to sirolimus. Moderate Study
- ► Selpercatinib is predicted to increase the exposure to sorafenib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► St John's wort is predicted to decrease the exposure to selpercatinib. Avoid. Moderate Study
- Selpercatinib is predicted to increase the exposure to taxanes (paclitaxel). Avoid. Moderate Study
- ► Selpercatinib is predicted to increase the exposure to temsirolimus. Moderate Study

Selumetinib

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to selumetinib. Avoid or adjust dose consult product literature. [Severe] Study
- Selumetinib might increase the risk of bleeding when given with aspirin. Severe Theoretical
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severel Study
- ► Selumetinib might increase the risk of bleeding when given with cangrelor. Severe Theoretical

- ► Selumetinib might increase the risk of bleeding when given with cilostazol. [Severe] Theoretical
- ► Selumetinib might increase the risk of bleeding when given with clopidogrel. Severe Theoretical
- ► Cobicistat is predicted to increase the exposure to selumetinib.

 Avoid or adjust dose—consult product literature. [Severe] Study
- ► Selumetinib might increase the risk of bleeding when given with coumarins. Severe Theoretical
- ► Crizotinib is predicted to increase the exposure to selumetinib.

 Avoid or adjust dose—consult product literature. Severe Study
- ► Dabrafenib is predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ► Selumetinib might increase the risk of bleeding when given with dipyridamole. [Moderate] Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ► Grapefruit juice is predicted to increase the exposure to selumetinib. Avoid. Moderate Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Study
- ► Idelalisib is predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Study
- ► Imatinib is predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Study
- ► Letermovir is predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature.

 Severe Study
- ► Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to selumetinib. Avoid or adjust dose consult product literature. Severe Study
- ► Mitotane is predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ► Moclobemide is predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature.

 Severe Theoretical
- ► Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Study
- Nilotinib is predicted to increase the exposure to selumetinib.
 Avoid or adjust dose—consult product literature. Severe Study
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to selumetinib. Avoid. [Severe] Study
- ► Selumetinib might increase the risk of bleeding when given with phenindione. Severe Theoretical

 ► Selumetinib might increase the risk of bleeding when given
- Selumetinib might increase the risk of bleeding when given with prasugrel. Severe Theoretical
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ➤ SSRIs (fluoxetine) are predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature.

 [Severe] Theoretical
- ➤ SSRIs (fluvoxamine) are predicted to increase the exposure to selumetinib. Avoid or monitor—consult product literature.

 Severe Theoretical
- St John's wort is predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- Selumetinib might increase the risk of bleeding when given with ticagrelor. [Severe] Theoretical
- ▶ Vitamin E substances might increase the risk of bleeding when given with selumetinib. Avoid. Severe Theoretical

Semaglutide → see glucagon-like peptide-1 receptor agonists Sertraline → see SSRIs

Sevelamer

SEPARATION OF ADMINISTRATION Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

► Sevelamer modestly decreases the exposure to roxadustat.

Roxadustat should be taken at least 1 hour after sevelamer.

Moderate | Study

Sevoflurane → see volatile halogenated anaesthetics **Sildenafil** → see phosphodiesterase type-5 inhibitors **Siltuximab** → see monoclonal antibodies

Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simvastatin → see statins

Siponimod → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to siponimod. Severe Study
- Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe | Study → Also see TABLE 6 D. 1491
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to siponimod. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature.
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe | Study → Also see TABLE 6 p. 1491
- ➤ Cobicistat is predicted to increase the exposure to siponimod.

 Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ➤ Crizotinib is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- Dabrafenib is predicted to decrease the exposure to siponimod.
 Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature.
 Severe) Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- ► Idelalisib is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- ► Imatinib is predicted to increase the exposure to siponimod.

 Avoid depending on other drugs taken—consult product literature. Severe Study
- ► Letermovir is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ► Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid and for 4 weeks after stopping siponimod. [Severe] Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- Macrolides (erythromycin) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. Severe Study
- ► Mifepristone is predicted to increase the exposure to siponimod. Moderate Theoretical
- Mitotane is predicted to decrease the exposure to siponimod.
 Severe Study
- ► Monoclonal antibodies (alemtuzumab) are predicted to increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature.

Siponimod (continued)

- ▶ Nilotinib is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to siponimod. [Severe] Study
- ➤ St John's wort is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical

► Abrocitinib might increase the exposure to sirolimus. Moderate

- Theoretical

 Anti-androgens (apalutamide, enzalutamide) are predicted to
- decrease the concentration of **sirolimus**. Avoid. [Severe] Study Antiarrhythmics (amiodarone) are predicted to increase the
- concentration of sirolimus. Severe Anecdotal

 Antiarrhythmics (dronedarone) increase the concentration of
- sirolimus. Monitor and adjust dose. Moderate Study

 ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the
- concentration of sirolimus. Avoid. [Severe] Study
 ➤ Antifungals, azoles (fluconazole, isavuconazole, posaconazole)
 increase the concentration of sirolimus. Monitor and adjust
- dose. [Moderate] Study

 Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ► Antifungals, azoles (miconazole) are predicted to increase the concentration of sirolimus. Monitor and adjust dose. [Moderate]
- ▶ Berotralstat is predicted to increase the concentration of sirolimus. Monitor and adjust dose. Moderate Study
- Brigatinib potentially decreases the concentration of sirolimus. Avoid. [Moderate] Theoretical
- Calcium channel blockers (diltiazem, verapamil) increase the concentration of sirolimus. Monitor and adjust dose. [Moderate]
 Study
- ► Cenobamate is predicted to decrease the exposure to sirolimus.

 Adjust dose. Moderate Theoretical
- ► Ceritinib is predicted to increase the exposure to sirolimus.

 Avoid. Severe Theoretical
- Sirolimus is predicted to affect the efficacy of chenodeoxycholic acid. Monitor and adjust dose. Moderate Theoretical
- Ciclosporin moderately increases the exposure to sirolimus.
 Separate administration by 4 hours. |Severe| Study
- ► Cobicistat is predicted to increase the concentration of sirolimus. Avoid. Severe Study
- ► Crizotinib increases the concentration of sirolimus. Monitor and adjust dose. Moderate Study
- Eliglustat is predicted to increase the exposure to sirolimus.
 Adjust dose. Moderate Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the concentration of sirolimus and sirolimus potentially increases the concentration of endothelin receptor antagonists (bosentan). Avoid. [Severe] Theoretical
- Entrectinib is predicted to increase the exposure to sirolimus.
 Mild Theoretical
- Fedratinib is predicted to increase the exposure to sirolimus.
 Monitor and adjust dose. [Moderate] Theoretical
- ► Grapefruit juice increases the concentration of sirolimus.

 Avoid. Moderatel Study
- ► HIV-protease inhibitors are predicted to increase the concentration of sirolimus. Avoid. Severe Study
- ► Ibrutinib is predicted to increase the exposure to sirolimus.

 Separate administration by at least 6 hours. Moderate

 Theoretical
- ► Idelalisib is predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- Imatinib increases the concentration of sirolimus. Monitor and adjust dose. Moderate Study

- ► Ivacaftor is predicted to increase the exposure to sirolimus.

 [Moderate] Study
- ► Lapatinib is predicted to increase the exposure to sirolimus.

 Moderate | Theoretical
- ► Larotrectinib is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Mild] Theoretical
- ► Letermovir increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- ► Lorlatinib is predicted to decrease the exposure to sirolimus.

 Avoid. Moderate Theoretical
- Lumacaftor is predicted to decrease the exposure to sirolimus.
 Avoid. Severe Theoretical
- Macrolides (clarithromycin) are predicted to increase the concentration of sirolimus. Avoid. Severe Study
- ► Macrolides (erythromycin) increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ► Sirolimus is predicted to decrease the efficacy of mifamurtide.

 Avoid. Severe Theoretical
- Mifepristone is predicted to increase the exposure to sirolimus.
 Severel Theoretical
- Mirabegron is predicted to increase the exposure to sirolimus.
 Mild Theoretical
- Mitotane is predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ► Monoclonal antibodies (sarilumab) potentially affect the exposure to sirolimus. Monitor and adjust dose. Moderate Theoretical
- Neratinib is predicted to increase the exposure to sirolimus.
 [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) increase the concentration of sirolimus. Monitor and adjust dose. Moderate Study
- Nilotinib increases the concentration of sirolimus. Monitor and adjust dose. Moderate Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of sirolimus. Severe Theoretical
- ► NNRTIS (doravirine) are predicted to decrease the exposure to sirolimus. Monitor sirolimus concentration and adjust dose, p. 906. [Moderate] Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the concentration of sirolimus. Monitor and adjust dose. Moderate Theoretical
- Olaparib might increase the exposure to sirolimus. Moderate
 Theoretical
- Osimertinib is predicted to increase the exposure to sirolimus.
 Moderate Study
- ▶ Palbociclib is predicted to increase the exposure to sirolimus. Adjust dose. Moderate Theoretical
- ► Pemigatinib might increase the exposure to sirolimus.

 Separate administration by at least 6 hours. Moderate

 Theoretical
- Pibrentasvir with glecaprevir is predicted to increase the exposure to sirolimus. [Moderate] Study
- Pitolisant is predicted to decrease the exposure to sirolimus.
 Avoid. [Severe] Theoretical
- ► Ribociclib is predicted to increase the exposure to sirolimus.

 Use with caution and adjust dose. [Moderate] Theoretical
- Rifamycins (rifampicin) are predicted to decrease the concentration of sirolimus. Avoid. Severe Study
- Rucaparib is predicted to increase the exposure to sirolimus.
 Monitor and adjust dose. [Moderate] Study
- Selpercatinib is predicted to increase the exposure to sirolimus. [Moderate] Study
- ► Sotorasib is predicted to increase the exposure to sirolimus. Avoid or adjust dose. Moderate Study
- ► St John's wort is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. Severe Theoretical
- ➤ Sirolimus is predicted to decrease the concentration of tacrolimus and tacrolimus increases the exposure to sirolimus.

 Severe Study

- Tepotinib is predicted to increase the concentration of sirolimus. Severe Study
- ► Tucatinib is predicted to increase the exposure to sirolimus. Avoid or adjust dose. Moderate Theoretical
- Vandetanib is predicted to increase the exposure to sirolimus.
 Moderate Study
- ▶ Velpatasvir is predicted to increase the exposure to sirolimus. Severe | Theoretical
- Vemurafenib is predicted to increase the exposure to sirolimus.
 Use with caution and adjust dose. [Severe] Theoretical
- ▶ Venetoclax is predicted to increase the exposure to sirolimus. Avoid or adjust dose. Severe Study

Sitagliptin → see dipeptidylpeptidase-4 inhibitors

SNRIs → see TABLE 18 p. 1494 (hyponatraemia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 4 p. 1490 (antiplatelet effects)

duloxetine · venlafaxine

- ► Antiepileptics (phenytoin) are predicted to decrease the exposure to duloxetine. Moderate Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to venlafaxine. Moderate Study → Also see TABLE 9 p. 1492
- ► Axitinib is predicted to increase the exposure to duloxetine.

 Moderate Theoretical → Also see TABLE 4 p. 1490
- Duloxetine is predicted to increase the exposure to beta blockers, selective (metoprolol). Moderate Study
- Cobicistat is predicted to increase the exposure to venlafaxine.
 Moderate Study
- Duloxetine is predicted to increase the exposure to eliglustat.
 Avoid or adjust dose—consult product literature. Severe Study
- ► Givosiran is predicted to increase the exposure to duloxetine. Use with caution and adjust dose. [Moderate] Study
- ► H₂ receptor antagonists (cimetidine) slightly increase the exposure to venlafaxine. Mild Study
- Venlafaxine slightly increases the exposure to haloperidol.
 Severe Study → Also see TABLE 9 p. 1492 → Also see TABLE 11 p. 1492
- ► HIV-protease inhibitors (ritonavir) are predicted to decrease the exposure to duloxetine. Moderate Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to venlafaxine. Moderate Study
- Idelalisib is predicted to increase the exposure to venlafaxine.
 Moderate Study
- ► Leflunomide is predicted to decrease the exposure to duloxetine. Moderate Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to venlafaxine. Moderate Study → Also see TABLE 9 p. 1492
- Mexiletine is predicted to increase the exposure to duloxetine.
 Moderate Theoretical
- Osilodrostat is predicted to increase the exposure to duloxetine. [Moderate] Theoretical
- ► Duloxetine might increase the risk of adverse effects when given with ozanimod. [Severe] Theoretical
- ▶ Duloxetine is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- Use with caution and adjust dose. Moderate Study

 Venlafaxine is predicted to increase the exposure to pitolisant.
- Use with caution and adjust dose. Mild Theoretical

 ➤ Quinolones (ciprofloxacin) are predicted to increase the exposure to duloxetine. Avoid. Moderate Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to duloxetine. [Moderate] Theoretical
- Rucaparib is predicted to increase the exposure to duloxetine.
 Monitor and adjust dose. Moderate Study
- ► SSRIs (fluvoxamine) markedly increase the exposure to duloxetine. Avoid. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ► Tacrolimus potentially increases the risk of serotonin syndrome when given with venlafaxine. [Severe] Anecdotal
- ► Teriflunomide is predicted to decrease the exposure to duloxetine. Moderate Theoretical
- Vaborbactam is predicted to increase the concentration of venlafaxine. <u>Unknown</u> Theoretical
- Vemurafenib is predicted to increase the exposure to duloxetine. Use with caution or avoid. Moderate Theoretical

Sodium bicarbonate

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

- ► Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral acalabrutinib. Separate administration by at least 2 hours. [Moderate] Study
- Oral sodium bicarbonate decreases the absorption of antifungals, azoles (ketoconazole). [Moderate] Study
- Oral sodium bicarbonate -containing antacids are predicted to decrease the absorption of oral bosutinib. Bosutinib should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ➤ Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral dasatinib. Separate administration by at least 2 hours. [Moderate] Study
- Oral sodium bicarbonate -containing antacids are predicted to decrease the absorption of oral erlotinib. Erlotinib should be taken 2 hours before or 4 hours after antacids. Moderate

 Theoretical
- ► Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
- Oral sodium bicarbonate -containing antacids are predicted to decrease the absorption of oral lapatinib. Avoid. Moderate Theoretical
- ➤ Sodium bicarbonate decreases the concentration of lithium.

 [Severe] Anecdotal
- ► Sodium bicarbonate is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical
- ➤ Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ➤ Oral sodium bicarbonate -containing antacids might affect the exposure to oral nilotinib. Separate administration by at least 2 hours. [Moderate] Study
- Oral sodium bicarbonate -containing antacids are predicted to decrease the exposure to oral NNRTIs (rilpivirine). Rilpivirine should be taken 4 hours before or 2 hours after antacids.
 Severel Theoretical
- ➤ Oral sodium bicarbonate -containing antacids might decrease the absorption of oral pazopanib. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- Oral sodium bicarbonate is predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical

Sodium citrate

- ► Sodium citrate is predicted to decrease the efficacy of methenamine. Avoid. Moderate Theoretical
- ► Sodium citrate is predicted to increase the risk of adverse effects when given with sucralfate. Avoid. Moderate Theoretical

Sodium glucose co-transporter 2 inhibitors → see TABLE 14 p. 1493 (antidiabetic drugs), TABLE 8 p. 1491 (hypotension)

canagliflozin · dapagliflozin · empagliflozin · ertugliflozin

- ► Antiepileptics (phenytoin) might decrease the exposure to empagliflozin. Avoid or monitor diabetic control. Moderate
- ► Fenfluramine might decrease blood glucose concentrations when given with sodium glucose co-transporter 2 inhibitors.

 Moderate Theoretical
- Rifamycins (rifampicin) moderately decrease the exposure to canagliflozin. Adjust canagliflozin dose, p. 772. [Moderate] Study
- ► Rifamycins (rifampicin) might decrease the exposure to empagliflozin. Avoid or monitor diabetic control. [Moderate]
 Theoretical

Sodium oxybate → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

► Antiepileptics (valproate) increase the exposure to sodium oxybate. Adjust sodium oxybate dose, p. 524. Moderate Study Sodium phenylbutyrate

► Antiepileptics (valproate) potentially decrease the effects of

- sodium phenylbutyrate. Moderate Anecdotal

 ► Corticosteroids potentially decrease the effects of sodium
- phenylbutyrate. [Moderate] Anecdotal
 Haloperidol potentially decreases the effects of sodium phenylbutyrate. [Moderate] Anecdotal

Sodium picosulfate → see TABLE 18 p. 1494 (hyponatraemia)

Sodium picosulfate (continued)

► Oral sodium picosulfate might decrease the concentration of the active metabolite of oral baloxavir marboxil. [Severe]

Sodium zirconium cyclosilicate

- ► Sodium zirconium cyclosilicate is predicted to decrease the exposure to antifungals, azoles. Separate administration by at least 2 hours. Moderate Theoretical
- ➤ Sodium zirconium cyclosilicate is predicted to decrease the exposure to dasatinib. Separate administration by at least 2 hours. Moderate Theoretical
- ➤ Sodium zirconium cyclosilicate is predicted to decrease the exposure to erlotinib. Separate administration by at least 2 hours. [Moderate] Theoretical
- ➤ Sodium zirconium cyclosilicate is predicted to decrease the exposure to HIV-protease inhibitors. Separate administration by at least 2 hours. Moderate Theoretical
- Sodium zirconium cyclosilicate is predicted to decrease the exposure to ledipasvir. Separate administration by at least 2 hours. Moderate Theoretical
- ► Sodium zirconium cyclosilicate is predicted to decrease the exposure to nilotinib. Separate administration by at least 2 hours. Moderate Theoretical
- ➤ Sodium zirconium cyclosilicate is predicted to decrease the exposure to NNRTIs (rilpivirine). Separate administration by at least 2 hours. Moderate Theoretical
- Sodium zirconium cyclosilicate is predicted to decrease the exposure to raltegravir. Separate administration by at least 2 hours. [Moderate] Theoretical

Sofosbuvir

- Sofosbuvir is predicted to increase the risk of severe bradycardia or heart block when given with antiarrhythmics (amiodarone). Refer to specialist literature. [Severe] Anecdotal
- Antiepileptics (carbamazepine) are predicted to decrease the exposure to sofosbuvir. Avoid. Severe Study
- Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sofosbuvir. Avoid. [Severe] Theoretical
- H₂ receptor antagonists potentially decrease the exposure to sofosbuvir. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
- ► HIV-protease inhibitors (tipranavir) are predicted to decrease the exposure to sofosbuvir. Avoid. Severe Theoretical
- ► Modafinil is predicted to decrease the exposure to sofosbuvir. Avoid. (Severe) Theoretical
- Proton pump inhibitors potentially decrease the exposure to sofosbuvir. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to sofosbuvir. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to sofosbuvir. Avoid. Severe Study

Solifenacin → see TABLE 10 p. 1492 (antimuscarinics)

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to solifenacin. [Moderate] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to solifenacin. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- Antipsychotics, second generation (clozapine) can cause constipation, as can solifenacin; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492
- Cobicistat is predicted to increase the exposure to solifenacin.
 Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- HIV-protease inhibitors are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study

- ► Idelalisib is predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- ► Macrolides (clarithromycin) are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- Mitotane is predicted to decrease the exposure to solifenacin.
 Moderate Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to solifenacin. [Moderate] Theoretical

Solriamfetol

- ► Solriamfetol is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors. Avoid and for 14 days after stopping MAO-B inhibitors. Severe Theoretical
- ➤ Solriamfetol is predicted to increase the risk of a hypertensive crisis when given with MAOIs, irreversible. Avoid and for 14 days after stopping the MAOI. Severe Theoretical

Somatropin

 Corticosteroids are predicted to decrease the effects of somatropin. [Moderate] Theoretical

Sorafenib → see TABLE 15 p. 1493 (myelosuppression), TABLE 9
p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to sorafenib. Moderate Theoretical → Also see TABLE 9 p. 1492
- ➤ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sorafenib. [Moderate] Theoretical
- Antiepileptics (oxcarbazepine) are predicted to decrease the exposure to sorafenib. Moderate Study
- Sorafenib increases the anticoagulant effect of coumarins.
 Severe Anecdotal
- Dabrafenib is predicted to decrease the exposure to sorafenib.
 Moderate Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to sorafenib. Moderate Study
- Mitotane is predicted to decrease the exposure to sorafenib.
 Moderate Theoretical → Also see TABLE 15 p. 1493
- Neomycin moderately decreases the exposure to sorafenib.
 Moderatel Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to sorafenib. Moderate Study → Also see TABLE 9 p. 1492
- Sorafenib is predicted to increase the risk of bleeding events when given with phenindione. [Severe] Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to sorafenib. Moderate Theoretical
- Sorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. [Severe] Theoretical
- ► Selpercatinib is predicted to increase the exposure to sorafenib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► St John's wort is predicted to decrease the exposure to sorafenib. [Moderate] Study

Sotalol → see beta blockers, non-selective

Sotorasib → see TABLE 1 p. 1490 (hepatotoxicity)

- ➤ Sotorasib is predicted to increase the exposure to aliskiren. Avoid or adjust dose. Moderate Study
- Oral antacids are predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. Moderate Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to sotorasib. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sotorasib. Avoid. Severe Study → Also see TABLE 1 p. 1490
- Sotorasib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Avoid or adjust dose. [Moderate] Study
- Sotorasib moderately decreases the exposure to benzodiazepines (midazolam). [Moderate] Study
- ➤ Oral calcium salts (calcium carbonate) are predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical

- Sotorasib is predicted to increase the exposure to colchicine.
 Avoid or adjust dose. Moderate Study
- ► Sotorasib is predicted to increase the exposure to digoxin.

 Avoid or adjust dose. [Moderate] Study
- Sotorasib is predicted to decrease the exposure to ergotamine.
 Avoid or adjust dose. Moderate Theoretical
- ► Sotorasib is predicted to increase the exposure to everolimus. Avoid or adjust dose. Moderate Study
- Sotorasib is predicted to increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). Avoid or adjust dose.
 Moderate Study
- ► H₂ receptor antagonists are predicted to decrease the exposure to sotorasib. Avoid. Moderate Study
- Sotorasib is predicted to increase the exposure to loperamide.
 Avoid or adjust dose. [Moderate] Study
- ► Mitotane is predicted to decrease the exposure to sotorasib. Avoid. Severe Study
- Sotorasib is predicted to decrease the exposure to opioids (alfentanil). Avoid or adjust dose. Moderate Theoretical
- Proton pump inhibitors are predicted to decrease the exposure to sotorasib. Avoid. Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to sotorasib. Avoid. Severe Study
- ► Sotorasib is predicted to increase the exposure to sirolimus. Avoid or adjust dose. Moderate Study
- Oral sodium bicarbonate is predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- ► Sotorasib is predicted to increase the exposure to talazoparib. Avoid or adjust dose. Moderate Study
- Sotorasib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Avoid or adjust dose. Moderate Study
- ► Sotorasib is predicted to decrease the exposure to temsirolimus. Avoid or adjust dose. Moderate Theoretical
- ► Sotorasib is predicted to increase the exposure to thrombin inhibitors (dabigatran). Avoid or adjust dose. Moderate Study
- ► Sotorasib is predicted to increase the exposure to topotecan.

 Avoid or adjust dose. Moderate Study

Spironolactone → see aldosterone antagonists

SSRIs → see TABLE 18 p. 1494 (hyponatraemia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- ➤ SSRIs (fluoxetine, fluvoxamine) are predicted to increase the exposure to abrocitinib. Adjust abrocitinib dose, p. 1354. Severe Study
- Fluvoxamine very markedly increases the exposure to agomelatine. Avoid. Severe Study
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to amfetamines. Severe Theoretical → Also see TABLE 13 p. 1493
- ► Fluvoxamine moderately to markedly increases the exposure to aminophylline. Avoid. [Severe] Study
- Fluvoxamine decreases the clearance of anaesthetics, local (ropivacaine). Avoid prolonged use. Moderate Study
- ► Fluvoxamine is predicted to increase the exposure to anagrelide. Moderate Theoretical → Also see TABLE 4 p. 1490
- ► Anti-androgens (apalutamide) are predicted to decrease the exposure to citalopram. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 1492
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to SSRIs (citalopram, escitalopram, fluoxetine, fluoxamine, paroxetine, sertraline). Severe Theoretical → Also see TABLE 9 p. 1492
- Fluvoxamine is predicted to increase the exposure to antiarrhythmics (propafenone). Monitor and adjust dose.
 Moderate Study
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to anticholinesterases, centrally acting (galantamine). Monitor and adjust dose. Moderate Study

- ► Antiepileptics (fosphenytoin, phenytoin) decrease the concentration of paroxetine. [Moderate] Study
- Sertraline potentially increases the risk of toxicity when given with antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ► SSRIs (fluoxetine, fluvoxamine) are predicted to increase the concentration of antiepileptics (fosphenytoin, phenytoin).

 Monitor and adjust dose. [Severe] Anecdotal
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887.
 Moderate) Theoretical
- Antifungals, azoles (fluconazole, voriconazole) are predicted to increase the exposure to escitalopram. Use with caution and adjust dose. Severe Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to moderately increase the exposure to dapoxetine.
 Avoid potent CYPSA4 inhibitors or adjust dapoxetine dose,
 p. 887. [Severe] Study
- ► Antifungals, azoles (voriconazole) are predicted to increase the exposure to citalopram. Severe Theoretical → Also see TABLE 9 p. 1492
- Antihistamines, sedating (cyproheptadine) potentially decrease the effects of SSRIs. [Moderate] Anecdotal
- ➤ SSRIs (fluoxetine, paroxetine) are predicted to moderately increase the exposure to antipsychotics, second generation (aripiprazole). Adjust aripiprazole dose, p. 427. [Moderate] Study
- Fluvoxamine increases the exposure to antipsychotics, second generation (asenapine). Moderate Study
- Paroxetine moderately increases the exposure to antipsychotics, second generation (asenapine). [Moderate] Study
- Fluvoxamine increases the concentration of antipsychotics, second generation (clozapine). Monitor adverse effects and adjust dose. Severe Study
- ► Fluvoxamine moderately increases the exposure to antipsychotics, second generation (olanzapine). Adjust dose. [Severe] Anecdotal
- SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to antipsychotics, second generation (risperidone).
 Adjust dose. [Moderate] Study
- SSRIs (fluoxetine, paroxetine) are predicted to markedly increase the exposure to atomoxetine. Adjust dose. Severe Study
- Fluvoxamine moderately increases the exposure to benzodiazepines (alprazolam). Adjust dose. Moderate Study
- SSRIs (fluoxetine, fluvoxamine) potentially increase the exposure to benzodiazepines (clobazam). Adjust dose. [Moderate] Theoretical
- Fluvoxamine moderately increases the exposure to benzodiazepines (diazepam). [Moderate] Study
- ► Fluvoxamine moderately increases the concentration of beta blockers, non-selective (propranolol). Moderate Study
- ➤ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to beta blockers, selective (metoprolol, nebivolol).

 [Moderate] Study
- Bupropion is predicted to increase the exposure to dapoxetine.
 Moderate Theoretical
- Fluvoxamine markedly decreases the clearance of caffeine citrate. Monitor and adjust dose. [Severe] Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ► SSRIs (fluoxetine, fluvoxamine) are predicted to increase the exposure to cannabidiol. Moderate Theoretical
- SSRIs (fluoxetine, fluvoxamine) are predicted to increase the exposure to cilostazol. Adjust cilostazol dose, p. 252. Moderate Theoretical → Also see TABLE 4 p. 1490
- Cinacalcet is predicted to increase the exposure to dapoxetine.
 Moderate Theoretical
- ► Fluvoxamine is predicted to increase the exposure to cinacalcet. Adjust dose. Moderate Theoretical
- ► SSRIs (fluoxetine, fluvoxamine) are predicted to decrease the efficacy of clopidogrel. Avoid. Severe Theoretical → Also see TABLE 4 p. 1490

SSRIs (continued)

- ➤ Cobicistat is predicted to moderately increase the exposure to dapoxetine. Avoid potent CYP3A4 inhibitors or adjust dapoxetine dose, p. 887. Severe Study
- ► Cobicistat is predicted to increase the exposure to SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline). Monitor and adjust dose. Moderate Theoretical
- ► Crizotinib is predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to slightly increase the exposure to darifenacin. [Mild] Study
- ► Fluvoxamine is predicted to increase the exposure to dopamine receptor agonists (ropinirole). Adjust dose. Moderate Study
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to eliglustat. Avoid or adjust dose—consult product literature. Severe Study
- Fluvoxamine is predicted to increase the exposure to eltrombopag. Moderate Theoretical
- ► Fluvoxamine is predicted to increase the exposure to erlotinib. Monitor adverse effects and adjust dose. Moderate Theoretical
- ► Fluoxetine is predicted to increase the exposure to fedratinib. Avoid depending on other drugs taken—consult product literature. Moderate Theoretical
- Fluvoxamine is predicted to increase the exposure to fedratinib. Avoid. Moderate Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to fesoterodine. Use with caution and adjust dose. Mild Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to gefitinib. Moderate Theoretical
- ► Gilteritinib is predicted to decrease the efficacy of SSRIs (escitalopram, fluoxetine, sertraline). Avoid. Moderate Theoretical
- ► Grapefruit juice moderately increases the exposure to sertraline. Avoid. Moderate Study
- ▶ H₂ receptor antagonists (cimetidine) slightly increase the exposure to SSRIs (citalopram, escitalopram). Adjust dose. Moderate Study
- ► H₂ receptor antagonists (cimetidine) slightly increase the exposure to SSRIs (paroxetine, sertraline). Moderate Study
- ► Fluoxetine increases the concentration of haloperidol. Adjust dose. Moderate Anecdotal
- ► Fluvoxamine increases the concentration of haloperidol. Adjust dose. Moderate Study
- HIV-protease inhibitors are predicted to moderately increase the exposure to dapoxetine. Avoid potent CYP3A4 inhibitors or adjust dapoxetine dose, p. 887. Severe Study
- ► Idelalisib is predicted to moderately increase the exposure to dapoxetine. Avoid potent CYP3A4 inhibitors or adjust dapoxetine dose, p. 887. Severe Study
- ▶ Imatinib is predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical → Also see TABLE 4 p. 1490
- Letermovir is predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ► Fluoxetine is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. Unknown Theoretical
- Fluvoxamine is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- Fluvoxamine is predicted to increase the exposure to loxapine. Avoid. Unknown Theoretical
- ► Macrolides (clarithromycin) are predicted to moderately increase the exposure to dapoxetine. Avoid potent CYP3A4 inhibitors or adjust dapoxetine dose, p. 887. Severe Study
- ► Macrolides (erythromycin) are predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ▶ Fluvoxamine very markedly increases the exposure to melatonin. Avoid. Severe Study
- ▶ SSRIs (fluoxetine, fluvoxamine, paroxetine) are predicted to increase the exposure to mexiletine. Moderate Study

- ▶ Moclobemide is predicted to increase the exposure to escitalopram. Use with caution and adjust dose. Severe Study → Also see TABLE 13 p. 1493
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ► SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with neuromuscular blocking drugs, non-depolarising (mivacurium). [Unknown]
- Nilotinib is predicted to increase the exposure to dapoxetine. Adjust dapoxetine dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of opioids (codeine). Moderate Theoretical
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of opioids (tramadol). Severe Study → Also see TABLE 13 n 1493
- ▶ SSRIs might increase the risk of adverse effects when given with ozanimod. Severe Theoretical
- ► Fluvoxamine is predicted to increase the exposure to pentoxifylline. Moderate Theoretical
- ▶ Fluvoxamine is predicted to increase the exposure to phenothiazines (chlorpromazine). Moderate Theoretical
- ▶ Fluvoxamine is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Moderate Study
- ▶ Fluvoxamine is predicted to moderately increase the exposure to pirfenidone. Avoid. Moderate Study
- ► SSRIs (fluoxetine, paroxetine) are predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- ▶ Fluvoxamine moderately increases the exposure to pomalidomide. Adjust pomalidomide dose, p. 1035. Moderate
- ▶ Paroxetine slightly increases the exposure to procyclidine. Monitor and adjust dose. Moderate Study
- ▶ Proton pump inhibitors (esomeprazole) are predicted to slightly to moderately increase the exposure to citalopram. Monitor and adjust dose. Severe Theoretical
- ▶ Proton pump inhibitors (esomeprazole, omeprazole) are predicted to increase the exposure to escitalopram. Use with caution and adjust dose. Severe Study
- ► Proton pump inhibitors (omeprazole) slightly to moderately increase the exposure to citalopram. Monitor and adjust dose. Severe Study
- ► Fluvoxamine is predicted to increase the exposure to riluzole. Moderate Theoretical
- ▶ Fluoxetine is predicted to increase the exposure to selumetinib. Avoid or adjust dose—consult product literature. Severe
- ▶ Fluvoxamine is predicted to increase the exposure to selumetinib. Avoid or monitor—consult product literature. Severe Theoretical
- ▶ Fluvoxamine markedly increases the exposure to SNRIS (duloxetine). Avoid. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ SSRIs (fluvoxamine) are predicted to increase the exposure to SSRIs (citalopram). Monitor and adjust dose. Severe Anecdotal → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see **TABLE 4** p. 1490
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to SSRIs (dapoxetine). Moderate Theoretical → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4
- ► SSRIs (fluoxetine, fluvoxamine) are predicted to increase the exposure to SSRIs (escitalopram). Use with caution and adjust dose. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ► SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with suxamethonium. Unknown Theoretical
- ▶ Fluvoxamine very slightly increases the exposure to talazoparib. Moderate Study

- ► SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of tamoxifen. Avoid. [Severe] Study
- ► Terbinafine is predicted to increase the exposure to fluoxetine. Adjust dose. [Moderate] Theoretical
- ► Terbinafine moderately increases the exposure to paroxetine.

 Moderatel Study
- ► Terbinafine is predicted to increase the exposure to SSRIS (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline). Moderate Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to the active metabolite of tetrabenazine. Moderate Study
- Fluvoxamine moderately to markedly increases the exposure to theophylline. Avoid. [Severe] Study
- Fluvoxamine very markedly increases the exposure to tizanidine. Avoid. Severe Study
- ➤ SSRIs (fluoxetine, fluvoxamine) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ► Fluvoxamine increases the exposure to tricyclic antidepressants (amitriptyline, imipramine). Adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ► Fluvoxamine markedly increases the exposure to tricyclic antidepressants (clomipramine). Adjust dose. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ► Fluvoxamine increases the concentration of triptans (frovatriptan). Severe Study → Also see TABLE 13 p. 1493
- ► Fluvoxamine is predicted to increase the exposure to triptans (zolmitriptan). Adjust zolmitriptan dose, p. 515. Severe
 Theoretical → Also see TABLE 13 p. 1493
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to vortioxetine. Monitor and adjust dose. [Moderate]
 Study → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- St John's wort → see TABLE 13 p. 1493 (serotonin syndrome)
- ➤ St John's wort is predicted to decrease the exposure to abemaciclib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to acalabrutinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to afatinib.

 Moderate Study
- St John's wort is predicted to slightly decrease the exposure to aldosterone antagonists (eplerenone). Avoid. [Moderate] Study
- ► St John's wort decreases the exposure to aliskiren. Moderate Study
- St John's wort is predicted to decrease the concentration of aminophylline. Severe Theoretical
- St John's wort is predicted to decrease the exposure to antiandrogens (darolutamide). Avoid. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to antiarrhythmics (dronedarone). Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to antiepileptics (brivaracetam). [Moderate] Theoretical
- St John's wort is predicted to decrease the concentration of antiepileptics (carbamazepine). Monitor and adjust dose.
 Moderate Theoretical
- ➤ St John's wort is predicted to decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). Avoid. [Severe] Theoretical
- ➤ St John's wort is predicted to decrease the exposure to antiepileptics (perampanel). Monitor and adjust dose. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to antiepileptics (tiagabine). Avoid. Mild Theoretical
- ► St John's wort is predicted to decrease the exposure to antifungals, azoles (isavuconazole). Avoid. [Severe] Theoretical
- St John's wort moderately decreases the exposure to antifungals, azoles (voriconazole). Avoid. [Moderate] Study
- St John's wort is predicted to decrease the concentration of antimalarials (piperaquine). Avoid. Moderate Theoretical

- ► St John's wort is predicted to decrease the exposure to antipsychotics, second generation (cariprazine). Avoid. Severe Theoretical
- ➤ St John's wort is predicted to decrease the exposure to antipsychotics, second generation (lurasidone). Monitor and adjust dose. [Moderate] Theoretical
- ➤ St John's wort is predicted to decrease the exposure to antipsychotics, second generation (paliperidone). Severe Theoretical
- St John's wort is predicted to decrease the exposure to antipsychotics, second generation (quetiapine). Moderate Study
- St John's wort is predicted to decrease the exposure to avapritinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to axitinib.

