nutrition solution. Other vitamins are usually given daily; they are generally introduced in the parenteral nutrition solution. Alternatively, if the patient is able to take small amounts by mouth, vitamins may be given orally.

The nutrition solution is infused through a central venous catheter inserted under full surgical precautions. Alternatively, infusion through a peripheral vein may be used for supplementary as well as total parenteral nutrition for periods of up to a month, depending on the availability of peripheral veins; factors prolonging cannula life and preventing thrombophlebitis include the use of soft polyurethane paediatric cannulas and use of feeds of low osmolality and neutral pH. Only nutritional fluids should be given by the dedicated intravenous line.

Before starting, the patient should be well oxygenated with a near normal circulating blood volume and attention should be given to renal function and acid-base status. Appropriate biochemical tests should have been carried out beforehand and serious deficits corrected. Nutritional and electrolyte status must be monitored throughout treatment.

Complications of long-term parenteral nutrition include gall bladder sludging, gall stones, cholestasis and abnormal liver function tests. For details of the prevention and management of parenteral nutrition complications, specialist literature should be consulted.

**Protein** is given as mixtures of essential and non-essential synthetic L-amino acids. Ideally, all essential amino acids should be included with a wide variety of nonessential ones to provide sufficient nitrogen together with electrolytes. Solutions vary in their composition of amino acids; they often contain an energy source (usually glucose p. 955) and electrolytes.

**Energy** is provided in a ratio of 0.6 to 1.1 megajoules (150–250 kcal) per gram of protein nitrogen. Energy requirements must be met if amino acids are to be utilised for tissue maintenance. A mixture of carbohydrate and fat energy sources (usually 30–50% as fat) gives better utilisation of amino acids than glucose alone.

Glucose is the preferred source of carbohydrate, but if more than 180 g is given per day frequent monitoring of blood glucose is required, and insulin may be necessary. Glucose in various strengths from 10 to 50% must be infused through a central venous catheter to avoid thrombosis.

In parenteral nutrition regimens, it is necessary to provide adequate **phosphate** in order to allow phosphorylation of glucose and to prevent hypophosphataemia; between 20 and 30 mmol of phosphate is required daily.

Fructose and sorbitol have been used in an attempt to avoid the problem of hyperosmolar hyperglycaemic non-ketotic acidosis but other metabolic problems may occur, as with xylitol and ethanol which are now rarely used.

**Fat** emulsions have the advantages of a high energy to fluid volume ratio, neutral pH, and iso-osmolality with plasma, and provide essential fatty acids. Several days of adaptation may be required to attain maximal utilisation. Reactions include occasional febrile episodes (usually only with 20% emulsions) and rare anaphylactic responses. Interference with biochemical measurements such as those for blood gases and calcium may occur if samples are taken before fat has been cleared. Daily checks are necessary to ensure complete clearance from the plasma in conditions where fat metabolism may be disturbed. **Additives should not be mixed with fat emulsions unless compatibility is known.**

#### Administration

Because of the complex requirements relating to parenteral nutrition full details relating to administration have been omitted. In all cases *product literature and other specialist literature should be consulted.*

## NUTRIENTS > PARENTERAL NUTRITION

### Parenteral nutrition supplements

#### • INDICATIONS AND DOSE

##### DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES

##### Amino acid supplement for hypercatabolic or hypermetabolic states

##### ► BY INTRAVENOUS INFUSION

- Adult: 300–400 mg/kg daily, dose not to exceed 20% of total amino acid intake

#### • CAUTIONS

**PEDITRACE SOLUTION FOR INFUSION 10ML VIALS** Reduced biliary excretion · reduced biliary excretion in cholestatic liver disease · reduced biliary excretion in markedly reduced urinary excretion (careful biochemical monitoring required) · total parenteral nutrition exceeding one month

##### CAUTIONS, FURTHER INFORMATION

- Total parenteral nutrition exceeding one month Measure serum manganese concentration and check liver function before commencing treatment and regularly during treatment—discontinue if manganese concentration raised or if cholestasis develops.
- DIRECTIONS FOR ADMINISTRATION** Because of the complex requirements relating to parenteral nutrition, full details relating to administration have been omitted. In all cases *specialist pharmacy advice, product literature, and other specialist literature should be consulted.* Compatibility with the infusion solution must be ascertained before adding supplementary preparations. **Additives should not be mixed with fat emulsions unless compatibility is known.**

##### CERNEVIT SOLUTION FOR INJECTION VIALS AND DILUENT Dissolve in 5 mL water for injections.

**PEDITRACE SOLUTION FOR INFUSION 10ML VIALS** For addition to Vaminolact®, Vamin® 14 Electrolyte-Free solutions, and glucose intravenous infusions.

**TRACUTIL® AMPOULES** For addition to infusion solutions.

**DECAN CONCENTRATE FOR SOLUTION FOR INFUSION 40ML BOTTLES** For addition to infusion solutions.

**ADDIPHOS® VIALS** For addition to Vamin® solutions and glucose intravenous infusions.

**DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES** For addition to infusion solutions containing amino acids.

**ADDITRACE SOLUTION FOR INFUSION 10ML AMPOULES** For addition to Vamin® solutions and glucose intravenous infusions.

**GLYCOPHOS® VIALS** For addition to Vamin® and Vaminolact® solutions, and glucose intravenous infusions.

**SOLIVITO N POWDER FOR SOLUTION FOR INFUSION VIALS** Dissolve in water for injections or glucose intravenous infusion for adding to glucose intravenous infusion or Intralipid®, dissolve in Vitlipid N® or Intralipid® for adding to Intralipid® only.

**VITLIPID N INFANT EMULSION FOR INJECTION 10ML AMPOULES** For addition to Intralipid®.

**VITLIPID N ADULT EMULSION FOR INJECTION 10ML AMPOULES** For addition to Intralipid®.

#### • PRESCRIBING AND DISPENSING INFORMATION

##### CERNEVIT SOLUTION FOR INJECTION VIALS AND DILUENT

Cernevit® solution contains dl-alpha tocopherol 11.2 units, ascorbic acid 125 mg, biotin 69 micrograms, coлекаliferol 220 units, cyanocobalamin 6 micrograms, folic acid 414 micrograms, glycine 250 mg, nicotinamide 46 mg, pantothenic acid (as dextranthenol) 17.25 mg, pyridoxine hydrochloride 5.5 mg, retinol (as palmitate)

3500 units, riboflavin (as dihydrated sodium phosphate) 4.14 mg, thiamine (as cocarboxylase tetrahydrate) 3.51 mg.

#### PEDITRACE SOLUTION FOR INFUSION 10ML

**VIALS** *Peditrace*® solution contains traces of Zn<sup>2+</sup>, Cu<sup>2+</sup>, Mn<sup>2+</sup>, Se<sup>4+</sup>, F, I.

**TRACUTIL® AMPOULES** *Tracutyl*® solution contains trace elements Fe<sup>2+</sup>, Zn<sup>2+</sup>, Mn<sup>2+</sup>, Cu<sup>2+</sup>, Cr<sup>3+</sup>, Se<sup>4+</sup>, Mo<sup>6+</sup>, I, F.

#### DECAN CONCENTRATE FOR SOLUTION FOR INFUSION 40ML BOTTLES

For patients over 40 kg. *Decan*® solution contains trace elements Fe<sup>2+</sup>, Zn<sup>2+</sup>, Cu<sup>2+</sup>, Mn<sup>2+</sup>, F, Co<sup>2+</sup>, I, Se<sup>4+</sup>, Mo<sup>6+</sup>, Cr<sup>3+</sup>.

**ADDIPHOS® VIALS** *Addiphos*® sterile solution contains phosphate 40 mmol, K<sup>+</sup> 30 mmol, Na<sup>+</sup> 30 mmol/20 mL.

#### DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES

*Dipeptiven*® solution contains N(2)-L-alanyl-L-glutamine 200 mg/ml (providing L-alanine 82 mg, L-glutamine 134.6 mg).

**ADDITRACE SOLUTION FOR INFUSION 10ML AMPOULES** For patients over 40 kg. *Additrace*® solution contains traces of Fe<sup>3+</sup>, Zn<sup>2+</sup>, Mn<sup>2+</sup>, Cu<sup>2+</sup>, Cr<sup>3+</sup>, Se<sup>4+</sup>, Mo<sup>6+</sup>, F, I.

**GLYCOPHOS® VIALS** *Glycophos*® Sterile Concentrate solution contains phosphate 20 mmol, Na<sup>+</sup> 40 mmol/20 mL.

#### SOLIVITO N POWDER FOR SOLUTION FOR INFUSION VIALS

*Solvito N*® powder for reconstitution contains biotin 60 micrograms, cyanocobalamin 5 micrograms, folic acid 400 micrograms, glycine 300 mg, nicotinamide 40 mg, pyridoxine hydrochloride 4.9 mg, riboflavin sodium phosphate 4.9 mg, sodium ascorbate 113 mg, sodium pantothenate 16.5 mg, thiamine mononitrate 3.1 mg.

#### VITLIPID N INFANT EMULSION FOR INJECTION 10ML AMPOULES

*Vitlipid N*® infant emulsion contains vitamin A 230 units, ergocalciferol 40 units, *dl*-alpha tocopherol 0.7 unit, phytomenadione 20 micrograms/mL.

#### VITLIPID N ADULT EMULSION FOR INJECTION 10ML AMPOULES

*Vitlipid N*® adult emulsion contains vitamin A 330 units, ergocalciferol 20 units, *dl*-alpha tocopherol 1 unit, phytomenadione 15 micrograms/mL. For adults and children over 11 years.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

#### Solution for injection

##### • *Cernevit* (Baxter Healthcare Ltd)

Cyanocobalamin 6 microgram, Biotin 69 microgram, Folic acid 414 microgram, Thiamine 3.51 mg, Riboflavin (as Riboflavin sodium phosphate) 4.14 mg, Pyridoxine (as Pyridoxine hydrochloride) 4.53 mg, Pantothenic acid (as Dexpantenol) 17.25 mg, Nicotinamide 46 mg, Ascorbic acid 125 mg, Alpha tocopherol 11.2 unit, Colecalciferol 220 unit, Retinol 3500 unit. *Cernevit* solution for injection vials and diluent | 10 vial [PoM] no price available

#### Solution for infusion

##### • Parenteral nutrition supplements (Non-proprietary)

**Sodium glycerophosphate 216 mg per 1 ml** Sodium glycerophosphate 4.32g/20ml concentrate for solution for infusion vials | 1 vial [PoM] £5.07 | 10 vial [PoM] no price available

##### • *Additrace* (Fresenius Kabi Ltd)

**Sodium molybdate 4.85 microgram per 1 ml, Chromic chloride 5.33 microgram per 1 ml, Sodium selenite 10.5 microgram per 1 ml, Potassium iodide 16.6 microgram per 1 ml, Manganese chloride 99 microgram per 1 ml, Sodium fluoride 210 microgram per 1 ml, Copper chloride 340 microgram per 1 ml, Ferric chloride 544 microgram per 1 ml, Zinc chloride 1.36 mg per 1 ml** *Additrace* solution for infusion 10ml ampoules | 1 ampoule [PoM] £1.96 | 20 ampoule [PoM] no price available

##### • *Dipeptiven* (Fresenius Kabi Ltd)

**N(2)-L-alanyl-L-glutamine 200 mg per 1 ml** *Dipeptiven* 20g/100ml concentrate for solution for infusion bottles | 1 bottle [PoM] £25.93 | 10 bottle [PoM] no price available

**Dipeptiven 10g/50ml concentrate for solution for infusion bottles** | 1 bottle [PoM] £13.94 | 10 bottle [PoM] no price available

##### • *Peditrace* (Fresenius Kabi Ltd)

**Manganese (as Manganese chloride) 1 microgram per 1 ml, Iodine (as Potassium iodide) 1 microgram per 1 ml, Selenium (as Sodium selenite) 2 microgram per 1 ml, Copper (as Copper chloride) 20 microgram per 1 ml, Fluoride (as Sodium fluoride) 57 microgram per 1 ml, Zinc (as Zinc chloride) 250 microgram per 1 ml** *Peditrace* solution for infusion 10ml vials | 1 vial [PoM] £3.55 | 10 vial [PoM] no price available

##### • *Tracutyl* (B.Braun Melsungen AG)

**Sodium molybdate dihydrate 2.42 microgram per 1 ml, Chromic chloride 5.3 microgram per 1 ml, Sodium selenite pentahydrate 7.89 microgram per 1 ml, Potassium iodide 16.6 microgram per 1 ml, Sodium fluoride 126 microgram per 1 ml, Manganese chloride 197.9 microgram per 1 ml, Copper chloride 204.6 microgram per 1 ml, Zinc chloride 681.5 microgram per 1 ml, Ferrous chloride 695.8 microgram per 1 ml** *Tracutyl* concentrate for solution for infusion 10ml ampoules | 5 ampoule [PoM] £7.96

#### Powder for solution for infusion

##### • *Solvitro N* (Fresenius Kabi Ltd)

**Cyanocobalamin 5 microgram, Biotin 60 microgram, Folic acid 400 microgram, Thiamine nitrate 3.1 mg, Pyridoxine hydrochloride 4.9 mg, Riboflavin sodium phosphate 4.9 mg, Sodium pantothenate 16.5 mg, Nicotinamide 40 mg, Sodium ascorbate 113 mg** *Solvitro N* powder for solution for infusion vials | 1 vial [PoM] £1.97 | 10 vial [PoM] no price available

#### Emulsion for injection

##### • *Vitlipid N Adult* (Fresenius Kabi Ltd)

**Ergocalciferol 500 nanogram per 1 ml, Phytomenadione 15 microgram per 1 ml, Retinol palmitate 99 microgram per 1 ml, Alpha tocopherol 910 microgram per 1 ml** *Vitlipid N Adult* emulsion for injection 10ml ampoules | 1 ampoule [PoM] £1.97

##### • *Vitlipid N Infant* (Fresenius Kabi Ltd)

**Ergocalciferol 1 microgram per 1 ml, Phytomenadione 20 microgram per 1 ml, Retinol palmitate 69 microgram per 1 ml, Alpha tocopherol 640 microgram per 1 ml** *Vitlipid N Infant* emulsion for injection 10ml ampoules | 1 ampoule [PoM] £1.97

## 5 Nutrition (oral)

### Enteral nutrition

#### Overview

The body's reserves of protein rapidly become exhausted in severely ill patients, especially during chronic illness or in those with severe burns, extensive trauma, pancreatitis, or intestinal fistula. Much can be achieved by frequent meals and by persuading the patient to take supplementary snacks of ordinary food between the meals.

However, extra calories, protein, other nutrients, and vitamins are often best given by supplementing ordinary meals with enteral sip or tube feeds.

When patients cannot feed normally, for example, patients with severe facial injury, oesophageal obstruction, or coma, a nutritionally complete diet of enteral feeds must be given. The advice of a dietician should be sought to determine the protein and total energy requirement of the patient and the form and relative contribution of carbohydrate and fat to the energy requirements.

Most enteral feeds contain protein derived from cows' milk or soya. Elemental feeds containing protein hydrolysates or free amino acids can be used for patients who have diminished ability to break down protein, for example in inflammatory bowel disease or pancreatic insufficiency.

Even when nutritionally complete feeds are given, water and electrolyte balance should be monitored. Haematological and biochemical parameters should also be monitored, particularly in clinically unstable patients. Extra minerals (e.g. magnesium and zinc) may be needed in

patients where gastro-intestinal secretions are being lost. Additional vitamins may also be needed.

### Enteral nutrition in children

Children have special requirements and in most situations liquid feeds prepared for adults are totally unsuitable—the advice of a paediatric dietitian should be sought.

## 5.1 Special diets

### Nutrition in special diets

#### Overview

These are preparations that have been modified to eliminate a particular constituent from a food or that are nutrient mixtures formulated as food substitutes for patients who either cannot tolerate or cannot metabolise certain common constituents of food. In certain clinical conditions, some food preparations are regarded as drugs and can be prescribed within the NHS if they have been approved by the Advisory Committee on Borderline Substances (ACBS).

#### Coeliac disease

Coeliac disease is caused by an abnormal immune response to gluten. For management and further information, see Coeliac disease p. 35.

#### Phenylketonuria

*Phenylketonuria* (hyperphenylalaninaemia, PKU), which results from the inability to metabolise **phenylalanine**, is managed by restricting dietary intake of **phenylalanine** to a small amount sufficient for tissue building and repair.

Sapropterin dihydrochloride below, a synthetic form of tetrahydrobiopterin, is licensed as an adjunct to dietary restriction of **phenylalanine** in the management of patients with *phenylketonuria* and *tetrahydrobiopterin deficiency*.

**Aspartame** (used as a sweetener in some foods and medicines) contributes to the **phenylalanine** intake and may affect control of *phenylketonuria*. Where the presence of **aspartame** is specified in the product literature this is indicated in the BNF against the preparation; the patient should be informed of this.

#### • SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · cough · diarrhoea · headache · nasal congestion · pharyngolaryngeal pain · vomiting
- ▶ **Frequency not known** Hypersensitivity reactions

• **PREGNANCY** Manufacturer advises caution—consider only if strict dietary management inadequate.

• **BREAST FEEDING** Manufacturer advises avoid—no information available.

• **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.

• **RENAL IMPAIRMENT** Manufacturer advises caution—no information available.

#### • MONITORING REQUIREMENTS

- ▶ Monitor blood-phenylalanine concentration before and after first week of treatment—if unsatisfactory response increase dose at weekly intervals to max. dose and monitor blood-phenylalanine concentration weekly; discontinue treatment if unsatisfactory response after 1 month.
- ▶ Monitor blood-phenylalanine and tyrosine concentrations 1–2 weeks after dose adjustment and during treatment.

• **DIRECTIONS FOR ADMINISTRATION** Tablets should be dissolved in water and taken within 20 minutes.

• **PRESCRIBING AND DISPENSING INFORMATION** Sapropterin is a synthetic form of tetrahydrobiopterin.

• **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer sapropterin dihydrochloride dispersible tablets.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Soluble tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

**Sapropterin dihydrochloride 100 mg** Kuvan 100mg soluble tablets sugar-free | 30 tablet [PoM] £597.22

## 6 Vitamin deficiency

### Vitamins

#### Overview

Vitamins are used for the prevention and treatment of specific deficiency states or where the diet is known to be inadequate; they may be prescribed in the NHS to prevent or treat deficiency but not as dietary supplements.

Their use as general 'pick-me-ups' is of unproven value and, in the case of preparations containing vitamin A or D, may actually be harmful if patients take more than the prescribed dose. The 'fad' for mega-vitamin therapy with water-soluble vitamins, such as ascorbic acid p. 991 and pyridoxine hydrochloride p. 988, is unscientific and can be harmful.

Dietary reference values for vitamins are available in the Department of Health publication:

Dietary Reference Values for Food Energy and Nutrients for the United Kingdom: Report of the Panel on Dietary Reference Values of the Committee on Medical Aspects of Food Policy. *Report on Health and Social Subjects* 41. London: HMSO, 1991.

#### Dental patients

It is unjustifiable to treat stomatitis or glossitis with mixtures of vitamin preparations; this delays diagnosis and correct treatment.

Most patients who develop a nutritional deficiency despite an adequate intake of vitamins have malabsorption and if

### 5.1a Phenylketonuria

#### DRUGS FOR METABOLIC DISORDERS >

#### TETRAHYDROBIOPTERIN AND DERIVATIVES

### Sapropterin dihydrochloride

#### • INDICATIONS AND DOSE

**Phenylketonuria (adjunct to dietary restriction of phenylalanine) (specialist use only)**

▶ BY MOUTH

- ▶ Adult: Initially 10 mg/kg once daily, adjusted according to response; usual dose 5–20 mg/kg once daily, dose to be taken preferably in the morning

**Tetrahydrobiopterin deficiency (adjunct to dietary restriction of phenylalanine) (specialist use only)**

▶ BY MOUTH

- ▶ Adult: Initially 2–5 mg/kg once daily, adjusted according to response, dose to be taken preferably in the morning, the total daily dose may alternatively be given in 2–3 divided doses; maximum 20 mg/kg per day

• **CAUTIONS** History of convulsions

• **INTERACTIONS** → Appendix 1: sapropterin

this is suspected the patient should be referred to a medical practitioner.

### Vitamin A

Deficiency of vitamin A (retinol) p. 988 is associated with ocular defects (particularly xerophthalmia) and an increased susceptibility to infections, but deficiency is rare in the UK (even in disorders of fat absorption).

### Vitamin B group

Deficiency of the B vitamins, other than vitamin B<sub>12</sub>, is rare in the UK and is usually treated by preparations containing thiamine (B<sub>1</sub>) p. 989, riboflavin (B<sub>2</sub>), and nicotinamide p. 1168, which is used in preference to nicotinic acid p. 194, as it does not cause vasodilatation. Other members (or substances traditionally classified as members) of the vitamin B complex such as aminobenzoic acid, biotin, choline, inositol nicotinate p. 227, and pantothenic acid or panthenol may be included in vitamin B preparations but there is no evidence of their value.

The severe deficiency states Wernicke's encephalopathy and Korsakoff's psychosis, especially as seen in chronic alcoholism, are best treated initially by the parenteral administration of B vitamins (*Pabrinex*®), followed by oral administration of thiamine in the longer term. Anaphylaxis has been reported with parenteral B vitamins.

As with other vitamins of the B group, pyridoxine hydrochloride (B<sub>6</sub>) deficiency is rare, but it may occur during isoniazid p. 554 therapy or penicillamine p. 1002 treatment in Wilson's disease and is characterised by peripheral neuritis. High doses of pyridoxine hydrochloride are given in some metabolic disorders, such as hyperoxaluria, and it is also used in sideroblastic anaemia. There is evidence to suggest that pyridoxine hydrochloride may provide some benefit in premenstrual syndrome. It has been tried for a wide variety of other disorders, but there is little sound evidence to support the claims of efficacy.

Nicotinic acid inhibits the synthesis of cholesterol and triglyceride. Folic acid p. 937 and vitamin B<sub>12</sub> are used in the treatment of megaloblastic anaemia. Folic acid p. 869 (available as calcium folinate) is used in association with cytotoxic therapy.

### Vitamin C

Vitamin C (ascorbic acid) therapy is essential in scurvy, but less florid manifestations of vitamin C deficiency are commonly found, especially in the elderly.

Severe scurvy causes gingival swelling and bleeding margins as well as petechiae on the skin. This is, however, exceedingly rare and a patient with these signs is more likely to have leukaemia. Investigation should not be delayed by a trial period of vitamin treatment.

Claims that vitamin C ameliorates colds or promotes wound healing have not been proven.

### Vitamin D

The term Vitamin D is used for a range of compounds which possess the property of preventing or curing rickets. They include ergocalciferol (calciferol, vitamin D<sub>2</sub>) p. 994, colecalciferol (vitamin D<sub>3</sub>) p. 992, dihydrotachysterol p. 994, alfalcidol (1 $\alpha$ -hydroxycholecalciferol) p. 991, and calcitriol (1,25-dihydroxycholecalciferol) p. 992.

Simple vitamin D deficiency can be prevented by taking an oral supplement of ergocalciferol (calciferol, vitamin D<sub>2</sub>) or colecalciferol (vitamin D<sub>3</sub>) daily. Vitamin D deficiency can occur in people whose exposure to sunlight is limited and in those whose diet is deficient in vitamin D. In these individuals, ergocalciferol or colecalciferol daily by mouth may be given to treat vitamin D deficiency; higher doses may be necessary for severe deficiency. Patients who do not respond should be referred to a specialist.

Preparations containing colecalciferol with calcium carbonate p. 993 are available for the management of combined calcium and vitamin D deficiency, or for those at high risk of deficiency.

Vitamin D deficiency caused by *intestinal malabsorption* or *chronic liver disease* usually requires vitamin D in pharmacological doses.

Vitamin D requires hydroxylation by the kidney to its active form, therefore the hydroxylated derivatives alfalcidol or calcitriol should be prescribed if patients with *severe renal impairment* require vitamin D therapy. Calcitriol is also licensed for the management of postmenopausal osteoporosis.

Paricalcitol p. 995, a synthetic vitamin D analogue, is licensed for the prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure.

### Vitamin E

The daily requirement of vitamin E (tocopherol) has not been well defined but is probably 3 to 15 mg daily. There is little evidence that oral supplements of vitamin E are essential in adults, even where there is fat malabsorption secondary to cholestasis. In young children with congenital cholestasis, abnormally low vitamin E concentrations may be found in association with neuromuscular abnormalities, which usually respond only to the parenteral administration of vitamin E.

Vitamin E has been tried for various other conditions but there is little scientific evidence of its value.

### Vitamin K

Vitamin K is necessary for the production of blood clotting factors and proteins necessary for the normal calcification of bone.

Because vitamin K is fat soluble, patients with fat malabsorption, especially in biliary obstruction or hepatic disease, may become deficient. Menadiol sodium phosphate p. 996 is a water-soluble synthetic vitamin K derivative that can be given orally to prevent vitamin K deficiency in malabsorption syndromes.

Oral coumarin anticoagulants act by interfering with vitamin K metabolism in the hepatic cells and their effects can be antagonised by giving vitamin K.

### Other compounds

Potassium aminobenzoate p. 988 has been used in the treatment of various disorders associated with excessive fibrosis such as scleroderma and Peyronie's disease. In Peyronie's disease there is some evidence to support efficacy in reducing progression when given early in the disease; however, there is no evidence for reversal of the condition. The therapeutic value of potassium aminobenzoate in scleroderma is doubtful.

## VITAMINS AND TRACE ELEMENTS >

### MULTIVITAMINS

## Vitamins A and D

### • INDICATIONS AND DOSE

#### Prevention of vitamin A and D deficiency

- ▶ BY MOUTH
- ▶ Child: 1 capsule daily, 1 capsule contains 4000 units vitamin A and 400 units (10 micrograms) vitamin D
- ▶ Adult: (consult product literature)

• **UNLICENSED USE** Not licensed in children under 6 months of age.

### • SIDE-EFFECTS

#### Overdose

**Excessive ingestion** Prolonged excessive ingestion of vitamins A and D can lead to hypervitaminosis.

- **PRESCRIBING AND DISPENSING INFORMATION** This drug contains vitamin D; consult individual vitamin D monographs.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Capsule

##### ▶ Vitamins A and D (Non-proprietary)

Vitamin D 400 unit, Vitamin A 4000 unit | Vitamins A and D capsules BPC 1973 | 28 capsule £2.81 | 28 capsule (GSL) £2.81 | 84 capsule £6.75-£8.42 DT price = £8.42

## Vitamins A, C and D

The properties listed below are those particular to the combination only. For the properties of the components please consider, vitamin A below, ascorbic acid p. 991.

#### ● INDICATIONS AND DOSE

##### Prevention of vitamin deficiency

###### ▶ BY MOUTH

- ▶ Child 1 month-4 years: 5 drops daily, 5 drops contain vitamin A approx. 700 units, vitamin D approx. 300 units (7.5 micrograms), ascorbic acid approx. 20 mg

- **INTERACTIONS** → Appendix 1: ascorbic acid, vitamin A

- **PRESCRIBING AND DISPENSING INFORMATION** This drug contains vitamin D; consult individual vitamin D monographs.

Available free of charge to children under 4 years in families on the Healthy Start Scheme, or alternatively may be available direct to the public—further information for healthcare professionals can be accessed at [www.healthystart.nhs.uk](http://www.healthystart.nhs.uk). Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

*Healthy Start Vitamins for women* (containing ascorbic acid, vitamin D, and folic acid) are also available free of charge to women on the Healthy Start Scheme during pregnancy and until their baby is one year old, or alternatively may be available direct to the public—further information for healthcare professionals can be accessed at [www.healthystart.nhs.uk](http://www.healthystart.nhs.uk). Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Oral drops

- ▶ **Healthy Start Children's Vitamin** (Secretary of State for Health) Vitamin A and D3 concentrate.55 mg per 1 ml, Sodium ascorbate 18.58 mg per 1 ml, Ascorbic acid 150 mg per 1 ml, Vitamin D 2000 iu per 1 ml, Vitamin A 5000 iu per 1 ml | Healthy Start Children's Vitamin drops | 10 ml no price available

## VITAMINS AND TRACE ELEMENTS > VITAMIN A

## Vitamin A

(Retinol)

#### ● INDICATIONS AND DOSE

##### Vitamin A deficiency

###### ▶ BY MOUTH

- ▶ Child 1-11 months: 5000 units daily, to be taken with or after food, higher doses may be used initially for treatment of severe deficiency
- ▶ Child 1-17 years: 10 000 units daily, to be taken with or after food, higher doses may be used initially for treatment of severe deficiency

- **UNLICENSED USE** Preparations containing only vitamin A are not licensed.

- **INTERACTIONS** → Appendix 1: vitamin A

#### ● SIDE-EFFECTS

**Overdose** Massive overdose can cause rough skin, dry hair, an enlarged liver, and a raised erythrocyte sedimentation rate and raised serum calcium and serum alkaline phosphatase concentrations.

- **PREGNANCY** Excessive doses may be teratogenic. In view of evidence suggesting that high levels of vitamin A may cause birth defects, women who are (or may become) pregnant are advised not to take vitamin A supplements (including tablets and fish liver oil drops), except on the advice of a doctor or an antenatal clinic; nor should they eat liver or products such as liver pâté or liver sausage.

- **BREAST FEEDING** Theoretical risk of toxicity in infants of mothers taking large doses.

- **MONITORING REQUIREMENTS** Treatment is sometimes initiated with very high doses of vitamin A and the child should be monitored closely; very high doses are associated with acute toxicity.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: drops

##### Drops

##### ▶ Vitamin A (Non-proprietary)

(Vitamin B<sub>6</sub>)

#### ● INDICATIONS AND DOSE

##### Deficiency states

###### ▶ BY MOUTH

- ▶ Adult: 20–50 mg 1–3 times a day

##### Isoniazid-induced neuropathy (prophylaxis)

###### ▶ BY MOUTH

- ▶ Adult: 10–20 mg daily

##### Isoniazid-induced neuropathy (treatment)

###### ▶ BY MOUTH

- ▶ Adult: 50 mg 3 times a day

**Idiopathic sideroblastic anaemia**

► BY MOUTH

► Adult: 100–400 mg daily in divided doses

**Prevention of penicillamine-induced neuropathy in Wilson's disease**

► BY MOUTH

► Adult: 20 mg daily

**Premenstrual syndrome**

► BY MOUTH

► Adult: 50–100 mg daily

- **UNLICENSED USE** Not licensed for prophylaxis of penicillamine-induced neuropathy in Wilson's disease. Not licensed for treatment of premenstrual syndrome.

**IMPORTANT SAFETY INFORMATION**

Prolonged use of pyridoxine in a dose of 10 mg daily is considered safe but the long-term use of pyridoxine in a dose of 200 mg or more daily has been associated with neuropathy. The safety of long-term pyridoxine supplementation with doses above 10 mg daily has not been established.

- **SIDE-EFFECTS** Sensory neuropathy (with high doses when given for extended periods)

**Overdose**

Overdosage induces toxic effects.

**Severe deficiency**

► BY MOUTH

► Adult: 200–300 mg daily in divided doses

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (SEPTEMBER 2007)

Although potentially serious allergic adverse reactions may rarely occur during, or shortly after, parenteral administration, the CHM has recommended that:

- This should not preclude the use of parenteral thiamine in patients where this route of administration is required, particularly in patients at risk of Wernicke-Korsakoff syndrome where treatment with thiamine is essential;
- Intravenous administration should be by infusion over 30 minutes;
- Facilities for treating anaphylaxis (including resuscitation facilities) should be available when parenteral thiamine is administered.

- **CAUTIONS** Anaphylaxis may occasionally follow injection

- **BREAST FEEDING** Severely thiamine-deficient mothers should avoid breast-feeding as toxic methyl-glyoxal present in milk.

● **PRESCRIBING AND DISPENSING INFORMATION**

- With intramuscular use or intravenous use Some preparations may contain phenol as a preservative.

● **MEDICINAL FORMS**

## Vitamin B substances with ascorbic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, thiamine p. 989, ascorbic acid p. 991.

### ● INDICATIONS AND DOSE

**Parenteral vitamins B and C for rapid correction of severe depletion or malabsorption (e.g. in alcoholism, after acute infections, postoperatively, or in psychiatric states) | Maintenance of vitamins B and C in chronic intermittent haemodialysis**

- BY INTRAVENOUS INFUSION
- Adult: See MHRA/CHM advice in p. 989 monograph (consult product literature).

#### Treatment of Wernicke's encephalopathy

- INITIALLY BY INTRAVENOUS INFUSION
- Adult: 2–3 pairs 3 times a day for 2 days, discontinue if no response, continue treatment if symptoms respond after 2 days; (by intravenous infusion or by deep intramuscular injection) 1 pair once daily for 5 days or for as long as improvement continues, give deep intramuscular injection into the gluteal muscle

#### Prophylaxis of Wernicke's encephalopathy in alcohol dependence

- BY INTRAVENOUS INFUSION, OR BY DEEP INTRAMUSCULAR INJECTION
- Adult: 1 pair once daily for at least 3–5 days, give deep intramuscular injection into the gluteal muscle

#### Psychosis following narcosis or electroconvulsive therapy | Toxicity from acute infections

- BY INTRAVENOUS INFUSION, OR BY DEEP INTRAMUSCULAR INJECTION
- Adult: 1 pair twice daily for up to 7 days, give deep intramuscular injection into the gluteal muscle

#### Haemodialysis

- BY INTRAVENOUS INFUSION
- Adult: 1 pair every 2 weeks

- **UNLICENSED USE** *Pabrinex*® doses in BNF may differ from those in product literature.

- **INTERACTIONS** → Appendix 1: ascorbic acid

- **DIRECTIONS FOR ADMINISTRATION** Give (*Pabrinex*® I/V High Potency) intermittently or via drip tubing in Glucose 5% or Sodium chloride 0.9%. Ampoules contents should be mixed, diluted, and administered without delay; give over 30 minutes.

- **PRESCRIBING AND DISPENSING INFORMATION** Some formulations of *Pabrinex*® may contain benzyl alcohol. *Pabrinex*® I/M High Potency injection is for intramuscular use only. *Pabrinex*® I/V High Potency injection is for intravenous use only.

## VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES

### Vitamin D and analogues (systemic)

● **CONTRA-INDICATIONS** Hypercalcaemia · metastatic calcification

● **SIDE-EFFECTS**

**Overdose** Symptoms of overdosage include anorexia, lassitude, nausea and vomiting, diarrhoea, constipation, weight loss, polyuria, sweating, headache, thirst, vertigo, and raised concentrations of calcium and phosphate in plasma and urine.

● **PREGNANCY** High doses teratogenic in *animals* but therapeutic doses unlikely to be harmful.

● **BREAST FEEDING** Caution with high doses; may cause hypercalcaemia in infant—monitor serum-calcium concentration.

● **MONITORING REQUIREMENTS** **Important:** All patients receiving pharmacological doses of vitamin D should have their plasma-calcium concentration checked at intervals (initially once or twice weekly) and whenever nausea or vomiting occurs.

▮ above

### Alfacalcidol

(1 $\alpha$ -Hydroxycholecalciferol)

#### ● INDICATIONS AND DOSE

**Patients with severe renal impairment requiring vitamin D therapy**

► BY MOUTH, OR BY INTRAVENOUS INJECTION

► Adult: Initially 1 microgram daily, dose to be adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily

► Elderly: Initially 500 nanograms daily, dose adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily

**Hypophosphataemic rickets | Persistent hypocalcaemia due to hypoparathyroidism or pseudohypoparathyroidism**

► BY MOUTH, OR BY INTRAVENOUS INJECTION

► Child 1 month–11 years: 25–50 nanograms/kg once daily, dose to be adjusted as necessary; maximum 1 microgram per day

► Child 12–17 years: 1 microgram once daily, dose to be adjusted as necessary

**Prevention of vitamin D deficiency in renal or cholestatic liver disease**

► BY MOUTH, OR BY INTRAVENOUS INJECTION

► Child 1 month–11 years (body-weight up to 20 kg): 15–30 nanograms/kg once daily (max. per dose 500 nanograms)

► Child 1 month–11 years (body-weight 20 kg and above): 250–500 nanograms once daily, dose to be adjusted as necessary

► Child 12–17 years: 250–500 nanograms once daily, dose to be adjusted as necessary

#### DOSE EQUIVALENCE AND CONVERSION

► One drop of alfacalcidol 2 microgram/mL oral drops contains approximately 100 nanograms alfacalcidol.

● **CAUTIONS** Nephrolithiasis · take care to ensure correct dose in infants

● **INTERACTIONS** → Appendix 1: vitamin D substances

● **SIDE-EFFECTS**

► Rare Nephrocalcinosis · pruritus · rash · urticaria

- **RENAL IMPAIRMENT** Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.
- **DIRECTIONS FOR ADMINISTRATION** For injection, shake ampoule for at least 5 seconds before use, and give over 30 seconds.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Solution for injection

EXCIPIENTS: May contain Alcohol, propylene glycol

##### One-Alpha (LEO Pharma)

**Alfacalcidol 2 microgram per 1 ml** One-Alpha 2micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £41.13  
 One-Alpha 1micrograms/0.5ml solution for injection ampoules | 10 ampoule [PoM] £21.57

#### Oral drops

EXCIPIENTS: May contain Alcohol

##### One-Alpha (LEO Pharma)

**Alfacalcidol 2 microgram per 1 ml** One-Alpha 2micrograms/ml oral drops sugar-free | 10 ml [PoM] £21.30 DT price = £21.30

#### Capsule

EXCIPIENTS: May contain Sesame oil

##### Alfacalcidol (Non-proprietary)

**Alfacalcidol 250 nanogram** Alfacalcidol 250nanogram capsules | 30 capsule [PoM] £5.20 DT price = £3.64

**Alfacalcidol 500 nanogram** Alfacalcidol 500nanogram capsules | 30 capsule [PoM] £10.00 DT price = £7.62

**Alfacalcidol 1 microgram** Alfacalcidol 1microgram capsules | 30 capsule [PoM] £14.03 DT price = £10.23 | 30 capsule no price available DT price = £10.23

##### One-Alpha (LEO Pharma)

## Calcitriol

### (1,25-Dihydroxycholecalciferol)

#### INDICATIONS AND DOSE

##### Renal osteodystrophy

###### BY MOUTH

- ▶ Adult: Initially 250 nanograms daily, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

##### Renal osteodystrophy (in patients with normal or only slightly reduced plasma-calcium concentration)

###### BY MOUTH

- ▶ Adult: Initially 250 nanograms once daily on alternate days, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

##### Established postmenopausal osteoporosis

###### BY MOUTH

- ▶ Adult: 250 nanograms twice daily, plasma-calcium concentration and creatinine to be monitored (consult product literature)

- **INTERACTIONS** → Appendix 1: vitamin D substances
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises avoid—no information available. Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor plasma calcium, phosphate, and creatinine during dosage titration.
  - ▶ Monitor plasma-calcium concentration in patients receiving high doses.

- **DIRECTIONS FOR ADMINISTRATION** Contents of capsule may be administered by oral syringe.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Capsule

##### Calcitriol (Non-proprietary)

**Calcitriol 250 nanogram** Calcitriol 250nanogram capsules | 30 capsule [PoM] £18.04 | 100 capsule [PoM] no price available DT price = £18.04

## Cholecalciferol

### (Cholecalciferol; Vitamin D<sub>3</sub>)

#### INDICATIONS AND DOSE

##### Prevention of vitamin D deficiency

###### BY MOUTH

- ▶ Adult: 400 units daily

##### Treatment of vitamin D deficiency

###### BY MOUTH

- ▶ Adult: 800 units daily, higher doses may be necessary for severe deficiency

- **INTERACTIONS** → Appendix 1: vitamin D substances
- **RENAL IMPAIRMENT** Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.
- **DIRECTIONS FOR ADMINISTRATION**  
**INVITA D3® 25,000UNITS/1ML ORAL SOLUTION** May be mixed with a small amount of cold or lukewarm food immediately before administration.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution, oral drops

## Ergocalciferol

(Calciferol; Vitamin D<sub>2</sub>)

### ● INDICATIONS AND DOSE

#### Vitamin D deficiency caused by intestinal malabsorption or chronic liver disease

► BY MOUTH

► Adult: Up to 40 000 units daily

#### Hypocalcaemia of hypoparathyroidism to achieve normocalcaemia

► BY MOUTH

► Adult: Up to 100 000 units daily

#### Prevention of vitamin D deficiency

► BY MOUTH

► Adult: 400 units daily

#### Treatment of vitamin D deficiency

► BY MOUTH

► Adult: 800 units daily, higher doses may be necessary for severe deficiency

- **INTERACTIONS** → Appendix 1: vitamin D substances
- **RENAL IMPAIRMENT** Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.
- **PRESCRIBING AND DISPENSING INFORMATION** The BP directs that when calciferol is prescribed or demanded, colecalciferol or ergocalciferol should be dispensed or supplied.  
When the strength of the tablets ordered or prescribed is not clear, the intention of the prescriber with respect to the strength (expressed in micrograms or milligrams per tablet) should be ascertained.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral solution

##### Tablet

##### ▶ Ergocalciferol (Non-proprietary)

Ergocalciferol 12.5 microgram Ergocalciferol 12.5microgram tablets | 30 tablet no price available

##### ▶ Ergoral (Cubic Pharmaceuticals Ltd)

Ergocalciferol 125 microgram Ergoral D2 5,000unit tablets | 30 tablet £19.95

Ergocalciferol 250 microgram Ergoral D2 10,000unit tablets | 30 tablet £23.95

##### Oral solution

##### ▶ Eciferol (Rhodes Pharma Ltd)

Ergocalciferol 3000 unit per 1 ml Eciferol D2 3,000units/ml liquid | 60 ml £55.00 DT price = £102.44

##### Capsule

##### ▶ Ergocalciferol (Non-proprietary)

Ergocalciferol 1.25 mg Ergocalciferol 1.25mg capsules | 30 capsule [PoM] no price available | 50 capsule [PoM] £230.00

##### ▶ Eciferol (Rhodes Pharma Ltd)

Ergocalciferol 1.25 mg Eciferol D2 50,000unit capsules | 10 capsule £29.99

##### ▶ Ergoral (Cubic Pharmaceuticals Ltd)

Ergocalciferol 1.25 mg Ergoral D2 50,000unit capsules | 10 capsule £19.95

## Ergocalciferol with calcium lactate and calcium phosphate (Calcium and vitamin D)

The properties listed below are those particular to the combination only. For the properties of the components please consider, ergocalciferol p. 994, calcium lactate p. 959.

#### ● INDICATIONS AND DOSE

##### Prevention of calcium and vitamin D deficiency | Treatment of calcium and vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: calcium salts, vitamin D substances
- **DIRECTIONS FOR ADMINISTRATION** Tablets may be crushed before administration, or may be chewed.
- **PRESCRIBING AND DISPENSING INFORMATION** Each tablet contains calcium lactate 300 mg, calcium phosphate 150 mg (calcium 97 mg or  $\text{Ca}^{2+}$  2.4 mmol), ergocalciferol 10 micrograms (400 units).
- **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer calcium and ergocalciferol tablets.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Tablet

##### ▶ Ergocalciferol with calcium lactate and calcium phosphate (Non-proprietary)

Ergocalciferol 10 microgram, Calcium phosphate 150 mg, Calcium lactate 300 mg Calcium and Ergocalciferol tablets | 28 tablet [P] £18.50 DT price = £18.26 | 28 tablet no price available DT price = £18.26 | 500 tablet [P] no price available

## Paricalcitol

#### ● INDICATIONS AND DOSE

##### For prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

##### For prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure in patients on haemodialysis

- ▶ Adult: To be administered via haemodialysis access (consult product literature)

- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS** Acne · breast tenderness · dyspepsia · pruritus · rash · taste disturbance
- **PREGNANCY** Toxicity in *animal* studies—manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor plasma calcium and phosphate during dose titration and at least monthly when stabilised.
  - ▶ Monitor parathyroid hormone concentration.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

EXCIPIENTS: May contain Propylene glycol

##### ▶ Zemplar (AbbVie Ltd)

Paricalcitol 5 microgram per 1 ml Zemplar 5micrograms/1ml solution for injection ampoules | 5 ampoule [PoM] £62.00 (Hospital only)

Zemplar 5micrograms/1ml solution for injection vials | 5 vial [PoM] £62.00 (Hospital only)

##### Capsule

##### ▶ Zemplar (AbbVie Ltd)

Paricalcitol 1 microgram Zemplar 1microgram capsules | 28 capsule [PoM] £69.44

Paricalcitol 2 microgram Zemplar 2microgram capsules | 28 capsule [PoM] £138.88

## VITAMINS AND TRACE ELEMENTS > VITAMIN E

## Alpha tocopherol (Tocopherol)

#### ● INDICATIONS AND DOSE

##### Vitamin E deficiency because of malabsorption in congenital or hereditary chronic cholestasis

- ▶ BY MOUTH USING ORAL SOLUTION
- ▶ Child: 17 mg/kg daily, dose to be adjusted as necessary

- **CAUTIONS** Predisposition to thrombosis
- **INTERACTIONS** → Appendix 1: vitamin E substances
- **SIDE-EFFECTS**
  - ▶ Common or very common Diarrhoea

- **Uncommon** Alopecia · asthenia · disturbances in serum-potassium concentration · disturbances in serum-sodium concentration · headache · pruritus · rash
- **PREGNANCY** Manufacturer advises caution, no evidence of harm in *animal* studies.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available. Manufacturer advises monitor closely in hepatic impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution. Risk of renal toxicity due to polyethylene glycol content. Manufacturer advises monitor closely in renal impairment.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Tocofersolan is a water-soluble form of D-alpha tocopherol.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Oral solution

- **Vedrop** (Orphan Europe (UK) Ltd) ▼

D-alpha tocopherol (as Tocofersolan) 50 mg per 1 ml Vedrop  
50mg/ml oral solution sugar-free | 20 ml [PoM] £54.55 sugar-free |  
60 ml [PoM] £163.65

## Alpha tocopheryl acetate (Tocopherol)

#### ● INDICATIONS AND DOSE

##### Vitamin E deficiency

- **BY MOUTH**
- Child: 2–10 mg/kg daily, increased if necessary up to 20 mg/kg daily

##### Malabsorption in cystic fibrosis

- **BY MOUTH**
- Child 1–11 months: 50 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Child 1–11 years: 100 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Child 12–17 years: 100–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- Adult: 100–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes

##### Vitamin E deficiency in cholestasis and severe liver disease

- **BY MOUTH**
- Child 1 month–11 years: Initially 100 mg daily, adjusted according to response, increased if necessary up to 200 mg/kg daily
- Child 12–17 years: Initially 200 mg daily, adjusted according to response, increased if necessary up to 200 mg/kg daily

##### Malabsorption in abetalipoproteinaemia

- **BY MOUTH**
- Adult: 50–100 mg/kg once daily

- **CAUTIONS** Predisposition to thrombosis
- **INTERACTIONS** → Appendix 1: vitamin E substances
- **SIDE-EFFECTS** Abdominal pain (particularly with high doses) · diarrhoea (particularly with high doses)
- **PREGNANCY** No evidence of safety of high doses.
- **BREAST FEEDING** Excreted in milk; minimal risk, although caution with large doses.

- **MONITORING REQUIREMENTS** Increased bleeding tendency in vitamin-K deficient patients or those taking anticoagulants (prothrombin time and INR should be monitored).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: chewable tablet

#### Oral suspension

EXCIPIENTS: May contain Sucrose

- **Alpha tocopheryl acetate (Non-proprietary)**

Alpha tocopheryl acetate 100 mg per 1 ml Alpha tocopheryl acetate 500mg/5ml oral suspension | 100 ml [GS] £58.85 DT price = £58.85

#### Chewable tablet

- **Alpha tocopheryl acetate (Non-proprietary)**

Alpha tocopheryl acetate 100 mg Alpha tocopheryl acetate 100mg chewable tablets | 30 tablet no price available

- **E-Tabs** (Ennogen Healthcare Ltd)

Alpha tocopheryl acetate 100 mg E-Tabs 100mg chewable tablets | 30 tablet £87.30

- **Ephynal** (Imported (Italy))

Alpha tocopheryl acetate 100 mg Ephynal 100mg chewable tablets | 30 tablet no price available

#### Capsule

## VITAMINS AND TRACE ELEMENTS > VITAMIN K

### Menadiol sodium phosphate

#### ● INDICATIONS AND DOSE

##### Prevention of Vitamin K deficiency in malabsorption syndromes

- **BY MOUTH**
- Adult: 10–40 mg daily, dose to be adjusted as necessary

- **CAUTIONS** G6PD deficiency (risk of haemolysis) · vitamin E deficiency (risk of haemolysis)
- **PREGNANCY** Avoid in late pregnancy and labour unless benefit outweighs risk of neonatal haemolytic anaemia, hyperbilirubinaemia, and kernicterus in neonate.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

### Tablet

#### Menadiol sodium phosphate (Non-proprietary)

#### Menadiol phosphate (as Menadiol sodium phosphate)

10 mg Menadiol 10mg tablets | 100 tablet P £185.90 DT price = £185.90

## Phytomenadione

(Vitamin K<sub>1</sub>)

### INDICATIONS AND DOSE

**Major bleeding in patients on warfarin (in combination with dried prothrombin complex or fresh frozen plasma)**

#### BY SLOW INTRAVENOUS INJECTION

- Adult: 5 mg for 1 dose, stop warfarin treatment

**INR > 8.0 with minor bleeding in patients on warfarin**

#### BY SLOW INTRAVENOUS INJECTION

- Adult: 1–3 mg, stop warfarin treatment, dose may be repeated if INR still too high after 24 hours, restart warfarin treatment when INR <5

**INR > 8.0 with no bleeding in patients on warfarin**

#### BY MOUTH

- Adult: 1–5 mg, intravenous preparation to be used orally, stop warfarin treatment, repeat dose if INR still too high after 24 hours, restart warfarin treatment when INR <5

**INR 5.0–8.0 with minor bleeding in patients on warfarin**

#### BY SLOW INTRAVENOUS INJECTION

- Adult: 1–3 mg, stop warfarin treatment, restart warfarin treatment when INR <5

**Reversal of anticoagulation prior to elective surgery (after warfarin stopped)**

#### BY MOUTH

- Adult: 1–5 mg, intravenous preparation to be used orally, dose to be given the day before surgery if INR ≥1.5

**Reversal of anticoagulation prior to emergency surgery (when surgery can be delayed 6–12 hours)**

#### BY INTRAVENOUS INJECTION

- Adult: 5 mg as a single dose, if surgery cannot be delayed, dried prothrombin complex can be given in addition to phytomenadione and the INR checked before surgery

- **UNLICENSED USE** Oral use of intravenous preparations is unlicensed.

- **CAUTIONS** Intravenous injections should be given very slowly—risk of vascular collapse

**KONAKION<sup>®</sup> MM** Reduce dose in elderly

### SIDE-EFFECTS

**KONAKION<sup>®</sup> MM** Anaphylactoid reactions

- **PREGNANCY** Use if potential benefit outweighs risk.

- **BREAST FEEDING** Present in milk.

### HEPATIC IMPAIRMENT

**KONAKION<sup>®</sup> MM** Caution—glycocholic acid may displace bilirubin.

### DIRECTIONS FOR ADMINISTRATION

**KONAKION<sup>®</sup> MM PAEDIATRIC** *Konakion<sup>®</sup> MM Paediatric* may be administered by mouth or by intramuscular injection or by intravenous injection. For intravenous injection, may be diluted with Glucose 5% if necessary.

**KONAKION<sup>®</sup> MM** *Konakion<sup>®</sup> MM* may be administered by slow intravenous injection or by intravenous infusion in glucose 5%; **not** for intramuscular injection. For intravenous infusion (*Konakion<sup>®</sup> MM*), give intermittently

in Glucose 5%; dilute with 55 mL; may be injected into lower part of infusion apparatus.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution, drops

### Solution for injection

EXCIPIENTS: May contain Glycocholic acid, lecithin

#### Konakion MM (Roche Products Ltd)

**Phytomenadione 10 mg per 1 ml** *Konakion MM Paediatric* 2mg/0.2ml solution for injection ampoules | 5 ampoule PoM £4.71  
*Konakion MM* 10mg/1ml solution for injection ampoules | 10 ampoule PoM £3.78 DT price = £3.78

## 6.1 Neural tube defects (prevention in pregnancy)

### Neural tube defects (prevention in pregnancy)

#### Prevention in pregnancy

Folic acid supplements p. 937 taken before and during pregnancy can reduce the occurrence of neural tube defects. The risk of a neural tube defect occurring in a child should be assessed and folic acid given as follows:

- Women at a low risk of conceiving a child with a neural tube defect should be advised to take folic acid as a medicinal or food supplement daily (at low-risk group dose) before conception and until week 12 of pregnancy. Women who have not been taking folic acid and who suspect they are pregnant should start at once and continue until week 12 of pregnancy.
- Couples are at a high risk of conceiving a child with a neural tube defect if either partner has a neural tube defect (or either partner has a family history of neural tube defects), if they have had a previous pregnancy affected by a neural tube defect, or if the woman has *coeliac disease* (or other malabsorption state), diabetes mellitus, sickle-cell anaemia, or is taking **antiepileptic medicines**.
- Women in the high-risk group who wish to become pregnant (or who are at risk of becoming pregnant) should be advised to take folic acid daily (at high-risk group dose) and continue until week 12 of pregnancy (women with sickle-cell disease should continue taking their normal dose of folic acid (or to increase the dose to high-risk group daily dose) and continue this throughout pregnancy).

There is no justification for prescribing multiple-ingredient vitamin preparations containing vitamin B<sub>12</sub> or folic acid.

### 1 Arthritis

#### Arthritis

##### Rheumatoid arthritis and other inflammatory disorders

A non-steroidal anti-inflammatory drug (NSAID) is indicated for pain and stiffness resulting from inflammatory rheumatic disease; analgesics such as paracetamol p. 422 or codeine phosphate p. 431 can also be used.

Drugs are also used to influence the rheumatic disease process itself. For *rheumatoid arthritis* these disease-modifying antirheumatic drugs (DMARDs) include methotrexate p. 844, cytokine modulators, azathioprine p. 787, ciclosporin p. 788, cyclophosphamide p. 830, leflunomide p. 1002, penicillamine p. 1002, gold, antimalarials (chloroquine p. 582 and hydroxychloroquine sulfate p. 1001), and sulfasalazine p. 42. Corticosteroids also have a significant role in the management of rheumatoid arthritis.

Drugs which may affect the disease process in *psoriatic arthritis* include sulfasalazine, gold, azathioprine, methotrexate, leflunomide, and cytokine modulators.

##### Osteoarthritis and soft-tissue disorders

For pain relief in osteoarthritis and soft-tissue disorders, paracetamol should be used first and may need to be taken regularly. A topical NSAID or topical capsaicin 0.025% p. 458 should also be considered, particularly in knee or hand osteoarthritis. An oral NSAID can be substituted for, or used in addition to, paracetamol. If further pain relief is required in osteoarthritis, then the addition of an opioid analgesic may be considered, but with a substantial risk of adverse effects; however, an opioid analgesic should be considered before a NSAID in patients taking low-dose aspirin.

Intra-articular corticosteroid injections may produce temporary benefit in osteoarthritis, especially if associated with soft-tissue inflammation.

Non-drug measures, such as weight reduction and exercise, should also be encouraged.

Glucosamine p. 1000 and rubefacients are not recommended for the treatment of osteoarthritis.

Hyaluronic acid and its derivatives are available for osteoarthritis of the knee, but are not recommended. Sodium hyaluronate p. 1068 (*Durolane*®, *Euflexxa*®, *Fermathron*®, *Orthovisc*®, *Ostenil*®, *Ostenil Plus*®, *RenheVis*®, *Suplasyn*®, *Synocom*®, *Synopsis*®) or hylan G-F 20 (*Synvisc*®) is injected intra-articularly to supplement natural hyaluronic acid in

the synovial fluid. These injections may reduce pain over 1–6 months, but are associated with a short-term increase in knee inflammation. Sodium hyaluronate (*SportVis*®) is also licensed for the relief of pain and optimisation of recovery following ankle sprain, and for the relief of chronic pain and disability associated with tennis elbow.

#### Rheumatic disease, suppressing drugs

##### Overview

Certain drugs such as those affecting the immune response can suppress the disease process in *rheumatoid arthritis* and *psoriatic arthritis*; gold, penicillamine p. 1002, hydroxychloroquine sulfate p. 1001, chloroquine p. 582, and sulfasalazine p. 42 can also suppress the disease process in *rheumatoid arthritis* while sulfasalazine and possibly gold can suppress the disease process in *psoriatic arthritis*. Unlike NSAIDs, which are used only for symptom control, disease-modifying anti-rheumatic drugs (DMARDs) can affect the progression of disease but may require 2–6 months of treatment for a full therapeutic response. Response to DMARDs may allow the NSAID dose to be reduced or withdrawn. All patients with suspected inflammatory joint disease should be referred to a specialist as soon as possible to confirm diagnosis and evaluate disease activity; early initiation of DMARDs is recommended to control the signs and symptoms, and to limit joint damage.

##### Choice

The choice of a disease-modifying antirheumatic drug should take into account co-morbidity and patient preference. Methotrexate p. 844, sulfasalazine, intramuscular gold, and penicillamine are similar in efficacy. However, methotrexate or sulfasalazine may be better tolerated.

A combination of **DMARDs** (including methotrexate and at least one other DMARD) and a short-term **corticosteroid**, should be given to patients with newly diagnosed active rheumatoid arthritis, ideally within 3 months of the onset of persistent symptoms. If the use of particular DMARDs is contra-indicated and combination therapy is not possible, monotherapy with a suitable DMARD should be given and the dose rapidly increased until clinically effective. In patients with established and stable rheumatoid arthritis, cautiously reduce drug doses to the lowest that are clinically effective. Response to drug treatment often produces a reduction in requirements of both corticosteroids and other drugs.

**Gold** and penicillamine are effective in *palindromic rheumatism*. *Systemic and discoid lupus erythematosus* are sometimes treated with chloroquine or hydroxychloroquine sulfate.

If a disease-modifying anti-rheumatic drug does not lead to an objective benefit within 6 months, it should be replaced by a different one.

## Gold

**Gold** can be given as sodium aurothiomalate p. 1003 for active progressive rheumatoid arthritis; it must be given by deep intramuscular injection and the area gently massaged. A test dose must be given followed by doses at weekly intervals until there is definite evidence of remission. In patients who do respond, the interval between injections is then gradually increased to 4 weeks and treatment is continued for up to 5 years after complete remission. If relapse occurs the dosage frequency may be immediately increased and only once control has been obtained again should the dosage frequency be decreased; if no response is seen within 2 months, alternative treatment should be sought. It is important to avoid complete relapse since second courses of gold are not usually effective.

## Penicillamine

Penicillamine has a similar action to gold. More patients are able to continue treatment than with gold but side-effects are common.

Patients should be warned not to expect improvement for at least 6 to 12 weeks after treatment is initiated. Penicillamine should be discontinued if there is no improvement within 1 year.

## Sulfasalazine

Sulfasalazine has a beneficial effect in suppressing the inflammatory activity of rheumatoid arthritis. Sulfasalazine may also be used by specialists, in the management of psoriatic arthritis affecting peripheral joints [unlicensed indication]. Haematological abnormalities occur usually in the first 3 to 6 months of treatment and are reversible on cessation of treatment.

## Antimalarials

The antimalarial hydroxychloroquine sulfate is used to treat rheumatoid arthritis of moderate inflammatory activity; chloroquine is also licensed for treating inflammatory disorders but is used much less frequently and is generally reserved for use if other drugs have failed.

Chloroquine and hydroxychloroquine sulfate are effective for mild systemic lupus erythematosus, particularly involving the skin and joints. These drugs should not be used for psoriatic arthritis. Chloroquine and hydroxychloroquine sulfate are better tolerated than gold or penicillamine. Retinopathy rarely occurs provided that the recommended doses are not exceeded; in the elderly it is difficult to distinguish drug-induced retinopathy from changes of ageing.

Mepacrine hydrochloride p. 479 is sometimes used in discoid lupus erythematosus [unlicensed].

## Drugs affecting the immune response

Methotrexate is a disease-modifying antirheumatic drug suitable for moderate to severe rheumatoid arthritis.

Azathioprine p. 787, ciclosporin p. 788, cyclophosphamide p. 830, leflunomide p. 1002, and the **cytokine modulators** are considered more toxic and they are used in cases that have not responded to other disease-modifying drugs.

Methotrexate is usually given by mouth once a week, adjusted according to response. In patients who experience mucosal or gastro-intestinal side-effects with methotrexate, folic acid p. 937 given every week [unlicensed indication], on

a different day from the methotrexate, may help to reduce the frequency of such side-effects.

Leflunomide acts on the immune system as a disease-modifying antirheumatic drug. Its therapeutic effect starts after 4–6 weeks and improvement may continue for a further 4–6 months. Leflunomide, which is similar in efficacy to sulfasalazine and methotrexate, may be chosen when these drugs cannot be used.

Ciclosporin is licensed for severe active rheumatoid arthritis when conventional second-line therapy is inappropriate or ineffective. There is some evidence that ciclosporin may retard the rate of erosive progression and improve symptom control in those who respond only partially to methotrexate.

Cyclophosphamide may be used for rheumatoid arthritis with severe systemic manifestations [unlicensed indication]; it is toxic and regular blood counts (including platelet counts) should be carried out. Cyclophosphamide can also be given for *severe systemic rheumatoid arthritis* and for other connective tissue diseases (especially with active vasculitis).

Drugs that affect the immune response are also used in the management of severe cases of *systemic lupus erythematosus* and other connective tissue disorders. They are often given in conjunction with corticosteroids for patients with severe or progressive renal disease. They may be used in cases of *polymyositis* that are resistant to corticosteroids. They are used for their corticosteroid-sparing effect in patients whose corticosteroid requirements are excessive. Azathioprine is usually used.

In the specialist management of psoriatic arthritis affecting peripheral joints, leflunomide, methotrexate, or azathioprine [unlicensed indication] may be used.

## Juvenile idiopathic arthritis

Many children with *juvenile idiopathic arthritis* (juvenile chronic arthritis) do not require disease-modifying antirheumatic drugs. Methotrexate is effective; sulfasalazine is an alternative [unlicensed indication] but it should be avoided in *systemic-onset juvenile idiopathic arthritis*. Gold and penicillamine are no longer used. Cytokine modulators have a role in *juvenile idiopathic arthritis*.

## Cytokine modulators

Cytokine modulators should be used under specialist supervision.

Adalimumab p. 1008, certolizumab pegol p. 1011, etanercept p. 1012, golimumab p. 1014, and infliximab p. 1016 inhibit the activity of tumour necrosis factor alpha (TNF- $\alpha$ ).

Adalimumab is licensed for moderate to severe active *rheumatoid arthritis* when response to other disease-modifying antirheumatic drugs (including methotrexate p. 844) has been inadequate; it is also licensed for severe, active, and progressive disease in adults not previously treated with methotrexate. In the treatment of rheumatoid arthritis, adalimumab should be used in combination with methotrexate, but it can be given alone if methotrexate is inappropriate. Adalimumab is also licensed for the treatment of active and progressive *psoriatic arthritis* and severe active *ankylosing spondylitis* that have not responded adequately to other disease-modifying antirheumatic drugs. It is also licensed for the treatment of severe axial spondyloarthritis without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs. Adalimumab also has a role in inflammatory bowel disease and plaque psoriasis.

Certolizumab pegol is licensed for use in patients with moderate to severe active *rheumatoid arthritis* when response to disease-modifying antirheumatic drugs (including methotrexate) has been inadequate. Certolizumab pegol can be used in combination with methotrexate, or as a

monotherapy if methotrexate is not tolerated or is contra-indicated. Certolizumab pegol is also licensed for the treatment of severe active *ankylosing spondylitis* in patients who have had an inadequate response to, or are intolerant of NSAIDs. It is also licensed for the treatment of severe active *axial spondyloarthritis*, without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs.

Etanercept is licensed for the treatment of moderate to severe active *rheumatoid arthritis* either alone or in combination with methotrexate when the response to other disease-modifying antirheumatic drugs is inadequate and in severe, active and progressive *rheumatoid arthritis* in patients not previously treated with methotrexate. It is also licensed for the treatment of active and progressive *psoriatic arthritis* inadequately responsive to other disease-modifying antirheumatic drugs, and for severe *ankylosing spondylitis* inadequately responsive to conventional therapy. Etanercept also has a role in plaque psoriasis.

Golimumab is licensed in combination with methotrexate for the treatment of moderate to severe active *rheumatoid arthritis* when response to disease-modifying antirheumatic drug (DMARD) therapy (including methotrexate has been inadequate; it is also licensed in combination with methotrexate for patients with severe, active, and progressive rheumatoid arthritis not previously treated with methotrexate. Golimumab is also licensed for the treatment of active and progressive *psoriatic arthritis*, as monotherapy or in combination with methotrexate, when response to DMARD therapy has been inadequate; it is also licensed for the treatment of severe active *ankylosing spondylitis* when there is an inadequate response to conventional treatment.

Infliximab is licensed for the treatment of active *rheumatoid arthritis* in combination with methotrexate when the response to other disease-modifying antirheumatic drugs, including methotrexate, is inadequate; it is also licensed in combination with methotrexate for patients not previously treated with methotrexate or other DMARDs who have severe, active, and progressive rheumatoid arthritis. Infliximab is also licensed for the treatment of *ankylosing spondylitis*, in patients with severe axial symptoms who have not responded adequately to conventional therapy, and in combination with methotrexate (or alone if methotrexate is not tolerated or is contra-indicated) for the treatment of active and progressive *psoriatic arthritis* which has not responded adequately to disease-modifying antirheumatic drugs.

Rituximab p. 820 is licensed in combination with methotrexate for the treatment of severe active *rheumatoid arthritis* in patients whose condition has not responded adequately to other disease-modifying antirheumatic drugs (including one or more tumour necrosis factor inhibitors) or who are intolerant of them. Rituximab has a role in malignant disease.

Abatacept p. 1007 prevents the full activation of T-lymphocytes. It is licensed for moderate to severe active *rheumatoid arthritis* in combination with methotrexate, in patients unresponsive to other disease-modifying antirheumatic drugs (including methotrexate or a tumour necrosis factor (TNF) inhibitor). Abatacept is not recommended for use in combination with TNF inhibitors.

Anakinra p. 1004 inhibits the activity of interleukin-1. Anakinra (in combination with methotrexate) is licensed for the treatment of *rheumatoid arthritis* which has not responded to methotrexate alone. Anakinra is not recommended for the treatment of rheumatoid arthritis except when used in a controlled long-term clinical study. Patients who are already receiving anakinra for rheumatoid arthritis should continue treatment until they and their specialist consider it appropriate to stop.

Belimumab p. 795 inhibits the activity of B-lymphocyte stimulator. Belimumab is licensed as adjunctive therapy in patients with active, autoantibody-positive systemic lupus erythematosus with a high degree of disease activity despite standard therapy.

Secukinumab p. 1004 inhibits the activity of interleukin-17A. Secukinumab is licensed for the treatment of active *psoriatic arthritis*, in combination with methotrexate or alone, which has not responded adequately to disease-modifying antirheumatic drugs; it is also licensed for the treatment of *ankylosing spondylitis*, in patients who have not responded adequately to conventional therapy. Secukinumab also has a role in plaque psoriasis.

Tocilizumab p. 1005 antagonises the actions of interleukin-6. Tocilizumab is licensed for use in patients with moderate to severe active *rheumatoid arthritis* when response to at least one disease-modifying antirheumatic drug or tumour necrosis factor inhibitor has been inadequate, or in those who are intolerant of these drugs. Tocilizumab can be used in combination with methotrexate, or as monotherapy if methotrexate is not tolerated or is contra-indicated.

Ustekinumab p. 1006 inhibits the activity of interleukins 12 and 23. It is licensed for the treatment of active *psoriatic arthritis* (in combination with methotrexate or alone) in patients who have had an inadequate response to one or more disease-modifying antirheumatic drugs.

**Other drugs used for Arthritis** Acetofenac, p. 1030 · Acemetacin, p. 1030 · Celecoxib, p. 1031 · Dexibuprofen, p. 1032 · Diclofenac potassium, p. 1033 · Diclofenac sodium, p. 1034 · Etodolac, p. 1037 · Etoricoxib, p. 1038 · Fenoprofen, p. 1039 · Flurbiprofen, p. 1040 · Ibuprofen, p. 1041 · Indometacin, p. 1043 · Ketoprofen, p. 1044 · Mefenamic acid, p. 1046 · Meloxicam, p. 1046 · Nabumetone, p. 1047 · Naproxen, p. 1048 · Piroxicam, p. 1049 · Prednisone, p. 641 · Sulindac, p. 1051 · Tenoxicam, p. 1051 · Tiaprofenic acid, p. 1052

## CHONDROPROTECTIVE DRUGS

### Glucosamine

- **DRUG ACTION** Glucosamine is a natural substance found in mucopolysaccharides, mucoproteins, and chitin.

#### ● INDICATIONS AND DOSE

##### ALATERIS®

##### Symptomatic relief of mild to moderate osteoarthritis of the knee

###### ► BY MOUTH

- Adult: 1250 mg once daily, review treatment if no benefit after 2–3 months

##### DOLENIO®

##### Symptomatic relief of mild to moderate osteoarthritis of the knee

###### ► BY MOUTH

- Adult: 1500 mg once daily, review treatment if no benefit after 2–3 months

##### GLUSARTEL®

##### Symptomatic relief of mild to moderate osteoarthritis of the knee

###### ► BY MOUTH

- Adult: 1500 mg once daily, dose to be dissolved in at least 250 mL of water, review treatment if no benefit after 2–3 months

- **CAUTIONS** Asthma · impaired glucose tolerance · predisposition to cardiovascular disease
- **INTERACTIONS** → Appendix 1: glucosamine

### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · constipation · diarrhoea · drowsiness · dyspepsia · fatigue · flatulence · headache · nausea
- **Uncommon** Flushing · pruritus · rash
- **Frequency not known** Hair loss · visual disturbances
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if patient has a shellfish allergy.
- **PREGNANCY** Manufacturers advise avoid—no information available.
- **BREAST FEEDING** Manufacturers advise avoid—no information available.
- **MONITORING REQUIREMENTS**
  - Monitor blood-glucose concentration before treatment and periodically thereafter in patients with impaired glucose tolerance.
  - Monitor cholesterol in patients with predisposition to cardiovascular disease.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (May 2008) that glucosamine (*Alateris*®) and (July 2011) glucosamine (*Glusartel*®) are **not** recommended for use within NHS Scotland for the symptomatic relief of mild to moderate osteoarthritis of the knee.

- **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing—the mechanism of action is not understood and there is limited evidence to show it is effective.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

ELECTROLYTES: May contain Sodium

► **Alateris** (MWK Healthcare Ltd)

Glucosamine (as Glucosamine hydrochloride) 625 mg Alateris

625mg tablets | 60 tablet [PoM] £18.40 DT price = £18.40

► **Dolenio** (Alissa Healthcare Research Ltd)

Dolenio 1500mg tablets | 30 tablet [PoM] £18.20 DT price = £18.20

## DISEASE-MODIFYING ANTI-RHEUMATIC DRUGS

### Hydroxychloroquine sulfate

#### ● INDICATIONS AND DOSE

**Active rheumatoid arthritis (administered on expert advice) | Systemic and discoid lupus erythematosus (administered on expert advice) | Dermatological conditions caused or aggravated by sunlight (administered on expert advice)**

► BY MOUTH

- **Adult:** 200–400 mg daily, daily maximum dose to be based on ideal body-weight; maximum 6.5 mg/kg per day

- **CAUTIONS** Acute porphyrias p. 969 · diabetes (may lower blood glucose) · elderly · G6PD deficiency · may aggravate myasthenia gravis · may exacerbate psoriasis · neurological disorders (especially in those with a history of epilepsy) · severe gastro-intestinal disorders

#### CAUTIONS, FURTHER INFORMATION

- **Screening for ocular toxicity** A review group convened by the Royal College of Ophthalmologists has updated guidelines for screening to prevent ocular toxicity on long-term treatment with chloroquine and hydroxychloroquine (*Hydroxychloroquine and Ocular Toxicity: Recommendations on Screening* 2009). The following recommendations relate to hydroxychloroquine, which is only rarely associated with toxicity.

*Before treatment:*

- Assess renal and liver function (adjust dose if impaired)

- Ask patient about visual impairment (not corrected by glasses). If impairment or eye disease present, assessment by an optometrist is advised and any abnormality should be referred to an ophthalmologist
- Record near visual acuity of each eye (with glasses where appropriate) using a standard reading chart
- Initiate hydroxychloroquine treatment if no abnormality detected (at a dose not exceeding hydroxychloroquine sulfate 6.5 mg/kg daily)  
*During treatment:*
- Ask patient about visual symptoms and monitor visual acuity annually using the standard reading chart
- Refer to ophthalmologist if visual acuity changes or if vision blurred and warn patient to seek prescribing doctor's advice about stopping treatment
- If long-term treatment is required (more than 5 years), individual arrangement should be agreed with the local ophthalmologist

- **INTERACTIONS** → Appendix 1: hydroxychloroquine

#### ● SIDE-EFFECTS

- **Common or very common** Gastro-intestinal disturbances · headache · pruritus · rashes · skin reactions
- **Uncommon** Convulsions · discoloration of skin, nails, and mucous membranes · ECG changes · hair depigmentation · hair loss · keratopathy · ototoxicity · retinal damage · visual changes
- **Rare** Acute generalised exanthematous pustulosis · agranulocytosis · angioedema · aplastic anaemia · blood disorders · cardiomyopathy · emotional disturbances · exfoliative dermatitis · hepatic damage · mental changes · myopathy · neuromyopathy · photosensitivity · psychosis · Stevens-Johnson syndrome · thrombocytopenia
- **Frequency not known** Bronchospasm · diffuse parenchymal lung disease · drug rash with eosinophilia and systemic symptoms

#### Overdose

Hydroxychloroquine is very toxic in overdose; overdose is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

- **PREGNANCY** It is not necessary to withdraw an antimalarial drug during pregnancy if the rheumatic disease is well controlled; however, the manufacturer of hydroxychloroquine advises avoiding use.
- **BREAST FEEDING** Avoid—risk of toxicity in infant.
- **HEPATIC IMPAIRMENT** Caution in moderate to severe hepatic impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution. Monitor plasma-hydroxychloroquine concentration in severe renal impairment.
- **MONITORING REQUIREMENTS** Manufacturers recommend regular ophthalmological examination but the evidence of practical value is unsatisfactory (see advice of the Royal College of Ophthalmologists).
- **PRESCRIBING AND DISPENSING INFORMATION** To avoid excessive dosage in obese patients, the dose of hydroxychloroquine should be calculated on the basis of ideal body-weight.
- **PATIENT AND CARER ADVICE** Do not take antacids for at least 4 hours before or after hydroxychloroquine to reduce possible interference with hydroxychloroquine absorption.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21

#### ► Hydroxychloroquine sulfate (Non-proprietary)

**Hydroxychloroquine sulfate 200 mg** Hydroxychloroquine 200mg tablets | 60 tablet **[PoM]** £5.15 DT price = £3.64

#### ► Plaquenil (Sanofi)

**Hydroxychloroquine sulfate 200 mg** Plaquenil 200mg tablets | 60 tablet **[PoM]** £5.15 DT price = £3.64

#### ► Quinoric (Bristol Laboratories Ltd)

**Hydroxychloroquine sulfate 200 mg** Quinoric 200mg tablets | 60 tablet **[PoM]** £4.75 DT price = £3.64

## Leflunomide

### ● INDICATIONS AND DOSE

**Moderate to severe active rheumatoid arthritis (specialist use only)**

#### ► BY MOUTH

- Adult: Initially 100 mg once daily for 3 days, then reduced to 10–20 mg once daily

**Active psoriatic arthritis (specialist use only)**

#### ► BY MOUTH

- Adult: Initially 100 mg once daily for 3 days, then reduced to 20 mg once daily

- **CONTRA-INDICATIONS** Serious infection · severe hypoproteinaemia · severe immunodeficiency

- **CAUTIONS** Anaemia (avoid if significant and due to causes other than rheumatoid arthritis) · history of tuberculosis · impaired bone-marrow function (avoid if significant and due to causes other than rheumatoid arthritis) · leucopenia (avoid if significant and due to causes other than rheumatoid arthritis) · thrombocytopenia (avoid if significant and due to causes other than rheumatoid arthritis)

- **INTERACTIONS** → Appendix 1: leflunomide

### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · alopecia · anorexia · asthenia · diarrhoea · dizziness · dry skin · headache · increased blood pressure · leucopenia · nausea · oral mucosal disorders · paraesthesia · pruritus · rash · tenosynovitis · vomiting
- **Uncommon** Anaemia · anxiety · hyperlipidaemia · hypokalaemia · hypophosphataemia · taste disturbance · tendon rupture · thrombocytopenia
- **Rare** Hepatitis · eosinophilia · interstitial lung disease · jaundice · pancytopenia · severe infection
- **Very rare** Hepatic failure · pancreatitis · peripheral neuropathy · progressive multifocal leucoencephalopathy · Stevens-Johnson syndrome · toxic epidermal necrolysis · vasculitis
- **Frequency not known** Bone-marrow toxicity · hypouricaemia · malignancy · reduced sperm count · renal failure

### SIDE-EFFECTS, FURTHER INFORMATION

Discontinue treatment and institute washout procedure in case of serious side-effect (consult product literature).

- **Hepatotoxicity** Potentially life-threatening hepatotoxicity reported usually in the first 6 months. Discontinue treatment (and institute washout procedure—consult product literature) or reduce dose according to liver-function abnormality; if liver-function abnormality persists after dose reduction, discontinue treatment and institute washout procedure.

- **CONCEPTION AND CONTRACEPTION** Effective contraception **essential** during treatment and for at least 2 years after treatment in women and at least 3 months

after treatment in men (plasma concentration monitoring required; waiting time before conception may be reduced with washout procedure—consult product literature). The concentration of the active metabolite after washout should be less than 20 micrograms/litre (measured on 2 occasions 14 days apart) in men or women before conception—consult product literature.

- **PREGNANCY** Avoid—active metabolite teratogenic in *animal* studies.
- **BREAST FEEDING** Present in milk in *animal* studies—manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Avoid—active metabolite may accumulate.
- **RENAL IMPAIRMENT** Manufacturer advises avoid in moderate or severe impairment—no information available.
- **PRE-TREATMENT SCREENING** Exclude pregnancy before treatment.
- **MONITORING REQUIREMENTS**
  - Monitor full blood count (including differential white cell count and platelet count) before treatment and every 2 weeks for 6 months then every 8 weeks.
  - Monitor liver function before treatment and every 2 weeks for first 6 months then every 8 weeks.
  - Monitor blood pressure.
- **TREATMENT CESSATION** Washout Procedure The active metabolite persists for a long period; to aid drug elimination in case of serious adverse effect, or before starting another disease-modifying antirheumatic drug, or before conception, stop treatment and give *either* colestyramine p. 191 or charcoal, activated p. 1256. Procedure may be repeated as necessary.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 4

#### ► Leflunomide (Non-proprietary)

**Leflunomide 10 mg** Leflunomide 10mg tablets | 30 tablet **[PoM]** £46.00 DT price = £4.69

**Leflunomide 15 mg** Leflunomide 15mg tablets | 30 tablet **[PoM]** £46.00 DT price = £4.60

**Leflunomide 20 mg** Leflunomide 20mg tablets | 30 tablet **[PoM]** £61.36 DT price = £4.62

#### ► Arava (Sanofi)

**Leflunomide 10 mg** Arava 10mg tablets | 30 tablet **[PoM]** £51.13 DT price = £4.69

**Leflunomide 20 mg** Arava 20mg tablets | 30 tablet **[PoM]** £61.36 DT price = £4.62

**Leflunomide 100 mg** Arava 100mg tablets | 3 tablet **[PoM]** £30.67

## Penicillamine

- **DRUG ACTION** Penicillamine aids the elimination of copper ions in Wilson's disease (hepatolenticular degeneration).

### ● INDICATIONS AND DOSE

**Severe active rheumatoid arthritis (administered on expert advice)**

#### ► BY MOUTH

- **Adult:** Initially 125–250 mg daily for 1 month, then increased in steps of 125–250 mg, at intervals of not less than 4 weeks; maintenance 500–750 mg daily in divided doses, then reduced in steps of 125–250 mg every 12 weeks, dose reduction attempted only if remission sustained for 6 months; maximum 1.5 g per day
- **Elderly:** Initially up to 125 mg daily for 1 month, then increased in steps of up to 125 mg, at intervals of at least 4 weeks; maximum 1 g per day

**Wilson's disease**

## ► BY MOUTH

- Adult: 1.5–2 g daily in divided doses, adjusted according to response, to be taken before food; maintenance 0.75–1 g daily, a dose of 2 g daily should not be continued for more than one year; maximum 2 g per day
- Elderly: 20 mg/kg daily in divided doses, adjusted according to response

**Autoimmune hepatitis (used rarely; after disease controlled with corticosteroids)**

## ► BY MOUTH

- Adult: Initially 500 mg daily in divided doses, to be increased slowly over 3 months; maintenance 1.25 g daily

**Cystinuria, therapeutic**

## ► BY MOUTH

- Adult: 1–3 g daily in divided doses, to be adjusted to maintain urinary cystine below 200 mg/litre, to be taken before food

**Cystinuria, prophylactic**

## ► BY MOUTH

- Adult: 0.5–1 g daily, maintain urinary cystine below 300 mg/litre and adequate fluid intake (at least 3 litres daily), to be taken at bedtime
- Elderly: Minimum dose to maintain urinary cystine below 200 mg/litre is recommended

- **CONTRA-INDICATIONS** Lupus erythematosus

- **CAUTIONS** Neurological involvement in Wilson's disease

- **INTERACTIONS** → Appendix 1: penicillamine

● **SIDE-EFFECTS**

- **Common or very common** Anorexia · fever · nausea · proteinuria · rash · thrombocytopenia
- **Rare** Alopecia · breast enlargement (male and female) · elastosis perforans · haematuria (withdraw immediately if cause unknown) · mouth ulceration · pseudoxanthoma elasticum · skin laxity · stomatitis
- **Frequency not known** Agranulocytosis · aplastic anaemia · blood disorders · bronchiolitis · cholestatic jaundice · dermatomyositis · glomerulonephritis · Goodpasture's syndrome · haemolytic anaemia · haemolytic leucopenia · late rashes (consider dose reduction) · lupus erythematosus · myasthenia gravis · nephrotic syndrome · neuropathy (especially if neurological involvement in Wilson's disease—prophylactic pyridoxine recommended) · neutropenia · pancreatitis · pemphigus · pneumonitis · polymyositis · pulmonary haemorrhage · rheumatoid arthritis · septic arthritis (in patients with rheumatoid arthritis) · Stevens-Johnson syndrome · taste loss (mineral supplements not recommended) · urticaria · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Proteinuria** Proteinuria, associated with immune complex nephritis, occurs in up to 30% of patients, but may resolve despite continuation of treatment; treatment may be continued provided that renal function tests remain normal, oedema is absent, and the 24-hour urinary excretion of protein does not exceed 2 g.
- **Rash** Rashes are a common side-effect. Those that occur in the first few months of treatment disappear when the drug is stopped and treatment may then be re-introduced at a lower dose level and gradually increased.
- **Taste loss** Loss of taste can occur about 6 weeks after treatment is started but usually returns 6 weeks later irrespective of whether treatment is discontinued.
- **Nausea** Nausea may occur but is not usually a problem provided that penicillamine is taken before food or on retiring and that low initial doses are used and only gradually increased.

- **ALLERGY AND CROSS-SENSITIVITY** Patients who are hypersensitive to penicillin may react rarely to penicillamine.
- **PREGNANCY** Fetal abnormalities reported rarely; avoid if possible.
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **RENAL IMPAIRMENT** Reduce dose and monitor renal function or avoid (consult product literature).
- **MONITORING REQUIREMENTS**
  - Consider withdrawal if platelet count falls below 120 000/mm<sup>3</sup> or white blood cells below 2500/mm<sup>3</sup> or if 3 successive falls within reference range (can restart at reduced dose when counts return to within reference range but permanent withdrawal necessary if recurrence of leucopenia or thrombocytopenia).
  - Blood counts, including platelets, and urine examinations should be carried out before starting treatment and then every 1 or 2 weeks for the first 2 months then every 4 weeks to detect blood disorders and proteinuria (they should also be carried out in the week after any dose increase).
  - A reduction in platelet count calls for discontinuation with subsequent re-introduction at a lower dosage and then, if possible, gradual increase.
  - Longer intervals may be adequate in cystinuria and Wilson's disease.
- **PATIENT AND CARER ADVICE** Counselling on the symptoms of blood disorders is advised. Warn patient and carers to tell doctor immediately if sore throat, fever, infection, non-specific illness, unexplained bleeding and bruising, purpura, mouth ulcers, or rashes develop.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

**Tablet**

CAUTIONARY AND ADVISORY LABELS 6, 22

► **Penicillamine (Non-proprietary)**

**Sodium aurothiomalate**● **INDICATIONS AND DOSE****Active progressive rheumatoid arthritis (administered on expert advice)**► **BY DEEP INTRAMUSCULAR INJECTION**

- Adult: Test dose 10 mg, followed by 50 mg once weekly until there is definite evidence of remission, then reduced to 50 mg every 4 weeks continued for up to 5 years after complete remission, dose to be reduced gradually. Benefit is not expected until 300–500 mg has been given; it should be discontinued if there is no remission after 1 g has been given

**Relapse in patients who have previously received sodium aurothiomalate therapy for active progressive rheumatoid arthritis (administered on expert advice)**► **BY DEEP INTRAMUSCULAR INJECTION**

- Adult: 50 mg once weekly until control has been obtained again, then reduced to 50 mg every 4 weeks continued for up to 5 years after complete continued →

remission, if no response is seen within 2 months, alternative treatment should be sought

- **CONTRA-INDICATIONS** Exfoliative dermatitis · history of blood disorders · history of bone marrow aplasia · necrotising enterocolitis · pulmonary fibrosis · systemic lupus erythematosus
- **CAUTIONS** Colitis · eczema · elderly · history of urticaria
- CAUTIONS, FURTHER INFORMATION**  
Sodium aurothiomalate should be discontinued in the presence of blood disorders, gastro-intestinal bleeding (associated with ulcerative enterocolitis), or unexplained proteinuria (associated with immune complex nephritis) which is repeatedly above 300 mg/litre.
- **INTERACTIONS** → Appendix 1: sodium aurothiomalate
- **SIDE-EFFECTS** Alopecia · blood disorders (sometimes sudden and fatal) · colitis · gold deposits in eye · hepatotoxicity with cholestatic jaundice · irreversible pigmentation in sun-exposed areas (on prolonged parenteral treatment) · mouth ulcers · nephrotic syndrome · peripheral neuropathy · proteinuria · pulmonary fibrosis · severe anaphylactic reactions · skin reactions · stomatitis · taste disturbances
- SIDE-EFFECTS, FURTHER INFORMATION**  
Rashes with pruritus often occur after 2 to 6 months of treatment and may necessitate discontinuation.
- **PREGNANCY** Consider reducing dose and frequency. Manufacturer advises avoid but limited data suggests usually not necessary to withdraw if condition well controlled.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk; theoretical possibility of rashes and idiosyncratic reactions.
- **HEPATIC IMPAIRMENT** Caution in mild to moderate impairment. Avoid in severe impairment.
- **RENAL IMPAIRMENT** Caution in mild to moderate impairment. Avoid in severe impairment.
- **MONITORING REQUIREMENTS**
  - ▶ Urine tests and full blood counts (including total and differential white cell and platelet counts) must be performed before starting treatment and before each intramuscular injection.
  - ▶ Monitor for pulmonary fibrosis with annual chest X-ray.
- **PATIENT AND CARER ADVICE** Patients should be advised to seek prompt medical attention if diarrhoea, sore throat, fever, infection, non-specific illness, unexplained bleeding and bruising, purpura, mouth ulcers, metallic taste, rash, breathlessness, or cough develop.

## IMMUNOSUPPRESSANTS > INTERLEUKIN INHIBITORS

### Anakinra

#### ● INDICATIONS AND DOSE

**Treatment of rheumatoid arthritis (in combination with methotrexate) which has not responded to methotrexate alone**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 100 mg once daily

- **CONTRA-INDICATIONS** Neutropenia
- **CAUTIONS** History of asthma (risk of serious infection) · predisposition to infection
- **INTERACTIONS** → Appendix 1: anakinra
- **SIDE-EFFECTS**
  - ▶ Common or very common Neutropenia
  - ▶ Frequency not known Antibody formation · headache · infections · injection-site reactions · malignancy
- SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ Blood disorders Neutropenia reported commonly—discontinue if neutropenia develops.
- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used during treatment.
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** Caution if eGFR 30–50 mL/minute/1.73 m<sup>2</sup>. Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
- **MONITORING REQUIREMENTS** Monitor neutrophil count before treatment, then every month for 6 months, then every 3 months.
- **PATIENT AND CARER ADVICE**  
Blood disorders Patients should be instructed to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat, bruising or, bleeding) develop.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**Scottish Medicines Consortium (SMC) Decisions**  
The *Scottish Medicines Consortium* has advised (July 2002) that anakinra is **not** recommended for the treatment of rheumatoid arthritis within NHS Scotland.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Kineret (Swedish Orphan Biovitrum Ltd)

Anakinra 150 mg per 1 ml Kineret 100mg/0.67ml solution for injection pre-filled syringes | 28 pre-filled disposable injection [PoM] £734.44

## Secukinumab

16-Mar-2016

- **DRUG ACTION** Secukinumab is a recombinant human monoclonal antibody that selectively binds to cytokine interleukin-17A (IL-17A) and inhibits the release of proinflammatory cytokines and chemokines.

#### ● INDICATIONS AND DOSE

**Psoriatic arthritis | Ankylosing spondylitis**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 150 mg every week for 5 doses, then maintenance 150 mg every month, review treatment if no response within 16 weeks of initial dose

**Psoriatic arthritis with concomitant moderate to severe plaque psoriasis or if inadequate response to anti-TNF $\alpha$  treatment | Plaque psoriasis**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 300 mg every week for 5 doses, then maintenance 300 mg every month, review treatment if no response within 16 weeks of initial dose

- **CONTRA-INDICATIONS** Severe active infection
- **CAUTIONS** Chronic infection · Crohn's disease (monitor for exacerbations) · history of recurrent infection · predisposition to infection (discontinue if new serious infection develops)

**CAUTIONS, FURTHER INFORMATION**

- ▶ **Tuberculosis** Manufacturer advises that patients with latent tuberculosis should complete anti-tuberculosis therapy before starting secukinumab.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Diarrhoea · oral herpes · rhinorrhoea · upper respiratory tract infections
- ▶ **Uncommon** Conjunctivitis · neutropenia (usually mild and reversible) · oral candidiasis · otitis externa · tinea pedis
- ▶ **Rare** Anaphylactic reactions

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 20 weeks after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—no information available.

- **BREAST FEEDING** Manufacturer advises avoid during treatment and for up to 20 weeks after discontinuing treatment—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe or pen out of the refrigerator 20 minutes before administration and to avoid injecting into areas of the skin that show psoriasis. Patients may self-administer Cosentyx® pre-filled pen.

● **PATIENT AND CARER ADVICE**

**Self-administration** Patients and their carers should be given training in subcutaneous injection technique.

**Infection** Patients and their carers should be advised to seek immediate medical attention if symptoms of infection develop during treatment with secukinumab.

● **NATIONAL FUNDING/ACCESS DECISIONS****NICE technology appraisals (TAs)**

- ▶ **Secukinumab for treating moderate to severe plaque psoriasis (July 2015)** NICE TA350  
Secukinumab is recommended as an option for the treatment of moderate to severe plaque psoriasis in adults if:

- the disease has failed to respond to standard systemic treatments (including ciclosporin, methotrexate, and PUVA), or when standard treatments are contra-indicated or not tolerated; *and*
- the manufacturer provides secukinumab with the discount agreed in the patient access scheme  
Secukinumab should be withdrawn in patients whose psoriasis has not responded adequately within 12 weeks of initial dose; further treatment cycles are not recommended.

Patients whose treatment with secukinumab was started before this guidance was published, but does not meet these criteria, should have the option to continue treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA350](http://www.nice.org.uk/TA350)

- ▶ **Secukinumab for active ankylosing spondylitis after treatment with non-steroidal anti-inflammatory drugs or TNF-alpha inhibitors (September 2016)** NICE TA407

Secukinumab is recommended, within its marketing authorisation, as an option for treating active ankylosing spondylitis in adults who have responded inadequately to conventional therapy (non-steroidal anti-inflammatory drugs or TNF-alpha inhibitors) only if the manufacturer provides secukinumab with the discount agreed in the patient access scheme.

Assess response to secukinumab after 16 weeks of treatment and continue only if there is clear evidence of response, defined as a reduction in the Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) score to 50% of the pre-treatment value or by 2 or more units **and** a

reduction in the spinal pain visual analogue scale (VAS) by 2 cm or more.

[www.nice.org.uk/TA407](http://www.nice.org.uk/TA407)

**Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (May 2015) that secukinumab (Cosentyx®) is accepted for restricted use within NHS Scotland for the treatment of moderate to severe plaque psoriasis in adults who have failed to respond to standard systemic therapies (including ciclosporin, methotrexate and phototherapy), or when standard treatments cannot be used because of intolerance or contra-indications.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Cosentyx** (Novartis Pharmaceuticals UK Ltd) ▼  
**Secukinumab 150 mg per 1 ml** Cosentyx 150mg/1ml solution for injection pre-filled pens | 2 pre-filled disposable injection [PoM] £1,218.78  
**Cosentyx 150mg/1ml solution for injection pre-filled syringes** | 2 pre-filled disposable injection [PoM] £1,218.78

**Tocilizumab**

31-May-2016

● **INDICATIONS AND DOSE**

**Moderate to severe active rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) when response to at least one disease-modifying antirheumatic drug or tumour necrosis factor inhibitor has been inadequate, or in those who are intolerant of these drugs**

- ▶ **BY INTRAVENOUS INFUSION**
- ▶ **Adult:** 8 mg/kg every 4 weeks (max. per dose 800 mg), for dose adjustments in patients with liver enzyme abnormalities, or low absolute neutrophil or platelet count, consult product literature

- **CONTRA-INDICATIONS** Do not initiate if absolute neutrophil count less than  $2 \times 10^3$ /litre · severe active infection

- **CAUTIONS** History of diverticulitis · history of intestinal ulceration · history of recurrent or chronic infection (interrupt treatment if serious infection occurs) · low absolute neutrophil count · low platelet count · predisposition to infection (interrupt treatment if serious infection occurs)

**CAUTIONS, FURTHER INFORMATION**

- ▶ **Tuberculosis** Patients with latent tuberculosis should be treated with standard therapy before starting tocilizumab.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abdominal pain · antibody formation · dizziness · gastritis · headache · hypercholesterolaemia · hypersensitivity · hypertension · infection · leucopenia · mouth ulceration · neutropenia · peripheral oedema · pruritus · raised hepatic transaminases · rash · upper respiratory-tract infection
- ▶ **Uncommon** Anaphylaxis · gastric ulcer · gastro-intestinal perforation · hypertriglyceridaemia · hypothyroidism · infusion related reactions · nephrolithiasis
- ▶ **Frequency not known** Thrombocytopenia
- ▶ **SIDE-EFFECTS, FURTHER INFORMATION**
- ▶ **Neutrophil and platelet counts** Discontinue if absolute neutrophil count less than  $0.5 \times 10^9$ /litre or platelet count less than  $50 \times 10^3$ /microlitre).

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—consult product literature.
- **RENAL IMPAIRMENT** Manufacturer advises monitor renal function closely in moderate or severe impairment.
- **PRE-TREATMENT SCREENING**  
Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor lipid profile 4–8 weeks after starting treatment and then as indicated.
  - ▶ Monitor for demyelinating disorders.
  - ▶ Monitor hepatic transaminases every 4–8 weeks for first 6 months, then every 12 weeks.
  - ▶ Monitor neutrophil and platelet counts 4–8 weeks after starting treatment and then as indicated.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (RoActemra®), give intermittently in Sodium chloride 0.9%; dilute requisite dose to a volume of 100 mL with infusion fluid and give over 1 hour.
- **PATIENT AND CARER ADVICE** An alert card should be provided.  
Patients and their carers should be advised to seek immediate medical attention if symptoms of infection occur, or if symptoms of diverticular perforation such as abdominal pain, haemorrhage, or fever accompanying change in bowel habits occur.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NICE technology appraisals (TAs)**
  - ▶ Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016) NICE TA375  
Tocilizumab, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if **all** the following criteria are met:
    - disease is severe, that is, a disease activity score (DAS28) greater than 5.1,
    - disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs),
    - the manufacturers provides tocilizumab as agreed in the patient access schemes.
 Tocilizumab can be used as monotherapy in patients who cannot take methotrexate because it is contra-indicated or because of intolerance, when the criteria above are met.  
Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.  
Patients currently receiving tocilizumab whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.  
[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)
  - ▶ Tocilizumab for the treatment of rheumatoid arthritis (February 2012—updated February 2016) NICE TA247  
Tocilizumab, in combination with methotrexate, is recommended as an option for the treatment of rheumatoid arthritis in adults if:
    - the disease has responded inadequately to DMARDs and a TNF inhibitor and the patient cannot receive rituximab

because of contra-indications or intolerance, **and** tocilizumab is used as described for TNF inhibitor treatments (specifically the recommendations on disease activity) in the NICE guidance (August 2010) Adalimumab, etanercept, infliximab, rituximab and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor, *or*

- the disease has responded inadequately to one or more TNF inhibitor treatments and to rituximab
  - and the manufacturer provides tocilizumab with the discount agreed as part of the patient access scheme.
- Patients currently receiving tocilizumab for the treatment of rheumatoid arthritis who do not meet these criteria should have the option to continue treatment until they and their clinicians consider it appropriate to stop.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

##### ▶ RoActemra (Roche Products Ltd)

**Tocilizumab 20 mg per 1 mL** RoActemra 400mg/20mL concentrate for solution for infusion vials | 1 vial [POM] £512.00 (Hospital only)  
RoActemra 200mg/10mL concentrate for solution for infusion vials | 1 vial [POM] £256.00 (Hospital only)  
RoActemra 80mg/4mL concentrate for solution for infusion vials | 1 vial [POM] £102.40 (Hospital only)

## Ustekinumab

#### ● INDICATIONS AND DOSE

**Severe plaque psoriasis that has not responded to at least 2 standard systemic treatments and photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 100 kg): Initially 45 mg, then 45 mg after 4 weeks, then 45 mg every 12 weeks, discontinue if no response within 16 weeks
- ▶ Adult (body-weight 100 kg and above): Initially 45–90 mg, then 45–90 mg after 4 weeks, then 45–90 mg every 12 weeks, discontinue if no response within 16 weeks

**Active psoriatic arthritis (in combination with methotrexate or alone) in patients who have had an inadequate response to one or more disease-modifying antirheumatic drugs**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 100 kg): Initially 45 mg, then 45 mg after 4 weeks, then 45 mg every 12 weeks, review treatment if no response within 28 weeks
- ▶ Adult (body-weight 100 kg and above): Initially 45–90 mg, then 45–90 mg after 4 weeks, then 45–90 mg every 12 weeks, review treatment if no response within 28 weeks

#### ● CONTRA-INDICATIONS Active infection

- **CAUTIONS** Development of malignancy · elderly · history of malignancy · predisposition to infection · start appropriate treatment if widespread erythema and skin exfoliation develop, and stop ustekinumab treatment if exfoliative dermatitis suspected

#### CAUTIONS, FURTHER INFORMATION

- ▶ Tuberculosis Active tuberculosis should be treated with standard treatment for at least 2 months before starting ustekinumab. Patients who have previously received adequate treatment for tuberculosis can start ustekinumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before

starting ustekinumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with ustekinumab.

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Arthralgia · diarrhoea · dizziness · headache · infections (sometimes severe) · injection-site reactions · malaise · myalgia · nausea · oropharyngeal pain · pruritus
- ▶ **Uncommon** Depression · facial palsy · hypersensitivity reactions (possibly delayed onset) · nasal congestion · pustular psoriasis
- ▶ **Rare** Exfoliative dermatitis

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for 15 weeks after stopping treatment.

● **PREGNANCY** Avoid.

● **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

● **PRE-TREATMENT SCREENING**

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

● **MONITORING REQUIREMENTS**

- ▶ Monitor for non-melanoma skin cancer, especially in patients with a history of PUVA treatment or prolonged immunosuppressant therapy, or those over 60 years of age.
- ▶ Monitor for signs and symptoms of exfoliative dermatitis or erythrodermic psoriasis.

● **PATIENT AND CARER ADVICE**

Exfoliative dermatitis Patients should be advised to seek prompt medical attention if symptoms suggestive of exfoliative dermatitis or erythrodermic psoriasis (such as increased redness and shedding of skin over a larger area of the body) develop.

Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAS)**

- ▶ **Ustekinumab for plaque psoriasis in adults (September 2009)** NICE TA180

Ustekinumab is recommended for the treatment of severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and to photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Ustekinumab should be withdrawn if the response is not adequate after 16 weeks.

For patients weighing over 100 kg, the manufacturer should provide the 90-mg dose of ustekinumab at the same price as the 45-mg dose.

[www.nice.org.uk/TA180](http://www.nice.org.uk/TA180)

- ▶ **Ustekinumab for treating active psoriatic arthritis (June 2015)** NICE TA340

Ustekinumab is an option, alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adults only when:

- treatment with tumour necrosis factor (TNF) alpha inhibitors is contra-indicated but would otherwise be considered (as described in the NICE guidance on etanercept, infliximab and adalimumab for the treatment of psoriatic arthritis (August 2010) and golimumab for the treatment of psoriatic arthritis (April 2011) or
- the patient has had treatment with 1 or more TNF-alpha inhibitors.

Ustekinumab is recommended only if the manufacturer provides the 90 mg dose of ustekinumab for patients who

weigh more than 100 kg at the same cost as the 45 mg dose, as agreed in the patient access scheme.

Ustekinumab treatment should be stopped if the patient's psoriatic arthritis has not shown an adequate response using the Psoriatic Arthritis Response Criteria (PsARC) at 24 weeks.

Patients currently receiving ustekinumab whose disease does not meet the above criteria should have the option to continue treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA340](http://www.nice.org.uk/TA340)

**Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (February 2014) that ustekinumab (*Stelara*®) is accepted for restricted use within NHS Scotland either alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adults who have responded inadequately to previous therapy with a non-biological disease-modifying anti-rheumatic drug, and failed on, or are unsuitable for, treatment with a TNF inhibitor.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

**IMMUNOSUPPRESSANTS > T-CELL ACTIVATION INHIBITORS**

**Abatacept**

31-May-2016

● **INDICATIONS AND DOSE**

**Moderate to severe active rheumatoid arthritis (in combination with methotrexate) in patients unresponsive to other disease-modifying antirheumatic drugs (including methotrexate or a tumour necrosis factor (TNF) inhibitor)**

- ▶ **INITIALLY BY INTRAVENOUS INFUSION**

- ▶ **Adult (body-weight up to 60 kg):** 500 mg every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 500 mg every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose

- ▶ **Adult (body-weight 60–100 kg):** 750 mg every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 750 mg every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose

- ▶ **Adult (body-weight 101 kg and above):** 1 g every 2 weeks for 3 doses (loading dose), then (by intravenous infusion) 1 g every 4 weeks, alternatively (by subcutaneous injection) 125 mg once weekly, first subcutaneous dose to be given within 1 day of the intravenous loading dose; patients who are unable to receive an infusion may initiate subcutaneous abatacept without receiving an intravenous loading dose

- **CONTRA-INDICATIONS** Severe infection
- **CAUTIONS** Do not initiate until active infections are controlled · elderly (increased risk of side-effects) · predisposition to infection (screen for latent tuberculosis and viral hepatitis) · progressive multifocal leucoencephalopathy (discontinue treatment if neurological symptoms present)
- **INTERACTIONS** → Appendix 1: abatacept
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · conjunctivitis · cough · diarrhoea · dizziness · dyspepsia · fatigue · flushing · headache · hypertension · infection · leucopenia · nausea · pain in extremities · paraesthesia · stomatitis · vomiting
  - ▶ **Uncommon** Psoriasis · alopecia · anxiety · arthralgia · basal and squamous cell carcinoma · bradycardia · bronchospasm · bruising · depression · dry eye · dry skin · dyspnoea · gastritis · hyperhidrosis · hypotension · menstrual disturbances · palpitation · skin papilloma · sleep disorder · tachycardia · thrombocytopenia · visual disturbance · weight gain
  - ▶ **Frequency not known** Lung cancer · lymphoma
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment and for 14 weeks after last dose.
- **PREGNANCY** Manufacturer advises avoid unless essential.
- **BREAST FEEDING** Present in milk in *animal* studies—manufacturer advises avoid breast-feeding during treatment and for 14 weeks after last dose.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, given intermittently in Sodium chloride 0.9%; reconstitute each vial with 10 mL water for injections using the silicone-free syringe provided; dilute requisite dose in Sodium Chloride 0.9% to 100 mL (using the same silicone-free syringe); give over 30 minutes through a low protein-binding filter (pore size 0.2–1.2 micron).
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NICE technology appraisals (TAs)**
  - ▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195  
 Abatacept, in combination with methotrexate, is an option for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or have an intolerance of, other disease-modifying antirheumatic drugs (DMARDs) including at least 1 tumour necrosis factor (TNF) inhibitor, and who cannot use rituximab because of contra-indications or intolerance. Treatment should be continued only if there is adequate response. Patients should be monitored at least every 6 months.  
[www.nice.org.uk/TA195](http://www.nice.org.uk/TA195)
  - ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)** NICE TA375  
 Abatacept, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if **all** the following criteria are met:
    - disease is severe, that is, a disease activity score (DAS28) greater than 5.1,
    - disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs),
    - the manufacturers provides abatacept as agreed in the patient access schemes.
 Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving abatacept whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

**Severe plaque psoriasis either refractory to at least 2 standard systemic treatments or photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** Initially 80 mg, then 40 mg every 2 weeks, to be started 1 week after initial dose, discontinue treatment if no response within 16 weeks

**Moderate-to-severe active rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) when response to other disease-modifying drugs (including methotrexate) has been inadequate | Severe, active, and progressive rheumatoid arthritis (in combination with methotrexate or alone if methotrexate inappropriate) not previously treated with methotrexate**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** 40 mg every 2 weeks, then increased if necessary to 40 mg once weekly, dose to be increased only in patients receiving adalimumab alone, review treatment if no response within 12 weeks

**Active and progressive psoriatic arthritis that has not responded adequately to other disease-modifying antirheumatic drugs | Severe active ankylosing spondylitis that has not responded adequately to other disease-modifying antirheumatic drugs | Severe axial spondyloarthritis without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of, NSAIDs**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** 40 mg every 2 weeks, discontinue treatment if no response within 12 weeks

#### **Severe active Crohn's disease**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** Initially 80 mg, then 40 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 12 weeks of initial dose

#### **Severe active Crohn's disease (accelerated regimen)**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 12 weeks of initial dose

**Severe active ulcerative colitis**

## ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, maximum 40 mg administered at a single site, review treatment if no response within 8 weeks of initial dose

**Active moderate to severe hidradenitis suppurativa (acne inversa) in patients with an inadequate response to conventional systemic therapy**

## ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 160 mg, given as either four 40 mg injections in one day or as two 40 mg injections per day for 2 consecutive days, followed by 80 mg after 2 weeks, given as two 40 mg injections in one day, then 40 mg after 2 weeks; maintenance 40 mg once weekly, review treatment if no response within 12 weeks; if treatment interrupted—consult product literature

**Uveitis (in combination with corticosteroids or alone if corticosteroids inappropriate), with or without other disease-modifying drugs (initiated under specialist supervision)**

## ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 80 mg, given as two 40 mg injections in one day, then 40 mg after 1 week; maintenance 40 mg every 2 weeks

- **CONTRA-INDICATIONS** Moderate or severe heart failure · severe infection
- **CAUTIONS** Demyelinating disorders (risk of exacerbation) · development of malignancy · do not initiate until active infections are controlled (discontinue if new serious infection develops) · hepatitis B virus—monitor for active infection · history of malignancy · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection

**CAUTIONS, FURTHER INFORMATION**

- **Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting adalimumab. Patients who have previously received adequate treatment for tuberculosis can start adalimumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting adalimumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with adalimumab.