 Avoid or adjust dose. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to bedaquiline. Avoid. [Severe] Study
- St John's wort moderately decreases the exposure to benzodiazepines (alprazolam). [Moderate] Study
- St John's wort moderately decreases the exposure to benzodiazepines (midazolam). Monitor and adjust dose.
 Moderatel Study
- St John's wort is predicted to decrease the concentration of berotralstat. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the exposure to bictegravir. Avoid. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to bosutinib. Avoid. Severe Study
- St John's wort is predicted to decrease the exposure to brigatinib. Avoid. [Moderate] Study
- St John's wort is predicted to decrease the exposure to cabozantinib. [Moderate] Study
- St John's wort is predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Theoretical
- ➤ St John's wort is predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to cannabidiol. Adjust dose. [Mild] Study
- ► St John's wort is predicted to decrease the exposure to ceritinib. Avoid. Severe Theoretical
- ► St John's wort decreases the concentration of ciclosporin.

 Avoid. [Moderate] Study
- St John's wort is predicted to alter the effects of cilostazol.
 Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to cobicistat. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the exposure to cobimetinib. Avoid. Severe Theoretical
- ➤ St John's wort decreases the efficacy of combined hormonal contraceptives. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ➤ St John's wort decreases the anticoagulant effect of coumarins. Avoid. Severe Anecdotal
- ► St John's wort is predicted to decrease the exposure to crizotinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to dabrafenib. Avoid. Moderate Study
- ► St John's wort is predicted to decrease the exposure to darifenacin. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to dasatinib. Severe Study
- ➤ St John's wort is predicted to decrease the efficacy of desogestrel. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ➤ St John's wort decreases the concentration of digoxin. Avoid. Severel Anecdotal
- ► St John's wort is predicted to decrease the exposure to dolutegravir. Adjust dolutegravir dose, p. 696. Severe Study
- ► St John's wort is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. Mild Study
- St John's wort is predicted to moderately decrease the exposure to elbasvir. Avoid. [Severe] Study

St John's wort (continued)

- ► St John's wort is predicted to decrease the exposure to elexacaftor. Avoid. Severe Theoretical
- ► St John's wort is predicted to increase the exposure to eliglustat. Avoid. Severe Study
- ► St John's wort is predicted to decrease the concentration of elvitegravir. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the exposure to encorafenib. Severe Theoretical
- St John's wort is predicted to decrease the exposure to endothelin receptor antagonists (bosentan). Avoid. [Moderate] Theoretical
- ➤ St John's wort is predicted to decrease the exposure to endothelin receptor antagonists (macitentan). Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to entrectinib. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the effects of ergotamine. [Moderate] Theoretical
- St John's wort is predicted to decrease the exposure to erlotinib. Severe Study
- ➤ St John's wort is predicted to decrease the efficacy of etonogestrel. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- St John's wort is predicted to decrease the concentration of everolimus. Avoid or adjust dose. Severe Study
- ► St John's wort is predicted to decrease the exposure to exemestane. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to factor XA inhibitors (apixaban). Use with caution or avoid. [Severe] Study
- St John's wort is predicted to decrease the exposure to factor XA inhibitors (edoxaban). [Moderate] Study
- ➤ St John's wort is predicted to decrease the exposure to factor XA inhibitors (rivaroxaban). Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- St John's wort is predicted to decrease the exposure to fedratinib. Avoid. [Moderate] Study
- St John's wort is predicted to decrease the exposure to fesoterodine. Avoid. Severe Theoretical
- ➤ St John's wort is predicted to decrease the exposure to fingolimod. Avoid. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to the active metabolite of fostemsavir. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to gefitinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to gilteritinib. Avoid. Severe Study
- ➤ St John's wort is predicted to decrease the exposure to glasdegib. Avoid or adjust glasdegib dose, p. 1087. [Moderate]
 Theoretical
- ► St John's wort is predicted to decrease the exposure to glecaprevir. Avoid. Severe Study
- St John's wort is predicted to markedly decrease the exposure to grazoprevir. Avoid. Severe Study
- ► St John's wort is predicted to decrease the concentration of guanfacine. Adjust dose. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to HIVprotease inhibitors. Avoid. (Severe) Study
- St John's wort is predicted to decrease the efficacy of hormone replacement therapy. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to ibrutinib. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to idelalisib. Avoid. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to imatinib. [Moderate] Study
- St John's wort slightly decreases the exposure to irinotecan.
 Avoid. Severe Study
- St John's wort decreases the exposure to ivabradine. Avoid.
 Moderate Study
- ► St John's wort is predicted to decrease the exposure to ivacaftor. Avoid. [Severe] Study
- St John's wort is predicted to decrease the exposure to ixazomib. Avoid. Severe Theoretical

- ► St John's wort is predicted to decrease the exposure to lapatinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to larotrectinib. Avoid. [Moderate] Study
- St John's wort is predicted to decrease the exposure to ledipasvir. Avoid. [Severe] Study
- ► St John's wort is predicted to decrease the concentration of letermovir. [Moderate Theoretical
- St John's wort is predicted to decrease the efficacy of levonorgestrel. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to lorlatinib. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to maraviroc. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to mifepristone. Severe Theoretical
- St John's wort is predicted to decrease the exposure to naldemedine. Avoid. Severe Study
- St John's wort is predicted to decrease the exposure to naloxegol. Avoid. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to neurokinin-1 receptor antagonists (aprepitant, fosaprepitant). Avoid. Moderate Theoretical
- ➤ St John's wort is predicted to decrease the exposure to neurokinin-1 receptor antagonists (netupitant). Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to nilotinib. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the exposure to nintedanib. Moderate Study
- ► St John's wort is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to NNRTIS (doravirine, rilpivirine). Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the concentration of NNRTIS (efavirenz, nevirapine). Avoid. (Severe) Theoretical
- St John's wort is predicted to decrease the exposure to NNRTIS (etravirine). Avoid. Severe Study
- ➤ St John's wort is predicted to decrease the efficacy of norethisterone. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ► St John's wort is predicted to decrease the exposure to olaparib. Avoid. Moderate Theoretical
- St John's wort decreases the exposure to opioids (methadone).
 Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1493
- St John's wort moderately decreases the exposure to opioids (oxycodone). Adjust dose. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to osimertinib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to ospemifene. Moderate Study
- ► St John's wort is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to
- pazopanib. Severe Study
 ➤ St John's wort is predicted to decrease the exposure to pemigatinib. Avoid. Severe Study
- ➤ St John's wort is predicted to decrease the exposure to phosphodiesterase type-4 inhibitors (apremilast). Avoid. Severe Theoretical
- ▶ St John's wort is predicted to decrease the exposure to
- phosphodiesterase type-5 inhibitors. [Moderate] Theoretical
 St John's wort is predicted to decrease the exposure to
- St John's wort is predicted to decrease the exposure to pibrentasvir. Avoid. Severe Study
- ► St John's wort slightly decreases the exposure to pioglitazone.
 Mild Study
 ► St John's wort is predicted to decrease the exposure to
- pitolisant. Monitor and adjust dose. Moderate Theoretical

- St John's wort is predicted to decrease the exposure to ponatinib. Avoid. Severe Theoretical
- St John's wort is predicted to decrease the exposure to ranolazine. Avoid. Severe Study
- St John's wort is predicted to decrease the exposure to regorafenib. Avoid. Severe Study
- St John's wort is predicted to decrease the exposure to relugolix. Avoid. [Moderate] Study
- St John's wort is predicted to decrease the exposure to ribociclib. Avoid. [Severe] Study
- St John's wort is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to selpercatinib. Avoid. Moderate Study

 St John's wort is predicted to decrease the exposure to
- ► St John's wort is predicted to decrease the exposure to selumetinib. Avoid. Severe Study
- ➤ St John's wort is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- St John's wort is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. Severe Theoretical
- St John's wort is predicted to decrease the exposure to sofosbuvir. Avoid. Severe Study
- St John's wort is predicted to decrease the exposure to sorafenib. Moderate Study
- St John's wort is predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
- St John's wort is predicted to decrease the exposure to sunitinib. Moderate Study
- ► St John's wort decreases the concentration of tacrolimus.

 Avoid. | Severe | Study
- St John's wort is predicted to decrease the exposure to taxanes (cabazitaxel). Avoid. Severe Theoretical
- ➤ St John's wort is predicted to decrease the exposure to taxanes (docetaxel). Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to taxanes (paclitaxel). Avoid. [Severe] Study
- ► St John's wort is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- St John's wort is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ► Tepotinib might decrease the exposure to St John's wort. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to tezacaftor. Avoid. Severe Theoretical
- St John's wort potentially decreases the exposure to theophylline. [Severe] Anecdotal
- St John's wort is predicted to decrease the exposure to thrombin inhibitors (dabigatran). Avoid. [Severe] Study
- ► St John's wort is predicted to decrease the exposure to ticagrelor. Moderate Theoretical
- ► St John's wort might decrease the exposure to tigecycline. Mild Theoretical
- St John's wort is predicted to decrease the exposure to tivozanib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to tofacitinib. Moderate Study
 ► St John's wort is predicted to decrease the exposure to
- tolvaptan. Avoid. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to topotecan. Severel Theoretical
- ► St John's wort is predicted to decrease the exposure to treprostinil. Adjust dose. Mild Theoretical
- St John's wort is predicted to decrease the exposure to tucatinib. Avoid. [Severe] Theoretical
- ► St John's wort is predicted to decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859.

 Severe | Anecdotal
- St John's wort is predicted to decrease the exposure to vandetanib. Avoid. Severe Study
- ► St John's wort is predicted to decrease the exposure to velpatasvir. Avoid. Moderate Theoretical
- St John's wort is predicted to decrease the exposure to vemurafenib. Avoid. Severe Study

- ► St John's wort is predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- ➤ St John's wort is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine). Severe
- ► St John's wort is predicted to decrease the exposure to vinca alkaloids (vinflunine). Avoid. [Severe] Theoretical
- St John's wort is predicted to decrease the exposure to vismodegib. Avoid. Moderate Theoretical
- St John's wort is predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical

Statins → see TABLE 1 p. 1490 (hepatotoxicity)

atorvastatin • fluvastatin • pravastatin • rosuvastatin • simvastatin

- Acipimox is predicted to increase the risk of rhabdomyolysis when given with statins. Severe Theoretical
- Atorvastatin slightly to moderately increases the exposure to aliskiren. [Moderate] Study
- ► Oral antacids decrease the absorption of oral rosuvastatin. Separate administration by 2 hours. [Moderate] Study
- Anti-androgens (apalutamide) are predicted to decrease the exposure to atorvastatin. Moderate Study
- Anti-androgens (apalutamide) slightly decrease the exposure to rosuvastatin. Mild Study
- Anti-androgens (apalutamide) are predicted to decrease the exposure to simvastatin. Avoid or monitor. [Moderate] Study
- Anti-androgens (darolutamide) are predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin).
 Avoid. [Severe] Theoretical
- Anti-androgens (enzalutamide) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). Moderate Study
- Anti-androgens (darolutamide) are predicted to increase the concentration of statins (pravastatin, simvastatin). [Moderate]
- ► Antiarrhythmics (amiodarone) are predicted to increase the exposure to atorvastatin. Monitor and adjust dose. Moderate
- ► Antiarrhythmics (amiodarone) are predicted to increase the exposure to fluvastatin. [Moderate] Study
- Antiarrhythmics (amiodarone) increase the exposure to simvastatin. Adjust simvastatin dose, p. 222. Severel Study
- Antiarrhythmics (dronedarone) slightly increase the exposure to atorvastatin. Monitor and adjust dose. Severe Study
- ► Antiarrhythmics (dronedarone) slightly increase the exposure to rosuvastatin. Adjust dose. Severe Study
- Antiarrhythmics (dronedarone) moderately increase the exposure to simvastatin. Monitor and adjust dose. [Severe] Study
- ► Antiepileptics (carbamazepine) are predicted to decrease the exposure to atorvastatin. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ► Antiepileptics (carbamazepine, eslicarbazepine) moderately decrease the exposure to simvastatin. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ► Antiepileptics (eslicarbazepine) are predicted to decrease the exposure to atorvastatin. Monitor and adjust dose. Moderate Theoretical
- Antiepileptics (eslicarbazepine) decrease the exposure to rosuvastatin. [Moderate] Study
- Antiepileptics (phenytoin) moderately decrease the exposure to atorvastatin. Moderate Study
- ► Antiepileptics (phenytoin) are predicted to decrease the exposure to simvastatin. Moderate Study
- Antiepileptics (fosphenytoin, phenobarbital, primidone) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
- ► Antiepileptics (oxcarbazepine) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate]

 Theoretical
- ► Antifungals, azoles (fluconazole, miconazole) are predicted to increase the exposure to fluvastatin. Moderate Study → Also see TABLE 1 p. 1490
- Antifungals, azoles (isavuconazole) slightly increase the exposure to atorvastatin. [Moderate] Study
- ► Antifungals, azoles (isavuconazole) are predicted to increase the exposure to simvastatin. Monitor and adjust dose. Severe

 Theoretical

Statins (continued)

- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to atorvastatin. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1490
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to simvastatin. Avoid. Severe Study → Also see TABLE 1 p. 1490
- Antifungals, azoles (miconazole) (including the oral gel) might increase the exposure to atorvastatin. [Moderate] Theoretical
- Antifungals, azoles (miconazole) (including the oral gel) are predicted to increase the exposure to simvastatin. Avoid. [Severe] Anecdotal
- ► Antifungals, azoles (posaconazole) are predicted to increase the exposure to atorvastatin. Avoid. [Severe] Anecdotal
- ► Antifungals, azoles (posaconazole) markedly to very markedly increase the exposure to simvastatin. Avoid. [Severe] Study
- ► Antifungals, azoles (fluconazole) are predicted to increase the exposure to statins (atorvastatin, simvastatin). Monitor and adjust dose. (Severe) Anecdotal → Also see TABLE 1 p. 1490
- Antifungals, azoles (isavuconazole) are predicted to increase the exposure to statins (fluvastatin, rosuvastatin). [Moderate]
- Bempedoic acid increases the exposure to pravastatin.
 Moderate Study
- ▶ Bempedoic acid increases the exposure to simvastatin. Adjust simvastatin dose, p. 222. Moderate Study
- Calcium channel blockers (amlodipine) slightly increase the exposure to simvastatin. Adjust simvastatin dose, p. 222. [Mild] Study
- ► Calcium channel blockers (diltiazem) slightly increase the exposure to atorvastatin. Monitor and adjust dose. Severe Study
- ► Calcium channel blockers (diltiazem, verapamil) moderately increase the exposure to simvastatin. Monitor and adjust dose.

 Severe Study
- Calcium channel blockers (verapamil) are predicted to slightly to moderately increase the exposure to atorvastatin. Monitor and adjust dose. Severe Theoretical
- Cenobamate is predicted to decrease the exposure to simvastatin. Adjust dose. Moderate Theoretical
- ► Cephalosporins (ceftobiprole) are predicted to increase the concentration of statins. Moderate Theoretical
- ➤ Ciclosporin markedly to very markedly increases the exposure to atorvastatin. Avoid or adjust atorvastatin dose, p. 220. Severe Study
- Ciclosporin moderately increases the exposure to fluvastatin.
 Severel Study
- Ciclosporin markedly to very markedly increases the exposure to pravastatin. Adjust dose. [Severe] Study
- Ciclosporin markedly increases the exposure to rosuvastatin.
 Avoid. Severe Study
- Ciclosporin markedly to very markedly increases the exposure to simvastatin. Avoid. Severe Study
- ► Cilostazol is predicted to increase the exposure to atorvastatin.

 Moderate Theoretical
- Cilostazol slightly increases the exposure to simvastatin.
 Moderatel Study
- ► Clopidogrel increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. [Moderate] Study
- Cobicistat is predicted to increase the exposure to atorvastatin.
 Avoid or adjust dose and monitor rhabdomyolysis. [Severe]
- ► Cobicistat is predicted to increase the exposure to simvastatin. Avoid. Severe Study
- ► Colchicine has been reported to cause rhabdomyolysis when given with statins. Severe Anecdotal
- ► Statins (fluvastatin, rosuvastatin) increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. Severe Study
- Crizotinib is predicted to increase the exposure to atorvastatin.
 Monitor and adjust dose. [Moderate] Theoretical
- ► Crizotinib is predicted to increase the exposure to pravastatin.

 Moderate Theoretical
- Crizotinib is predicted to increase the exposure to simvastatin.
 Monitor and adjust dose. Severe Theoretical

- Dabrafenib is predicted to decrease the exposure to statins (atorvastatin, simvastatin). Moderate Study
- ► Statins are predicted to increase the risk of rhabdomyolysis when given with daptomycin. [Severe] Theoretical
- ▶ Dasatinib is predicted to increase the exposure to simvastatin. Moderate Theoretical
- ► Elbasvir with grazoprevir slightly increases the exposure to atorvastatin. Adjust atorvastatin dose, p. 220. Moderate Study
- ► Elbasyir with grazoprevir is predicted to increase the exposure to fluvastatin. Adjust fluvastatin dose, p. 220. [Moderate]

Theoretical

- Elbasvir with grazoprevir moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. Moderate Study
- ► Elbasvir with grazoprevir is predicted to increase the exposure to simvastatin. Adjust simvastatin dose, p. 222. Moderate

 Theoretical
- ► Elexacaftor is predicted to increase the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). [Moderate]
 Theoretical
- ► Eltrombopag is predicted to increase the exposure to statins. Monitor and adjust dose. [Moderate] Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to statins (atorvastatin, simvastatin).

 Moderate Study
- ► Fibrates (bezafibrate, ciprofibrate) increase the risk of rhabdomyolysis when given with pravastatin. Avoid. Severe
- ► Fibrates (bezafibrate, ciprofibrate) increase the risk of rhabdomyolysis when given with rosuvastatin. Adjust rosuvastatin dose, p. 221. [Severe] Study
- ► Fibrates (bezafibrate, ciprofibrate) increase the risk of rhabdomyolysis when given with simvastatin. Adjust simvastatin dose, p. 222. Severe Study
- ► Fibrates (ciprofibrate) increase the risk of rhabdomyolysis when given with atorvastatin. Avoid or adjust dose. Severe Study
- ► Fibrates (ciprofibrate) increase the risk of rhabdomyolysis when given with fluvastatin. [Severe] Study
- ► Fibrates (fenofibrate) increase the risk of rhabdomyolysis when given with atorvastatin. Monitor and adjust fenofibrate dose, p. 217. [Severe] Anecdotal
- ► Fibrates (fenofibrate) are predicted to increase the risk of rhabdomyolysis when given with fluvastatin. Use with caution and adjust fenofibrate dose, p. 217. [Severe] Theoretical
- ► Fibrates (fenofibrate) are predicted to increase the risk of rhabdomyolysis when given with pravastatin. Avoid. Severe Theoretical
- ► Fibrates (fenofibrate) increase the risk of rhabdomyolysis when given with rosuvastatin. Adjust fenofibrate and rosuvastatin doses, p. 217, p. 221. Severe Anecdotal
- ► Fibrates (fenofibrate) increase the risk of rhabdomyolysis when given with simvastatin. Adjust fenofibrate dose, p. 217. [Severe]

 Anecdotal
- ► Fibrates (gemfibrozil) increase the risk of rhabdomyolysis when given with statins. Avoid. (Severe) Anecdotal
- ► Fibrates (bezafibrate) increase the risk of rhabdomyolysis when given with statins (atorvastatin, fluvastatin). Severe Study
- ► Fostamatinib slightly increases the exposure to rosuvastatin.

 [Moderate] Study
- ► Fostamatinib slightly increases the exposure to simvastatin.

 Monitor adverse effects and adjust dose. Moderate Study
- Fostemsavir increases the exposure to rosuvastatin. Adjust starting dose and monitor. Severe Study
- Fostemsavir is predicted to increase the exposure to statins (atorvastatin, fluvastatin, simvastatin). Adjust starting dose and monitor. Severe Theoretical
- ► Fusidate has been reported to cause rhabdomyolysis when given with statins. Avoid. Severe Anecdotal
- Glecaprevir with pibrentasvir markedly increases the exposure to atorvastatin. Avoid. Severe Study
- ► Glecaprevir with pibrentasvir is predicted to increase the exposure to fluvastatin. [Moderate] Theoretical
- Glecaprevir with pibrentasvir moderately increases the exposure to pravastatin. Use with caution and adjust pravastatin dose, p. 221. Moderate Study

- ► Glecaprevir with pibrentasvir moderately increases the exposure to rosuvastatin. Use with caution and adjust rosuvastatin dose, p. 221. [Moderate] Study
- ► Glecaprevir with pibrentasvir moderately increases the exposure to simvastatin. Avoid. [Moderate] Study
- ► Grapefruit juice increases the exposure to atorvastatin. Mild Study
- ► **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. <u>Severe</u> Study
- Grazoprevir moderately increases the exposure to atorvastatin.
 Adjust atorvastatin dose, p. 220. [Moderate] Study
- Grazoprevir with elbasvir is predicted to increase the exposure to fluvastatin. Adjust fluvastatin dose, p. 220. [Moderate]

 Theoretical
- Grazoprevir with elbasvir moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. Moderate Study
- ► Grazoprevir with elbasvir is predicted to increase the exposure to simvastatin. Adjust simvastatin dose, p. 222. [Moderate]

 Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to atorvastatin. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- HIV-protease inhibitors might affect the exposure to pravastatin. [Moderate] Study
- ► HIV-protease inhibitors (atazanavir, lopinavir) are predicted to increase the exposure to rosuvastatin. Avoid or adjust rosuvastatin dose, p. 221. Severe Study
- HIV-protease inhibitors (darunavir, ritonavir) are predicted to increase the exposure to rosuvastatin. Avoid or adjust dose.
 Severe Study
- HIV-protease inhibitors (fosamprenavir, tipranavir) are predicted to increase the exposure to rosuvastatin. Use with caution and adjust dose. Severe Study
- ► HIV-protease inhibitors are predicted to increase the exposure to simvastatin. Avoid. Severe Study
- ► Idelalisib is predicted to increase the exposure to atorvastatin. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- Idelalisib is predicted to increase the exposure to simvastatin.
 Avoid. [Severe] Study
- Imatinib is predicted to increase the exposure to atorvastatin.
 Monitor and adjust dose. Severe Theoretical
- ► Imatinib moderately increases the exposure to simvastatin.

 Monitor and adjust dose. Severe Study
- ► Ledipasvir with sofosbuvir is predicted to increase the exposure to atorvastatin. Monitor and adjust dose. Moderate

 Apecdotal
- ► Ledipasvir with sofosbuvir is predicted to increase the exposure to rosuvastatin. Avoid. Severe Theoretical
- ► Ledipasvir with sofosbuvir is predicted to increase the exposure to statins (fluvastatin, pravastatin, simvastatin). Monitor and adjust dose. Moderate Theoretical
- ► Leflunomide is predicted to increase the exposure to rosuvastatin. Adjust dose. Moderate Study → Also see TABLE 1 p. 1490
- ► Leflunomide is predicted to increase the exposure to statins (atorvastatin, fluvastatin, pravastatin, simvastatin). Moderate Study → Also see TABLE 1 p. 1490
- Letermovir moderately increases the exposure to atorvastatin.
 Avoid or adjust atorvastatin dose, p. 220. Severe Study
- ► Letermovir is predicted to increase the exposure to fluvastatin.

 Monitor and adjust dose. Moderate Theoretical
- Letermovir is predicted to increase the exposure to pravastatin. Avoid or adjust dose. Moderate Theoretical
- ► Letermovir is predicted to increase the exposure to statins (rosuvastatin, simvastatin). Avoid. Severe Study
- ► Lomitapide increases the exposure to atorvastatin. Adjust lomitapide dose or separate administration by 12 hours, p. 226.
 Mild Study ⇒ Also see TABLE 1 p. 1490
- ► Lomitapide increases the exposure to simvastatin. Monitor and adjust simvastatin dose, p. 222. Moderate Study → Also see TABLE 1 p. 1490
- ► Macrolides (clarithromycin) are predicted to increase the exposure to atorvastatin. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study

- ► Macrolides (clarithromycin) moderately increase the exposure to pravastatin. Severe Study
- ► Macrolides (clarithromycin) are predicted to increase the exposure to Simvastatin. Avoid. Severe Study
- Macrolides (erythromycin) slightly increase the exposure to atorvastatin. Monitor and adjust dose. Severe Study
- Macrolides (erythromycin) slightly increase the exposure to pravastatin. Severe Study
 Macrolides (erythromycin) markedly increase the exposure to
- simvastatin. Avoid. Severe Study

 ► Mifepristone moderately increases the exposure to fluvastatin.
- Moderate Study
- ► Mifepristone very markedly increases the exposure to simvastatin. Severe Study
- Mitotane is predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
- Monoclonal antibodies (sarilumab) are predicted to decrease the exposure to statins (adorvastatin, simvastatin). [Moderate] Study
- ► Monoclonal antibodies (tocilizumab) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). Monitor and adjust dose. [Moderate] Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to statins (atorvastatin, simvastatin). Monitor and adjust dose. Severe Theoretical
- ► Nicotinic acid might increase the risk of rhabdomyolysis when given with statins. Use with caution or avoid. Severe Theoretical
- Nilotinib is predicted to increase the exposure to atorvastatin.
 Monitor and adjust dose. Moderate Theoretical
- Nilotinib is predicted to increase the exposure to simvastatin.
 Monitor and adjust dose. Severel Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of simvastatin. Avoid. [Severe] Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of statins (atorvastatin, rosuvastatin). Adjust dose. [Severe] Theoretical
- NNRTIs (etravirine) slightly decrease the exposure to atorvastatin. Monitor and adjust dose. [Moderate] Study
- ► NNRTIs (etravirine) are predicted to increase the exposure to fluvastatin. Adjust dose. Severe Theoretical
- ► NNRTIs (etravirine) are predicted to decrease the exposure to simvastatin. Adjust dose. [Moderate] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
- Olaparib is predicted to increase the exposure to statins.
 Moderate Theoretical
- ► Osimertinib causes a small increase in the exposure to rosuvastatin. Severe Study
- Pazopanib might cause increased ALT concentrations when given with simvastatin. [Moderate] Study
- Pazopanib might affect the exposure to statins (atorvastatin, pravastatin, rosuvastatin). Moderate Theoretical
- Rosuvastatin is predicted to increase the anticoagulant effect of phenindione. Monitor INR and adjust dose. Severe Theoretical
- Pibrentasvir with glecaprevir markedly increases the exposure to atorvastatin. Avoid. Severe Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to fluvastatin. [Moderate] Theoretical
- Pibrentasvir with glecaprevir moderately increases the exposure to pravastatin. Use with caution and adjust pravastatin dose, p. 221. Moderate Study
- ➤ Pibrentasvir with glecaprevir moderately increases the exposure to rosuvastatin. Use with caution and adjust rosuvastatin dose, p. 221. Moderate Study
- Pibrentasvir with glecaprevir moderately increases the exposure to simvastatin. Avoid. Moderate Study
- Ranolazine is predicted to increase the exposure to atorvastatin. [Moderate] Theoretical
- ► Ranolazine slightly increases the exposure to simvastatin.

 Adjust simvastatin dose, p. 222. Moderate Study
- Regorafenib is predicted to increase the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. Moderate Study
- ► Regorafenib is predicted to increase the exposure to statins (atorvastatin, fluvastatin). Moderate Study
- ► Ribociclib (high-dose) is predicted to increase the exposure to simvastatin. Avoid. Moderate Theoretical

Statins (continued)

- Ribociclib is predicted to increase the exposure to statins (pravastatin, rosuvastatin). Moderate Theoretical
- ► Rifamycins (rifampicin) markedly decrease the exposure to atorvastatin. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ► Rifamycins (rifampicin) moderately decrease the exposure to fluvastatin. Monitor and adjust dose. [Moderate] Study
- Rifamycins (rifampicin) very markedly decrease the exposure to simvastatin. Moderate Study
- ► Roxadustat might increase the exposure to fluvastatin.

 Monitor adverse effects and adjust dose. Moderate Theoretical
- Roxadustat is predicted to increase the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). Monitor adverse effects and adjust dose. [Moderate] Study
- St John's wort is predicted to decrease the exposure to statins (atorvastatin, simvastatin). Moderate Study
- Fluvastatin slightly increases the exposure to sulfonylureas (glibenclamide). [Mild] Study
- Atorvastatin very slightly increases the exposure to talazoparib. Moderate Study
- ➤ Taxanes (cabazitaxel) are predicted to affect the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
- Tedizolid is predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Avoid. Moderate Study
- ► Tepotinib might increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Moderate Theoretical
- ► Teriflunomide moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. [Moderate] Study → Also see TABLE 1 p. 1490
- ➤ Teriflunomide is predicted to increase the exposure to statins (atorvastatin, fluvastatin, pravastatin, simvastatin). [Moderate]
 Study → Also see TABLE 1 p. 1490
- ► Ticagrelor slightly to moderately increases the exposure to simvastatin. Adjust simvastatin dose, p. 222. [Moderate] Study
- Tivozanib is predicted to decrease the exposure to rosuvastatin. Moderate Theoretical
- ► Tucatinib is predicted to increase the exposure to simvastatin. Avoid or adjust dose. Moderate Theoretical
- Velpatasvir with sofosbuvir slightly increases the exposure to atorvastatin. Severe Study
- ► Velpatasvir moderately increases the exposure to rosuvastatin.

 Adjust rosuvastatin dose and monitor adverse effects, p. 221.

 [Several Study]
- ▶ Velpatasvir with sofosbuvir is predicted to increase the exposure to statins (fluvastatin, simvastatin). Monitor adverse effects and adjust dose. Severe Theoretical
- ► Venetoclax is predicted to increase the exposure to atorvastatin. Moderate Study
- Venetoclax is predicted to increase the exposure to statins (fluvastatin, pravastatin, rosuvastatin, simvastatin). [Moderate]
 Theoretical
- Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the exposure to atorvastatin. Adjust atorvastatin dose, p. 220. [Moderate] Theoretical
- Voxilaprevir with sofosbuvir and velpatasvir moderately increases the exposure to pravastatin. Monitor and adjust pravastatin dose, p. 221. Moderate Study
- Voxilaprevir with sofosbuvir and velpatasvir markedly increases the exposure to rosuvastatin. Avoid. Severel Study
- Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (fluvastatin, simvastatin).
 Avoid. Moderate Theoretical

Stiripentol → see antiepileptics

Streptokinase → see TABLE 3 p. 1490 (anticoagulant effects) **Streptomycin** → see aminoglycosides

Streptozocin → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

 Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with streptozocin. UKHSA advises avoid (refer to Green Book).
 [Severe] Theoretical

Strontium → see TABLE 5 p. 1491 (thromboembolism)

- ► Oral antacids decrease the absorption of oral strontium. Separate administration by 2 hours. [Moderate] Study
- ► Oral calcium salts decrease the exposure to strontium. Separate administration by 2 hours. [Moderate] Study
- Strontium is predicted to decrease the absorption of quinolones. Avoid. Moderate Theoretical
- ► Strontium is predicted to decrease the absorption of

tetracyclines. Avoid. Moderate Theoretical

ıcralfate

- Sucralfate is predicted to decrease the exposure to bictegravir.
 Avoid. Moderate Theoretical
- ► Sucralfate potentially decreases the effects of coumarins (warfarin). Separate administration by 2 hours. Moderate
- ► Sucralfate decreases the absorption of digoxin. Separate administration by 2 hours. Severe Anecdotal
- ► Sucralfate decreases the absorption of dolutegravir. Moderate Study
- ➤ Sucralfate increases the risk of blocked enteral or nasogastric tubes when given with enteral feeds. Separate administration by 1 hour. Moderate Study
- ► Potassium citrate increases the risk of adverse effects when given with sucralfate. Avoid. Moderate Theoretical
- ► Sucraffate decreases the exposure to quinolones. Separate administration by 2 hours. Moderate Study
- ► Sodium citrate is predicted to increase the risk of adverse effects when given with sucralfate. Avoid. Moderate Theoretical
- ➤ Sucralfate decreases the absorption of sulpiride. Separate administration by 2 hours. Moderate Study
- ► Oral sucralfate might decrease the absorption of oral tetracyclines. [Moderate] Theoretical
- ➤ Sucralfate potentially decreases the absorption of theophylline. Separate administration by at least 2 hours.

 Moderate Study
- ➤ Sucralfate decreases the absorption of thyroid hormones (levothyroxine). Separate administration by at least 4 hours. [Moderate] Study
- Sucralfate is predicted to decrease the absorption of tricyclic antidepressants. [Moderate] Study

Sucroferric oxyhydroxide

 Sucroferric oxyhydroxide might decrease the exposure to roxadustat. Roxadustat should be taken at least 1 hour after sucroferric oxyhydroxide. Moderate Theoretical

Sugammadex

- ➤ Sugammadex is predicted to decrease the exposure to combined hormonal contraceptives. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- Sugammadex is predicted to decrease the exposure to desogestrel. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ➤ Sugammadex is predicted to decrease the efficacy of etonogestrel. Use additional contraceptive precautions. Severe

 Theoretical
- ► Sugammadex is predicted to decrease the exposure to levonorgestrel. Use additional contraceptive precautions.

 Severe | Theoretical
- Sugammadex is predicted to decrease the exposure to medroxyprogesterone. Use additional contraceptive precautions. Severe Theoretical
- ► Sugammadex is predicted to decrease the exposure to norethisterone. Use additional contraceptive precautions.

 [Severe] Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- Anti-androgens (darolutamide) are predicted to increase the exposure to sulfasalazine. Avoid. [Severe] Theoretical
- ► Antifungals, azoles (isavuconazole) are predicted to increase the exposure to sulfasalazine. Moderate Theoretical
- ► Sulfasalazine decreases the concentration of digoxin. Moderate
- Sulfasalazine is predicted to decrease the absorption of folates.
 [Moderate] Study

- ► Leflunomide is predicted to increase the exposure to sulfasalazine. Moderate Study → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- Regorafenib is predicted to increase the exposure to sulfasalazine. Moderate Study → Also see TABLE 15 p. 1493
- ► Roxadustat might increase the exposure to sulfasalazine.

 Monitor adverse effects and adjust dose. [Moderate] Theoretical
- Tedizolid is predicted to increase the exposure to sulfasalazine.
 Avoid. Moderate Study
- ► Tepotinib might increase the exposure to sulfasalazine. Severe
 Theoretical
- ► Teriflunomide is predicted to increase the exposure to sulfasalazine. [Moderate] Study → Also see TABLE 1 p. 1490
- ► Velpatasvir is predicted to increase the exposure to sulfasalazine. Moderate Theoretical
- ► Venetoclax is predicted to increase the exposure to sulfasalazine. [Moderate] Theoretical
- Voxilaprevir is predicted to increase the concentration of sulfasalazine. Avoid. Severel Theoretical

Sulfonamides

sulfadiazine • sulfadoxine • sulfamethoxazole

- ➤ Sulfonamides potentially increase the risk of methaemoglobinaemia when given with topical anaesthetics, local (prilocaine). Use with caution or avoid. Severe Anecdotal
- Sulfadiazine is predicted to increase the concentration of antiepileptics (fosphenytoin). Monitor and adjust dose.
 Moderate Study
- ► Sulfadiazine increases the concentration of antiepileptics (phenytoin). Monitor and adjust dose. Moderate Study
- ► Antimalarials (pyrimethamine) increase the risk of adverse effects when given with sulfonamides. [Severe] Study
- Chloroprocaine is predicted to decrease the effects of sulfonamides. Avoid. [Severe] Theoretical
- ► Sulfadiazine is predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical
- Sulfamethoxazole increases the anticoagulant effect of coumarins. Severel Study
- ► Sulfonamides are predicted to increase the risk of methaemoglobinaemia when given with dapsone. Severe Theoretical
- ➤ Sulfonamides are predicted to increase the exposure to methotrexate. Use with caution or avoid. Severe Theoretical
- ▶ Potassium aminobenzoate is predicted to affect the efficacy of sulfonamides. Avoid. Severe Theoretical
- Sulfonamides are predicted to increase the exposure to sulfonylureas. Moderate Study
 Sulfonamides are predicted to increase the effects of
- thiopental. Moderate Theoretical

Sulfonylureas \rightarrow see TABLE 14 p. 1493 (antidiabetic drugs)

- glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

 Anti-androgens (darolutamide) are predicted to increase the concentration of glibenclamide. [Moderate] Theoretical
- ► Antiarrhythmics (amiodarone) are predicted to increase the exposure to sulfonylureas. Use with caution and adjust dose.