- **SIDE-EFFECTS**
  - **Common or very common** Anxiety · benign tumours · chest pain · cough · dehydration · dermatitis · dizziness · dyspepsia · dyspnoea · electrolyte disturbances · eye disorders · flushing · gastrointestinal haemorrhage · haematuria · hyperlipidaemia · hypertension · hyperuricaemia · impaired healing · mood changes · musculoskeletal pain · oedema · onycholysis · paraesthesia · rash · renal impairment · skin cancer · sleep disturbances · tachycardia · vomiting
  - **Uncommon** Aortic aneurysm · arrhythmias · cholecystitis · cholelithiasis · dysphagia · erectile dysfunction · hearing loss · hepatic steatosis · interstitial lung disease · leukaemia · lymphoma · malignancy · neuropathy · nocturia · pancreatitis · pneumonitis · rhabdomyolysis · solid tumours · tinnitus · tremor · vascular occlusion
  - **Rare** Autoimmune hepatitis · demyelinating disorders · myocardial infarction
  - **Frequency not known** Abdominal pain · anaemia · antibody formation · aplastic anaemia · blood disorders · cutaneous

vasculitis · depression · fever · headache · hypersensitivity reactions · injection-site reactions · leucopenia · lupus erythematosus-like syndrome · nausea · new onset psoriasis · pancytopenia · pleural effusion · pruritus · pulmonary embolism · sarcoidosis · Stevens-Johnson syndrome · thrombocytopenia · worsening heart failure · worsening of symptoms of dermatomyositis · worsening psoriasis

**SIDE-EFFECTS, FURTHER INFORMATION**

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required during treatment and for at least 5 months after last dose.
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid; manufacturer advises avoid for at least 5 months after last dose.
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - Manufacturer advises monitor for infection before, during, and for 4 months after treatment.
  - Manufacturer advises monitor for non-melanoma skin cancer before and during treatment, especially in patients with a history of PUVA treatment for psoriasis or extensive immunosuppressant therapy.
  - For *uveitis*, manufacturer advises patients should be assessed for pre-existing or developing central demyelinating disorders before and at regular intervals during treatment.
- **PATIENT AND CARER ADVICE** An alert card should be provided.

When used to treat *hidradenitis suppurativa*, patients and their carers should be advised to use a daily topical antiseptic wash on lesions during treatment with adalimumab.

Tuberculosis patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, or, and fever) develop.

Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

**● NATIONAL FUNDING/ACCESS DECISIONS****NICE technology appraisals (TAs)**

- **Adalimumab for plaque psoriasis in adults (June 2008)**

**NICE TA146**

Adalimumab is recommended for the treatment of severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Adalimumab should be withdrawn if the response is not adequate after 16 weeks.

[www.nice.org.uk/TA146](http://www.nice.org.uk/TA146)

- **Infliximab and adalimumab for Crohn's disease (May 2010)**

**NICE TA187**

Adalimumab is recommended for the treatment of severe active Crohn's disease that has not responded to conventional therapy (including corticosteroids and other drugs affecting the immune response) or when conventional therapy cannot be used because of intolerance or contra-indications.

Adalimumab should be given as a planned course of treatment for 12 months or until treatment failure, whichever is shorter. Treatment should be continued beyond 12 months only if there is evidence of active disease—in these cases the need for treatment should be

reviewed at least annually. If the disease relapses after stopping treatment, adalimumab can be restarted.

[www.nice.org.uk/TA187](http://www.nice.org.uk/TA187)

- ▶ **Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015)** NICE TA329 Adalimumab is an option for treating moderately to severely active ulcerative colitis in adults whose disease has responded inadequately to conventional therapy including corticosteroids and mercaptopurine or azathioprine, or in adults who are intolerant to or have contra-indications for conventional therapies.

The choice of treatment should be made on an individual basis and if more than one treatment is suitable, the least expensive should be chosen.

Adalimumab should be given as a planned course of treatment until treatment fails (including the need for surgery) or until 12 months after starting treatment, whichever is shorter. Treatment should be continued only if there is clear evidence of a response. Patients who continue treatment should be reassessed at least every 12 months to determine whether ongoing treatment is still clinically appropriate.

[www.nice.org.uk/TA329](http://www.nice.org.uk/TA329)

- ▶ **Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010)** NICE TA199 Adalimumab is recommended for the treatment of active and progressive psoriatic arthritis in adults who have peripheral arthritis with at least 3 tender joints and at least 3 swollen joints, and who have not responded adequately to at least 2 standard disease-modifying antirheumatic drugs (used alone or in combination).

Adalimumab should be discontinued if there is an inadequate response at 12 weeks.

[www.nice.org.uk/TA199](http://www.nice.org.uk/TA199)

- ▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195 Adalimumab, in combination with methotrexate, is an option for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or have an intolerance of, other DMARDs including at least 1 TNF inhibitor, and who cannot use rituximab because of contra-indications or intolerance. In patients who cannot use methotrexate because of intolerance or contra-indications, adalimumab can be given as monotherapy. Treatment should be continued only if there is adequate response. Patients should be monitored at least every 6 months.

[www.nice.org.uk/TA195](http://www.nice.org.uk/TA195)

- ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)** NICE TA375 Adalimumab, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if the following criteria are met:
  - disease is severe, that is, a disease activity score (DAS28) greater than 5.1, and,
  - disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs).

Adalimumab can be used as monotherapy in patients who cannot take methotrexate because it is contra-indicated or because of intolerance, when the criteria above are met.

Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving adalimumab whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)

- ▶ **TNF-alpha inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)** NICE TA383

Adalimumab, certolizumab pegol, etanercept, golimumab and infliximab are recommended as options for treating severe active ankylosing spondylitis in patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs (NSAIDs).

Adalimumab, certolizumab pegol and etanercept are also recommended as options for treating severe non-radiographic axial spondyloarthritis in patients whose disease has responded inadequately to, or who are intolerant of, NSAIDs.

The response to treatment should be assessed 12 weeks after the start of treatment and should only be continued if there is clear evidence of response.

Treatment with another tumour necrosis factor (TNF) -alpha inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF-alpha inhibitor, or in those whose disease has stopped responding after an initial response.

[www.nice.org.uk/TA383](http://www.nice.org.uk/TA383)

- ▶ **Adalimumab for treating moderate-to-severe hidradenitis suppurativa (June 2016)** NICE TA392 Adalimumab is recommended, within its marketing authorisation, as an option for treating active moderate-to-severe hidradenitis suppurativa in adults whose disease has not responded to conventional systemic therapy. The drug is recommended only if the manufacturer provides it at the price agreed in the patient access scheme. Response should be assessed after 12 weeks of treatment, and the drug continued only if there is clear evidence of response, defined as a reduction of 25% or more in the total abscess and inflammatory nodule count and no increase in abscesses and draining fistulas.

## Certolizumab pegol

31-May-2016

### ● INDICATIONS AND DOSE

**Moderate to severe active rheumatoid arthritis when response to disease-modifying antirheumatic drugs (including methotrexate) has been inadequate (as monotherapy or in combination with methotrexate) | Severe, active and progressive rheumatoid arthritis in patients not previously treated with methotrexate or other disease-modifying antirheumatic drugs (in combination with methotrexate) | Active psoriatic arthritis when response to disease-modifying antirheumatic drugs has been inadequate (as monotherapy or in combination with methotrexate)**

#### ► BY SUBCUTANEOUS INJECTION

- Adult: Loading dose 400 mg every 2 weeks for 3 doses, then maintenance 200 mg every 2 weeks, once clinical response is confirmed, an alternative maintenance dosing of 400 mg every 4 weeks can be considered, review treatment if no response within 12 weeks

**Treatment of severe active ankylosing spondylitis in patients who have had an inadequate response to, or are intolerant of NSAIDs | Treatment of severe active axial spondyloarthritis, without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs**

#### ► BY SUBCUTANEOUS INJECTION

- Adult: Loading dose 400 mg every 2 weeks for 3 doses, then maintenance 200 mg every 2 weeks, alternatively maintenance 400 mg every 4 weeks, review treatment if no response within 12 weeks

- **CONTRA-INDICATIONS** Moderate to severe heart failure · severe active infection

- **CAUTIONS** Demyelinating CNS disorders (risk of exacerbation) · do not initiate until active infections are controlled (discontinue if new serious infection develops and until infection controlled) · hepatitis B virus (monitor for active infection) · history or development of malignancy · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection

### CAUTIONS, FURTHER INFORMATION

- **Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting certolizumab pegol. Patients who have previously received adequate treatment for tuberculosis can start certolizumab pegol but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting certolizumab pegol. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with certolizumab pegol.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

### ● SIDE-EFFECTS

- **Common or very common** Hypertension · rash · sensory abnormalities
- **Uncommon** Acne · alopecia · anxiety · appetite disorders · arrhythmias · ascites · asthma · benign tumours · cardiomyopathies · cholestasis · cough · dermatitis · dizziness · dyslipidaemia · ecchymosis · electrolyte disorders · gastro-intestinal disorders · gastro-intestinal perforation · gastro-intestinal ulcer · haematuria · haemorrhage · heart failure · hepatic disorders · impaired healing · influenza-like illness · ischaemic coronary artery disorders · leukaemia · lymphoma · malignancy · menstrual disorders · mood disorders · muscle disorders · nail disorders · new onset or worsening psoriasis · ocular inflammation · oedema · peripheral neuropathy ·

photosensitivity · pleural effusion · renal impairment · skin cancer · skin discoloration · solid tumours · syncope · tinnitus · tremor · visual disturbance

- **Rare** Atrioventricular block · cerebrovascular accident · cholelithiasis · impaired coordination · interstitial lung disease · nephropathy · Raynaud's phenomenon · seizures · sexual dysfunction · splenomegaly · thyroid disorders · trigeminal neuralgia
- **Frequency not known** Abdominal pain · anaemia · antibody formation · aplastic anaemia · blood disorders · depression · fever · headache · hypersensitivity reactions · infections · injection-site reactions · leucopenia · lupus erythematosus-like syndrome · multiple sclerosis · nausea · pancytopenia · pruritus · thrombocytopenia · worsening heart failure

### SIDE-EFFECTS, FURTHER INFORMATION

- **Infection** Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment and for at least 5 months after last dose.
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS** Monitor for infection before, during, and for 5 months after treatment.
- **PATIENT AND CARER ADVICE** An alert card should be provided.

Blood disorders Patients should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop. Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss and fever) develop.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### NICE technology appraisals (TAs)

- Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016) NICE TA375

Certolizumab pegol, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if the following criteria are met:

- disease is severe, that is, a disease activity score (DAS28) greater than 5.1,
- disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs),
- the manufacturers provide certolizumab pegol as agreed in the patient access schemes.

Certolizumab pegol can be used as monotherapy in patients who cannot take methotrexate because it is contra-indicated or because of intolerance, when the criteria above are met.

Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving certolizumab pegol within the NHS whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)

- ▶ **TNF- $\alpha$  inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)**

NICE TA383

Adalimumab, certolizumab pegol, etanercept, golimumab and infliximab are recommended as options for treating severe active ankylosing spondylitis in adult patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs.

Adalimumab, certolizumab pegol and etanercept are also recommended as options for treating severe non-radiographic axial spondyloarthritis in patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs (NSAIDs).

The response to treatment should be assessed 12 weeks after the start of treatment. Treatment should only be continued if there is clear evidence of response.

Treatment with another tumour necrosis factor (TNF)- $\alpha$  inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF- $\alpha$  inhibitor, or in those whose disease has stopped responding after an initial response.

[www.nice.org.uk/TA383](http://www.nice.org.uk/TA383)

- ▶ **Certolizumab pegol for treating rheumatoid arthritis after inadequate response to a TNF- $\alpha$  inhibitor (October 2016)**

NICE TA415

Certolizumab pegol, in combination with methotrexate, or as monotherapy, is recommended as an option for treating active rheumatoid arthritis in adults who have had an inadequate response to, or who cannot tolerate, other disease-modifying antirheumatic drugs (DMARDs) including at least 1 tumour necrosis factor- $\alpha$  (TNF- $\alpha$ ) inhibitor, only if the following criteria are met:

- disease activity is severe **and**
- rituximab is contra-indicated or not tolerated, or if monotherapy, rituximab cannot be given because methotrexate is contra-indicated or not tolerated **and**
- the manufacturers provide certolizumab pegol as agreed in the patient access scheme.

Continue treatment only if there is at least a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if at least a moderate EULAR response is not maintained.

Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA415](http://www.nice.org.uk/TA415)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (July 2014) that certolizumab pegol is accepted for restricted use within NHS Scotland, in combination with methotrexate, for the treatment of active psoriatic arthritis in patients whose disease has not responded to adequate trials of at least two standard disease-modifying antirheumatic drugs (DMARDs), administered either individually or in combination.

**SIDE-EFFECTS, FURTHER INFORMATION**

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required during treatment and for 3 weeks after last dose.
- **PREGNANCY** Avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Use with caution in moderate to severe alcoholic hepatitis.
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS** Monitor for skin cancer before and during treatment, particularly in those at risk (including patients with psoriasis or a history of PUVA treatment).
- **PRESCRIBING AND DISPENSING INFORMATION** Etanercept is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
- **PATIENT AND CARER ADVICE** An alert card should be provided.  
Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.  
Tuberculosis Patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NICE technology appraisals (TAs)**  
► **Etanercept and efalizumab for plaque psoriasis (July 2006)** NICE TA103  
Etanercept is recommended for severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) and to photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Etanercept should be withdrawn if the response is not adequate after 12 weeks.  
[www.nice.org.uk/TA103](http://www.nice.org.uk/TA103)  
► **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195  
Etanercept, in combination with methotrexate, is an option for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or have an intolerance of, other DMARDs including at least 1 TNF inhibitor, and who cannot use rituximab because of contra-indications or intolerance. In patients who cannot use methotrexate because of intolerance or contra-indications, etanercept can be given as monotherapy. Treatment should be continued only if there is adequate response. Patients should be monitored at least every 6 months.  
[www.nice.org.uk/TA195](http://www.nice.org.uk/TA195)  
► **Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010)** NICE TA199  
Etanercept is recommended for the treatment of active and progressive psoriatic arthritis in adults who have peripheral arthritis with at least 3 tender joints and at least 3 swollen joints, and who have not responded adequately to at least 2 standard disease-modifying antirheumatic drugs (used alone or in combination).

Etanercept should be discontinued if there is an inadequate response at 12 weeks.

[www.nice.org.uk/TA199](http://www.nice.org.uk/TA199)

- ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)**  
NICE TA375

Etanercept, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if the following criteria are met:

- disease is severe, that is, a disease activity score (DAS28) greater than 5.1, **and**
- disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs)

Etanercept can be used as monotherapy in patients who cannot take methotrexate because it is contra-indicated or because of intolerance, when the criteria above are met.

Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving etanercept whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)

- ▶ **TNF- $\alpha$  inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)**  
NICE TA383

Adalimumab, certolizumab pegol, etanercept, golimumab and infliximab are recommended as options for treating severe active ankylosing spondylitis in patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs (NSAIDs).

Adalimumab, certolizumab pegol and etanercept are also recommended as options for treating severe non-radiographic axial spondyloarthritis in patients whose disease has responded inadequately to, or who are intolerant of, NSAIDs.

The response to treatment should be assessed 12 weeks after the start of treatment and should only be continued if there is clear evidence of response.

Treatment with another tumour necrosis factor (TNF)- $\alpha$  inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF- $\alpha$  inhibitor, or in those whose disease has stopped responding after an initial response.

[www.nice.org.uk/TA383](http://www.nice.org.uk/TA383)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* issued similar advice to NICE TA103 on the use of etanercept for severe plaque psoriasis in adults (August 2009) and children over 6 years old (April 2012).

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment and for at least 6 months after last dose.

● **PREGNANCY** Use only if essential.

● **BREAST FEEDING** Manufacturer advises avoid during and for at least 6 months after treatment—present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.

● **PRE-TREATMENT SCREENING**

**Tuberculosis** Patients should be evaluated for tuberculosis before treatment.

● **MONITORING REQUIREMENTS** Monitor for infection before, during, and for 5 months after treatment.

● **DIRECTIONS FOR ADMINISTRATION** For doses requiring multiple injections, each injection should be administered at a different site.

**Missed dose** If dose administered more than 2 weeks late, subsequent doses should be administered on the new monthly due date.

● **PATIENT AND CARER ADVICE** An alert card should be provided.

**Tuberculosis** All patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

**Blood disorders** Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

▶ **Golimumab for the treatment of psoriatic arthritis (April 2011)** NICE TA220

Golimumab is an option for the treatment of active and progressive psoriatic arthritis in adults only if:

- golimumab is used as described in the NICE guidance (August 2010) for other tumour necrosis factor (TNF) inhibitors, and
- the manufacturer provides the 100-mg dose of

golimumab at the same price as the 50-mg dose.

[www.nice.org.uk/TA220](http://www.nice.org.uk/TA220)

- ▶ **Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015)** NICE TA329  
Golimumab is an option for treating moderately to severely active ulcerative colitis in adults whose disease has responded inadequately to conventional therapy including corticosteroids and mercaptopurine or azathioprine, or in adults who are intolerant to or have contra-indications for conventional therapies.

Golimumab is recommended only if the manufacturer provides the 100 mg dose of golimumab at the same cost as the 50 mg dose, as agreed in the patient access scheme.

The choice of treatment should be made on an individual basis and if more than one treatment is suitable, the least expensive should be chosen.

Golimumab should be given as a planned course of treatment until treatment fails (including the need for surgery) or until 12 months after starting treatment, whichever is shorter. Treatment should be continued only if there is clear evidence of a response. Patients who continue treatment should be reassessed at least every 12 months to determine whether ongoing treatment is still clinically appropriate.

[www.nice.org.uk/TA329](http://www.nice.org.uk/TA329)

- ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)** NICE TA375

Golimumab, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if **all** the following criteria are met:

- disease is severe, that is, a disease activity score (DAS28) greater than 5.1,
- disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs),
- the manufacturers provides golimumab as agreed in the patient access schemes.

Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving treatment with golimumab whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)

- ▶ **TNF-alpha inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)** NICE TA383

Adalimumab, certolizumab pegol, etanercept, golimumab and infliximab are recommended as options for treating severe active ankylosing spondylitis in patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs (NSAIDs).

The response to treatment should be assessed 12 weeks after the start of treatment. Treatment should only be continued if there is clear evidence of response.

Treatment with another tumour necrosis factor (TNF)-alpha inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF-alpha inhibitor, or in those whose disease has stopped responding after an initial response.

[www.nice.org.uk/TA383](http://www.nice.org.uk/TA383)

- ▶ **Golimumab** for the treatment of rheumatoid arthritis after the failure of previous disease-modifying antirheumatic drugs (June 2011–updated February 2016) NICE TA225  
Golimumab, in combination with methotrexate, is an option for the treatment of rheumatoid arthritis in patients who have had an inadequate response to DMARDs, including a TNF inhibitor, if golimumab is used as described in the NICE technology appraisal guidance 195 (August 2010) for other TNF inhibitors, and the manufacturer provides the 100-mg dose of golimumab at the same price as the 50-mg dose.  
[www.nice.org.uk/TA225](http://www.nice.org.uk/TA225)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (June 2012) that golimumab (*Simponi*®) is accepted for restricted use within NHS Scotland at a dose of 50 mg, alone or in combination with methotrexate, for the treatment of active and progressive psoriatic arthritis in adults whose disease has not responded to adequate trials of at least two standard DMARDs, administered either individually or in combination.

#### All Wales Medicines Strategy Group (AWMSG) Decisions

The *All Wales Medicines Strategy Group* has advised (October 2016) that Golimumab (*Simponi*®) is recommended as an option for use within NHS Wales for the treatment of adults with severe, active non radiographic axial spondyloarthritis with objective signs of inflammation (indicated by elevated C reactive protein and/or magnetic resonance imaging evidence, who have had an inadequate response to, or are intolerant to non-steroidal anti-inflammatory drugs. The recommendation applies only if the approved Wales Patient Access Scheme (WPAS) is used or where the list/contract price is equivalent or lower.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

CAUTIONARY AND ADVISORY LABELS 10

- ▶ **Simponi** (Merck Sharp & Dohme Ltd)

**Golimumab 100 mg per 1 ml** Simponi 50mg/0.5ml solution for injection pre-filled disposable devices | 1 pre-filled disposable injection [PoM] £762.97  
Simponi 100mg/1ml solution for injection pre-filled pen | 1 pre-filled disposable injection [PoM] £1,525.94  
Simponi 50mg/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £762.97

## Infliximab

31-May-2016

#### ● INDICATIONS AND DOSE

##### Severe active Crohn's disease

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, then 5 mg/kg after 4 weeks, if condition has responded, then maintenance 5 mg/kg every 8 weeks

##### Fistulating Crohn's disease

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, if condition has responded consult product literature for guidance on further doses

##### Severe active ulcerative colitis

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 8 weeks, discontinue if no response 14 weeks after initial dose

#### Rheumatoid arthritis (in combination with methotrexate)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 3 mg/kg, then 3 mg/kg after 2 weeks, followed by 3 mg/kg after 4 weeks, then 3 mg/kg every 8 weeks, dose to be increased only if response is inadequate after 12 weeks of initial treatment; increased in steps of 1.5 mg/kg every 8 weeks, increased if necessary up to 7.5 mg/kg every 8 weeks, alternatively increased if necessary to 3 mg/kg every 4 weeks, discontinue if no response by 12 weeks of initial infusion or after dose adjustment

#### Ankylosing spondylitis

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 6–8 weeks, discontinue if no response by 6 weeks of initial infusion

#### Psoriatic arthritis (in combination with methotrexate)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, followed by 5 mg/kg every 8 weeks

#### Plaque psoriasis

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 5 mg/kg, then 5 mg/kg after 2 weeks, followed by 5 mg/kg after 4 weeks, then 5 mg/kg every 8 weeks, discontinue if no response within 14 weeks of initial infusion

#### IMPORTANT SAFETY INFORMATION

Adequate resuscitation facilities must be available when infliximab is used.

- **CONTRA-INDICATIONS** Moderate or severe heart failure · severe infections
- **CAUTIONS** Demyelinating disorders (risk of exacerbation) · dermatomyositis · development of malignancy · hepatitis B virus—monitor for active infection · history of colon carcinoma (in inflammatory bowel disease) · history of dysplasia (in inflammatory bowel disease) · history of malignancy · history of prolonged immunosuppressant or PUVA treatment in patients with psoriasis · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection (discontinue if new serious infection develops) · risk of delayed hypersensitivity reactions if drug-free interval exceeds 16 weeks (re-administration after interval exceeding 16 weeks not recommended)
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Tuberculosis Manufacturer advises to evaluate patients for active and latent tuberculosis before treatment. Active tuberculosis should be treated with standard treatment for at least 2 months before starting infliximab. If latent tuberculosis is diagnosed, treatment should be started before commencing treatment with infliximab. Patients who have previously received adequate treatment for tuberculosis can start infliximab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting infliximab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with infliximab. Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis develop (e.g. persistent cough, weight loss and fever).
- ▶ Hypersensitivity reactions Hypersensitivity reactions (including fever, chest pain, hypotension, hypertension, dyspnoea, transient visual loss, pruritus, urticaria, serum sickness-like reactions, angioedema, anaphylaxis) reported during or within 1–2 hours after infusion (risk

greatest during first or second infusion or in patients who discontinue other immunosuppressants). Manufacturer advises prophylactic antipyretics, antihistamines, or hydrocortisone may be administered.

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · arthralgia · constipation · diarrhoea · dizziness · dry skin · dyspepsia · ecchymosis · epistaxis · flushing · gastro-intestinal haemorrhage · gastro-oesophageal reflux · hyperhidrosis · hypertension · hypoaesthesia · hypotension · myalgia · new onset or worsening psoriasis · palpitation · paraesthesia · rash · sleep disturbances · tachycardia
- ▶ **Uncommon** Abnormal skin pigmentation · agitation · amnesia · arrhythmia · bradycardia · bullous eruption · cheilitis · cholecystitis · confusion · eye disorders · heart failure · hepatitis · hyperkeratosis · impaired healing · intestinal perforation · nervousness · neuropathy · pancreatitis · peripheral ischaemia · pleurisy · pulmonary oedema · rosacea · seborrhoea · seizures · syncope · vaginitis
- ▶ **Rare** Demyelinating disorders · interstitial lung disease · leukaemia · lymphoma · melanoma · pericardial effusion · Stevens-Johnson syndrome · toxic epidermal necrolysis · vasospasm
- ▶ **Frequency not known** Abdominal pain · anaemia · antibody formation · aplastic anaemia · blood disorders · depression · fever · headache · hepatic failure · hepatosplenic T-cell lymphoma (more likely in inflammatory bowel disease) · hypersensitivity reactions · injection-site reactions · leucopenia · lupus erythematosus-like syndrome · Merkel cell carcinoma · nausea · pancytopenia · pruritus · thrombocytopenia · worsening heart failure · worsening symptoms of dermatomyositis

**SIDE-EFFECTS, FURTHER INFORMATION**

Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during and for at least 6 months after last dose.

● **PREGNANCY** Use only if essential.

● **BREAST FEEDING** Amount probably too small to be harmful.

● **PRE-TREATMENT SCREENING**

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

● **MONITORING REQUIREMENTS**

- ▶ Monitor for infection before, during, and for 6 months after treatment.
- ▶ All patients should be observed carefully for 1–2 hours after infusion and resuscitation equipment should be available for immediate use (risk of hypersensitivity reactions).
- ▶ Monitor for symptoms of delayed hypersensitivity if re-administered after a prolonged period.
- ▶ Manufacturer advises periodic skin examination for non-melanoma skin cancer, particularly in patients with risk factors.

● **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (*Remicade*®), give intermittently in Sodium chloride 0.9%; reconstitute each 100-mg vial with 10 mL water for injections using a 21-gauge or smaller needle; gently swirl vial without shaking to dissolve; allow to stand for 5 minutes; dilute requisite dose with infusion fluid to a final volume of 250 mL and give through a low protein-binding filter (1.2 micron or less) over at least 2 hours (adults over 18 years who have tolerated 3 initial 2-hour infusions may be given subsequent infusions of up to 6 mg/kg over at least 1 hour); start infusion within 3 hours of reconstitution.

● **PRESCRIBING AND DISPENSING INFORMATION** Infliximab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.

● **PATIENT AND CARER ADVICE** An alert card should be provided.

**Tuberculosis** Patients and carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop. **Blood disorders** Patients and carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

**Hypersensitivity reactions** Patients and carers should be advised to keep Alert card with them at all times and seek medical advice if symptoms of delayed hypersensitivity develop.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

▶ **Infliximab for plaque psoriasis in adults (January 2008)** NICE TA134

Infliximab is recommended for the treatment of very severe plaque psoriasis which has failed to respond to standard systemic treatments (including ciclosporin and methotrexate) or to photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications. Infliximab should be withdrawn if the response is not adequate after 10 weeks.

[www.nice.org.uk/TA134](http://www.nice.org.uk/TA134)

▶ **Infliximab for acute exacerbations of ulcerative colitis (December 2008)** NICE TA163

Infliximab is recommended as an option for the treatment of acute exacerbations of severe ulcerative colitis when treatment with ciclosporin is contra-indicated or inappropriate.

[www.nice.org.uk/TA163](http://www.nice.org.uk/TA163)

▶ **Infliximab and adalimumab for Crohn's disease (May 2010)** NICE TA187

Infliximab is recommended for the treatment of severe active Crohn's disease that has not responded to conventional therapy (including corticosteroids and other drugs affecting the immune response) or when conventional therapy cannot be used because of intolerance or contra-indications; infliximab can also be used in a similar way in children over 6 years of age. In adults over 18 years of age, infliximab is recommended for the treatment of fistulating Crohn's disease that has not responded to conventional therapy (including antibacterials, drainage, and other drugs affecting the immune response) or when conventional therapy cannot be used because of intolerance or contra-indications.

Infliximab should be given as a planned course of treatment for 12 months or until treatment failure, whichever is shorter. Treatment should be continued beyond 12 months only if there is evidence of active disease—in these cases the need for treatment should be reviewed at least annually. If the disease relapses after stopping treatment, infliximab can be restarted.

[www.nice.org.uk/TA187](http://www.nice.org.uk/TA187)

▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195

Infliximab, in combination with methotrexate, is an option for the treatment of severe active rheumatoid arthritis in adults who have had an inadequate response to, or have an intolerance of, other DMARDs including at least 1 TNF inhibitor, and who cannot use rituximab because of contra-indications or intolerance. Treatment should be continued only if there is adequate response. Patients should be monitored at least every 6 months.

[www.nice.org.uk/TA195](http://www.nice.org.uk/TA195)

- ▶ **Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010)** NICE TA199  
Infliximab is recommended for the treatment of active and progressive psoriatic arthritis in adults who have peripheral arthritis with at least 3 tender joints and at least 3 swollen joints, and who have not responded adequately to at least 2 standard disease-modifying antirheumatic drugs (used alone or in combination).

Infliximab should be discontinued if there is an inadequate response at 12 weeks.

[www.nice.org.uk/TA199](http://www.nice.org.uk/TA199)

- ▶ **Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015)** NICE TA329  
Infliximab is an option for treating moderately to severely active ulcerative colitis in adults whose disease has responded inadequately to conventional therapy including corticosteroids and mercaptopurine or azathioprine, or in adults who are intolerant to or have contra-indications for conventional therapies.

The choice of treatment should be made on an individual basis and if more than one treatment is suitable, the least expensive should be chosen.

Infliximab should be given as a planned course of treatment until treatment fails (including the need for surgery) or until 12 months after starting treatment, whichever is shorter. Treatment should be continued only if there is clear evidence of a response. Patients who continue treatment should be reassessed at least every 12 months to determine whether ongoing treatment is still clinically appropriate.

[www.nice.org.uk/TA329](http://www.nice.org.uk/TA329)

- ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)** NICE TA375

Infliximab, in combination with methotrexate, is recommended as an option for treating rheumatoid arthritis, only if the following criteria are met:

- disease is severe, that is, a disease activity score (DAS28) greater than 5.1, **and**,
- disease has not responded to intensive therapy with a combination of conventional disease-modifying antirheumatic drugs (DMARDs).

Continue treatment only if there is a moderate response measured using European League Against Rheumatism (EULAR) criteria at 6 months after starting therapy. After initial response within 6 months, withdraw treatment if a moderate EULAR response is not maintained.

Patients currently receiving infliximab whose disease does not meet the above criteria should have the option to continue their treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA375](http://www.nice.org.uk/TA375)

- ▶ **TNF-alpha inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)** NICE TA383

Adalimumab, certolizumab pegol, etanercept, golimumab and infliximab are recommended as options for treating severe active ankylosing spondylitis in patients whose disease has responded inadequately to, or who are intolerant of, non-steroidal anti-inflammatory drugs (NSAIDs). Infliximab is recommended only if treatment is started with the least expensive infliximab product. Patients currently receiving infliximab should continue treatment with the same infliximab product until they and their clinician considers it appropriate to stop.

The response to treatment should be assessed 12 weeks after the start of treatment and should only be continued if there is clear evidence of response.

Treatment with another tumour necrosis factor (TNF)-alpha inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF-alpha inhibitor, or in those whose disease has stopped responding after an initial response.  
[www.nice.org.uk/TA383](http://www.nice.org.uk/TA383)

## PHOSPHODIESTERASE TYPE-4 INHIBITORS

### Apremilast

13-Apr-2017

- **DRUG ACTION** Apremilast inhibits the activity of phosphodiesterase type-4 (PDE4) which results in suppression of pro-inflammatory mediator synthesis and promotes anti-inflammatory mediators.

#### • INDICATIONS AND DOSE

**Active psoriatic arthritis (in combination with disease-modifying antirheumatic drugs or alone) in patients who have had an inadequate response or who have been intolerant to a prior disease-modifying antirheumatic drug therapy | Moderate to severe chronic plaque psoriasis that has not responded to standard systemic treatments or photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 10 mg daily on day 1, then 10 mg twice daily on day 2, then 10 mg in the morning and 20 mg in the evening on day 3, then 20 mg twice daily on day 4, then 20 mg in the morning and 30 mg in the evening on day 5, then maintenance 30 mg twice daily, doses should be taken approximately 12 hours apart; review treatment if no response within 24 weeks of initiation

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE (JANUARY 2017): APREMILAST (OTEZLA®): RISK OF SUICIDAL THOUGHTS AND BEHAVIOUR**

A review of evidence from clinical trials and postmarketing cases has suggested a causal association between apremilast and suicidal thoughts and behaviour.

- **CAUTIONS** Concomitant use of drugs likely to cause psychiatric symptoms · history of psychiatric illness · low body-weight—consider discontinuation if weight loss is unexplained or clinically significant
- **INTERACTIONS** → Appendix 1: apremilast
- **SIDE-EFFECTS**
- ▶ **Common or very common** Back pain · bronchitis · cough · decreased appetite · depression · diarrhoea · dyspepsia · fatigue · gastroesophageal reflux disease · headache · insomnia · migraine · nasopharyngitis · nausea · tension headache · upper abdominal pain · upper respiratory tract infections · vomiting

- ▶ **Uncommon** Rash · suicidal ideation and behaviour · weight loss
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before treatment and ensure effective contraception during treatment.
- **PREGNANCY** Avoid—teratogenic in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** Reduce dose if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>; consult product literature for initial dose titration.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor body-weight regularly in patients underweight at the start of treatment.
  - ▶ Manufacturer advises monitor for psychiatric symptoms (including depression, suicidal ideation and behaviour)—discontinue treatment if new or worsening psychiatric symptoms are identified.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and carers should be instructed to notify the prescriber of any changes in behaviour or mood, and of any suicidal ideation.
- **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

  - ▶ **Apremilast for treating active psoriatic arthritis (February 2017)** NICE TA433  
Apremilast, alone or in combination with disease-modifying antirheumatic drugs (DMARDs), is recommended as an option for treating active psoriatic arthritis in adults only if:
    - they have peripheral arthritis with 3 or more tender joints and 3 or more swollen joints **and**
    - their disease has not responded to adequate trials of at least 2 standard DMARDs, given either alone or in combination **and**
    - the manufacturer provides apremilast with the discount agreed in the patient access scheme.
 Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their clinician consider it appropriate to stop.  
[www.nice.org.uk/TA433](http://www.nice.org.uk/TA433)
  - ▶ **Apremilast for treating moderate to severe plaque psoriasis (November 2016)** NICE TA419  
Apremilast is recommended as an option for treating chronic plaque psoriasis in patients whose disease has not responded to other systemic therapies, including ciclosporin, methotrexate and PUVA, or when these treatments are contra-indicated or not tolerated, only if:
    - the disease is severe, as defined by a total Psoriasis Area Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of more than 10 **and**
    - treatment is stopped if the psoriasis has not responded adequately at 16 weeks (defined as a 75% reduction in the PASI score (PASI 75) from when treatment started or a 50% reduction in the PASI score (PASI 50) and a 5-point reduction in DLQI from start of treatment), **and**
    - the manufacturer provides apremilast with the discount agreed in the patient access scheme.
 Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their clinician consider it appropriate to stop.  
[www.nice.org.uk/TA419](http://www.nice.org.uk/TA419)

**Scottish Medicines Consortium (SMC) Decisions**  
 The *Scottish Medicines Consortium* has advised (June 2015) that apremilast (*Otezla*®) is accepted for restricted use within NHS Scotland for the treatment of active psoriatic arthritis in patients who have had an inadequate response

with at least two prior Disease Modifying Antirheumatic Drug (DMARD) therapies or who are intolerant to such therapies.

## 2 Hyperuricaemia and gout

### Gout

#### Overview

It is important to distinguish drugs used for the treatment of acute attacks of gout from those used in the long-term control of the disease. The latter exacerbate and prolong the acute manifestations if started during an attack. The management of gout in adolescents requires specialist supervision.

#### Acute attacks of gout

Acute attacks of gout are usually treated with high doses of NSAIDs such as diclofenac sodium p. 1034, diclofenac potassium p. 1033, etoricoxib p. 1038, indometacin p. 1043, ketoprofen p. 1044, naproxen p. 1048 or sulindac p. 1051. Colchicine p. 1020 is an alternative in patients in whom NSAIDs are contra-indicated. Aspirin p. 117 is *not* indicated in gout. Allopurinol p. 1021, febuxostat p. 1021, and uricosurics are not effective in treating an acute attack and may prolong it indefinitely if started during the acute episode.

The use of colchicine is limited by the development of toxicity at higher doses, but it is of value in patients with heart failure since, unlike NSAIDs, it does not induce fluid retention; moreover, it can be given to patients receiving anticoagulants.

Oral or parenteral corticosteroids are an effective alternative in those who cannot tolerate NSAIDs or who are resistant to other treatments. Intra-articular injection of a corticosteroid can be used in acute monoarticular gout [unlicensed indication]. A corticosteroid by intramuscular injection can be effective in podagra.

Canakinumab p. 794, a recombinant monoclonal antibody, can be used for the symptomatic treatment of frequent gouty arthritis attacks (at least 3 in the previous 12 months). It is licensed for use in patients whose condition has not responded adequately to treatment with NSAIDs or colchicine, or who are intolerant of them.

#### Long-term control of gout

Frequent recurrence of acute attacks of gout, the presence of tophi, or signs of chronic gouty arthritis may call for the initiation of long-term ('interval') treatment. For long-term control of gout the formation of uric acid from purines may be reduced with the xanthine-oxidase inhibitors allopurinol or febuxostat alternatively the uricosuric drug sulfinpyrazone p. 1020 may be used to increase the excretion of uric acid in the urine. Treatment should be continued indefinitely to prevent further attacks of gout by correcting the hyperuricaemia. These drugs should never be started during an acute attack; they are usually started 1–2 weeks

after the attack has settled. The initiation of treatment may precipitate an acute attack, and therefore an anti-inflammatory analgesic or colchicine should be used as a prophylactic and continued for at least one month after the hyperuricaemia has been corrected. However, if an acute attack develops during treatment, then the treatment should continue at the same dosage and the acute attack treated in its own right.

Allopurinol is widely used and is especially useful in patients with renal impairment or urate stones when uricosuric drugs cannot be used; it is *not* indicated for the treatment of asymptomatic hyperuricaemia. It can cause rashes.

Febuxostat is licensed for the treatment of chronic hyperuricaemia where urate deposition has already occurred; it is *not* indicated for patients in whom the rate of urate formation is greatly increased, such as in malignant disease or in Lesch-Nyhan syndrome.

Sulfinpyrazone can be used instead of allopurinol or in conjunction with it in cases that are resistant to treatment.

Benzbromarone (available from 'special-order' manufacturers or specialist importing companies) is a uricosuric drug that can be used in patients with mild renal impairment.

Crystallisation of urate in the urine can occur with the uricosuric drugs and it is important to ensure an adequate urine output especially in the first few weeks of treatment. As an additional precaution the urine may be rendered alkaline.

Aspirin and other salicylates antagonise the uricosuric drugs; they do not antagonise allopurinol but are nevertheless *not* indicated in gout.

## ALKALOIDS > PLANT ALKALOIDS

### Colchicine

#### ● INDICATIONS AND DOSE

##### Acute gout

- ▶ BY MOUTH
- ▶ Adult: 500 micrograms 2–4 times a day until symptoms relieved, maximum 6 mg per course, do not repeat course within 3 days

##### Short-term prophylaxis during initial therapy with allopurinol and uricosuric drugs

- ▶ BY MOUTH
- ▶ Adult: 500 micrograms twice daily

##### Prophylaxis of familial Mediterranean fever (recurrent polyserositis)

- ▶ BY MOUTH
- ▶ Adult: 0.5–2 mg once daily

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

Manufacturer advises reduce dose by half with concurrent use of moderate inhibitors of CYP3A4. Manufacturer advises reduce dose by 75% (to one quarter of usual dose) with concurrent use of potent inhibitors of CYP3A4 or P-glycoprotein inhibitors; avoid concurrent use in patients with hepatic or renal impairment.

- **UNLICENSED USE** BNF doses may differ from those in the product literature. Use of colchicine for prophylaxis of familial Mediterranean fever (recurrent polyserositis) is an unlicensed indication.
- **CONTRA-INDICATIONS** Blood disorders
- **CAUTIONS** Cardiac disease · elderly · gastro-intestinal disease
- **INTERACTIONS** → Appendix 1: colchicine
- **SIDE-EFFECTS**
  - ▶ Common or very common Abdominal pain · nausea · vomiting

- ▶ **Rare** Alopecia · blood disorders with prolonged treatment · inhibition of spermatogenesis · myopathy · peripheral neuritis
- ▶ **FREQUENCY NOT KNOWN** Excessive doses may cause profuse diarrhoea · gastrointestinal haemorrhage · hepatic damage · rash · renal damage
- **PREGNANCY** Avoid—teratogenicity in *animal* studies.
- **BREAST FEEDING** Present in milk but no adverse effects reported. Manufacturers advise caution.
- **HEPATIC IMPAIRMENT** Use with caution.
- **RENAL IMPAIRMENT** Reduce dose or increase dosage interval if eGFR 10–50 mL/minute/1.73 m<sup>2</sup>. Avoid if eGFR less than 10 mL/minute/1.73 m<sup>2</sup>.

#### ● MEDICINAL FORMS

##### Tablet

##### ▶ Colchicine (Non-proprietary)

**Colchicine 500 microgram** Colchicine 500microgram tablets | 100 tablet [PoM] £45.56 DT price = £14.28

## URICOSURICS

### Sulfinpyrazone

#### (Sulphinpyrazone)

#### ● INDICATIONS AND DOSE

##### Gout prophylaxis | Hyperuricaemia

- ▶ BY MOUTH
- ▶ Adult: Initially 100–200 mg daily, dose to be taken with food (or milk); increased to 600–800 mg daily over 2–3 weeks, 800 mg daily is rarely given; continue until serum uric acid concentration normal then reduce dose for maintenance (maintenance dose may be as low as 200 mg daily)

- **CONTRA-INDICATIONS** Acute gout attack · acute porphyrias p. 969 · history of blood disorders · peptic ulceration
- **CAUTIONS** Cardiac disease (may cause salt and water retention) · ensure adequate fluid intake (about 2–3 litres daily) and render urine alkaline during initial treatment
- **INTERACTIONS** → Appendix 1: sulfinpyrazone
- **SIDE-EFFECTS**
  - ▶ **Rare** Acute renal failure · blood disorders · gastro-intestinal bleeding · gastro-intestinal ulceration · hepatitis · jaundice · raised liver enzymes
  - ▶ **FREQUENCY NOT KNOWN** Allergic skin reactions · gastro-intestinal disturbances · salt retention · water retention
- **ALLERGY AND CROSS-SENSITIVITY** Avoid in hypersensitivity to aspirin, salicylates, NSAIDs.
- **PREGNANCY** Manufacturer advises caution—no information available.
- **BREAST FEEDING** No information available.
- **HEPATIC IMPAIRMENT** Avoid in severe impairment.
- **RENAL IMPAIRMENT** Reduce dose. Avoid in severe impairment.
- **MONITORING REQUIREMENTS** Regular blood counts before treatment and at regular intervals during treatment.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## XANTHINE OXIDASE INHIBITORS

## Allopurinol

## ● INDICATIONS AND DOSE

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones | Prophylaxis of hyperuricaemia associated with cancer chemotherapy**

## ► BY MOUTH

- Adult: Initially 100 mg daily, for maintenance adjust dose according to plasma or urinary uric acid concentration, dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in mild conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in mild conditions)**

**Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in mild conditions)**

## ► BY MOUTH

- Adult: 100–200 mg daily, dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in moderately severe conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in moderately severe conditions)**

**Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in moderately severe conditions)**

## ► BY MOUTH

- Adult: 300–600 mg daily in divided doses (max. per dose 300 mg), dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in severe conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in severe conditions)**

## ► BY MOUTH

- Adult: 700–900 mg daily in divided doses (max. per dose 300 mg), dose to be taken preferably after food

- **CONTRA-INDICATIONS** Not a treatment for acute gout but continue if attack develops when already receiving allopurinol, and treat attack separately

- **CAUTIONS** Ensure adequate fluid intake (2–3 litres/day) · for hyperuricaemia associated with cancer therapy, allopurinol treatment should be started before cancer therapy

## CAUTIONS, FURTHER INFORMATION

Administer prophylactic NSAID (*not* aspirin or salicylates) or colchicine until at least 1 month after hyperuricaemia corrected (usually for first 3 months) to avoid precipitating an acute attack.

- **INTERACTIONS** → Appendix 1: allopurinol

## ● SIDE-EFFECTS

- **Common or very common** Gastro-intestinal disorders · rashes (**withdraw** therapy; if rash mild re-introduce cautiously but **discontinue** promptly if recurrence)
- **Rare** Alopecia · aplastic anaemia · arthralgia · blood disorders · drowsiness · eosinophilia resembling Stevens-Johnson syndrome · eosinophilia resembling toxic epidermal necrolysis · exfoliation · fever · gynaecomastia · haemolytic anaemia · headache · hepatitis · hepatotoxicity · hypersensitivity reactions · hypertension · leucopenia · lymphadenopathy · malaise · neuropathy · paraesthesia · renal impairment · taste disturbances · thrombocytopenia · vasculitis · vertigo · visual disturbances
- **Very rare** Seizures

- **PREGNANCY** Toxicity not reported. Manufacturer advises use only if no safer alternative and disease carries risk for mother or child.

- **BREAST FEEDING** Present in milk—not known to be harmful.

- **HEPATIC IMPAIRMENT** Reduce dose.

- **RENAL IMPAIRMENT** Max. 100 mg daily, increased only if response inadequate; in severe impairment, reduce daily

dose below 100 mg, or increase dose interval; if facilities available, adjust dose to maintain plasma-oxipurinol concentration below 100 micromol/litre.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, mouthwash

## Tablet

DT price = £0.85

## Febuxostat

28-Sep-2016

## ● INDICATIONS AND DOSE

**Treatment of chronic hyperuricaemia in gout**

## ► BY MOUTH

- Adult: Initially 80 mg once daily, if after 2–4 weeks of initial dose, serum uric acid greater than 6 mg/100 mL then increase dose; increased if necessary to 120 mg once daily

**Prophylaxis and treatment of acute hyperuricaemia with initial chemotherapy for haematologic malignancies**

## ► BY MOUTH

- Adult: 120 mg once daily, to be started 2 days before start of cytotoxic therapy and continued for 7–9 days, according to chemotherapy duration

## IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: SERIOUS HYPERSENSITIVITY REACTIONS (JUNE 2012)

There have been rare but serious reports of hypersensitivity reactions, including Stevens-Johnson syndrome and acute anaphylactic shock with febuxostat. Patients should be advised of the signs and symptoms of severe hypersensitivity; febuxostat must be stopped immediately if these occur (early withdrawal is associated with a better prognosis), and must not be restarted in patients who have ever developed a hypersensitivity reaction to febuxostat. Most cases occur during the first month of treatment; a prior history of hypersensitivity to allopurinol and/or renal disease may indicate potential hypersensitivity to febuxostat.

- **CONTRA-INDICATIONS** Not a treatment for acute gout but continue if attack develops when already receiving febuxostat, and treat attack separately

- **CAUTIONS** Congestive heart failure · ischaemic heart disease · thyroid disorders · transplant recipients

## CAUTIONS, FURTHER INFORMATION

Administer prophylactic NSAID (*not* aspirin or salicylates) or colchicine for at least 6 months after starting febuxostat to avoid precipitating an acute attack.

- **INTERACTIONS** → Appendix 1: febuxostat

## ● SIDE-EFFECTS

- **Common or very common** Abnormal liver function tests · gastro-intestinal disturbances · headache · oedema · rash

- ▶ **Uncommon** Renal failure • appetite change • arthralgia • arthritides • atrial fibrillation • bronchitis • bursitis • chest pain • cholelithiasis • cough • decreased libido • dermatitis • diabetes mellitus • dizziness • drowsiness • dyspnoea • ECG abnormalities • erectile dysfunction • flushing • haematuria • hemiparesis • hyperlipidaemia • hypertension • hypoaesthesia • increased thyroid stimulating hormone • increased urinary frequency • insomnia • muscle spasm • muscle weakness • myalgia • nephrolithiasis • palpitation • paraesthesia • proteinuria • thirst • thrombocytopenia • tinnitus • tubulointerstitial nephritis
- ▶ **Rare** Asthenia • blurred vision • hepatitis • jaundice • mouth ulceration • nervousness • pancreatitis • pancytopenia • rhabdomyolysis • thirst • thrombocytopenia • tinnitus • tubulointerstitial nephritis
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Max. 80 mg daily in mild impairment. No dose information available in moderate or severe impairment.
- **RENAL IMPAIRMENT** Use with caution if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>—no information available.
- **PRE-TREATMENT SCREENING** Monitor liver function tests before treatment as indicated.
- **MONITORING REQUIREMENTS** Monitor liver function tests periodically during treatment as indicated.
- **NATIONAL FUNDING/ACCESS DECISIONS**

#### NICE technology appraisals (TAs)

- ▶ **Febuxostat for the management of hyperuricaemia in patients with gout (December 2008) NICE TA164**  
Febuxostat is recommended as an option for the management of chronic hyperuricaemia in gout only for patients who are intolerant of allopurinol or for whom allopurinol is contra-indicated.

For the purposes of this guidance, intolerance of allopurinol is defined as adverse effects that are sufficiently severe to warrant discontinuation, or to prevent full dose escalation for optimal effectiveness.

[www.nice.org.uk/TA164](http://www.nice.org.uk/TA164)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* issued similar advice to NICE guidance: Febuxostat for the management of hyperuricaemia in patients with gout (December 2008), in August 2010.

The *Scottish Medicines Consortium* has advised (June 2016) that febuxostat (*Adenuric*®) is accepted for restricted use within NHS Scotland for the prevention and treatment of hyperuricaemia in patients undergoing chemotherapy for haematological malignancies at intermediate to high risk of tumour lysis syndrome, only when allopurinol is not tolerated or contra-indicated.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Febuxostat 120 mg** Adenuric 120mg tablets | 28 tablet [PoM] £24.36 DT price = £24.36

## 3 Neuromuscular disorders

### Neuromuscular disorders

#### Drugs that enhance neuromuscular transmission

Anticholinesterases are used as first-line treatment in *ocular myasthenia gravis* and as an adjunct to immunosuppressant therapy for *generalised myasthenia gravis*.

Corticosteroids are used when anticholinesterases do not control symptoms completely. A second-line immunosuppressant such as azathioprine p. 787 is frequently used to reduce the dose of corticosteroid.

Plasmapheresis or infusion of intravenous immunoglobulin [unlicensed indication] may induce temporary remission in severe relapses, particularly where bulbar or respiratory function is compromised or before thymectomy.

#### Anticholinesterases

Anticholinesterase drugs enhance neuromuscular transmission in voluntary and involuntary muscle in *myasthenia gravis*. Excessive dosage of these drugs can impair neuromuscular transmission and precipitate cholinergic crises by causing a depolarising block. This may be difficult to distinguish from a worsening myasthenic state.