 Moderate Study
- Antifungals, azoles (fluconazole, miconazole) are predicted to increase the exposure to sulfonylureas. Use with caution and adjust dose. [Moderate] Study
- Antifungals, azoles (voriconazole) are predicted to increase the concentration of sulfonylureas. Use with caution and adjust dose. [Moderate] Study
- Cephalosporins (ceftobiprole) are predicted to increase the concentration of glibenclamide. [Moderate] Theoretical
- Ceritinib is predicted to increase the exposure to glimepiride.
 Adjust dose. Moderate Theoretical
- Chloramphenicol is predicted to increase the exposure to sulfonylureas. Severe Study
- Elexacaftor is predicted to increase the exposure to glibenclamide. [Moderate] Theoretical
- Endothelin receptor antagonists (bosentan) increase the risk of hepatotoxicity when given with glibenclamide. Avoid. Severe Study.
- Fenfluramine might decrease blood glucose concentrations when given with sulfonylureas. Moderate Theoretical

- ► Fibrates are predicted to increase the risk of hypoglycaemia when given with sulfonylureas. [Moderate] Theoretical
- ► Leflunomide is predicted to increase the exposure to glibenclamide. Moderate Study
- ► Letermovir is predicted to increase the concentration of glibenclamide. [Moderate] Theoretical
- ► Macrolides (clarithromycin) are predicted to slightly increase the exposure to sulfonylureas. (Moderate) Theoretical
- Metreleptin is predicted to increase the risk of hypoglycaemia when given with sulfonylureas. Monitor blood glucose and adjust dose. Severel Theoretical
- ► Mifepristone is predicted to increase the exposure to sulfonylureas (glimepiride, tolbutamide). [Moderate] Theoretical
- Nitisinone is predicted to increase the exposure to sulfonylureas (glimepiride, tolbutamide). [Moderate] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to sulfonylureas. Moderate Study
- Roxadustat is predicted to increase the exposure to glibenclamide. Monitor adverse effects and adjust dose.
 Moderate Study
- ► Statins (fluvastatin) slightly increase the exposure to glibenclamide. [Mild] Study
- Sulfonamides are predicted to increase the exposure to sulfonylureas. Moderate Study
- ➤ Taxanes (cabazitaxel) are predicted to affect the exposure to glibenclamide. Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
- Teriflunomide is predicted to increase the exposure to glibenclamide. Moderate Study
- Venetoclax is predicted to increase the exposure to glibenclamide. Moderate Theoretical

Sulindac → see NSAIDs

Sulpiride → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

- Oral antacids decrease the absorption of oral sulpiride.
 Separate administration by 2 hours. Moderate Study
- ► Sulpiride is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
- ► Sulpiride is predicted to decrease the effects of levodopa. Avoid. Severe Theoretical → Also see TABLE 8 p. 1491
- ► Sulpiride potentially increases the risk of neurotoxicity when given with lithium. Severe Anecdotal → Also see TABLE 9 p. 1492
- ➤ Sucralfate decreases the absorption of sulpiride. Separate administration by 2 hours. [Moderate] Study

Sumatriptan → see triptans

Sunitinib → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to sunitinib. Moderate Study → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. [Moderate]
 Study
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to sunitinib. [Moderate] Study → Also see TABLE 9 p. 1492
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate) Study → Also see TABLE 9 p. 1492
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to sunitinib. Moderate Study
- ► Cobicistat is predicted to increase the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate Study
- ► Crizotinib is predicted to increase the exposure to sunitinib.

 [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Dabrafenib is predicted to decrease the exposure to sunitinib. Moderate Study
- ► Elbasvir is predicted to increase the concentration of sunitinib.

 Use with caution and adjust dose. [Moderate] Theoretical

Sunitinib (continued)

- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to sunitinib. Moderate Study
- ► Grapefruit juice is predicted to increase the exposure to sunitinib. Avoid. Moderate Theoretical
- ► Grazoprevir is predicted to increase the concentration of sunitinib. Use with caution and adjust dose. [Moderate]
 Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate Study
- ► Idelalisib is predicted to increase the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. [Moderate] Study
- ► Imatinib is predicted to increase the exposure to sunitinib.
 Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- Letermovir is predicted to increase the exposure to sunitinib.
 Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate Study → Also see TABLE 9 p. 1492
- Macrolides (erythromycin) are predicted to increase the exposure to sunitinib. Moderate Study → Also see TABLE 9 p. 1492
- Mitotane is predicted to decrease the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate Study → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to sunitinib. Moderate Study
- Nilotinib is predicted to increase the exposure to sunitinib. Moderate Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to sunitinib. Moderate Study → Also see TABLE 9 p. 1492
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to sunitinib. Avoid or adjust sunitinib dose, p. 1080. Moderate Study
- ► St John's wort is predicted to decrease the exposure to sunitinib. [Moderate] Study
- Sunitinib has been reported to cause hypothyroidism when given with thyroid hormones (levothyroxine). Moderate Anecdotal
 Suxamethonium → see TABLE 6 p. 1491 (bradycardia), TABLE 20
- p. 1494 (neuromuscular blocking effects)

 ➤ Alkylating agents (cyclophosphamide) increase the risk of prolonged neuromuscular blockade when given with
- suxamethonium. [Moderate] Study
 Antiarrhythmics (lidocaine) are predicted to increase the effects of suxamethonium. [Moderate] Study
- ► Anticholinesterases, centrally acting increase the effects of
- suxamethonium. [Moderate] Theoretical → Also see TABLE 6 p. 1491

 Antiepileptics (carbamazepine) increase the risk of prolonged neuromuscular blockade when given with suxamethonium.

 [Moderate] Study
- ► Antiepileptics (fosphenytoin, phenytoin) increase the effects of suxamethonium. [Moderate] Study
- ► Clindamycin increases the effects of suxamethonium. Severe
- ► Corticosteroids are predicted to decrease the effects of suxamethonium. Severel Anecdotal
- ➤ Suxamethonium is predicted to increase the risk of cardiovascular adverse effects when given with digoxin. Severe Anecdotal → Also see TABLE 6 p. 1491
- Irinotecan is predicted to increase the risk of prolonged neuromuscular blockade when given with suxamethonium.
 Moderate Theoretical
- ► Intravenous magnesium is predicted to increase the effects of suxamethonium. Moderate Study
- Metoclopramide increases the effects of suxamethonium.
 Moderate Study
- Penicillins (piperacillin) increase the effects of suxamethonium.
 Moderate Study
- ► SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with suxamethonium.

 Unknown Theoretical

Sympathomimetics, inotropic

- ► Sympathomimetics, inotropic are predicted to decrease the effects of apraclonidine. Avoid. Severe Theoretical
- ► Beta blockers, non-selective increase the risk of hypertension and bradycardia when given with dobutamine. Severe

 Theoretical
- ▶ Beta blockers, selective increase the risk of hypertension and bradycardia when given with dobutamine. Moderate Theoretical
- Entacapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, inotropic.
 Moderate Theoretical
- ► Ergometrine potentially increases the risk of peripheral vasoconstriction when given with dopamine. Avoid. Severe
- ➤ Sympathomimetics, inotropic are predicted to increase the risk of elevated blood pressure when given with linezolid. Avoid.

 | Severe | Theoretical |
- Sympathomimetics, inotropic are predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors.
 Avoid. [Severe] Anecdotal
- Sympathomimetics, inotropic are predicted to increase the risk of a hypertensive crisis when given with MAOIs, irreversible.
 Avoid and for 14 days after stopping the MAOI. Severe
 Theoretical
- Opicapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, inotropic.
 Severe Theoretical
- ➤ Tolcapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, inotropic. Moderate Theoretical

Sympathomimetics, vasoconstrictor

 $adrenaline/epinephrine \cdot ephedrine \cdot isometheptene \cdot metaraminol \cdot midodrine \cdot noradrenaline/norepinephrine \cdot phenylephrine \cdot pseudoephedrine \cdot xylometazoline$

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- ► Ephedrine increases the risk of adverse effects when given with aminophylline. Avoid in children. Moderate Study
- ► Sympathomimetics, vasoconstrictor are predicted to decrease the effects of apraclonidine. Avoid. Severe Theoretical
- Atropine increases the risk of severe hypertension when given with phenylephrine. (Severe) Study
- Beta blockers, non-selective are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [Severe] Study
- Beta blockers, selective are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [Severe] study
- ▶ Isometheptene potentially increases the risk of adverse effects when given with dopamine receptor agonists (bromocriptine). Avoid. [Severe] Anecdotal
- Entacapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [Moderate] Study
- ► Ergometrine is predicted to increase the risk of peripheral vasoconstriction when given with noradrenaline/norepinephrine. Severe Anecdotal
- Pseudoephedrine increases the risk of elevated blood pressure when given with linezolid. Avoid. Severe Study
- Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine) are predicted to increase the risk of elevated blood pressure when given with linezolid. Avoid. Severe Theoretical
- Sympathomimetics, vasoconstrictor are predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors. Avoid. [Severe] Anecdotal
- ► Sympathomimetics, vasoconstrictor are predicted to increase the risk of a hypertensive crisis when given with MAOIs,

- irreversible. Avoid and for 14 days after stopping the MAOI.
- Mianserin decreases the effects of ephedrine. Severe Anecdotal
 Sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine) are predicted to increase the risk of a hypertensive crisis when given with moclobemide. Avoid. Severel Study
- Opicapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). [Severe] Theoretical
- Sympathomimetics, vasoconstrictor might increase the risk of a hypertensive crisis when given with ozanimod. [Severe]
- ► Ephedrine increases the risk of adverse effects when given with theophylline. Avoid in children. Moderate Study
- ► Tolcapone is predicted to increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). Moderate Theoretical
- Tricyclic antidepressants are predicted to decrease the effects of ephedrine. Avoid. Severe Study
- Tricyclic antidepressants increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine). Avoid. Severel Study

Tacalcitol → see vitamin D substances

Tacrolimus → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium)

- Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ► Tacrolimus is predicted to increase the exposure to afatinib.

 [Moderate] Theoretical
- ► Alcohol increases the risk of facial flushing and skin irritation when given with topical tacrolimus. [Moderate] Study
- Anti-androgens (apalutamide, enzalutamide) decrease the concentration of tacrolimus. Monitor and adjust dose. Severe
- Antiarrhythmics (amiodarone) are predicted to increase the concentration of tacrolimus. [Severe] Anecdotal
- Antiarrhythmics (dronedarone) are predicted to increase the concentration of tacrolimus. Severel Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of tacrolimus. Monitor and adjust dose. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the concentration of tacrolimus.
 [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the concentration of tacrolimus. Monitor and adjust dose. (Severe) Study
- ► Antifungals, azoles (miconazole) are predicted to increase the concentration of tacrolimus. Monitor and adjust dose. Severe Theoretical
- ▶ Baricitinib is predicted to enhance the risk of immunosuppression when given with tacrolimus. Severe Theoretical
- Berotralstat is predicted to increase the exposure to tacrolimus. Moderate Study
- ▶ Brigatinib potentially decreases the concentration of tacrolimus. Avoid. Moderate Theoretical
 ▶ Calcium channel blockers (diltiazem, verapamil) are predicted to
- increase the concentration of tacrolimus. Severe Study

 ► Calcium channel blockers (nicardipine) potentially increase the
- concentration of tacrolimus. Monitor concentration and adjust dose. Severe Anecdotal
- Ceritinib is predicted to increase the exposure to tacrolimus.
 Avoid. Severe Theoretical
- Chloramphenicol increases the concentration of tacrolimus.
 Severel Study
- ► Ciclosporin increases the concentration of tacrolimus. Avoid.
 Severe Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494

- ► Cobicistat is predicted to increase the concentration of tacrolimus. Monitor and adjust dose. Severe Study
- Crizotinib is predicted to increase the concentration of tacrolimus. Severe Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the concentration of tacrolimus and tacrolimus potentially increases the concentration of endothelin receptor antagonists (bosentan). Avoid. [Severe] Theoretical
- Filgotinib is predicted to increase the risk of immunosuppression when given with tacrolimus. Avoid.
 Severe Theoretical
- ► Glecaprevir with pibrentasvir slightly increases the exposure to tacrolimus. Monitor and adjust dose. Mild Study
- ► Grapefruit juice greatly increases the concentration of tacrolimus. Avoid. Severe Study
- ► Grazoprevir increases the exposure to tacrolimus. Moderate
 Study
- HIV-protease inhibitors are predicted to increase the concentration of tacrolimus. Monitor and adjust dose. Severe Study
- Idelalisib is predicted to increase the concentration of tacrolimus. Monitor and adjust dose. (Severe) Study
- Imatinib is predicted to increase the concentration of tacrolimus. Severe Study
- ► Iron chelators (devrazoxane) might increase the risk of immunosuppression when given with tacrolimus. Severe Theoretical
- Ivacaftor is predicted to increase the exposure to tacrolimus.
 Moderate Theoretical
- ► Larotrectinib is predicted to increase the exposure to tacrolimus. Use with caution and adjust dose. [Mild] Theoretical
- Letermovir is predicted to increase the concentration of tacrolimus. [Severe] Study
- ➤ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tacrolimus. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- ► Tacrolimus is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. Moderate Theoretical
- ► Lorlatinib is predicted to decrease the exposure to tacrolimus.

 Avoid. Moderate Theoretical
- ► Lumacaftor is predicted to decrease the exposure to tacrolimus. Avoid. Severe Theoretical
- Macrolides (clarithromycin) are predicted to increase the concentration of tacrolimus. Monitor and adjust dose. Severe Study
- Macrolides (erythromycin) are predicted to increase the concentration of tacrolimus. Severel Study
- Tacrolimus is predicted to affect the efficacy of mifamurtide.
 Avoid. Severe Theoretical
- Mitotane decreases the concentration of tacrolimus. Monitor and adjust dose. [Severe] Study
- ► Monoclonal antibodies (sarilumab) potentially affect the exposure to tacrolimus. Monitor and adjust dose. [Moderate] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of tacrolimus. Severe Study
- ► Nilotinib is predicted to increase the concentration of tacrolimus. Severe Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of tacrolimus. Severe Theoretical
- ► NNRTIS (doravirine) are predicted to decrease the exposure to tacrolimus. Monitor tacrolimus concentration and adjust dose, p. 907. [Moderate] Theoretical
- ► NNRTIS (efavirenz, nevirapine) are predicted to decrease the concentration of tacrolimus. Monitor and adjust dose.

 Moderate Theoretical
- ► Olaparib might alter the exposure to tacrolimus. Moderate
 Theoretical
- ▶ Palbociclib is predicted to increase the exposure to tacrolimus. Adjust dose. Moderate Theoretical
- ► Pibrentasvir with glecaprevir slightly increases the exposure to tacrolimus. Monitor and adjust dose. [Mild] Study

Tacrolimus (continued)

- ▶ Pitolisant is predicted to decrease the exposure to tacrolimus. Avoid. Severe Theoretical
- ► Ranolazine increases the concentration of tacrolimus. Adjust dose. Severe Anecdotal
- ► Ribociclib is predicted to increase the exposure to tacrolimus. Use with caution and adjust dose. Moderate Theoretical
- ► Rifamycins (rifampicin) decrease the concentration of tacrolimus. Monitor and adjust dose. Severe Study
- Rucaparib is predicted to increase the exposure to tacrolimus.
 Monitor and adjust dose. Moderate Study
- ➤ Sirolimus is predicted to decrease the concentration of tacrolimus and tacrolimus increases the exposure to sirolimus. Severe Study
- ► Tacrolimus potentially increases the risk of serotonin syndrome when given with SNRIs (venlafaxine). (Severe) Anecdotal
- ➤ St John's wort decreases the concentration of tacrolimus.

 Avoid. (Severe) Study
- ► Tacrolimus is predicted to increase the exposure to thrombin inhibitors (dabigatran). Avoid. Severe Theoretical
- ► Tigecycline has been reported to increase the concentration of tacrolimus. [Severe] Anecdotal
- ► Tacrolimus increases the exposure to tofacitinib. Avoid. Severe Study
- ► Tucatinib is predicted to increase the exposure to tacrolimus. Avoid or adjust dose. [Moderate] Theoretical

Tadalafil → see phosphodiesterase type-5 inhibitors **Tafasitamab** → see monoclonal antibodies

Talazoparib → see TABLE 15 p. 1493 (myelosuppression)

- ► Antiarrhythmics (amiodarone, dronedarone) are predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe|Study
- ► Antiarrhythmics (propafenone) are predicted to increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Moderate Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. [Severe] Study
- ► Berotralstat is predicted to increase the concentration of talazoparib. Monitor and adjust dose. Moderate Study
- Beta blockers, non-selective (carvedilol) cause a small increase in the bioavailability of talazoparib. Avoid or adjust talazoparib dose, p. 1091. [Moderate] Study
- Calcium channel blockers (diltiazem, felodipine) very slightly increase the exposure to talazoparib. [Moderate] Study
- Calcium channel blockers (verapamil) are predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- Ciclosporin is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ► Cobicistat is predicted to increase the exposure to talazoparib.

 Avoid or adjust talazoparib dose, p. 1091. Moderate Theoretical
- ► Eltrombopag is predicted to increase the exposure to talazoparib. Avoid or monitor. [Moderate] Theoretical
- ► HIV-protease inhibitors (darunavir, tipranavir) are predicted to increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Moderate Theoretical
- HIV-protease inhibitors (lopinavir, ritonavir) are predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. [Severe] Study
- ► Ibrutinib is predicted to increase the exposure to talazoparib. Separate administration by at least 6 hours. Moderate Theoretical → Also see TABLE 15 p. 1493
- Ivacaftor is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ► Lapatinib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ► Leflunomide is predicted to increase the exposure to talazoparib. Avoid or monitor. Moderate Theoretical → Also see TABLE 15 p. 1493
- Lorlatinib is predicted to decrease the exposure to talazoparib.
 Moderate Study

- ► Macrolides are predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe
- ► Neratinib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ► Olaparib might increase the exposure to talazoparib. Moderate
 Theoretical → Also see TABLE 15 p. 1493
- Osimertinib is predicted to increase the exposure to talazoparib. [Moderate] Study
- ► Ranolazine is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe
- ► Rucaparib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study → Also see TABLE 15 p. 1493
- ► Sotorasib is predicted to increase the exposure to talazoparib. Avoid or adjust dose. Moderate Study
- SSRIs (fluvoxamine) very slightly increase the exposure to talazoparib. [Moderate] Study
- ► Statins (atorvastatin) very slightly increase the exposure to talazoparib. Moderate Study
- ► Tepotinib is predicted to increase the concentration of talazoparib. Severe Study
- ► Teriflunomide is predicted to increase the exposure to talazoparib. Avoid or monitor. [Moderate] Theoretical
- ► Tucatinib is predicted to increase the exposure to talazoparib.

 Use with caution and adjust dose. Moderate Theoretical
- ► Vandetanib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ➤ Vemurafenib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe

Tamoxifen → see TABLE 5 p. 1491 (thromboembolism)

- Tamoxifen (high-dose) might increase the concentration of antiepileptics (fosphenytoin) and antiepileptics (fosphenytoin) might decrease the concentration of tamoxifen (high-dose).
 Severel Theoretical
- Tamoxifen (high-dose) might increase the concentration of antiepileptics (phenytoin) and antiepileptics (phenytoin) might decrease the concentration of tamoxifen (high-dose). Severe Anecdotal
- Bupropion is predicted to decrease the efficacy of tamoxifen.
 Avoid. Severe Study
- Cinacalcet is predicted to decrease the efficacy of tamoxifen.
 Avoid. Severe Study
- ► Tamoxifen increases the anticoagulant effect of coumarins.

 Severe Study
- ► Rifamycins (rifampicin) markedly decrease the exposure to tamoxifen. Unknown Study
- ► SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of tamoxifen. Avoid. Severe Study
- ► Terbinafine is predicted to decrease the efficacy of tamoxifen. Avoid. Severe Study

Tamsulosin → see alpha blockers

Tapentadol → see opioids

Taxanes → see TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy)

cabazitaxel · docetaxel · paclitaxel

- ► Cabazitaxel is predicted to affect the exposure to angiotensin-II receptor antagonists (valsartan). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. Moderate
- Theoretical ► Anti-androgens (apalutamide, enzalutamide) are predicted to
- decrease the exposure to cabazitaxel. Avoid. Moderate Study

 Anti-androgens (apalutamide, enzalutamide) are predicted to
- decrease the exposure to docetaxel. Severe Theoretical

 Anti-androgens (apalutamide, enzalutamide) are predicted to
- decrease the exposure to paclitaxel. Avoid. Severe Study
 Antiarrhythmics (dronedarone) are predicted to increase the exposure to cabazitaxel. [Moderate] Theoretical
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to docetaxel. [Severe] Study

- Antiarrhythmics (dronedarone) are predicted to increase the exposure to paclitaxel. Moderate Anecdotal
- ► Antiarrhythmics (amiodarone) are predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). [Unknown]
 Theoretical → Also see TABLE 12 p. 1493
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to cabazitaxel. Avoid. [Moderate] Study → Also see TABLE 12 p. 1493
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to docetaxel. Severe Theoretical → Also see TABLE 12 p. 1493
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to paclitaxel. Avoid. (Severe Study → Also see TABLE 12 p. 1493
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to paclitaxel. [Moderate] Anecdotal
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to cabazitaxel. [Moderate]
 Theoretical
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to docetaxel. Severe
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to cabazitaxel. Avoid or monitor—consult product literature. Severe Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to docetaxel. Avoid or adjust dose. Severel Study
- Antifungals, azoles (miconazole) are predicted to increase the concentration of docetaxel. Use with caution and adjust dose.
 Moderate Theoretical
- Cabazitaxel is predicted to affect the exposure to antihistamines, non-sedating (fexofenadine). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
- Berotralstat is predicted to increase the concentration of taxanes (docetaxel, paclitaxel). Monitor and adjust dose.
 Moderate Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to cabazitaxel. [Moderate] Theoretical
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to docetaxel. [Severe] Study
 Calcium channel blockers (diltiazem, verapamil) are predicted to
- increase the exposure to paclitaxel. Moderate Anecdotal
- ► Ceritinib is predicted to increase the exposure to paclitaxel. Moderate Theoretical → Also see TABLE 15 p. 1493
- ► Ciclosporin increases the concentration of taxanes (docetaxel, paclitaxel) (oral). Unknown Study
- Clopidogrel is predicted to increase the concentration of paclitaxel. [Severe] Anecdotal
- ► Cobicistat is predicted to increase the exposure to cabazitaxel.

 Avoid or monitor—consult product literature. Severe Study
- ► Cobicistat is predicted to increase the exposure to docetaxel. Avoid or adjust dose. Severe Study
- Cobicistat is predicted to increase the exposure to paclitaxel.
 Moderate Anecdotal
- Crizotinib is predicted to increase the exposure to cabazitaxel.
 Moderate Theoretical
- ► Crizotinib is predicted to increase the exposure to docetaxel.

 Severe|Study
- Crizotinib is predicted to increase the exposure to paclitaxel.
- Moderate Anecdotal

 ➤ Dabrafenib is predicted to decrease the exposure to cabazitaxel. Moderate Theoretical
- Dabrafenib is predicted to decrease the exposure to docetaxel.
 Severe Theoretical
- Dabrafenib is predicted to decrease the exposure to paclitaxel.
 Avoid. Severe Study
- Eliglustat is predicted to increase the exposure to paclitaxel.
 Adjust dose. [Moderate] Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to cabazitaxel. Moderate Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to docetaxel. [Severe] Theoretical

- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to paclitaxel. Avoid. Severe Study
- Fibrates (gemfibrozil) are predicted to increase the concentration of paclitaxel. Severe Anecdotal
- ► HIV-protease inhibitors are predicted to increase the exposure to cabazitaxel. Avoid or monitor—consult product literature.

 | Severe | Study |
- HIV-protease inhibitors are predicted to increase the exposure to docetaxel. Avoid or adjust dose. Severe Study
- HIV-protease inhibitors are predicted to increase the exposure to paclitaxel. Moderate Anecdotal
- ► Ibrutinib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Separate administration by at least 6 hours. Moderate Theoretical → Also see TABLE 15 p. 1493
- Idelalisib is predicted to increase the exposure to cabazitaxel.
 Avoid or monitor—consult product literature. Severe Study
- ► Idelalisib is predicted to increase the exposure to docetaxel. Avoid or adjust dose. Severe Study
- Idelalisib is predicted to increase the exposure to paclitaxel.
 Moderate Anecdotal
- ► Imatinib is predicted to increase the exposure to cabazitaxel.

 Moderate Theoretical → Also see TABLE 15 p. 1493
- ► Imatinib is predicted to increase the exposure to docetaxel.

 Severe Study → Also see TABLE 15 p. 1493
- ► Imatinib is predicted to increase the exposure to paclitaxel.

 [Moderate] Anecdotal → Also see TABLE 15 p. 1493
- ▶ Iron chelators (deferasirox) are predicted to increase the concentration of paclitaxel. [Severe] Anecdotal
- Ivacaftor is predicted to increase the exposure to docetaxel (oral). Unknown Theoretical
- Ivacaftor is predicted to increase the exposure to paclitaxel (oral). <u>Unknown</u> Study
- Lapatinib slightly increases the exposure to paclitaxel. Severe Study
- ▶ Leflunomide is predicted to increase the concentration of paclitaxel. Severe Anecdotal → Also see TABLE 15 p. 1493
- ► Letermovir is predicted to increase the exposure to cabazitaxel.

 [Moderate] Theoretical
- Letermovir is predicted to increase the exposure to docetaxel.
 Severe Study
- Letermovir is predicted to increase the exposure to paclitaxel.
 Moderate Anecdotal
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (docetaxel, paclitaxel). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Lorlatinib is predicted to decrease the exposure to paclitaxel.
 Moderate Study
- ► Macrolides (clarithromycin) are predicted to increase the exposure to cabazitaxel. Avoid or monitor—consult product literature. [Severe] Study
- Macrolides (clarithromycin) are predicted to increase the exposure to docetaxel. Avoid or adjust dose. Severel Study
- ► Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to paclitaxel. Moderate Anecdotal
- Macrolides (erythromycin) are predicted to increase the exposure to cabazitaxel. [Moderate] Theoretical
- Macrolides (erythromycin) are predicted to increase the exposure to docetaxel. Severe Study
- ► Macrolides (azithromycin) are predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). Unknown Theoretical
- ► Cabazitaxel is predicted to affect the exposure to meglitinides (repaglinide). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
- Mirabegron is predicted to increase the exposure to paclitaxel.
 Mild Theoretical
- Mitotane is predicted to decrease the exposure to cabazitaxel. Avoid. Moderate Study → Also see TABLE 15 p. 1493
- Mitotane is predicted to decrease the exposure to docetaxel.
 Severe Theoretical → Also see TABLE 15 p. 1493
- ► Mitotane is predicted to decrease the exposure to paclitaxel. Avoid. Severe Study → Also see TABLE 15 p. 1493
- Neratinib is predicted to increase the exposure to docetaxel (oral). [Unknown] Theoretical

Taxanes (continued)

- Neratinib is predicted to increase the exposure to paclitaxel (oral). [Unknown] Study
- ➤ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to cabazitaxel. [Moderate] Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to docetaxel. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to paclitaxel. [Moderate]

 Anecdotal
- Nilotinib is predicted to increase the exposure to cabazitaxel.
 Moderate Theoretical → Also see TABLE 15 p. 1493
 Nilotinib is predicted to increase the exposure to docetaxel
- Nilotinib is predicted to increase the exposure to docetaxel.
 Severe Study → Also see TABLE 15 p. 1493
- Nilotinib is predicted to increase the exposure to paclitaxel.
 Moderate Anecdotal → Also see TABLE 15 p. 1493
 NNRTIS (efavirenz, nevirapine) are predicted to decrease the
- exposure to cabazitaxel. Moderate Theoretical

 NNRTIS (efavirenz, nevirapine) are predicted to decrease the
- exposure to docetaxel. Severe Theoretical
 ➤ NNRTIS (efavirenz, nevirapine) are predicted to decrease the
- exposure to paclitaxel. Avoid. Severe Study

 Olaparib might increase the exposure to taxanes (docetaxel,
- paclitaxel). Moderate Theoretical → Also see TABLE 15 p. 1493

 ➤ Osimertinib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Moderate Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to paclitaxel. Moderate Study
- Pitolisant is predicted to decrease the exposure to docetaxel.
 Avoid. [Severe] Theoretical
- Pitolisant is predicted to decrease the exposure to paclitaxel.
 Mild Theoretical
- ► Ranolazine is predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). Unknown Theoretical
- Rifamycins (rifabutin) are predicted to decrease the exposure to cabazitaxel. Avoid. [Moderate] Theoretical
 Rifamycins (rifampicin) are predicted to decrease the exposure
- to cabazitaxel. Avoid. Moderate Study

 ► Rifamycins (rifampicin) are predicted to decrease the exposure
- to **docetaxel**. Severe Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to paclitaxel. Avoid. Severe Study
- ► Rucaparib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel) (oral). Unknown Theoretical → Also see TABLE 15 p. 1493
- ► Selpercatinib is predicted to increase the exposure to paclitaxel. Avoid. [Moderate] Study
- ➤ Sotorasib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Avoid or adjust dose. Moderate Study
- ► St John's wort is predicted to decrease the exposure to cabazitaxel. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to docetaxel. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to paclitaxel. Avoid. [Severe] Study
- Cabazitaxel is predicted to affect the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin).
 Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
- ► Cabazitaxel is predicted to affect the exposure to sulfonylureas (glibenclamide). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. Moderate Theoretical
- ► Tepotinib is predicted to increase the concentration of taxanes (docetaxel, paclitaxel) (oral). Severel Study
- ► Teriflunomide is predicted to increase the concentration of paclitaxel. [Severe] Anecdotal
- ➤ Tucatinib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Use with caution and adjust dose.

 Moderate Theoretical
- ► Vandetanib is predicted to increase the exposure to docetaxel (oral). [Unknown] Theoretical
- Vandetanib is predicted to increase the exposure to paclitaxel (oral). Unknown Study

- Velpatasvir is predicted to increase the exposure to paclitaxel.
 Severe Theoretical
- Vemurafenib is predicted to increase the exposure to docetaxel (oral). Unknown Theoretical
- Vemurafenib is predicted to increase the exposure to paclitaxel (oral). Use with caution and adjust dose. [Unknown] Theoretical

Tazarotene → see retinoids

Tedizolid

- ➤ Tedizolid is predicted to increase the exposure to imatinib. Avoid. [Moderate] Theoretical
- ► Tedizolid is predicted to increase the exposure to lapatinib.

 Avoid. Moderate Theoretical
- ► Tedizolid is predicted to increase the exposure to methotrexate. Avoid. [Moderate] Theoretical
- ► Tedizolid is predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Avoid. [Moderate] Study
- ► Tedizolid is predicted to increase the exposure to sulfasalazine. Avoid. [Moderate] Study
- ► Tedizolid is predicted to increase the exposure to topotecan.

 Avoid. Moderate Study

Tegafur → see TABLE 15 p. 1493 (myelosuppression)

- ► Tegafur potentially increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. Severe Anecdotal
- ► Tegafur increases the anticoagulant effect of coumarins.

 Moderate Theoretical
- ► Folates are predicted to increase the risk of toxicity when given with tegafur. Severe Theoretical
- ► H₂ receptor antagonists (cimetidine) are predicted to increase the risk of toxicity when given with tegafur. [Severe] Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tegafur. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ► Methotrexate is predicted to increase the risk of toxicity when given with tegafur. Severe Theoretical → Also see TABLE 15 p. 1493

Teicoplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

Telmisartan → see angiotensin-II receptor antagonists **Telotristat ethyl**

- ► Telotristat ethyl decreases the exposure to benzodiazepines (midazolam). Moderate Study
- Telotristat ethyl is predicted to decrease the exposure to NNRTIs (doravirine). Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- Octreotide (short-acting) decreases the exposure to telotristat ethyl. Telotristat ethyl should be taken at least 30 minutes before octreotide. Moderate Study

Temazepam → see benzodiazepines

Temocillin → see penicillins

Temozolomide → see alkylating agents **Temsirolimus** → see TABLE 15 p. 1493 (myelosuppression)

- ➤ ACE inhibitors are predicted to increase the risk of angioedema when given with temsirolimus. [Moderate] Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the concentration of temsirolimus. Avoid. Severe
- ► Antiarrhythmics (dronedarone) are predicted to increase the concentration of temsirolimus. Use with caution or avoid.

 Moderate | Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study
- ➤ Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the concentration of temsirolimus. Avoid. Severe Theoretical
- ► Berotralstat is predicted to increase the exposure to temsirolimus. Use with caution or avoid. Moderate Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the concentration of and the risk of angioedema

- when given with **temsirolimus**. Use with caution or avoid.

 Moderate Theoretical
- Temsirolimus is predicted to increase the risk of angioedema when given with calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine). [Moderate] Theoretical
- Cenobamate is predicted to decrease the exposure to oral temsirolimus. Adjust dose. [Moderate] Theoretical
- Cobicistat is predicted to increase the concentration of temsirolimus. Avoid. Severe Theoretical
- ► Crizotinib is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ Dabrafenib is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the concentration of temsirolimus. Avoid. Severe
- Entrectinib is predicted to increase the exposure to temsirolimus. [Mild] Theoretical
- ► Fedratinib is predicted to increase the exposure to temsirolimus (oral). Monitor and adjust dose. Moderate
 Theoretical
- Grapefruit juice is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- temstrollmus. Use with caution or avoid. [Moderate] Ineoretical

 HIV-protease inhibitors are predicted to increase the
 concentration of temsirollimus. Avoid. [Severe] Theoretical
- ► Idelalisib is predicted to increase the concentration of temsirolimus. Avoid. Severe Theoretical
- ► Imatinib is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with temsirolimus. UKHSA advises avoid (refer to Green Book).
 Severel Theoretical
- ► Lumacaftor is predicted to decrease the exposure to temsirolimus. Avoid. Severe Theoretical
- Macrolides (clarithromycin) are predicted to increase the concentration of temsirolimus. Avoid. Severe Theoretical
- Macrolides (erythromycin) are predicted to increase the concentration of temsirolimus. Use with caution or avoid.
 Moderate Theoretical
- Mifepristone is predicted to increase the exposure to oral temsirolimus. (Severe) Theoretical
- Mitotane is predicted to decrease the concentration of temsirolimus. Avoid. Severe Study → Also see TABLE 15 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the concentration of temsirolimus. Use with caution or avoid. Moderate Theoretical
- ► Nilotinib is predicted to increase the concentration of temsirolimus. Use with caution or avoid. Moderate Theoretical → Also see TABLE 15 p. 1493
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ► Olaparib might alter the exposure to temsirolimus. [Moderate]
 Theoretical → Also see TABLE 15 p. 1493
- Pitolisant is predicted to decrease the exposure to temsirolimus. Avoid. [Severe] Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the concentration of temsirolimus. Avoid. Severe Study
- Selpercatinib is predicted to increase the exposure to temsirolimus. [Moderate] Study
- ➤ Sotorasib is predicted to decrease the exposure to temsirolimus. Avoid or adjust dose. Moderate Theoretical
- ► St John's wort is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical

Tenecteplase → see TABLE 3 p. 1490 (anticoagulant effects) **Tenofovir alafenamide**

- Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- Ciclosporin is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical

- ► Eltrombopag is predicted to increase the exposure to tenofovir alafenamide. Moderate Theoretical
- ▶ Fostemsavir is predicted to increase the exposure to tenofovir alafenamide. Adjust dose—consult product literature.
 [Moderate] Theoretical
- ► HIV-protease inhibitors (atazanavir, darunavir, lopinavir) increase the exposure to tenofovir alafenamide. Avoid or adjust dose.