Muscarinic side-effects of anticholinesterases include increased sweating, increased salivary and gastric secretions, increased gastro-intestinal and uterine motility, and bradycardia. These parasympathomimetic effects are antagonised by atropine sulfate p. 1224.

Neostigmine p. 1024 produces a therapeutic effect for up to 4 hours. Its pronounced muscarinic action is a disadvantage, and simultaneous administration of an antimuscarinic drug such as atropine sulfate or propantheline bromide p. 84 may be required to prevent colic, excessive salivation, or diarrhoea. In severe disease neostigmine can be given every 2 hours. The maximum that most patients can tolerate is 180 mg daily.

Pyridostigmine bromide p. 1025 is less powerful and slower in action than neostigmine but it has a longer duration of action. It is preferable to neostigmine because of its smoother action and the need for less frequent dosage. It is particularly preferred in patients whose muscles are weak on waking. It has a comparatively mild gastrointestinal effect but an antimuscarinic drug may still be required.

Neostigmine is also used to reverse the actions of the non-depolarising neuromuscular blocking drugs.

#### Immunosuppressant therapy

**Corticosteroids** are established as treatment for *myasthenia gravis*; although they are commonly given on alternate days there is little evidence of benefit over daily administration. Corticosteroid treatment is usually initiated under in-patient supervision and all patients should receive osteoporosis prophylaxis.

In *generalised myasthenia gravis* prednisolone p. 639 is given. About 10% of patients experience a transient but very serious worsening of symptoms in the first 2–3 weeks, especially if the corticosteroid is started at a high dose. Smaller doses of corticosteroid are usually required in *ocular myasthenia*. Once clinical remission has occurred (usually after 2–6 months), the dose of prednisolone should be reduced slowly to the minimum effective dose.

In *generalised myasthenia gravis* azathioprine is usually started at the same time as the corticosteroid and it allows a lower maintenance dose of the corticosteroid to be used. Cyclosporin p. 788, methotrexate p. 844, or mycophenolate mofetil p. 796 can be used in patients unresponsive or intolerant to other treatments [unlicensed indications].

**Acetylcholine-release enhancers**

Amifampridine p. 1025 is licensed for the symptomatic treatment of Lambert-Eaton myasthenic syndrome (LEMS), a rare disorder of neuromuscular transmission.

Fampridine p. 799 is licensed for the improvement of walking in patients with multiple sclerosis p. 797 who have a walking disability.

**Skeletal muscle relaxants**

The drugs described are used for the relief of chronic muscle spasm or spasticity associated with multiple sclerosis p. 797 or other neurological damage; they are not indicated for spasm associated with minor injuries. Baclofen, diazepam, and tizanidine act principally on the central nervous system. Dantrolene has a peripheral site of action; cannabis extract has both a central and a peripheral action. Skeletal muscle relaxants differ in action from the muscle relaxants used in anaesthesia, which block transmission at the neuromuscular junction.

The underlying cause of spasticity should be treated and any aggravating factors (e.g. pressure sores, infection) remedied. Skeletal muscle relaxants are effective in most forms of spasticity except the rare alpha variety. The major disadvantage of treatment with these drugs is that reduction in muscle tone can cause a loss of splinting action of the spastic leg and trunk muscles and sometimes lead to an increase in disability.

Baclofen p. 1026 inhibits transmission at spinal level and also depresses the central nervous system. The dose should be increased slowly to avoid the major side-effects of sedation and muscular hypotonia (other adverse events are uncommon).

A cannabis extract p. 1026 containing dronabinol (delta-9-tetrahydrocannabinol) and cannabidiol is licensed as an adjunct treatment for moderate to severe spasticity associated with multiple sclerosis in patients who have not responded adequately to other skeletal muscle relaxants. The dose should be titrated over 2 weeks; response to treatment should be reviewed after 4 weeks and treatment stopped if an adequate response is not achieved.

Dantrolene sodium p. 1236 acts directly on skeletal muscle and produces fewer central adverse effects making it a drug of choice. The dose should be increased slowly.

Diazepam p. 327 can also be used. Sedation and occasionally extensor hypotonus are disadvantages. Other benzodiazepines also have muscle-relaxant properties. Muscle-relaxant doses of benzodiazepines are similar to anxiolytic doses.

Tizanidine p. 1027 is an  $\alpha_2$ -adrenoceptor agonist indicated for spasticity associated with multiple sclerosis or spinal cord injury.

**Other muscle relaxants**

The clinical efficacy of methocarbamol p. 1027 and meprobamate p. 330 as muscle relaxants is **not** well established, although they have been included in compound analgesic preparations.

**CAUTIONS, FURTHER INFORMATION**

- Interstitial lung disease Perform chest radiography if symptoms such as dry cough or dyspnoea develop; discontinue if interstitial lung disease is diagnosed.

- **INTERACTIONS** → Appendix 1: riluzole

- **SIDE-EFFECTS**

- **Common or very common** Abdominal pain · asthenia · diarrhoea · dizziness · drowsiness · headache · nausea · oral paraesthesia · tachycardia · vomiting
- **Uncommon** Anaemia · angioedema · interstitial lung disease · pancreatitis
- **Rare** Neutropenia
- **Very rare** Hepatitis

**SIDE-EFFECTS, FURTHER INFORMATION**

- Neutropenia White blood cell counts should be determined in febrile illness; neutropenia requires discontinuation of riluzole.

- **PREGNANCY** Avoid—no information available.

- **BREAST FEEDING** Avoid—no information available.

- **HEPATIC IMPAIRMENT** Avoid.

- **RENAL IMPAIRMENT** Avoid—no information available.

- **PATIENT AND CARER ADVICE**

Blood disorders Patients or their carers should be told how to recognise signs of neutropenia and advised to seek immediate medical attention if symptoms such as fever occur.

**Driving and skilled tasks**

Dizziness or vertigo may affect performance of skilled tasks (e.g. driving).

- **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- **Riluzole for motor neurone disease (January 2001)** NICE TA20 Riluzole is recommended for treating the amyotrophic lateral sclerosis (ALS) form of motor neurone disease (MND). Treatment should be initiated by a specialist in MND but it can then be supervised under a shared-care arrangement involving the general practitioner.  
[www.nice.org.uk/TA20](http://www.nice.org.uk/TA20)

- **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, powder

**Oral suspension**

- **Teglutik** (Martindale Pharmaceuticals Ltd)

**Riluzole 5 mg per 1 ml** Teglutik 5mg/1ml oral suspension sugar-free | 300 ml [PoM] £100.00 DT price = £100.00

**Tablet**

- **Riluzole (Non-proprietary)**

**Riluzole 50 mg** Riluzole 50mg tablets | 56 tablet [PoM] £320.00 DT price = £14.37

- **Rilutek** (Sanofi)

**Riluzole 50 mg** Rilutek 50mg tablets | 56 tablet [PoM] £320.33 DT price = £14.37

**NEUROPROTECTIVE DRUGS****Riluzole**

- **INDICATIONS AND DOSE**

**To extend life in patients with amyotrophic lateral sclerosis, initiated by specialist experienced in the management of motor neurone disease**

- **BY MOUTH**

- **Adult:** 50 mg twice daily

- **CONTRA-INDICATIONS** Acute porphyria

- **CAUTIONS** History of abnormal hepatic function (consult product literature for details) · interstitial lung disease

## 3.1 Muscular dystrophy

### DRUGS FOR NEUROMUSCULAR DISORDERS

#### Ataluren

24-May-2017

- **DRUG ACTION** Ataluren restores the synthesis of dystrophin by allowing ribosomes to read through premature stop codons that cause incomplete dystrophin synthesis in nonsense mutation Duchenne muscular dystrophy.

#### ● INDICATIONS AND DOSE

**Duchenne muscular dystrophy resulting from a nonsense mutation in the dystrophin gene, in ambulatory patients (initiated by a specialist)**

- BY MOUTH
- Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: ataluren

#### ● SIDE-EFFECTS

- **Common or very common** Abdominal discomfort · constipation · cough · decreased appetite · diarrhoea · enuresis · epistaxis · flatulence · haematuria · headache · hypertension · hypertriglyceridaemia · musculoskeletal chest pain · nausea · pain in extremity · pyrexia · rash · upper abdominal pain · vomiting · weight loss
- **Frequency not known** Changes in renal function tests · raised cholesterol

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

- **BREAST FEEDING** Manufacturer advises discontinue breastfeeding—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises close monitoring—safety and efficacy not established.

- **RENAL IMPAIRMENT** Manufacturer advises close monitoring—safety and efficacy not established.

- **MONITORING REQUIREMENTS** Manufacturer advises monitor renal function at least every 6–12 months, and cholesterol and triglyceride concentrations at least annually.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises the contents of each sachet should be mixed with at least 30 mL of liquid (water, milk, fruit juice), or 3 tablespoons of semi-solid food (yoghurt or apple sauce).

- **PATIENT AND CARER ADVICE** Manufacturer advises patients should maintain adequate hydration during treatment.

#### Missed doses

Manufacturer advises if a morning or midday dose is more than 3 hours late, or an evening dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (April 2016) that ataluren (*Translarna*®) is not recommended for use within NHS Scotland for the treatment of Duchenne muscular dystrophy resulting from a nonsense mutation in the dystrophin gene, in ambulatory patients aged 5 years and older as the economic case was not demonstrated.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Granules

- **Translarna** (PTC Therapeutics Ltd) ▼

**Ataluren 125 mg** Translarna 125mg granules for oral suspension sachets | 30 sachet [PoM] no price available

**Ataluren 250 mg** Translarna 250mg granules for oral suspension sachets | 30 sachet [PoM] no price available

**Ataluren 1 gram** Translarna 1,000mg granules for oral suspension sachets | 30 sachet [PoM] no price available

## 3.2 Myasthenia gravis and Lambert-Eaton myasthenic syndrome

### ANTICHOLINESTERASES

#### Anticholinesterases

- **DRUG ACTION** They prolong the action of acetylcholine by inhibiting the action of the enzyme acetylcholinesterase.

- **CONTRA-INDICATIONS** Intestinal obstruction · urinary obstruction

- **CAUTIONS** Arrhythmias · asthma (extreme caution) · atropine or other antidote to muscarinic effects may be necessary (particularly when neostigmine is given by injection) but not given routinely because it may mask signs of overdosage · bradycardia · epilepsy · hyperthyroidism · hypotension · parkinsonism · peptic ulceration · recent myocardial infarction · vagotonia

- **SIDE-EFFECTS** Abdominal cramps (more marked with higher doses) · diarrhoea · increased salivation · nausea · vomiting

#### Overdose

Signs of overdosage include bronchoconstriction, increased bronchial secretions, lacrimation, excessive sweating, involuntary defaecation, involuntary micturition, miosis, nystagmus, bradycardia, heart block, arrhythmias, hypotension, agitation, excessive dreaming, and weakness eventually leading to fasciculation and paralysis.

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.

- **BREAST FEEDING** Amount probably too small to be harmful.

▶ above

#### Neostigmine

(Neostigmine methylsulfate)

#### ● INDICATIONS AND DOSE

##### Treatment of myasthenia gravis

- BY MOUTH

- Adult: Initially 15–30 mg, dose repeated at suitable intervals throughout the day, total daily dose 75–300 mg, the maximum that most patients can tolerate is 180 mg daily

- BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

- Adult: 1–2.5 mg, dose repeated at suitable intervals throughout the day (usual total daily dose 5–20 mg)

##### Reversal of non-depolarising (competitive) neuromuscular blockade

- BY INTRAVENOUS INJECTION

- Adult: 2.5 mg (max. per dose 5 mg), repeated if necessary after or with glycopyrronium or atropine, to be given over 1 minute

- **CAUTIONS** Glycopyrronium or atropine should also be given when reversing neuromuscular blockade
- **INTERACTIONS** → Appendix 1: neostigmine
- **RENAL IMPAIRMENT** May need dose reduction.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

##### Solution for injection

- ▶ **Neostigmine (Non-proprietary)**  
Neostigmine metilsulfate 2.5 mg per 1 ml Neostigmine 2.5mg/1ml solution for injection ampoules | 10 ampoule [PoM] £5.06-£5.45

##### Tablet

- ▶ **Neostigmine (Non-proprietary)**  
Neostigmine bromide 15 mg Neostigmine 15mg tablets | 140 tablet [PoM] £99.60 DT price = £99.60

P 1024

## Pyridostigmine bromide

- **DRUG ACTION** Pyridostigmine bromide has weaker muscarinic action than neostigmine.

#### INDICATIONS AND DOSE

##### Myasthenia gravis

- ▶ **INITIALLY BY MOUTH**
- ▶ **Adult:** 30–120 mg, doses to be given at suitable intervals throughout day; (by mouth) usual dose 0.3–1.2 g daily in divided doses, it is inadvisable to exceed a total daily dose of 450 mg in order to avoid acetylcholine receptor down-regulation; patients requiring doses exceeding 450 mg daily will usually require input from a specialised neuromuscular service. Immunosuppressant therapy is usually considered if the dose of pyridostigmine exceeds 360 mg daily

- **INTERACTIONS** → Appendix 1: pyridostigmine
- **RENAL IMPAIRMENT** Reduce dose; excreted by kidney.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

##### Tablet

- ▶ **Pyridostigmine bromide (Non-proprietary)**  
Pyridostigmine bromide 60 mg Pyridostigmine bromide 60mg tablets | 200 tablet [PoM] £45.54 DT price = £45.54
- ▶ **Mestinon** (Meda Pharmaceuticals Ltd)  
Pyridostigmine bromide 60 mg Mestinon 60mg tablets | 200 tablet [PoM] £45.57 DT price = £45.54

## CHOLINERGIC RECEPTOR STIMULATING DRUGS

## Amifampridine

#### INDICATIONS AND DOSE

##### Symptomatic treatment of Lambert-Eaton myasthenic syndrome (specialist use only)

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15 mg daily in 3 divided doses, then increased in steps of 5 mg every 4–5 days, increased to up to 60 mg daily in 3–4 divided doses (max. per dose 20 mg); maximum 60 mg per day

- **CONTRA-INDICATIONS** Congenital QT syndromes · epilepsy · uncontrolled asthma
- **CAUTIONS** Non-paraneoplastic form of Lambert-Eaton myasthenic syndrome
- **INTERACTIONS** → Appendix 1: amifampridine
- **SIDE-EFFECTS** Anxiety · arrhythmias · blurred vision · bronchial hypersecretion · chorea · convulsions · cough · dizziness · drowsiness · exacerbation or precipitation of asthma · gastro-intestinal disorders · headache · myoclonia

· palpitations · paraesthesia · Raynaud's syndrome · sleep disturbances · weakness

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women.
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** In mild impairment reduce initial dose to 10 mg daily in divided doses, increased in steps of 5 mg every 7 days. In moderate or severe impairment reduce initial dose to 5 mg daily in divided doses, increased in steps of 5 mg every 7 days. Use with caution.
- **RENAL IMPAIRMENT** In mild impairment reduce initial dose to 10 mg daily in divided doses, increased in steps of 5 mg every 7 days. In moderate or severe impairment reduce initial dose to 5 mg daily in divided doses, increased in steps of 5 mg every 7 days. Use with caution.
- **MONITORING REQUIREMENTS** Clinical and ECG monitoring required at treatment initiation and yearly thereafter.
- **NATIONAL FUNDING/ACCESS DECISIONS**

#### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (July 2012) that amifampridine phosphate (Firdapse®) is not recommended for use within NHS Scotland for the symptomatic treatment of Lambert-Eaton myasthenic syndrome (LEMS).

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet

##### Tablet

CAUTIONARY AND ADVISORY LABELS 3, 21

## 3.3 Nocturnal leg cramps

### Nocturnal leg cramps

#### Quinine salts

Quinine salts p. 586, such as quinine sulfate are effective in reducing the frequency of nocturnal leg cramps by about 25% in ambulatory patients; however, because of potential toxicity, quinine is not recommended for routine treatment and should not be used unless cramps cause regular disruption to sleep. Quinine should only be considered when cramps are very painful or frequent; when other treatable causes of cramp have been excluded; and when non-pharmacological treatments have not worked (e.g. passive stretching exercises). It may take up to 4 weeks for improvement to become apparent; if there is benefit, quinine treatment can be continued. Treatment should be interrupted at intervals of approximately 3 months to assess the need for further quinine treatment. In patients taking quinine long term, a trial discontinuation may be considered. Quinine is toxic in overdosage and accidental fatalities have occurred.

## 3.4 Spasticity

**Other drugs used for spasticity** Dantrolene sodium, p. 1236  
• Diazepam, p. 327

### CANNIBINOIDS

#### Cannabis extract

##### • INDICATIONS AND DOSE

**Adjunct in moderate to severe spasticity in multiple sclerosis (specialist use only)**

- BY BUCCAL ADMINISTRATION
- Adult: (consult product literature)

• **CONTRA-INDICATIONS** Family history of psychosis • history of other severe psychiatric disorder • personal history of psychosis

• **CAUTIONS** History of epilepsy • significant cardiovascular disease

• **INTERACTIONS** → Appendix 1: cannabis extract

##### • SIDE-EFFECTS

- **Common or very common** Amnesia • blurred vision • constipation • depression • diarrhoea • disorientation • dissociation • dizziness • drowsiness • dry mouth • dysarthria • impaired attention • increased or decreased appetite • malaise • mood disturbance • mouth ulcers • nausea • oral pain • taste disturbance • vertigo • vomiting
- **Uncommon** Abdominal pain • delusions • hallucinations • hypertension • oromucosal discolouration • palpitation • paranoia • pharyngitis • stomatitis • suicidal thoughts • syncope • tachycardia • tooth discolouration
- **Frequency not known** Anxiety • seizures

• **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception during and for 3 months after treatment in men and women.

• **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risks.

• **BREAST FEEDING** Avoid—present in milk.

• **HEPATIC IMPAIRMENT** Manufacturer advises more frequent monitoring in significant hepatic impairment—possible risk of prolonged or enhanced effect.

• **RENAL IMPAIRMENT** Manufacturer advises more frequent monitoring in significant renal impairment—possible risk of prolonged or enhanced effect.

• **MONITORING REQUIREMENTS** Monitor oral mucosa—interrupt treatment if lesions or persistent soreness.

##### • PATIENT AND CARER ADVICE

**Driving and skilled tasks**

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including cannabis, see Drugs and driving under Guidance on prescribing p. 1.

##### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Propylene glycol

► **Sativex** (Bayer Plc)

Cannabidiol 2.5 mg per 1 dose, Dronabinol 2.7 mg per 1 dose Sativex oromucosal spray | 270 dose [POM] £375.00 [CD4-1]

## MUSCLE RELAXANTS > CENTRALLY ACTING

### Baclofen

21-Nov-2016

##### • INDICATIONS AND DOSE

**Pain of muscle spasm in palliative care**

- BY MOUTH
- Adult: 5–10 mg 3 times a day

**Hiccup due to gastric distension (in palliative care)**

- BY MOUTH
- Adult: 5 mg twice daily

**Chronic severe spasticity resulting from disorders such as multiple sclerosis or traumatic partial section of spinal cord**

- BY MOUTH
- Adult: Initially 5 mg 3 times a day, gradually increased; maintenance up to 60 mg daily in divided doses, review treatment if no benefit within 6 weeks of achieving maximum dose; maximum 100 mg per day

**Severe chronic spasticity unresponsive to oral antispastic drugs (or where side-effects of oral therapy unacceptable) or as alternative to ablative neurosurgical procedures (specialist use only)**

- BY INTRATHECAL INJECTION
- Adult: Test dose 25–50 micrograms, to be given over at least 1 minute via catheter or lumbar puncture, then increased in steps of 25 micrograms (max. per dose 100 micrograms), not given more often than every 24 hours to determine appropriate dose, then *dose-titration phase*, most often using infusion pump (implanted into chest wall or abdominal wall tissues) to establish maintenance dose (ranging from 12 micrograms to 2 mg daily for spasticity of spinal origin or 22 micrograms to 1.4 mg daily for spasticity of cerebral origin) retaining some spasticity to avoid sensation of paralysis

##### IMPORTANT SAFETY INFORMATION

Consult product literature for details on test dose and titration—important to monitor patients closely in appropriately equipped and staffed environment during screening and immediately after pump implantation. Resuscitation equipment must be available for immediate use. Treatment with continuous pump-administered intrathecal baclofen should be initiated within 3 months of a satisfactory response to intrathecal baclofen testing.

##### • CONTRA-INDICATIONS

- With intrathecal use Local infection • systemic infection
- With oral use Avoid oral route in active peptic ulceration

##### • CAUTIONS

###### GENERAL CAUTIONS

Cerebrovascular disease • diabetes • elderly • epilepsy • history of peptic ulcer • hypertonic bladder sphincter • Parkinson's disease • psychiatric illness • respiratory impairment

###### SPECIFIC CAUTIONS

- With intrathecal use Coagulation disorders • malnutrition (increased risk of post-surgical complications) • previous spinal fusion procedure

• **INTERACTIONS** → Appendix 1: baclofen

##### • SIDE-EFFECTS

- **Common or very common** Agitation • anxiety • ataxia • cardiovascular depression • confusion • depression • dizziness • drowsiness • dry mouth • euphoria • gastro-intestinal disturbances • hallucinations • headache • hyperhidrosis • hypotension • insomnia • myalgia • nightmares • rash • respiratory depression • sedation • seizure • tremor • urinary disturbances • visual disorders

- ▶ **Rare** Abdominal pain · changes in hepatic function · dysarthria · erectile dysfunction · paraesthesia · taste disturbances
- ▶ **Very rare** Hypothermia
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (toxicity in *animal* studies).
- **BREAST FEEDING** Present in milk—amount probably too small to be harmful.
- **HEPATIC IMPAIRMENT**
  - ▶ With oral use Manufacturer advises use with caution.
- **RENAL IMPAIRMENT**
  - ▶ With oral use Risk of toxicity—use smaller doses (e.g. 5 mg daily by mouth) and if necessary increase dosage interval; if eGFR less than 15 mL/minute/1.73 m<sup>2</sup> manufacturer advises use by mouth only if potential benefit outweighs risk. Excreted by the kidney.
- **TREATMENT CESSATION** Avoid abrupt withdrawal (risk of hyperactive state, may exacerbate spasticity, and precipitate autonomic dysfunction including hyperthermia, psychiatric reactions and convulsions; to minimise risk, discontinue by gradual dose reduction over at least 1–2 weeks (longer if symptoms occur)).
- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral liquid formulations may include raspberry.  
**Palliative care**  
For further information on the use of baclofen in palliative care, see [www.palliativedrugs.com/formulary/en/baclofen.html](http://www.palliativedrugs.com/formulary/en/baclofen.html).
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks**  
Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection

##### Tablet

**Baclofen 1 mg per 1 ml** Lyflex 5mg/5ml oral solution sugar-free | 300 ml [PoM] £7.95 DT price = £3.22

## Methocarbamol

#### ● INDICATIONS AND DOSE

##### **Short-term symptomatic relief of muscle spasm**

##### ▶ **BY MOUTH**

▶ **Adult:** 1.5 g 4 times a day; reduced to 750 mg 3 times a day if required

▶ **Elderly:** Up to 750 mg 4 times a day, dose may be sufficient

● **CONTRA-INDICATIONS** Brain damage · coma · epilepsy · myasthenia gravis · pre-coma

● **INTERACTIONS** → Appendix 1: methocarbamol

● **SIDE-EFFECTS** Amnesia · anaphylaxis · angioedema · anxiety · blurred vision · bradycardia · cholestatic jaundice · confusion · dizziness · drowsiness · dyspepsia · fever · headache · hypersensitivity reactions · hypotension · leucopenia · nasal congestion · nausea · pruritus · rash · restlessness · seizures · tremor · urticaria · vomiting

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

● **BREAST FEEDING** Present in milk in *animal studies*—manufacturer advises caution.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution; half-life may be prolonged.

● **RENAL IMPAIRMENT** Manufacturer advises caution.

#### ● **PATIENT AND CARER ADVICE**

##### **Driving and skilled tasks**

Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

● **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

##### Tablet

CAUTIONARY AND ADVISORY LABELS 2

##### ▶ **Methocarbamol (Non-proprietary)**

## Tizanidine

#### ● INDICATIONS AND DOSE

##### **Spasticity associated with multiple sclerosis or spinal cord injury or disease**

##### ▶ **BY MOUTH**

▶ **Adult:** Initially 2 mg daily, then increased in steps of 2 mg daily in divided doses, increased at intervals of at least 3–4 days and adjust according to response; usual dose up to 24 mg daily in 3–4 divided doses; maximum 36 mg per day

● **CAUTIONS** Elderly

● **INTERACTIONS** → Appendix 1: tizanidine

#### ● **SIDE-EFFECTS**

▶ **Common or very common** Altered liver enzymes (discontinue if persistently raised—consult product

- literature) · dizziness · drowsiness · dry mouth · fatigue · gastro-intestinal disturbance · hypotension · nausea
- ▶ **Uncommon** Bradycardia
  - ▶ **Frequency not known** Asthenia · blurred vision · confusion · convulsions · hallucinations · hepatitis · insomnia · liver failure · syncope
  - **PREGNANCY** Avoid (toxicity in *animal* studies).
  - **BREAST FEEDING** Avoid (present in milk in *animal* studies).
  - **HEPATIC IMPAIRMENT** Avoid in severe impairment; use in moderate impairment only if potential benefit outweighs risk.
  - **RENAL IMPAIRMENT** Manufacturer advises caution.
  - **MONITORING REQUIREMENTS** Monitor liver function monthly for first 4 months and in those who develop unexplained nausea, anorexia or fatigue.
  - **TREATMENT CESSATION** Avoid abrupt withdrawal (risk of rebound hypertension and tachycardia); to minimise risk, discontinue gradually and monitor blood pressure.
  - **PATIENT AND CARER ADVICE**  
Driving and skilled tasks  
Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

## 4 Pain and inflammation in musculoskeletal disorders

### Low back pain and sciatica

08-Mar-2017

#### Description of condition

Low back pain is pain in the lumbosacral area of the back. It can be described as *non-specific, mechanical, musculoskeletal or simple* (if it is not associated with serious or potentially serious causes). Episodes of back pain do not usually last long, with rapid improvements in pain and disability seen within a few weeks to months.

Sciatica (*radicular pain or radiculopathy*) is neuropathic leg pain secondary to compressive lumbosacral nerve root pathology.

#### Non-drug treatment

[EvGr] Exercise programmes, manual therapy, and psychological therapies should be considered for managing low back pain with or without sciatica.

Spinal decompression may be considered in patients with sciatica when pain and function has not improved with non-surgical treatment (including drug treatment). ⚠

#### Drug treatment

[EvGr] An oral NSAID (see Non-steroidal anti-inflammatory drugs, below) should be considered for managing acute low back pain, taking into consideration the gastro-intestinal, cardio-renal and hepatic risks associated with NSAIDs; as well as the need for continued monitoring, and the possible need for gastroprotective treatment (see *NSAID-associated ulcers* under Peptic ulceration p. 70).

A weak opioid, either alone or with paracetamol p. 422, can be used to manage acute low back pain only if an NSAID is contra-indicated, not tolerated or ineffective (see *Opioid analgesics* under Analgesics p. 420). Paracetamol alone is ineffective for managing low back pain. ⚠

[EvGr] Benzodiazepines are sometimes used to manage acute low back pain (particularly in loss of lordosis); however evidence to support their use is very weak. ⚠

[EvGr] In patients with chronic low back pain who have had an inadequate response to non-drug treatment, NSAIDs should be considered as first-line therapy. Opioids should be the last treatment option considered and should be considered only in patients for whom other therapies have failed and only if the potential benefits outweigh the risks for individual patients. If indicated, opioids should only be prescribed for a limited period of time. Long term opioid therapy should be avoided.

Selective serotonin re-uptake inhibitors (SSRIs), serotonin and noradrenaline re-uptake inhibitors (SNRIs), tricyclic antidepressants, and antiepileptic drugs should **not** be offered for managing low back pain.

When non-surgical treatment is ineffective in patients with moderate and severe localised back pain arising from structures supplied by the medial branch nerve, radiofrequency denervation can be considered. ⚠

#### Sciatica

Patients with sciatica may require specific treatment for Neuropathic pain p. 457.

[EvGr] Patients with acute and severe sciatica may benefit from treatment with epidural injections of local anaesthetic and/or corticosteroid. ⚠

#### Useful Resources

Low back pain and sciatica. National Institute for Health and Care Excellence. Clinical guideline NG59. November 2016. [www.nice.org.uk/guidance/ng59](http://www.nice.org.uk/guidance/ng59)

## Non-steroidal anti-inflammatory drugs

05-Jun-2017

#### Therapeutic effects

In *single doses* non-steroidal anti-inflammatory drugs (NSAIDs) have analgesic activity comparable to that of paracetamol p. 422, but paracetamol is preferred, particularly in the elderly.

In regular *full dosage* NSAIDs have both a lasting analgesic and an anti-inflammatory effect which makes them particularly useful for the treatment of continuous or regular pain associated with inflammation. Therefore, although paracetamol often gives adequate pain control in osteoarthritis, NSAIDs are more appropriate than paracetamol or the opioid analgesics in the *inflammatory arthritides* (e.g. rheumatoid arthritis) and in some cases of *advanced osteoarthritis*. NSAIDs can also be of benefit in the less well defined conditions of *back pain* and *soft-tissue disorders*.

#### Choice

Differences in anti-inflammatory activity between NSAIDs are small, but there is considerable variation in individual response and tolerance to these drugs. About 60% of patients will respond to any NSAID; of the others, those who do not respond to one may well respond to another. Pain relief starts soon after taking the first dose and a full analgesic effect should normally be obtained within a week, whereas an anti-inflammatory effect may not be achieved (or may not be clinically assessable) for up to 3 weeks. If appropriate responses are not obtained within these times, another NSAID should be tried.

NSAIDs reduce the production of prostaglandins by inhibiting the enzyme cyclo-oxygenase. They vary in their selectivity for inhibiting different types of cyclo-oxygenase; selective inhibition of cyclo-oxygenase-2 is associated with less gastro-intestinal intolerance. Several other factors also influence susceptibility to gastrointestinal effects, and a NSAID should be chosen on the basis of the incidence of gastro-intestinal and other side-effects.

Ibuprofen p. 1041 is a propionic acid derivative with anti-inflammatory, analgesic, and antipyretic properties. It has fewer side-effects than other non-selective NSAIDs but its anti-inflammatory properties are weaker. It is unsuitable for conditions where inflammation is prominent, such as acute gout. Dexibuprofen p. 1032 is the active enantiomer of ibuprofen. It has similar properties to ibuprofen and is licensed for the relief of mild to moderate pain and inflammation.

Other propionic acid derivatives:

Naproxen p. 1048 is one of the first choices because it combines good efficacy with a low incidence of side-effects (but more than ibuprofen).

Fenoprofen p. 1039 is as effective as naproxen, and flurbiprofen p. 1040 may be slightly more effective. Both are associated with slightly more gastro-intestinal side-effects than ibuprofen.

Ketoprofen p. 1044 has anti-inflammatory properties similar to ibuprofen and has more side-effects. Dexketoprofen p. 1033, an isomer of ketoprofen, has been introduced for the short-term relief of mild to moderate pain.

Tiaprofenic acid p. 1052 is as effective as naproxen; it has more side-effects than ibuprofen.

Drugs with properties similar to those of propionic acid derivatives:

Diclofenac sodium p. 1034 and aceclofenac p. 1030 are similar in efficacy to naproxen.

Etodolac p. 1037 is comparable in efficacy to naproxen; it is licensed for symptomatic relief of osteoarthritis and rheumatoid arthritis.

Indometacin p. 1043 has an action equal to or superior to that of naproxen, but with a high incidence of side-effects including headache, dizziness, and gastro-intestinal disturbances.

Mefenamic acid p. 1046 has minor anti-inflammatory properties. It has occasionally been associated with diarrhoea and haemolytic anaemia which require discontinuation of treatment.

Meloxicam p. 1046 is licensed for the short-term relief of pain in osteoarthritis and for long-term treatment of rheumatoid arthritis and ankylosing spondylitis.

Nabumetone p. 1047 is comparable in effect to naproxen.

Phenylbutazone is licensed for ankylosing spondylitis, but is not recommended because it is associated with serious side-effects, in particular haematological reactions; it should be used only by a specialist in severe cases where other treatments have been found unsuitable.

Piroxicam p. 1049 is as effective as naproxen and has a long duration of action which permits once-daily administration. However, it has more gastro-intestinal side-effects than most other NSAIDs, and is associated with more frequent serious skin reactions.

Sulindac p. 1051 is similar in tolerance to naproxen.

Tenoxicam p. 1051 is similar in activity and tolerance to naproxen. Its long duration of action allows once-daily administration.

Tolfenamic acid p. 451 is licensed for the treatment of migraine.

Ketorolac trometamol p. 1077 and the selective inhibitor of cyclo-oxygenase-2, parecoxib p. 1232, are licensed for the short-term management of postoperative pain.

The selective inhibitors of cyclo-oxygenase-2, etoricoxib p. 1038 and celecoxib p. 1031, are as effective as non-

selective NSAIDs such as diclofenac sodium and naproxen. Although selective inhibitors can cause serious gastro-intestinal events, available evidence appears to indicate that the risk of serious upper gastro-intestinal events is lower with selective inhibitors compared to non-selective NSAIDs; this advantage may be lost in patients who require concomitant low-dose aspirin.

Celecoxib and etoricoxib are licensed for the relief of pain in osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis; etoricoxib is also licensed for the relief of pain from acute gout.

Aspirin p. 117 has been used in high doses to treat rheumatoid arthritis, but other NSAIDs are now preferred.

### Dental and orofacial pain

Mild to moderate dental pain and inflammation is effectively relieved by NSAIDs. Those used for dental pain include ibuprofen, diclofenac sodium, and diclofenac potassium p. 1033.

### Asthma

Any degree of worsening of asthma may be related to the ingestion of NSAIDs, either prescribed or (in the case of ibuprofen and others) purchased over the counter.

### NSAIDs and cardiovascular events

All NSAID use (including cyclo-oxygenase-2 selective inhibitors) can, to varying degrees, be associated with a small increased risk of thrombotic events (e.g. myocardial infarction and stroke) independent of baseline cardiovascular risk factors or duration of NSAID use; however, the greatest risk may be in those receiving high doses long term.

Cyclo-oxygenase-2 selective inhibitors, diclofenac (150 mg daily) and ibuprofen (2.4 g daily) are associated with an increased risk of thrombotic events. Although there are limited data regarding the thrombotic effects of aceclofenac, treatment advice has been updated in line with diclofenac, based on aceclofenac's structural similarity to diclofenac and its metabolism to diclofenac. The increased risk for diclofenac is similar to that of licensed doses of etoricoxib. Naproxen (1 g daily) is associated with a lower thrombotic risk, and low doses of ibuprofen (1.2 g daily or less) have not been associated with an increased risk of myocardial infarction.

The lowest effective dose of NSAID should be prescribed for the shortest period of time to control symptoms and the need for long-term treatment should be reviewed periodically.

### NSAIDs and gastro-intestinal events

All NSAIDs are associated with serious gastro-intestinal toxicity; the risk is higher in the elderly. Evidence on the relative safety of non-selective NSAIDs indicates differences in the risks of serious upper gastro-intestinal side-effects—piroxicam p. 1049, ketoprofen p. 1044, and ketorolac trometamol p. 1077 are associated with the highest risk; indometacin p. 1043, diclofenac, and naproxen p. 1048 are associated with intermediate risk, and ibuprofen p. 1041 with the lowest risk (although high doses of ibuprofen have been associated with intermediate risk). Selective inhibitors of cyclo-oxygenase-2 are associated with a *lower risk* of serious upper gastro-intestinal side-effects than non-selective NSAIDs.

Recommendations are that NSAIDs associated with a low risk e.g. ibuprofen are *generally preferred*, to start at the *lowest recommended dose* and not to use more than one oral NSAID at a time.

The combination of a NSAID and low-dose aspirin can increase the risk of gastro-intestinal side-effects; this combination should be used only if absolutely necessary and the patient should be monitored closely.

While it is preferable to avoid NSAIDs in patients with active or previous gastro-intestinal ulceration or bleeding, and to withdraw them if gastro-intestinal lesions develop, nevertheless patients with serious rheumatic diseases (e.g. rheumatoid arthritis) are usually dependent on NSAIDs for effective relief of pain and stiffness.

Patients at risk of gastro-intestinal ulceration (including the elderly), who need NSAID treatment should receive gastroprotective treatment.

Systemic as well as local effects of NSAIDs contribute to gastro-intestinal damage; taking oral formulations with milk or food, or using enteric-coated formulations, or changing the route of administration may only partially reduce symptoms such as dyspepsia.

### NSAIDs and alcohol

Alcohol increases the risk of gastro-intestinal haemorrhage associated with NSAIDs. Specialist sources recommend that concurrent use need not be avoided with moderate alcohol intake, but greater caution is warranted in those who drink more than the recommended daily limits.

Some cases of acute kidney injury have been attributed to use of NSAIDs and acute excessive alcohol consumption.

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Aceclofenac

#### • INDICATIONS AND DOSE

**Pain and inflammation in rheumatoid arthritis, osteoarthritis and ankylosing spondylitis**

► BY MOUTH

► Adult: 100 mg twice daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · ischaemic heart disease · mild heart failure · peripheral arterial disease · severe heart failure
- **CAUTIONS** Allergic disorders · avoid in acute porphyrias p. 969 · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · hypertension · left ventricular dysfunction · oedema · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated)
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
  - **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances ·

hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

#### SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Most manufacturers advise avoiding the use of NSAIDs during pregnancy or avoiding them unless the potential benefit outweighs the risk. NSAIDs should be avoided during the third trimester because use is associated with a risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn. In addition, the onset of labour may be delayed and its duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Initially 100 mg daily. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution; avoid in moderate to severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Tablet

CAUTIONARY AND ADVISORY LABELS 21

##### ► Acceclofenac (Non-proprietary)

£9.63 DT price = £9.63

### Acemetacin

- **DRUG ACTION** Glycolic acid ester of indometacin.

#### • INDICATIONS AND DOSE

**Pain and inflammation in rheumatic disease | Pain and inflammation in other musculoskeletal disorders | Postoperative analgesia**

► BY MOUTH

► **Adult:** 120 mg daily in divided doses, then increased if necessary to 180 mg daily in divided doses, dose to be taken with food

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · epilepsy · heart failure · ischaemic heart disease · parkinsonism · peripheral arterial disease · psychiatric disturbances · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - ▶ **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · blood disorders · confusion · convulsions · hepatic damage · hyperglycaemia · interstitial fibrosis associated with NSAIDs can lead to renal failure · intestinal strictures · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · peripheral neuropathy · psychiatric disturbances · pulmonary eosinophilia · Stevens-Johnson syndrome · syncope · thrombocytopenia · toxic epidermal necrolysis · visual disturbances
  - ▶ **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hyperkalaemia · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Most manufacturers advise avoiding the use of NSAIDs during pregnancy or avoiding them unless the potential benefit outweighs the risk. NSAIDs should be avoided during the third trimester because use is associated with a risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn. In addition, the onset of labour may be delayed and its duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Avoid if possible or use with caution. There is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **MONITORING REQUIREMENTS** During prolonged therapy ophthalmic and blood examinations particularly advisable.

## ● PATIENT AND CARER ADVICE

### Driving and skilled tasks

**Driving** Dizziness may affect performance of skilled tasks (e.g. driving).

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Capsule

CAUTIONARY AND ADVISORY LABELS 21

#### ▶ **Emflex** (Merck Serono Ltd)

**Acemetacin 60 mg** Emflex 60mg capsules | 90 capsule [PoM]  
£28.20 DT price = £28.20

## Celecoxib

02-Jun-2017

## ● INDICATIONS AND DOSE

### Pain and inflammation in osteoarthritis

#### ▶ BY MOUTH

- ▶ **Adult:** 200 mg daily in 1–2 divided doses, then increased if necessary up to 200 mg twice daily, discontinue if no improvement after 2 weeks on maximum dose

### Pain and inflammation in rheumatoid arthritis

#### ▶ BY MOUTH

- ▶ **Adult:** 100 mg twice daily, then increased if necessary to 200 mg twice daily, discontinue if no improvement after 2 weeks on maximum dose

### Ankylosing spondylitis

#### ▶ BY MOUTH

- ▶ **Adult:** 200 mg daily in 1–2 divided doses, then increased if necessary up to 400 mg daily in 1–2 divided doses, discontinue if no improvement after 2 weeks on maximum dose

## DOSE ADJUSTMENTS DUE TO INTERACTIONS

Manufacturer advises reduce dose by half with concurrent use of fluconazole.

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · hypertension · left ventricular dysfunction · oedema · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated)
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dyspnoea · influenza-like symptoms
  - ▶ **Uncommon** Cerebral infarction · fatigue · muscle cramps · palpitation · paraesthesia · stomatitis
  - ▶ **Rare** Alopecia · alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · taste disturbance · toxic epidermal necrolysis · visual disturbances
  - ▶ **Very rare** Seizures
  - ▶ **Frequency not known** Angioedema · blood disorders · bronchospasm · chest pain · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness ·

drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

#### SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.  
Contra-indicated in patients with sulfonamide sensitivity.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid (teratogenic in *animal* studies).
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Halve initial dose in moderate impairment. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **MONITORING REQUIREMENTS** Monitor blood pressure before and during treatment.

£21.55 DT price = £1.81

**Celecoxib 200 mg** Celebrex 200mg capsules | 30 capsule [PoM]

£21.55 DT price = £1.62

## Dexibuprofen

#### ● INDICATIONS AND DOSE

**Pain and inflammation associated with osteoarthritis and other musculoskeletal disorders | Mild to moderate pain and inflammation including dental pain**

##### ➤ BY MOUTH

- **Adult:** 600–900 mg daily in up to 3 divided doses; increased if necessary up to 1.2 g daily (max. per dose 400 mg)

**Mild to moderate pain and inflammation in dysmenorrhoea**

##### ➤ BY MOUTH

- **Adult:** 600–900 mg daily in up to 3 divided doses (max. per dose 300 mg); maximum 900 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension

#### CAUTIONS, FURTHER INFORMATION

- **High-dose dexibuprofen** A small increase in cardiovascular risk, similar to the risk associated with cyclo-oxygenase-2 inhibitors and diclofenac, has been reported with high-dose dexibuprofen ( $\geq 1.2$  g daily); use should be avoided in patients with established ischaemic heart disease, peripheral arterial disease, cerebrovascular disease, congestive heart failure (New York Heart Association classification II–III), and uncontrolled hypertension.

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

- **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

#### SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Present in milk—but risk to infant minimal.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>. Reduce initial dose. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

• Adult: 75 mg 1–2 times a day for maximum 2 days, twice daily administration in severe cases, to be injected into the gluteal muscle

**Ureteric colic**

► BY DEEP INTRAMUSCULAR INJECTION

• Adult: 75 mg, then 75 mg after 30 minutes if required

**Acute postoperative pain (in hospital setting)**

► BY INTRAVENOUS INFUSION

• Adult: 75 mg, then 75 mg after 4–6 hours if required for maximum 2 days; maximum 150 mg per day

**Prevention of postoperative pain (in hospital setting)**

► BY INTRAVENOUS INFUSION

• Adult: Initially 25–50 mg, to be given after surgery over 15–60 minutes, then 5 mg/hour for maximum 2 days; maximum 150 mg per day

**● CONTRA-INDICATIONS**

- With intravenous use Dehydration · history of asthma · history of confirmed or suspected cerebrovascular bleeding · history of haemorrhagic diathesis · hypovolaemia · operations with high risk of haemorrhage
- With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · avoid suppositories in proctitis · cerebrovascular disease · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease

**● CAUTIONS**

- With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and

fatalities) · history of cardiac failure · hypertension · left ventricular dysfunction · oedema · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated)

- With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

**● INTERACTIONS** → Appendix 1: NSAIDs**● SIDE-EFFECTS****• Rare**

- With systemic use Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- Frequency not known
- With intramuscular use or intravenous use Injection site reactions
- With rectal use Suppositories may cause rectal irritation
- With systemic use Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
- With topical use Paraesthesia · photosensitivity · rash (discontinue use if develops)

**SIDE-EFFECTS, FURTHER INFORMATION**

- Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- With topical use Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

**● CONCEPTION AND CONTRACEPTION**

- With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**● PREGNANCY**

- With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

**● BREAST FEEDING**

- With systemic use Use with caution during breast-feeding. Amount in milk too small to be harmful.
- With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

### ● HEPATIC IMPAIRMENT

- With systemic use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

### ● RENAL IMPAIRMENT

- With systemic use Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- With intravenous use Avoid intravenous use if serum creatinine greater than 160 micromol/litre.
  - Contra-indicated in moderate or severe renal impairment.

### ● DIRECTIONS FOR ADMINISTRATION

- With intravenous use For *intravenous infusion* (Voltarol®), give continuously or intermittently in Glucose 5% or Sodium chloride 0.9%. Dilute 75 mg with 100–500 mL infusion fluid (previously buffered with 0.5 mL sodium bicarbonate 8.4% solution or with 1 mL sodium bicarbonate 4.2% solution). For intermittent infusion give 25–50 mg over 15–60 minutes or 75 mg over 30–120 minutes. For continuous infusion give at a rate of 5 mg/hour.
- With topical use For topical preparations, apply with gentle massage only.

### ● PRESCRIBING AND DISPENSING INFORMATION

- Voltarol® dispersible tablets are more suitable for **short-term** use in acute conditions for which treatment required for no more than 3 months (no information on use beyond 3 months).

- PATIENT AND CARER ADVICE** For topical preparations, patients and their carers should be advised to wash hands immediately after use.

**Photosensitivity** Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

- EXCEPTIONS TO LEGAL CATEGORY** Various pack sizes of gel preparations may be available on sale to the public.

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary

Diclofenac Sodium Tablets may be prescribed.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### DYLOJECT®

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (February 2008) that *Dyloject*® is accepted for restricted use within NHS Scotland for the treatment or prevention of postoperative pain by intravenous injection in supervised healthcare settings.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: dispersible tablet, oral suspension, oral solution

#### Gastro-resistant tablet

CAUTIONARY AND ADVISORY LABELS 5, 25

**Diclofenac sodium 75 mg** Motifene 75mg modified-release capsules | 56 capsule [PoM] £8.00 DT price = £8.00

## Diclofenac sodium with misoprostol

The properties listed below are those particular to the combination only. For the properties of the components please consider, diclofenac sodium p. 1034, misoprostol p. 75.

### ● INDICATIONS AND DOSE

#### ARTHROTEC® 50/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- Adult: 1 tablet 2–3 times a day, take with food

#### ARTHROTEC® 75/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- ▶ BY MOUTH

- Adult: 1 tablet twice daily, take with food

**MISOFEN® 50/200**

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

► BY MOUTH

Adult: 1 tablet 2–3 times a day, take with food

**MISOFEN® 75/200**

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

► BY MOUTH

Adult: 1 tablet twice daily, take with food

- **UNLICENSED USE** The BNF recommends a higher starting dose of misoprostol for prophylaxis against NSAID-induced gastroduodenal ulceration than that provided by the combination preparations of diclofenac and misoprostol.

- **INTERACTIONS** → Appendix 1: NSAIDs

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Gastro-resistant tablet**

CAUTIONARY AND ADVISORY LABELS 21, 25

- **Arthrotec** (Pfizer Ltd)

**Misoprostol 200 microgram, Diclofenac sodium 50 mg** Arthrotec 50 gastro-resistant tablets | 60 tablet PoM £11.98 DT price = £11.98

**Misoprostol 200 microgram, Diclofenac sodium 75 mg** Arthrotec 75 gastro-resistant tablets | 60 tablet PoM £15.83 DT price = £15.83

- **Misofen** (Morningside Healthcare Ltd)

**Misoprostol 200 microgram, Diclofenac sodium 50 mg** Misofen 50mg/200microgram gastro-resistant tablets | 60 tablet PoM £11.98 DT price = £11.98

**Misoprostol 200 microgram, Diclofenac sodium 75 mg** Misofen 75mg/200microgram gastro-resistant tablets | 60 tablet PoM £15.83 DT price = £15.83

## Etodolac

### ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatoid arthritis and osteoarthritis**

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

Adult: 300–600 mg daily in 1–2 divided doses

► BY MOUTH USING MODIFIED-RELEASE MEDICINES

Adult: 600 mg daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure ·

pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances

- **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · confusion · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · dyspnoea · dysuria · fatigue · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · palpitation · paraesthesia · photosensitivity · pruritus · pyrexia · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · stomatitis · tinnitus · tremor · urinary frequency · vasculitis · vertigo

#### **SIDE-EFFECTS, FURTHER INFORMATION**

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

**Etodolac 600 mg** Etolyn 600mg modified-release tablets | 30 tablet PoM £12.40 DT price = £15.50

- **Etopan XL** (Ranbaxy (UK) Ltd)

**Etodolac 600 mg** Etopan XL 600mg tablets | 30 tablet PoM £14.60 DT price = £15.50

- **Lodine SR** (Almirall Ltd)

**Etodolac 600 mg** Lodine SR 600mg tablets | 30 tablet PoM £15.50 DT price = £15.50

#### **Capsule**

- **Eccoxolac** (Meda Pharmaceuticals Ltd)

**Etodolac 300 mg** Eccoxolac 300mg capsules | 60 capsule PoM £8.14 DT price = £8.14

## Etoricoxib

23-Nov-2016

### • INDICATIONS AND DOSE

#### Pain and inflammation in osteoarthritis

- BY MOUTH
- Child 16–17 years: 30 mg once daily, increased if necessary to 60 mg once daily
- Adult: 30 mg once daily, increased if necessary to 60 mg once daily

#### Pain and inflammation in rheumatoid arthritis | Ankylosing spondylitis

- BY MOUTH
- Child 16–17 years: 60 mg once daily, increased if necessary to 90 mg once daily
- Adult: 60 mg once daily, increased if necessary to 90 mg once daily

#### Acute gout

- BY MOUTH
- Child 16–17 years: 120 mg once daily for maximum 8 days
- Adult: 120 mg once daily for maximum 8 days

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease · uncontrolled hypertension (persistently above 140/90 mmHg)

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · dehydration · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · hypertension · left ventricular dysfunction · oedema · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated)

- **INTERACTIONS** → Appendix 1: NSAIDs

### • SIDE-EFFECTS

- **Common or very common** Ecchymosis · fatigue · influenza-like symptoms · palpitation
- **Uncommon** Anxiety · appetite change · arthralgia · atrial fibrillation · chest pain · cough · dry mouth · dyspnoea · electrolyte disturbance · epistaxis · flushing · mental acuity impaired · mouth ulcer · myalgia · paraesthesia · taste disturbance · transient ischaemic attack · weight change
- **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- **Very rare** Confusion · hallucinations
- **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
- **SIDE-EFFECTS, FURTHER INFORMATION**
- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Manufacturer advises avoid (teratogenic in animal studies). Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Max. 60 mg daily in mild impairment. Max. 60 mg on alternate days or 30 mg once daily in moderate impairment. Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
  - In adults Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
  - In children Avoid if estimated glomerular filtration rate less than 30 mL/minute/1.73 m<sup>2</sup>.
- **MONITORING REQUIREMENTS** Monitor blood pressure before treatment, 2 weeks after initiation and periodically during treatment.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- **Arcoxia** (Grunenthal Ltd)

**Etoricoxib 30 mg** Arcoxia 30mg tablets | 28 tablet [PoM] £13.99 DT price = £13.99

**Etoricoxib 60 mg** Arcoxia 60mg tablets | 28 tablet [PoM] £20.11 DT price = £20.11

**Etoricoxib 90 mg** Arcoxia 90mg tablets | 5 tablet [PoM] £4.10 | 28 tablet [PoM] £22.96 DT price = £22.96

**Etoricoxib 120 mg** Arcoxia 120mg tablets | 7 tablet [PoM] £6.03 | 28 tablet [PoM] £24.11 DT price = £24.11

## Felbinac

- **DRUG ACTION** Felbinac is an active metabolite of the NSAID fenbufen.

### • INDICATIONS AND DOSE

#### Relief of pain in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)

- TO THE SKIN
- Adult: Apply 2–4 times a day, therapy should be reviewed after 14 days; maximum 25 g per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal haemorrhage (two or more distinct episodes) · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure
- **CAUTIONS** Allergic disorders · avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's

disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · not for use with occlusive dressings · peripheral arterial disease · risk factors for cardiovascular events · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported) · ulcerative colitis (may be exacerbated) · uncontrolled hypertension

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**

- ▶ **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- ▶ **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · Photosensitivity · raised blood pressure · rash (discontinue use if develops) · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

**SIDE-EFFECTS, FURTHER INFORMATION**

- ▶ **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.

Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.
- **BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Deterioration in renal function has been reported after topical use.
- **DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.
- **PATIENT AND CARER ADVICE** For topical preparations patients and carers should be advised to wash hands immediately after use. Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Foam**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

## Ibuprofen

### ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Mild to moderate pain including dysmenorrhoea | Postoperative analgesia | Migraine | Dental pain**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- Adult: Initially 300–400 mg 3–4 times a day; increased if necessary up to 600 mg 4 times a day; maintenance 200–400 mg 3 times a day, may be adequate
- ▶ BY MOUTH USING MODIFIED-RELEASE MEDICINES
- Adult: 1.6 g once daily, dose to be taken in the early evening, increased if necessary to 2.4 g daily in 2 divided doses, dose to be increased only in severe cases

**Mild to moderate pain | Pain and inflammation of soft-tissue injuries | Pyrexia with discomfort**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- Child 3–5 months: 50 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 6–11 months: 50 mg 3–4 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 1–3 years: 100 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 4–6 years: 150 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day
- Child 7–9 years: 200 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day; maximum 2.4 g per day
- Child 10–11 years: 300 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day; maximum 2.4 g per day
- Child 12–17 years: Initially 300–400 mg 3–4 times a day; increased if necessary up to 600 mg 4 times a day; maintenance 200–400 mg 3 times a day, may be adequate

### **Pain and inflammation**

- ▶ BY MOUTH USING MODIFIED-RELEASE MEDICINES
- Child 12–17 years: 1.6 g once daily, dose preferably taken in the early evening, increased to 2.4 g daily in 2 divided doses, dose to be increased only in severe cases

**Pain and inflammation in rheumatic disease including juvenile idiopathic arthritis**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- Child 3 months–17 years: 30–40 mg/kg daily in 3–4 divided doses; maximum 2.4 g per day

**Pain and inflammation in systemic juvenile idiopathic arthritis**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- Child 3 months–17 years: Up to 60 mg/kg daily in 4–6 divided doses; maximum 2.4 g per day

**Post-immunisation pyrexia in infants (on doctor's advice only)**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- Child 2–3 months: 50 mg for 1 dose, followed by 50 mg after 6 hours if required

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- Adult: Apply up to 3 times a day, ibuprofen gel 5% gel to be administered

### FENBID<sup>®</sup> FORTE

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- Adult: Apply up to 4 times a day, therapy should be reviewed after 14 days

### IBUGEL<sup>®</sup> FORTE

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- Adult: Apply up to 3 times a day

- **UNLICENSED USE** Not licensed for use in children under 3 months or body-weight under 5 kg. Maximum dose for systemic juvenile idiopathic arthritis is unlicensed.

### ● CONTRA-INDICATIONS

- With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

### ● CAUTIONS

- With systemic use Allergic disorders (in adults) · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

### CAUTIONS, FURTHER INFORMATION

- High-dose ibuprofen A small increase in cardiovascular risk, similar to the risk associated with cyclo-oxygenase-2 inhibitors and diclofenac, has been reported with high-dose ibuprofen ( $\geq 2.4$  g daily); use should be avoided in patients with established ischaemic heart disease, peripheral arterial disease, cerebrovascular disease, congestive heart failure (New York Heart Association classification II–III), and uncontrolled hypertension.

- **INTERACTIONS** → Appendix 1: NSAIDs

### ● SIDE-EFFECTS

- ▶ Rare
- With systemic use Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- ▶ Frequency not known
- With systemic use Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure ·

rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

- ▶ With topical use Photosensitivity · rash (discontinue use if develops)

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- ▶ With topical use Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

#### Overdose

Overdosage with ibuprofen may cause nausea, vomiting, epigastric pain, and tinnitus, but more serious toxicity is very uncommon. Charcoal, activated p. 1256 followed by symptomatic measures are indicated if more than 100 mg/kg has been ingested within the preceding hour.

For details on the management of poisoning, see Emergency treatment of poisoning p. 1249.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

#### ● PREGNANCY

- ▶ With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

#### ● BREAST FEEDING

- ▶ With oral use Use with caution during breast-feeding. Amount too small to be harmful but some manufacturers advise avoid.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

#### ● HEPATIC IMPAIRMENT

- ▶ With oral use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

#### ● RENAL IMPAIRMENT

- ▶ With oral use Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- ▶ With topical use in adults Deterioration in renal function has also been reported after topical use.

- **DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of syrup may include orange.

#### ● PATIENT AND CARER ADVICE

Medicines for Children leaflet: Ibuprofen for pain and inflammation [www.medicinesforchildren.org.uk/ibuprofen-for-pain-and-inflammation](http://www.medicinesforchildren.org.uk/ibuprofen-for-pain-and-inflammation)

- ▶ With topical use For topical preparations, patients and their carers should be advised to wash hands immediately after use.

**Photosensitivity** For topical preparations, patients or their carers should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

#### ● PROFESSION SPECIFIC INFORMATION

##### Dental practitioners' formulary

Ibuprofen Oral Suspension Sugar-free may be prescribed. Ibuprofen Tablets may be prescribed.

- **EXCEPTIONS TO LEGAL CATEGORY** Smaller pack sizes of gel preparations may be available on sale to the public.

Oral preparations can be sold to the public in certain circumstances.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

##### Effervescent granules

- Brands may include Nurofen Meltlets

**Indometacin****(Indomethacin)**● **INDICATIONS AND DOSE****Pain and moderate to severe inflammation in rheumatic disease and other musculoskeletal disorders**► **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

- Adult: 50–200 mg daily in divided doses

► **BY RECTUM**

- Adult: 100 mg twice daily if required, dose to be administered at night and in the morning, combined oral and rectal treatment, maximum total daily dose 150–200 mg

► **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

- Adult: 75 mg 1–2 times a day

**Acute gout**► **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

- Adult: 150–200 mg daily in divided doses

► **BY RECTUM**

- Adult: 100 mg twice daily if required, dose to be administered at night and in the morning, combined oral and rectal treatment, maximum total daily dose 150–200 mg

► **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

- Adult: 75 mg 1–2 times a day

**Dysmenorrhoea**► **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

- Adult: Up to 75 mg daily

► **BY RECTUM**

- Adult: 100 mg twice daily if required, dose to be administered at night and in the morning, combined oral and rectal treatment, maximum total daily dose 150–200 mg

► **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

- Adult: 75 mg daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure
- **CAUTIONS** Allergic disorders · avoid rectal administration in haemorrhoids · avoid rectal administration in proctitis · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · epilepsy · heart failure · ischaemic heart disease · parkinsonism · peripheral arterial disease · psychiatric disturbances · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · blood disorders · confusion · convulsions · hepatic damage · hyperglycaemia · interstitial fibrosis associated with NSAIDs can lead to renal failure · intestinal strictures · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · peripheral neuropathy · psychiatric disturbances · pulmonary eosinophilia · Stevens-Johnson syndrome · syncope · thrombocytopenia · toxic epidermal necrolysis · visual disturbances
  - **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hyperkalaemia · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
  - With rectal use Suppositories may cause occasional bleeding · suppositories may cause rectal irritation
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of

asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount probably too small to be harmful—manufacturers advise avoid. Use with caution during breast-feeding.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **MONITORING REQUIREMENTS** During prolonged therapy ophthalmic and blood examinations particularly advisable.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks**  
Dizziness may affect performance of skilled tasks (e.g. driving).

**Ketoprofen 200 mg** Valket 200 Retard capsules | 28 capsule [PoM] £10.70 DT price = £23.85

## Gel

EXCIPIENTS: May contain Fragrances

## Ketoprofen (Non-proprietary)

**Ketoprofen 25 mg per 1 gram** Ketoprofen 2.5% gel | 50 gram [PoM] £1.80 DT price = £1.64 | 100 gram [PoM] £3.28 DT price = £3.28

## Oruvail (Sanofi)

**Ketoprofen 25 mg per 1 gram** Oruvail 2.5% gel | 100 gram [PoM] £6.84 DT price = £3.28

## Powergel (A. Menarini Farmaceutica Internazionale SRL)

**Ketoprofen 25 mg per 1 gram** Powergel 2.5% gel | 50 gram [PoM] £3.06 DT price = £1.64 | 100 gram [PoM] £5.89 DT price = £3.28

## Tiloket (Tillomed Laboratories Ltd)

**Ketoprofen 25 mg per 1 gram** Tiloket 2.5% gel | 50 gram [PoM] £3.00 DT price = £1.64 | 100 gram [PoM] £6.00 DT price = £3.28

## Ketoprofen with omeprazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, ketoprofen p. 1044, omeprazole p. 78.

## INDICATIONS AND DOSE

**Patients requiring ketoprofen for osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis, who are at risk of NSAID associated duodenal or gastric ulcer or gastroduodenal erosions**

## BY MOUTH USING MODIFIED-RELEASE MEDICINES

- **Adult:** Initially 100/20 mg daily, increased if necessary to 200/20 mg daily, depending on severity of symptoms, dose expressed as x/y mg ketoprofen/omeprazole

- **INTERACTIONS** → Appendix 1: NSAIDs, proton pump inhibitors

- **PRESCRIBING AND DISPENSING INFORMATION** Capsules enclose microgranules containing modified-release ketoprofen and gastro-resistant omeprazole.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

No licensed medicines listed.

## Mefenamic acid

### • INDICATIONS AND DOSE

**Pain and inflammation in rheumatoid arthritis and osteoarthritis | Postoperative pain | Mild to moderate pain**

- BY MOUTH
- Adult: 500 mg 3 times a day

**Acute pain including dysmenorrhoea | Menorrhagia**

- BY MOUTH
- Child 12–17 years: 500 mg 3 times a day
- Adult: 500 mg 3 times a day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · inflammatory bowel disease · severe heart failure

- **CAUTIONS** Acute porphyrias p. 969 · allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · epilepsy · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

### • SIDE-EFFECTS

- **Common or very common** Diarrhoea (withdraw treatment) · rashes (withdraw treatment) · stomatitis
- **Uncommon** Fatigue · paraesthesia
- **Rare** Alveolitis · aplastic anaemia · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · glucose intolerance · haemolytic anaemia (positive Coombs' test) · hepatic damage · hypotension · interstitial fibrosis associated with NSAIDs can lead to renal failure · palpitation · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · thrombocytopenia · toxic epidermal necrolysis · visual disturbances
- **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo

### SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.

### Overdose

Mefenamic acid has important consequences in overdose because it can cause convulsions, which if prolonged or recurrent, require treatment.

For details on the management of poisoning, see Emergency treatment of poisoning p. 1249, in particular, Convulsions.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING** Use with caution during breast-feeding. Amount too small to be harmful but manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

#### Oral suspension

CAUTIONARY AND ADVISORY LABELS 21

EXCIPIENTS: May contain Ethanol

#### ► Mefenamic acid (Non-proprietary)

**Mefenamic acid 250 mg** Mefenamic acid 250mg capsules | 100 capsule [PoM] £60.10 DT price = £9.54

#### ► Ponstan (Chemidex Pharma Ltd)

**Mefenamic acid 250 mg** Ponstan 250mg capsules | 100 capsule [PoM] £8.17 DT price = £9.54

## Meloxicam

### • INDICATIONS AND DOSE

**Exacerbation of osteoarthritis (short-term)**

- BY MOUTH
- Child 16–17 years: 7.5 mg once daily, then increased if necessary up to 15 mg once daily
- Adult: 7.5 mg once daily, then increased if necessary up to 15 mg once daily

**Pain and inflammation in rheumatic disease | Ankylosing spondylitis**

- BY MOUTH
- Child 16–17 years: 15 mg once daily, then reduced to 7.5 mg once daily if required
- Adult: 15 mg once daily, then reduced to 7.5 mg once daily if required
- Elderly: 7.5 mg once daily

### Relief of pain and inflammation in juvenile idiopathic arthritis and other musculoskeletal disorders in children intolerant to other NSAIDs

#### ► BY MOUTH

- Child 12–17 years (body-weight up to 50 kg): 7.5 mg once daily
- Child 12–17 years (body-weight 50 kg and above): 15 mg once daily

- **UNLICENSED USE** Not licensed for use in children under 16 years.
- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
  - **Frequency not known** Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Present in milk in *animal* studies—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
  - In adults Avoid if eGFR less than 25 mL/minute/1.73 m<sup>2</sup>.
  - In children Avoid if estimated glomerular filtration rate less than 25 mL/minute/1.73 m<sup>2</sup>.

## Naproxen with esomeprazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, naproxen p. 1048, esomeprazole p. 76.

#### ● INDICATIONS AND DOSE

**Patients requiring naproxen for osteoarthritis, rheumatoid arthritis, or ankylosing spondylitis, who are at risk of NSAID-associated duodenal or gastric ulcer and when treatment with lower doses of naproxen or other NSAIDs ineffective**

- ▶ BY MOUTH
- ▶ Adult: 500/20 mg twice daily, dose expressed as x/y mg naproxen/esomeprazole

#### ● INTERACTIONS → Appendix 1: NSAIDs, proton pump inhibitors

#### ● PRESCRIBING AND DISPENSING INFORMATION Naproxen component is gastro-resistant.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Modified-release tablet

CAUTIONARY AND ADVISORY LABELS 22, 25

##### ▶ Naproxen with esomeprazole (Non-proprietary)

Esomeprazole (as Esomeprazole magnesium trihydrate) 20 mg, Naproxen 500 mg | Naproxen 500mg / Esomeprazole 20mg modified-release tablets | 60 tablet [PoM] no price available DT price = £14.95  
 ▶ Vimovo (AstraZeneca UK Ltd)  
 Esomeprazole (as Esomeprazole magnesium trihydrate) 20 mg, Naproxen 500 mg | Vimovo 500mg/20mg modified-release tablets | 60 tablet [PoM] £14.95 DT price = £14.95

## Naproxen with misoprostol

The properties listed below are those particular to the combination only. For the properties of the components please consider, naproxen p. 1048, misoprostol p. 75.

#### ● INDICATIONS AND DOSE

**Patients requiring naproxen for rheumatoid arthritis, osteoarthritis, or ankylosing spondylitis, with prophylaxis against NSAID-induced gastroduodenal ulceration**

- ▶ BY MOUTH
- ▶ Adult: 500 mg twice daily, naproxen and 200 micrograms twice daily, misoprostol, taken together with food

#### ● INTERACTIONS → Appendix 1: NSAIDs

#### ● PRESCRIBING AND DISPENSING INFORMATION The BNF recommends a higher starting dose of misoprostol for prophylaxis against NSAID-induced gastroduodenal ulceration than that provided by the misoprostol with naproxen combination pack.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
 No licensed medicines listed.

## Piroxicam

#### ● INDICATIONS AND DOSE

**Rheumatoid arthritis (initiated by a specialist) | Osteoarthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist)**

- ▶ BY MOUTH
- ▶ Adult: Up to 20 mg once daily

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- ▶ Adult: Apply 3–4 times a day, 0.5% gel to be applied; review treatment after 4 weeks

#### IMPORTANT SAFETY INFORMATION

CHMP ADVICE—PIROXICAM (JUNE 2007)

The CHMP has recommended restrictions on the use of piroxicam because of the increased risk of gastro-intestinal side effects and serious skin reactions. The CHMP has advised that:

- piroxicam should be initiated only by physicians experienced in treating inflammatory or degenerative rheumatic diseases
- piroxicam should not be used as first-line treatment
- in adults, use of piroxicam should be limited to the symptomatic relief of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis
- piroxicam dose should not exceed 20 mg daily
- piroxicam should no longer be used for the treatment

of acute painful and inflammatory conditions

- treatment should be reviewed 2 weeks after initiating piroxicam, and periodically thereafter
- concomitant administration of a gastro-protective agent should be considered.

Topical preparations containing piroxicam are not affected by these restrictions.

#### ● CONTRA-INDICATIONS

- ▶ With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding · history of gastro-intestinal perforation · history of gastro-intestinal ulceration · inflammatory bowel disease · severe heart failure

#### ● CAUTIONS

- ▶ With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension
- ▶ With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

#### ● INTERACTIONS → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

##### ▶ Rare

- ▶ With systemic use Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances

##### ▶ Frequency not known

- ▶ With systemic use Angioedema · blood disorders · bronchospasm · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hypersensitivity reactions · insomnia · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · vertigo
- ▶ With topical use Photosensitivity · rash (discontinue use if develops)

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- ▶ With topical use Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

#### ● CONCEPTION AND CONTRACEPTION

- ▶ With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

#### ● PREGNANCY

- ▶ With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn; onset of labour may be delayed and duration may be increased).
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

#### ● BREAST FEEDING

- ▶ With systemic use Use with caution during breast-feeding. Amount too small to be harmful.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

#### ● HEPATIC IMPAIRMENT

- ▶ With systemic use Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.

#### ● RENAL IMPAIRMENT

- ▶ With systemic use Avoid if possible or use with caution. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- ▶ With topical use Deterioration in renal function has also been reported after topical use.

- **DIRECTIONS FOR ADMINISTRATION** For topical preparations apply with gentle massage only.

Piroxicam orodispersible tablets can be taken by placing on the tongue and allowing to dissolve or by swallowing.

#### ● PATIENT AND CARER ADVICE

- ▶ With topical use For topical preparations, patients and their carers should be advised to wash hands immediately after use.
- ▶ Photosensitivity
- ▶ With topical use Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

#### ● LESS SUITABLE FOR PRESCRIBING

- ▶ With oral use Piroxicam is less suitable for prescribing.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Orodispersible tablet

CAUTIONARY AND ADVISORY LABELS 10, 21

**Piroxicam 20 mg** Feldene 20 capsules | 30 capsule [PoM](#) £7.71

## Sulindac

### ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Acute gout**

#### ► BY MOUTH

- Adult: 200 mg twice daily for maximum duration 7–10 days in peri-articular disorders, dose may be reduced according to response; acute gout should respond within 7 days; maximum 400 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · ensure adequate hydration · heart failure · history of renal stones · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

### ● SIDE-EFFECTS

- **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis · visual disturbances
- **Frequency not known** Angioedema · blood disorders · bronchospasm · cholestasis · colitis (induction of or exacerbation of) · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · fluid retention (rarely precipitating congestive heart failure) · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · headache · hearing disturbances · hepatic failure · hepatitis · hypersensitivity reactions · insomnia · jaundice with fever · nausea · nervousness · photosensitivity · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · tinnitus · urine discoloration · vertigo

### SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING** Use with caution during breast-feeding.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid in severe impairment. The lowest effective dose should be used for the shortest possible duration. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

## 5 Soft tissue and joint disorders

### 5.1 Local inflammation of joints and soft tissue

**Other drugs used for local inflammation of joints and soft tissue** Betamethasone p. 635

#### CORTICOSTEROIDS

### Corticosteroids, inflammatory disorders

#### Systemic corticosteroids

Short-term treatment with corticosteroids can help to rapidly improve symptoms of rheumatoid arthritis. Long-term treatment in rheumatoid arthritis should be considered only after evaluating the risks and all other treatment options have been considered. Corticosteroids can induce osteoporosis, and prophylaxis should be considered on long-term treatment.

In severe, possibly life-threatening, situations a high initial dose of corticosteroid is given to induce remission and the dose is then reduced gradually and discontinued altogether. Relapse may occur as the dose of corticosteroid is reduced, particularly if the reduction is too rapid. The tendency is therefore to increase the maintenance dose and consequently the patient becomes dependent on corticosteroids. For this reason pulse doses of corticosteroids (e.g. methylprednisolone p. 1054 up to 1 g intravenously on 3 consecutive days) are used to suppress highly active inflammatory disease while longer-term treatment with a disease-modifying drug is commenced.

Prednisolone p. 1054 may reduce the rate of joint destruction in moderate to severe *rheumatoid arthritis* of less than 2 years' duration. The reduction in joint destruction must be distinguished from mere symptomatic improvement (which lasts only 6 to 12 months at this dose) and care should be taken to avoid increasing the dose above 7.5 mg daily. Evidence supports maintenance of this anti-erosive dose for 2–4 years only after which treatment should be tapered off to reduce long-term adverse effects.

A modified-release preparation of prednisone p. 641 is also available for the treatment of moderate to severe rheumatoid arthritis.

*Polymyalgia rheumatica* and *giant cell (temporal) arteritis* are always treated with corticosteroids. Relapse is common if therapy is stopped prematurely. Many patients require treatment for at least 2 years and in some patients it may be

necessary to continue long-term low-dose corticosteroid treatment.

*Polyarteritis nodosa* and *polymyositis* are usually treated with corticosteroids.

*Systemic lupus erythematosus* is treated with corticosteroids when necessary using a similar dosage regimen to that for *polyarteritis nodosa* and *polymyositis*. Patients with pleurisy, pericarditis, or other systemic manifestations will respond to corticosteroids. It may then be possible to reduce the dosage; alternate-day treatment is sometimes adequate, and the drug may be gradually withdrawn. In some mild cases corticosteroid treatment may be stopped after a few months. Many mild cases of systemic lupus erythematosus do not require corticosteroid treatment. Alternative treatment with anti-inflammatory analgesics, and possibly chloroquine p. 582 or hydroxychloroquine sulfate p. 1001, should be considered.

*Ankylosing spondylitis* should not be treated with long-term corticosteroids; rarely, pulse doses may be needed and may be useful in extremely active disease that does not respond to conventional treatment.

#### Local corticosteroid injections

Corticosteroids are injected locally for an anti-inflammatory effect. In inflammatory conditions of the joints, particularly in rheumatoid arthritis, they are given by *intra-articular injection* to relieve pain, increase mobility, and reduce deformity in one or a few joints; they can also provide symptomatic relief while waiting for DMARDs to take effect. Full aseptic precautions are essential; infected areas should be avoided. Occasionally an acute inflammatory reaction develops after an intra-articular or soft-tissue injection of a corticosteroid. This may be a reaction to the microcrystalline suspension of the corticosteroid used, but must be distinguished from sepsis introduced into the injection site.

Smaller amounts of corticosteroids may also be injected directly into soft tissues for the relief of inflammation in conditions such as *tennis or golfer's elbow* or *compression neuropathies*. In *tendinitis*, injections should be made into the tendon sheath and not directly into the tendon (due to the absence of a true tendon sheath and a high risk of rupture, the Achilles tendon should not be injected).

Hydrocortisone acetate p. 1054 or one of the synthetic analogues is generally used for local injection. Intra-articular corticosteroid injections can cause flushing and may affect the hyaline cartilage. Each joint should not usually be treated more than 4 times in one year.

Corticosteroid injections are also injected into soft tissues for the treatment of skin lesions.

### Dexamethasone

06-Jun-2016

#### ● INDICATIONS AND DOSE

##### Local inflammation of joints

###### ▶ BY INTRA-ARTICULAR INJECTION

- ▶ Adult: 0.3–3.3 mg, where appropriate, dose may be repeated at intervals of 3–21 days according to response, dose given according to size—consult product literature

##### Local inflammation of soft tissues

###### ▶ BY LOCAL INFILTRATION

- ▶ Adult: 1.7–5 mg, dose given according to size—consult product literature, where appropriate may be repeated at intervals of 3–21 days, use the 3.3 mg/mL injection preparation for this dose

- **INTERACTIONS** → Appendix 1: corticosteroids

- **PREGNANCY** Dexamethasone readily crosses the placenta.

- **PRESCRIBING AND DISPENSING INFORMATION**

Dexamethasone 3.8 mg/mL Injection has replaced Dexamethasone 4 mg/mL Injection. All dosage

recommendations for intravenous, intramuscular, intrarticular use or local infiltration; are given in units of dexamethasone base.

#### • MEDICINAL FORMS

**5.2 Soft tissue disorders****Soft-tissue disorders****Extravasation**

Local guidelines for the management of extravasation should be followed where they exist or specialist advice sought.

Extravasation injury follows leakage of drugs or intravenous fluids from the veins or inadvertent

administration into the subcutaneous or subdermal tissue. It must be dealt with **promptly** to prevent tissue necrosis.

Acidic or alkaline preparations and those with an osmolality greater than that of plasma can cause extravasation injury; excipients including alcohol and polyethylene glycol have also been implicated. Cytotoxic drugs commonly cause extravasation injury. In addition, certain patients such as the very young and the elderly are at increased risk. Those receiving anticoagulants are more likely to lose blood into surrounding tissues if extravasation occurs, while those receiving sedatives or analgesics may not notice the early signs or symptoms of extravasation.

**Prevention of extravasation**

Precautions should be taken to avoid extravasation; ideally, drugs likely to cause extravasation injury should be given through a central line and patients receiving repeated doses of hazardous drugs peripherally should have the cannula resited at regular intervals. Attention should be paid to the manufacturers' recommendations for administration. Placing a glyceryl trinitrate patch p. 212 distal to the cannula may improve the patency of the vessel in patients with small veins or in those whose veins are prone to collapse.

Patients should be asked to report any pain or burning at the site of injection immediately.

**Management of extravasation**

If extravasation is suspected the infusion should be stopped immediately but the cannula should not be removed until after an attempt has been made to aspirate the area (through the cannula) in order to remove as much of the drug as possible. Aspiration is sometimes possible if the extravasation presents with a raised bleb or blister at the injection site and is surrounded by hardened tissue, but it is often unsuccessful if the tissue is soft or soggy.

**Corticosteroids** are usually given to treat inflammation, although there is little evidence to support their use in extravasation. Hydrocortisone p. 1054 or dexamethasone p. 1053 can be given either locally by subcutaneous injection or intravenously at a site distant from the injury.

**Antihistamines** and **analgesics** may be required for symptom relief.

The management of extravasation beyond these measures is not well standardised and calls for specialist advice. Treatment depends on the nature of the offending substance; one approach is to localise and neutralise the substance whereas another is to spread and dilute it.

The first method may be appropriate following extravasation of vesicant drugs and involves administration of an antidote (if available) and the application of cold compresses 3–4 times a day (consult specialist literature for details of specific antidotes). Spreading and diluting the offending substance involves infiltrating the area with physiological saline, applying warm compresses, elevating the affected limb, and administering hyaluronidase p. 1056. A saline flush-out technique (involving flushing the subcutaneous tissue with physiological saline) may be effective but requires specialist advice. Hyaluronidase should not be administered following extravasation of vesicant drugs (unless it is either specifically indicated or used in the saline flush-out technique). Dextrazoxane p. 868 is licensed for the treatment of anthracycline-induced extravasation.

**Enzymes****Collagenase**

Collagenase p. 1056 are proteolytic enzymes that are derived from the fermentation of *Clostridium histolyticum* and have the ability to break down collagen. A preparation containing a mixture of two collagenases is licensed for the treatment of Dupuytren's contracture; the preparation should be injected into a palpable cord with a contracture of a metacarpophalangeal joint or proximal interphalangeal joint.

**Hyaluronidase**

Hyaluronidase is used to render the tissues more readily permeable to injected fluids, e.g. for introduction of fluids by subcutaneous infusion (termed hypodermoclysis).

**Rubefacients, topical NSAIDs, capsaicin, and poultices**

**Rubefacients** act by counter-irritation. Pain, whether superficial or deep-seated, is relieved by any method that itself produces irritation of the skin. Topical rubefacient preparations may contain nicotinate and salicylate compounds, essential oils, capsaicin, and camphor. The evidence available does not support the use of topical rubefacients in acute or chronic musculoskeletal pain.

**Topical NSAIDs**

The use of a NSAID by mouth is effective for relieving musculoskeletal pain. **Topical NSAIDs** (e.g. felbinac p. 1038, ibuprofen p. 1041, ketoprofen p. 1044, and piroxicam p. 1049) may provide some relief of pain in musculoskeletal conditions; they can be considered as an adjunctive treatment in knee or hand osteoarthritis.

**Capsaicin**

A preparation containing capsaicin 0.025% p. 458 can be considered as an adjunct in hand or knee osteoarthritis. It may need to be used for 1–2 weeks before pain is relieved.

A capsaicin 0.075% cream is licensed for the symptomatic relief of postherpetic neuralgia after lesions have healed, and for the relief of painful diabetic neuropathy.

A self-adhesive patch containing capsaicin 8% is licensed for the treatment of peripheral neuropathic pain in non-diabetic patients.

**ENZYMES****Collagenase****• INDICATIONS AND DOSE****Dupuytren's contracture in patients with a palpable cord**

- ▶ BY INTRALESIONAL INJECTION
- ▶ Adult: 580 micrograms, then 580 micrograms every 4 weeks if required, inject into palpable cord, maximum 3 injections per cord, maximum 8 injections in total and only one cord may be treated at a time

- **CONTRA-INDICATIONS** Avoid injecting into other structures containing collagen (e.g. tendons, nerves, and blood vessels)—risk of tendon rupture or ligament damage

- **CAUTIONS** Coagulation disorders · use of anticoagulants

**● SIDE-EFFECTS**

- ▶ **Common or very common** Arthralgia · burning sensation · ecchymosis · hyperhidrosis · hypoesthesia · injection site reactions · joint swelling · lymphadenopathy · myalgia · paraesthesia
- ▶ **Uncommon** Complex regional pain syndrome · crepitus · ligament injury · monoplegia · muscle spasm · muscle weakness · tendon rupture · tremor · wound dehiscence

- **PREGNANCY** Manufacturer advises avoid.

- **BREAST FEEDING** Systemic absorption by mother negligible.

- **DIRECTIONS FOR ADMINISTRATION** Reconstitution and injected volumes vary with site of injection—consult product literature.

**● NATIONAL FUNDING/ACCESS DECISIONS****Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (April 2012) that collagenase *Clostridium histolyticum* (Xiapex<sup>®</sup>) is accepted for restricted use within NHS Scotland as an alternative to limited fasciectomy, for the treatment of Dupuytren's contracture of moderate severity (as defined by the British Society for Surgery of the Hand) in patients

with a palpable cord and up to two affected joints per hand, who are suitable for limited fasciectomy, but for whom percutaneous needle fasciectomy is not considered a suitable treatment option.

**● MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for solution for injection**

- ▶ **Xiapex** (Swedish Orphan Biovitrum Ltd)

**Collagenase clostridium histolyticum 900 microgram** Xiapex.  
0.9mg powder and solvent for solution for injection vials | 1 vial [PoM]  
£650.00

**Hyaluronidase****● INDICATIONS AND DOSE****Enhance permeation of subcutaneous or intramuscular injections**

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 1500 units, to be dissolved directly into the solution to be injected (ensure compatibility)

**Enhance permeation of local anaesthetics**

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be mixed with the local anaesthetic solution

**Enhance permeation of ophthalmic local anaesthetic**

- ▶ TO THE EYE
- ▶ Adult: 15 units/mL, to be mixed with the local anaesthetic solution

**Hypodermoclysis**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride injection, administered before start of 500–1000 mL infusion fluid

**Extravasation**

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area as soon as possible after extravasation

**Haematoma**

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area

- **CONTRA-INDICATIONS** Avoid sites where infection is present · avoid sites where malignancy is present · do not apply direct to cornea · not for anaesthesia in unexplained premature labour · not for intravenous administration · not to be used to enhance the absorption and dispersion of dopamine and/or alpha-adrenoceptor agonists · not to be used to reduce swelling of bites · not to be used to reduce swelling of stings

- **CAUTIONS** Elderly (control speed and total volume and avoid overhydration especially in renal impairment)

**● SIDE-EFFECTS**

- ▶ **Common or very common** Oedema
- ▶ **Rare** Bleeding · bruising · infection · local irritation
- ▶ **Frequency not known** Anaphylaxis · severe allergy

**● MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- ▶ **Hyaluronidase (Non-proprietary)**

**Hyaluronidase 1500 unit** Hyaluronidase 1,500unit powder for solution for injection ampoules | 10 ampoule [PoM] £136.55

### Eye

#### Administration of drugs to the eye

Drugs are most commonly administered to the eye by topical application as eye drops or eye ointments. When a higher drug concentration is required within the eye, a local injection may be necessary.

Eye-drop dispenser devices are available to aid the instillation of eye drops from plastic bottles and some are prescribable on the NHS (consult Drug Tariff—see Appliances and Reagents). Product-specific devices may be supplied by manufacturers—consult individual manufacturers for information. They are particularly useful for the elderly, visually impaired, arthritic, or otherwise physically limited patients.

#### Eye drops and eye ointments

Eye drops are generally instilled into the pocket formed by gently pulling down the lower eyelid and keeping the eye closed for as long as possible after application; one drop is all that is needed. Instillation of more than one drop should be discouraged because it may increase systemic side-effects. A small amount of eye ointment is applied similarly; the ointment melts rapidly and blinking helps to spread it.

When two different eye-drop preparations are used at the same time of day, dilution and overflow may occur when one immediately follows the other. The patient should therefore leave an interval of at least 5 minutes between the two; the interval should be extended when eye drops with a prolonged contact time, such as gels and suspensions, are used. Eye ointment should be applied after drops.

Systemic effects may arise from absorption of drugs into the general circulation from conjunctival vessels or from the nasal mucosa after the excess preparation has drained down through the tear ducts. The extent of systemic absorption following ocular administration is highly variable; nasal drainage of drugs is associated with eye drops much more often than with eye ointments. Pressure on the lacrimal punctum for at least a minute after applying eye drops reduces nasolacrimal drainage and therefore decreases systemic absorption from the nasal mucosa.

After using eye drops or eye ointments, patients should be warned not to drive or perform other skilled tasks until vision is clear.

Also see warnings relating to eye drops and contact lenses.

#### Eye lotions

These are solutions for the irrigation of the conjunctival sac. They act mechanically to flush out irritants or foreign bodies

as a first-aid treatment. Sterile sodium chloride 0.9% p. 1068 solution is usually used. Clean water will suffice in an emergency.

#### Other preparations administered to the eye

Subconjunctival injection may be used to administer anti-infective drugs, mydriatics, or corticosteroids for conditions not responding to topical therapy; intracameral and intravitreal routes can also be used to administer certain drugs, for example antibacterials. These injections should only be used under specialist supervision.

Drugs such as antimicrobials and corticosteroids may be administered systemically to treat susceptible eye conditions.

#### Ophthalmic Specials

Certain eye drops, e.g. amphotericin p. 561, ceftazidime p. 500, cefuroxime p. 1070, colistimethate sodium p. 525, desferrioxamine mesilate p. 941, dexamethasone p. 1061, gentamicin p. 1070, and vancomycin p. 505 can be prepared aseptically from material supplied for injection.

The Royal College of Ophthalmologists and the UK Ophthalmic Pharmacy Group have produced the Ophthalmic Specials Guidance to help prescribers and pharmacists manage and restrict the use of unlicensed eye preparations. 'Specials' should only be prescribed in situations where a licensed product is not suitable for a patient's needs. The Ophthalmic Specials Guidance can be accessed on the Royal College of Ophthalmologists website ([www.rcophth.ac.uk](http://www.rcophth.ac.uk)). The guidance will be reviewed every six months to ensure the most accurate and up-to-date information is available.

#### Preservatives and sensitisers

Information on preservatives and substances identified as skin sensitisers is provided under Excipients statements in preparation entries. Very rarely, cases of corneal calcification have been reported with the use of phosphate-containing eye drops in patients with significantly damaged corneas—consult product literature for further information.

#### Control of microbial contamination

Preparations for the eye should be sterile when issued. Care should be taken to avoid contamination of the contents during use.

Eye drops in multiple-application containers for *domiciliary* use should not be used for more than 4 weeks after first opening (unless otherwise stated by the manufacturer).

Multiple application eye drops for use in *hospital wards* are

normally discarded 1 week after first opening—local practice may vary. Individual containers should be provided for each patient. A separate container should be supplied for each eye only if there are special concerns about contamination. Containers used before an eye operation should be discarded at the time of the operation and fresh containers supplied postoperatively. A fresh supply should also be provided upon discharge from hospital; in specialist ophthalmology units, it may be acceptable to issue containers that have been dispensed to the patient on the day of discharge.

In *out-patient departments* single-application containers should be used; if multiple-application containers are used, they should be discarded after single patient use within one clinical session.

In *eye surgery* single-application containers should be used if possible; if a multiple-application container is used, it should be discarded after single use. Preparations used during intra-ocular procedures and others that may penetrate into the anterior chamber must be isotonic and without preservatives and buffered if necessary to a neutral pH. Specially formulated fluids should be used for intra-ocular surgery; intravenous infusion preparations are not usually suitable for this purpose (Hartmann's solution may be used in some ocular surgery). For all surgical procedures, a previously unopened container is used for each patient.

### Contact lenses

For cosmetic reasons many people prefer to wear contact lenses rather than spectacles; contact lenses are also sometimes required for medical indications. Visual defects are corrected by either rigid ('hard' or gas permeable) lenses or soft (hydrogel or silicone hydrogel—in adults only) lenses; soft lenses are the most popular type, because they are initially the most comfortable, but they may not give the best vision. Lenses should usually be worn for a specified number of hours each day and removed for sleeping. The risk of infectious and non-infectious keratitis is increased by extended continuous contact lens wear, which is not recommended, except when medically indicated.

Contact lenses require meticulous care. Poor compliance with directions for use, and with daily cleaning and disinfection, can result in complications including ulcerative keratitis or conjunctivitis. One-day disposable lenses, which are worn only once and therefore require no disinfection or cleaning, are becoming increasingly popular.

*Acanthamoeba keratitis*, a painful and sight-threatening condition, is associated with ineffective lens cleaning and disinfection, the use of contaminated lens cases, or tap water coming into contact with the lenses. The condition is especially associated with the use of soft lenses (including frequently replaced lenses) and should be treated by specialists.

### Contact lenses and drug treatment

Special care is required in prescribing eye preparations for contact lens users. Some drugs and preservatives in eye preparations can accumulate in hydrogel lenses and may induce toxic and adverse reactions. Therefore, unless medically indicated, the lenses should be removed before instillation of the eye preparation and not worn during the period of treatment. Alternatively, unpreserved drops can be used. Eye drops may, however, be instilled while patients are wearing rigid corneal contact lenses. Ointment preparations should never be used in conjunction with contact lens wear; oily eye drops should also be avoided.

Many drugs given systemically can also have adverse effects on contact lens wear. These include oral contraceptives (particularly those with a higher oestrogen content), drugs which reduce blink rate (e.g. anxiolytics, hypnotics, antihistamines, and muscle relaxants), drugs which reduce lacrimation (e.g. antihistamines, antimuscarinics, phenothiazines and related drugs, some beta-blockers, diuretics, and tricyclic antidepressants), and

drugs which increase lacrimation (including ephedrine hydrochloride p. 261 and hydralazine hydrochloride p. 175). Other drugs that may affect contact lens wear are isotretinoin p. 1166 (can cause conjunctival inflammation), aspirin p. 117 (salicylic acid appears in tears and can be absorbed by contact lenses—leading to irritation), and rifampicin p. 549 and sulfasalazine p. 42 (can discolour lenses).

## 1 Allergic and inflammatory eye conditions

### Eye, allergy and inflammation

#### Corticosteroids

Corticosteroids administered locally to the eye or given by mouth are effective for treating anterior segment inflammation, including that which results from surgery.

*Topical corticosteroids* are applied frequently for the first 24–48 hours; once inflammation is controlled, the frequency of application is reduced. They should normally only be used under expert supervision; three main dangers are associated with their use:

- a 'red eye', when the diagnosis is unconfirmed, may be due to herpes simplex virus, and a corticosteroid may aggravate the condition, leading to corneal ulceration, with possible damage to vision and even loss of the eye. Bacterial, fungal, and amoebic infections pose a similar hazard;
- 'steroid glaucoma' can follow the use of corticosteroid eye preparations in susceptible individuals;
- a 'steroid cataract' can follow prolonged use.

Combination products containing a corticosteroid with an anti-infective drug are sometimes used after ocular surgery to reduce inflammation and prevent infection; use of combination products is otherwise rarely justified.

*Systemic corticosteroids* may be useful for ocular conditions. The risk of producing a 'steroid cataract' increases with the dose and duration of corticosteroid use.

#### Intravitreal corticosteroids

An intravitreal implant containing dexamethasone p. 1061 (*Ozurdex*®) is licensed for the treatment of adults with macular oedema following either branch retinal vein occlusion or central retinal vein occlusion; it is also licensed for the treatment of adult patients with inflammation of the posterior segment of the eye presenting as non-infectious uveitis.

An intravitreal implant containing fluocinolone acetonide p. 1091 (*Iluvien*®) is licensed for the treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies. It should be administered by specialists experienced in the use of intravitreal injections.

#### Other anti-inflammatory preparations

Other preparations used for the topical treatment of inflammation and allergic conjunctivitis include antihistamines, lodoxamide p. 1060, and sodium cromoglicate p. 1060.

Eye drops containing antihistamines, such as *antazoline* (with xylometazoline hydrochloride p. 1100 as *Otrivine-Antistin*®), azelastine hydrochloride p. 1059, epinastine hydrochloride p. 1059, ketotifen p. 1059, and olopatadine p. 1060, can be used for allergic conjunctivitis.

Sodium cromoglicate (sodium cromoglycate) and nedocromil sodium eye drops p. 1060 can be useful for vernal keratoconjunctivitis and other allergic forms of conjunctivitis.

Lodoxamide eye drops are used for allergic conjunctival conditions including seasonal allergic conjunctivitis.

Diclofenac sodium eye drops, p. 1077 and emedastine eye drops, below, are also licensed for seasonal allergic conjunctivitis.

Non-steroidal anti-inflammatory eye drops are used for the prophylaxis and treatment of inflammation of the eye following surgery or laser treatment.

Ciclosporin p. 1064 is licensed for severe keratitis in patients with dry eye disease, which has not improved despite treatment with tear substitutes.

## 1.1 Allergic conjunctivitis

### ANTI-HISTAMINES

#### Antazoline with xylometazoline

##### ● INDICATIONS AND DOSE

###### Allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply 2-3 times a day for maximum 7 days
- ▶ Adult: Apply 2-3 times a day for maximum 7 days

- **CAUTIONS** Angle-closure glaucoma · cardiovascular disease · diabetes mellitus · hypertension · hyperthyroidism · phaeochromocytoma · urinary retention

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Transient stinging
- ▶ **Frequency not known** Blurred vision · eye irritation · mydriasis

##### SIDE-EFFECTS, FURTHER INFORMATION

Absorption of antazoline and xylometazoline may result in systemic side-effects.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate
- ▶ **Otrivine Antistin** (Thea Pharmaceuticals Ltd)  
Xylometazoline hydrochloride 500 microgram per 1 ml,  
Antazoline sulfate 5 mg per 1 ml Otrivine Antistin 0.5%/0.05% eye drops | 10 ml [P] £3.35 DT price = £3.35

#### Azelastine hydrochloride

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 4-17 years: Apply twice daily, increased if necessary to 4 times a day
- ▶ Adult: Apply twice daily, increased if necessary to 4 times a day

###### Perennial conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply twice daily; increased if necessary to 4 times a day, maximum duration of treatment 6 weeks
- ▶ Adult: Apply twice daily; increased if necessary to 4 times a day, maximum duration of treatment 6 weeks

- **INTERACTIONS** → Appendix 1: antihistamines (non-sedating)

##### ● SIDE-EFFECTS

- ▶ **Frequency not known** Bitter taste · mild transient irritation

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate
- ▶ **Optilast** (Meda Pharmaceuticals Ltd)  
Azelastine hydrochloride 500 microgram per 1 ml Optilast 0.05% eye drops | 8 ml [PoM] £6.40 DT price = £6.40

#### Emedastine

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 3-17 years: Apply twice daily
- ▶ Adult: Apply twice daily

- **SIDE-EFFECTS** Blurred vision · corneal infiltrates (discontinue) · corneal staining · dry eye · headache · irritation · keratitis · lacrimation · local oedema · photophobia · rhinitis · transient burning · transient stinging

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride
- ▶ **Emedine** (Alcon Laboratories (UK) Ltd)  
Emedastine (as Emedastine difumarate) 500 microgram per 1 ml Emedine 0.5mg/ml eye drops | 5 ml [PoM] £7.31 DT price = £7.31

#### Epinephrine hydrochloride

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply twice daily for maximum 8 weeks
- ▶ Adult: Apply twice daily for maximum 8 weeks

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Burning
- ▶ **Uncommon** Conjunctival hyperaemia · dry eye · eye pain · eye pruritus · headache · increased lacrimation · nasal irritation · rhinitis · taste disturbance · visual disturbance

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate
- ▶ **Relestat** (Allergan Ltd)  
Epinephrine hydrochloride 500 microgram per 1 ml Relestat 500micrograms/ml eye drops | 5 ml [PoM] £9.90 DT price = £9.90

#### Ketotifen

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 3-17 years: Apply twice daily
- ▶ Adult: Apply twice daily

- **INTERACTIONS** → Appendix 1: antihistamines (sedating)

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Punctate corneal epithelial erosion · transient burning · transient stinging
- ▶ **Uncommon** Dry eye · photophobia · subconjunctival haemorrhage
- ▶ **Frequency not known** Drowsiness · dry mouth · headache · skin reactions

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

► **Zaditen** (Thea Pharmaceuticals Ltd)

**Ketotifen (as Ketotifen fumarate) 250 microgram per 1 ml** Zaditen 250micrograms/ml eye drops | 5 ml [PoM] £7.80 DT price = £7.80

## Olopatadine

### INDICATIONS AND DOSE

#### Seasonal allergic conjunctivitis

- TO THE EYE
- Child 3-17 years: Apply twice daily for maximum 4 months
- Adult: Apply twice daily for maximum 4 months

### SIDE-EFFECTS

- **Common or very common** Local irritation
- **Uncommon** Asthenia · dizziness · dry eye · headache · keratitis · local oedema · photophobia
- **Frequency not known** Dry nose

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

► **Opatanol** (Alcon Laboratories (UK) Ltd)

**Olopatadine (as Olopatadine hydrochloride) 1 mg per 1 ml** Opatanol 1mg/ml eye drops | 5 ml [PoM] £4.68 DT price = £4.68

## MAST-CELL STABILISERS

## Lodoxamide

### INDICATIONS AND DOSE

#### Allergic conjunctivitis

- TO THE EYE
- Child 4-17 years: Apply 4 times a day, improvement of symptoms may sometimes require treatment for up to 4 weeks
- Adult: Apply 4 times a day, improvement of symptoms may sometimes require treatment for up to 4 weeks

### SIDE-EFFECTS

- **Common or very common** Blurred vision · burning · itching · ocular discomfort · stinging · tear production disturbance
- **Uncommon** Blepharitis · dizziness · drowsiness · flushing · headache · keratitis · nasal dryness

- **EXCEPTIONS TO LEGAL CATEGORY** Lodoxamide 0.1% eye drops can be sold to the public for treatment of allergic conjunctivitis in adults and children over 4 years.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

► **Alomide** (Alcon Laboratories (UK) Ltd)

**Lodoxamide (as Lodoxamide trometamol) 1 mg per 1 ml** Alomide 0.1% eye drops | 10 ml [PoM] £5.21 DT price = £5.21  
Alomide Allergy 0.1% eye drops | 5 ml [P] £3.12

## Nedocromil sodium

### INDICATIONS AND DOSE

#### Seasonal and perennial conjunctivitis

- TO THE EYE
- Child 6-17 years: Apply twice daily, increased if necessary to 4 times a day, max. 12 weeks duration of treatment for seasonal allergic conjunctivitis
- Adult: Apply twice daily, increased if necessary to 4 times a day, max. 12 weeks duration of treatment for seasonal allergic conjunctivitis

#### Seasonal keratoconjunctivitis

- TO THE EYE
- Child 6-17 years: Apply 4 times a day
- Adult: Apply 4 times a day

- **SIDE-EFFECTS** Distinctive taste · transient burning · transient stinging

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

► **Rapitil** (Sanofi)

**Nedocromil sodium 20 mg per 1 ml** Rapitil 2% eye drops | 5 ml [PoM] £2.86 DT price = £2.86

## Sodium cromoglicate

### (Sodium cromoglycate)

### INDICATIONS AND DOSE

#### Allergic conjunctivitis | Seasonal keratoconjunctivitis

- TO THE EYE
- Child: Apply 4 times a day
- Adult: Apply 4 times a day

- **SIDE-EFFECTS** Transient burning · transient stinging

- **EXCEPTIONS TO LEGAL CATEGORY** Sodium cromoglicate 2% eye drops can be sold to the public (in max. pack size of 10 mL) for treatment of acute seasonal and perennial allergic conjunctivitis.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

► **Sodium cromoglicate (Non-proprietary)**

**Sodium cromoglicate 20 mg per 1 ml** Sodium cromoglicate 2% eye drops | 13.5 ml [PoM] £8.03 DT price = £2.35

► **Cromolux** (Tubilux Pharma Ltd)

**Sodium cromoglicate 20 mg per 1 ml** Cromolux 2% eye drops | 13.5 ml [PoM] £3.20 DT price = £2.35

► **Opticrom** (Sanofi)

**Sodium cromoglicate 20 mg per 1 ml** Opticrom Aqueous 2% eye drops | 13.5 ml [PoM] £8.03 DT price = £2.35

► **Vividrin** (Bausch & Lomb UK Ltd)

**Sodium cromoglicate 20 mg per 1 ml** Vividrin 2% eye drops | 13.5 ml [PoM] £10.95 DT price = £2.35

## 1.2 Inflammatory eye conditions

### Other drugs used for Inflammatory eye conditions

Adalimumab, p. 1008

### ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

#### Nepafenac

06-Jun-2017

##### ● INDICATIONS AND DOSE

**Prophylaxis and treatment of postoperative pain and inflammation associated with cataract surgery | Reduction in the risk of postoperative macular oedema associated with cataract surgery in diabetic patients**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **CAUTIONS** Avoid sunlight · corneal epithelial breakdown (if evidence of, then discontinue immediately)

- **INTERACTIONS** → Appendix 1: NSAIDs

##### ● SIDE-EFFECTS

- ▶ Common or very common Punctate keratitis
- ▶ Uncommon Allergic conjunctivitis · blurred vision · choroidal effusion · conjunctival hyperaemia · corneal deposits · corneal epithelium defect · dry eye · eye pruritus · headache · increased lacrimation · iritis · keratitis · nausea · ocular discomfort · photophobia
- ▶ Frequency not known Corneal opacity · dermatochalasis · dizziness · eye swelling · impaired corneal healing · reduced visual acuity

##### ● NATIONAL FUNDING/ACCESS DECISIONS

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (May 2017) that nepafenac (*Nevanac*®) 3 mg/mL eye drops are accepted for use within NHS Scotland for the reduction in risk of postoperative macular oedema associated with cataract surgery in diabetic patients.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Nevanac** (Alcon Laboratories (UK) Ltd)  
Nepafenac 1 mg per 1 mL Nevanac 1mg/mL eye drops | 5 mL [PoM]  
£14.92

### CORTICOSTEROIDS

#### Betamethasone

##### ● INDICATIONS AND DOSE

#### Local treatment of inflammation (short-term)

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply every 1–2 hours until controlled then reduce frequency
- ▶ Adult: Apply every 1–2 hours until controlled then reduce frequency
- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Child: Apply 2–4 times a day, alternatively apply at night when used in combination with eye drops
- ▶ Adult: Apply 2–4 times a day, alternatively apply at night when used in combination with eye drops

- **INTERACTIONS** → Appendix 1: corticosteroids

- **SIDE-EFFECTS** Corneal thinning · scleral thinning

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ▶ Betamethasone (Non-proprietary)

Betamethasone sodium phosphate 1 mg per 1 mL Betamethasone 0.1% ear/eye/nose drops | 5 mL [PoM] no price available

##### ▶ Betnesol (Focus Pharmaceuticals Ltd)

Betamethasone sodium phosphate 1 mg per 1 mL Betnesol 0.1% eye/ear/nose drops | 10 mL [PoM] £2.32 DT price = £2.32

##### ▶ Vistamethasone (Martindale Pharmaceuticals Ltd)

Betamethasone sodium phosphate 1 mg per 1 mL Vistamethasone 0.1% ear/eye/nose drops | 5 mL [PoM] £0.87 | 10 mL [PoM] £0.99 DT price = £2.32

#### Eye ointment

##### ▶ Betnesol (Focus Pharmaceuticals Ltd)

Betamethasone sodium phosphate 1 mg per 1 gram Betnesol 0.1% eye ointment | 3 gram [PoM] £1.41 DT price = £1.41

Combinations available: **Betamethasone with neomycin**, p. 1063

### Dexamethasone

06-Jun-2016

##### ● INDICATIONS AND DOSE

#### Local treatment of inflammation (short-term)

- ▶ TO THE EYE USING EYE DROP

- ▶ Child: Apply 4–6 times a day

- ▶ Adult: Apply every 30–60 minutes until controlled, then reduced to 4–6 times a day

#### Short term local treatment of inflammation (severe conditions)

- ▶ TO THE EYE USING EYE DROP

- ▶ Child: Apply every 30–60 minutes until controlled, reduce frequency when control achieved

**Macular oedema following either branch retinal vein occlusion or central retinal vein occlusion (specialist use only) | Visual impairment due to diabetic macular oedema in adults who are pseudophakic, or who are insufficiently responsive to, or unsuitable for non-corticosteroid therapy (specialist use only) | For the treatment of inflammation of the posterior segment of the eye presenting as non-infectious uveitis (specialist use only)**

- ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: 700 micrograms, to be administered into the affected eye, concurrent administration to both eyes not recommended. For further information on pre-treatment, administration and repeat dosing, consult product literature

- **UNLICENSED USE** *Maxidex*® not licensed for use in children under 2 years. *Dropodex*® not licensed for use in children.