 Moderatel Study
- HIV-protease inhibitors (tipranavir) are predicted to decrease the exposure to tenofovir alafenamide. Avoid. Moderate Theoretical
- ► Leflunomide is predicted to increase the exposure to tenofovir alafenamide. Moderate Theoretical
- ► Rifamycins are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to tenofovir alafenamide. Avoid. Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- **Tenofovir disoproxil** → see TABLE 2 p. 1490 (nephrotoxicity)
- ► Ciclosporin is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical → Also see TABLE 2 p. 1490
- ► Eltrombopag is predicted to increase the exposure to tenofovir disoproxil. Moderate Theoretical
- ► HIV-protease inhibitors (atazanavir, darunavir, lopinavir) are predicted to increase the risk of renal impairment when given with tenofovir disoproxil. Severe Anecdotal
- ► Ledipasvir with sofosbuvir slightly increases the exposure to tenofovir disoproxil. [Moderate] Study
- Leflunomide is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
- Teriflunomide is predicted to increase the exposure to tenofovir disoproxil. Moderate Theoretical
- Velpatasvir is predicted to increase the exposure to tenofovir disoproxil. [Severe] Study
- Voxilaprevir with sofosbuvir and velpatasvir potentially increases the concentration of tenofovir disoproxil. Severe

Tenoxicam → see NSAIDs **Tepotinib**

- ► Tepotinib is predicted to increase the concentration of aliskiren. Severe Study
- Anti-androgens (apalutamide, enzalutamide) might decrease the exposure to tepotinib. Avoid. (Severe) Theoretical
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) might decrease the exposure to tepotinib. Avoid. [Severe] Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) might increase the exposure to tepotinib. Avoid. [Severe] Theoretical
- Tepotinib is predicted to increase the concentration of antihistamines, non-sedating (fexofenadine). [Severe] Study
- Tepotinib is predicted to increase the concentration of colchicine. Severel Study
- ► Tepotinib is predicted to increase the concentration of digoxin.

 Severe Study
- Tepotinib is predicted to increase the concentration of everolimus. Severe Study
- ► Tepotinib is predicted to increase the concentration of factor XA inhibitors (edoxaban, rivaroxaban). Severe Study
- HIV-protease inhibitors (lopinavir) boosted with ritonavir might increase the exposure to tepotinib. Avoid. Severe Theoretical
- ► HIV-protease inhibitors (ritonavir) might increase the exposure to tepotinib. Avoid. Severe Theoretical
- Tepotinib is predicted to increase the concentration of loperamide. Severe Study
- ► Macrolides (clarithromycin) might increase the exposure to tepotinib. Avoid. (Severe) Theoretical
- Mitotane might decrease the exposure to tepotinib. Avoid.
 Severe Theoretical
- ▶ Rifamycins (rifampicin) might decrease the exposure to tepotinib. Avoid. Severe Theoretical
- ► Tepotinib is predicted to increase the concentration of sirolimus. [Severe] Study
- Tepotinib might decrease the exposure to St John's wort.
 Avoid. [Severe] Theoretical

Tepotinib (continued)

- ► Tepotinib might increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Moderate Theoretical
- Tepotinib might increase the exposure to sulfasalazine. Severe
- ► Tepotinib is predicted to increase the concentration of talazoparib. Severe Study
- ► Tepotinib is predicted to increase the concentration of taxanes (docetaxel, paclitaxel) (oral). Severe Study
- Tepotinib slightly increases the exposure to thrombin inhibitors (dabigatran). Severe Study
- Tepotinib is predicted to increase the concentration of topotecan. Severe Study

Terazosin → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ➤ Terbinafine is predicted to increase the exposure to anticholinesterases, centrally acting (galantamine). Monitor and adjust dose. [Moderate] Study
- ► Terbinafine is predicted to moderately increase the exposure to antipsychotics, second generation (aripiprazole). Adjust aripiprazole dose, p. 427. Moderate Study
- Terbinafine is predicted to increase the exposure to antipsychotics, second generation (risperidone). Adjust dose.
 Moderate Study
- ➤ Terbinafine is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
- ► Terbinafine is predicted to increase the exposure to beta blockers, selective (metoprolol, nebivolol). [Moderate] Study
- ► Terbinafine is predicted to slightly increase the exposure to darifenacin. Mild Study
- ► Terbinafine is predicted to increase the exposure to eliglustat. Avoid or adjust dose—consult product literature. Severe Study
- ► Terbinafine is predicted to increase the exposure to
- fesoterodine. Use with caution and adjust dose. Mild Theoretical
 Terbinafine is predicted to increase the exposure to gefitinib.
- Moderate Theoretical
 ➤ Terbinafine is predicted to increase the exposure to mexiletine.

 Moderate Study
- ► Terbinafine is predicted to decrease the efficacy of opioids (codeine). Moderate Theoretical
- Terbinafine is predicted to decrease the efficacy of opioids (tramadol). [Severe] Study
- Terbinafine is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. Moderate Study
- Rifamycins (rifampicin) decrease the exposure to terbinafine.
 Adjust dose. Moderate Study
- ► Terbinafine is predicted to increase the exposure to SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline).

 Moderate Theoretical
- Terbinafine is predicted to increase the exposure to SSRIs (fluoxetine). Adjust dose. [Moderate] Theoretical
- Terbinafine moderately increases the exposure to SSRIs (paroxetine). [Moderate] Study
- Terbinafine is predicted to decrease the efficacy of tamoxifen.
 Avoid. Severe Study
- Terbinafine is predicted to increase the exposure to the active metabolite of tetrabenazine. Moderate Study
- Terbinafine is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. Severe
- ► Terbinafine is predicted to increase the exposure to vortioxetine. Monitor and adjust dose. [Moderate] Study

Terbutaline → see beta₂ agonists

Teriflunomide → see TABLE 1 p. 1490 (hepatotoxicity)

- ► Teriflunomide is predicted to increase the exposure to adefovir. Moderate Study
- Teriflunomide is predicted to decrease the exposure to agomelatine. [Moderate] Theoretical
- Teriflunomide is predicted to increase the exposure to alpelisib. Moderate Theoretical
- Teriflunomide decreases the exposure to aminophylline. Adjust dose. Moderate Study

- ► Teriflunomide is predicted to decrease the exposure to anaesthetics, local (ropivacaine). [Moderate] Theoretical
- ➤ Teriflunomide is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone).
 Moderate Theoretical
- Teriflunomide is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Moderate Study
- ► Teriflunomide is predicted to decrease the exposure to antipsychotics, second generation (clozapine). [Moderate] Theoretical
- ➤ Teriflunomide is predicted to decrease the exposure to antipsychotics, second generation (olanzapine). Monitor and adjust dose. Moderate Study
- ► Teriflunomide is predicted to increase the exposure to baricitinib. [Moderate] Study
- ► Teriflunomide is predicted to increase the exposure to berotralstat. Severe Theoretical
- ➤ Teriflunomide is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose.

 Moderate | Study
- ► Teriflunomide is predicted to increase the exposure to cephalosporins (cefaclor). Moderate Study
- ► Teriflunomide is predicted to increase the exposure to cladribine. Avoid or adjust dose. [Moderate] Theoretical
- ► Teriflunomide affects the anticoagulant effect of coumarins.

 Severe Study
- Teriflunomide is predicted to increase the exposure to endothelin receptor antagonists (bosentan). Moderate Study
- Filgotinib is predicted to increase the risk of immunosuppression when given with teriflunomide. Avoid.
 Severe Theoretical
- ► Teriflunomide is predicted to increase the exposure to ganciclovir. Moderate Study
- Teriflunomide is predicted to increase the exposure to H₂ receptor antagonists (cimetidine, famotidine). [Moderate] Study
- ➤ Teriflunomide is predicted to increase the exposure to larotrectinib. [Mild] Study
- ➤ Teriflunomide is predicted to increase the concentration of letermovir. [Moderate] Study
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with teriflunomide. UKHSA advises avoid (refer to Green Book).
- ➤ Teriflunomide is predicted to increase the exposure to loop diuretics (furosemide). [Moderate] Study
- ➤ Teriflunomide is predicted to increase the exposure to meglitinides (repaglinide). [Moderate] Study
- ► Teriflunomide is predicted to decrease the exposure to melatonin. [Moderate] Theoretical
- ► Teriflunomide is predicted to increase the exposure to methotrexate. Moderate Study → Also see TABLE 1 p. 1490
- Teriflunomide is predicted to increase the clearance of mexiletine. Monitor and adjust dose. [Moderate] Study
- ► Teriflunomide is predicted to increase the exposure to montelukast. Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to NRTIS (zidovudine). [Moderate] Theoretical
- Teriflunomide is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to oseltamivir. Moderate Study
- ➤ Teriflunomide is predicted to increase the exposure to the active metabolites of ozanimod. Avoid. Moderate Study
- ► Teriflunomide is predicted to increase the exposure to penicillins (benzylpenicillin). Moderate Study
- ► Teriflunomide is predicted to increase the exposure to pioglitazone. [Moderate] Study
- ► Teriflunomide is predicted to decrease the exposure to pirfenidone. Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to quinolones (ciprofloxacin). Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to rifamycins (rifampicin). Moderate Theoretical
- Teriflunomide is predicted to increase the exposure to selexipag. Adjust selexipag dose, p. 198. [Moderate] Study

- Teriflunomide is predicted to decrease the exposure to SNRIs (duloxetine). Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to statins (atorvastatin, fluvastatin, pravastatin, simvastatin). [Moderate] Study → Also see TABLE 1 p. 1490
- ► Teriflunomide moderately increases the exposure to statins (rosuvastatin). Adjust rosuvastatin dose, p. 221. Moderate
 Study → Also see TABLE 1 p. 1490
- ► Teriflunomide is predicted to increase the exposure to sulfasalazine. [Moderate] Study → Also see TABLE 1 p. 1490
- ► Teriflunomide is predicted to increase the exposure to sulfonylureas (glibenclamide). [Moderate] Study
- ► Teriflunomide is predicted to increase the exposure to talazoparib. Avoid or monitor. [Moderate] Theoretical
- ► Teriflunomide is predicted to increase the concentration of taxanes (paclitaxel). Severe Anecdotal
- Teriflunomide is predicted to increase the exposure to tenofovir alafenamide. Moderate Theoretical
- ► Teriflunomide is predicted to increase the exposure to tenofovir disoproxil. Moderate Theoretical
- Teriflunomide is predicted to decrease the exposure to theophylline. Adjust dose. Moderate Study
- ► Teriflunomide moderately decreases the exposure to tizanidine. [Mild] Study
- ► Teriflunomide is predicted to increase the exposure to topotecan. Moderate Study
- ► Teriflunomide is predicted to increase the exposure to tucatinib. [Moderate] Theoretical
- Teriflunomide is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical

Tetrahenazine → see TABLE 9 p. 1492 (QT-interval prolongation),

TABLE 11 p. 1492 (CNS depressant effects)

▶ Bupropion is predicted to increase the exposure to the active

- metabolite of tetrabenazine. Moderate Study
- Cinacalcet is predicted to increase the exposure to the active metabolite of tetrabenazine. [Moderate] Study
- ► Tetrabenazine is predicted to decrease the effects of levodopa.
 Use with caution or avoid. Moderate Theoretical
 ► Tetrabenazine potentially increases the risk of CNS excitation
- Tetrabenazine potentially increases the risk of CNS excitation and hypertension when given with MAO-B inhibitors. Severe Theoretical
- ➤ Tetrabenazine potentially increases the risk of CNS excitation and hypertension when given with MAOIs, irreversible. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- ► Tetrabenazine potentially increases the risk of CNS excitation and hypertension when given with moclobemide. Severe

 Theoretical
- ► SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to the active metabolite of tetrabenazine. Moderate Study
- ► Terbinafine is predicted to increase the exposure to the active metabolite of tetrabenazine. Moderate Study

Tetracaine → see anaesthetics, local

Tetracycline → see tetracyclines

Tetracyclines → see TABLE 1 p. 1490 (hepatotoxicity)

 $\label{eq:democracycline} \textbf{demeclocycline} \cdot \textbf{doxycycline} \cdot \textbf{lymecycline} \cdot \textbf{minocycline} \cdot \textbf{oxytetracycline} \cdot \textbf{tetracycline} \cdot$

- Dairy products decrease the absorption of demeclocycline and oxytetracycline.
- Interactions do not generally apply to topical use of oxytetracycline unless specified.
- Dairy products decrease the exposure to tetracycline manufacturer advises take 1 hour before or 2 hours after dairy products.
- ➤ Oral ACE inhibitors (quinapril) (magnesium carbonatecontaining forms) might decrease the absorption of oral tetracyclines. Avoid. [Moderate] Study
- Oral antacids greatly decrease the absorption of oral tetracyclines. Separate administration by 2 to 3 hours.
 Moderate Study
- ► Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone) decrease the concentration of doxycycline. Adjust dose. Moderate Study → Also see TABLE 1 p. 1490

- ► Antiepileptics (fosphenytoin) are predicted to decrease the concentration of doxycycline. Adjust dose. [Moderate] Theoretical
- ➤ Tetracycline decreases the concentration of antimalarials (atovaquone). Moderate Study
- ▶ Bismuth greatly decreases the efficacy of tetracyclines. Separate administration by 2 hours. Moderate Study
- Calcium salts (calcium carbonate) are predicted to decrease the absorption of tetracyclines. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- Doxycycline is predicted to increase the concentration of ciclosporin. Severe Theoretical
- Combined hormonal contraceptives might exacerbate skin pigmentation when given with minocycline. [Moderate] Anecdotal
- ► Tetracyclines increase the anticoagulant effect of coumarins.

 [Severe] Anecdotal
- ➤ Oral iron decreases the absorption of oral tetracyclines.

 Tetracyclines should be taken 2 to 3 hours after iron. Moderate

 Study
- ► Oral kaolin is predicted to decrease the absorption of oral tetracyclines. [Moderate] Theoretical
- ► Oral lanthanum might decrease the absorption of oral tetracyclines. Separate administration by 2 hours. Moderate
 Theoretical
- ➤ Tetracyclines are predicted to increase the risk of lithium toxicity when given with lithium. Avoid or adjust dose. Severel Appendix 1
- ► Tetracyclines are predicted to increase the anticoagulant effect of phenindione. Severe Theoretical
- ➤ Tetracycline is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- ► Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin) increase the risk of benign intracranial hypertension when given with tetracyclines. Avoid. [Severe] Anecdotal
- ► Rifamycins (rifampicin) modestly decrease the exposure to doxycycline. Adjust dose. Moderate Study
- Strontium is predicted to decrease the absorption of tetracyclines. Avoid. [Moderate] Theoretical
- Oral sucralfate might decrease the absorption of oral tetracyclines. Moderate Theoretical
- ➤ Oral zinc is predicted to decrease the absorption of tetracyclines. Separate administration by 2 to 3 hours. Moderate | Theoretical

Tezacaftor

FOOD AND LIFESTYLE Bitter (Seville) oranges might increase the exposure to tezacaftor.

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to tezacaftor. Avoid. [Severe] Theoretical
- ➤ Antiarrhythmics (dronedarone) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tezacaftor. Avoid. [Severe] Theoretical
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ➤ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to tezacaftor. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320.
 Severel Study
- Cobicistat is predicted to increase the exposure to tezacaftor. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study

Tezacaftor (continued)

- Crizotinib is predicted to increase the exposure to tezacaftor.
 Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ► Grapefruit juice is predicted to increase the exposure to tezacaftor. Avoid. Severe Study
- HIV-protease inhibitors are predicted to increase the exposure to tezacaftor. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Idelalisib is predicted to increase the exposure to tezacaftor. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Imatinib is predicted to increase the exposure to tezacaftor.
 Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Letermovir is predicted to increase the exposure to tezacaftor.
 Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Macrolides (clarithromycin) are predicted to increase the exposure to tezacaftor. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Macrolides (erythromycin) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] study
- ► Mitotane is predicted to decrease the exposure to tezacaftor. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- Nilotinib is predicted to increase the exposure to tezacaftor. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ► Rifamycins are predicted to decrease the exposure to tezacaftor. Avoid. Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to tezacaftor. Avoid. Severe Theoretical

Thalidomide → see TABLE 6 p. 1491 (bradycardia), TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 5 p. 1491 (thromboembolism), TABLE 11 p. 1492 (CNS depressant effects)

- Combined hormonal contraceptives are predicted to increase the risk of venous thromboembolism when given with thalidomide. Avoid. Severe Study
- Hormone replacement therapy is predicted to increase the risk of venous thromboembolism when given with thalidomide.
 Severe | Theoretical

Theophylline → see TABLE 17 p. 1494 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- Aciclovir is predicted to increase the exposure to theophylline.
 Monitor and adjust dose. Severe Theoretical
- ► Theophylline decreases the efficacy of antiarrhythmics (adenosine). Separate administration by 24 hours. [Mild] Study
- Antiepileptics (carbamazepine) potentially increase the clearance of theophylline and theophylline decreases the exposure to antiepileptics (carbamazepine). Adjust dose. Moderate) Anecdotal
- ► Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to theophylline. Adjust dose. [Moderate]
- ► Antiepileptics (phenobarbital, primidone) are predicted to increase the clearance of theophylline. Adjust dose. [Moderate]

 Theoretical

- Antiepileptics (stiripentol) are predicted to increase the exposure to theophylline. Avoid. Moderate Theoretical
- Axitinib is predicted to increase the exposure to theophylline.
 Moderate Theoretical
- ▶ Beta blockers, non-selective are predicted to increase the risk of bronchospasm when given with theophylline. Avoid. Severe Theoretical
- ► Beta blockers, selective are predicted to increase the risk of bronchospasm when given with theophylline. Avoid. Severe
- ► Caffeine citrate decreases the clearance of theophylline.

 [Moderate] Study
- ► Combined hormonal contraceptives is predicted to increase the exposure to theophylline. Monitor and adjust dose. Moderate

 Theoretical
- ► Theophylline increases the risk of agitation when given with doxapram. [Moderate] Study
- Enteral feeds decrease the exposure to theophylline. Moderate Study
- Esketamine is predicted to increase the risk of seizures when given with theophylline. Avoid. Severe Theoretical
- ► H₂ receptor antagonists (cimetidine) increase the concentration of theophylline. Adjust dose. [Severe] Study
 ► HIV-protease inhibitors (ritonavir) are predicted to decrease the
- exposure to theophylline. Adjust dose. Moderate Study
 Interferons slightly increase the exposure to theophylline.
- Adjust dose. Moderate Study

 Iron chelators (deferasirox) increase the exposure to
- theophylline. Avoid. Moderate Study
 ► Isoniazid is predicted to affect the clearance of theophylline.
- Severe Anecdotal

 ► Leflunomide is predicted to decrease the exposure to
- theophylline. Adjust dose. [Moderate] Study

 ➤ Theophylline is predicted to decrease the concentration of lithium. Monitor concentration and adjust dose. [Moderate]
- ► Macrolides (azithromycin, clarithromycin) are predicted to increase the exposure to theophylline. Adjust dose. Moderate
- Macrolides (erythromycin) decrease the clearance of theophylline and theophylline potentially decreases the clearance of macrolides (erythromycin). Adjust dose. Severe Study
- ► Methotrexate decreases the clearance of theophylline. Moderate Study
- Metreleptin might alter the exposure to theophylline. Monitor concentration and adjust dose. Severe Theoretical
- Mexiletine is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical
- ► Monoclonal antibodies (blinatumomab) are predicted to transiently increase the exposure to theophylline. Monitor and adjust dose. Moderate Theoretical
- ► Monoclonal antibodies (sarilumab) potentially affect the exposure to theophylline. Monitor and adjust dose. Moderate
- Monoclonal antibodies (tocilizumab) are predicted to decrease the exposure to theophylline. Monitor and adjust dose.
 Moderatel Theoretical
- ► Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of theophylline. Adjust dose. [Moderate]

 Theoretical
- ➤ Obeticholic acid is predicted to increase the exposure to theophylline. [Severe] Theoretical
- Osilodrostat is predicted to increase the exposure to theophylline. Monitor and adjust dose. Moderate Theoretical
- ► Pentoxifylline increases the concentration of theophylline.

 Monitor and adjust dose. Severe Study
- Theophylline is predicted to slightly increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Avoid.
 Moderate Theoretical
- ➤ Quinolones (ciprofloxacin) are predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate]

 Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to theophylline. Adjust dose. Moderate Study

- Rucaparib is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical
- ► SSRIs (fluvoxamine) moderately to markedly increase the exposure to theophylline. Avoid. Severe Study

 ► St. John's wort potentially decreases the exposure to
- ► St John's wort potentially decreases the exposure to theophylline. Severe Anecdotal
- ➤ Sucralfate potentially decreases the absorption of theophylline. Separate administration by at least 2 hours. Moderate Study
- Sympathomimetics, vasoconstrictor (ephedrine) increase the risk of adverse effects when given with theophylline. Avoid in children. [Moderate] Study
- ► Teriflunomide is predicted to decrease the exposure to theophylline. Adjust dose. Moderate Study
- Valaciclovir is predicted to increase the exposure to theophylline. Severe Theoretical
- Vemurafenib is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical

Thiazide diuretics → see TABLE 18 p. 1494 (hyponatraemia),
TABLE 8 p. 1491 (hypotension), TABLE 17 p. 1494 (reduced serum potassium)

bendroflumethiazide • chlorothiazide • chlortalidone • hydrochlorothiazide • hydroflumethiazide • indapamide • metolazone • xipamide

- ► Thiazide diuretics are predicted to increase the risk of hypersensitivity reactions when given with allopurinol. Severe Theoretical
- Aspirin (high-dose) increases the risk of acute renal failure when given with thiazide diuretics. Severe Theoretical
- ► Thiazide diuretics increase the risk of hypercalcaemia when given with calcium salts. Severe Anecdotal
- ► Thiazide diuretics increase the concentration of lithium. Avoid or adjust dose and monitor concentration. Severe Study
- Metolazone is predicted to decrease the efficacy of methenamine. [Moderate] Theoretical
- NSAIDs increase the risk of acute renal failure when given with thiazide diuretics. (Severe) Theoretical → Also see TABLE 18 p. 1494
- Reboxetine is predicted to increase the risk of hypokalaemia when given with thiazide diuretics. Moderate Anecdotal
- ► Thiazide diuretics are predicted to increase the risk of
- hypercalcaemia when given with toremifene. Severe Theoretical

 ► Thiazide diuretics increase the risk of hypercalcaemia when
 given with vitamin D substances. [Moderate] Theoretical

Thiopental -> see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

- ► Sulfonamides are predicted to increase the effects of thiopental. Moderate Theoretical
- Tricyclic antidepressants increase the risk of cardiac arrhythmias and hypotension when given with thiopental.
 Moderate) Study → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492

Thiotepa → see alkylating agents

Thrombin inhibitors → see TABLE 3 p. 1490 (anticoagulant effects) argatroban • bivalirudin • dabigatran

- Abrocitinib slightly increases the exposure to dabigatran.
 Moderate Study
- Anti-androgens (apalutamide) are predicted to decrease the exposure to dabigatran. Mild Study
- Antiarrhythmics (amiodarone) increase the exposure to dabigatran. Monitor and adjust dose. Severe Study
- Antiarrhythmics (dronedarone) moderately increase the exposure to dabigatran. Avoid. <u>Severe</u> Study
- Antiepileptics (carbamazepine) are predicted to decrease the exposure to dabigatran. Avoid. [Severe] Study
- Antiepileptics (phenytoin) are predicted to decrease the exposure to dabigatran. Avoid. [Severe] Theoretical
- Antifungals, azoles (fluconazole, posaconazole, voriconazole) are predicted to increase the exposure to dabigatran. Severe Study
- ➤ Antifungals, azoles (isavuconazole) are predicted to increase the exposure to dabigatran. Monitor and adjust dose. [Moderate] Study
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to dabigatran. Avoid. Severe Study

- ► Berotralstat is predicted to increase the concentration of dabigatran. Monitor and adjust dose. [Moderate] Study
- ► Calcium channel blockers (verapamil) increase the exposure to dabigatran. Monitor and adjust dose. Severe Study
- ► Ceritinib is predicted to increase the exposure to dabigatran.

 [Moderate] Theoretical
- ► Ciclosporin is predicted to increase the exposure to dabigatran.

 Avoid. Severe Study
- Cobicistat moderately increases the exposure to dabigatran. Avoid. Severe Study
- ► Elbasvir is predicted to increase the concentration of dabigatran. [Moderate] Theoretical
- ► Eliglustat is predicted to increase the exposure to dabigatran.

 Adjust dose. Moderate Study
- ► Glecaprevir with pibrentasvir increases the exposure to dabigatran. Avoid. [Moderate] Study
- ► HIV-protease inhibitors (atazanavir, darunavir, lopinavir) boosted with ritonavir are predicted to increase the exposure to dabigatran. Avoid. [Severe] Anecdotal
- ► HIV-protease inhibitors (fosamprenavir, tipranavir) boosted with ritonavir are predicted to increase the exposure to dabigatran. Avoid. [Severe] Theoretical
- ► HIV-protease inhibitors (ritonavir) are predicted to increase the exposure to dabigatran. Avoid. Severe Study
- ► Ibrutinib is predicted to increase the exposure to dabigatran.

 Separate administration by at least 6 hours. Moderate

 Theoretical
- ► Ivacaftor is predicted to increase the exposure to dabigatran. Moderate Study
- ► Lapatinib is predicted to increase the exposure to dabigatran.

 [Severe] Theoretical
- Ledipasvir is predicted to increase the exposure to dabigatran.
 Moderate Theoretical
- Letermovir is predicted to decrease the concentration of dabigatran. Avoid. Severe Theoretical
- ► Lorlatinib is predicted to decrease the exposure to dabigatran.

 [Moderate] Study
- ► Macrolides (azithromycin, erythromycin) are predicted to increase the exposure to dabigatran. [Severe] Theoretical
- ► Macrolides (clarithromycin) increase the exposure to dabigatran. Moderate Study
- Mirabegron is predicted to increase the exposure to dabigatran. Severel Theoretical
- Neratinib is predicted to increase the exposure to dabigatran.
 [Moderate] Study
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of dabigatran. Avoid. [Severe] Theoretical
- ► Olaparib might increase the exposure to dabigatran. Moderate
 Theoretical
- Osimertinib is predicted to increase the exposure to dabigatran. Moderate Study
- ► Pemigatinib might increase the exposure to dabigatran.
 Separate administration by at least 6 hours. Moderate
 Theoretical
- Pibrentasvir with glecaprevir increases the exposure to dabigatran. Avoid. Moderate Study
- Pitolisant is predicted to decrease the exposure to dabigatran.
 Mild Theoretical
- Ranibizumab is predicted to increase the risk of bleeding events when given with argatroban. Severe Theoretical
- Ranibizumab is predicted to increase the risk of bleeding events when given with bivalirudin. Moderate Theoretical
- ► Ranolazine is predicted to increase the exposure to dabigatran.

 Severe Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to dabigatran. Avoid. Severel Study
- ► Sotorasib is predicted to increase the exposure to dabigatran. Avoid or adjust dose. [Moderate] Study
- ► St John's wort is predicted to decrease the exposure to dabigatran. Avoid. Severe Study
- ► Tacrolimus is predicted to increase the exposure to dabigatran.

 Avoid. Severe Theoretical
- ► Tepotinib slightly increases the exposure to dabigatran. Severe Study

Thrombin inhibitors (continued)

- Ticagrelor increases the exposure to dabigatran. Monitor and adjust dose. (Severe) Study
- ► Tucatinib is predicted to increase the exposure to dabigatran. Use with caution and adjust dose. Moderate Theoretical
- ► Vandetanib is predicted to increase the exposure to dabigatran. Moderate Study
- Velpatasvir increases the exposure to dabigatran. Avoid.
 Severe Study
- Vemurafenib is predicted to increase the exposure to dabigatran. Monitor and adjust dose. Severe Theoretical
- ▶ Venetoclax is predicted to increase the exposure to dabigatran. Avoid or adjust dose. Severe Study
- Voxilaprevir with sofosbuvir and velpatasvir increases the concentration of dabigatran. Avoid. Severe Study

Thyroid hormones

levothyroxine · liothyronine

FOOD AND LIFESTYLE Food, including dietary fibre, milk, soya products, and coffee, might decrease the absorption of levothyroxine.

- Oral antacids are predicted to decrease the absorption of oral levothyroxine. Separate administration by at least 4 hours.
 Moderate Anecdotal
- Anti-androgens (apalutamide) potentially decrease the exposure to levothyroxine. [Mild] Theoretical
- Antiarrhythmics (amiodarone) are predicted to increase the risk of thyroid dysfunction when given with thyroid hormones.
 Avoid. Moderate Study
- ➤ Antiepileptics (carbamazepine) are predicted to increase the risk of hypothyroidism when given with thyroid hormones. Monitor and adjust dose. [Moderate] Study
- ➤ Antiepileptics (fosphenytoin, phenytoin) are predicted to increase the risk of hypothyroidism when given with thyroid hormones. Moderate Study
- Antiepileptics (phenobarbital, primidone) are predicted to decrease the effects of thyroid hormones. [Moderate] Theoretical
- ➤ Oral calcium salts are predicted to decrease the absorption of levothyroxine. Separate administration by at least 4 hours. [Moderate] Anecdotal
- Thyroid hormones are predicted to affect the concentration of digoxin. Monitor and adjust dose. [Moderate] Theoretical
- ► HIV-protease inhibitors (ritonavir) decrease the concentration of levothyroxine. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
- Oral hormone replacement therapy is predicted to decrease the effects of thyroid hormones. Moderate Theoretical
- Imatinib causes hypothyroidism when given with levothyroxine in thyroidectomy patients. [Moderate] Study
- Oral iron decreases the absorption of oral levothyroxine.
 Separate administration by at least 4 hours. [Moderate] Study
- ► Lanthanum decreases the absorption of thyroid hormones. Separate administration by 2 hours. [Moderate] Study
- Nirmatrelvir boosted with ritonavir might decrease the efficacy of levothyroxine. [Moderate] Theoretical
- ➤ Sucralfate decreases the absorption of levothyroxine. Separate administration by at least 4 hours. Moderate Study
- ► Sunitinib has been reported to cause hypothyroidism when given with levothyroxine. [Moderate] Anecdotal

Tiagabine → see antiepileptics

Tiaprofenic acid → see NSAIDs

Tibolone → see TABLE 5 p. 1491 (thromboembolism)

Ticagrelor → see TABLE 6 p. 1491 (bradycardia), TABLE 4 p. 1490 (antiplatelet effects)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to markedly decrease the exposure to ticagrelor. Avoid. Severe Study
- Antiarrhythmics (amiodarone) are predicted to increase the exposure to ticagrelor. Use with caution or avoid. Severe Study → Also see TABLE 6 p. 1491
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to ticagrelor. Avoid. Severe Study

- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to ticagrelor. Avoid. [Severe] Study
- ► Cenobamate is predicted to decrease the exposure to ticagrelor. Adjust dose. [Moderate] Theoretical
- ► Ciclosporin is predicted to increase the exposure to ticagrelor. Use with caution or avoid. Severe Study
- Cobicistat is predicted to markedly increase the exposure to ticagrelor. Avoid. Severe Study
- Dabrafenib is predicted to decrease the exposure to ticagrelor.
 Moderate Theoretical
- ► Ticagrelor increases the concentration of digoxin. Moderate Study → Also see TABLE 6 p. 1491
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to ticagrelor. Moderate Theoretical
- Ticagrelor is predicted to increase the exposure to ergotamine.
 Avoid. Severe Theoretical
- Grapefruit juice moderately increases the exposure to ticagrelor. [Moderate] Study
- ► HIV-protease inhibitors are predicted to markedly increase the exposure to ticagrelor. Avoid. Severe Study
- ► Idelalisib is predicted to markedly increase the exposure to ticagrelor. Avoid. Severe Study
- ► Ticagrelor is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ► Macrolides (azithromycin) are predicted to increase the exposure to ticagrelor. Use with caution or avoid. [Severe] Study
- ► Macrolides (clarithromycin) are predicted to markedly increase the exposure to ticagrelor. Avoid. Severe Study
- Mitotane is predicted to markedly decrease the exposure to ticagrelor. Avoid. Severe Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to ticagrelor. [Moderate] Theoretical
- ► Ranolazine is predicted to increase the exposure to ticagrelor.

 Use with caution or avoid. Severe Study
- Rifamycins (rifampicin) are predicted to markedly decrease the exposure to ticagrelor. Avoid. Severe Study
- Selumetinib might increase the risk of bleeding when given with ticagrelor. [Severe] Theoretical
- ► St John's wort is predicted to decrease the exposure to ticagrelor. Moderate Theoretical
- ► Ticagrelor slightly to moderately increases the exposure to statins (simvastatin). Adjust simvastatin dose, p. 222. Moderate
- ▶ Ticagrelor increases the exposure to thrombin inhibitors
- (dabigatran). Monitor and adjust dose. Severe Study
 ▶ Vemurafenib is predicted to increase the exposure to ticagrelor. Use with caution or avoid. Severe Study

Tigecycline → see TABLE 1 p. 1490 (hepatotoxicity)

- Antiarrhythmics (amiodarone, dronedarone) might increase the exposure to tigecycline. [Mild] Anecdotal
- ► Antiepileptics (carbamazepine) might decrease the exposure to tigecycline. [Mild] Theoretical → Also see TABLE 1 p. 1490
- Antifungals, azoles (itraconazole, ketoconazole) might increase the exposure to tigecycline. Mild Anecdotal → Also see TABLE 1 p. 1490
- Calcium channel blockers (verapamil) might increase the exposure to tigecycline. [Mild] Anecdotal
- Ciclosporin might increase the exposure to tigecycline and tigecycline has been reported to increase the concentration of ciclosporin. [Severe] Anecdotal
- Tigecycline is predicted to alter the anticoagulant effect of coumarins. Moderate Anecdotal
- ► HIV-protease inhibitors (lopinavir, ritonavir) might increase the exposure to tigecycline. Mild Anecdotal
- Ivacaftor might increase the exposure to tigecycline. Mild Anecdotal
- ► Lapatinib might increase the exposure to tigecycline. Mild Anecdotal
- Macrolides might increase the exposure to tigecycline. Mild Anecdotal
- Neratinib might increase the exposure to tigecycline. Mild Anecdotal → Also see TABLE 1 p. 1490
- Tigecycline is predicted to increase the anticoagulant effect of phenindione. Severe Theoretical

A1

- ► Ranolazine might increase the exposure to tigecycline. [Mild]

 Anecdotal
- Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin) increase the risk of benign intracranial hypertension when given with tigecycline. Avoid. Severel Anecdotal
- ► Rifamycins (rifampicin) might decrease the exposure to tigecycline. [Mild] Theoretical
- St John's wort might decrease the exposure to tigecycline. Mild
 Theoretical
- Tigecycline has been reported to increase the concentration of tacrolimus. (Severe) Anecdotal
- Vandetanib might increase the exposure to tigecycline. Mild Anecdotal
- ► Vemurafenib might increase the exposure to tigecycline. Mild Anecdotal

Tildrakizumab → see monoclonal antibodies

Timolol → see beta blockers, non-selective

Tinzaparin → see low molecular-weight heparins

Tioguanine → see TABLE 15 p. 1493 (myelosuppression)

 Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tigguanine. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Tiotropium → see TABLE 10 p. 1492 (antimuscarinics)

➤ Antipsychotics, second generation (clozapine) can cause constipation, as can tiotropium; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Tipranavir → see HIV-protease inhibitors

Tirofiban → see TABLE 3 p. 1490 (anticoagulant effects)
Tivozanib

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to tivozanib. Severe Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tivozanib. Severe Study
- Mitotane is predicted to decrease the exposure to tivozanib.
 Severel Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to tivozanib. (Severe) Study
- St John's wort is predicted to decrease the exposure to tivozanib. Avoid. Severe Study
- ► Tivozanib is predicted to decrease the exposure to statins (rosuvastatin). [Moderate] Theoretical

Tizanidine → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

- Antiepileptics (fosphenytoin, phenytoin) moderately decrease the exposure to tizanidine. [Mild] Study
- Axitinib is predicted to increase the exposure to tizanidine.
 Moderate Theoretical
- Combined hormonal contraceptives increases the exposure to tizanidine. Avoid. [Moderate] Study
 Givosiran is predicted to increase the exposure to tizanidine.
- Givosiran is predicted to increase the exposure to tizanidine
 Use with caution and adjust dose. [Moderate] Study
- HIV-protease inhibitors (ritonavir) moderately decrease the exposure to tizanidine. [Mild] Study
- ► Iron chelators (deferasirox) are predicted to increase the exposure to tizanidine. Avoid. Moderate Theoretical
- ► Leflunomide moderately decreases the exposure to tizanidine.