##### ● CONTRA-INDICATIONS

- ▶ With intravitreal use Active ocular herpes simplex · active or suspected ocular infection · active or suspected periocular infection · rupture of the posterior lens capsule in patients with aphakia, iris or transscleral fixated intra-ocular lens or anterior chamber intra-ocular lens · uncontrolled advanced glaucoma

##### ● CAUTIONS

- ▶ With intravitreal use History of ocular viral infection (including herpes simplex) · posterior capsule tear or iris defect (risk of implant migration into the anterior chamber which may cause corneal oedema and, in persistent severe cases, the need for corneal transplantation) · retinal vein occlusion with significant retinal ischaemia

- **INTERACTIONS** → Appendix 1: corticosteroids

### ● SIDE-EFFECTS

- **Uncommon**
- With intravitreal use Eyelid pruritus · glaucoma · migraine · necrotising retinitis
- **Frequency not known**
- When used by eye Corneal thinning · scleral thinning
- With intravitreal use Blepharitis · cataract · headache · ocular hypertension · raised intra-ocular pressure · secondary ocular infection · visual disturbance

### ● PREGNANCY Dexamethasone readily crosses the placenta.

- With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

### ● BREAST FEEDING

- With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

### ● MONITORING REQUIREMENTS

- With intravitreal use Monitor intra-ocular pressure and for signs of ocular infection. In patients with posterior capsule tear or iris defect monitor for implant migration to allow for; early diagnosis and management.

### ● PRESCRIBING AND DISPENSING INFORMATION

Although multi-dose Dexamethasone eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### NICE technology appraisals (TAs)

- **Dexamethasone intravitreal implant for the treatment of macular oedema secondary to retinal vein occlusion (July 2011)** NICE TA229  
Dexamethasone intravitreal implant is recommended as an option for the treatment of macular oedema following central retinal vein occlusion. Dexamethasone intravitreal implant is also recommended as an option for the treatment of macular oedema following branch retinal vein occlusion when:
  - treatment with laser photocoagulation has not been beneficial, *or*
  - treatment with laser photocoagulation is not considered suitable because of the extent of macular haemorrhage.[www.nice.org.uk/TA229](http://www.nice.org.uk/TA229)
- **Dexamethasone intravitreal implant for treating diabetic macular oedema (July 2015)** NICE TA349  
Dexamethasone intravitreal implant is recommended as an option for treating diabetic macular oedema only if:
  - the implant is to be used in an eye with an intraocular (pseudophakic) lens **and**
  - the diabetic macular oedema does not respond to non-corticosteroid treatment, or such treatment is unsuitable.[www.nice.org.uk/TA349](http://www.nice.org.uk/TA349)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (May 2012) that dexamethasone intravitreal implant (*Ozurdex*®) is accepted for restricted use within NHS Scotland for the treatment of adults with macular oedema (i) following central retinal vein occlusion, and (ii) with branch retinal vein occlusion who are not clinically suitable for laser treatment, including patients with dense macular haemorrhage, or patients who have received and failed on previous laser treatment.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

#### ► Dexamethasone (Non-proprietary)

**Dexamethasone sodium phosphate 1 mg per 1 ml** Dexamethasone 0.1% eye drops 0.4ml unit dose preservative free | 20 unit dose [PoM] £9.75 DT price = £9.75

Minimis dexamethasone 0.1% eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.46 DT price = £11.46

#### ► Dexafree (Thea Pharmaceuticals Ltd)

**Dexamethasone sodium phosphate 1 mg per 1 ml** Dexafree 1mg/1ml eye drops 0.4ml unit dose | 30 unit dose [PoM] £9.70

#### ► Dropodex (Rayner Pharmaceuticals Ltd)

**Dexamethasone sodium phosphate 1 mg per 1 ml** Dropodex 0.1% eye drops 0.4ml unit dose | 20 unit dose [PoM] £9.75 DT price = £9.75

#### ► Maxidex (Alcon Laboratories (UK) Ltd)

**Dexamethasone 1 mg per 1 ml** Maxidex 0.1% eye drops | 5 ml [PoM] £1.42 DT price = £1.42 | 10 ml [PoM] £2.80 DT price = £2.80

#### Implant

#### ► Ozurdex (Allergan Ltd)

**Dexamethasone 700 microgram** Ozurdex 700microgram intravitreal implant in applicator | 1 device [PoM] £870.00 (Hospital only)

Combinations available: *Dexamethasone with framycetin sulfate and gramicidin*, p. 1063 · *Dexamethasone with hypromellose, neomycin and polymyxin B sulfate*, p. 1063 · *Dexamethasone with tobramycin*, p. 1064

## Fluorometholone

### ● INDICATIONS AND DOSE

#### Local treatment of inflammation (short term)

##### ► TO THE EYE

- Child 2–17 years: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day
- Adult: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day

### ● SIDE-EFFECTS Corneal thinning · scleral thinning

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

#### ► FML Liquifilm (Allergan Ltd)

**Fluorometholone 1 mg per 1 ml** FML Liquifilm 0.1% ophthalmic suspension | 5 ml [PoM] £1.71 DT price = £1.71 | 10 ml [PoM] £2.95 DT price = £2.95

## Prednisolone

### ● INDICATIONS AND DOSE

#### Local treatment of inflammation (short-term)

##### ► TO THE EYE

- Child: Apply every 1–2 hours until controlled then reduce frequency
- Adult: Apply every 1–2 hours until controlled then reduce frequency

### ● UNLICENSED USE *Pred Forte*® not licensed for use in children (age range not specified by manufacturer).

### ● INTERACTIONS → Appendix 1: corticosteroids

### ● SIDE-EFFECTS Corneal thinning · scleral thinning

### ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose prednisolone eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

▶ **Prednisolone (Non-proprietary)**

**Prednisolone sodium phosphate 5 mg per 1 ml** Minim prednisolone sodium phosphate 0.5% eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.78 DT price = £11.78

▶ **Pred Forte** (Allergan Ltd)

**Prednisolone acetate 10 mg per 1 ml** Pred Forte 1% eye drops | 5 ml [PoM] £1.82 DT price = £1.82 | 10 ml [PoM] £3.66 DT price = £3.66

**Ear/eye drops solution**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Predsol** (Focus Pharmaceuticals Ltd)

**Prednisolone sodium phosphate 5 mg per 1 ml** Predsol 0.5% ear/eye drops | 10 ml [PoM] £2.00 DT price = £2.00

**Rimexolone****INDICATIONS AND DOSE****Local treatment of postoperative inflammation (short term use)**

## ▶ TO THE EYE

- Adult: Apply 4 times a day for 2 weeks, treatment to begin 24 hours after surgery

**Local treatment of steroid-responsive inflammation (short term use)**

## ▶ TO THE EYE

- Adult: Apply in at least 4 times a day divided doses for up to 4 weeks

**Uveitis (short term use)**

## ▶ TO THE EYE

- Adult: Apply every 1 hour during the day time for week 1, then apply every 2 hours for week 2, then apply 4 times a day for week 3, then apply twice daily for the first 4 days of week 4, then apply once daily for the remaining 3 days of week 4

**SIDE-EFFECTS** Corneal thinning · scleral thinning**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

**CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES****Betamethasone with neomycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1061, neomycin sulfate p. 492.

**INDICATIONS AND DOSE****Local treatment of eye inflammation and bacterial infection (short-term)**

## ▶ TO THE EYE USING EYE DROP

- Adult: Apply up to 6 times a day

**LESS SUITABLE FOR PRESCRIBING** Betamethasone with neomycin eye-drops are less suitable for prescribing.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye/nose drops solution**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Betnesol-N** (Focus Pharmaceuticals Ltd)

**Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 ml, Neomycin sulfate 5 mg per 1 ml** Betnesol-N ear/eye/nose drops | 10 ml [PoM] £2.39 DT price = £2.39

**Dexamethasone with framycetin sulfate and gramicidin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1061, framycetin sulfate p. 1094.

**INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

## ▶ TO THE EYE

- Child: Apply 4–6 times a day, may be administered every 30–60 minutes in severe conditions until controlled, then reduce frequency
- Adult: Apply 4–6 times a day, may be administered every 30–60 minutes in severe conditions until controlled, then reduce frequency

**LESS SUITABLE FOR PRESCRIBING** Sofradex® is less suitable for prescribing.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye drops solution**

EXCIPIENTS: May contain Polysorbates

▶ **Sofradex** (Sanofi)

**Gramicidin 50 microgram per 1 ml, Dexamethasone (as Dexamethasone sodium metasulfobenzoate) 500 microgram per 1 ml, Framycetin sulfate 5 mg per 1 ml** Sofradex ear/eye drops | 10 ml [PoM] £7.50

**Dexamethasone with hypromellose, neomycin and polymyxin B sulfate**

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1061, neomycin sulfate p. 492.

**INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

## ▶ TO THE EYE USING EYE DROP

- Adult: Apply every 30–60 minutes until controlled, then reduced to 4–6 times a day

## ▶ TO THE EYE USING EYE OINTMENT

- Adult: Apply 3–4 times a day, alternatively, apply at night when used with eye drops

**LESS SUITABLE FOR PRESCRIBING** Dexamethasone with neomycin and polymyxin B sulfate is less suitable for prescribing.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye ointment**

EXCIPIENTS: May contain Hydroxybenzoates (parabens), wool fat and related substances including lanolin

▶ **Maxitrol** (Alcon Laboratories (UK) Ltd)

**Dexamethasone 1 mg per 1 gram, Neomycin (as Neomycin sulfate) 3500 unit per 1 gram, Polymyxin B sulfate 6000 unit per 1 gram** Maxitrol eye ointment | 3.5 gram [PoM] £1.44

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

► **Maxitrol** (Alcon Laboratories (UK) Ltd)

Dexamethasone 1 mg per 1 ml, Hypromellose 5 mg per 1 ml, Neomycin (as Neomycin sulfate) 3500 unit per 1 ml, Polymyxin B sulfate 6000 unit per 1 ml Maxitrol eye drops | 5 ml [PoM] £1.68

**Dexamethasone with tobramycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1061, tobramycin p. 493.

**INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

► TO THE EYE

► Adult: (consult product literature)

• **LESS SUITABLE FOR PRESCRIBING** Dexamethasone with tobramycin eye-drops are less suitable for prescribing.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

► **Tobradex** (Alcon Laboratories (UK) Ltd)

Dexamethasone 1 mg per 1 ml, Tobramycin 3 mg per 1 ml Tobradex 3mg/ml / 1mg/ml eye drops | 5 ml [PoM] £5.37 DT price = £5.37

**IMMUNOSUPPRESSANTS > CALCINEURIN INHIBITORS AND RELATED DRUGS****Ciclosporin (Cyclosporin)**

01-Sep-2016

• **DRUG ACTION** Ciclosporin inhibits production and release of lymphokines, thereby suppressing cell-mediated immune response.

**INDICATIONS AND DOSE**

**Severe keratitis in dry eye disease that has not responded to treatment with tear substitutes (initiated by a specialist)**

► TO THE EYE

► Adult: Apply 1 drop once daily, to be applied to the affected eye(s) at bedtime, review treatment at least every 6 months

• **CONTRA-INDICATIONS** Active or suspected ocular or peri-ocular infection

• **CAUTIONS** Glaucoma—limited information available · history of ocular herpes—no information available

• **INTERACTIONS** → Appendix 1: ciclosporin

**SIDE-EFFECTS**

► **Common or very common** Blurred vision · instillation site pain · local erythema · local irritation · local oedema · local pain · ocular hyperaemia

► **Uncommon** Bacterial keratitis · blepharitis · chalazion · conjunctivitis · corneal decompensation · corneal infiltrates · corneal scar · eye discharge · herpes zoster (ophthalmic) · iridocyclitis · keratitis · local pruritus

• **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception during treatment in women of child-bearing potential.

• **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

• **BREAST FEEDING** Manufacturer advises avoid—limited information.

• **DIRECTIONS FOR ADMINISTRATION** Keep eyes closed for 2 minutes after using *Ikervis*® eye drops, to increase local drug action and reduce systemic absorption.

**NATIONAL FUNDING/ACCESS DECISIONS****NICE technology appraisals (TAs)**

► Ciclosporin for treating dry eye disease that has not improved despite treatment with artificial tears (December 2015)

NICE TA369

Ciclosporin (*Ikervis*®) is recommended as an option for treating dry eye disease that has not improved despite treatment with tear substitutes.

www.nice.org.uk/TA369

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye ointment

**Eye drops**► **Ikervis** (Santen UK Ltd)

Ciclosporin 1 mg per 1 ml Ikervis 0.1% eye drops 0.3ml unit dose | 30 unit dose [PoM] £72.00 DT price = £72.00

**1.2a Anterior uveitis****ANTIMUSCARINICS****Antimuscarinics (eye)**

• **CAUTIONS** Children under 3 months owing to the possible association between cycloplegia and the development of amblyopia · darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdosage · mydriasis can precipitate acute angle-closure glaucoma (usually in those aged over 60 years and hypermetropic (long-sighted), who are predisposed to the condition because of a shallow anterior chamber)

• **SIDE-EFFECTS** Conjunctivitis (on prolonged administration) · contact dermatitis · eye oedema (on prolonged administration) · hyperaemia (on prolonged administration) · local irritation (on prolonged administration) · raised intraocular pressure · transient stinging

• **PATIENT AND CARER ADVICE** Patients may not be able to undertake skilled tasks until vision clears after mydriasis.

## Homatropine hydrobromide

### INDICATIONS AND DOSE

#### Anterior uveitis

##### ► TO THE EYE

- Adult: (consult product literature)

### INTERACTIONS → Appendix 1: homatropine

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

## Dry eye conditions

### Dry eye

#### Tear deficiency, ocular lubricants, and astringents

Chronic soreness of the eyes associated with reduced or abnormal tear secretion (e.g. in Sjögren's syndrome) often responds to tear replacement therapy or pilocarpine p. 1105 given by mouth in adults. The severity of the condition and patient preference will often guide the choice of preparation.

Hyromellose p. 1067 is the traditional choice of treatment for tear deficiency. It may need to be instilled frequently (e.g. hourly) for adequate relief. Ocular surface mucin is often abnormal in tear deficiency and the combination of hyromellose with a mucolytic such as acetylcysteine below can be helpful.

The ability of carbomers to cling to the eye surface may help reduce frequency of application to 4 times daily.

Polyvinyl alcohol p. 1068 increases the persistence of the tear film and is useful when the ocular surface mucin is reduced.

Sodium hyaluronate eye drops p. 1068 are also used in the management of tear deficiency.

Sodium chloride 0.9% drops p. 1068 are sometimes useful in tear deficiency, and can be used as 'comfort drops' by contact lens wearers, and to facilitate lens removal. They are also used to irrigate the eye. Special presentations of sodium chloride 0.9% and other irrigation solutions are used routinely for intra-ocular surgery. Sodium chloride 5% eye drops are used for the short-term treatment of corneal oedema in adults.

Eye ointments containing a paraffin can be used to lubricate the eye surface, especially in cases of recurrent corneal epithelial erosion. They may cause temporary visual disturbance and are best suited for application before sleep. Ointments should not be used during contact lens wear.

## OCULAR LUBRICANTS

### Acetylcysteine

07-Feb-2017

#### INDICATIONS AND DOSE

##### Tear deficiency | Impaired or abnormal mucus production

##### ► TO THE EYE

- Adult: Apply 3–4 times a day

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPENTS: May contain Benzalkonium chloride, disodium edetate

##### ► Liquifilm Tears (Allergan Ltd)

Polyvinyl alcohol 14 mg per 1 ml Liquifilm Tears 1.4% eye drops | 15 ml £1.93  
Liquifilm Tears 1.4% eye drops 0.4ml unit dose preservative free | 30 unit dose £5.35

##### ► PVA (Tubilux Pharma Ltd)

Polyvinyl alcohol 14 mg per 1 ml PVA 1.4% eye drops | 15 ml £1.63

##### ► Refresh Ophthalmic (Allergan Ltd)

Polyvinyl alcohol 14 mg per 1 ml Refresh Ophthalmic 1.4% eye drops 0.4ml unit dose | 30 unit dose £2.25

##### ► Sno Tears (Bausch & Lomb UK Ltd)

Polyvinyl alcohol 14 mg per 1 ml Sno Tears 1.4% eye drops | 10 ml £1.06

## Retinol palmitate with white soft paraffin and light liquid paraffin and liquid paraffin and wool fat (Formulated as an ocular lubricant)

### INDICATIONS AND DOSE

#### Dry eye conditions

- TO THE EYE
- Adult: (consult product literature)

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye ointment

##### ► Vita-POS (Scope Ophthalmics Ltd)

Vita-POS eye ointment preservative free | 5 gram £2.75

## Sodium chloride

### INDICATIONS AND DOSE

**Tear deficiency | Ocular lubricants and astringents | Irrigation, including first-aid removal of harmful substances | Intra-ocular or topical irrigation during surgical procedures**

- TO THE EYE
- Child: Apply as required, use 0.9% eye preparations
- Adult: Apply as required, use 0.9% eye preparations

### Corneal oedema

- TO THE EYE
- Adult: Use 5% eye preparations (consult product literature)

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose sodium chloride eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye ointment

#### Eye drops

##### ► Sodium chloride (Non-proprietary)

Sodium chloride 50 mg per 1 ml Sodium chloride 5% eye drops | 10 ml £25.25

##### ► Hypersal (Ennogen Healthcare Ltd)

Sodium chloride 50 mg per 1 ml Hypersal 5% eye drops | 10 ml £25.25

##### ► ODM5 (Kestrel Ophthalmics Ltd)

Sodium chloride 50 mg per 1 ml ODM5 5% eye drops preservative free | 10 ml £24.00 DT price = £0.00

##### ► Saline (Bausch & Lomb UK Ltd)

Sodium chloride 9 mg per 1 ml Minims saline 0.9% eye drops 0.5ml unit dose | 20 unit dose P £7.14 DT price = £7.14

##### ► Sodium chloride (Essential Pharmaceuticals Ltd, Moorfields Pharmaceuticals)

Sodium chloride 50 mg per 1 ml NaCl 5% eye drops 0.45ml unit dose preservative free | 20 unit dose £19.70  
PF Drops Sodium Chloride 5% eye drops preservative free | 10 ml £25.20 DT price = £0.00

#### Eye ointment

##### ► Sodium chloride (Non-proprietary)

Sodium chloride 50 mg per 1 ml Sodium chloride 5% eye ointment preservative free | 5 gram £22.50

## Sodium hyaluronate

### INDICATIONS AND DOSE

#### Dry eye conditions

- TO THE EYE
- Adult: Apply as required

- **PRESCRIBING AND DISPENSING INFORMATION** Some preparations are contained in units which are resealable and may be used for up to 12 hours.

Although multi-dose sodium hyaluronate eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

Emustil eye drops 0.3ml unit dose preservative free | 20 unit dose £6.22

## 3 Eye infections

### Eye, infections of

#### Eye infections

Most acute superficial eye infections can be treated topically. Blepharitis and conjunctivitis are often caused by staphylococci; keratitis and endophthalmitis may be bacterial, viral, or fungal.

Bacterial *blepharitis* is treated by application of an antibacterial eye ointment to the conjunctival sac or to the lid margins. Systemic treatment may occasionally be required and is usually undertaken after culturing organisms from the lid margin and determining their antimicrobial sensitivity; antibiotics such as the tetracyclines given for 3 months or longer may be appropriate.

Most cases of acute bacterial conjunctivitis are self limiting; where treatment is appropriate, antibacterial eye

drops or an eye ointment are used. A poor response might indicate viral or allergic conjunctivitis.

*Corneal ulcer* and *keratitis* require specialist treatment and may call for hospital admission for intensive therapy.

*Endophthalmitis* is a medical emergency which also calls for specialist management and requires intravitreal administration of antimicrobials; concomitant systemic treatment is required in some cases. Surgical intervention, such as vitrectomy, is sometimes indicated.

#### Antibacterials

Bacterial eye infections are generally treated topically with eye drops and eye ointments. Systemic administration is sometimes appropriate in blepharitis.

Chloramphenicol p. 1072 has a broad spectrum of activity and is the drug of choice for *superficial eye infections*. Chloramphenicol eye drops are well tolerated and the recommendation that chloramphenicol eye drops should be avoided because of an increased risk of aplastic anaemia is not well founded.

Other antibacterials with a broad spectrum of activity include the quinolones, ciprofloxacin p. 1071, levofloxacin p. 1071, moxifloxacin p. 1071, and ofloxacin p. 1072; the aminoglycosides, gentamicin p. 1070 and tobramycin p. 1070 are also active against a wide variety of bacteria. Gentamicin, tobramycin, quinolones (except moxifloxacin), and **polymyxin B** are effective for infections caused by *Pseudomonas aeruginosa*.

Ciprofloxacin eye drops are licensed for corneal ulcers; intensive application (especially in the first 2 days) is required throughout the day and night.

Azithromycin eye drops p. 1070 are licensed for trachomatous conjunctivitis caused by *Chlamydia trachomatis* and for purulent bacterial conjunctivitis. *Trachoma* which results from chronic infection with *Chlamydia trachomatis* can be treated with azithromycin by mouth [unlicensed indication].

**Fusidic acid** is useful for staphylococcal infections.

Propamide isetionate p. 1073 is of little value in bacterial infections but is used by specialists to treat the rare, but potentially sight-threatening, condition of *acanthamoeba keratitis* [unlicensed indication].

Cefuroxime p. 1070 can be administered by intracameral injection for the prophylaxis of endophthalmitis following cataract surgery.

#### With corticosteroids

Many antibacterial preparations also incorporate a corticosteroid but such mixtures should **not** be used unless a patient is under close specialist supervision. In particular they should not be prescribed for undiagnosed 'red eye' which is sometimes caused by the herpes simplex virus and may be difficult to diagnose.

#### Administration

Frequency of application depends on the severity of the infection and the potential for irreversible ocular damage; antibacterial eye preparations are usually administered as follows:

- *Eye drops*, apply 1 drop at least every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing.
- *Eye ointment*, apply *either* at night (if eye drops used during the day) *or* 3–4 times daily (if eye ointment used alone).

#### Antifungals

Fungal infections of the cornea are rare but can occur after agricultural injuries, especially in hot and humid climates. Orbital mycosis is rarer, and when it occurs it is usually because of direct spread of infection from the paranasal sinuses. Increasing age, debility, or immunosuppression can encourage fungal proliferation. The spread of infection

through blood occasionally produces metastatic endophthalmitis.

Many different fungi are capable of producing ocular infection; they can be identified by appropriate laboratory procedures.

Antifungal preparations for the eye are not generally available. Treatment will normally be carried out at specialist centres, but requests for information about supplies of preparations not available commercially should be addressed to the Strategic Health Authority (or equivalent), or to the nearest hospital ophthalmology unit, or to Moorfields Eye Hospital, 162 City Road, London EC1V 2PD (tel. (020) 7253 3411) or [www.moorfields.nhs.uk](http://www.moorfields.nhs.uk).

## Antivirals

Herpes simplex infections producing, for example, dendritic corneal ulcers can be treated with aciclovir p. 1073 or ganciclovir p. 1073. Aciclovir eye ointment is used in combination with systemic treatment for ophthalmic zoster.

Slow-release ocular implants containing ganciclovir (available on a named-patient basis from specialist importing companies) may be inserted surgically to treat immediate sight-threatening CMV retinitis. Local treatments do not protect against systemic infection or infection in the other eye. See systemic treatment of CMV retinitis.

## 3.1 Bacterial eye infection

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Gentamicin

##### ● INDICATIONS AND DOSE

###### Bacterial eye infections

###### ► TO THE EYE

- Child: Apply 1 drop at least every 2 hours in severe infection, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient
- Adult: Apply 1 drop at least every 2 hours, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient

##### ● INTERACTIONS → Appendix 1: aminoglycosides

##### ● PRESCRIBING AND DISPENSING INFORMATION Eye drops may be sourced as a manufactured special or from specialist importing companies.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

###### Ear/eye drops solution

EXCIPIENTS: May contain Benzalkonium chloride

###### ► Gentamicin (Non-proprietary)

Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml Gentamicin 0.3% ear/eye drops | 10 ml [PoM] £2.14 DT price = £2.15

#### Tobramycin

30-Nov-2016

##### ● INDICATIONS AND DOSE

###### Local treatment of infections

###### ► TO THE EYE

- Child 1–17 years: Apply twice daily for 6–8 days
- Adult: Apply twice daily for 6–8 days

##### Local treatment of infections (severe infection)

###### ► TO THE EYE

- Child 1–17 years: Apply 4 times a day for first day, then apply twice daily for 5–7 days
- Adult: Apply 4 times a day for first day, then apply twice daily for 5–7 days

##### ● INTERACTIONS → Appendix 1: aminoglycosides

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzododecinium bromide

###### ► Tobravisc (Alcon Laboratories (UK) Ltd)

Tobramycin 3 mg per 1 ml Tobravisc 3mg/ml eye drops | 5 ml [PoM] £4.74

### ANTIBACTERIALS > CEPHALOSPORINS, SECOND-GENERATION

F 496

#### Cefuroxime

##### ● INDICATIONS AND DOSE

###### APROKAM® INTRACAMERAL INJECTION

###### Prophylaxis of endophthalmitis after cataract surgery

###### ► BY INTRACAMERAL INJECTION

- Adult: 1 mg, dose to be injected into the anterior chamber of the eye at the end of cataract surgery

##### ● CAUTIONS Combined operations with cataract surgery · complicated cataracts · reduced corneal endothelial cells (less than 2000) · severe risk of infection · severe thyroid disease

##### ● INTERACTIONS → Appendix 1: cephalosporins

##### ● PREGNANCY Not known to be harmful.

##### ● BREAST FEEDING Present in milk in low concentration, but appropriate to use.

##### ● NATIONAL FUNDING/ACCESS DECISIONS

###### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (December 2016) that cefuroxime (Aprokam®) is accepted for use within NHS Scotland for antibiotic prophylaxis of postoperative endophthalmitis after cataract surgery.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Powder for solution for injections

###### ► Aprokam (Thea Pharmaceuticals Ltd)

Cefuroxime sodium 50 mg Aprokam powder for solution for injection | 10 vial [PoM] £49.95

### ANTIBACTERIALS > MACROLIDES

#### Azithromycin

##### ● INDICATIONS AND DOSE

###### Trachomatous conjunctivitis caused by *Chlamydia trachomatis* | Purulent bacterial conjunctivitis

###### ► TO THE EYE

- Child: Apply twice daily for 3 days, review if no improvement after 3 days of treatment
- Adult: Apply twice daily for 3 days, review if no improvement after 3 days of treatment

##### ● INTERACTIONS → Appendix 1: macrolides

##### ● SIDE-EFFECTS

- Common or very common Blurred vision · ocular burning · ocular discomfort · ocular pruritus
- Uncommon Conjunctival hyperaemia · eyelid eczema · eyelid erythema · eyelid oedema · keratitis

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- ▶ **Azyter** (Thea Pharmaceuticals Ltd)

Azithromycin dihydrate 15 mg per 1 gram Azyter 15mg/g eye drops 0.25g unit dose | 6 unit dose [PoM] £6.99 DT price = £6.99

## ANTIBACTERIALS > QUINOLONES

### Ciprofloxacin

#### ● INDICATIONS AND DOSE

##### Superficial bacterial eye infection

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply 4 times a day for maximum duration of treatment 21 days
- ▶ Adult: Apply 4 times a day for maximum duration of treatment 21 days
- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Child 1-17 years: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days
- ▶ Adult: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days

##### Superficial bacterial eye infection (severe infection)

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days
- ▶ Adult: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days

##### Corneal ulcer

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3–14, maximum duration of treatment 21 days, to be administered throughout the day and night
- ▶ Adult: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3–14, maximum duration of treatment 21 days, to be administered throughout the day and night
- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Child 1-17 years: Apply 1.25 centimetres every 1–2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night
- ▶ Adult: Apply 1.25 centimetres every 1–2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night

- **INTERACTIONS** → Appendix 1: quinolones

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Corneal deposits (reversible after completion of treatment) · ocular discomfort · ocular hyperaemia · taste disturbance
- ▶ **Uncommon** Increased lacrimation · blurred vision · conjunctival hyperaemia · corneal infiltrates · corneal staining · eye dryness · eye irritation · eye pain · eye pruritus · eye swelling · eyelid disorders · eyelid erythema · eyelid exfoliation · eyelid oedema · headache · keratopathy · nausea · photophobia
- ▶ **Rare** Abdominal pain · asthenopia · corneal disorders · corneal epithelium defect · dermatitis · diarrhoea · diplopia · dizziness · ear pain · eye hypoaesthesia · keratitis · paranasal sinus hypersecretion · rhinitis

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises caution.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Ciloxan** (Alcon Laboratories (UK) Ltd)

Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 ml Ciloxan 0.3% eye drops | 5 ml [PoM] £4.70 DT price = £4.70

#### Eye ointment

- ▶ **Ciloxan** (Alcon Laboratories (UK) Ltd)

Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 gram Ciloxan 3mg/g eye ointment | 3.5 gram [PoM] £5.22

### Levofloxacin

#### ● INDICATIONS AND DOSE

##### Local treatment of eye infections

- ▶ TO THE EYE
- ▶ Child 1-17 years: Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days
- ▶ Adult: Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days

- **INTERACTIONS** → Appendix 1: quinolones

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Ocular burning · visual disturbances
- ▶ **Uncommon** Conjunctival follicles · headache · lid erythema · lid oedema · ocular discomfort · ocular dryness · ocular itching · ocular pain · photophobia · rhinitis
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose levofloxacin eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Levofloxacin (Non-proprietary)**

Levofloxacin (as Levofloxacin hemihydrate) 5 mg per

1 ml Levofloxacin 5mg/ml eye drops | 5 ml [PoM] £6.25

- ▶ **Oftaquin** (Santen UK Ltd)

Levofloxacin (as Levofloxacin hemihydrate) 5 mg per

1 ml Oftaquin 5mg/ml eye drops 0.3ml unit dose | 30 unit dose [PoM] £17.95

Oftaquin 5mg/ml eye drops | 5 ml [PoM] £6.95

### Moxifloxacin

#### ● INDICATIONS AND DOSE

##### Local treatment of infections

- ▶ TO THE EYE
- ▶ Child: Apply 3 times a day continue treatment for 2–3 days after infection improves; review if no improvement within 5 days
- ▶ Adult: Apply 3 times a day continue treatment for 2–3 days after infection improves; review if no improvement within 5 days

- **INTERACTIONS** → Appendix 1: quinolones

### ● SIDE-EFFECTS

- **Common or very common** Hyperaemia · ocular discomfort · ocular dryness · ocular irritation · ocular pain · taste disturbances
- **Uncommon** Conjunctival haemorrhage · corneal disorders · corneal erosion · corneal keratitis · corneal staining · eyelid erythema · headache · nasal discomfort · paraesthesia · pharyngolaryngeal pain · visual disturbances · vomiting
- **Frequency not known** Dizziness · dyspnoea · nausea · palpitation · photophobia · pruritus · raised intra-ocular pressure · rash

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- **Moxivig** (Alcon Laboratories (UK) Ltd)  
**Moxifloxacin (as Moxifloxacin hydrochloride) 5 mg per 1 ml** Moxivig 0.5% eye drops | 5 ml [PoM] £9.80

## Floxacin

### ● INDICATIONS AND DOSE

#### Local treatment of infections

- **TO THE EYE**
- **Child 1–17 years:** Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment
- **Adult:** Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment

- **CAUTIONS** Corneal ulcer (risk of corneal perforation) · epithelial defect (risk of corneal perforation)

- **INTERACTIONS** → Appendix 1: quinolones

### ● SIDE-EFFECTS

- **Common or very common** Eye irritation · ocular discomfort
- **Frequency not known** Dry eyes · facial oedema · increased lacrimation · keratitis · ocular hyperaemia · ocular oedema · photophobia · visual disturbances

- **PREGNANCY** Manufacturer advises use only if benefit outweighs risk (systemic quinolones have caused arthropathy in animal studies).

- **BREAST FEEDING** Manufacturer advises avoid.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- **Exocin** (Allergan Ltd)  
**Oxofloxacin 3 mg per 1 ml** Exocin 0.3% eye drops | 5 ml [PoM] £2.17 DT price = £2.17

severity of the infection. For less severe infection 3–4 times daily is generally sufficient

#### ► TO THE EYE USING EYE OINTMENT

- **Child:** Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone
- **Adult:** Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone

- **INTERACTIONS** → Appendix 1: chloramphenicol

- **SIDE-EFFECTS** Transient stinging

- **PREGNANCY** Avoid unless essential—no information on topical use but risk of 'neonatal grey-baby syndrome' with oral use in third trimester.

- **BREAST FEEDING** Avoid unless essential—*theoretical* risk of bone-marrow toxicity.

### ● PRESCRIBING AND DISPENSING INFORMATION

Although multi-dose chloramphenicol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● PATIENT AND CARER ADVICE

Medicines for Children leaflet: Chloramphenicol for eye infections

**Chloramphenicol 10 mg per 1 gram** Chloromycetin 1% eye ointment | 4 gram [PoM] £1.08 DT price = £2.27

#### ► Klorafect (Blumont Pharma Ltd)

**Chloramphenicol 10 mg per 1 gram** Klorafect 1% eye ointment | 4 gram [PoM] £1.81 DT price = £2.27

## ANTIBACTERIALS > OTHER

## Chloramphenicol

- **DRUG ACTION** Chloramphenicol is a potent broad-spectrum antibiotic.

### ● INDICATIONS AND DOSE

#### Superficial eye infections

- **TO THE EYE USING EYE DROP**
- **Child:** Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the severity of the infection. For less severe infection 3–4 times daily is generally sufficient
- **Adult:** Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the

### ● INDICATIONS AND DOSE

#### Staphylococcal eye infections

#### ► TO THE EYE

- **Child:** Apply twice daily
- **Adult:** Apply twice daily

- **INTERACTIONS** → Appendix 1: fusidic acid

## Fusidic acid

16-Jun-2017

- **DRUG ACTION** Fusidic acid and its salts are narrow-spectrum antibiotics used for staphylococcal infections.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Modified-release drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### Fusidic acid (Non-proprietary)

Fusidic acid 10 mg per 1 gram Fusidic acid 1% modified-release eye drops | 5 gram [PoM] £29.06 DT price = £29.06

## ANTIPROTOZOALS

### Propamidine isetionate

#### INDICATIONS AND DOSE

##### *Acanthamoeba keratitis* infections (specialist use only) |

##### Local treatment of eye infections

- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Adult: Apply 1–2 times a day
- ▶ TO THE EYE USING EYE DROP
- ▶ Adult: Apply up to 4 times a day

- **UNLICENSED USE** Not licensed for *acanthamoeba keratitis* infections.

- **SIDE-EFFECTS** Eye irritation · eye pain

- **PREGNANCY** Manufacturer advises avoid unless essential—no information available.

- **BREAST FEEDING** Manufacturer advises avoid unless essential—no information available.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye ointment

- ▶ **Brolene (Dibrompropamidine)** (Sanofi)

Dibrompropamidine isetionate 1.5 mg per 1 gram Brolene 0.15% eye ointment | 5 gram [P] £2.92 DT price = £3.49

- ▶ **Golden Eye (dibrompropamidine)** (Cambridge Healthcare Supplies Ltd)

Dibrompropamidine isetionate 1.5 mg per 1 gram Golden Eye 0.15% ointment | 5 gram [P] £3.49 DT price = £3.49

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Brolene (Propamidine)** (Sanofi)

Propamidine isetionate 1 mg per 1 ml Brolene 0.1% eye drops | 10 ml [P] £2.80

- ▶ **Golden Eye (propamidine)** (Cambridge Healthcare Supplies Ltd)

Propamidine isetionate 1 mg per 1 ml Golden Eye 0.1% drops | 10 ml [P] £3.26

## 3.2 Viral eye infection

### 3.2a Ophthalmic herpes simplex

#### ANTIVIRALS > NUCLEOSIDE ANALOGUES

### Aciclovir

#### (Acyclovir)

#### INDICATIONS AND DOSE

##### Herpes simplex infection (local treatment)

- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Child: Apply 1 centimetre 5 times a day continue for at least 3 days after complete healing
- ▶ Adult: Apply 1 centimetre 5 times a day continue for at least 3 days after complete healing

- **INTERACTIONS** → Appendix 1: aciclovir

#### SIDE-EFFECTS

- ▶ **Common or very common** Local inflammation · local irritation · superficial punctate keratopathy
- ▶ **Rare** Blepharitis

- ▶ **Very rare** Angioedema · hypersensitivity reactions

#### PATIENT AND CARER ADVICE

Medicines for Children leaflet: Aciclovir eye ointment for herpes simplex infections [www.medicinesforchildren.org.uk/aciclovir-eye-ointment-for-herpes-simplex-infection](http://www.medicinesforchildren.org.uk/aciclovir-eye-ointment-for-herpes-simplex-infection)

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye ointment

- ▶ **Zovirax** (GlaxoSmithKline UK Ltd)

Aciclovir 30 mg per 1 gram Zovirax 3% ophthalmic ointment | 4.5 gram [PoM] £9.34 DT price = £9.34

### Ganciclovir

#### INDICATIONS AND DOSE

##### Local treatment of herpes simplex infections

- ▶ TO THE EYE
- ▶ Adult: Apply 5 times a day until healing complete, then apply 3 times a day for a further 7 days

- **INTERACTIONS** → Appendix 1: ganciclovir

- **SIDE-EFFECTS** Burning sensation · superficial punctate keratitis · tingling

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients hypersensitive to valganciclovir, aciclovir, or valaciclovir.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye gel

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Virgan** (Thea Pharmaceuticals Ltd)

Ganciclovir 1.5 mg per 1 gram Virgan 0.15% eye gel | 5 gram [PoM] £19.99 DT price = £19.99

## 4 Eye procedures

### Mydriatics and cycloplegics

#### Overview

Antimuscarinics dilate the pupil and paralyse the ciliary muscle; they vary in potency and duration of action.

Short-acting, relatively weak mydriatics, such as tropicamide 0.5% p. 1074 (action lasts for 4–6 hours), facilitate the examination of the fundus of the eye. Longer-acting options include cyclopentolate hydrochloride 1% p. 1065 (action up to 24 hours) or atropine sulfate p. 1064 (action up to 7 days).

Phenylephrine hydrochloride p. 1075 is used for mydriasis in diagnostic or therapeutic procedures; mydriasis occurs within 60–90 minutes and lasts up to 5–7 hours.

Mydriatics and cycloplegics are used in the treatment of anterior uveitis, usually as an adjunct to corticosteroids. Atropine sulfate is used in anterior uveitis mainly to prevent posterior synechiae and to relieve ciliary spasm; cyclopentolate hydrochloride or homatropine hydrobromide p. 1065 (action up to 3 days) can also be used and may be preferred because they have a shorter duration of action.

**Other drugs used for Eye procedures** Apraclonidine, p. 1086 · Lidocaine hydrochloride, p. 1242

## ANTIMUSCARINICS

F 1064

## Tropicamide

## ● INDICATIONS AND DOSE

## Funduscopy

- ▶ TO THE EYE
- ▶ Child: 0.5% eye drops to be applied 20 minutes before examination
- ▶ Adult: (consult product literature)

## ● INTERACTIONS → Appendix 1: tropicamide

## ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose tropicamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

## Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, edetic acid (edta)

## ▶ Mydracyl (Alcon Laboratories (UK) Ltd)

Tropicamide 5 mg per 1 ml Mydracyl 0.5% eye drops | 5 ml [PoM] £1.29

Tropicamide 10 mg per 1 ml Mydracyl 1% eye drops | 5 ml [PoM] £1.60

## ▶ Tropicamide (Bausch &amp; Lomb UK Ltd)

Tropicamide 5 mg per 1 ml Minims tropicamide 0.5% eye drops 0.5ml unit dose | 20 unit dose [PoM] £10.75

Tropicamide 10 mg per 1 ml Minims tropicamide 1% eye drops 0.5ml unit dose | 20 unit dose [PoM] £10.77

Combinations available: *Phenylephrine with tropicamide*, p. 1075

## ANTISEPTICS AND DISINFECTANTS &gt; IODINE PRODUCTS

## Povidone-iodine

## ● INDICATIONS AND DOSE

## Cutaneous peri-ocular and conjunctival antisepsis before ocular surgery

- ▶ TO THE EYE
- ▶ Adult: Apply, leave for 2 minutes, then irrigate thoroughly with sodium chloride 0.9%

## ● CONTRA-INDICATIONS Concomitant use of ocular antimicrobial drugs · concomitant use of ocular formulations containing mercury-based preservatives

## ● SIDE-EFFECTS

- ▶ Rare Conjunctival hyperaemia · superficial punctuate keratitis
- ▶ Frequency not known Cytotoxicity on deep tissue · cytotoxicity on mucous membranes · residual yellow coloration of the conjunctiva

## ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose povidone iodine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye lotion

## Eye drops

## ▶ Povidone iodine (Bausch &amp; Lomb UK Ltd)

Povidone-iodine 50 mg per 1 ml Minims povidone iodine 5% eye drops 0.4ml unit dose | 20 unit dose [PoM] £16.00

## DIAGNOSTIC AGENTS &gt; DYES

## Fluorescein sodium

## ● INDICATIONS AND DOSE

## Detection of lesions and foreign bodies

- ▶ TO THE EYE USING EYE DROP
- ▶ Adult: Use sufficient amount to stain damaged areas

## ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose fluorescein eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

## Eye drops

## ▶ Fluorescein sodium (Bausch &amp; Lomb UK Ltd)

Fluorescein sodium 10 mg per 1 ml Minims fluorescein sodium 1% eye drops 0.5ml unit dose | 20 unit dose [P] £8.89

Fluorescein sodium 20 mg per 1 ml Minims fluorescein sodium 2% eye drops 0.5ml unit dose | 20 unit dose [P] £8.89

## Fluorescein with lidocaine

## ● INDICATIONS AND DOSE

## Local anaesthesia

- ▶ TO THE EYE
- ▶ Adult: Apply as required

## ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose lidocaine and fluorescein eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

## Eye drops

## ▶ Lidocaine and Fluorescein (Bausch &amp; Lomb UK Ltd)

Fluorescein sodium 2.5 mg per 1 ml, Lidocaine hydrochloride 40 mg per 1 ml Minims lidocaine and fluorescein eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.24

## MIOTICS &gt; PARASYMPATHOMIMETICS

## Acetylcholine chloride

## ● INDICATIONS AND DOSE

## Cataract surgery | Penetrating keratoplasty | Iridectomy | Anterior segment surgery requiring rapid complete miosis

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

## ● CAUTIONS Asthma · gastro-intestinal spasm · heart failure · hyperthyroidism · parkinsonism · peptic ulcer · urinary-tract obstruction

## ● INTERACTIONS → Appendix 1: acetylcholine

## ● SIDE-EFFECTS

- ▶ Rare Bradycardia · breathing difficulty · flushing · hypotension · sweating

## ● PREGNANCY Avoid unless potential benefit outweighs risk—no information available.

## ● BREAST FEEDING Avoid unless potential benefit outweighs risk—no information available.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Irrigation

##### ► Miochol-E (Bausch & Lomb UK Ltd)

**Acetylcholine chloride 20 mg** Miochol-E 20mg powder and solvent for solution for intraocular irrigation vials | 1 vial [PoM] £7.28

##### ► Miphtel (Alan Pharmaceuticals)

**Acetylcholine chloride 20 mg** Miphtel 20mg powder and solvent for solution for intraocular irrigation ampoules | 6 ampoule [PoM] £43.68 (Hospital only)

## SYMPATHOMIMETICS > VASOCONSTRICTOR

### Phenylephrine hydrochloride

#### INDICATIONS AND DOSE

##### Mydriasis

###### ► TO THE EYE

- Child: Apply 1 drop, to be administered before procedure, a drop of proxymetacaine topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging
- Adult: Apply 1 drop, to be administered before procedure, then apply 1 drop after 60 minutes if required, a drop of topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging

- **CONTRA-INDICATIONS** 10% strength eye drops in children and the elderly · aneurysms · cardiovascular disease · hypertension · thyrotoxicosis

- **CAUTIONS** Asthma · cerebral arteriosclerosis (in adults) · corneal epithelial damage · darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdosage · diabetes (avoid eye drops in long standing diabetes) · mydriasis can precipitate acute angle-closure glaucoma in a few patients, usually over 60 years and hypermetropic (long-sighted), who are pre-disposed to the condition because of a shallow anterior chamber · ocular hyperaemia · susceptibility to angle-closure glaucoma

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor

- **SIDE-EFFECTS** Arrhythmias · blurred vision · conjunctivitis on prolonged administration · coronary artery spasm · extrasystoles · hyperaemia on prolonged administration · hypertension · local irritation on prolonged administration · myocardial infarction (usually after use of 10% strength in patients with pre-existing cardiovascular disease) · oedema on prolonged administration · palpitation · photophobia · raised intraocular pressure · tachycardia · transient stinging

- **PREGNANCY** Use only if potential benefit outweighs risk.

- **BREAST FEEDING** Use only if potential benefit outweighs risk—no information available.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose phenylephrine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### PATIENT AND CARER ADVICE

##### Driving and skilled tasks

Patients should be warned not to undertake skilled tasks (e.g. driving) until vision clears after mydriasis.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Disodium edetate, sodium metabisulfite

##### ► Phenylephrine hydrochloride (Bausch & Lomb UK Ltd)

**Phenylephrine hydrochloride 25 mg per 1 ml** Minims phenylephrine hydrochloride 2.5% eye drops 0.5ml unit dose | 20 unit dose [P] £11.41

**Phenylephrine hydrochloride 100 mg per 1 ml** Minims phenylephrine hydrochloride 10% eye drops 0.5ml unit dose | 20 unit dose [P] £11.41

### Phenylephrine with tropicamide

The properties listed below are those particular to the combination only. For the properties of the components please consider, phenylephrine hydrochloride above, tropicamide p. 1074.

#### INDICATIONS AND DOSE

##### Pre-operative mydriasis | Diagnostic procedures when monotherapy insufficient

###### ► TO THE EYE

- Adult: One insert to be applied into the lower conjunctival sac up to max. 2 hours before procedure; remove insert within 30 minutes of satisfactory mydriasis, and within 2 hours of application

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor, tropicamide

- **DIRECTIONS FOR ADMINISTRATION** Patients with severe dry eyes may require a drop of saline to improve insert tolerance.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ophthalmic insert

##### ► Mydriaset (Thea Pharmaceuticals Ltd)

**Tropicamide 28 mg, Phenylephrine hydrochloride 5.4 mg** Mydriaset 5.4mg / 0.28mg ophthalmic inserts | 20 insert [PoM] £84.00

## 4.1 Post-operative pain and inflammation

### Eye, surgical and peri-operative drug use

#### Ocular peri-operative drugs

Drugs used to prepare the eye for surgery, drugs that are injected into the anterior chamber at the time of surgery, and those used after eye surgery, are included here.

Cefuroxime p. 498, administered by intra-ocular injection into the anterior chamber of the eye (intracameral use), is used for the prophylaxis of endophthalmitis after cataract surgery.

Non-steroidal anti-inflammatory eye drops such as diclofenac sodium p. 1077, flurbiprofen p. 1077, ketorolac trometamol p. 1077, and nepafenac p. 1061, are used for the prophylaxis and treatment of inflammation, pain, and other symptoms associated with ocular surgery or laser treatment of the eye. Bromfenac p. 1076 is used for the treatment of postoperative inflammation following cataract surgery. Diclofenac sodium and flurbiprofen are also used to prevent miosis during ocular surgery.

Apraclonidine, p. 1086, an  $\alpha_1$ -adrenoreceptor agonist, reduces intra-ocular pressure possibly by reducing the

production of aqueous humour. It is used to control increases in intra-ocular pressure associated with ocular surgery and as short-term treatment to reduce intraocular pressure prior to surgery.

Acetylcholine chloride p. 1074, administered into the anterior chamber of the eye during surgery, rapidly produces miosis which lasts approximately 20 minutes. If prolonged miosis is required, it can be applied again.

Intra-ocular sodium hyaluronate p. 1068 and balanced salt solution are used during surgical procedures on the eye.

Povidone-iodine p. 1074 is used for peri-ocular and conjunctival antisepsis before ocular surgery to support postoperative infection control.

## Local anaesthetics

Oxybuprocaine hydrochloride below and tetracaine below are widely used topical local anaesthetics. Proxymetacaine hydrochloride below causes less initial stinging and is useful for children. Oxybuprocaine hydrochloride or a combined preparation of lidocaine hydrochloride and fluorescein sodium p. 1074 is used for tonometry. Tetracaine produces a more profound anaesthesia and is suitable for use before minor surgical procedures, such as the removal of corneal sutures. It has a temporary disruptive effect on the corneal epithelium. Lidocaine hydrochloride, with or without adrenaline/epinephrine p. 216, is injected into the eyelids for minor surgery. Local anaesthetics should never be used for the management of ocular symptoms.

## ANAESTHETICS, LOCAL

### Oxybuprocaine hydrochloride (Benoxinate hydrochloride)

#### ● INDICATIONS AND DOSE

##### Local anaesthetic

- ▶ TO THE EYE
- ▶ Adult: Apply as required

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose oxybuprocaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

- ▶ **Oxybuprocaine hydrochloride** (Bausch & Lomb UK Ltd)  
**Oxybuprocaine hydrochloride 4 mg per 1 ml** Minims oxybuprocaine hydrochloride 0.4% eye drops 0.5ml unit dose | 20 unit dose [PoM] £10.15

### Proxymetacaine hydrochloride

#### ● INDICATIONS AND DOSE

##### Local anaesthetic

- ▶ TO THE EYE
- ▶ Adult: Apply as required

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose proxymetacaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

- ▶ **Proxymetacaine** (Bausch & Lomb UK Ltd)  
**Proxymetacaine hydrochloride 5 mg per 1 ml** Minims proxymetacaine 0.5% eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.54

## Tetracaine

### (Amethocaine)

#### ● INDICATIONS AND DOSE

##### Local anaesthetic

- ▶ TO THE EYE
- ▶ Adult: Apply as required

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose tetracaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

- ▶ **Tetracaine (Non-proprietary)**  
**Tetracaine hydrochloride 5 mg per 1 ml** Minims tetracaine hydrochloride 0.5% eye drops 0.5ml unit dose | 20 unit dose [PoM] £10.16
- Tetracaine hydrochloride 10 mg per 1 ml** Minims tetracaine hydrochloride 1% eye drops 0.5ml unit dose | 20 unit dose [PoM] £10.16

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

## Bromfenac

#### ● INDICATIONS AND DOSE

##### Postoperative inflammation following cataract surgery

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, sulfites

- ▶ **Bromfenac (Non-proprietary)**  
**Bromfenac (as Bromfenac sodium sesquihydrate)**  
**900 microgram per 1 ml** Bromfenac 900micrograms/ml eye drops | 5 ml [PoM] no price available
- ▶ **Yellox** (Bausch & Lomb UK Ltd)  
**Bromfenac (as Bromfenac sodium sesquihydrate)**  
**900 microgram per 1 ml** Yellox 900micrograms/ml eye drops | 5 ml [PoM] £8.50

## Diclofenac sodium

### ● INDICATIONS AND DOSE

**Inhibition of intra-operative miosis during cataract surgery (but does not possess intrinsic mydriatic properties) | Postoperative inflammation in cataract surgery, strabismus surgery or argon laser trabeculoplasty | Pain in corneal epithelial defects after photorefractive keratectomy, radial keratotomy or accidental trauma | Seasonal allergic conjunctivitis**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

### ● INTERACTIONS → Appendix 1: NSAIDs

### ● ALLERGY AND CROSS-SENSITIVITY

Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

### ● PRESCRIBING AND DISPENSING INFORMATION

Although multi-dose diclofenac sodium eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, propylene glycol

#### ▶ Voltarol Ophtha (Thea Pharmaceuticals Ltd)

Diclofenac sodium 1 mg per 1 ml Voltarol Ophtha 0.1% eye drops 0.3ml unit dose | 5 unit dose [PoM] £4.00 | 40 unit dose [PoM] £32.00

#### ▶ Voltarol Ophtha Multidose (Thea Pharmaceuticals Ltd)

Diclofenac sodium 1 mg per 1 ml Voltarol Ophtha Multidose 0.1% eye drops | 5 ml [PoM] £6.68

## Flurbiprofen

### ● INDICATIONS AND DOSE

**Inhibition of intra-operative miosis (but does not possess intrinsic mydriatic properties) | Control of anterior segment inflammation following postoperative and post-laser trabeculoplasty when corticosteroids contra-indicated**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

### ● INTERACTIONS → Appendix 1: NSAIDs

### ● ALLERGY AND CROSS-SENSITIVITY

Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

#### ▶ Ocufen (Allergan Ltd)

Flurbiprofen sodium 300 microgram per 1 ml Ocufen 0.03% eye drops 0.4ml unit dose | 40 unit dose [PoM] £37.15

## Ketorolac trometamol

### ● INDICATIONS AND DOSE

**Prophylaxis and reduction of inflammation and associated symptoms following ocular surgery**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

### ● INTERACTIONS → Appendix 1: NSAIDs

### ● ALLERGY AND CROSS-SENSITIVITY

Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### ▶ Acular (Allergan Ltd)

Ketorolac trometamol 5 mg per 1 ml Acular 0.5% eye drops | 5 ml [PoM] £3.00 DT price = £3.00

## CORTICOSTEROIDS

### Loteprednol etabonate

### ● INDICATIONS AND DOSE

**Treatment of post-operative inflammation following ocular surgery**

- ▶ TO THE EYE
- ▶ Adult: Apply 4 times a day for maximum duration of treatment of 14 days, to be started 24 hours after surgery

### ● SIDE-EFFECTS

Corneal thinning · scleral thinning

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### ▶ Lotemax (Bausch & Lomb UK Ltd)

Loteprednol etabonate 5 mg per 1 ml Lotemax 0.5% eye drops | 5 ml [PoM] £5.50 DT price = £5.50

## 5 Glaucoma and ocular hypertension

### Glaucoma

#### Overview

Glaucoma describes a group of disorders characterised by a loss of visual field associated with cupping of the optic disc and optic nerve damage. While glaucoma is generally associated with raised intra-ocular pressure, it can occur when the intra-ocular pressure is within the normal range.