 Miid Study
- Mexiletine increases the exposure to tizanidine. Avoid.
 Moderate Study
- ► Obeticholic acid is predicted to increase the exposure to tizanidine. Severe Theoretical
- ► Osilodrostat increases the exposure to tizanidine. Avoid. Moderate Study → Also see TABLE 9 p. 1492
- Quinolones (ciprofloxacin) increase the exposure to tizanidine.
 Avoid. [Moderate] Study
- Rifamycins (rifampicin) moderately decrease the exposure to tizanidine. [Mild] Study
- Rucaparib increases the exposure to tizanidine. Avoid. Moderate Study
- SSRIs (fluvoxamine) very markedly increase the exposure to tizanidine. Avoid. (Severe) Study

- ► Teriflunomide moderately decreases the exposure to tizanidine. [Mild] Study
- ► Vemurafenib increases the exposure to tizanidine. Avoid.

 [Moderate] Study → Also see TABLE 9 p. 1492

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies **Tofacitinib**

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ► Antiarrhythmics (dronedarone) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderatel Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ► Antifungals, azoles (fluconazole) increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- ► Antifungals, azoles (isavuconazole) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- Antifungals, azoles (posaconazole) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib.
 Adjust tofacitinib dose, p. 1200. Moderate Theoretical
- Calcium channel blockers (diltiazem, verapamil) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200.
 [Moderate] Study
- Ciclosporin increases the exposure to tofacitinib. Avoid. Severe Study
- ➤ Cobicistat is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- ► Tofacitinib is predicted to increase the risk of bleeding when given with coumarins. Severe | Theoretical
- ► Crizotinib given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- ▶ Dabrafenib is predicted to decrease the exposure to tofacitinib. Moderate Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ► Filgotinib is predicted to increase the risk of immunosuppression when given with tofacitinib. Avoid. Severe Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- ▶ Idelalisib is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- ► Imatinib given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- ► Letermovir given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study
- Live vaccines potentially increase the risk of generalised infection (possibly life-threatening) when given with tofacitinib. Avoid. [Severe] Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200.

 Moderate] Study
- ► Macrolides (erythromycin) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- Mitotane is predicted to decrease the exposure to tofacitinib.
 Avoid. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200.
 [Moderate] Study
- ► Nilotinib given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. Moderate Study

Tofacitinib (continued)

- NNRTIS (efavirenz, nevirapine) are predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ► Totacitinib is predicted to increase the risk of bleeding when given with phenindione. [Severe] Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to tofacitinib. Avoid. Severe Study
- ➤ SSRIs (fluoxetine, fluvoxamine) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- St John's wort is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ► Tacrolimus increases the exposure to tofacitinib. Avoid. Severe Study

Tolbutamide → see sulfonylureas

Tolcapone

- Tolcapone increases the exposure to levodopa. Monitor and adjust dose. Moderate Study
- ► Tolcapone is predicted to increase the effects of MAOIs, irreversible. Avoid. Severe Theoretical
- Tolcapone is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, inotropic.
 Moderatel Theoretical
- Tolcapone is predicted to increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine). Moderate Theoretical

Tolfenamic acid → see NSAIDs

Tolterodine → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 10 p. 1492 (antimuscarinics)

- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to tolterodine. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ➤ Antipsychotics, second generation (clozapine) can cause constipation, as can tolterodine; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492
- ➤ Cobicistat is predicted to increase the exposure to tolterodine. Avoid. Severe Study
- ▶ Dacomitinib is predicted to markedly increase the exposure to tolterodine. Avoid. |Severe| Study
- ► Eliglustat is predicted to increase the exposure to tolterodine.

 Adjust dose. [Moderate] Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to tolterodine. Avoid. [Severe] Study
- Idelalisib is predicted to increase the exposure to tolterodine.
 Avoid. Severe Study
- Macrolides (clarithromycin) are predicted to increase the exposure to tolterodine. Avoid. Severe Study → Also see TABLE 9 p. 1402

Tolvaptan → see TABLE 16 p. 1494 (increased serum potassium)
GENERAL INFORMATION Avoid concurrent use of drugs that
increase serum-sodium concentrations.

- ➤ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to tolvaptan. Use with caution or avoid depending on indication. [Severe] Study
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724.
 [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tolvaptan. Use with caution or avoid depending on indication. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to tolvaptan.
 Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study

- ► Cenobamate is predicted to decrease the exposure to tolvaptan. Adjust dose. [Moderate] Theoretical
- ► Cobicistat is predicted to increase the exposure to tolvaptan.

 Manufacturer advises caution or adjust tolvaptan dose with
 potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ► Crizotinib is predicted to increase the exposure to tolvaptan.

 Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ► Tolvaptan increases the concentration of digoxin. [Mild] Study
- Grapefruit juice increases the exposure to tolvaptan. Avoid.
 Moderate Study
- ► HIV-protease inhibitors are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- Idelalisib is predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- Imatinib is predicted to increase the exposure to tolvaptan.
 Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ► Letermovir is predicted to increase the exposure to tolvaptan.

 Manufacturer advises caution or adjust tolvaptan dose with
 moderate CYP3A4 inhibitors, p. 724. Moderate Study
- ► Tolvaptan is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- Macrolides (erythromycin) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724.
 Moderatel Study
- ► Mitotane is predicted to decrease the exposure to tolvaptan.

 Use with caution or avoid depending on indication. Severe Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to tolvaptan. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- Nilotinib is predicted to increase the exposure to tolvaptan.
 Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- Quinolones (ciprofloxacin) are predicted to increase the exposure to tolvaptan. Use with caution and adjust tolvaptan dose, p. 724. [Moderate] Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to tolvaptan. Use with caution or avoid depending on indication. [Severe] Study
- ► St John's wort is predicted to decrease the exposure to tolvaptan. Avoid. Moderate Theoretical

Topiramate → see antiepileptics

- Topotecan → see TABLE 15 p. 1493 (myelosuppression)

 Anti-androgens (darolutamide) are predicted to increase the exposure to topotecan. Avoid. [Severe] Theoretical
- Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to topotecan. Severe Study
- ► Antiepileptics (fosphenytoin, phenytoin) increase the clearance of topotecan. Moderate Study
- ► Antifungals, azoles (isavuconazole) are predicted to increase the exposure to topotecan. [Moderate] Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to topotecan. [Severe] Study
- ► Berotralstat is predicted to increase the concentration of topotecan. Monitor and adjust dose. Moderate Study
- ► Calcium channel blockers (verapamil) are predicted to increase the exposure to topotecan. [Severe] Study
- ► Ceritinib is predicted to increase the exposure to topotecan.

 Medicate Theoretical → Alca see TABLE 15 p. 1403
- Moderate Theoretical → Also see TABLE 15 p. 1493

 Ciclosporin is predicted to increase the exposure to topotecan.
- Severe Study
 ► Eliglustat is predicted to increase the exposure to topotecan.
 Adjust dose. Moderate Study
- ► HIV-protease inhibitors (lopinavir, ritonavir) are predicted to increase the exposure to topotecan. Severe Study

- ► Ibrutinib is predicted to increase the exposure to topotecan.

 Separate administration by at least 6 hours. [Moderate]

 Theoretical → Also see TABLE 15 p. 1493
- ► Ivacaftor is predicted to increase the exposure to topotecan.

 Severe Study
- Lapatinib is predicted to increase the exposure to topotecan.

 Severe Study
- ► Leflunomide is predicted to increase the exposure to topotecan. Moderate Study → Also see TABLE 15 p. 1493
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with topotecan. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Lorlatinib is predicted to decrease the exposure to topotecan.
 Moderate Study
- ► Macrolides are predicted to increase the exposure to topotecan. Severe Study
- ► Mirabegron is predicted to increase the exposure to topotecan.

 [Mild] Theoretical
- Neratinib is predicted to increase the exposure to topotecan.
 Severe Study
- ► Olaparib might increase the exposure to topotecan. [Moderate]
 Theoretical → Also see TABLE 15 p. 1493
- Osimertinib is predicted to increase the exposure to topotecan.
 Moderate Study
- Pibrentasvir with glecaprevir is predicted to increase the exposure to topotecan. Moderate Study
- Pitolisant is predicted to decrease the exposure to topotecan.
 Mild Theoretical
- Ranolazine is predicted to increase the exposure to topotecan.
 Severe Study
- Regorafenib is predicted to increase the exposure to topotecan. Moderate Study → Also see TABLE 15 p. 1493
- ► Roxadustat might increase the exposure to topotecan. Monitor adverse effects and adjust dose. Moderate Theoretical
- Rucaparib is predicted to increase the exposure to topotecan.
 Severe Study → Also see TABLE 15 p. 1493
- Sotorasib is predicted to increase the exposure to topotecan.
 Avoid or adjust dose. Moderate Study
- ► St John's wort is predicted to decrease the exposure to topotecan. Severe Theoretical
- ► Tedizolid is predicted to increase the exposure to topotecan. Avoid. [Moderate] Study
- ► Tepotinib is predicted to increase the concentration of topotecan. Severe Study
- Teriflunomide is predicted to increase the exposure to topotecan. [Moderate] Study
- ► Tucatinib is predicted to increase the exposure to topotecan. Use with caution and adjust dose. Moderate Theoretical
- ► Vandetanib is predicted to increase the exposure to topotecan.

 Severe|Study
- ► Velpatasvir is predicted to increase the exposure to topotecan.

 [Severe] Theoretical
- Vemurafenib is predicted to increase the exposure to topotecan. Severe Study
- Venetoclax is predicted to increase the exposure to topotecan.
 Moderate Theoretical
- Voxilaprevir is predicted to increase the concentration of topotecan. Avoid. Severe Theoretical

Torasemide → see loop diuretics

Toremifene → see TABLE 5 p. 1491 (thromboembolism), TABLE 9 p. 1492 (QT-interval prolongation)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to toremifene. Adjust dose. [Moderate]
 Study → Also see TABLE 9 p. 1492
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to toremifene. Adjust dose. [Moderate] Study
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to toremifene. Moderate Theoretical → Also see TABLE 9 p. 1492
- ► Cobicistat is predicted to increase the exposure to toremifene.

 Moderate Theoretical
- ► Toremifene is predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical

- ► HIV-protease inhibitors are predicted to increase the exposure to toremifene. [Moderate] Theoretical
- ► Idelalisib is predicted to increase the exposure to toremifene.

 [Moderate] Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to toremifene. Moderate Theoretical → Also see TABLE 9 n 1492
- ► Mitotane is predicted to decrease the exposure to toremifene. Adjust dose. Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to toremifene. Adjust dose. Moderate Study
- ► Thiazide diuretics are predicted to increase the risk of hypercalcaemia when given with toremifene. Severe Theoretical

Trabectedin → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to trabectedin. Avoid. Severe Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to trabectedin. Avoid. Severe Theoretical → Also see TABLE 1 p. 1490
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to trabectedin. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1490
- ► Cobicistat is predicted to increase the exposure to trabectedin.

 Avoid or adjust dose. Severe Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to trabectedin. Avoid or adjust dose. Severe Theoretical
- ► Idelalisib is predicted to increase the exposure to trabectedin. Avoid or adjust dose. Severe Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with trabectedin. UKHSA advises avoid (refer to Green Book).
 Severe! Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to trabectedin. Avoid or adjust dose. [Severe] Theoretical
- Mitotane is predicted to decrease the exposure to trabectedin. Avoid. Severe Theoretical → Also see TABLE 15 p. 1493
- Rifamycins (rifampicin) are predicted to decrease the exposure to trabectedin. Avoid. Severe Theoretical

Tralokinumab → see monoclonal antibodies **Tramadol** → see opioids

Trametinib

- Antiarrhythmics (amiodarone, dronedarone) are predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ► Antifungals, azoles (itraconazole, ketoconazole) are predicted to
- increase the concentration of **trametinib**. [Moderate] Theoretical Calcium channel blockers (verapamil) are predicted to increase
- the concentration of trametinib. Moderate Theoretical
- ► Ciclosporin is predicted to increase the concentration of trametinib. Moderate Theoretical
- ► Drugs with anticoagulant effects (see TABLE 3 p. 1490) cause bleeding, as can trametinib; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ➤ Drugs with antiplatelet effects (see TABLE 4 p. 1490) cause bleeding, as can trametinib; concurrent use might increase the risk of developing this effect. Severe| Theoretical
- HIV-protease inhibitors (lopinavir, ritonavir) are predicted to increase the concentration of trametinib. [Moderate] Theoretical
- Ivacaftor is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ► Lapatinib is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- Macrolides are predicted to increase the concentration of trametinib. [Moderate] Theoretical
- ► Neratinib is predicted to increase the concentration of trametinib. Moderate Theoretical
- ► Ranolazine is predicted to increase the concentration of trametinib. Moderate Theoretical
- ► Rucaparib is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- Vandetanib is predicted to increase the concentration of trametinib. [Moderate] Theoretical

Trametinib (continued)

 Vemurafenib is predicted to increase the concentration of trametinib. Moderate Theoretical

Trandolapril → see ACE inhibitors

Tranexamic acid → see TABLE 5 p. 1491 (thromboembolism)

Tranylcypromine → see MAOIs, irreversible

Trastuzumab → see monoclonal antibodies

Trastuzumab deruxtecan → see monoclonal antibodies
Trastuzumab emtansine → see monoclonal antibodies

Trazodone → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 11 p. 1492 (CNS depressant effects)

- Antiarrhythmics (dronedarone) are predicted to increase the exposure to trazodone. [Moderate] Theoretical
- Antiepileptics (carbamazepine) decrease the concentration of trazodone. Adjust dose. [Moderate] Anecdotal
- ➤ Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to trazodone. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to moderately increase the exposure to trazodone.
 Avoid or adjust dose. Moderate Study
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to trazodone. [Moderate] Theoretical
- ► Cobicistat is predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
- ► Crizotinib is predicted to increase the exposure to trazodone.

 Moderate Theoretical
- HIV-protease inhibitors are predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. Moderate Study
- Idelalisib is predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. [Moderate] Study
- Imatinib is predicted to increase the exposure to trazodone.
 [Moderate] Theoretical
- Letermovir is predicted to increase the exposure to trazodone.
 Moderate Theoretical
- ► Macrolides (clarithromycin) are predicted to moderately increase the exposure to trazodone. Avoid or adjust dose. Moderate] Study
- Macrolides (erythromycin) are predicted to increase the exposure to trazodone. Moderate Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to trazodone. [Moderate]
 Theoretical
- Nilotinib is predicted to increase the exposure to trazodone.
 Moderate Theoretical
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of trazodone. [Moderate] Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Treosulfan → see alkylating agents

Treprostinil → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (antiplatelet effects)

- Antiepileptics (carbamazepine, phenobarbital, phenytoin) are predicted to decrease the exposure to treprostinil. Adjust dose.
 Mildl Theoretical
- ► Clopidogrel is predicted to increase the exposure to treprostinil. Adjust dose. Moderate Theoretical → Also see TABLE 4
- Fibrates (gemfibrozil) increase the exposure to treprostinil.
 Adjust dose. Moderate Study
- ► Iron chelators (deferasirox) are predicted to increase the exposure to treprostinil. Adjust dose. Moderate Theoretical
- ► Loop diuretics (furosemide) might slightly decrease the clearance of treprostinil. Unknown Theoretical → Also see TABLE 8 p. 1491
- Rifamycins (rifampicin) slightly decrease the exposure to treprostinil. Adjust dose. [Mild] Study
- St John's wort is predicted to decrease the exposure to treprostinil. Adjust dose. [Mild] Theoretical
- ► Trimethoprim is predicted to increase the exposure to treprostinil. Adjust dose. Moderate Theoretical

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see TABLE 18 p. 1494

(hyponatraemia), TABLE 8 p. 1491 (hypotension), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

amitriptyline • clomipramine • dosulepin • doxepin • imipramine • lofepramine • nortriptyline • trimipramine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to tricyclic antidepressants. Avoid. Severe

 Theoretical → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (propafenone) are predicted to increase the concentration of tricyclic antidepressants. [Moderate]
 Theoretical → Also see TABLE 10 p. 1492
- ► Antiepileptics (carbamazepine) decrease the exposure to tricyclic antidepressants. Adjust dose. Moderate Study → Also see TABLE 18 p. 1494
- Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to tricyclic antidepressants. [Moderate] Study → Also see TABLE 11 p. 1492
- Antiepileptics (valproate) increase the concentration of nortriptyline. [Severe] Study
- Tricyclic antidepressants (clomipramine, imipramine) potentially increase the risk of overheating and dehydration when given with antiepileptics (zonisamide). Avoid in children. Severel Theoretical
- Antipsychotics, second generation (clozapine) can cause constipation, as can tricyclic antidepressants; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ➤ Bupropion is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. Severe Study
- Cinacalcet is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. Severe Study
- ► Tricyclic antidepressants decrease the antihypertensive effects of clonidine. Monitor and adjust dose. Moderate Anecdotal → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ► Cobicistat is predicted to slightly increase the exposure to tricyclic antidepressants. Mild Study
- Dacomitinib is predicted to markedly increase the exposure to tricyclic antidepressants (imipramine, nortriptyline). Avoid.
 [Severe] Study
- ► Darifenacin (high-dose) is predicted to increase the exposure to tricyclic antidepressants. [Moderate] Study → Also see TABLE 10 p. 1492
- ► Eliglustat is predicted to increase the exposure to nortriptyline.

 Adjust dose. Moderate Theoretical
- ► H₂ receptor antagonists (cimetidine) increase the exposure to tricyclic antidepressants. [Moderate] Study
- ► HIV-protease inhibitors (ritonavir, tipranavir) are predicted to increase the exposure to tricyclic antidepressants. Moderate Theoretical
- ► Tricyclic antidepressants potentially increase the risk of neurotoxicity when given with lithium. [Severe] Anecdotal → Also see TABLE 13 p. 1493 → Also see TABLE 9 p. 1492
- Tricyclic antidepressants are predicted to increase the risk of severe toxic reaction when given with MAOIs, irreversible.
 Avoid and for 14 days after stopping the MAOI. [Severe]
 Theoretical -> Also see TABLE 8 p. 1491 -> Also see TABLE 13 p. 1493
- ► Methylphenidate might increase the concentration of tricyclic antidepressants. Use with caution and adjust dose. Moderate
- Amitriptyline decreases the effects of metyrapone. Avoid.
 Moderate Theoretical

- ► Tricyclic antidepressants are predicted to increase the risk of severe toxic reaction when given with moclobemide. Avoid. Severe | Theoretical → Also see TABLE 13 p. 1493
- ► Tricyclic antidepressants are predicted to decrease the effects of moxonidine. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants (amitriptyline, imipramine, nortriptyline). [Moderate] Theoretical
- Tricyclic antidepressants might increase the risk of adverse effects when given with ozanimod. Severe Theoretical
- Tricyclic antidepressants are predicted to decrease the efficacy of pitolisant. [Mild] Theoretical
- SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- SSRIs (fluvoxamine) markedly increase the exposure to clomipramine. Adjust dose. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ► SSRIs (fluvoxamine) increase the exposure to tricyclic antidepressants (amitriptyline, imipramine). Adjust dose. Severe Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- Sucralfate is predicted to decrease the absorption of tricyclic antidepressants. [Moderate] Study
- Tricyclic antidepressants increase the effects of sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine). Avoid. Severe Study
- Tricyclic antidepressants are predicted to decrease the effects of sympathomimetics, vasoconstrictor (ephedrine). Avoid. Severe Study
- ► Terbinafine is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. Severe Study
- Tricyclic antidepressants increase the risk of cardiac arrhythmias and hypotension when given with thiopental.
 Moderate Study → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492

Trientine

- ▶ Oral trientine potentially decreases the absorption of oral iron. Moderate Theoretical
- ► Trientine potentially decreases the absorption of zinc.

 [Moderate] Theoretical

Trifluoperazine → see phenothiazines

- **Trihexyphenidyl** → see TABLE 10 p. 1492 (antimuscarinics)
- ➤ Antipsychotics, second generation (clozapine) can cause constipation, as can trihexyphenidyl; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492
- Trimethoprim → see TABLE 18 p. 1494 (hyponatraemia), TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium)
- ► Trimethoprim increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study
- ► Antimalarials (pyrimethamine) increase the risk of adverse effects when given with trimethoprim. Severe Study
- Trimethoprim might increase the risk of haematological toxicity when given with azathioprine in renal transplant patients. Severe Anecdotal
- Trimethoprim is predicted to increase the anticoagulant effect of coumarins. [Severe] Study
- Dapsone increases the exposure to trimethoprim and trimethoprim increases the exposure to dapsone. [Severe] Study
- ► Trimethoprim increases the concentration of digoxin. Moderate Study
- Trimethoprim is predicted to increase the exposure to dopamine receptor agonists (pramipexole). Adjust dose.
 [Moderate] Study
- Trimethoprim slightly increases the exposure to meglitinides (repaglinide). Avoid or monitor blood glucose. Moderate Study
- ► Trimethoprim might increase the risk of haematological toxicity when given with mercaptopurine in renal transplant patients. | Severe| Theoretical

- ► Trimethoprim increases the risk of adverse effects when given with methotrexate. Avoid. Severe Anecdotal → Also see TABLE 2
- ► Trimethoprim slightly increases the exposure to NRTIS (lamivudine). [Moderate] Study
- ► Rifamycins (rifampicin) decrease the exposure to trimethoprim.

 Moderate Study
- ► Trimethoprim is predicted to decrease the efficacy of sapropterin. Moderate Theoretical
- ► Trimethoprim is predicted to increase the exposure to treprostinil. Adjust dose. Moderate Theoretical

Trimipramine → see tricyclic antidepressants

Triptans → see TABLE 13 p. 1493 (serotonin syndrome)

almotriptan • eletriptan • frovatriptan • naratriptan • rizatriptan • sumatriptan • zolmitriptan •

- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) increase the exposure to almotriptan. [Mild] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to eletriptan.
 Avoid. [Severe] Study
- Beta blockers, non-selective (propranolol) slightly to moderately increase the exposure to rizatriptan. Adjust rizatriptan dose and separate administration by at least 2 hours, p. 513.
 [Moderate] Study
- ► Cenobamate is predicted to decrease the exposure to eletriptan. Adjust dose. Moderate Theoretical
- ► Cobicistat increases the exposure to almotriptan. Mild Study
 ► Cobicistat is predicted to markedly increase the exposure to
- eletriptan. Avoid. Severe Study
- Combined hormonal contraceptives is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515.
 Moderate Theoretical
- Almotriptan is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after almotriptan. Severe Theoretical
- ▶ Eletriptan increases the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. Severe Study
- Rizatriptan is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after rizatriptan. Severe Theoretical
- ➤ Sumatriptan increases the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after sumatriptan. Severe Study
- Triptans (frovatriptan, naratriptan) are predicted to increase the risk of vasoconstriction when given with ergotamine.
 Separate administration by 24 hours. Severe Theoretical
- Zolmitriptan is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after zolmitriptan. [Severe] Theoretical
- ► H₂ receptor antagonists (cimetidine) slightly increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Mild Study
- HIV-protease inhibitors increase the exposure to almotriptan.
 Mild Study
- HIV-protease inhibitors are predicted to markedly increase the exposure to eletriptan. Avoid. Severe Study
- Idelalisib increases the exposure to almotriptan. Mild Study
 Idelalisib is predicted to markedly increase the exposure to eletriptan. Avoid. Severe Study
- Macrolides (clarithromycin) increase the exposure to almotriptan. [Mild] Study
- Macrolides (clarithromycin) are predicted to markedly increase the exposure to eletriptan. Avoid. Severe Study
- ► Macrolides (erythromycin) moderately increase the exposure to eletriptan. Avoid. [Moderate] Study
- MAOIs, irreversible are predicted to increase the exposure to triptans (rizatriptan, sumatriptan). Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see TABLE 13 p. 1493
- MAOIs, irreversible are predicted to increase the exposure to zolmitriptan. [Severe] Theoretical → Also see TABLE 13 p. 1493

Triptans (continued)

- ► Mexiletine is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Moderate
- Moclobemide moderately increases the exposure to triptans (rizatriptan, sumatriptan). Avoid. Moderate Study → Also see TABLE 13 p. 1493
- Moclobemide slightly increases the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Moderate Study → Also see TABLE 13 p. 1493
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to eletriptan. [Moderate]
 Study
- ➤ Osilodrostat is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Moderate
 Theoretical
- Quinolones (ciprofloxacin) are predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515.
 Moderatel Theoretical
- Rucaparib is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Moderate Theoretical
- SSRIs (fluvoxamine) increase the concentration of frovatriptan.
 Severe Study → Also see TABLE 13 p. 1493
- ➤ SSRIs (fluvoxamine) are predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Severe
 Theoretical → Also see TABLE 13 p. 1493
- Vemurafenib is predicted to increase the exposure to zolmitriptan. Adjust zolmitriptan dose, p. 515. Moderate Theoretical

Tropicamide → see TABLE 10 p. 1492 (antimuscarinics)

➤ Antipsychotics, second generation (clozapine) can cause constipation, as can tropicamide; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

Trospium → see TABLE 10 p. 1492 (antimuscarinics)

➤ Antipsychotics, second generation (clozapine) can cause constipation, as can trospium; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

Tryptophan → see TABLE 13 p. 1493 (serotonin syndrome)

- Tryptophan greatly decreases the concentration of levodopa.
 Moderate Study
- ► Tryptophan increases the risk of adverse effects when given with MAOIs, irreversible. Severe Anecdotal → Also see TABLE 13 p. 1493

Tucatinib

- ► Tucatinib is predicted to increase the exposure to aliskiren. Use with caution and adjust dose. [Moderate] Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to tucatinib. Avoid. <u>Severe</u> Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to tucatinib. Avoid. [Severe] Study
- Tucatinib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Use with caution and adjust dose. [Moderate] Theoretical
 Tucatinib markedly increases the exposure to benzodiazepines
- (midazolam). Avoid or adjust dose. [Moderate] Study

 Turatinih is predicted to increase the exposure to busnirone
- ► Tucatinib is predicted to increase the exposure to buspirone.

 Avoid or adjust dose. Moderate Theoretical
- ► Clopidogrel is predicted to increase the exposure to tucatinib. Avoid or adjust tucatinib dose, p. 1085. Severe Study
- ► Tucatinib is predicted to increase the exposure to colchicine.

 Use with caution and adjust dose. [Moderate] Theoretical
- ► Tucatinib is predicted to increase the exposure to darifenacin. Avoid or adjust dose. [Moderate] Theoretical
- ► Tucatinib slightly increases the exposure to digoxin. Use with caution and adjust dose. Moderate Study
- ► Tucatinib is predicted to increase the exposure to everolimus. Avoid or adjust dose. Moderate Theoretical
- ➤ Tucatinib is predicted to increase the exposure to factor XA inhibitors (edoxaban). Avoid or adjust dose. Moderate Theoretical

- ► Tucatinib is predicted to increase the exposure to factor XA inhibitors (rivaroxaban). Use with caution and adjust dose.

 Moderate Theoretical
- ► Fibrates (gemfibrozil) are predicted to increase the exposure to tucatinib. Avoid or adjust tucatinib dose, p. 1085. [Severe] Study
- ➤ Tucatinib is predicted to increase the exposure to HIV-protease inhibitors (darunavir, tipranavir). Avoid or adjust dose.
 Moderate Theoretical
- ► Tucatinib is predicted to increase the exposure to ibrutinib.

 Avoid or adjust dose. [Moderate] Theoretical
- ► Iron chelators (deferasirox) are predicted to increase the exposure to tucatinib. Moderate Theoretical
- Leflunomide is predicted to increase the exposure to tucatinib.
 Moderate Theoretical
- Tucatinib is predicted to increase the exposure to lomitapide.
 Avoid or adjust dose. [Moderate] Theoretical
- ► Tucatinib is predicted to increase the exposure to loperamide.

 Use with caution and adjust dose. [Moderate] Theoretical
- ► Mitotane is predicted to decrease the exposure to tucatinib. Avoid. Severe Study
- ► Tucatinib is predicted to increase the exposure to naloxegol.

 Avoid or adjust dose. Moderate Theoretical
- ➤ Tucatinib is predicted to increase the exposure to opioids (alfentanil). Avoid or adjust dose. [Moderate] Theoretical
- Tucatinib is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (avanafil, vardenafil). Avoid or adjust dose. Moderate Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to tucatinib. Avoid. Severe Study
- ► Tucatinib is predicted to increase the exposure to sirolimus. Avoid or adjust dose. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to tucatinib. Avoid. Severe Theoretical
- ► Tucatinib is predicted to increase the exposure to statins (simvastatin). Avoid or adjust dose. Moderate Theoretical
- ➤ Tucatinib is predicted to increase the exposure to tacrolimus.

 Avoid or adjust dose. [Moderate] Theoretical
- ► Tucatinib is predicted to increase the exposure to talazoparib.

 Use with caution and adjust dose. [Moderate] Theoretical
- ➤ Tucatinib is predicted to increase the exposure to taxanes (docetaxel, paclitaxel). Use with caution and adjust dose.

 Moderatel Theoretical
- ► Teriflunomide is predicted to increase the exposure to tucatinib. [Moderate] Theoretical
- ➤ Tucatinib is predicted to increase the exposure to thrombin inhibitors (dabigatran). Use with caution and adjust dose. Moderate Theoretical
- ► Tucatinib is predicted to increase the exposure to topotecan.
 Use with caution and adjust dose. Moderate Theoretical

Typhoid vaccine, oral → see live vaccines Ulipristal

- ➤ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the efficacy of ulipristal. Avoid and for 4 weeks after stopping ulipristal. [Severe] Theoretical
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids.
 Moderate Study
- Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Moderate] Study
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Severe] Study
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. Moderate Study
- ► Cobicistat is predicted to increase the exposure to ulipristal.

 Avoid if used for uterine fibroids. Severe Study
- Combined hormonal contraceptives might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of

- **combined hormonal contraceptives.** Avoid or use additional contraceptive precautions. <u>Severe</u> Theoretical
- ► Crizotinib is predicted to increase the exposure to ulipristal.

 Avoid if used for uterine fibroids. Moderate Study
- ▶ Dabrafenib is predicted to decrease the efficacy of ulipristal. Avoid and for 4 weeks after stopping ulipristal. Severe Theoretical
- ▶ Desogestrel might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of desogestrel. Avoid or use additional contraceptive precautions. Severe Theoretical
- ► Endothelin receptor antagonists (bosentan) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ► Etonogestrel might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of etonogestrel. Avoid.

 Severel Theoretical
- ► Grapefruit juice is predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ► Griseofulvin potentially decreases the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severel Anecdotal
- HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir) boosted with ritonavir are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Severe] Study
- ► HIV-protease inhibitors (ritonavir) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Idelalisib is predicted to increase the exposure to ulipristal.
 Avoid if used for uterine fibroids. [Severe] Study
- Imatinib is predicted to increase the exposure to ulipristal.
 Avoid if used for uterine fibroids. Moderate Study
- ► Letermovir is predicted to increase the exposure to ulipristal.

 Avoid if used for uterine fibroids. Moderate Study
- ► Levonorgestrel might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of levonorgestrel. Avoid.

 Severel Theoretical
- ► Lumacaftor is predicted to decrease the efficacy of ulipristal.

 Use additional contraceptive precautions. (Severe) Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. Severe Study
- ► Macrolides (erythromycin) moderately increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Moderate] Study
- ► Mitotane is predicted to decrease the efficacy of ulipristal. Avoid and for 4 weeks after stopping ulipristal. Severe Theoretical
- ► Modafinil decreases the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Apecdotal
- ► Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- Neurokinin-1 receptor antagonists (netupitant) are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [Moderate] Study
- Nilotinib is predicted to increase the exposure to ulipristal.
 Avoid if used for uterine fibroids. [Moderate] Study
- ► NNRTIS (efavirenz, nevirapine) decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severel Anecdotal
- ➤ Norethisterone might decrease the efficacy of ulipristal and ulipristal might decrease the efficacy of norethisterone. Avoid or use additional contraceptive precautions. Severe Theoretical
- ▶ Rifamycins decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- ► St John's wort is predicted to decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 859.

 Severe Anecdotal

Umeclidinium → see TABLE 10 p. 1492 (antimuscarinics)

► Antipsychotics, second generation (clozapine) can cause constipation, as can umeclidinium; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Upadacitinib

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to upadacitinib. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to upadacitinib. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to upadacitinib. Use with caution or avoid. [Severe] Study
- ► Antifungals, azoles (posaconazole) are predicted to increase the exposure to upadacitinib. Use with caution or avoid. [Moderate] Study
- ► Cobicistat is predicted to increase the exposure to upadacitinib. Use with caution or avoid. Severe Study
- ► Grapefruit is predicted to increase the exposure to upadacitinib. Avoid. Moderate Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to upadacitinib. Use with caution or avoid. [Severe] Study
- ► Idelalisib is predicted to increase the exposure to upadacitinib.

 Use with caution or avoid. [Severe] Study
- ► Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with upadacitinib. Avoid. Severe Theoretical
- ► Macrolides (clarithromycin) are predicted to increase the exposure to upadacitinib. Use with caution or avoid. Severe Study
- Mitotane is predicted to decrease the exposure to upadacitinib.
 Moderate Study
- Rifamycins (rifampicin) are predicted to decrease the exposure to upadacitinib. Moderate Study

Urokinase → see TABLE 3 p. 1490 (anticoagulant effects) **Ursodeoxycholic acid**

- ➤ Oral antacids are predicted to decrease the absorption of oral ursodeoxycholic acid. Separate administration by 2 hours. Moderatel Theoretical
- Ursodeoxycholic acid affects the concentration of ciclosporin.
 Use with caution and adjust dose. Severe Anecdotal
- ► Fibrates are predicted to decrease the efficacy of ursodeoxycholic acid. Avoid. Severe Theoretical Ustekinumab → see monoclonal antibodies

Vaborbactam

- Vaborbactam is predicted to increase the concentration of beta blockers, selective (metoprolol). <u>Unknown</u> Theoretical
- Vaborbactam is predicted to increase the concentration of SNRIs (venlafaxine). Unknown Theoretical

Valaciclovir → see TABLE 2 p. 1490 (nephrotoxicity)

- Valaciclovir is predicted to increase the exposure to aminophylline. (Severe) Anecdotal
- ➤ Valaciclovir is predicted to decrease the efficacy of live vaccines (herpes-zoster vaccine, live). [Moderate] Theoretical
- Mycophenolate is predicted to increase the risk of haematological toxicity when given with valaciclovir. [Moderate] Theoretical
- Valaciclovir is predicted to increase the exposure to theophylline. Severe Theoretical

Valganciclovir → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

- ► Valganciclovir is predicted to increase the risk of seizures when given with carbapenems (imipenem). Avoid. [Severe] Anecdotal
- Mycophenolate is predicted to increase the risk of haematological toxicity when given with valganciclovir.
 Moderate Theoretical

Valproate → see antiepileptics

Valsartan → see angiotensin-II receptor antagonists

Vancomycin → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity)

Vandetanib → see TABLE 9 p. 1492 (QT-interval prolongation)

- Vandetanib is predicted to increase the exposure to afatinib.
 Moderate Study
- Vandetanib is predicted to increase the exposure to aliskiren.
 Moderate Study
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492

Vandetanib (continued)

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study
- Vandetanib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Moderate Study
- ► Vandetanib is predicted to increase the exposure to berotralstat. Severe Study
- ► Vandetanib is predicted to increase the exposure to bictegravir. Use with caution or avoid. Moderate Theoretical
- Vandetanib is predicted to increase the exposure to colchicine.
 Moderate Study
- ► Dabrafenib is predicted to decrease the exposure to vandetanib. [Moderate] Study
- Vandetanib slightly increases the exposure to digoxin.
 Moderate Study
- Vandetanib is predicted to increase the exposure to dopamine receptor agonists (pramipexole). Adjust dose. [Moderate] Study
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to vandetanib. Moderate Study
- Vandetanib is predicted to increase the exposure to erlotinib.
 Moderate Theoretical
- Vandetanib is predicted to increase the exposure to everolimus. Moderate Study
- Vandetanib is predicted to increase the exposure to factor XA inhibitors (apixaban). [Moderate] Theoretical
- Vandetanib is predicted to increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Study
- ► Vandetanib is predicted to increase the exposure to fidaxomicin. Avoid. Moderate Study
- Vandetanib is predicted to increase the exposure to gilteritinib.
 Moderate Theoretical
- Vandetanib is predicted to increase the exposure to loperamide. Moderate Study
- Vandetanib increases the exposure to metformin. Monitor and adjust dose. [Moderate] Study
- Mitotane is predicted to decrease the exposure to vandetanib.
 Avoid. Moderate Study
- Vandetanib is predicted to increase the exposure to nintedanib.
 Moderate Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to vandetanib. Moderate Study → Also see TABLE 9 p. 1492
- ➤ Vandetanib is predicted to increase the exposure to relugolix. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study
- Vandetanib is predicted to increase the exposure to sirolimus.
 Moderate Study
- ► St John's wort is predicted to decrease the exposure to vandetanib. Avoid. Severe Study
- ► Vandetanib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe Study
- ► Vandetanib is predicted to increase the exposure to taxanes (docetaxel) (oral). <u>Unknown</u>] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to taxanes (paclitaxel) (oral). <u>Unknown</u> Study
- ► Vandetanib is predicted to increase the exposure to thrombin inhibitors (dabigatran). [Moderate] Study
- ► Vandetanib might increase the exposure to tigecycline. Mild
- ► Vandetanib is predicted to increase the exposure to topotecan.

 Severe Study
- Vandetanib is predicted to increase the concentration of trametinib. Moderate Theoretical
- ► Vandetanib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492

Vardenafil → see phosphodiesterase type-5 inhibitors

Varicella-zoster immunoglobulin → see immunoglobulins Varicella-zoster vaccine → see live vaccines

Vecuronium → see neuromuscular blocking drugs, non-depolarising **Vedolizumab** → see monoclonal antibodies

Velpatasvir

- Velpatasvir is predicted to increase the exposure to aliskiren.
 Severel Theoretical
- ➤ Oral antacids are predicted to decrease the concentration of oral velpatasvir. Separate administration by 4 hours. [Moderate] Theoretical
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to moderately decrease the exposure to velpatasvir. Avoid. |Severe| Study
- ► Antiarrhythmics (amiodarone) are predicted to increase the concentration of velpatasvir. Avoid or monitor. [Moderate]

 Theoretical
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to velpatasvir. Avoid. Severe Study
- ► Antiepileptics (oxcarbazepine) are predicted to decrease the exposure to velpatasvir. Avoid. Severe Theoretical
- ► Velpatasvir is predicted to increase the exposure to
- antihistamines, non-sedating (fexofenadine). (Severe) Theoretical ► Calcium salts (calcium carbonate) are predicted to decrease the
- Calcium salts (calcium carbonate) are predicted to decrease the concentration of velpatasvir. Separate administration by 4 hours. [Moderate] Anecdotal
- ▶ Velpatasvir is predicted to increase the exposure to colchicine.
 Severe | Theoretical
- Dabrafenib is predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ► Velpatasvir is predicted to increase the exposure to digoxin.

 Severe Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to velpatasvir. Avoid. [Moderate]
 Theoretical
- Velpatasvir is predicted to increase the exposure to everolimus. [Severe] Theoretical
- Velpatasvir is predicted to increase the exposure to factor XA inhibitors (edoxaban). Severe Theoretical
- H₂ receptor antagonists are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 685. Moderate Study
- ► HIV-protease inhibitors (tipranavir) are predicted to increase the exposure to velpatasvir. Severe Theoretical
- Velpatasvir is predicted to increase the exposure to loperamide. [Severe] Theoretical
- Mitotane is predicted to moderately decrease the exposure to velpatasvir. Avoid. Severe Study
- Modafinil is predicted to decrease the exposure to velpatasvir.
 Avoid. Severe Theoretical
- ► NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ➤ Proton pump inhibitors are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 685. [Moderate] Study
- ► Rifamycins (rifampicin) are predicted to moderately decrease the exposure to velpatasvir. Avoid. Severe Study
- Velpatasvir is predicted to increase the exposure to sirolimus.
 Severe | Theoretical
- ► St John's wort is predicted to decrease the exposure to velpatasvir. Avoid. Moderate Theoretical
- ► Velpatasvir with sofosbuvir slightly increases the exposure to statins (atorvastatin). Severe Study
- Velpatasvir with sofosbuvir is predicted to increase the exposure to statins (fluvastatin, simvastatin). Monitor adverse effects and adjust dose. [Severe] Theoretical
- ► Velpatasvir moderately increases the exposure to statins (rosuvastatin). Adjust rosuvastatin dose and monitor adverse effects, p. 221. [Severe] Study
- Velpatasvir is predicted to increase the exposure to sulfasalazine. Moderate Theoretical
- ► Velpatasvir is predicted to increase the exposure to taxanes (paclitaxel). Severe Theoretical
- Velpatasvir is predicted to increase the exposure to tenofovir disoproxil. Severe Study
- Velpatasvir increases the exposure to thrombin inhibitors (dabigatran). Avoid. Severe Study
- ► Velpatasvir is predicted to increase the exposure to topotecan.

 Severe | Theoretical

- **Vemurafenib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- Vemurafenib is predicted to increase the exposure to afatinib.
 Moderate Study
- Vemurafenib is predicted to increase the exposure to agomelatine. [Moderate] Study
- ► Vemurafenib is predicted to increase the exposure to aliskiren.

 Use with caution and adjust dose. [Moderate] Theoretical
- Vemurafenib is predicted to increase the exposure to aminophylline. Adjust dose. Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to anaesthetics, local (ropivacaine). Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to anagrelide. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vemurafenib. Avoid. Severe Study → Also see TABLE 9 p. 1492
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to vemurafenib. Severe Theoretical → Also see TABLE 9
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vemurafenib. Avoid. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to vemurafenib. [Severe] Theoretical → Also see TABLE 9 p. 1492
- Vemurafenib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Use with caution and adjust dose. Severel Theoretical
- Vemurafenib increases the concentration of antipsychotics, second generation (clozapine). Monitor adverse effects and adjust dose. Severe Study
- Vemurafenib is predicted to increase the exposure to antipsychotics, second generation (olanzapine). Adjust dose.
 Moderate Anecdotal
- Vemurafenib slightly to moderately decreases the exposure to benzodiazepines (midazolam). Moderate Study
- Vemurafenib is predicted to increase the exposure to berotralstat. Severe Study
- Vemurafenib is predicted to increase the exposure to beta blockers, non-selective (nadolol). [Moderate] Study
- Vemurafenib is predicted to increase the exposure to bictegravir. Use with caution or avoid. [Moderate] Theoretical
- Vemurafenib is predicted to decrease the concentration of bupropion. [Moderate] Theoretical
- Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to vemurafenib. [Severe] Theoretical
- Ciclosporin might affect the exposure to vemurafenib. Severe Theoretical
- Cobicistat is predicted to increase the exposure to vemurafenib. [Severe] Theoretical
- ▶ Vemurafenib is predicted to increase the exposure to colchicine. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1212. [Severe] Theoretical
- Vemurafenib might decrease the efficacy of combined hormonal contraceptives. Use additional contraceptive precautions. Severe Theoretical
- Vemurafenib is predicted to increase the exposure to coumarins. Moderate Study
- ► Crizotinib is predicted to increase the exposure to vemurafenib. Severe|Theoretical → Also see TABLE 9 p. 1492
- ► Dabrafenib is predicted to decrease the exposure to vemurafenib. Severe Study
- Vemurafenib slightly increases the exposure to digoxin. Use with caution and adjust dose. Severe Study
- Vemurafenib is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (sitagliptin). Use with caution or avoid. Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to dopamine receptor agonists (ropinirole). Adjust dose. Moderate Study
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to vemurafenib. Severe Study
- Vemurafenib is predicted to increase the exposure to endothelin receptor antagonists (ambrisentan). Use with caution or avoid. [Moderate] Theoretical

- ► Vemurafenib are predicted to increases the exposure to erlotinib. Monitor adverse effects and adjust dose. Moderate Study
- ▶ Vemurafenib is predicted to increase the exposure to everolimus. Use with caution and adjust dose. Severe Theoretical
 ▶ Vemurafenib is predicted to increase the exposure to factor XA
- inhibitors (apixaban). Moderate Theoretical
- Vemurafenib is predicted to slightly increase the exposure to factor XA inhibitors (edoxaban). [Severe] Theoretical
- Vemurafenib might increase the exposure to factor XA inhibitors (rivaroxaban). Use with caution and adjust dose. Moderate Theoretical
- ► Vemurafenib is predicted to increase the exposure to fidaxomicin. Avoid. Moderate Study
- ▶ Gefitinib might affect the exposure to vemurafenib. Moderate
 Theoretical
- Vemurafenib is predicted to increase the exposure to gilteritinib. [Moderate] Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to vemurafenib. Severe Theoretical
- ► Idelalisib is predicted to increase the exposure to vemurafenib.

 Severel Theoretical
- Imatinib is predicted to increase the exposure to vemurafenib.
 Severe Theoretical
- ► Vemurafenib is predicted to increase the exposure to larotrectinib. [Mild] Theoretical
- Letermovir is predicted to increase the exposure to vemurafenib. Severe Theoretical
- Vemurafenib might increase the exposure to loperamide. Use with caution and adjust dose. [Moderate] Theoretical
- Vemurafenib is predicted to increase the exposure to loxapine.
 Avoid. Unknown Theoretical
- ► Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to vemurafenib. Severe Theoretical → Also see TABLE 9 p. 1492
- Vemurafenib slightly increases the exposure to MAO-B inhibitors (rasagiline). [Moderate] Study
- Vemurafenib is predicted to increase the exposure to maraviroc. Use with caution or avoid. Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to melatonin. [Moderate] Theoretical
- Mitotane is predicted to decrease the exposure to vemurafenib.
 Avoid. [Severe] Study
- ► Monoclonal antibodies (ipilimumab) might increase the risk of hepatotoxicity when given with vemurafenib. Avoid. Severe
- Vemurafenib is predicted to increase the exposure to naldemedine. Moderate Study
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to vemurafenib. Severe Theoretical
- Nilotinib is predicted to increase the exposure to vemurafenib.

 Severel Theoretical → Also see TABLE 9 p. 1492
- Vemurafenib is predicted to increase the exposure to nintedanib. [Moderate] Study
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to vemurafenib. Severe Study → Also see TABLE 9 p. 1492
- ► Vemurafenib is predicted to increase the exposure to panobinostat. Adjust dose. Moderate Theoretical → Also see TABLE 9 p. 1492
- Vemurafenib is predicted to increase the exposure to phenindione. [Moderate] Study
- ► Vemurafenib is predicted to increase the exposure to phenothiazines (chlorpromazine). [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Vemurafenib is predicted to increase the exposure to phosphodiesterase type-4 inhibitors (roflumilast). Moderate Theoretical
- ► Vemurafenib is predicted to increase the exposure to pibrentasvir. Moderate Theoretical
- ► Vemurafenib is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. Moderate Study
- ► Vemurafenib might increase the exposure to ranolazine. Use with caution or avoid. Moderate Theoretical → Also see TABLE 9 p. 1492

Vemurafenib (continued)

- Vemurafenib is predicted to increase the exposure to relugolix.
 Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to vemurafenib. Avoid. Severe Study
- Vemurafenib is predicted to increase the exposure to riluzole.
 Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to sirolimus.
 Use with caution and adjust dose. [Severe] Theoretical
- ► Vemurafenib is predicted to increase the exposure to SNRIs (duloxetine). Use with caution or avoid. Moderate Theoretical
- ► St John's wort is predicted to decrease the exposure to vemurafenib. Avoid. [Severe] Study
- ► Vemurafenib is predicted to slightly increase the exposure to talazoparib. Avoid or adjust talazoparib dose, p. 1091. Severe
- Vemurafenib is predicted to increase the exposure to taxanes (docetaxel) (oral). [Unknown] Theoretical
- Vemurafenib is predicted to increase the exposure to taxanes (paclitaxel) (oral). Use with caution and adjust dose. <u>Unknown</u> Theoretical
- Vemurafenib is predicted to increase the exposure to theophylline. Monitor and adjust dose. [Moderate] Theoretical
- Vemurafenib is predicted to increase the exposure to thrombin inhibitors (dabigatran). Monitor and adjust dose. Severe

 Theoretical
- ► Vemurafenib is predicted to increase the exposure to ticagrelor. Use with caution or avoid. [Severe] Study
- Vemurafenib might increase the exposure to tigecycline. [Mild]
 Anecdotal
- ► Vemurafenib increases the exposure to tizanidine. Avoid.

 Moderate Study → Also see TABLE 9 p. 1492
- Vemurafenib is predicted to increase the exposure to topotecan. Severe Study
- Vemurafenib is predicted to increase the concentration of trametinib. [Moderate] Theoretical
- Vemurafenib is predicted to increase the exposure to triptans (zolmitriptan). Adjust zolmitriptan dose, p. 515. [Moderate]
 Theoretical
- Vemurafenib is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical
- ► Vemurafenib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492

Venetoclax

FOOD AND LIFESTYLE Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to venetoclax. Avoid. Severe Study
- Antiarrhythmics (amiodarone) are predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to venetoclax. Avoid. Severe) Study
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to venetoclax. Avoid or adjust dose consult product literature. [Severe] Study
- Venetoclax is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Moderate Theoretical
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. [Severe] Study
- Ciclosporin is predicted to increase the exposure to venetoclax.
 Avoid or monitor for toxicity. Severe Theoretical
- Cobicistat is predicted to increase the exposure to venetoclax.
 Avoid or adjust dose—consult product literature. [Severe] Study
- Venetoclax is predicted to increase the exposure to colchicine.
 Avoid or adjust dose. (Severe) Study
- Venetoclax slightly increases the exposure to coumarins (warfarin). [Moderate] Study

- ► Crizotinib is predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. [Severe] Study
- Dabrafenib is predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- Venetoclax increases the exposure to digoxin. Avoid or adjust dose. Severe Study
- ► Eltrombopag is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical
- Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- ► Venetoclax is predicted to increase the exposure to endothelin receptor antagonists (bosentan). Moderate Theoretical
- ▶ Venetoclax is predicted to increase the exposure to everolimus. Avoid or adjust dose. Severe Study
- Venetoclax is predicted to increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). Avoid or adjust dose. Severe Study
- Grapefruit juice is predicted to increase the exposure to venetoclax. Avoid. Severel Theoretical
- ► HIV-protease inhibitors are predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. Severel Study
- ► Idelalisib is predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. Severe Study
- ► Imatinib is predicted to increase the exposure to venetoclax.

 Avoid or adjust dose—consult product literature. [Severe] Study
- ► Ivacaftor is predicted to increase the exposure to venetoclax.
- Avoid or monitor for toxicity. <u>Severe</u> Theoretical

 ► Lapatinib is predicted to increase the exposure to venetoclax.

 Avoid or monitor for toxicity. <u>Severe</u> Theoretical
- Leflunomide is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical
- ► Letermovir is predicted to increase the exposure to venetoclax.

 Avoid or adjust dose—consult product literature. Severe Study
- ► Venetoclax potentially decreases the efficacy of live vaccines. Avoid. Severe Theoretical
- Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to venetoclax. Avoid or adjust dose consult product literature. Severe Study
- Venetoclax is predicted to increase the exposure to meglitinides (repaglinide). [Moderate] Theoretical
- Mitotane is predicted to decrease the exposure to venetoclax.
 Avoid. Severe Study
- Neratinib is predicted to increase the exposure to venetoclax.

 Avoid or monitor for toxicity. Severe Theoretical
- Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. Severel Study
- Nilotinib is predicted to increase the exposure to venetoclax.
 Avoid or adjust dose—consult product literature. [Severe] Study
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of venetoclax. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- NNRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- ► Quinolones (ciprofloxacin) are predicted to increase the exposure to venetoclax. Avoid or adjust dose—consult product literature. Severe Theoretical
- Ranolazine is predicted to increase the exposure to venetoclax.
 Avoid or monitor for toxicity. Severe Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- Venetoclax is predicted to increase the exposure to sirolimus.
 Avoid or adjust dose. Severe Study
- ► St John's wort is predicted to decrease the exposure to
- venetoclax. Avoid. Severe Study
 ➤ Venetoclax is predicted to increase the exposure to statins
 (atorvastatin). [Moderate] Study
- ► Venetoclax is predicted to increase the exposure to statins (fluvastatin, pravastatin, rosuvastatin, simvastatin). [Moderate]
 Theoretical
- Venetoclax is predicted to increase the exposure to sulfasalazine. [Moderate] Theoretical
- Venetoclax is predicted to increase the exposure to sulfonylureas (glibenclamide). Moderate Theoretical

- ► Teriflunomide is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical
- Venetoclax is predicted to increase the exposure to thrombin inhibitors (dabigatran). Avoid or adjust dose. Severe Study
- Venetoclax is predicted to increase the exposure to topotecan.
 Moderate Theoretical
- Vemurafenib is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. Severe Theoretical

Venlafaxine → see SNRIs

Verapamil → see calcium channel blockers

Vericiguat → see TABLE 8 p. 1491 (hypotension)

Vernakalant → see antiarrhythmics

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta₂ agonists

Vildagliptin → see dipeptidylpeptidase-4 inhibitors

Vinblastine → see vinca alkaloids

Vinca alkaloids → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 19 p. 1494 (ototoxicity), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 5 p. 1491 (thromboembolism), TABLE 9 p. 1492 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vinflunine. Avoid. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vinorelbine. Use with caution or avoid. Severe Theoretical
- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). Severe Theoretical
- ► Antiarrhythmics (amiodarone) might increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 12 p. 1493 → Also see TABLE 9 p. 1492
- Antiarrhythmics (dronedarone) are predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vinflunine. Avoid. Severe Theoretical → Also see TABLE 12 p. 1493
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vinorelbine. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 D. 1493
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). Severe Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 1 p. 1490
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
- Antifungals, azoles (miconazole) are predicted to increase the concentration of vinca alkaloids. Use with caution and adjust dose. Moderate Theoretical
- Asparaginase potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before asparaginase. Severe) Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- ► Ciclosporin might increase the exposure to vinca alkaloids.

 Severe Theoretical
- Cobicistat is predicted to increase the exposure to vinca alkaloids. Severe Theoretical
- ► Crisantaspase potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before crisantaspase. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ► Crizotinib is predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 9 p. 1492

- HIV-protease inhibitors are predicted to increase the exposure to vinca alkaloids. Severe Theoretical
- ► Idelalisib is predicted to increase the exposure to vinca alkaloids. Severe Theoretical
- ► Imatinib is predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 15 p. 1493
- Ivacaftor might increase the exposure to vinca alkaloids.
 Severe) Theoretical
- ► Lapatinib might increase the exposure to vinca alkaloids.

 Severe Theoretical → Also see TABLE 9 p. 1492
- ► Letermovir is predicted to increase the exposure to vinca alkaloids. Severe Theoretical
- ➤ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with vinca alkaloids. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Macrolides (azithromycin) might increase the exposure to vinca alkaloids. (Severe) Theoretical
- ► Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 9 p. 1492
- ► Mitotane is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). Severe Theoretical → Also see TABLE 15 p. 1493
- ► Mitotane is predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
- Mitotane is predicted to decrease the exposure to vinorelbine.
 Use with caution or avoid. Severe Theoretical → Also see TABLE 15
- Neratinib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 1 p. 1490
- ► Neurokinin-1 receptor antagonists are predicted to increase the exposure to vinca alkaloids. [Severe] Theoretical
- Nilotinib is predicted to increase the exposure to vinca alkaloids. Severe Theoretical → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ► Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of vinca alkaloids (vinblastine, vincristine). Severe Theoretical
- ▶ Pegaspargase potentially increases the risk of neurotoxicity when given with vincristine. Vincristine should be taken 3 to 24 hours before pegaspargase. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ► Ranolazine might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492
- Rifamycins (rifampicin) are predicted to decrease the exposure to vinflunine. Avoid. [Severe] Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to vinorelbine. Use with caution or avoid. <u>Severe</u> Theoretical
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine). Severe

 Theoretical
- ► Rucaparib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 15 p. 1493
- ► St John's wort is predicted to decrease the exposure to vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine). Severe Theoretical
- ► St John's wort is predicted to decrease the exposure to vinflunine. Avoid. Severe Theoretical
- Vandetanib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492
- Vemurafenib might increase the exposure to vinca alkaloids.
 Severe Theoretical → Also see TABLE 9 p. 1492

Vincristine → see vinca alkaloids Vindesine → see vinca alkaloids Vinflunine → see vinca alkaloids Vinorelbine → see vinca alkaloids

Vismodegih

- ► Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vismodegib. Avoid. Moderate

 Theoretical
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical

A1

Vismodegib (continued)

- Mitotane is predicted to decrease the exposure to vismodegib.
 Avoid. Moderate Theoretical
- Rifamycins (rifampicin) are predicted to decrease the exposure to vismodegib. Avoid. [Moderate] Theoretical
- ► St John's wort is predicted to decrease the exposure to vismodegib. Avoid. Moderate Theoretical

Vitamin A

- Retinoids (acitretin, alitretinoin, isotretinoin) are predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. Severel Theoretical
- ► Retinoids (bexarotene) are predicted to increase the risk of toxicity when given with vitamin A. Adjust dose. Moderate
- ► Retinoids (tretinoin) are predicted to increase the risk of vitamin A toxicity when given with vitamin A. Avoid. Severe Study

Vitamin D substances

alfacalcidol • calcipotriol • calcitriol • colecalciferol • ergocalciferol • paricalcitol • tacalcitol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- Antiepileptics (carbamazepine) are predicted to decrease the effects of vitamin D substances. [Moderate] Study
- ► Antiepileptics (fosphenytoin, phenytoin) decrease the effects of vitamin D substances. [Moderate] Study
- ► Antiepileptics (phenobarbital, primidone) are predicted to decrease the effects of vitamin D substances. Moderate

 Theoretical
- ► Antifungals, azoles (clotrimazole, ketoconazole) are predicted to decrease the exposure to colecalciferol. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to paricalcitol. [Moderate]
 Study
- Cobicistat is predicted to increase the exposure to paricalcitol.
 [Moderate] Study
- Vitamin D substances are predicted to increase the risk of toxicity when given with digoxin. Severe Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to paricalcitol. Moderate Study
- ► Idelalisib is predicted to increase the exposure to paricalcitol. Moderate Study
- Macrolides (clarithromycin) are predicted to increase the exposure to paricalcitol. Moderate Study
- ► Thiazide diuretics increase the risk of hypercalcaemia when given with vitamin D substances. [Moderate] Theoretical

Vitamin E substances

- Vitamin E substances affect the exposure to ciclosporin.
 Moderate Study
- Vitamin E substances might increase the risk of bleeding when given with selumetinib. Avoid. Severe Theoretical

Volanesorsen

- Drugs with anticoagulant effects (see TABLE 3 p. 1490) cause bleeding, as can volanesorsen; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical
- Drugs with antiplatelet effects (see TABLE 4 p. 1490) cause bleeding, as can volanesorsen; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. Severe Theoretical

Volatile halogenated anaesthetics → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

 $desflurane \cdot is of lurane \cdot methoxy flurane \cdot sevoflurane$

- Antiepileptics (phenobarbital, primidone) potentially increase the risk of nephrotoxicity when given with methoxyflurane. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ► Isoniazid potentially increases the risk of nephrotoxicity when given with methoxyflurane. Avoid. Severe Theoretical
- Methylphenidate might increase the risk of hypertension and arrhythmias when given with volatile halogenated

- anaesthetics. Avoid methylphenidate on day of surgery, p. 379. Severe Theoretical
- ► Rifamycins (rifampicin) potentially increase the risk of nephrotoxicity when given with methoxyflurane. Avoid. Severe Theoretical

Voriconazole → see antifungals, azoles

Vortioxetine → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 4 p. 1490 (antiplatelet effects)

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to vortioxetine. Monitor and adjust dose. [Moderate] Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to vortioxetine. Monitor and adjust dose. [Moderate] Study
- Bupropion is predicted to increase the exposure to vortioxetine. Monitor and adjust dose. Moderate Study
- ► Cinacalcet is predicted to increase the exposure to vortioxetine.

 Monitor and adjust dose. [Moderate] Study
- ► Interferons (ropeginterferon alfa) are predicted to increase the exposure to vortioxetine. [Moderate] Theoretical
- ► Mitotane is predicted to decrease the exposure to vortioxetine. Monitor and adjust dose. Moderate Study
- ► Rifamycins (rifampicin) are predicted to decrease the exposure to vortioxetine. Monitor and adjust dose. [Moderate] Study
- ➤ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to vortioxetine. Monitor and adjust dose. Moderate Study → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ► Terbinafine is predicted to increase the exposure to vortioxetine. Monitor and adjust dose. Moderate Study

Voxilaprevir

- Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the concentration of voxilaprevir. Avoid. (Severe) Study
- ➤ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of voxilaprevir. Avoid. [Severe] Study
- Antiepileptics (oxcarbazepine) are predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- ► Ciclosporin increases the concentration of voxilaprevir. Avoid. Severe Study
- Combined hormonal contraceptives (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with voxilaprevir with sofosbuvir and velpatasvir. Avoid. [Severe] Study
- ► Dabrafenib is predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the exposure to digoxin. Monitor and adjust dose.
 Severel Theoretical
- ► Endothelin receptor antagonists (bosentan) are predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- ➤ Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the concentration of factor XA inhibitors (edoxaban). Avoid. [Severe] Theoretical
- ► HIV-protease inhibitors (atazanavir) boosted with ritonavir increase the concentration of voxilaprevir. Avoid. [Severe] Study
- ► HIV-protease inhibitors (lopinavir) boosted with ritonavir are predicted to increase the concentration of voxilaprevir. Avoid.

 | Severe | Theoretical |
- ► HIV-protease inhibitors (tipranavir) boosted with ritonavir are predicted to increase the concentration of voxilaprevir. Severe Theoretical
- Mitotane is predicted to decrease the concentration of voxilaprevir. Avoid. Severe Study
- Modafinil is predicted to decrease the concentration of voxilaprevir. Avoid. Severel Theoretical
- NNRTIS (efavirenz, nevirapine) are predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- Proton pump inhibitors are predicted to decrease the exposure to voxilaprevir. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
- Rifamycins (rifabutin) are predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- Rifamycins (rifampicin) are predicted to decrease the concentration of voxilaprevir. Avoid. [Severe] Study

- ▶ St John's wort is predicted to decrease the concentration of voxilaprevir. Avoid. Severe Theoretical
- ▶ Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (atorvastatin). Adjust atorvastatin dose, p. 220. Moderate Theoretical
- ▶ Voxilaprevir with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (fluvastatin, simvastatin). Avoid. Moderate Theoretical
- ► Voxilaprevir with sofosbuvir and velpatasvir moderately increases the exposure to statins (pravastatin). Monitor and adjust pravastatin dose. Moderate Study
- ▶ Voxilaprevir with sofosbuvir and velpatasvir markedly increases the exposure to statins (rosuvastatin). Avoid. Severe
- ▶ Voxilaprevir is predicted to increase the concentration of sulfasalazine. Avoid. Severe Theoretical
- ► Voxilaprevir with sofosbuvir and velpatasvir potentially increases the concentration of tenofovir disoproxil. Severe
- ▶ Voxilaprevir with sofosbuvir and velpatasvir increases the concentration of thrombin inhibitors (dabigatran). Avoid. Severe
- ► Voxilaprevir is predicted to increase the concentration of topotecan. Avoid. Severe Theoretical

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor Yellow fever vaccine, live → see live vaccines Zidovudine → see NRTIs

7inc

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ Oral zinc might decrease the concentration of the active metabolite of oral baloxavir marboxil. Avoid. Severe Theoretical
- ▶ Oral zinc decreases the absorption of oral bisphosphonates (alendronate). Alendronate should be taken at least 30 minutes before zinc. Moderate Study
- ▶ Oral zinc decreases the absorption of oral bisphosphonates (clodronate). Avoid zinc. Moderate Study
- ► Oral zinc is predicted to decrease the absorption of oral bisphosphonates (ibandronate). Avoid zinc for at least 6 hours before or 1 hour after ibandronate. Moderate Theoretical
- ▶ Oral **zinc** decreases the absorption of oral bisphosphonates (risedronate). Separate administration by at least 2 hours. Moderate Study
- ► Oral calcium salts decrease the absorption of zinc. Moderate
- ▶ Oral zinc is predicted to decrease the absorption of eltrombopag. Eltrombopag should be taken 2 hours before or 4 hours after zinc. Severe Theoretical
- ▶ Oral zinc is predicted to decrease the efficacy of oral iron and oral iron is predicted to decrease the efficacy of oral zinc. Moderate Study
- ► Oral zinc is predicted to decrease the absorption of oral iron chelators (deferiprone). [Moderate] Theoretical
- Zinc is predicted to decrease the absorption of penicillamine. Mild Theoretical
- ► Zinc is predicted to decrease the exposure to quinolones.
- Separate administration by 2 hours. Moderate Study ▶ Oral zinc is predicted to decrease the absorption of tetracyclines. Separate administration by 2 to 3 hours.
- Moderate Theoretical ► Trientine potentially decreases the absorption of zinc. Moderate Theoretical

Zoledronate → see bisphosphonates

Zolmitriptan → see triptans

Zolpidem → see TABLE 11 p. 1492 (CNS depressant effects)

▶ Antiepileptics (carbamazepine) moderately decrease the exposure to zolpidem. Moderate Study

- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of zolpidem. Severe Theoretical
- ▶ Rifamycins (rifampicin) moderately decrease the exposure to zolpidem. Moderate Study

Zonisamide → see antiepileptics

- **Zopicione** → see TABLE 11 p. 1492 (CNS depressant effects) ▶ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to zopiclone. Adjust dose. Moderate
- ► Antiarrhythmics (dronedarone) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ► Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to zopiclone. Adjust dose. Moderate Study → Also see TABLE 11
- ► Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ► Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Theoretical
- ► Calcium channel blockers (diltiazem, verapamil) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ► Cobicistat is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Theoretical
- ► Crizotinib is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Theoretical
- ► Idelalisib is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Theoretical
- ▶ Imatinib is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ Letermovir is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ Macrolides (clarithromycin) are predicted to increase the exposure to zopiclone. Adjust dose. $\underline{\textbf{Moderate}}$ Theoretical
- ▶ Macrolides (erythromycin) are predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ Mitotane is predicted to decrease the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ Neurokinin-1 receptor antagonists (aprepitant, netupitant) are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Nilotinib is predicted to increase the exposure to zopiclone. Adjust dose. Moderate Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to zopiclone. Adjust dose. Moderate Study

Zuclopenthixol → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

- ► Antipsychotics, second generation (clozapine) can cause constipation, as can zuclopenthixol; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ Zuclopenthixol is predicted to decrease the effects of dopamine receptor agonists. Avoid. Moderate Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
- ► Zuclopenthixol is predicted to decrease the effects of levodopa. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see TABLE 8 p. 1491
- ► Zuclopenthixol potentially increases the risk of neurotoxicity when given with lithium. Severe Anecdotal → Also see TABLE 9

Other inborn errors of metabolism	1759
Phenylketonuria	1760
Tyrosinaemia	1763

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of carbohydrate is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The fat or oil content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Dermatitis, Eczema and Pruritus

Aveeno © Cream; Aveeno Dotion; E45 Emollient Bath Oil; E45 Emollient Wash Cream

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark® classic foundation and finishing powder; Dermacolor® Camouflage cream and fixing powder; Keromask® finishing powder and masking cream; Veil® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. AS Saliva Orthana[®]; Biotène Oralbalance[®]; Glandosane[®]; Saliveze[®]

Photodermatoses (skin protection in)

Sunsense® Ultra (Ego) SPF 50+; Uvistat® Lipscreen SPF 50, Uvistat® Suncream SPF 30 and 50 Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Feed additives

Special additives for conditions of intolerance

Glucose liquid

▶ For use as an energy supplement in sucrose-isomaltase deficiency.

LIQUID, contains syrups, hydrolysed starch, sulphur dioxide. Glucose liquid (J M Loveridge Ltd)

280 gram (ACBS) · No NHS indicative price available | 500 gram (ACBS) · NHS indicative price = £4.39

Glucose powder

▶ For use as an energy supplement in sucrose-isomaltase deficiency.

POWDER, contains dextrose monohydrate.

Glucose powder for oral use BP 1980 (Thornton & Ross Ltd) 500 gram (ACBS) · NHS indicative price = £1.75 · Drug Tariff (Part VIIIA Category C) price = £1.75

Feed thickeners and pre-thickened drinks

Instant Carobel®

▶ For thickening of liquids or foods in the treatment of vomiting. POWDER, contains residual lactose.

Instant Carobel powder (Nutricia Ltd)

135 gram (ACBS) · NHS indicative price = £3.19

Multi-thick ®

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified maize starch (sulphur dioxide and sulphites), residual lactose. Gluten-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

Nutilis ® Clear

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains guar gum, maltodextrin, xanthan gum. Gluten-free, lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

Nutilis Clear powder 1.25g sachets (Nutricia Ltd)

50 sachet (ACBS) · NHS indicative price = £11.65

Nutilis ® Powder

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.

POWDER, gluten-free and lactose-free.

Nutilis powder (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £6.03

Osmosip ® Clear and Thick Instant Thickener

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, xanthan gum. Gluten-free.

Osmosip Clear & Thick Instant Thickener powder (Spectral Pharmaceuticals Ltd)

133 gram (ACBS) • NHS indicative price = £3.95

Resource ® ThickenUp ®

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified food starch (maize).

Resource ThickenUp powder (Nestle Health Science) 227 gram (ACBS) · NHS indicative price = £4.66

Resource ThickenUp powder 4.5g sachets (Nestle Health Science) 75 sachet (ACBS) · NHS indicative price = £18.49

Resource [®] ThickenUp [®] Clear

▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, residual lactose (tin only), xanthan gum. Gluten-free.

Resource ThickenUp Clear powder (Nestle Health Science)

127 gram (ACBS) · NHS indicative price = £8.46

Resource ThickenUp Clear powder 1.2g sachets (Nestle Health Science)

24 sachet (ACBS) · NHS indicative price = £5.28

SLO Drinks®

Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

XPHEN TYR Tyrosidon ® Free AA Mix

 Nutritional supplement for the dietary management of tyrosinaemia where plasma methionine levels are normal.
 POWDER, protein 77 g, carbohydrate 4.5 g, fat Nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd) 500 gram (ACBS) ⋅ NHS indicative price = £217.07

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eyedrops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

- 1 Warning: This medicine may make you sleepy Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd To be used on preparations for children containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.
- 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on preparations for adults that can cause drowsiness, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also

label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include blurred vision, dizziness, or nausea. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leafler

Also to be used as for label 2 but where alcohol is not an issue.

4 Warning: Do not drink alcohol

Rhybudd: Peidiwch ag yfed alcohol

To be used on preparations where a reaction such as flushing may occur if alcohol is taken (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

5 Do not take indigestion remedies 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin where the absorption is significantly affected by antacids. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines;

when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthych am stopio

To be used on *preparations that contain a drug which is* required to be taken over long periods without the patient necessarily perceiving any benefit (e.g. antituberculous drugs).

Also to be used on preparations that contain a drug whose withdrawal is likely to be a particular hazard (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop

Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

10 Warning: Read the additional information given with this medicine

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids.* The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on preparations that may cause phototoxic or photoallergic reactions if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

12 Do not take anything containing aspirin while taking this medicine

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

13 Dissolve or mix with water before taking

Gadewch i doddi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

14 This medicine may colour your urine. This is harmless Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg

To be used on *preparations that may cause the patient's urine to turn an unusual colour.* These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine

Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau

To be used on preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.

16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening

Rhowch y dabled i doddi dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagor To be used on glyceryl trinitrate tablets to remind the patient not to transfer the tablets to plastic or less suitable containers.

17 Do not take more than... in 24 hours

Peidiwch â chymryd mwy na... mewn 24 awr

To be used on preparations for the treatment of acute migraine except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or cansules.

It may also be used on preparations for which no dose has been specified by the prescriber.

18 Do not take more than... in 24 hours. Also, do not take more than... in any one week

Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos

To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.

19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink

Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol To be used on preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an alternative to the label 2 wording (the choice being at the discretion of the pharmacist) for anxiolytics prescribed to be taken at night.

It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'

21 Take with or just after food, or a meal

Cymerwch gyda neu ar ôl bwyd

To be used on preparations that are liable to cause gastric irritation, or those that are better absorbed with food.

Patients should be advised that a *small amount of food is sufficient*.

22 Take 30 to 60 minutes before food

Cymerwch 30 i 60 munud cyn bwyd

To be used on some preparations whose absorption is thereby improved.

Most oral antibacterials require label 23 instead (see below).

23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food

Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd

To be used on oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach.

24 Suck or chew this medicine

Bydd angen cnoi neu sugno'r feddyginiaeth hon

To be used on *preparations that should be sucked or chewed*. The pharmacist should use discretion as to which of these words is appropriate.

25 Swallow this medicine whole. Do not chew or crush

Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân

To be used on preparations that are enteric-coated or designed for modified-release.

Also to be used on *preparations that taste very unpleasant or may damage the mouth* if not swallowed whole.

Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.

26 Dissolve this medicine under your tongue

Gadewch i'r feddyginiaeth hon doddi o dan y tafod

To be used on preparations designed for sublingual use. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.

27 Take with a full glass of water

Cymerwch gyda llond gwydr o ddŵr

To be used on *preparations that should be well diluted* (e.g. chloral hydrate), *where a high fluid intake is required* (e.g. sulfonamides), or *where water is required to aid the action* (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.

28 Spread thinly on the affected skin only

Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).

29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours

Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr

To be used on containers of dispensed solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on a 'as required' basis. The dose form should be specified, e.g. tablets or capsules.

This label has been introduced because of the serious consequences of overdosage with paracetamol.

30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well

Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn

To be used on all containers of dispensed *preparations* containing paracetamol.

32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon

To be used on containers of dispensed preparations containing aspirin when the name on the label does not include the word 'aspirin'.

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value, As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

with vascular disease).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic

debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see Buyers' Guide: Advanced wound dressings (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

Basic wound contact dressings

Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

Hydrocolloid with silver p. 1779	Cadexomer-iodine p. 1778	Alginate with silver p. 1778	
Note In each section of this table the dressi	ngs are listed in order of increasing absorbency.		

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet [®]) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

Some wound contact (primary) dressings require a secondary dressing

Knitted polyester primary dressing

Atrauman

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

Atrauman dressing (Paul Hartmann Ltd) 10cm \times 20cm= £0.83, 20cm \times 30cm= £2.28, 5cm \times 5cm= £0.35, 7.5cm \times 10cm= £0.36

Knitted viscose primary dressing

N-A Dressing

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A dressing (Systagenix Wound Management Ltd) 19cm \times 9.5cm= £0.67, 9.5cm \times 9.5cm= £0.35

N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm \times 9.5cm= £0.65, 9.5cm \times 9.5cm= £0.34

Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.34

Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm \times 9.5cm= £0.36

Paraffin Gauze Dressing

Cuticell

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading Cuticell (BSN medical ttd) Classic dressing 10cm × 10cm= £0.31

Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading Jelonet (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.44

Neotulle

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Neotulle (Neomedic Ltd) dressing 10cm × 10cm= £0.29

Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

Absorbent cellulose dressing

CelluDress

Absorbent Cellulose Dressing with Fluid Repellent Backing Cellubress dressing (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Eclypse

Absorbent Cellulose Dressing with Fluid Repellent Backing Eclypse (Advancis Medical) Boot dressing 60cm × 70cm=£14.42, dressing 15cm × 15cm=£1.01, 20cm × 30cm=£2.24, 60cm × 40cm=£8.53

Exu-Drv

Absorbent Cellulose Dressing with Fluid Repellent Backing Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm \times 15cm= £1.20, 15cm \times 23cm= £2.45, 23cm \times 38cm= £5.69

Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

Zetuvit E (Paul Hartmann Ltd) non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.29, sterile dressing 10cm × 10cm= £0.23, 10cm × 20cm= £0.26, 20cm × 20cm= £0.41, 20cm × 40cm= £1.16

Absorbent perforated dressing

Adpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

 Adpore dressing (Medicareplus International Ltd) 10cm × 10cm=

 £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm ×

 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm

 × 8cm= £0.08

Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cosmopor E dressing (Paul Hartmann Ltd) 10cm \times 20cm= £0.48, 10cm \times 25cm= £0.59, 10cm \times 35cm= £0.82, 5cm \times 7.2cm= £0.09, 8cm \times 10cm= £0.18, 8cm \times 15cm= £0.29

Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm \times 20cm= £0.33, 10cm \times 25cm= £0.34, 10cm \times 30cm= £0.45, 8cm \times 10cm= £0.11, 8cm \times 15cm= £0.26

Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

 $\begin{array}{l} \textbf{Leukomed dressing} \text{ (BSN medical Ltd) } 10cm \times 20cm= \pounds 0.46, 10cm \\ \times 25cm= \pounds 0.52, 10cm \times 30cm= \pounds 0.67, 10cm \times 35cm= \pounds 0.77, \\ 5cm \times 7.2cm= \pounds 0.09, 8cm \times 10cm= \pounds 0.20, 8cm \times 15cm= \pounds 0.34 \\ \end{array}$

Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

 $\begin{tabular}{ll} \begin{tabular}{ll} \be$

Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medisafe dressing (Neomedic Ltd) 6cm \times 8cm= £0.08, 8cm \times 10cm= £0.13, 8cm \times 12cm= £0.23, 9cm \times 15cm= £0.29, 9cm \times 20cm= £0.34, 9cm \times 25cm= £0.36

Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore dressing (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Primapore dressing (Smith & Nephew Healthcare Ltd) $10\text{cm} \times 20\text{cm} = \text{£0.46}, 10\text{cm} \times 25\text{cm} = \text{£0.53}, 10\text{cm} \times 30\text{cm} = \text{£0.67}, 10\text{cm} \times 35\text{cm} = \text{£1.03}, 6\text{cm} \times 8.3\text{cm} = \text{£0.19}, 8\text{cm} \times 10\text{cm} = \text{£0.20}, 8\text{cm} \times 15\text{cm} = \text{£0.35}$

Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

 $\begin{array}{ll} \textbf{Softpore dressing} \ (\text{Richardson Healthcare Ltd}) \ 10\text{cm} \times 10\text{cm} = \ \pounds0.13, \\ 10\text{cm} \times 15\text{cm} = \ \pounds0.20, \ 10\text{cm} \times 20\text{cm} = \ \pounds0.35, \ 10\text{cm} \times 25\text{cm} = \\ \pounds0.40, \ 10\text{cm} \times 30\text{cm} = \ \pounds0.49, \ 10\text{cm} \times 35\text{cm} = \ \pounds0.58, \ 6\text{cm} \times 7\text{cm} = \\ \pounds0.06 \end{array}$

Absorbent perforated plastic film faced dressing

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Absopad dressing (Medicareplus International Ltd) $10cm \times 10cm = £0.13, 20cm \times 10cm = £0.28$

Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Askina Pad dressing (B.Braun Medical Ltd) $10cm \times 10cm = £0.22$

Melolir

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Melolin dressing (Smith & Nephew Healthcare Ltd) $10cm \times 10cm = £0.29$, $20cm \times 10cm = £0.57$, $5cm \times 5cm = £0.18$

Skintac

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Skintact dressing (Robinson Healthcare) 10cm \times 10cm= £0.17, 20cm \times 10cm= £0.34, 5cm \times 5cm= £0.10

Solvaline I

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Solvaline N dressing (Lohmann & Rauscher) $10cm \times 10cm = £0.19$, $20cm \times 10cm = £0.38$, $5cm \times 5cm = £0.11$

Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Telfa dressing (H & R Healthcare Ltd) $10\text{cm} \times 7.5\text{cm} = £0.16$, $15\text{cm} \times 7.5\text{cm} = £0.18$, $20\text{cm} \times 7.5\text{cm} = £0.29$, $7.5\text{cm} \times 5\text{cm} = £0.12$

Super absorbent hydroconductive dressing

Drawte

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton Drawtex dressing (Martindale Pharmaceuticals Ltd) 10cm \times 1.3m= £16.00, 10cm \times 10cm= £2.24, 10cm \times 1m= £16.00, 15cm \times 20cm= £6.00, 20cm \times 1m= £25.00, 20cm \times 20cm= £6.98, 5cm \times 5cm= £0.95, 7.5cm \times 1m= £15.50, 7.5cm \times 7.5cm= £1.77

Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)

ActivHeal Hydrogel

Hydrogel containing guar gum and propylene glycol ActivHeal (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.43

Cutimed

Hydrogel

Cutimed (BSN medical Ltd) Gel dressing= £3.22

Flexigran

Hydrogel containing modified starch and glycerol Flexigran (A1 Pharmaceuticals) Gel dressing= £1.90

GranuGel

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

GranuGEL (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.48

ntrasite Gel

Hydrogel containing modified carmellose polymer and propylene glycol

IntraSite (Smith & Nephew Healthcare Ltd) Gel dressing= £3.82

Nu-Gel

Hydrogel containing alginate and propylene glycol Nu-Gel (Systagenix Wound Management Ltd) dressing= £2.16

Purilon Gel

Hydrogel containing carboxymethylcellulose and calcium alginate

Purilon (Coloplast Ltd) Gel dressing= £2.42

Hydrogel sheet dressings

ActiFormCool

Hydrogel dressing

ActiFormCool sheet (L&R Medical UK Ltd) $10cm \times 10cm$ square= £2.81, $10cm \times 15cm$ rectangular= £4.03, $20cm \times 20cm$ square= £8.45, $5cm \times 6.5cm$ rectangular= £1.91

Aguaflo

Hydrogel dressing

Aquaflo (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

Coolie

Hydrogel dressing (without adhesive border)
Coolie (Zeroderma Ltd) sheet 7cm discs= £1.96

Gel EX

Hydrogel dressing (without adhesive border)

Gel FX sheet (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60,

15cm × 15cm square= £3.20

Geliperm

Hydrogel sheets

Geliperm (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

Intrasite Conformable

Soft non-woven dressing impregnated with Intrasite [®] gel Intrasite Conformable dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.92, 10cm × 20cm rectangular= £2.60, 10cm × 40cm rectangular= £4.64

Novogel

Glycerol-based hydrogel sheets (standard or thin) Novogel sheet (Ford Medical Associates Ltd) 10cm \times 10cm square= £3.18, 15cm \times 20cm rectangular= £6.07, 20cm \times 40cm rectangular= £11.56, 30cm \times 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm \times 7.5cm rectangular= £1.99, 7.5cm diameter circular= £5.84

SanoSkin NET

Hydrogel sheet (without adhesive border) SanoSkin NET (Ideal Medical Solutions Ltd) sheet 8.5cm \times 12cm rectangular= £2.28

Vacunet

Non-adherent, hydrogel coated polyester net dressing **Vacunet dressing** (Protex Healthcare Ltd) $10 \text{cm} \times 10 \text{cm}$ square= £1.93, $10 \text{cm} \times 15 \text{cm}$ rectangular= £2.86

Sodium hyaluronate dressings

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

Hyiodine [®] should be used with caution in thyroid disorders.

lyiodine

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Vapour-permeable films and membranes

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability.

Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad

For intravenous and subcutaneous catheter sites Niko Fix dressing (Unomedical Ltd) 7cm × 8.5cm= £0.20

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

Askina Derm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces Askina Derm dressing (B.Braun Medical Ltd) $10\text{cm} \times 12\text{cm} = £1.16$, $10\text{cm} \times 20\text{cm} = £2.20$, $15\text{cm} \times 20\text{cm} = £2.66$, $20\text{cm} \times 30\text{cm} = £4.76$, $6\text{cm} \times 7\text{cm} = £0.40$

EasI-V

For intravenous and subcutaneous catheter sites EasI-V (ConvaTec Ltd) dressing 7cm \times 7.5cm= £0.38

Soft polymer dressings

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent

pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

Cellulose dressings

Sorbion Sachet Border

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border Cutimed Sorbion Sachet Border dressing (BSN medical Ltd) 10cm \times 10cm square= £3.14, 15cm \times 15cm square= £4.78, 25cm \times 15cm rectangular= £7.45

Askina SilNet

Soft silicone-coated wound contact dressing Askina SilNet dressing (B.Braun Medical Ltd) 10cm × 18cm= £5.31, 20cm × 30cm= £13.00, 5cm × 7.5cm= £1.21, 7.5cm × 10cm= £2.43

Mepitel

Soft silicone, semi-transparent wound contact dressing Mepitel dressing (Molnlycke Health Care Ltd) $12cm \times 15cm = £5.72$, $5cm \times 7cm = £1.43$, $8cm \times 10cm = £2.86$

Mepitel One

Soft silicone, thin, transparent wound contact dressing Mepitel One dressing (Molnlycke Health Care Ltd) 13cm \times 15cm= £5.04, 24cm \times 27.5cm= £14.43, 6cm \times 7cm= £1.24, 9cm \times 10cm= £2.44

Silfle

Soft silicone-coated polyester wound contact dressing Silflex dressing (Advancis Medical) 12cm \times 15cm= £4.79, 20cm \times 30cm= £12.34, 35cm \times 60cm= £41.39, 5cm \times 7cm= £1.16, 8cm \times 10cm= £2.38

Silon-TSR

Soft silicone polymer wound contact dressing Silon-TSR dressing (Bio Med Sciences) 13cm \times 13cm= £3.52, 13cm \times 25cm= £5.47, 28cm \times 30cm= £7.37

Sorbion Contact

Non-adherent soft polymer wound contact dressing Cutimed Sorbion Contact dressing (85N medical Ltd) 10cm × 10cm= £2.07, 10cm × 20cm= £4.14, 20cm × 20cm= £7.26, 20cm × 30cm= £10.37, 7.5cm × 7.5cm= £1.55

Tegaderm Contact

Non-adherent soft polymer wound contact dressing Tegaderm Contact dressing (3M Health Care Ltd) 20cm \times 25cm= £11.06, 7.5cm \times 10cm= £2.32

Urgotul

Non-adherent soft polymer wound contact dressing <code>Urgotul dressing</code> (<code>Urgo</code> <code>Ltd</code>) <code>10cm</code> × <code>10cm= £3.13</code>, <code>10cm</code> × <code>40cm= £10.53</code>, <code>15cm</code> × <code>15cm= £6.66</code>, <code>15cm</code> × <code>20cm= £8.86</code>, <code>20cm</code> × <code>30cm= £14.25</code>, <code>5cm</code> × <code>5cm= £1.57</code>

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

Hydrocolloid-fibrous dressings

Aquace

Soft non-woven pad containing hydrocolloid-fibres

Aquacel Ribbon dressing (ConvaTec Ltd) 1cm × 45cm= £1.97, 2cm

× 45cm= £2.61

Aguacel Foam

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border Aquacel Foam dressing adhesive (ConvaTec Ltd) $10\text{cm} \times 10\text{cm} = £2.28$, $12.5\text{cm} \times 12.5\text{cm} + £2.83$, $17.5\text{cm} \times 17.5\text{cm} = £5.65$, $19.8\text{cm} \times 14\text{cm}$ heel= £5.78, $20\text{cm} \times 16.9\text{cm}$ sacral= £5.19, $21\text{cm} \times 21\text{cm} = £2.7$, $25\text{cm} \times 30\text{cm} = £10.71$, $8\text{cm} \times 8\text{cm} = £1.47$, $n\text{on-adhesive } 10\text{cm} \times 10\text{cm} = £2.70$, $15\text{cm} \times 15\text{cm} = £4.53$, $15\text{cm} \times 20\text{cm} = £6.20$, $20\text{cm} \times 20\text{cm} = £7.39$

UrgoClean Pad

Pad, hydrocolloid fibres coated with soft-adherent lipocolloidal wound contact layer

UrgoClean Pad dressing (Urgo Ltd) 10cm \times 10cm square= £2.24, 20cm \times 15cm rectangular= £4.21, 6cm \times 6cm square= £1.01

UrgoClean Rope

Rope, non-woven rope containing hydrocolloid fibres <code>UrgoClean rope dressing (Urgo Ltd) 2.5cm \times 40cm= £2.52, 5cm \times 40cm= £3.33</code>

Polyurethane matrix dressing

Cutinova Hydro

Polyurethane matrix with absorbent particles and waterproof polyurethane film

Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm \times 10cm square= £2.71, 15cm \times 20cm rectangular= £5.74, 5cm \times 6cm rectangular= £1.35

With adhesive border

Biatain Super

Semi-permeable hydrocolloid dressing; without adhesive border

Biatain Super dressing (adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.29, 12.5cm × 12.5cm square= £3.79, 12cm × 20cm rectangular= £3.80, 15cm × 15cm square= £4.56, 20cm × 20cm square= £7.12

Granuflex Bordered

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film Granuflex Bordered dressing (ConvaTec Ltd) 10cm × 10cm square= £3.55, 10cm × 13cm triangular= £4.19, 15cm × 15cm square= £6.78, 6cm × 6cm square= £1.87

Hydrocoll Border

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

Hydrocoll Border (bevelled edge) dressing (Paul Hartmann Ltd) 10cm \times 10cm square= £2.55, 12cm \times 18cm sacral= £3.82, 15cm \times 15cm square= £4.80, 5cm \times 5cm square= £1.07, 7.5cm \times 7.5cm square= £1.75, 8cm \times 12cm concave= £2.25

Tegaderm Hydrocolloid

Hydrocolloid dressing with adhesive border; normal or thin Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm \times 12cm oval= £1.60, 13cm \times 15cm oval= £2.98, dressing 10cm \times 12cm oval= £2.40, 13cm \times 15cm oval= £4.48, 17.1cm \times 16.1cm sacral= £5.00

Without adhesive border

ActivHeal Hydrocolloid

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

ActivHeal Hydrocolloid (Advanced Medical Solutions Ltd) dressing $10\text{cm} \times 10\text{cm}$ square=£1.60, $15\text{cm} \times 15\text{cm}$ square=£3.48, $15\text{cm} \times 18\text{cm}$ sacral=£4.03, $5\text{cm} \times 7.5\text{cm}$ rectangular=£0.79, foam backed dressing $10\text{cm} \times 10\text{cm}$ square=£1.56, $15\text{cm} \times 15\text{cm}$ square=£2.95, $15\text{cm} \times 18\text{cm}$ sacral=£3.40, $5\text{cm} \times 7.5\text{cm}$ rectangular=£0.99

Biatain Super

Semi-permeable, hydrocolloid film dressing without adhesive border

Biatain Super dressing (non-adhesive) (Coloplast Ltd) $10 \text{cm} \times 10 \text{cm}$ square= £2.29, 12.5cm \times 12.5cm square= £3.79, 12cm \times 20cm rectangular= £3.80, 15cm \times 15cm square= £4.56, 20cm \times 20cm square= £7.12

Comfeel Plus Contour

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Contour dressing (Coloplast Ltd) 6cm \times 8cm= £2.35, 9cm \times 11cm= £4.08

Comfeel Plus Pressure Relieving

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Pressure Relief dressing (Coloplast Ltd) 10cm diameter circular= £4.92, 15cm diameter circular= £7.41, 7cm diameter circular= £3.67

Comfeel Plus Transparent

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Transparent dressing (Coloplast Ltd) 10cm \times 10cm square= £1.35, 15cm \times 15cm square= £3.53, 15cm \times 20cm rectangular= £3.59, 20cm \times 20cm square= £3.61, 5cm \times 15cm rectangular= £1.68, 5cm \times 25cm rectangular= £2.73, 5cm \times 7cm rectangular= £0.71, 9cm \times 14cm rectangular= £2.58, 9cm \times 25cm rectangular= £3.66

Comfeel Plus Ulcer

Hydrocolloid dressings containing carmellose sodium and calcium alginate

 $\begin{array}{l} \textbf{Comfeel Plus dressing} \ (\texttt{Coloplast Ltd}) \ 10cm \times 10cm \ square= \ \pounds2.60, \\ 20cm \times 20cm \ square= \ \pounds8.01, 4cm \times 6cm \ rectangular= \ \pounds1.02 \end{array}$

DuoDERM Extra Thin

Semi-permeable hydrocolloid dressing

DuoDERM Extra Thin dressing (ConvaTec Ltd) 10cm × 10cm square= £1.41, 15cm × 15cm square= £3.03, 5cm × 10cm rectangular= £0.81, 7.5cm × 7.5cm square= £0.85, 9cm × 15cm rectangular= £1.88, 9cm × 25cm rectangular= £3.00, 9cm × 35cm rectangular= £4.20

DuoDERM Signal

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

 $\begin{array}{l} \textbf{DuoDERM Signal dressing (ConvaTec Ltd) 10cm} \times 10cm \ square=\\ \textbf{£2.26, 14cm} \times 14cm \ square=\\ \textbf{£3.96, 20cm} \times 20cm \ square=\\ \textbf{£7.86} \end{array}$

Flexigran

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

Flexigran (A1 Pharmaceuticals) Thin dressing 10cm \times 10cm square= £1.08, dressing 10cm \times 10cm square= £2.19

Granuflex

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film Granufflex (modified) dressing (ConvaTec Ltd) 10cm × 10cm square= £2.98, 15cm × 15cm square= £8.51

Hydrocoll Basic

Hydrocolloid dressing with absorbent wound contact pad Hydrocoll Basic dressing (Paul Hartmann Ltd) 10cm \times 10cm square= £2.59

Hvdrocoll Thin Film

Thin hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Thin Film dressing (Paul Hartmann Ltd) $10cm \times 10cm$ square= £1.22, $15cm \times 15cm$ square= £2.75, $7.5cm \times 7.5cm$ square= £0.74

Nu-Derm

Semi-permeable hydrocolloid dressing (normal and thin) Nu-Derm dressing (Systagenix Wound Management Ltd) $10 \text{cm} \times 10 \text{cm}$ square= £1.57, $15 \text{cm} \times 15 \text{cm}$ square= £3.21, $15 \text{cm} \times 18 \text{cm}$ sacral= £4.49, $20 \text{cm} \times 20 \text{cm}$ square= £6.41, $5 \text{cm} \times 5 \text{cm}$ square= £0.86, $8 \text{cm} \times 12 \text{cm}$ heel/elbow= £3.21, thin $10 \text{cm} \times 10 \text{cm}$ square= £1.07

Tegaderm Hydrocolloid

Hydrocolloid dressing without adhesive border; normal and thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.60, dressing 10cm × 10cm square= £2.44

Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic filmbacking, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisturesensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluidhanding capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Polyurethane Foam Dressing

Cutimed Cavity

Cutimed Cavity dressing (BSN medical Ltd) 10cm × 10cm= £3.32, 15cm × 15cm= £4.99, 5cm × 6cm= £2.00

Kendall Foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £1.09, 10cm × 20cm rectangular= £2.10, 12.5cm × 12.5cm square= £1.85, 15cm × 15cm square= £2.66, 20cm × 20cm square= £3.08, 5cm \times 5cm square= £0.73, 7.5cm \times 7.5cm square= £1.24, 8.5cm × 7.5cm rectangular (fenestrated)= £0.93

Polyurethane Foam Film Dressing with Adhesive Border

ActivHeal Foam Adhesive

ActivHeal Foam Adhesive dressing (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.65, 12.5cm × 12.5cm square= £1.70, 15cm × 15cm square= £2.18, 20cm × 20cm square= £4.56, 7.5cm × 7.5cm square= £1.19

PolyMem Max

PolyMem Max dressing (H & R Healthcare Ltd) 11cm \times 11cm square= £3.02, 20cm \times 20cm square= £11.92

PolyMem WIC

PolyMem WIC (H & R Healthcare Ltd) dressing 8cm × 8cm= £3.77

Tegaderm Foam

Tegadern Foam dressing (3M Health Care Ltd) 10cm \times 10cm square= £2.26, 10cm \times 20cm rectangular= £3.83, 10cm \times 60cm rectangular= £12.77, 20cm \times 20cm square= £6.11, 8.8cm \times 8.8cm square (fenestrated)= £2.30

Transorbent

Transorbent dressing (adhesive) (B.Braun Medical Ltd) 10cm × 10cm square= £2.06, 15cm × 15cm square= £3.79, 20cm × 20cm square= £6.06, 5cm × 7cm rectangular= £1.09

UrgoCell TLC

UrgoTul Absorb dressing (Urgo Ltd) $10\text{cm} \times 10\text{cm} = £2.44$, $15\text{cm} \times 20\text{cm} = £4.31$, $6\text{cm} \times 6\text{cm} = £1.24$, $12\text{cm} \times 19\text{cm}$ heel= £4.92

Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

ActivHeal Alginate

Calcium sodium alginate dressing

ActivHeal Alginate (Advanced Medical Solutions Ltd) Rope dressing 2.5cm \times 30cm=£2.16, dressing 10cm \times 10cm=£1.17, 10cm \times 20cm=£2.87, 5cm \times 5cm=£0.60

ActivHeal Aquafiber

Non-woven, calcium sodium alginate dressing ActivHeal Aquafiber (Advanced Medical Solutions Ltd) Rope dressing $2\text{cm} \times 42\text{cm} = £1.84$, dressing $10\text{cm} \times 10\text{cm} = £1.50$, $15\text{cm} \times 15\text{cm} = £2.82$, $5\text{cm} \times 5\text{cm} = £0.63$

Algisite M

Calcium alginate fibre, non-woven dressing

Algisite M (Smith & Nephew Healthcare Ltd) Rope dressing 2cm ×

30cm=£3.69, dressing 10cm × 10cm=£2.04, 15cm × 20cm= £5.47, 5cm × 5cm=£0.99

Kendall Foam Plus (H & R Healthcare Ltd) dressing 10cm \times 10cm square= £1.50

Melgisorb

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven Melgisorb (Molnlycke Health Care Ltd) Cavity dressing 2.2cm \times 32cm=£3.55, dressing 10cm \times 10cm=£1.88, 10cm \times 20cm=£3.52, 5cm \times 5cm=£0.90

Sorbalgon

Calcium alginate dressing

Sorbalgon (Paul Hartmann Ltd) T dressing 2g=£3.68, dressing 10cm \times 10cm=£1.81, 5cm \times 5cm=£0.86

Sorbsan Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads

Sorbsan Flat dressing (Aspen Medical Europe Ltd) $10cm \times 10cm = £1.72$, $10cm \times 20cm = £3.22$, $5cm \times 5cm = £0.82$

Sorbsan Plus

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Plus dressing (Aspen Medical Europe Ltd) 10cm \times 15cm= £3.12, 10cm \times 20cm= £3.98, 15cm \times 20cm= £5.53, 7.5cm \times 10cm= £1.77

Sorbsan Ribbon

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Ribbon dressing (Aspen Medical Europe Ltd) 40cm= £2.06

Sorbsan Surgical Packing

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Packing dressing (Aspen Medical Europe Ltd) 2g= £3.50

Suprasorb A

Calcium alginate dressing

Suprasorb A (Lohmann & Rauscher) alginate dressing 10cm \times 10cm=£1.29, 5cm \times 5cm=£0.66, cavity dressing 2g=£2.40

Tegaderm Alginate

Calcium alginate dressing

Tegaderm Alginate dressing (3M Health Care Ltd) $10cm \times 10cm = £1.78, 2cm \times 30.4cm = £2.96, 5cm \times 5cm = £0.84$

Urgosorb

Urgosorb (Urgo Ltd) Pad dressing 10cm \times 10cm=£2.25, 10cm \times 20cm=£4.12, 5cm \times 5cm=£0.94, Rope dressing 30cm=£2.94

Capillary-acting dressings

Vacutex

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

Vacutex dressing (Haddenham Healthcare Ltd) $10cm \times 10cm = £1.70$, $10cm \times 15cm = £2.29$, $10cm \times 20cm = £2.75$, $5cm \times 5cm = £0.96$

Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb

Activated charcoal and non-woven viscose rayon dressing Askina Carbosorb dressing (B.Braun Medical Ltd) $10cm \times 10cm =$ £3.08, $10cm \times 20cm =$ £5.95

CarhoELEX

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer CarboFlex dressing (ConvaTec Ltd) 10cm × 10cm= £3.42, 15cm × 20cm= £7.78, 8cm × 15cm oval=£4.10

Carbopad VC

Activated charcoal non-absorbent dressing Carbopad VC dressing (Synergy Health (UK) Ltd) 10cm × 10cm=£1.62, 10cm × 20cm=£2.19

CliniSorb Odour Control Dressings

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

CliniSorb dressing (CliniMed Ltd) 10cm \times 10cm= £2.01, 10cm \times 20cm= £2.68, 15cm \times 25cm= £4.31

Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and antiinflammatory properties. Dressings impregnated with jodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride

(polynexamethylene biguanide) of dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

Honey dressings

Medical grade honey has antimicrobial and antiinflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in bloodglucose concentrations during treatment with topical honey or honey-impregnated dressings.

For Actilite®, Activon Tulle® and Revamil®, where no size is stated by the prescriber the 5 cm size is to be supplied. Medihoney® Antimicrobial Wound Gel is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

Honey-based topical application

Activon Honey

Medical grade manuka honey Activon (Advancis Medical) Medical Grade Manuka Honey dressing= £2.80

L-Mesitran SOFT ointment dressing

Honey (medical grade) 40%

L-Mesitran (H & R Healthcare Ltd) SOFT ointment dressing= £3.62

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey Algivon dressing (Advancis Medical) 10cm × 10cm = £4.30,5cm × 5cm = £2.51

Algivon Plus

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

Algivon Plus Ribbon dressing (Advancis Medical) 2.5cm \times 20cm= £4.25, dressing 10cm \times 10cm= £4.25, 5cm \times 5cm= £2.48

L-Mesitran Border

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border L-Mesitran Border sheet (H & R Healthcare Ltd) $10 \text{cm} \times 10 \text{cm}$ square ± 2.76

L-Mesitran Hydro

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border L-Mesitran Hydro sheet (H & R Healthcare Ltd) 10cm × 10cm square= \$\frac{92}{25}\$ fs

L-Mesitran Net

Hydrogel, non-adherent wound contact layer, without adhesive border

L-Mesitran Net sheet (H & R Healthcare Ltd) 10cm \times 10cm square= £2.55

Medihoney Antibacterial Honey Apinate

Non-adherent calcium alginate dressing, impregnated with medical grade honey

Medihoney Antibacterial Honey Apinate (Integra NeuroSciences Ltd) dressing 10cm × 10cm square= £3.46, 5cm × 5cm square= £2.04, rope dressing 1.9cm × 30cm= £4.28

Medihoney Antibacterial Honey Tulle

Woven fabric impregnated with medical grade manuka honey

Medihoney Tulle dressing (Integra NeuroSciences Ltd) 10cm x10cm= £3.03

Medihoney Gel sheet

Sodium alginate dressing impregnated with medical grade honey

Medihoney Gel Sheet dressing (Integra NeuroSciences Ltd) 10cm \times 10cm= £4.28, 5cm \times 5cm= £1.78

Melladerm Dius Tulle

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

Melladerm Plus Tulle dressing (SanoMed Manufacturing BV) $10cm \times 10cm = £2.10$

Revamil

Polyacetate dressing impregnated with medical grade honey Revamil dressing (0swell Penda Pharmaceutical Ltd) 10cm \times 10cm= £2.90, 10cm \times 20cm= £5.30, 5cm \times 5cm= £1.75, 8cm \times 8cm= £3.33

Iodine dressings

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

Iodoflex® and Iodosorb® are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

Iodozyme[®] is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

 $Oxyzyme^{\otimes}$ is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contraindicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodoflex Paste

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

| Iodoflex paste (Smith & Nephew Healthcare Ltd) dressing= £8.66

Iodosorb Ointment

Iodine 0.9% as cadexomer–iodine in an ointment basis Iodosorb ointment (Smith & Nephew Healthcare Ltd) dressing= £9.57

Iodosorb Powder

Iodine 0.9% as cadexomer—iodine microbeads, 3-g sachet Iodosorb powder (Smith & Nephew Healthcare Ltd) dressing sachets=£2.05

Povidone-iodine fabric dressing

Inadine

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10% Inadine dressing (Systagenix Wound Management Ltd) 5cm \times 5cm= £0.34, 9.5cm \times 9.5cm= £0.50

Silver dressings

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs

or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Algisite Ag

Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) $10cm \times 10cm$ = £4.43, $10cm \times 20cm$ = £8.15, 2g= £6.12, $5cm \times 5cm$ = £1.77

Octenilin Wound gel

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

Octenilin Wound Gel (Schulke & Mayr UK Ltd) dressing= £5.02

Prontosan Wound Gel Hydrogel containing betaine surfactant and polihexanide Prontosan Wound Gel (B.Braun Medical Ltd) gel dressing= £6.80

Suprasorb X + PHMB

Biosynthetic cellulose fibre dressing with polihexanide Suprasorb X + PHMB dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £12.22, 2cm × 21cm rope= £7.61, 5cm × 5cm square= £2.70, 9cm × 9cm square= £5.37

Telfa AMD

Low adherence absorbent perforated plastic film faced dressing with polihexanide

Telfa AMD dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

Telfa AMD Island

Low adherence dressing with adhesive border and absorbent pad, with polihexanide

Telfa AMD Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.60, 10cm × 20cm= £0.87, 10cm × 25.5cm= £0.99, 10cm × 35cm= £1.23

Chlorhexidine gauze dressing

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

Bactigras gauze dressing (Smith & Nephew Healthcare Ltd) 10cm × $10cm. 5cm \times 5cm$

Irrigation fluids

Octenilin Wound irrigation solution

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

Octenilin irrigation solution (Schulke & Mayr UK Ltd) 350ml bottles=

Prontosan Wound Irrigation Solution

Aqueous solution containing betaine surfactant and polihexanide

Prontosan irrigation solution (B.Braun Medical Ltd) 350ml bottles= £5.09, 40ml unit dose= £15.11

Specialised dressings

Protease-modulating matrix dressings

Cadesorb Ointment

Cadesorb (Smith & Nephew Healthcare Ltd) ointment= £9.83

Catrix dressing (Cranage Healthcare Ltd) sachets= £3.80

Promogran

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing Promogran dressing (Systagenix Wound Management Ltd) 123 square cm= £16.12, 28 square cm= £5.35

Promogran Prisma Matrix

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing Promogran Prisma dressing (Systagenix Wound Management Ltd) 123 square cm= £18.54, 28 square cm= £6.51

UrgoStart

Soft adherent polymer matrix containing nanooligosaccharide factor (NOSF), with polyurethane foam film

UrgoStart dressing (Urgo Ltd) $10cm \times 10cm = £6.50$, $15cm \times 10cm = £6.50$ 20cm= £11.68, 6cm × 6cm= £4.70, 12cm × 19cm heel= £8.95

UrgoStart Contact

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF) UrgoStart Contact dressing (Urgo Ltd) 5cm × 7cm= £3.11

Silicone keloid dressings

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

Silicone gel **Bapscarcare** Silicone gel

Adjunct dressings and appliances

Surgical absorbents

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

Cotton

Absorbent Cotton, BP

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Absorbent Cotton, Hospital Quality

As for absorbent cotton but lower quality materials, shorter staple length etc.

Absorbent (Robert Bailey & Son Plc) cotton hospital quality

Gauze and cotton tissue

Gamgee Tissue (blue)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2 Gamgee (Robinson Healthcare) tissue blue label

Gamgee Tissue (pink)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2 Gamgee (Robinson Healthcare) tissue pink label DT

Gauze and tissue

Absorbent Cotton Gauze, BP 1988

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile $\,$

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Alvita (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

Clini (CliniSupplies Ltd) absorbent cotton BP 1988

Wound care accessories

Dressing packs

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wove bandages (banded)

Vernaid (Synergy Health (UK) Ltd) multiple pack dressing

Non-drug tariff specification sterile dressing packs Dressit

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field Dressit sterile dressing pack (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

Nurse It

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

Nurse It sterile dressing pack (Medicareplus International Ltd) with medium/large gloves= £0.81, small/medium gloves= £0.81

Polyfield Nitrile Patient Pack

Contains powder-free nitrile gloves, laminate sheet, nonwoven swabs, towel, polythene disposable bag, apron Polyfield Nitrile Patient Pack (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

Sterile Dressing Pack with Non-Woven Pads

Vernaid

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

Vernaid (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

Sterile dressing packs

Vernaid

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper Vernaid (Synergy Health (IIK) Ltd) sterile dressing pack

Woven and fabric swabs

Gauze Swab, PB 1988

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into

squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-sterile $10cm \times 10cm$, sterile $7.5cm \times 7.5cm$

Filmated non-woven Fabric Swab

Rega

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile Regal (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

Occlusive adhesive tapes

Blenderm

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymericadhesive mass

Blenderm (3M Health Care Ltd) tape 5cm= £3.43

Sleek

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

Leukoplast Sleek tape (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

Permeable adhesive tapes

3m Kind Removal Silicone Tape

Siltape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Siltape (Advancis Medical) 2cm= £5.86, 4cm= £5.86

Strappal

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide Strappal adhesive tape (BSN medical Ltd) 2.5cm=£1.48,5cm=£2.50, 7.5cm=£3.76

Transpore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Transpore tape (3M Health Care Ltd) 2.5cm= £0.86, 5cm= £1.51

Zinc Oxide Adhesive Tape, BP 1988

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide
Fast Aid zinc oxide adhesive tape (Robinson Healthcare) 1.25cm,
2.5cm, 5.5cm, 7.5cm

Skin closure dressings

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Skin closure strips, sterile

Leukostrip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Leukostrip (Smith & Nephew Healthcare Ltd) skin closure strips $6.4mm \times 76mm = £6.73$

Omnistrip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Omnistrip (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £25.56

Steri-strip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Steri-strip (3M Health Care Ltd) skin closure strips 6mm \times 75mm= £8.93

Bandages

Non-extensible bandages

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Open-wove Bandage, Type 1 BP 1988

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

Clini open wove bandage Type 1 BP 1988 (CliniSupplies Ltd) 10cm \times 5m, 2.5cm \times 5m, 5cm \times 5m, 7.5cm \times 5m

Vernaid white open wove bandage (Synergy Health (UK) Ltd) 10cm \times 5m, 2.5cm \times 5m, 5cm \times 5m, 7.5cm \times 5m

White open wove bandage (Robert Bailey & Son Plc) 10cm \times 5m, 2.5cm \times 5m, 5cm \times 5m, 7.5cm \times 5m

Triangular Calico Bandage, BP 1980

Unbleached calico right-angled triangle Clini (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm $\, imes\,$

Triangular (BSN medical Ltd) calico bandage 90cm × 127cm

Light-weight conforming bandages

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

Acti-Wrap

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Acti-Wrap (cohesive/latex free) bandage (L&R Medical UK Ltd) 10cm \times 4m= £0.86, 6cm \times 4m= £0.50, 8cm \times 4m= £0.72

Stayform bandage (Robinson Healthcare) 10cm \times 4m= £0.40, 15cm \times 4m= £0.69, 5cm \times 4m= £0.29, 7.5cm \times 4m= £0.36

Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage*, *BP* 1993, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage. For Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated

Acti-Fast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

Acti-Fast 2-way stretch stockinette (L&R Medical UK Ltd) 10.75cm= £5.96, 17.5cm= £1.91, 20cm= £3.31, 3.5cm= £0.59, 5cm= £0.61, 7.5cm= £0.81

Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

Cotton Crepe Bandage, BP 1988

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

Elastocrepe bandage (BSN medical Ltd) 10cm \times 4.5m, 7.5cm \times 4.5m Flexocrepe bandage (Robinson Healthcare) 10cm \times 4.5m, 7.5cm \times 4.5m

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Knit-Firm bandage (Millpledge Healthcare) 10cm \times 4.5m= £0.66, 15cm \times 4.5m= £0.96, 5cm \times 4.5m= £0.36, 7cm \times 4.5m= £0.51

L3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

L3 (Smith & Nephew Healthcare Ltd) bandage 10cm \times 8.6m= £2.34

Neosport

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Neosport bandage (Neomedic Ltd) 10cm \times 4.5m= £0.91, 15cm \times 4.5m= £1.12, 5cm \times 4.5m= £0.54, 7.5cm \times 4.5m= £0.73

Dortia

Cotton net bag with elastic edge and webbing waistband; small, medium, and large (all)

Portia suspensory bandage cotton type (Bray Group Ltd) 2 extra large, large, medium, small, 3 extra large, large, medium

PremierBand

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

PremierBand bandage (Shermond) 10cm \times 4.5m= £0.79, 15cm \times 4.5m= £1.18, 5cm \times 4.5m= £0.45, 7.5cm \times 4.5m= £0.63

Profore

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Profore #2 (Smith & Nephew Healthcare Ltd) bandage 10cm \times 4.5m= £1.44, latex free bandage 10cm \times 4.5m= £1.52

Profore #3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Profore #3 (Smith & Nephew Healthcare Ltd) bandage $10cm \times 8.7m = £4.18$, latex free bandage $10cm \times 8.7m = £4.54$

Setocrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Setocrepe (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.24

Soffcrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all) Soffcrepe bandage (BSN medical Ltd) 10cm × 4.5m= £1.32, 15cm × 4.5m= £1.92, 5cm × 4.5m= £0.74, 7.5cm × 4.5m= £1.04

Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched Tensoplast bandage (BSN medical Ltd) $10\text{cm} \times 4.5\text{m}$, $5\text{cm} \times 4.5\text{m}$, $7.5\text{cm} \times 4.5\text{m}$

Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Cohesive extensible bandages

Coban Bandage

Coban (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.98

Profore #4

Bandage

Profore #4 (Smith & Nephew Healthcare Ltd) bandage $10cm \times 2.5m$ = £3.46, latex free bandage $10cm \times 2.5m$ = £3.76

Ultra Fast

Bandage

Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 253 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

High compression bandages

High Compression Bandage

Cotton, viscose, nylon, and Lycra $^{\tiny\textcircled{\tiny 0}}$ extensible bandage, 3 m (unstretched)

K-ThreeC (Urgo Ltd) bandage $10cm \times 3m = £2.98$ SurePress (ConvaTec Ltd) bandage $10cm \times 3m = £3.85$

PEC High Compression Bandages

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

Setopress (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.71

VEC High Compression Bandages

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

Zipzoc® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

Zinc Paste Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging Excipients: may include cetostearyl alcohol,

hydroxybenzoates

Viscopaste (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.89

Zinc Paste and Ichthammol Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

Excipients: may include cetostearyl alcohol Ichthopaste (Evolan Pharma AB) bandage 7.5cm × 6m= £3.92

7inzoc

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Zipzoc (Evolan Pharma AB) stockings= £34.70

Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

Graduated Compression hosiery, Class 1 Light Support is used for superficial or early varices, varicosis during pregnancy. Graduated Compression hosiery, Class 2 Medium Support is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy. Graduated Compression hosiery, Class 3 Strong Support is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

Compression values for hosiery and lymphoedema garments Class 1: Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; Class 2 Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; Class 3 Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; Class 4 Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; Class 4 super Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

Graduated compression hosiery

Class 1 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Class 2 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Accessories

Suspender

Suspender, for thigh stockings

Anklets

Class 2 Medium Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Knee caps

Class 2 Medium Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note, there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed sugar-free versions, where available, are preferred. Licensed alcohol-free mouthwashes, where available, are

Aciclovir Cream, BP

Aciclovir Oral Suspension, BP, 200 mg/5 mL

Aciclovir Tablets, BP, 200 mg Aciclovir Tablets, BP, 800 mg

Amoxicillin Capsules, BP

Amoxicillin Oral Powder, DPF Amoxicillin Oral Suspension, BP

Artificial Saliva Gel, DPF

Artificial Saliva Oral Spray, DPF

Artificial Saliva Pastilles, DPF

Artificial Saliva Protective Spray, DPF

Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):

BioXtra® Gel Mouthspray BioXtra® Moisturising Gel

Glandosane®

Saliveze®

Artificial Saliva Substitute Spray, DPF

Aspirin Tablets, Dispersible, BP

Azithromycin Capsules, 250 mg, DPF

Azithromycin Oral Suspension, 200 mg/5 mL, DPF

Azithromycin Tablets, 250 mg, DPF

Azithromycin Tablets, 500 mg, DPF

Beclometasone Pressurised Inhalation, BP,

50 micrograms/metered inhalation, CFC-free, as:

Clenil Modulite®

Benzydamine Mouthwash, BP 0.15%

Benzydamine Oromucosal Spray, BP 0.15%

Betamethasone Soluble Tablets, 500 micrograms, DPF

Carbamazepine Tablets, BP

Cefalexin Capsules, BP

Cefalexin Oral Suspension, BP

Cefalexin Tablets, BP

Cetirizine Oral Solution, BP, 5 mg/5 mL

Cetirizine Tablets, BP, 10 mg

Chlorhexidine Gluconate Gel, BP Chlorhexidine Mouthwash, BP

Chlorhexidine Oral Spray, DPF

Chlorphenamine Oral Solution, BP

Chlorphenamine Tablets, BP

Choline Salicylate Dental Gel, BP

Clarithromycin Oral Suspension, 125 mg/5 mL, DPF Clarithromycin Oral Suspension, 250 mg/5 mL, DPF

Clarithromycin Tablets, BP

Clindamycin Capsules, BP

Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)

Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as

potassium salt)/5 mL

Co-amoxiclay Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL

Diazepam Oral Solution, BP, 2 mg/5 mL

Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP

Dihydrocodeine Tablets, BP, 30 mg

Doxycycline Tablets, Dispersible, BP

Doxycycline Capsules, BP, 100 mg Doxycycline Tablets, 20 mg, DPF

Ephedrine Nasal Drops, BP

Erythromycin Ethyl Succinate Oral Suspension, BP

Erythromycin Ethyl Succinate Tablets, BP

Erythromycin Stearate Tablets, BP

Erythromycin Tablets, Gastro-resistant, BP

Fluconazole Capsules, 50 mg, DPF

Fluconazole Oral Suspension, 50 mg/5 mL, DPF

Hydrocortisone Cream, BP, 1%

Hydrocortisone Oromucosal Tablets, BP

Hydrogen Peroxide Mouthwash, BP, 6% Ibuprofen Oral Suspension, BP, sugar-free

Ibuprofen Tablets, BP

Lansoprazole Capsules, Gastro-resistant, BP

Lidocaine Ointment, BP, 5%

Lidocaine Spray 10%, DPF

Loratadine Syrup, 5 mg/5 mL, DPF

Loratadine Tablets, BP, 10 mg

Menthol and Eucalyptus Inhalation, BP 1980

Metronidazole Oral Suspension, BP

Metronidazole Tablets, BP Miconazole Cream, BP

Miconazole Oromucosal Gel, BP

Miconazole and Hydrocortisone Cream, BP

Miconazole and Hydrocortisone Ointment, BP

Nystatin Oral Suspension, BP

Omeprazole Capsules, Gastro-resistant, BP

Oxytetracycline Tablets, BP Paracetamol Oral Suspension, BP

Paracetamol Tablets, BP

Paracetamol Tablets, Soluble, BP Phenoxymethylpenicillin Oral Solution, BP

Phenoxymethylpenicillin Tablets, BP

Promethazine Hydrochloride Tablets, BP

Promethazine Oral Solution, BP

Saliva Stimulating Tablets, DPF

Sodium Chloride Mouthwash, Compound, BP

Sodium Fluoride Mouthwash, BP

Sodium Fluoride Oral Drops, BP

Sodium Fluoride Tablets, BP

Sodium Fluoride Toothpaste 0.619%, DPF

Sodium Fluoride Toothpaste 1.1%, DPF

Sodium Fusidate Ointment, BP

Temazepam Oral Solution, BP

Temazepam Tablets, BP

Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs

throughout the BNF publications. **Details of DPF preparations**

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles

(proprietary product: Salivix), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray

(proprietary product: *Aequasyal*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray

(proprietary product: AS Saliva Orthana Spray) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules

azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL

azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets

azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms

betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray

(proprietary product: *Ĉorsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL

clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL

clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg

fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL

loratadine 5 mg/5 mL

Saliva Stimulating Tablets

(proprietary product: SST), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

Approved list for prescribing by **Community Practitioner Nurse** Prescribers (NPF)

Nurse Prescribers' Formulary for Community **Practitioners**

The Nurse Prescribers' Formulary for Community Practitioners is for use by District Nurses and Specialist Community Public Health Nurses (including Health Visitors) who have received nurse prescriber training. It provides a list of preparations approved by the Secretary of State that can be prescribed for patients receiving NHS treatment on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales). Community practitioner nurse prescribers should only prescribe items appearing in the nurse prescribers' list set out below (for the indications specified). Most medicinal preparations should be prescribed generically, except where this would not be clinically appropriate or where there is no approved generic name—see individual entries for further information.

The Nurse Prescribers' Advisory Group p. vii oversees the preparation of the NPF and advises UK health ministers on the list of preparations that may be prescribed by community practitioner nurse prescribers. Feedback from nurse prescribers is welcome and will be taken into account when reviewing this list; comments and constructive criticism should be sent to editor@bnf.org.

How to use the NPF

The list of medicinal preparations includes:

- Links to BNF monographs to allow full prescribing information for each preparation to be accessed;
- · Details of the indications for which each medicinal preparation can be prescribed;
- Signposting to doses for community practitioner nurse prescribers where these differ from those in the BNF for the specified indications;
- · Additional information that should be considered before prescribing certain preparations.

The NPF should be used in conjunction with BNF monographs to ensure that all relevant prescribing information is considered when prescribing decisions are made; links to the relevant BNF monographs allow quick access to this prescribing information. Most of the doses that can be prescribed by nurse prescribers for the specified indications are in line with those in BNF monographs, so the BNF doses for those indications can be used. If doses that can be prescribed by nurse prescribers differ from those in the BNF, specific indications and doses have been added to BNF monographs. These can be found towards the bottom of indication and dose sections of the relevant monographs with the statement "dose approved for use by community practitioner nurse prescribers" following the indication; individual preparation entries signpost to these doses.

General guidance for community practitioner nurse prescribers (Nurse Prescribers' Formulary-General guidance) includes information on prescribing for nurse prescribers and can be found in online versions of the BNF and the BNF app. Treatment summaries for nurse prescribers (e.g. Nurse Prescribers' Formulary-Analgesics) can also be found in online versions of the BNF and the BNF app; these provide an overview of the drug management or prophylaxis

of conditions that are commonly managed by nurse prescribers and/or information on the use of appliances, such as stoma appliances. In order to select safe and effective medicines for individual patients, information in the treatment summaries must be used in conjunction with other prescribing details about the drugs and knowledge of the patient's medical and drug history.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

- Almond oil ear drops p. 1291, BP
- Removal of ear wax
- Arachis oil enema p. 61, NPF
- To soften impacted faeces
- Aspirin tablets, dispersible, 300 mg p. 133, BP (max. 96 tablets: max. pack size 32 tablets)
- ▶ Mild to moderate pain | Pyrexia (for both indications, see doses for community practitioner nurse prescribers)
- · Bisacodyl suppositories p. 62, BP (includes 5-mg and 10-mg strengths)
- Constipation (see dose for community practitioner nurse prescribers)
- Bisacodyl tablets p. 62, BP
- Constipation (see dose for community practitioner nurse prescribers)
- Catheter maintenance solutions, sodium chloride p. 854, NPF
- For removal of clots and other debris, to be instilled as
- Catheter maintenance solutions, 'Solution G' p. 854,
- ▶ For prevention of catheter encrustation and crystallisation; in very severe cases use 'Solution R'
- Catheter maintenance solutions, 'Solution R' p. 854,
- ▶ For prevention of catheter encrustation and dissolution of crystallisation if 'Solution G' unsuccessful
- Chlorhexidine gluconate alcoholic solutions containing at least 0.05%, see chlorhexidine p. 1372 and chlorhexidine gluconate with isopropyl alcohol p. 1373
- Skin disinfection
- Chlorhexidine gluconate aqueous solutions p. 1372 containing at least 0.05%
- Skin disinfection
- Choline salicylate dental gel p. 1308, BP Mild oral and perioral lesions
- Clotrimazole cream 1% p. 1324, BP
- Fungal skin infections
- Co-danthramer capsules, NPF [discontinued]
 - Co-danthramer capsules, strong, NPF [discontinued]
- Co-danthramer oral suspension p. 63, NPF
- *In consultation with doctor, constipation in palliative care*
- · Co-danthramer oral suspension, strong p. 63, NPF
- In consultation with doctor, constipation in palliative care
- Co-danthrusate capsules, BP [discontinued]
- · Co-danthrusate oral suspension p. 63, NPF
- ▶ In consultation with doctor, constipation in palliative care
- · Crotamiton cream p. 1360, BP
- Pruritus (including pruritus after scabies)

- Crotamiton lotion, BP [discontinued]
- Dimeticone barrier creams containing at least 10%, see barrier creams and ointments p. 1314
- ▶ For use as a barrier preparation
- Dimeticone lotion p. 1328, NPF
- Docusate sodium capsules p. 61, BP
- ▶ Chronic constipation
- Docusate sodium enema p. 61, NPF
- Chronic constipation
- Docusate sodium oral solution p. 61, BP Chronic constipation
- · Docusate sodium oral solution, paediatric p. 61, BP
- Chronic constipation
- Econazole nitrate cream 1% p. 1324, BP Fungal skin infections

Emollient creams and ointments, paraffin-containing p. 1318 as listed below:

- Dry skin conditions | Eczema | Psoriasis | Ichthyosis | Pruritus
- Cetraben ® emollient cream
- Dermamist ®
- Diprobase ® cream
 Diprobase ® ointment
- Doublebase
- Doublebase ® Dayleve gel
- E45 ® cream
- Emulsifying ointment, BP
 Hydromol ® cream
- Hydrous ointment, BP
- Lipobase 6
- Liquid and white soft paraffin ointment, NPF

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN

and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff

Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm

Scottish Drug Tariff: www.isdscotland.org/Health-topics/ Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

- Arachis oil enema
- arachis oil 100%

BNF 84

- Catheter maintenance solution, sodium chloride
- (proprietary products: OptiFlo S; Uro-Tainer Sodium Chloride; Uriflex-S), sodium chloride 0.9%
- Catheter maintenance solution, 'Solution G'
- (proprietary products: OptiFlo G; Uro-Tainer Suby G; Uriflex G), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%
- · Catheter maintenance solution, 'Solution R'
- (proprietary products: *OptiFlo R; Uro-Tainer Solutio R; Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%
- Chlorhexidine gluconate alcoholic solutions
- (proprietary products: ChloraPrep; Hydrex Solution; Hydrex spray), chlorhexidine gluconate in alcoholic solution
- Chlorhexidine gluconate aqueous solutions
- (proprietary product: Unisept), chlorhexidine gluconate in aqueous solution
- Co-danthramer capsules PoM
- co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)
- Co-danthramer capsules, strong PoM
- co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)
- Co-danthramer oral suspension PoM
- co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)
- Co-danthramer oral suspension, strong PoM
- co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)
- Co-danthrusate oral suspension PoM
- (proprietary product: Normax), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)
- Dimeticone barrier creams
- (proprietary products Conotrane Cream, dimeticone '350' 22%; Siopel Barrier Cream, dimeticone '1000' 10%), dimeticone 10-22%
- Dimeticone lotion
- (proprietary product: Hedrin), dimeticone 4%
- Docusate enema
- (proprietary product: Norgalax Micro-enema), docusate sodium 120 mg in 10 g

- Liquid and white soft paraffin ointment
 - liquid paraffin 50%, white soft paraffin 50%
- Macrogol oral liquid, compound
- (proprietary product: Movicol Liquid), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL
- · Macrogol oral powder, compound
- (proprietary products: Laxido Orange, Molaxole, Movicol), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of Movicol® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K* 5.4 mmol/litre)
- Macrogol oral powder, compound, half-strength
- (proprietary product: Movicol-Half), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
- Malathion aqueous lotions
- (proprietary products: Derbac-M Liquid), malathion 0.5% in an aqueous basis
- Mebendazole oral suspension PoM
- (proprietary product: Vermox), mebendazole 100 mg/5 mL
- Mebendazole tablets Pom
 - (proprietary products: \(\overline{Ovex}\), \(Vermox\)\), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)
- Mouthwash solution-tablets
- consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash
- Nicotine inhalation cartridge for oromucosal use
- (proprietary products: NicAssist Inhalator, Nicorette Inhalator), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device)
- Nicotine lozenge
- nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: Nicorette Mint Lozenge, Nicotinell Mint Lozenge), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: NiQuitin Lozenges, NiQuitin Minis, NiQuitin Pre-quit)
- Nicotine medicated chewing gum
- (proprietary products: NicAssist Gum, Nicorette Gum, Nicotinell Gum, NiQuitin Gum), nicotine 2 mg or 4 mg
- Nicotine nasal spray
- (proprietary product: NicAssist Nasal Spray, Nicorette Nasal Spray), nicotine 500 micrograms/metered spray
- Nicotine oral spray
- (proprietary product: Nicorette Quickmist), nicotine 1 mg/metered spray
- Nicotine sublingual tablets
- (proprietary product: NicAssist Microtab, Nicorette Microtab), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))
- Nicotine transdermal patches
- releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: Boots NicAssist Patch, Nicorette Patch), or releasing in each 16 hours approx.
 10 mg, 15 mg, or 25 mg (proprietary products: NicAssist Translucent Patch, Nicorette Invisi Patch), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: Nicopatch, Nicotinell TTS, NiQuitin,

NiQuitin Clear) (prescriber should specify the brand to be dispensed)

• Permethrin cream

 (proprietary product: Lyclear Dermal Cream), permethrin 5%

• Senna oral solution

 (proprietary product: Senokot Syrup), sennosides 7.5 mg/5 mL

• Senna and ispaghula granules

 (proprietary product: Manevac Granules), senna fruit 12.4%, ispaghula 54.2%

• Sodium citrate compound enema

 (proprietary products: Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium picosulfate capsules

(proprietary products: Dulcolax Perles), sodium picosulfate
 2.5 mg

• Sodium picosulfate elixir

 (proprietary product: Dulcolax Liquid), sodium picosulfate 5 mg/5 mL

• Sterculia granules

▶ (proprietary product: Normacol Granules), sterculia 62%

· Sterculia and frangula granules

• (proprietary product: Normacol Plus Granules), sterculia 62%, frangula (standardised) 8%

· Zinc oxide and dimeticone spray

 (proprietary product: Sprilon), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

• Zinc oxide impregnated medicated bandage

 (proprietary product: Steripaste), sterile cotton bandage impregnated with paste containing zinc oxide 15%

Zinc oxide impregnated medicated stocking
 (proprietary product: Zipzoc), sterile rayon stocking

 (proprietary product: Zipzoc), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh. gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing, National Prescribing Centre, May 2010 (available at www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1792 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 496, transdermal fentanyl p. 490 and oral diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369, oxycodone hydrochloride p. 498 or temazepam p. 520.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369 and temazepam p. 520.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Paramedics

Paramedic Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Paramedic Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at www.gov.uk/government/ publications/human-and-veterinarymedicines-register-of-licensedmanufacturing-sites.

Licensed hospital manufacturing units also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (Pro-File; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1764

- Warning: This medicine may make you sleepy
- 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- Warning: Do not drink alcohol
- Do not take indigestion remedies 2 hours before or after vou take this medicine
- Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- Do not take milk, indigestion remedies, or medicines containing iron or zinc. 2 hours before or after you take this medicine
- Warning: Do not stop taking this medicine unless your doctor tells you to stop
- Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are
- 10 Warning: Read the additional information given with this medicine
- Protect your skin from sunlight-even on a bright but cloudy day. Do not use sunbeds
- Do not take anything containing aspirin while taking this medicine
- 13 Dissolve or mix with water before taking
- 14 This medicine may colour your urine. This is harmless
- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- Dissolve the tablet under your tongue-do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17 Do not take more than... in 24 hours
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week
- Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21 Take with or just after food, or a meal
- 22 Take 30 to 60 minutes before food
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24 Suck or chew this medicine
- 25 Swallow this medicine whole. Do not chew or crush
- 26 Dissolve this medicine under your tongue
- 27 Take with a full glass of water
- 28 Spread thinly on the affected skin only
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm) 1 centimetre (cm) = 10 mm 1 inch (in) = 25.4 mm 1 foot (ft) = 12 inches 12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g) 1 gram (g) = 1000 milligrams (mg) 1 milligram (mg) = 1000 micrograms 1 microgram = 1000 nanograms 1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL) 1 millilitre (1 mL) = 1000 microlitres 1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J) 1000 kilocalories (kcal) = 4.1868 megajoules (MJ) 1 megajoule (MJ) = 238.8 kilocalories (kcal) 1 millimetre of mercury (mmHg) = 133.3 pascals (Pa) 1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and sex

The table below shows the **mean values** for weight, height, and sex by age; these values have been derived from the UK-WHO growth charts 2009 and UK 1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

Medical emergencies in the community

13-Oct-202

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals . Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

► ANGINA: UNSTABLE

Aspirin dispersible tablets p. 133 (75 mg, 300 mg) BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

PLUS

► EITHER Glyceryl trinitrate aerosol spray p. 237

(400 micrograms/metered dose)

▶ Adult: 1-2 sprays, repeated as required

 OR Glyceryl trinitrate tablets (300 micrograms, 500 micrograms, 600 micrograms)
 SUBLINGUALLY

Adult: 0.3-1 mg, repeated as required

► MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION
Treat as for Angina: unstable

► MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION

Aspirin dispersible tablets (75 mg, 300 mg)
BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

Glyceryl trinitrate aerosol spray (400 micrograms/metered dose)

SUBLINGUALLY

SUBLINGUALLY

▶ Adult: 1-2 sprays, repeated as required

➤ OR Glyceryl trinitrate tablets (300 micrograms, 500 micrograms, 600 micrograms)

Adult: 0.3-1 mg, repeated as required

Metoclopramide hydrochloride injection p. 464 (5 mg/mL) BY INTRAVENOUS INJECTION

- Adult 18-19 years (body-weight up to 60 kg): 5 mg
- Adult 18-19 years (body-weight 60 kg and over): 10 mg
- Adult over 19 years: 10 mg

Diamorphine hydrochloride injection p. 488 (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1-2 MG/MINUTE)

- Adult: 5 mg followed by a further 2.5-5 mg if necessary
- Elderly or frail patients: reduce dose by half
- OR Morphine sulfate injection p. 496 (10 mg/mL)
 BY SLOW INTRAVENOUS INJECTION (1-2 MG/MINUTE)
 - Adult: 5-10 mg followed by a further 5-10 mg if necessary
 - ► Elderly or frail patients: reduce dose by half **Oxygen**, if appropriate

Airways disease, obstructive

► ASTHMA: ACUTE

Ever Emergency asthma consultations should be regarded as being for severe acute asthma until shown otherwise. Patients with features of severe or life-threatening acute asthma, and patients who fail to respond adequately at any time should be referred to hospital immediately. Acute asthma in children aged under 2 years should be managed in hospital.

High-flow **oxygen** should be given if available (via tight-fitting face mask in children) to achieve and maintain an SpO₂ level of 94-98%.

► EITHER Salbutamol aerosol inhaler p. 273

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER
(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

- Adult and child: 2-10 puffs each inhaled separately, repeated every 10-20 minutes or as necessary
- OR Salbutamol nebuliser solution (1 mg/mL, 2 mg/mL)
 BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)
 - Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
 - Child 5-11 years: 2.5-5 mg every 20-30 minutes or as necessary
- ▶ Child 12-17 years: 5 mg every 20-30 minutes or as necessary
- Adult: 5 mg every 20–30 minutes or as necessary
- ➤ OR Terbutaline sulfate nebuliser solution p. 275 (2.5 mg/mL) BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)
 - Child 4 years and below: 5 mg every 20-30 minutes or as necessary
 - Child 5-11 years: 5-10 mg every 20-30 minutes or as necessary
- Child 12-17 years: 10 mg every 20-30 minutes or as necessary
- ▶ Adult: 10 mg every 20-30 minutes or as necessary

▶ PLUS (in all cases)

► EITHER Prednisolone tablets p. 747 (or prednisolone soluble tablets) (5 mg)

BY MOUTH

- Child 11 years and below: 1-2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
- ▶ Child 12-17 years: 40-50 mg once daily for at least 5 days
- ► Adult: 40–50 mg once daily for at least 5 days
- ► OR Hydrocortisone p. 744 (preferably as sodium succinate)
 BY INTRAVENOUS INJECTION
 - Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
 - ▶ Child 1 year and below: 25 mg
 - ► Child 2-4 years: 50 mg
 - ▶ Child 5-17 years: 100 mg
 - Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 267

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ► Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- Child 12-17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4-6 hours as necessary

► CROUD

Dexamethasone oral solution p. 743 (2 mg/5 mL)

BY MOUTH

▶ Child 1 month-2 years: 150 micrograms/kg as a single dose

Anaphylaxis

► ANAPHYLAXIS

Adrenaline/epinephrine injection p. 241 (1 mg/mL (1 in 1000))
BY INTRAMUSCULAR INJECTION

- ► Child up to 6 months: 100–150 micrograms (0.1–0.15 mL), repeated after 5 minutes if necessary
- Child 6 months-5 years: 150 micrograms (0.15 mL), repeated after 5 minutes if necessary
- Child 6-11 years: 300 micrograms (0.3 mL), repeated after 5 minutes if necessary
- Child 12-17 years: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- Adult: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary

If life-threatening features persist, further doses of intramuscular adrenaline/epinephrine can be given every 5 minutes until specialist critical care available.

High-flow **oxygen** should be given as soon as available. For guidance on other treatment that may be used for the management of anaphylaxis, *see* Antihistamines, allergen immunotherapy and allergic emergencies p. 299.

Bacterial infection

► MENINGOCOCCAL DISEASE

Benzylpenicillin sodium injection p. 595 (600 mg, 1.2 g)
BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF
VENOUS ACCESS NOT AVAILABLE)

► Neonate: 300 mg

Child 1 month-11 months: 300 mg

► Child 1-9 years: 600 mg

► Child 10-17 years: 1.2 g

▶ Adult: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

► OR if history of allergy to penicillin

Cefotaxime injection p. 572 (1g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ► Child 1 month-11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12-17 years: 1 g
- ▶ Adult: 1g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

 OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins

Chloramphenicol injection p. 620 (1g)

BY INTRAVENOUS INJECTION

- ► Child: 12.5-25 mg/kg
- ► Adult: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 546.

Hypoglycaemia

► DIABETIC HYPOGLYCAEMIA

Fast-acting carbohydrate (glucose p. 1132 is preferred)
CHILD UP TO 5 YEARS

By mouth

• 5g (20 mL Lift® (previously Glucojuice®) oral glucose liquid or 1.5 glucose tablets or half a tube of glucose 40% oral gel or 1 teaspoonful of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

▶ 5 g (half a tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 5-11 YEARS

By mouth

• 10 g (40 mL Lift® (previously Glucojuice®) oral glucose liquid or 3 glucose tablets or 1 tube of glucose 40% oral gel or 2 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

10 g (1 tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 12-17 YEARS

By mouth

15 g (60 mL Lift® (previously Glucojuice®) oral glucose liquid or 4 glucose tablets or 1.5 tubes of glucose 40% oral gel or 3 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

▶ 15 g (1.5 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

ADULT

By mouth

▶ 15-20 g (60-80 mL Lift® (previously Glucojuice®) oral glucose liquid or 4-5 glucose tablets or 1.5-2 tubes of glucose 40% oral gel or 150-200 mL pure fruit juice or 3-4 heaped teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative patients]

▶ 15-20 g (1.5-2 tubes of glucose 40% oral gel), repeated after
15 minutes if necessary

NOTE Examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

 OR if hypoglycaemia unresponsive or if oral route cannot be used

Glucagon injection p. 793 (1 mg/mL)

BY INTRAMUSCULAR INJECTION

- Child 8 years and below or body-weight up to 25 kg: 500 micrograms (0.5 mL)
- Child 9-17 years or body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

▶ OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes

Glucose 10% intravenous infusion

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)
- ▶ Adult: 150-200 mL infused over 15 minutes
- ▶ OR Glucose 20% intravenous infusion

BY INTRAVENOUS INJECTION INTO LARGE VEIN

Adult: 75-100 mL infused over 15 minutes

Seizures

► CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES

- ► EITHER Diazepam rectal solution p. 375 (2 mg/mL, 4 mg/mL) BY RECTUM
 - Neonate: 1.25-2.5 mg, repeated once after 10-15 minutes if necessary
 - ► Child 1 month-1 year: 5 mg, repeated once after 10-15 minutes if necessary
 - Child 2-11 years: 5-10 mg, repeated once after 10-15 minutes if necessary
 - ▶ Child 12-17 years: 10-20 mg, repeated once after 10-15 minutes if necessary
 - Adult: 10-20 mg, repeated once after 10-15 minutes if necessary
 - Elderly: 10 mg, repeated once after 10–15 minutes if necessary

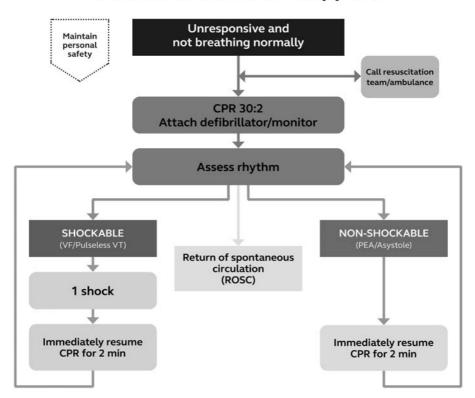

▶ OR Midazolam oromucosal solution p. 371

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- Child 1-2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months-11 months: 2.5 mg
- ► Child 1-4 years: 5 mg
- ► Child 5-9 years: 7.5 mg
- ▶ Child 10-17 years: 10 mg
- Adult: 10 mg [unlicensed]

Adult Advanced Life Support Algorithm

Adult advanced life support

Give high-quality chest compressions, and:

- · Give oxygen
- · Use waveform capnography · Continuous compressions if
- advanced airway · Minimise interruptions
- to compressions · Intravenous or intraosseous
- · Give adrenaline every
- 3-5 min
- · Give amiodarone after 3 shocks
- · Identify and treat reversible causes

Identify and treat reversible causes

- Hypoxia
- Hypovolaemia
- · Hypo-/hyperkalaemia/ metabolic
- · Hypo/hyperthermia
- · Thrombosis coronary or
- pulmonary
- · Tension pneumothorax
- · Tamponade cardiac

Consider ultrasound imaging to identify reversible causes

Consider

- · Coronary angiography/ percutaneous coronary intervention
- · Mechanical chest compressions to facilitate transfer/treatment
- · Extracorporeal CPR

After ROSC

- · Use an ABCDE approach
- Aim for SpO₂ of 94–98% and normal PaCO₂
- 12-lead ECG
- · Identify and treat cause
- · Targeted temperature management