The most common form of glaucoma is primary open-angle glaucoma (chronic open-angle glaucoma), where drainage of the aqueous humour through the trabecular meshwork is restricted. The condition is often asymptomatic, but the patient may present with significant loss of visual-field. Patients with ocular hypertension are at high risk of developing primary open-angle glaucoma.

Drugs that reduce intra-ocular pressure by different mechanisms are available for managing ocular hypertension and glaucoma. A topical beta-blocker or a prostaglandin analogue is usually the drug of first choice for the treatment of ocular hypertension. A prostaglandin analogue should be used to manage patients with early or moderate primary open-angle glaucoma. After checking compliance and eye drop instillation technique, it may be necessary to combine these drugs or add others, such as sympathomimetics, carbonic anhydrase inhibitors, or miotics to control intra-ocular pressure.

### Acute angle-closure glaucoma

Acute angle-closure glaucoma occurs when the outflow of aqueous humour from the eye is obstructed by bowing of the iris against the trabecular meshwork; it is a medical emergency that requires urgent reduction of intra-ocular pressure to prevent loss of vision. Patients with acute angle-closure glaucoma should be referred immediately for specialist ophthalmology assessment and treatment.

Standard antiglaucoma therapy is used if supplementary treatment is required after iridotomy, iridectomy, laser treatment, or drainage surgery in either primary open-angle or acute angle-closure glaucoma.

### Beta-blockers

Topical application of a beta-blocker to the eye reduces intra-ocular pressure effectively in *primary open-angle glaucoma*, probably by reducing the rate of production of aqueous humour. Administration by mouth also reduces intra-ocular pressure but this route is not used since side-effects may be troublesome.

Beta-blockers used as eye drops include betaxolol p. 1079, carteolol hydrochloride below, levobunolol hydrochloride below, and timolol maleate p. 1079.

### Prostaglandin analogues and prostamides

The prostaglandin analogues latanoprost p. 1083, tafluprost p. 1084 and travoprost p. 1085, and the synthetic prostamide, bimatoprost p. 1082, increase uveoscleral outflow and subsequently reduce intra-ocular pressure. They are used to reduce intra-ocular pressure in ocular hypertension or open-angle glaucoma.

### Sympathomimetics

Brimonidine tartrate, a selective  $\alpha_2$ -adrenoceptor agonist, is thought to lower intra-ocular pressure by reducing aqueous humour formation and increasing uveoscleral outflow. It is licensed for the reduction of intra-ocular pressure in open-angle glaucoma or ocular hypertension in patients for whom beta-blockers are inappropriate; it may also be used as adjunctive therapy when intra-ocular pressure is inadequately controlled by other anti-glaucoma therapy.

Apraclonidine p. 1086 is another  $\alpha_2$ -adrenoceptor agonist that lowers intra-ocular pressure by reducing aqueous humour formation. Eye drops containing apraclonidine 0.5% are used short-term to delay laser treatment or surgery in patients with glaucoma not adequately controlled by another drug; eye drops containing 1% are used for control of intra-ocular pressure after anterior segment laser surgery. Apraclonidine may not provide additional benefit in patients already using two drugs that suppress the production of aqueous humour.

### Carbonic anhydrase inhibitors and systemic drugs

The **carbonic anhydrase inhibitors**, acetazolamide p. 1080, brinzolamide p. 1080, and dorzolamide p. 1081, reduce intra-ocular pressure by reducing aqueous humour production. Systemic use of acetazolamide also produces weak diuresis.

Acetazolamide is given by mouth or by intravenous injection (intramuscular injections are painful because of the alkaline pH of the solution). It is used as an adjunct to other treatment for reducing intra-ocular pressure. Acetazolamide is not generally recommended for long-term use.

Dorzolamide and brinzolamide are topical carbonic anhydrase inhibitors. They are licensed for use in patients resistant to beta-blockers or those in whom beta-blockers are contra-indicated. They are used alone or as an adjunct to a topical beta-blocker. Brinzolamide can also be used as an adjunct to a prostaglandin analogue or the  $\alpha_2$ -adrenoceptor agonist, brimonidine tartrate p. 1086. Systemic absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.

The **osmotic diuretics**, intravenous hypertonic mannitol p. 222 or glycerol p. 61 by mouth are useful short-term ocular hypotensive drugs.

### Miotics

Miotics act by opening the inefficient drainage channels in the trabecular meshwork.

Pilocarpine p. 1082, a miotic, is not commonly used for the treatment of primary open-angle glaucoma because side-effects are poorly tolerated. It is used mainly in the treatment of primary angle-closure glaucoma and in some secondary glaucomas.

## BETA-ADRENOCEPTOR BLOCKERS > NON-SELECTIVE

### Carteolol hydrochloride

#### • INDICATIONS AND DOSE

##### Primary open-angle glaucoma

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

- **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block

- **CAUTIONS** Patients with corneal disease

#### CAUTIONS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider cautions listed for systemically administered beta blockers.

- **INTERACTIONS** → Appendix 1: beta blockers (non-selective)

- **SIDE-EFFECTS** Anaphylaxis - blepharoconjunctivitis - burning - corneal disorders - dry eyes - erythema - itching - ocular stinging - pain

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Teoptic** (Thea Pharmaceuticals Ltd)

**Carteolol hydrochloride 10 mg per 1 ml** Teoptic 1% eye drops | 5 ml [PoM] £7.60 DT price = £7.60

**Carteolol hydrochloride 20 mg per 1 ml** Teoptic 2% eye drops | 5 ml [PoM] £8.40 DT price = £8.40

### Levobunolol hydrochloride

#### • INDICATIONS AND DOSE

##### Primary open-angle glaucoma

- ▶ TO THE EYE
- ▶ Adult: Apply 1–2 times a day

- **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers - bradycardia - heart block

- **CAUTIONS** Patients with corneal disease

#### CAUTIONS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider cautions listed for systemically administered beta blockers.

- **INTERACTIONS** → Appendix 1: beta blockers (non-selective)

- **SIDE-EFFECTS** Anaphylaxis · anterior uveitis · blepharoconjunctivitis · burning · corneal disorders · dry eyes · erythema · itching · ocular stinging · pain

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose (Levobunolol) eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, sodium metabisulfite

- ▶ **Betagan** (Allergan Ltd)

Levobunolol hydrochloride 5 mg per 1 ml Betagan 0.5% eye drops | 5 ml [PoM] £1.85 DT price = £1.85  
Betagan Unit Dose 0.5% eye drops 0.4ml unit dose | 30 unit dose [PoM] £9.98

## Timolol maleate

#### INDICATIONS AND DOSE

**Reduction of intra-ocular pressure in primary open-angle glaucoma**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

##### TIMOPTOL-LA®

**Reduction of intra-ocular pressure in primary open-angle glaucoma**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily

##### TIOPEX®

**Reduction of intra-ocular pressure in primary open-angle glaucoma**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily, to be applied in the morning

- **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers · bradycardia · heart block

- **CAUTIONS** Consider also cautions listed for systemically administered beta blockers · patients with corneal disease

- **INTERACTIONS** → Appendix 1: beta blockers (non-selective)

- **SIDE-EFFECTS** Anaphylaxis · blepharoconjunctivitis · burning · corneal disorders · dry eyes · erythema · itching · ocular stinging · pain

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

- **BREAST FEEDING** Manufacturer advises avoidance.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **NATIONAL FUNDING/ACCESS DECISIONS**

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (February 2014) that timolol gel eye drops (*Tiopex*®) are accepted for restricted use within NHS Scotland for the reduction of elevated intraocular pressure in patients with ocular hypertension or chronic open angle glaucoma who have proven sensitivity to preservatives.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

##### Eye gel

EXCIPIENTS: May contain Benzododecinium bromide

- ▶ **Timoptol-LA** (Santen UK Ltd)

Timolol (as Timolol maleate) 2.5 mg per 1 ml Timoptol-LA 0.25% ophthalmic gel-forming solution | 2.5 ml [PoM] £3.12 DT price = £3.12  
Timolol (as Timolol maleate) 5 mg per 1 ml Timoptol-LA 0.5% ophthalmic gel-forming solution | 2.5 ml [PoM] £3.12 DT price = £3.12

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Timolol maleate (Non-proprietary)**

Timolol (as Timolol maleate) 2.5 mg per 1 ml Timolol 0.25% eye drops | 5 ml [PoM] £1.76 DT price = £1.43

Timolol (as Timolol maleate) 5 mg per 1 ml Timolol 0.5% eye drops | 5 ml [PoM] £1.95 DT price = £1.25

- ▶ **Timoptol** (Santen UK Ltd)

Timolol (as Timolol maleate) 2.5 mg per 1 ml Timoptol 0.25% eye drops | 5 ml [PoM] £3.12 DT price = £1.43

Timoptol Unit Dose 0.25% ophthalmic solution 0.2ml unit dose | 30 unit dose [PoM] £8.45 DT price = £8.45

Timolol (as Timolol maleate) 5 mg per 1 ml Timoptol 0.5% eye drops | 5 ml [PoM] £3.12 DT price = £1.25

Timoptol Unit Dose 0.5% ophthalmic solution 0.2ml unit dose | 30 unit dose [PoM] £9.65 DT price = £9.65

- ▶ **Tiopex** (Thea Pharmaceuticals Ltd)

Timolol (as Timolol maleate) 1 mg per 1 gram Tiopex 1mg/g eye gel 0.4g unit dose | 30 unit dose [PoM] £7.49 DT price = £7.49

Combinations available: *Bimatoprost with timolol*, p. 1083 · *Brimonidine with timolol*, p. 1087 · *Brinzolamide with timolol*, p. 1081 · *Dorzolamide with timolol*, p. 1082 · *Latanoprost with timolol*, p. 1084 · *Tafuprost with timolol*, p. 1085 · *Travoprost with timolol*, p. 1086

## BETA-ADRENOCEPTOR BLOCKERS > SELECTIVE

### Betaxolol

#### INDICATIONS AND DOSE

**Primary open-angle glaucoma**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

- **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers · bradycardia · heart block

- **CAUTIONS** Patients with corneal disease

#### CAUTIONS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider cautions listed for systemically administered beta blockers.

- **INTERACTIONS** → Appendix 1: beta blockers (selective)

- **SIDE-EFFECTS** Anaphylaxis · blepharoconjunctivitis · burning · corneal disorders · dry eyes · erythema · itching · ocular stinging · pain

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose betaxolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### ► Betaxolol (Non-proprietary)

**Betaxolol (as Betaxolol hydrochloride) 2.5 mg per 1 ml** Betaxolol 0.25% eye drops 0.25ml unit dose preservative free | 50 unit dose [PoM] no price available

**Betaxolol (as Betaxolol hydrochloride) 5 mg per 1 ml** Betaxolol 0.5% eye drops | 5 ml [PoM] £1.90 DT price = £1.90

#### ► Betoptic (Alcon Laboratories (UK) Ltd)

**Betaxolol (as Betaxolol hydrochloride) 2.5 mg per 1 ml** Betoptic 0.25% suspension eye drops | 5 ml [PoM] £2.66 DT price = £2.66  
**Betaxolol (as Betaxolol hydrochloride) 0.25% eye drops suspension 0.25ml unit dose** | 50 unit dose [PoM] £13.77

**Betaxolol (as Betaxolol hydrochloride) 5 mg per 1 ml** Betoptic 0.5% eye drops | 5 ml [PoM] £1.90 DT price = £1.90

## CARBONIC ANHYDRASE INHIBITORS

### Acetazolamide

#### ● INDICATIONS AND DOSE

**Reduction of intra-ocular pressure in open-angle glaucoma | Reduction of intra-ocular pressure in secondary glaucoma | Reduction of intra-ocular pressure perioperatively in angle-closure glaucoma**

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES, OR BY INTRAVENOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

► Adult: 0.25–1 g daily in divided doses, intramuscular injection preferably avoided because of alkalinity

#### Glaucoma

► BY MOUTH USING MODIFIED-RELEASE MEDICINES

► Adult: 250–500 mg daily

#### Epilepsy

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES, OR BY INTRAVENOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

► Adult: 0.25–1 g daily in divided doses, intramuscular injection preferably avoided because of alkalinity

● **CONTRA-INDICATIONS** Adrenocortical insufficiency · hyperchloraemic acidosis · hypokalaemia · hyponatraemia · long-term administration in chronic angle-closure glaucoma

● **CAUTIONS** Avoid extravasation at injection site (risk of necrosis) · diabetes mellitus · elderly · impaired alveolar ventilation (risk of acidosis) · not generally recommended for long-term use · pulmonary obstruction (risk of acidosis) · renal calculi

● **INTERACTIONS** → Appendix 1: acetazolamide

#### ● SIDE-EFFECTS

► **Common or very common** Ataxia · depression · diarrhoea · dizziness · excitement · fatigue · flushing · headache · irritability · loss of appetite · nausea · paraesthesia · polyuria · reduced libido · taste disturbance · thirst · vomiting

► **Uncommon** Blood disorders · bone marrow suppression · confusion · crystalluria · drowsiness · electrolyte disturbances on long-term therapy · fever · glycosuria · haematuria · hearing disturbances · melaena · metabolic acidosis · rash · renal calculi · renal colic · renal failure · renal lesions · Stevens-Johnson syndrome · toxic epidermal necrosis · ureteric colic

► **Rare** Cholestatic jaundice · convulsions · flaccid paralysis · fulminant hepatic necrosis · hepatitis · photosensitivity

► **Frequency not known** Transient myopia

#### SIDE-EFFECTS, FURTHER INFORMATION

Acetazolamide is a sulfonamide derivative; blood disorders, rashes, and other sulfonamide-related side-effects occur occasionally—patients should be told to report any unusual skin rash.

If electrolyte disturbances and metabolic acidosis occur, these can be corrected by administering potassium bicarbonate (as effervescent potassium tablets).

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of sulfonamide hypersensitivity.

● **PREGNANCY** Manufacturer advises avoid, especially in first trimester (toxicity in *animal* studies).

● **BREAST FEEDING** Amount too small to be harmful.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid.

● **RENAL IMPAIRMENT** Avoid—risk of metabolic acidosis.

● **MONITORING REQUIREMENTS** Monitor blood count and plasma electrolyte concentrations with prolonged use.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Tablet

CAUTIONARY AND ADVISORY LABELS 3

#### ► Acetazolamide (Non-proprietary)

**Acetazolamide 250 mg** Acetazolamide 250mg tablets | 112 tablet [PoM] £75.36 DT price = £28.20

#### Powder for solution for injection

##### ► Diamox (AMCo)

**Acetazolamide 500 mg** Diamox Sodium Parenteral 500mg powder for solution for injection vials | 1 vial [PoM] £14.76

#### Modified-release capsule

CAUTIONARY AND ADVISORY LABELS 3, 25

##### ► Diamox SR (AMCo)

**Acetazolamide 250 mg** Diamox SR 250mg capsules | 30 capsule [PoM] £16.66 DT price = £16.66

##### ► Eytazox (Teva UK Ltd)

**Acetazolamide 250 mg** Eytazox 250mg modified-release capsules | 30 capsule [PoM] £16.60 DT price = £16.66

## Brinzolamide

#### ● INDICATIONS AND DOSE

**Reduction of intra-ocular pressure in ocular hypertension and open-angle glaucoma either as adjunct to beta-blockers or prostaglandin analogues or used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated**

► TO THE EYE

► Adult: Apply twice daily, then increased if necessary up to 3 times a day

● **CONTRA-INDICATIONS** Hyperchloraemic acidosis

● **CAUTIONS** Renal tubular immaturity or abnormality · systemic absorption follows topical application

● **INTERACTIONS** → Appendix 1: brinzolamide

#### ● SIDE-EFFECTS

► **Common or very common** Corneal erosion · corneal oedema · dry mouth · headache · ocular disturbances · photophobia · reduced visual acuity · taste disturbances

► **Uncommon** Alopecia · amnesia · bradycardia · chest pain · cough · decreased libido · depression · diarrhoea · dizziness · drowsiness · dyspepsia · dyspnoea · epistaxis · erectile dysfunction · flatulence · malaise · nasal dryness · nausea · nervousness · oesophagitis · oral hypoaesthesia and paraesthesia · palpitation · paraesthesia · pharyngitis · renal pain · sinusitis · sleep disturbances · throat irritation · tinnitus · upper respiratory tract congestion · vomiting

► **Frequency not known** Arrhythmia · asthma · dermatitis · erythema · hypertension · peripheral oedema · rhinitis · tachycardia · tremor · vertigo

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of sulfonamide hypersensitivity.

- **PREGNANCY** Avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Use only if benefit outweighs risk.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ▶ Brinzolamide (Non-proprietary)

Brinzolamide 10 mg per 1 mL Brinzolamide 10mg/mL eye drops | 5 mL [PoM] £6.92 DT price = £2.11

##### ▶ Azopt (Alcon Laboratories (UK) Ltd)

Brinzolamide 10 mg per 1 mL Azopt 10mg/mL eye drops | 5 mL [PoM] £6.92 DT price = £2.11

## Brinzolamide with brimonidine

27-Sep-2016

The properties listed below are those particular to the combination only. For the properties of the components please consider, brinzolamide p. 1080, brimonidine tartrate p. 1086.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma and in ocular hypertension when monotherapy is inadequate**

- ▶ TO THE EYE
- ▶ Adult: Apply 1 drop twice daily

#### ● SIDE-EFFECTS

- ▶ Common or very common Somnolence
- ▶ Uncommon Dermatitis · dry throat · hypotension · vertigo

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

CAUTIONARY AND ADVISORY LABELS 3

EXCIPIENTS: May contain Benzalkonium chloride, propylene glycol

##### ▶ Simbrinza (Alcon Laboratories (UK) Ltd)

Brimonidine tartrate 2 mg per 1 mL, Brinzolamide 10 mg per 1 mL Simbrinza 10mg/mL / 2mg/mL eye drops | 5 mL [PoM] £9.23 DT price = £9.23

## Brinzolamide with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, brinzolamide p. 1080, timolol maleate p. 1079.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma or ocular hypertension when beta-blocker alone not adequate**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ▶ Azarga (Alcon Laboratories (UK) Ltd)

Timolol (as Timolol maleate) 5 mg per 1 mL, Brinzolamide 10 mg per 1 mL Azarga 10mg/mL / 5mg/mL eye drops | 5 mL [PoM] £11.05 DT price = £11.05

## Dorzolamide

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in ocular hypertension used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated | Open-angle glaucoma used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated | Pseudo-exfoliative glaucoma used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated**

- ▶ TO THE EYE
- ▶ Adult: Apply 3 times a day

**Raised intra-ocular pressure in ocular hypertension as adjunct to beta-blocker | Open-angle glaucoma as adjunct to beta-blocker | Pseudo-exfoliative glaucoma as adjunct to beta-blocker**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

- **CONTRA-INDICATIONS** Hyperchloraemic acidosis
- **CAUTIONS** Chronic corneal defects · history of intra-ocular surgery · history of renal calculi · low endothelial cell count · systemic absorption follows topical application
- **INTERACTIONS** → Appendix 1: dorzolamide
- **SIDE-EFFECTS**
  - ▶ Common or very common Asthenia · bitter taste · blurred vision · conjunctivitis · eyelid inflammation · headache · lacrimation · nausea · ocular irritation · superficial punctate keratitis
  - ▶ Uncommon Iridocyclitis
  - ▶ Rare Contact dermatitis · corneal oedema · dizziness · dry mouth · epistaxis · eyelid crusting · paraesthesia · Stevens-Johnson syndrome · throat irritation · toxic epidermal necrolysis · transient myopia · urolithiasis

#### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of sulfonamide hypersensitivity.
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.
- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose dorzolamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ▶ Dorzolamide (Non-proprietary)

Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 mL Dorzolamide 2% eye drops | 5 mL [PoM] £6.33 DT price = £1.90

##### ▶ Trusopt (Santen UK Ltd)

Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 mL Trusopt 2% eye drops | 5 mL [PoM] £6.33 DT price = £1.90  
Trusopt 2% eye drops 0.2mL unit dose preservative free | 60 unit dose [PoM] £24.18 DT price = £24.18

## Dorzolamide with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, dorzolamide p. 1081, timolol maleate p. 1079.

### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in ocular hypertension when beta-blockers alone not adequate | Raised intra-ocular pressure in open-angle glaucoma when beta-blockers alone not adequate | Raised intra-ocular pressure in pseudo-exfoliative glaucoma when beta-blockers alone not adequate**

► TO THE EYE

► Adult: Apply twice daily

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose dorzolamide with timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ► Dorzolamide with timolol (Non-proprietary)

**Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml** Dorzolamide 2% / Timolol 0.5% eye drops | 5 ml [PoM] £27.16 DT price = £1.81  
Dorzolamide 2% / Timolol 0.5% eye drops 0.2ml unit dose preservative free | 60 unit dose [PoM] £28.59 DT price = £28.59

#### ► Cosopt (Santen UK Ltd)

**Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml** Cosopt eye drops 0.2ml unit dose preservative free | 60 unit dose [PoM] £28.59 DT price = £28.59

Cosopt eye drops | 5 ml [PoM] £10.05 DT price = £1.81

## MIOTICS > PARASYMPATHOMIMETICS

### Pilocarpine

- **DRUG ACTION** Pilocarpine acts by opening the inefficient drainage channels in the trabecular meshwork.

### ● INDICATIONS AND DOSE

**Primary angle-closure glaucoma | Some secondary glaucomas**

► TO THE EYE

► Adult: Apply up to 4 times a day

- **CONTRA-INDICATIONS** Acute inflammatory disease of the anterior segment · acute iritis · anterior uveitis · conditions where pupillary constriction is undesirable · some forms of secondary glaucoma (where pupillary constriction is undesirable)
- **CAUTIONS** A darkly pigmented iris may require a higher concentration of the miotic or more frequent administration and care should be taken to avoid overdosage · asthma · cardiac disease · care in conjunctival damage · care in corneal damage · epilepsy · gastro-intestinal spasm · hypertension · hyperthyroidism · hypotension · marked vasomotor instability · Parkinson's disease · peptic ulceration · retinal detachment has occurred in susceptible individuals and those with retinal disease · urinary-tract obstruction
- **INTERACTIONS** → Appendix 1: pilocarpine

### ● SIDE-EFFECTS

- **Rare** Parasympathomimetics systemic side effects
- **Frequency not known** Blurred vision · ciliary spasm (leads to headache and browache which may be more severe in the initial 2–4 weeks of treatment—a particular disadvantage in patients under 40 years of age) · conjunctival vascular congestion · lens changes (with chronic use) · myopia · ocular burning · ocular itching · pupillary block · smarting · vitreous haemorrhage
- **PREGNANCY** Avoid unless the potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Avoid unless the potential benefit outweighs risk—no information available.
- **PRE-TREATMENT SCREENING** Fundus examination is advised before starting treatment with a miotic (retinal detachment has occurred).
- **MONITORING REQUIREMENTS** Intra-ocular pressure and visual fields should be monitored in those with chronic simple glaucoma and those receiving long-term treatment with a miotic.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose pilocarpine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks**  
Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ► Pilocarpine (Non-proprietary)

**Pilocarpine hydrochloride 10 mg per 1 ml** Pilocarpine hydrochloride 1% eye drops | 10 ml [PoM] £16.10 DT price = £13.44

**Pilocarpine hydrochloride 20 mg per 1 ml** Pilocarpine hydrochloride 2% eye drops | 10 ml [PoM] £19.71 DT price = £16.48

**Pilocarpine hydrochloride 40 mg per 1 ml** Pilocarpine hydrochloride 4% eye drops | 10 ml [PoM] £21.99 DT price = £18.35

#### ► Pilocarpine nitrate (Bausch & Lomb UK Ltd)

**Pilocarpine nitrate 20 mg per 1 ml** Minims pilocarpine nitrate 2% eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.99

## PROSTAGLANDIN ANALOGUES AND PROSTAMIDES

### Bimatoprost

### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

► TO THE EYE

► Adult: Apply once daily, to be administered preferably in the evening

- **CAUTIONS** Angle-closure glaucoma (no experience of use) · aphakia · asthma · chronic obstructive pulmonary disease · compromised respiratory function · congenital glaucoma (no experience of use) · contact lens wearers · history of significant ocular viral infections · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · predisposition to bradycardia · predisposition to hypotension · pseudophakia with torn posterior lens capsule or anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis

## • SIDE-EFFECTS

- **Common or very common** Blepharitis · blood pressure changes · brown pigmentation particularly in those with mixed-colour irides · conjunctival disorders · corneal erosion · darkening, thickening and lengthening of eye lashes · eyelash and vellus hair changes · headache · ocular discomfort · photophobia · pigmentation of periocular skin · punctate keratitis · reduced visual acuity · transient punctate epithelial erosion
- **Uncommon** Asthenopia · dizziness · skin rash
- **Rare** Arthralgia · darkening of palpebral skin · facial oedema · iritis · macular oedema · myalgia · uveitis
- **Very rare** Chest pain · exacerbation of angina · palpitation · periorbital changes resulting in deepening of the eyelid sulcus
- **Frequency not known** Asthma · blepharospasm · bradycardia · dyspnoea · exacerbation of asthma · exacerbation of COPD · eyelid retraction · malaise · nausea · ocular infection · reactivation of previous corneal infiltrates · retinal haemorrhage

• **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.

• **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

• **HEPATIC IMPAIRMENT** Use with caution in moderate to severe impairment—no information available.

• **RENAL IMPAIRMENT** Use with caution—no information available.

• **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose bimatoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

## • PATIENT AND CARER ADVICE

Changes to eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

## • NATIONAL FUNDING/ACCESS DECISIONS

### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (March 2013) that bimatoprost 300 micrograms/mL preservative-free eye drops (*Lumigan*® single-dose eye drops) are accepted for restricted use within NHS Scotland for the reduction of elevated intra-ocular pressure in chronic open-angle glaucoma and ocular hypertension (as monotherapy or as adjunctive therapy to beta-blockers) in adults who have proven sensitivity to benzalkonium chloride.

## • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ► *Lumigan* (Allergan Ltd)

**Bimatoprost 100 microgram per 1 ml** *Lumigan* 100micrograms/ml eye drops | 3 ml [PoM] £11.71 DT price = £11.71 | 9 ml [PoM] £35.13

**Bimatoprost 300 microgram per 1 ml** *Lumigan* 300micrograms/ml eye drops 0.4ml unit dose | 30 unit dose [PoM] £13.75 DT price = £13.75

## Bimatoprost with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, bimatoprost p. 1082, timolol maleate p. 1079.

## • INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

- TO THE EYE
- Adult: Apply once daily

## • NATIONAL FUNDING/ACCESS DECISIONS

### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (October 2013) that *Ganfort*® unit dose eye drops are accepted for restricted use within NHS Scotland for the reduction of intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension insufficiently responsive to topical beta-blockers or prostaglandin analogues who have proven sensitivity to preservatives.

## • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ► *Ganfort* (Allergan Ltd)

**Bimatoprost 300 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** *Ganfort* 0.3mg/ml / 5mg/ml eye drops | 3 ml [PoM] £13.95 DT price = £13.95 | 9 ml [PoM] £37.59  
*Ganfort* 0.3mg/ml / 5mg/ml eye drops 0.4ml unit dose | 30 unit dose [PoM] £17.50

## Latanoprost

## • INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

- TO THE EYE
- Adult: Apply once daily, to be administered preferably in the evening

## IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: LATANOPROST (XALATAN®): INCREASED REPORTING OF EYE IRRITATION SINCE REFORMULATION (JULY 2015)**

Following reformulation of *Xalatan*®, to allow for long-term storage at room temperature, there has been an increase in the number of reports of eye irritation from across the EU. Patients should be advised to tell their health professional promptly (within a week) if they experience eye irritation (e.g. excessive watering) severe enough to make them consider stopping treatment. Review treatment and prescribe a different formulation if necessary.

• **CONTRA-INDICATIONS** Active herpes simplex keratitis · history of recurrent herpetic keratitis associated with prostaglandin analogues

• **CAUTIONS** Angle-closure glaucoma (no experience of use) · aphakia · asthma · chronic obstructive pulmonary disease · compromised respiratory function · congenital glaucoma (no experience of use) · contact lens wearers · do not use within 5 minutes of thiomersal-containing preparations · history of significant ocular viral infections · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · peri-operative period of cataract surgery · pseudophakia with torn posterior lens capsule or

anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Blepharitis · blood pressure changes · brown pigmentation particularly in those with mixed-colour irides · conjunctival disorders · corneal erosion · darkening, thickening and lengthening of eye lashes · eyelash and vellus hair changes · headache · ocular discomfort · photophobia · pigmentation of periorcular skin · punctate keratitis · reduced visual acuity · transient punctate epithelial erosion
- ▶ **Uncommon** Asthenopia · dizziness · skin rash
- ▶ **Rare** Arthralgia · darkening of palpebral skin · facial oedema · iritis · macular oedema · myalgia · uveitis

- ▶ **Very rare** Chest pain · exacerbation of angina · palpitation · periorbital changes resulting in deepening of the eyelid sulcus

- ▶ **Frequency not known** Asthma · dyspnoea · exacerbation of asthma · exacerbation of COPD · iris cyst · nasopharyngitis · pyrexia

- **PREGNANCY** Manufacturer advises avoid.

- **BREAST FEEDING** May be present in milk—manufacturer advises avoid.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose latanoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● PATIENT AND CARER ADVICE

Changes in eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (June 2013) that *Monopost*<sup>®</sup> is accepted for restricted use within NHS Scotland for the reduction of elevated intra-ocular pressure in patients with open-angle glaucoma and ocular hypertension who have proven sensitivity to benzalkonium chloride.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ▶ Latanoprost (Non-proprietary)

**Latanoprost 50 microgram per 1 ml** Latanoprost 50micrograms/ml eye drops | 2.5 ml [PoM] £12.48 DT price = £1.40

##### ▶ Monopost (Thea Pharmaceuticals Ltd)

**Latanoprost 50 microgram per 1 ml** Monopost 50micrograms/ml eye drops 0.2ml unit dose | 30 unit dose [PoM] £8.49 DT price = £8.49 | 90 unit dose [PoM] £25.47 DT price = £25.47

##### ▶ Xalatan (Pfizer Ltd)

**Latanoprost 50 microgram per 1 ml** Xalatan 50micrograms/ml eye drops | 2.5 ml [PoM] £12.48 DT price = £1.40

## Latanoprost with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, latanoprost p. 1083, timolol maleate p. 1079.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma and ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ▶ Latanoprost with timolol (Non-proprietary)

**Latanoprost 50 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Latanoprost 50micrograms/ml / Timolol 5mg/ml eye drops | 2.5 ml [PoM] £14.32 DT price = £2.07

##### ▶ Xalacom (Pfizer Ltd)

**Latanoprost 50 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Xalacom eye drops | 2.5 ml [PoM] £14.32 DT price = £2.07

## Tafuprost

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily, to be administered preferably in the evening

- **CAUTIONS** Angle-closure glaucoma (no experience of use) · aphakia · asthma · chronic obstructive pulmonary disease · compromised respiratory function · congenital glaucoma (no experience of use) · contact lens wearers · history of significant ocular viral infections · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · pseudophakia with torn posterior lens capsule or anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Blepharitis · blood pressure changes · brown pigmentation particularly in those with mixed-colour irides · conjunctival disorders · corneal erosion · darkening, thickening and lengthening of eye lashes · eyelash and vellus hair changes · headache · ocular discomfort · photophobia · pigmentation of periorcular skin · punctate keratitis · reduced visual acuity · transient punctate epithelial erosion
- ▶ **Uncommon** Asthenopia · dizziness · skin rash
- ▶ **Rare** Arthralgia · darkening of palpebral skin · facial oedema · iritis · macular oedema · myalgia · uveitis
- ▶ **Very rare** Chest pain · exacerbation of angina · palpitation · periorbital changes resulting in deepening of the eyelid sulcus
- ▶ **Frequency not known** Asthma · dyspnoea · exacerbation of asthma · exacerbation of COPD
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Use with caution—no information available.

- **RENAL IMPAIRMENT** Use with caution—no information available.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose tafluprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

#### ● PATIENT AND CARER ADVICE

Changes to eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Disodium edetate

- ▶ **Saflutan** (Santen UK Ltd)

Tafluprost 15 microgram per 1 ml Saflutan 15micrograms/ml eye drops 0.3ml unit dose | 30 unit dose (PoM) £12.20 DT price = £12.20

## Tafluprost with timolol

30-Mar-2016

The properties listed below are those particular to the combination only. For the properties of the components please consider, tafluprost p. 1084, timolol maleate p. 1079.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma and ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

- ▶ TO THE EYE
- ▶ Adult: Apply 1 drop once daily

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Blurred vision · ocular hyperaemia
- ▶ **Uncommon** Anterior chamber inflammation · conjunctivitis

#### ● PATIENT AND CARER ADVICE

##### Driving and skilled tasks

Blurred vision may affect performance of skilled tasks (e.g. driving or operating machinery).

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (September 2015) that *Taptiqom*® (tafluprost with timolol) is accepted for restricted use within NHS Scotland, within the licensed indications, in patients who have proven sensitivity to preservatives.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Disodium edetate

- ▶ **Taptiqom** (Santen UK Ltd)

Tafluprost 15 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml Taptiqom 15micrograms/ml / 5mg/ml eye drops | 30 unit dose (PoM) £14.50

## Travoprost

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily, to be administered preferably in the evening

- **CAUTIONS** History of significant ocular viral infections · angle-closure glaucoma (no experience of use) · aphakia · asthma · chronic obstructive pulmonary disease · compromised respiratory function · congenital glaucoma (no experience of use) · contact lens wearers · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · pseudophakia with torn posterior lens capsule or anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Blepharitis · blood pressure changes · brown pigmentation particularly in those with mixed-colour irides · conjunctival disorders · corneal erosion · darkening, thickening and lengthening of eye lashes · eyelash and vellus hair changes · headache · ocular discomfort · photophobia · pigmentation of periorcular skin · punctate keratitis · reduced visual acuity · transient punctate epithelial erosion
- ▶ **Uncommon** Asthenopia · dizziness · skin rash
- ▶ **Rare** Arthralgia · darkening of palpebral skin · facial oedema · iritis · macular oedema · myalgia · uveitis
- ▶ **Very rare** Chest pain · exacerbation of angina · palpitation · periorbital changes resulting in deepening of the eyelid sulcus
- ▶ **Frequency not known** Asthma · bradycardia · cataract · constipation · cough · dry mouth · dysgeusia · dysphonia · dyspnoea · exacerbation of asthma · exacerbation of COPD · gastro-intestinal disorders · herpes simplex · malaise · mydriasis · nasal congestion · oropharyngeal pain · peptic ulcer reactivation · photopsia · throat irritation · tinnitus · vertigo

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies.

- **BREAST FEEDING** Present in milk in *animal* studies; manufacturer advises avoid.

#### ● PATIENT AND CARER ADVICE

Changes to eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Propylene glycol

- ▶ **Travatan** (Alcon Laboratories (UK) Ltd)

Travoprost 40 microgram per 1 ml Travatan 40micrograms/ml eye drops | 2.5 ml (PoM) £10.95 DT price = £10.95

## Travoprost with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, travoprost p. 1085, timolol maleate p. 1079.

### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

- ▶ TO THE EYE
- ▶ Adult: Apply once daily

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Propylene glycol

- ▶ **DuoTrav** (Alcon Laboratories (UK) Ltd)

Travoprost 40 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml DuoTrav 40micrograms/ml / 5mg/ml eye drops | 2.5 ml [PoM] £13.95 DT price = £13.95 | 7.5 ml [PoM] £39.68

## SYMPATHOMIMETICS > ALPHA<sub>2</sub>-ADRENOCEPTOR AGONISTS

## Apraclonidine

- **DRUG ACTION** Apraclonidine is an alpha<sub>2</sub>-adrenoceptor agonist that lowers intra-ocular pressure by reducing aqueous humour formation. It is a derivative of clonidine.

### ● INDICATIONS AND DOSE

**Control or prevention of postoperative elevation of intra-ocular pressure after anterior segment laser surgery**

- ▶ TO THE EYE
- ▶ Adult: Apply 1 drop, 1 hour before laser procedure, then 1 drop, immediately after completion of procedure, 1% eye drops to be administered

**Short-term adjunctive treatment of chronic glaucoma in patients not adequately controlled by another drug**

- ▶ TO THE EYE
- ▶ Adult: Apply 1 drop 3 times a day usually for maximum 1 month, 0.5% eye drops to be administered, may not provide additional benefit if patient already using two drugs that suppress the production of aqueous humour

- **CONTRA-INDICATIONS** History of severe or unstable and uncontrolled cardiovascular disease
- **CAUTIONS** Cerebrovascular disease · depression · heart failure · history of angina · hypertension · loss of effect may occur over time · Parkinson's syndrome · Raynaud's syndrome · recent myocardial infarction · reduction in vision in end-stage glaucoma (suspend treatment) · severe coronary insufficiency · thromboangiitis obliterans · vasovagal attack
- **INTERACTIONS** → Appendix 1: apraclonidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Conjunctivitis · dry eye · ocular intolerance · rhinitis · taste disturbance
  - ▶ **Uncommon** Asthma · blepharitis · blepharospasm · chest pain · conjunctival vascular disorders · corneal erosion and infiltrates · dyspnoea · eyelid ptosis or retraction · impaired co-ordination · irritability · keratitis · keratopathy · myalgia · mydriasis · nervousness · parosmia · photophobia · rhinorrhoea · throat irritation · visual impairment
- SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ Ocular intolerance Withdraw if eye pruritus, ocular hyperaemia, increased lacrimation, or oedema of the eyelids and conjunctiva occur.
  - ▶ Systemic effects Since absorption may follow topical application, see clonidine hydrochloride p. 139.

- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Use with caution in chronic renal failure.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor intra-ocular pressure and visual fields.
  - ▶ Monitor for excessive reduction in intra-ocular pressure following peri-operative use.
- **PATIENT AND CARER ADVICE**
  - Driving and skilled tasks**
  - Drowsiness may affect performance of skilled tasks (e.g. driving).

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Iopidine** (Alcon Laboratories (UK) Ltd)

Apraclonidine (as Apraclonidine hydrochloride) 5 mg per 1 ml Iopidine 5mg/ml eye drops | 5 ml [PoM] £10.88 DT price = £10.88

Apraclonidine (as Apraclonidine hydrochloride) 10 mg per 1 ml Iopidine 1% eye drops 0.25ml unit dose | 24 unit dose [PoM] £77.85 DT price = £77.85

## Brimonidine tartrate

13-Jan-2017

- **DRUG ACTION** Brimonidine, an alpha<sub>2</sub>-adrenoceptor agonist, is thought to lower intra-ocular pressure by reducing aqueous humour formation and increasing uveoscleral outflow.

### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma in patients for whom beta-blockers are inappropriate | Ocular hypertension in patients for whom beta-blockers are inappropriate | Adjunctive therapy when intra-ocular pressure is inadequately controlled by other antiglaucoma therapy**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

- **CAUTIONS** Cerebral insufficiency · coronary insufficiency · depression · postural hypotension · Raynaud's syndrome · severe cardiovascular disease · thromboangiitis obliterans
- **INTERACTIONS** → Appendix 1: brimonidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Burning sensation at application site · conjunctival blanching · conjunctival disturbances · conjunctival follicles · conjunctival infection · corneal erosion · corneal staining · dizziness · drowsiness · dry mouth · eyelid inflammation · gastro-intestinal disturbances · headache · malaise · ocular disturbances · ocular dryness · ocular hyperaemia · ocular pain · ocular pruritus · photophobia · stinging at application site · taste disturbances · upper respiratory symptoms · visual disturbances
  - ▶ **Uncommon** Arrhythmia · bradycardia · depression · nasal dryness · palpitation · tachycardia
  - ▶ **Rare** Dyspnoea
  - ▶ **Very rare** Hypertension · hypotension · insomnia · iritis · miosis · syncope
- **PREGNANCY** Manufacturer advises use only if benefit outweighs risk—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **PATIENT AND CARER ADVICE**  
Driving and skilled tasks  
Drowsiness may affect performance of skilled tasks (e.g. driving).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ► Brimonidine tartrate (Non-proprietary)

Brimonidine tartrate 2 mg per 1 ml | 5 ml [PoM] £6.85 DT price = £1.66

##### ► Alphagan (Allergan Ltd)

Brimonidine tartrate 2 mg per 1 ml | Alphagan 0.2% eye drops | 5 ml [PoM] £6.85 DT price = £1.66

##### ► Brymont (Blumont Pharma Ltd)

Brimonidine tartrate 2 mg per 1 ml | Brymont 2mg/ml eye drops | 5 ml [PoM] £2.27 DT price = £1.66

Combinations available: *Brimonidine with brimonidine*, p. 1081

## Brimonidine with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, brimonidine tartrate p. 1086, timolol maleate p. 1079.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma and for ocular hypertension when beta-blocker alone not adequate**

- TO THE EYE
- Adult: Apply twice daily

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ► Combigan (Allergan Ltd)

Brimonidine tartrate 2 mg per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml | Combigan eye drops | 5 ml [PoM] £10.00 DT price = £10.00 | 15 ml [PoM] £27.00

## 6 Retinal disorders

### 6.1 Macular degeneration

#### Subfoveal choroidal neovascularisation

##### Treatment

Aflibercept below, pegaptanib sodium p. 1088 and ranibizumab p. 1089 are vascular endothelial growth factor inhibitors licensed for the treatment of neovascular (wet) age-related macular degeneration. Aflibercept is also licensed for the treatment of macular oedema secondary to central retinal vein occlusion, and diabetic macular oedema; ranibizumab is also licensed for the treatment of visual impairment due to diabetic macular oedema, macular oedema secondary to branch or central retinal vein

occlusion, and choroidal neovascularisation secondary to pathologic myopia. Ranibizumab can be administered concomitantly with laser photocoagulation for the treatment of diabetic macular oedema and for macular oedema secondary to branch retinal vein occlusion.

#### ANTINEOVASCULARISATION DRUGS ► VASCULAR ENDOTHELIAL GROWTH FACTOR INHIBITORS

##### Aflibercept

- **DRUG ACTION** Aflibercept is a recombinant fusion protein that acts as a soluble decoy receptor and binds to vascular endothelial growth factors A and B (VEGF-A, VEGF-B) and placental growth factor (PlGF). Aflibercept inhibits the activation of VEGF receptors and the proliferation of endothelial cells, thereby inhibiting the growth of new vessels that supply tumours with oxygen and nutrients.

#### ● INDICATIONS AND DOSE

**Neovascular (wet) age-related macular degeneration (specialist use only)**

##### ► BY INTRAVITREAL INJECTION

- Adult: Initially 2 mg once a month for 3 months, then 2 mg every 2 months, review treatment frequency after 12 months

**Macular oedema secondary to retinal vein occlusion (specialist use only)**

##### ► BY INTRAVITREAL INJECTION

- Adult: Initially 2 mg once a month until maximum visual acuity is achieved or there are no signs of disease activity (discontinue treatment if no improvement in visual and anatomic outcomes)

**Diabetic macular oedema (specialist use only)**

##### ► BY INTRAVITREAL INJECTION

- Adult: Initially 2 mg once a month for 5 months, then maintenance 2 mg every 2 months, review treatment frequency after 12 months (discontinue treatment if no improvement in visual and anatomic outcomes)

**Myopic choroidal neovascularisation (specialist use only)**

##### ► BY INTRAVITREAL INJECTION

- Adult: 2 mg for 1 dose, if visual or anatomic outcomes indicate that disease persists, additional doses may be administered; the interval between 2 doses should be greater than 1 month

- **CONTRA-INDICATIONS** Clinical signs of irreversible ischaemic visual function loss · ocular or periocular infection · severe intra-ocular inflammation
- **CAUTIONS** Active systemic infection · diabetic patients with uncontrolled hypertension · discontinue treatment if stage 3 or 4 macular holes develop—consult product literature for full details · discontinue treatment in the event of a retinal break—consult product literature for full details · discontinue treatment in the event of rhegmatogenous retinal detachment—consult product literature for full details · patients at risk of retinal pigment epithelial tear · poorly controlled glaucoma · recent history of myocardial infarction · recent history of stroke · recent history of transient ischaemic attack

#### CAUTIONS, FURTHER INFORMATION

Aflibercept is given by intravitreal injection by specialists experienced in the management of this condition. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

- **INTERACTIONS** → Appendix 1: aflibercept

### ● SIDE-EFFECTS

- ▶ **Common or very common** Blurred vision · cataract formation · conjunctival haemorrhage · conjunctival hyperaemia · corneal abrasion or oedema · corneal erosion · eye pain · eyelid oedema · foreign body sensation in eye · increased lacrimation · injection-site haemorrhage · injection-site pain · ocular hyperaemia · punctate keratitis · raised intra-ocular pressure · reduced visual acuity · retinal degeneration · retinal pigment epithelium detachment · retinal pigment epithelium tear · vitreous detachment · vitreous floaters · vitreous haemorrhage
- ▶ **Uncommon** Anterior chamber flare · blindness · corneal epithelium defect · eyelid irritation · iridocyclitis · iritis · lenticular opacities · retinal detachment · retinal tear · uveitis
- ▶ **Rare** Hypopyon · vitritis

● **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **MONITORING REQUIREMENTS** Monitor intra-ocular pressure following injection.

● **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### NICE technology appraisals (TAs)

- ▶ **Aflibercept solution for injection for treating wet age-related macular degeneration (July 2013) NICE TA294**

Aflibercept solution for injection is recommended as an option for treating wet age-related macular degeneration only if:

- it is used in accordance with the recommendations for ranibizumab in NICE TA 155 and
- the manufacturer provides aflibercept solution for injection with the discount agreed in the patient access scheme

[www.nice.org.uk/TA294](http://www.nice.org.uk/TA294)

- ▶ **Aflibercept for treating visual impairment caused by macular oedema secondary to central retinal vein occlusion (February 2014) NICE TA305**

Aflibercept solution for injection is recommended as an option for treating visual impairment caused by macular oedema secondary to central retinal vein occlusion only if the manufacturer provides aflibercept solution for injection with the discount agreed in the patient access scheme.

[www.nice.org.uk/TA305](http://www.nice.org.uk/TA305)

- ▶ **Aflibercept for treating diabetic macular oedema (July 2015) NICE TA346**

Aflibercept solution for injection is recommended as an option for treating visual impairment caused by diabetic macular oedema only if:

- the eye has a central retinal thickness of 400 micrometres or more at the start of treatment and
- the company provides aflibercept with the discount agreed in the patient access scheme.

[www.nice.org.uk/TA346](http://www.nice.org.uk/TA346)

- ▶ **Aflibercept for treating visual impairment caused by macular oedema after branch retinal vein occlusion (September 2016) NICE TA409**

Aflibercept (*Eylea*®) is recommended, within its marketing authorisation, as an option for treating visual impairment in adults caused by macular oedema after branch retinal vein occlusion, only if the manufacturer provides aflibercept with the discount agreed in the patient access scheme.

[www.nice.org.uk/TA409](http://www.nice.org.uk/TA409)

### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (October 2016) that aflibercept (*Eylea*®) is accepted for use within NHS Scotland in adults for the treatment of visual impairment due to myopic choroidal neovascularisation. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

### All Wales Medicines Strategy Group (AWMSG) Decisions

The *All Wales Medicines Strategy Group* has advised (March 2017) that aflibercept (*Eylea*®) is recommended as an option for use within NHS Wales for the treatment of adult patients with visual impairment due to myopic choroidal neovascularisation. This recommendation applies only if the approved Wales Patient Access Scheme (PAS) is used or where the list/contract price is equivalent or lower.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

#### Solution for injection

- ▶ **Eylea** (Bayer PLC) ▼

**Aflibercept 40 mg per 1 ml** Eylea 2mg/50 microlitres solution for injection vials | 1 vial **[PoM]** £816.00

## Pegaptanib sodium

### ● INDICATIONS AND DOSE

#### Treatment of neovascular (wet) age-related macular degeneration (specialist use only)

- ▶ **BY INTRAVITREAL INJECTION**

- ▶ **Adult:** 300 micrograms every 6 weeks, to be administered into the affected eye, review treatment if no benefit after 2 consecutive injections

- **CONTRA-INDICATIONS** Ocular or periocular infection

### ● CAUTIONS

#### CAUTIONS, FURTHER INFORMATION

Pegaptanib is given by intravitreal injection by specialists. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Anterior chamber inflammation · cataract · conjunctival haemorrhage · conjunctivitis · corneal dystrophy · dry eye · eye discharge · eye irritation · eye pain · flashing lights · headache · periorbital haematoma · macular degeneration · mydriasis · periorbital haematoma · photophobia · punctate keratitis · raised intra-ocular pressure · retinal haemorrhage · rhinorrhoea · vitreous disorders · vitreous floaters
- ▶ **Uncommon** Aortic aneurysm · asthenopia · back pain · blepharitis · chalazion · changes in hair colour · chest pain · corneal deposits · deafness · decreased intra-ocular pressure · depression · dyspepsia · ectropion · eczema · eye movement disorder · eyelid ptosis · hypertension · influenza-like symptoms · injection-site reactions · iritis · nasopharyngitis · night sweats · nightmares · occlusion of retinal blood vessels · optic nerve cupping · palpitation · pruritus · pupillary disorder · rash · retinal detachment · retinal exudates · vertigo · vitreous haemorrhage · vomiting
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.

## ● MONITORING REQUIREMENTS

- ▶ Monitor intra-ocular pressure (transient increase may occur following injection, and small, sustained increases reported after repeated dosing).
- ▶ Monitor for vitreous haemorrhage and for signs of ocular infection for 2 weeks following injection.

● **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.

## ● NATIONAL FUNDING/ACCESS DECISIONS

### NICE technology appraisals (TAs)

- ▶ **Ranibizumab and pegaptanib for the treatment of age-related macular degeneration (updated May 2012)** NICE TA155  
Pegaptanib is not recommended for the treatment of wet age-related macular degeneration; patients currently receiving pegaptanib for any lesion type can continue therapy until they and their specialist consider it appropriate to stop.  
[www.nice.org.uk/TA155](http://www.nice.org.uk/TA155)

## ● MEDICAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Ranibizumab

### ● INDICATIONS AND DOSE

#### Neovascular (wet) age-related macular degeneration (specialist use only)

##### ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: 500 micrograms once a month, to be administered into the affected eye, monitor visual acuity monthly, continue treatment until visual acuity is stable for 3 consecutive months, thereafter monitor visual acuity monthly, if necessary subsequent doses may be given at least 1 month apart

#### Diabetic macular oedema | Macular oedema secondary to retinal vein occlusion (specialist use only)

##### ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: Initially 500 micrograms once a month, to be administered into the affected eye, monitor visual acuity monthly, continue treatment until visual acuity is stable for 3 consecutive months (discontinue treatment if no improvement in visual acuity after initial 3 injections), thereafter monitor visual acuity monthly, if necessary subsequent doses may be given at least 1 month apart

#### Choroidal neovascularisation secondary to pathologic myopia (specialist use only)

##### ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: Initially 500 micrograms, to be administered as a single injection into the affected eye, monitor for disease activity monthly for first 2 months, then at least every 3 months thereafter during the first year, then as required, if necessary subsequent doses may be given at least 1 month apart

#### Concomitant treatment of diabetic macular oedema, or macular oedema secondary to branch retinal vein occlusion, with laser photocoagulation (specialist use only)

##### ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: 500 micrograms, to be administered at least 30 minutes after laser photocoagulation

- **CONTRA-INDICATIONS** Ocular or periocular infection · severe intra-ocular inflammation · signs of irreversible ischaemic visual function loss in patients with retinal vein occlusion

- **CAUTIONS** Active systemic infection · diabetic macular oedema due to type 1 diabetes (limited information available) · diabetic patients with HbA<sub>1c</sub> over 12% · history

of stroke · history of transient ischaemic attack · patients at risk of retinal pigment epithelial tear · previous intravitreal injections · proliferative diabetic retinopathy · retinal detachment or macular hole (discontinue treatment if rhegmatogenous retinal detachment or stage 3 or 4 macular holes develop) · uncontrolled hypertension

## CAUTIONS, FURTHER INFORMATION

Ranibizumab is given by intravitreal injection by specialists. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

- **INTERACTIONS** → Appendix 1: ranibizumab

## ● SIDE-EFFECTS

- ▶ **Common or very common** Allergic skin reactions · anaemia · anterior chamber flare · anxiety · arthralgia · blepharitis · cataract · conjunctival disorders · conjunctivitis · cough · eye haemorrhage · eyelid oedema · headache · iridocyclitis · iritis · nasopharyngitis · nausea · ocular discomfort · photophobia · photopsia · posterior capsule opacification · punctate keratitis · raised intra-ocular pressure · retinal disorders · urinary tract infection · uveitis · visual disturbance · vitreous disorders

- ▶ **Uncommon** Blindness · corneal disorders · hyphaema · hypopyon · iris adhesion · keratopathy

- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

## ● MONITORING REQUIREMENTS

- ▶ Monitor intra-ocular pressure, perfusion of the optic nerve head, and for signs of ocular infection following injection.
- ▶ Monitor visual acuity, see individual indications and dose for frequency.

- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.

## ● NATIONAL FUNDING/ACCESS DECISIONS

### NICE technology appraisals (TAs)

- ▶ **Ranibizumab for treating choroidal neovascularisation associated with pathological myopia (November 2013)** NICE TA298

Ranibizumab is recommended as an option for treating visual impairment due to choroidal neovascularisation secondary to pathological myopia when the manufacturer provides ranibizumab with the discount agreed in the patient access scheme.

[www.nice.org.uk/TA298](http://www.nice.org.uk/TA298)

- ▶ **Ranibizumab for the treatment of visual impairment caused by macular oedema secondary to retinal vein occlusion (May 2013)** NICE TA283

Ranibizumab is recommended as an option for treating visual impairment caused by macular oedema:

- following central retinal vein occlusion or
- following branch retinal vein occlusion only if treatment with laser photocoagulation has not been beneficial, or when laser photocoagulation is not suitable because of the extent of macular haemorrhage and
- only if the manufacturer provides ranibizumab with the discount agreed in the patient access scheme revised in the context of NICE technology appraisal guidance 274.

[www.nice.org.uk/TA283](http://www.nice.org.uk/TA283)

- ▶ **Ranibizumab for the treatment of diabetic macular oedema (February 2013)** NICE TA274  
Ranibizumab is recommended as an option for the

treatment of visual impairment due to diabetic macular oedema only if:

- the eye has a central retinal thickness of 400 micrometres or more at the start of treatment **and**
- the manufacturer provides ranibizumab with the discount agreed in the patient access scheme (as revised in 2012).

Patients currently receiving ranibizumab for treating visual impairment due to diabetic macular oedema whose disease does not meet the criteria should be able to continue treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/TA274](http://www.nice.org.uk/TA274)

► **Ranibizumab and pegaptanib for the treatment of age-related macular degeneration (updated May 2012) NICE TA155**

Ranibizumab is recommended for the treatment of wet age-related macular degeneration if all of the following apply:

- the best corrected visual acuity is between 6/12 and 6/96;
- there is no permanent structural damage to the central fovea;
- the lesion size is less than or equal to 12 disc areas in greatest linear dimension;
- there is evidence of recent disease progression;
- the manufacturer provides ranibizumab with the discount agreed in the patient access scheme (as revised in 2012).

Ranibizumab should only be continued in patients who maintain adequate response to therapy.

[www.nice.org.uk/TA155](http://www.nice.org.uk/TA155)

**Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (May 2007) that ranibizumab (*Lucentis*®) is accepted for use within NHS Scotland for the treatment of neovascular (wet) age-related macular degeneration.

The *Scottish Medicines Consortium* has advised (October 2011 and April 2013) that ranibizumab (*Lucentis*®) is accepted for use within NHS Scotland for the treatment of macular oedema secondary to branch or central retinal vein occlusion, and (November 2012) for restricted use for the treatment of visual impairment due to diabetic macular oedema in adults with best corrected visual acuity 75 Early Treatment Diabetic Retinopathy Study letters or less at baseline, and (October 2013) for the treatment of visual impairment due to choroidal neovascularisation secondary to pathologic myopia in adults; SMC advice is contingent upon the continuing availability of ranibizumab at the price agreed in the patient access scheme.

• **MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

► **Lucentis** (Novartis Pharmaceuticals UK Ltd)

**Ranibizumab 10 mg per 1 mL** Lucentis 2.3mg/0.23mL solution for injection vials | 1 vial [PoM] £551.00 (Hospital only)

Lucentis 1.65mg/0.165mL solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £551.00

## PHOTOSENSITISERS

### Verteporfin

- **DRUG ACTION** Following intravenous infusion, verteporfin is activated by local irradiation using non-thermal red light to produce cytotoxic derivatives.

• **INDICATIONS AND DOSE**

**Photodynamic treatment of age-related macular degeneration associated with predominantly classic subfoveal choroidal neovascularisation or with pathological myopia (specialist use only)**

► **BY INTRAVENOUS INFUSION**

- Adult: 6 mg/m<sup>2</sup>, dose to be given over 10 minutes

- **CONTRA-INDICATIONS** Acute porphyria

- **CAUTIONS** Avoid extravasation · biliary obstruction · photosensitivity

- **INTERACTIONS** → Appendix 1: verteporfin

• **SIDE-EFFECTS**

- **Common or very common** Back pain · flashing lights · hypercholesterolaemia · malaise · nausea · photosensitivity · reduced visual acuity · visual disturbances · visual-field defects

- **Uncommon** Hyperaesthesia · hypertension · pyrexia · retinal detachment · subretinal, retinal or vitreous haemorrhage

- **Rare** Retinal or choroidal vessel non-perfusion

- **Frequency not known** Chest pain · macular oedema · myocardial infarction · retinal oedema · vasovagal reactions

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (teratogenic in *animal* studies).

- **BREAST FEEDING** No information available—manufacturer advises avoid breast-feeding for 48 hours after administration.

- **HEPATIC IMPAIRMENT** Use with caution in moderate hepatic impairment. Avoid in severe hepatic impairment.

- **DIRECTIONS FOR ADMINISTRATION** For information on administration and light activation, consult product literature.

For *intravenous infusion* (*Visudyne*®), give intermittently in Glucose 5%; reconstitute each 15 mg with 7 mL water for injections to produce a 2 mg/mL solution then dilute requisite dose with infusion fluid to a final volume of 30 mL and give over 10 minutes; protect infusion from light and administer within 4 hours of reconstitution. Incompatible with sodium chloride infusion.

- **PATIENT AND CARER ADVICE** Photosensitivity—avoid exposure of unprotected skin and eyes to bright light during infusion and for 48 hours afterwards.

• **NATIONAL FUNDING/ACCESS DECISIONS**

**NICE technology appraisals (TAs)**

- **Verteporfin photodynamic therapy for wet age-related macular degeneration (September 2003) NICE TA68**

Photodynamic therapy is recommended for wet age-related macular degeneration with a confirmed diagnosis of classic (no occult) subfoveal choroidal neovascularisation and best-corrected visual acuity of 6/60 or better.

Photodynamic therapy is **not** recommended for wet age-related macular degeneration with predominantly classic but partly occult subfoveal choroidal neovascularisation *except* in clinical studies.

[www.nice.org.uk/TA68](http://www.nice.org.uk/TA68)

### CORTICOSTEROIDS

1140

#### Fluocinolone acetonide

##### ● INDICATIONS AND DOSE

**Treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies (specialist use only)**

► BY INTRAVITREAL INJECTION

► **Adult:** 190 micrograms, to be administered into the affected eye

● **CONTRA-INDICATIONS** Active or suspected ocular infection · active or suspected peri-ocular infection · pre-existing glaucoma

● **CAUTIONS** Raised baseline intra-ocular pressure

##### ● SIDE-EFFECTS

► **Common or very common** Blurred vision · cataract · conjunctival haemorrhage · glaucoma · ocular discomfort · raised intra-ocular pressure · reduced visual acuity · vitreous floaters · vitreous haemorrhage

► **Uncommon** Conjunctival ulcer · endophthalmitis · eye discharge · eye pruritus · headache · iris adhesions · iris neovascularisation · maculopathy · ocular hyperaemia · optic atrophy · optic nerve disorder · posterior capsule opacification · retinal exudates · retinal vascular occlusion · sclera thinning · vitreous degeneration · vitreous detachment

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

● **BREAST FEEDING** Manufacturer advises avoid unless essential.

##### ● MONITORING REQUIREMENTS

► Monitor for raised intra-ocular pressure (particularly if raised at baseline), retinal detachment, endophthalmitis, vitreous haemorrhage or detachment within 2–7 days following the procedure.

► Monitor intra-ocular pressure at least every 3 months thereafter (for approximately 36 months).

● **DIRECTIONS FOR ADMINISTRATION** Concurrent administration to both eyes not recommended. For further information on administration and repeat dosing, consult product literature.

● **PRESCRIBING AND DISPENSING INFORMATION** Gel is useful for application to the scalp and other hairy areas.

##### ● NATIONAL FUNDING/ACCESS DECISIONS

#### **NICE technology appraisals (TAs)**

► Fluocinolone acetonide intravitreal implant for treating chronic diabetic macular oedema after an inadequate response to prior therapy (November 2013) NICE TA301 Fluocinolone acetonide intravitreal implant is recommended as an option for treating chronic diabetic

macular oedema that is insufficiently responsive to available therapies only if:

- the implant is to be used in an eye with an intra-ocular (pseudophakic lens) and
- the manufacturer provides fluocinolone acetonide intravitreal implant with the discount agreed in the patient access scheme.

[www.nice.org.uk/TA301](http://www.nice.org.uk/TA301)

#### **Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (February 2014) that fluocinolone acetonide intravitreal implant (*Iluvien*®) is recommended for restricted use within NHS Scotland for the treatment of vision impairment associated with chronic diabetic macular oedema, considered insufficiently responsive to available therapies, only in patients in whom the affected eye is pseudophakic (has an artificial lens after cataract surgery), and retreatment would take place only if the patient had previously responded to treatment with fluocinolone acetonide and subsequently best corrected visual acuity had deteriorated to less than 20/32.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Implant**

► **Iluvien** (Alimera Sciences Ltd)

**Fluocinolone acetonide 190 microgram** ILUVIEN 190microgram intravitreal implant in applicator | 1 device [PoM] £5,500.00

## 6.3 Optic neuropathy

### DRUGS FOR METABOLIC DISORDERS > ANTIOXIDANTS

#### Idebenone

31-May-2017

● **DRUG ACTION** Idebenone is a nootropic and antioxidant that is thought to act by restoring cellular ATP generation, thereby reactivating retinal ganglion cells.

##### ● INDICATIONS AND DOSE

**Leber's Hereditary Optic Neuropathy (initiated by a specialist)**

► BY MOUTH

► **Adult:** 300 mg 3 times a day

##### ● SIDE-EFFECTS

► **Common or very common** Back pain · cough · diarrhoea · nasopharyngitis

► **Frequency not known** Anorexia · azotaemia · blood disorders · bronchitis · chromaturia · dyspepsia · hepatitis · malaise · nausea · nervous system disorders · pain in extremity · pruritus · raised lipids · raised liver enzymes · rash · vomiting

##### **SIDE-EFFECTS, FURTHER INFORMATION**

► **Chromaturia** The metabolites of idebenone may cause red-brown discolouration of the urine. This effect is harmless, but the manufacturer advises caution as this may mask colour changes due to other causes (e.g. renal or blood disorders).

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.

● **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises use with caution—no information available.

● **RENAL IMPAIRMENT** Manufacturer advises use with caution—no information available.

## NATIONAL FUNDING/ACCESS DECISIONS

### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (May 2017) that idebenone (*Raxone*®) is accepted for restricted use within NHS Scotland for the treatment of visual impairment in patients with Leber's Hereditary Optic Neuropathy (LHON) who are not yet blind i.e. they do not meet the UK criteria to be registered as severely sight impaired. This advice is contingent upon the continuing availability of the Patient Access Scheme in NHS Scotland or a list price that is equivalent or lower.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet

### Ear

#### Ear

##### Otitis externa

Otitis externa is an inflammatory reaction of the meatal skin. It is important to exclude an underlying chronic otitis media before treatment is commenced. Many cases recover after thorough cleansing of the external ear canal by suction or dry mopping. A frequent problem in resistant cases is the difficulty in applying lotions and ointments satisfactorily to the relatively inaccessible affected skin. The most effective method is to introduce a ribbon gauze dressing or sponge wick soaked with **corticosteroid** ear drops or with an astringent such as aluminium acetate solution p. 1097. When this is not practical, the ear should be gently cleansed with a probe covered in cotton wool and the patient encouraged to lie with the affected ear uppermost for ten minutes after the canal has been filled with a liberal quantity of the appropriate solution.

If infection is present, a topical anti-infective which is not used systemically (such as neomycin sulfate p. 1095 or **clioquinol**) may be used, but for only about a week as excessive use may result in fungal infections; these may be difficult to treat and require expert advice. Sensitivity to the anti-infective or solvent may occur and resistance to antibacterials is a possibility with prolonged use. Aluminium acetate ear drops are also effective against bacterial infection and inflammation of the ear. Chloramphenicol p. 1095 may be used but the ear drops contain propylene glycol and cause hypersensitivity reactions in about 10% of patients. Solutions containing an anti-infective and a corticosteroid are used for treating cases where infection is present with inflammation and eczema.

In view of reports of ototoxicity, manufacturers contraindicate treatment with topical **aminoglycosides** or **polymyxins** in patients with a perforated tympanic membrane (eardrum) or patent grommet. However, some specialists do use these drops cautiously in the presence of a perforation or patent grommet in patients with chronic suppurative otitis media and when other measures have failed for otitis externa; treatment should be considered only by specialists in the following circumstances:

- drops should only be used in the presence of obvious infection;
- treatment should be for no longer than 2 weeks;

- patients should be counselled on the risk of ototoxicity and given justification for the use of these topical antibiotics;
- baseline audiometry should be performed, if possible, before treatment is commenced.

Clinical expertise and judgement should be used to assess the risk of treatment versus the benefit to the patient in such circumstances.

A solution of **acetic acid** 2% acts as an antifungal and antibacterial in the external ear canal. It may be used to treat mild otitis externa but in severe cases an anti-inflammatory preparation with or without an anti-infective drug is required. A proprietary preparation containing acetic acid 2% (*EarCalm*® spray) is on sale to the public.

For severe pain associated with otitis externa, a simple analgesic, such as paracetamol p. 422 or ibuprofen p. 1041, can be used. A systemic antibacterial can be used if there is spreading cellulitis or if the patient is systemically unwell. When a resistant staphylococcal infection (a boil) is present in the external auditory meatus, flucloxacillin p. 523 is the drug of choice; ciprofloxacin p. 527 (or an aminoglycoside) may be needed in pseudomonal infections which may occur if the patient has diabetes or is immunocompromised.

The skin of the pinna adjacent to the ear canal is often affected by eczema. A topical corticosteroid cream or ointment is then required, but prolonged use should be avoided.

##### Otitis media

###### Acute otitis media

Acute otitis media is the commonest cause of severe aural pain in small children. Many infections, especially those accompanying coryza, are caused by viruses. Most uncomplicated cases resolve without antibacterial treatment and a **simple analgesic**, such as paracetamol, may be sufficient. In children without systemic features, a **systemic antibacterial** may be started after 72 hours if there is no improvement, or earlier if there is deterioration, if the patient is systemically unwell, if the patient is at high risk of serious complications (e.g. in immunosuppression, cystic fibrosis), if mastoiditis is present, or in children under 2 years of age with bilateral otitis media. Perforation of the tympanic membrane in patients with *acute otitis media* usually heals spontaneously without treatment; if there is no improvement, e.g. pain or discharge persists, a systemic antibacterial can be given. Topical treatment of acute otitis media is ineffective and there is no place for drops containing a local anaesthetic.

**Otitis media with effusion**

Otitis media with effusion (glue ear) occurs in about 10% of children and in 90% of children with cleft palates. Systemic antibacterials are not usually required. If glue ear persists for more than a month or two, the child should be referred for assessment and follow up because of the risk of long-term hearing impairment which can delay language development. Untreated or resistant glue ear may be responsible for some types of *chronic otitis media*.

**Chronic otitis media**

Opportunistic organisms are often present in the debris, keratin, and necrotic bone of the middle ear and mastoid in patients with chronic otitis media. The mainstay of treatment is thorough cleansing with aural microsuction which may completely resolve long-standing infection. Local cleansing of the meatal and middle ear may be followed by treatment with a sponge wick or ribbon gauze dressing soaked with corticosteroid ear drops or with an astringent such as aluminium acetate solution; this is particularly beneficial for discharging ears or infections of the mastoid cavity. An antibacterial ear ointment may also be used. Acute exacerbations of chronic infection may also require systemic treatment with amoxicillin p. 518 (or erythromycin p. 510 if penicillin-allergic); treatment is adjusted according to the results of sensitivity testing.

In view of reports of ototoxicity, manufacturers contraindicate topical treatment with ototoxic antibacterials in the presence of a tympanic perforation or patent grommet. Ciprofloxacin or ofloxacin eye drops p. 530 used in the ear [unlicensed use] or ear drops [both unlicensed; available from 'special-order' manufacturers or specialist importing companies] are an effective alternative to such ototoxic ear drops for chronic otitis media in patients with perforation of the tympanic membrane.

However, some specialists do use ear drops containing **aminoglycosides** or **polymyxins** [unlicensed indications] cautiously in patients with chronic suppurative otitis media and a perforation of the tympanic membrane, if the otitis media has failed to settle with systemic antibacterials; treatment should be considered only **by specialists** in the following circumstances:

- drops should only be used in the presence of obvious infection;
- treatment should be for no longer than 2 weeks;
- patients should be counselled on the risk of ototoxicity and given justification for the use of these topical antibiotics;
- baseline audiometry should be performed, if possible, before treatment is commenced.

Clinical expertise and judgement should be used to assess the risk of treatment versus the benefit to the patient in such circumstances. It is considered that the pus in the middle ear associated with otitis media also carries a risk of ototoxicity.

**Removal of ear wax**

Ear wax (cerumen) is a normal bodily secretion which provides a protective film on the meatal skin and need only be removed if it causes hearing loss or interferes with a proper view of the ear drum.

Ear wax can be softened using simple remedies such as **olive oil** ear drops or **almond oil** ear drops; sodium bicarbonate ear drops p. 1097 are also effective, but may cause dryness of the ear canal. If the wax is hard and impacted, the drops can be used twice daily for several days and this may reduce the need for mechanical removal of the wax. The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear. Some proprietary preparations containing organic solvents can irritate the meatal skin, and in most cases the simple remedies indicated above are just as effective and less likely to cause irritation. Docusate sodium p. 1098 or urea hydrogen peroxide p. 1098

are ingredients in a number of proprietary preparations for softening ear wax.

If necessary, wax may be removed by irrigation with water (warmed to body temperature). Ear irrigation is generally best avoided in young children, in patients unable to co-operate with the procedure, in those with otitis media in the last six weeks, in otitis externa, in patients with cleft palate, a history of ear drum perforation, or previous ear surgery. A person who has hearing in one ear only should not have that ear irrigated because even a very slight risk of damage is unacceptable in this situation.

# 1 Otitis externa

**Other drugs used for Otitis externa** Hydrocortisone with miconazole, p. 1150

## ANTIBACTERIALS > AMINOGLYCOSIDES

### Framycetin sulfate

**• INDICATIONS AND DOSE****Bacterial infection in otitis externa**

- TO THE EAR
- Adult: (consult product literature)

- **CONTRA-INDICATIONS** Perforated tympanic membrane
- **CAUTIONS** Avoid prolonged use
- **SIDE-EFFECTS** Local sensitivity

**• MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

**Combinations available:** *Dexamethasone with framycetin sulfate and gramicidin*, p. 1097

### Gentamicin

**• INDICATIONS AND DOSE****Bacterial infection in otitis externa**

- TO THE EAR
- Child: Apply 2–3 drops 4–5 times a day, (including a dose at bedtime)
- Adult: Apply 2–3 drops 4–5 times a day, (including a dose at bedtime)

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1093) • perforated tympanic membrane (although may be used by specialists, see Ear p. 1093)

- **CAUTIONS** Avoid prolonged use
- **SIDE-EFFECTS** Local sensitivity

**• MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye drops solution**

EXCIPIENTS: May contain Benzalkonium chloride

► **Gentamicin (Non-proprietary)**

**Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml** Gentamicin 0.3% ear/eye drops | 10 ml **[POM]** £2.14 DT price = £2.15

## Gentamicin with hydrocortisone

### ● INDICATIONS AND DOSE

#### Eczematous inflammation in otitis externa

- ▶ TO THE EAR
- ▶ Child: Apply 2–4 drops 4–5 times a day, (including a dose at bedtime)
- ▶ Adult: Apply 2–4 drops 4–5 times a day, (including a dose at bedtime)

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1093) • perforated tympanic membrane (although may be used by specialists, see Ear p. 1093)

- **CAUTIONS** Avoid prolonged use
- **SIDE-EFFECTS** Local sensitivity reactions

### ● PATIENT AND CARER ADVICE

Betamethasone sodium phosphate 1 mg per 1 ml Vistamethasone 0.1% ear/eye/nose drops | 5 ml [PoM] £0.87 | 10 ml [PoM] £0.99 DT price = £2.32

Combinations available: *Betamethasone with neomycin*, below

## Clioquinol with flumetasone pivalate

### ● INDICATIONS AND DOSE

**Eczematous inflammation in otitis externa | Mild bacterial or fungal infections in otitis externa**

- ▶ TO THE EAR
- ▶ Child 2–17 years: 2–3 drops twice daily for 7–10 days, to be instilled into the ear
- ▶ Adult: 2–3 drops twice daily for 7–10 days, to be instilled into the ear

- **CONTRA-INDICATIONS** Iodine sensitivity

- **CAUTIONS** Avoid prolonged use · manufacturer advises avoid in perforated tympanic membrane (but used by specialists for short periods)

- **SIDE-EFFECTS** Local sensitivity

- **PATIENT AND CARER ADVICE** Clioquinol stains skin and clothing

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ear drops

- ▶ **Clioquinol with flumetasone pivalate (Non-proprietary)**

Flumetasone pivalate 200 microgram per 1 ml, Clioquinol 10 mg per 1 ml Flumetasone 0.02% / Clioquinol 1% ear drops | 7.5 ml [PoM] £10.37 DT price = £10.37 | 10 ml [PoM] £13.82 DT price = £13.82

## Prednisolone

### ● INDICATIONS AND DOSE

**Eczematous inflammation in otitis externa**

- ▶ TO THE EAR
- ▶ Child: Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained
- ▶ Adult: Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained

- **CONTRA-INDICATIONS** Avoid alone in the presence of untreated infection (combine with suitable anti-infective)

- **CAUTIONS** Avoid prolonged use

- **SIDE-EFFECTS** Local sensitivity reactions

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

#### Ear/eye drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Predsol** (Focus Pharmaceuticals Ltd)

Prednisolone sodium phosphate 5 mg per 1 ml Predsol 0.5% ear/eye drops | 10 ml [PoM] £2.00 DT price = £2.00

## CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

### Betamethasone with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1095, neomycin sulfate p. 1095.

### ● INDICATIONS AND DOSE

**Eczematous inflammation in otitis externa**

- ▶ TO THE EAR USING EAR DROPS
- ▶ Child: Apply 2–3 drops 3–4 times a day
- ▶ Adult: Apply 2–3 drops 3–4 times a day

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1093) · perforated tympanic membrane (although may be used by specialists, see Ear p. 1093)

- **CAUTIONS** Avoid prolonged use

- **SIDE-EFFECTS** Local sensitivity

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Betnesol-N** (Focus Pharmaceuticals Ltd)

Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 ml, Neomycin sulfate 5 mg per 1 ml Betnesol-N ear/eye/nose drops | 10 ml [PoM] £2.39 DT price = £2.39

## Dexamethasone with ciprofloxacin

09-Mar-2017

### ● INDICATIONS AND DOSE

**Acute otitis media in patients with tympanostomy tubes**

- ▶ TO THE EAR
- ▶ Adult: Apply 4 drops twice daily for 7 days

**Acute otitis externa**

- ▶ TO THE EAR
- ▶ Adult: Apply 4 drops twice daily for 7 days

- **CONTRA-INDICATIONS** Fungal ear infections · viral ear infections

- **CAUTIONS** Avoid prolonged use

### ● SIDE-EFFECTS

- ▶ **Common or very common** Ear pain
- ▶ **Uncommon** Ear congestion · flushing · fungal ear infections · irritability · malaise · otorrhoea · paraesthesia of the ear · skin exfoliation · taste disturbances · vomiting
- ▶ **Rare** Dizziness · erythematous rash · headache · hearing loss · tinnitus

### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ **Otorrhoea** Manufacturer advises further evaluation of underlying conditions if otorrhoea persists after a full course, or if at least two episodes of otorrhoea occur within 6 months.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **PATIENT AND CARER ADVICE** Manufacturer advises counselling on administration.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Ear drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

### Eye/Ear drops solution

EXCIPIENTS: May contain Polysorbates

► **Sofradex** (Sanofi)

Dexamethasone (as dexamethasone sodium metasulfobenzoate) 500 microgram per 1 ml, Framycetin sulfate 5 mg per 1 ml, Gramicidin 50 micrograms per 1 ml Sofradex ear/eye drops | 10 ml [PoM] £7.50

## Dexamethasone with glacial acetic acid and neomycin sulfate

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 635, neomycin sulfate p. 1095.

### INDICATIONS AND DOSE

#### Eczematous inflammation in otitis externa

► TO THE EAR

- Child 2–17 years: Apply 1 spray 3 times a day
- Adult: Apply 1 spray 3 times a day

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1093) · perforated tympanic membrane (although may be used by specialists, see Ear p. 1093)

- **CAUTIONS** Avoid prolonged use

- **SIDE-EFFECTS** Local sensitivity

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Spray

EXCIPIENTS: May contain Hydroxybenzoates (parabens)

► **Otomize** (Teva UK Ltd)

Dexamethasone 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram, Acetic acid glacial 20 mg per 1 gram Otomize ear spray | 5 ml [PoM] £3.27

## DERMATOLOGICAL DRUGS > ASTRINGENTS

## Aluminium acetate

### INDICATIONS AND DOSE

#### Inflammation in otitis externa

► TO THE EAR

- Adult: To be inserted into meatus or apply on a ribbon gauze dressing or sponge wick which should be kept saturated with the ear drops

- **DIRECTIONS FOR ADMINISTRATION** For ear drops 8%—dilute 8 parts aluminium acetate ear drops (13%) with 5 parts purified water. Must be freshly prepared.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

## 2 Removal of earwax

### BICARBONATE

## Sodium bicarbonate

### INDICATIONS AND DOSE

#### Removal of earwax (with 5% ear drop solution)

► TO THE EAR

- Child: (consult product literature)
- Adult: (consult product literature)

- **SIDE-EFFECTS** Dryness of the ear canal

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Ear drops

► **Sodium bicarbonate (Non-proprietary)**

Sodium bicarbonate 50 mg per 1 ml Sodium bicarbonate 5% ear drops | 10 ml £1.23–£1.25

## SOFTENING DRUGS

## Almond oil

### INDICATIONS AND DOSE

#### Removal of earwax

► TO THE EAR

- Child: Allow drops to warm to room temperature before use (consult product literature)
- Adult: Allow drops to warm to room temperature before use (consult product literature)

- **DIRECTIONS FOR ADMINISTRATION** The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Liquid

► **Almond oil (Non-proprietary)**

Almond oil 1 ml per 1 ml Almond oil liquid | 50 ml £0.91 DT price = £0.91 | 70 ml £0.73–£0.82 | 200 ml £2.54 | 500 ml £11.90

## Arachis oil with chlorobutanol

- ▶ **Otex** (Dendron Ltd)  
Urea hydrogen peroxide 50 mg per 1 gram Otex 5% ear drops | 8 ml Ⓟ £2.89 DT price = £2.89

## Nose

### Nose

#### Rhinitis and bacterial sinusitis

Rhinitis is often self-limiting but bacterial sinusitis may require treatment with antibacterials. There are few indications for nasal sprays and drops except in allergic rhinitis and perennial rhinitis. Many nasal preparations contain sympathomimetic drugs which may damage the nasal cilia. Sodium chloride 0.9% p. 953 solution may be used as a douche or 'sniff' following endonasal surgery.

#### Drugs used in nasal allergy

Mild allergic rhinitis is controlled by **antihistamines** (see under Antihistamines, allergen immunotherapy and allergic emergencies p. 265) or topical **nasal corticosteroids**; systemic nasal decongestants are of doubtful value. Topical nasal decongestants can be used for a short period to relieve congestion and allow penetration of a topical nasal corticosteroid.

More persistent symptoms and nasal congestion can be relieved by topical nasal **corticosteroids**; sodium cromoglicate p. 1105 is an alternative, but may be less effective. The topical antihistamine azelastine hydrochloride p. 1059 is useful for controlling breakthrough symptoms in allergic rhinitis. Topical antihistamines are considered less effective than topical corticosteroids but probably more effective than cromoglicate. In seasonal allergic rhinitis (e.g. hay fever), treatment should begin 2 to 3 weeks before the season commences and may have to be continued for several months; continuous treatment may be required for years in perennial rhinitis.

Montelukast p. 258 is less effective than topical nasal corticosteroids; montelukast can be used in patients with seasonal allergic rhinitis and concomitant asthma.

Sometimes allergic rhinitis is accompanied by vasomotor rhinitis. In this situation, the addition of topical nasal ipratropium bromide can reduce watery rhinorrhoea.

Very disabling symptoms occasionally justify the use of **systemic corticosteroids** for short periods, for example, in

students taking important examinations. They may also be used at the beginning of a course of treatment with a corticosteroid spray to relieve severe mucosal oedema and allow the spray to penetrate the nasal cavity.

### Corticosteroids

Corticosteroid nasal preparations should be avoided in the presence of untreated nasal infections, after nasal surgery (until healing has occurred), and in pulmonary tuberculosis. Patients transferred from systemic corticosteroids may experience exacerbation of some symptoms. Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged; for cautions and side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays. The height of children receiving prolonged treatment with nasal corticosteroids should be monitored; if growth is slowed, referral to a paediatrician should be considered.

### Nasal polyps

Short-term use of corticosteroid nasal drops helps to shrink nasal polyps; to be effective, the drops must be administered with the patient in the 'head down' position. A short course of a systemic corticosteroid may be required initially to shrink large polyps. A corticosteroid nasal spray can be used to maintain the reduction in swelling and also for the initial treatment of small polyps.

### Pregnancy

If a pregnant woman cannot tolerate the symptoms of allergic rhinitis, treatment with nasal beclomethasone dipropionate p. 1102, budesonide p. 1103, fluticasone p. 1103, or sodium cromoglicate may be considered.

### Topical nasal decongestants

The nasal mucosa is sensitive to changes in atmospheric temperature and humidity and these alone may cause slight nasal congestion. The nose and nasal sinuses produce a litre of mucus in 24 hours and much of this finds its way silently into the stomach via the nasopharynx. Slight changes in the nasal airway, accompanied by an awareness of mucus passing along the nasopharynx causes some patients to be inaccurately diagnosed as suffering from chronic sinusitis. These symptoms are particularly noticeable in the later stages of the common cold. Sodium chloride 0.9% given as nasal drops or spray may relieve nasal congestion by helping to liquefy mucous secretions.

Inhalation of **warm moist air** is useful in the treatment of symptoms of acute infective conditions. The addition of volatile substances such as menthol and eucalyptus may encourage the use of warm moist air (see under Aromatic inhalations, cough preparations and systemic nasal decongestants p. 282).

Symptoms of nasal congestion associated with vasomotor rhinitis and the common cold can be relieved by the short-term use (usually not longer than 7 days) of decongestant nasal drops and sprays. These all contain sympathomimetic drugs which exert their effect by vasoconstriction of the mucosal blood vessels which in turn reduces oedema of the nasal mucosa. They are of limited value because they can give rise to a rebound congestion (rhinitis medicamentosa) on withdrawal, due to a secondary vasodilatation with a subsequent temporary increase in nasal congestion. This in turn tempts the further use of the decongestant, leading to a vicious cycle of events. Ephedrine hydrochloride nasal drops, below, are the safest sympathomimetic preparation and can give relief for several hours. The more potent sympathomimetic drugs oxymetazoline and xylometazoline hydrochloride p. 1100 are more likely to cause a rebound effect.

Non-allergic watery rhinorrhoea often responds well to treatment with the antimuscarinic ipratropium bromide p. 1102.

### Sinusitis and oral pain

Sinusitis affecting the maxillary antrum can cause pain in the upper jaw. Where this is associated with blockage of the opening from the sinus into the nasal cavity, it may be helpful to relieve the congestion with inhalation of warm moist air or with ephedrine hydrochloride nasal drops.

Systemic antibacterials may sometimes be required for sinusitis (see under Nose infections, bacterial p. 487).

### Nasal preparations for infection

There is **no** evidence that topical anti-infective nasal preparations have any therapeutic value in rhinitis or sinusitis; see elimination of nasal staphylococci.

### Nasal staphylococci

Elimination of organisms such as staphylococci from the nasal vestibule can be achieved by the use of a cream containing **chlorhexidine** and **neomycin** (*Naseptin*®), but re-colonisation frequently occurs. Coagulase-positive staphylococci are present in the noses of 40% of the population.

A nasal ointment containing mupirocin p. 1101 is also available; it should probably be held in reserve for resistant infections. In hospitals or in care establishments, mupirocin nasal ointment should be reserved for the eradication (in both patients and staff) of nasal carriage of methicillin-resistant *Staphylococcus aureus* (MRSA). A sample should be taken 2 days after treatment to confirm eradication. The course may be repeated if the sample is positive (and the throat is not colonised). To avoid the development of resistance, the treatment course should not exceed 7 days and the course should not be repeated on more than one occasion. If the MRSA strain is mupirocin-resistant or does not respond after 2 courses, consider alternative products such as chlorhexidine and neomycin cream.

## 1 Nasal congestion

### SYMPATHOMIMETICS > VASOCONSTRICTOR

#### Ephedrine hydrochloride

##### • INDICATIONS AND DOSE

##### Nasal congestion | Sinusitis affecting the maxillary antrum

##### ► BY INTRANASAL ADMINISTRATION

- Child 12-17 years: Apply 1-2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril, administer ephedrine 0.5% nasal drops
- Adult: Apply 1-2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril

##### IMPORTANT SAFETY INFORMATION

##### CHM/MHRA ADVICE

The CHM/MHRA has stated that non-prescription cough and cold medicines containing ephedrine can be considered for up to 5 days' treatment in children aged 6-12 years after basic principles of best care have been tried; these medicines should not be used in children under 6 years of age.

- **CAUTIONS** Avoid excessive or prolonged use • cardiovascular disease (in children) • diabetes mellitus • elderly • hypertension • hyperthyroidism • ischaemic heart disease • prostatic hypertrophy (risk of acute urinary retention) (in adults)

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Headache · nausea
  - ▶ **Frequency not known** After excessive use tolerance with diminished effect · cardiovascular effect · local irritation · rebound congestion
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Present in milk; manufacturer advises avoid—irritability and disturbed sleep reported.
- **PRESCRIBING AND DISPENSING INFORMATION** For nasal drops, the BP directs that if no strength is specified 0.5% drops should be supplied.

#### PROFESSION SPECIFIC INFORMATION

- Dental practitioners' formulary  
Ephedrine nasal drops may be prescribed.
- **EXCEPTIONS TO LEGAL CATEGORY** Ephedrine nasal drops can be sold to the public provided no more than 180 mg of ephedrine base (or salts) are supplied at one time, and pseudoephedrine salts are not supplied at the same time; for conditions that apply to supplies made at the request of a patient, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: nasal drops

##### Nasal drops

- ▶ **Ephedrine hydrochloride (Non-proprietary)**  
Ephedrine hydrochloride 5 mg per 1 ml Ephedrine 0.5% nasal drops | 10 ml [P] £1.87-£1.90 DT price = £1.87
- Ephedrine hydrochloride 10 mg per 1 ml Ephedrine 1% nasal drops | 10 ml [P] £1.91-£1.94 DT price = £1.91

## Pseudoephedrine hydrochloride

#### INDICATIONS AND DOSE

##### Congestion of mucous membranes of upper respiratory tract

- ▶ **BY MOUTH**
- ▶ Child 6-11 years: 30 mg 3-4 times a day
- ▶ Child 12-17 years: 60 mg 3-4 times a day
- ▶ Adult: 60 mg 3-4 times a day

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (MARCH 2008 AND FEBRUARY 2009): OVER-THE-COUNTER COUGH AND COLD MEDICINES FOR CHILDREN  
Children under 6 years should not be given over-the-counter cough and cold medicines containing pseudoephedrine.

- **CAUTIONS** Diabetes · heart disease · hypertension · hyperthyroidism · ischaemic heart disease · prostatic hypertrophy · raised intra-ocular pressure (in children) · susceptibility to angle-closure glaucoma
- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anxiety · headache · hypertension · insomnia · nausea · restlessness · tachycardia · vomiting
  - ▶ **Rare** Hallucinations · rash
  - ▶ **Very rare** Angle-closure glaucoma
  - ▶ **Frequency not known** Urinary retention
- **PREGNANCY** Defective closure of the abdominal wall (gastroschisis) reported very rarely in newborns after first trimester exposure.
- **BREAST FEEDING** May suppress lactation; avoid if lactation not well established or if milk production insufficient.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in severe impairment.
- **RENAL IMPAIRMENT** Use with caution in mild to moderate renal impairment. Manufacturer advises avoid in severe renal impairment.
- **LESS SUITABLE FOR PRESCRIBING** Pseudoephedrine hydrochloride is less suitable for prescribing.
- **EXCEPTIONS TO LEGAL CATEGORY** *Galpseud®* and *Sudafed®* can be sold to the public provided no more than 720 mg of pseudoephedrine salts are supplied, and ephedrine base (or salts) are not supplied at the same time; for details see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Oral solution

EXCIPIENTS: May contain Alcohol

- ▶ **Galpseud** (Thornton & Ross Ltd)  
Pseudoephedrine hydrochloride 6 mg per 1 ml Galpseud 30mg/5ml linctus sugar-free | 2000 ml [PoM] £14.00

##### Tablet

- ▶ **Galpseud** (Thornton & Ross Ltd)  
Pseudoephedrine hydrochloride 60 mg Galpseud 60mg tablets | 24 tablet [PoM] £2.25 | 100 tablet [PoM] £5.42 DT price = £5.42

## Xylometazoline hydrochloride

- **DRUG ACTION** Xylometazoline is a sympathomimetic.

#### INDICATIONS AND DOSE

##### Nasal congestion

- ▶ **BY INTRANASAL ADMINISTRATION USING NASAL DROPS**
- ▶ Child 6-11 years: 1-2 drops 1-2 times a day as required for maximum duration of 5 days, 0.05% solution to be administered into each nostril
- ▶ Child 12-17 years: 2-3 drops 2-3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril
- ▶ Adult: 2-3 drops 2-3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril
- ▶ **BY INTRANASAL ADMINISTRATION USING NASAL SPRAY**
- ▶ Child 12-17 years: 1 spray 1-3 times a day as required for maximum duration of 7 days, to be administered into each nostril
- ▶ Adult: 1 spray 1-3 times a day as required for maximum duration of 7 days, to be administered into each nostril

#### IMPORTANT SAFETY INFORMATION

The CHM/MHRA has stated that non-prescription cough and cold medicines containing oxymetazoline or xylometazoline can be considered for up to 5 days' treatment in children aged 6-12 years after basic principles of best care have been tried; these medicines should not be used in children under 6 years of age.

- **CAUTIONS** Angle-closure glaucoma · avoid excessive or prolonged use · cardiovascular disease (in children) · diabetes mellitus · elderly · hypertension · hyperthyroidism · ischaemic heart disease · prostatic hypertrophy (risk of acute retention) · rebound congestion
- CAUTIONS, FURTHER INFORMATION**
- ▶ Rebound congestion Sympathomimetic drugs are of limited value in the treatment of nasal congestion because they can, following prolonged use (more than 7 days), give rise to a rebound congestion (rhinitis medicamentosa) on withdrawal, due to a secondary vasodilatation with a subsequent temporary increase in nasal congestion. This

in turn tempts the further use of the decongestant, leading to a vicious cycle of events.

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Cardiovascular effects · hallucinations in small children · headache · local irritation · nausea · rebound congestion · restlessness in small children · sleep disturbances in small children · tolerance with diminished effect (after excessive use) · transient visual disturbances
- SIDE-EFFECTS, FURTHER INFORMATION**
- Hallucinations (in small children) Discontinue treatment if the hallucinations occur.
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises caution—no information available.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

- **Otrivine** (GlaxoSmithKline Consumer Healthcare)  
**Xylometazoline hydrochloride 1 mg per 1 ml** Otrivine Congestion Relief 0.1% nasal spray | 10 ml [GSL] £3.05 DT price = £2.18  
Otrivine Adult Measured Dose Sinusitis spray | 10 ml [GSL] £2.62 DT price = £2.18  
Otrivine Allergy Relief 0.1% nasal spray | 10 ml [GSL] £2.62 DT price = £2.18  
Otrivine Adult nasal spray | 10 ml [GSL] £2.18 DT price = £2.18  
Otrivine Adult Metered Dose 0.1% nasal spray | 10 ml [GSL] £2.62 DT price = £2.18
- **Sudafed Congestion Relief** (McNeil Products Ltd)  
**Xylometazoline hydrochloride 1 mg per 1 ml** Sudafed Congestion Relief 0.1% nasal spray | 10 ml [GSL] £3.25 DT price = £2.18
- **Sudafed Mucus Relief** (McNeil Products Ltd)  
**Xylometazoline hydrochloride 1 mg per 1 ml** Sudafed Mucus Relief 0.1% nasal spray | 15 ml [GSL] £2.37
- **Sudafed Non-Drowsy Decongestant (xylometazoline)** (McNeil Products Ltd)  
**Xylometazoline hydrochloride 1 mg per 1 ml** Sudafed Blocked Nose 0.1% spray | 15 ml [GSL] £2.38

##### Nasal drops

- **Otrivine** (GlaxoSmithKline Consumer Healthcare)  
**Xylometazoline hydrochloride 500 microgram per 1 ml** Otrivine Child nasal drops | 10 ml [P] £1.91 DT price = £1.91  
**Xylometazoline hydrochloride 1 mg per 1 ml** Otrivine Adult 0.1% nasal drops | 10 ml [GSL] £2.18 DT price = £2.18

## 2 Nasal infection

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Chlorhexidine with neomycin

##### INDICATIONS AND DOSE

###### Eradication of nasal carriage of staphylococci

- BY INTRANASAL ADMINISTRATION
- Child: Apply 4 times a day for 10 days
- Adult: Apply 4 times a day for 10 days

###### Preventing nasal carriage of staphylococci

- BY INTRANASAL ADMINISTRATION
- Child: Apply twice daily
- Adult: Apply twice daily

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Arachis (peanut) oil, cetostearyl alcohol (including cetyl and stearyl alcohol)

- **Naseptin** (Alliance Pharmaceuticals Ltd)  
**Chlorhexidine hydrochloride 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram** Naseptin nasal cream | 15 gram [PoM] £2.24 DT price = £2.24

### ANTIBACTERIALS > OTHER

#### Mupirocin

##### INDICATIONS AND DOSE

###### BACTROBAN NASAL®

**For eradication of nasal carriage of staphylococci, including meticillin-resistant *Staphylococcus aureus* (MRSA)**

- BY INTRANASAL ADMINISTRATION
- Child: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated once if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril
- Adult: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated once if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** No information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution when mupirocin ointment used in moderate or severe impairment because it contains macrogols (polyethylene glycol).

##### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Nasal ointment

- **Bactroban** (GlaxoSmithKline UK Ltd)  
**Mupirocin (as Mupirocin calcium) 20 mg per 1 gram** Bactroban 2% nasal ointment | 3 gram [PoM] £4.24 DT price = £4.24

### CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

#### Betamethasone with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1095, neomycin sulfate p. 492.

##### INDICATIONS AND DOSE

###### Nasal infection

- BY INTRANASAL ADMINISTRATION USING NASAL DROPS
- Child: Apply 2–3 drops 2–3 times a day, to be applied into each nostril
- Adult: Apply 2–3 drops 2–3 times a day, to be applied into each nostril

##### LESS SUITABLE FOR PRESCRIBING

Betamethasone with neomycin nasal-drops are less suitable for prescribing; there is no evidence that topical anti-infective nasal preparations have any therapeutic value in rhinitis or sinusitis.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### ► Betnesol-N (Focus Pharmaceuticals Ltd)

Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 mL, Neomycin sulfate 5 mg per 1 mL Betnesol-N ear/eye/nose drops | 10 mL [PoM] £2.39 DT price = £2.39

## 3 Nasal inflammation, nasal polyps and rhinitis

**Other drugs used for Nasal inflammation, nasal polyps and rhinitis** Desloratadine, p. 269 • Fexofenadine hydrochloride, p. 269 • Ketotifen, p. 275

### ANTIMUSCARINICS

#### Ipratropium bromide

24-Feb-2016

##### INDICATIONS AND DOSE

**Rhinorrhoea associated with allergic and non-allergic rhinitis**

##### ► BY INTRANASAL ADMINISTRATION

- Child 12–17 years: 2 sprays 2–3 times a day, dose to be sprayed into each nostril
- Adult: 2 sprays 2–3 times a day, dose to be sprayed into each nostril

##### DOSE EQUIVALENCE AND CONVERSION

- 1 metered spray of nasal spray = 21 micrograms.

- **CAUTIONS** Avoid spraying near eyes • bladder outflow obstruction • cystic fibrosis • prostatic hyperplasia (in adults) • susceptibility to angle-closure glaucoma

- **INTERACTIONS** → Appendix 1: ipratropium

##### SIDE-EFFECTS

- **Common or very common** Epistaxis • nasal dryness • nasal irritation
- **Uncommon** Headache • nausea
- **Very rare** Gastro-intestinal motility disturbances • palpitations • urinary retention

- **PREGNANCY** Manufacturer advises only use if potential benefit outweighs the risk.

- **BREAST FEEDING** No information available—manufacturer advises only use if potential benefit outweighs risk.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

#### ► Rinattec (Boehringer Ingelheim Ltd)

Ipratropium bromide 21 microgram per 1 dose Rinattec 21 micrograms/dose nasal spray | 180 dose [PoM] £6.54 DT price = £6.54

### CORTICOSTEROIDS

#### Corticosteroids (intranasal)

- **CAUTIONS** Avoid after nasal surgery (until healing has occurred) • avoid in pulmonary tuberculosis • avoid in the presence of untreated nasal infections • patients transferred from systemic corticosteroids may experience exacerbation of some symptoms

##### CAUTIONS, FURTHER INFORMATION

Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is

prolonged; therefore also consider the cautions and side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays.

### SIDE-EFFECTS

- **Rare** Glaucoma • raised intra-ocular pressure
- **Very rare** Nasal septal perforation (usually following nasal surgery)
- **Frequency not known** Aggression (particularly in children) • anxiety (particularly in children) • bronchospasm • depression (particularly in children) • dryness • epistaxis • headache • hyperactivity (particularly in children) • hypersensitivity reactions • nasal irritation • nasal ulceration • sleep disturbances (particularly in children) • smell disturbances • taste disturbances • throat irritation

##### SIDE-EFFECTS, FURTHER INFORMATION

Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged. Therefore also consider the side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays.

### MONITORING REQUIREMENTS

- The height of children receiving prolonged treatment with nasal corticosteroids should be monitored; if growth is slowed, referral to a paediatrician should be considered.

above

## Beclometasone dipropionate

(Beclomethasone dipropionate)

### INDICATIONS AND DOSE

**Prophylaxis and treatment of allergic and vasomotor rhinitis**

##### ► BY INTRANASAL ADMINISTRATION

- Child 6–17 years: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day
- Adult: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day

- **INTERACTIONS** → Appendix 1: corticosteroids

- **EXCEPTIONS TO LEGAL CATEGORY** Preparations of beclometasone dipropionate can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 20 mg.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

#### ► Beclometasone dipropionate (Non-proprietary)

**Beclometasone dipropionate 50 microgram per**

**1 dose** Beclometasone 50micrograms/dose nasal spray | 200 dose [PoM] no price available DT price = £2.10

#### ► Beconase (GlaxoSmithKline UK Ltd, Omega Pharma Ltd)

**Beclometasone dipropionate 50 microgram per 1 dose** Beconase Aqueous 50micrograms/dose nasal spray | 200 dose [PoM] £2.63 DT price = £2.10

#### ► Nasobec (Teva UK Ltd)

**Beclometasone dipropionate 50 microgram per 1 dose** Nasobec Aqueous 50micrograms/dose nasal spray | 200 dose [PoM] £3.06 DT price = £2.10

## Betamethasone

### ● INDICATIONS AND DOSE

#### BETNESOL®

##### Non-infected inflammatory conditions of nose

- BY INTRANASAL ADMINISTRATION
- Adult: Apply 2–3 drops 2–3 times a day, dose to be applied into each nostril

#### VISTAMETHASONE®

##### Non-infected inflammatory conditions of nose

- BY INTRANASAL ADMINISTRATION
- Adult: Apply 2–3 drops twice daily, dose to be applied into each nostril

- **INTERACTIONS** → Appendix 1: corticosteroids

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- **Betnesol** (Focus Pharmaceuticals Ltd)  
Betamethasone sodium phosphate 1 mg per 1 ml Betnesol 0.1% eye/ear/nose drops | 10 ml [PoM] £2.32 DT price = £2.32
- **Vistamethasone** (Martindale Pharmaceuticals Ltd)  
Betamethasone sodium phosphate 1 mg per 1 ml Vistamethasone 0.1% ear/eye/nose drops | 5 ml [PoM] £0.87 | 10 ml [PoM] £0.99 DT price = £2.32

## Budesonide

20-Nov-2016

### ● INDICATIONS AND DOSE

#### Prophylaxis and treatment of allergic and vasomotor rhinitis

- BY INTRANASAL ADMINISTRATION
- Child 12–17 years: Initially 200 micrograms once daily, dose to be administered into each nostril in the morning, alternatively initially 100 micrograms twice daily, dose to be administered to each nostril; reduced to 100 micrograms once daily, dose to be administered into each nostril, dose can be reduced when control achieved
- Adult: Initially 200 micrograms once daily, dose to be administered into each nostril in the morning, alternatively initially 100 micrograms twice daily, dose to be administered to each nostril; reduced to 100 micrograms once daily, dose to be administered into each nostril, dose can be reduced when control achieved

#### Nasal polyps

- BY INTRANASAL ADMINISTRATION
- Child 12–17 years: 100 micrograms twice daily for up to 3 months, dose to be administered into each nostril
- Adult: 100 micrograms twice daily for up to 3 months, dose to be administered into each nostril

#### RHINOCORT AQUA®

##### Rhinitis

- BY INTRANASAL ADMINISTRATION
- Adult: 128 micrograms once daily, dose to be administered into each nostril in the morning, alternatively 64 micrograms twice daily, dose to be administered into each nostril; reduced to 64 micrograms once daily when control achieved. Use for maximum 3 months, doses to be administered into each nostril

#### Nasal polyps

- BY INTRANASAL ADMINISTRATION
- Adult: 64 micrograms twice daily for up to 3 months, dose to be administered into each nostril

- **INTERACTIONS** → Appendix 1: corticosteroids

- **EXCEPTIONS TO LEGAL CATEGORY** Preparations of budesonide can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of seasonal allergic rhinitis in adults over 18 years subject to max. single dose of 200 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. period of 3 months, and a pack size of 10 mg.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Disodium edetate, polysorbates, potassium sorbate

#### ► Budesonide (Non-proprietary)

**Budesonide 64 microgram per 1 dose** Budesonide 64micrograms/dose nasal spray | 120 dose [PoM] £4.77 DT price = £4.77

**Budesonide 100 microgram per 1 dose** Budeflam Aquanase 100micrograms/dose nasal spray | 150 dose [PoM] no price available Aircort 100micrograms/dose nasal spray | 200 dose [PoM] no price available

#### ► Rhinocort (AstraZeneca UK Ltd)

**Budesonide 64 microgram per 1 dose** Rhinocort Aqua 64 nasal spray | 120 dose [PoM] £3.49 DT price = £4.77

## Fluticasone

04-Jan-2016

### ● INDICATIONS AND DOSE

#### Prophylaxis and treatment of allergic rhinitis and perennial rhinitis

- BY INTRANASAL ADMINISTRATION USING NASAL SPRAY
- Child 4–11 years: 50 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 50 micrograms twice daily
- Child 12–17 years: 100 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 100 micrograms twice daily; reduced to 50 micrograms once daily, dose to be administered into each nostril, dose to be reduced when control achieved
- Adult: 100 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 100 micrograms twice daily; reduced to 50 micrograms once daily, dose to be administered into each nostril, dose to be reduced when control achieved

#### Nasal polyps

- BY INTRANASAL ADMINISTRATION USING NASAL DROPS
- Child 16–17 years: 200 micrograms 1–2 times a day, to be administered into each nostril, alternative treatment should be considered if no improvement after 4–6 weeks, (200 micrograms is equivalent to approximately 6 drops)
- Adult: 200 micrograms 1–2 times a day, to be administered into each nostril, alternative treatment should be considered if no improvement after 4–6 weeks, (200 micrograms is equivalent to approximately 6 drops)

#### AVAMYS® SPRAY

##### Prophylaxis and treatment of allergic rhinitis

- BY INTRANASAL ADMINISTRATION
- Child 6–11 years: 27.5 micrograms once daily, dose to be sprayed into each nostril, then increased if necessary to 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose
- Child 12–17 years: 55 micrograms once daily, dose to be sprayed into each nostril, continued →

reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose

- ▶ Adult: 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Avamys® spray: 1 spray equivalent to 27.5 micrograms.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Nasal ulceration occurs commonly with nasal preparations containing fluticasone furoate.

#### EXCEPTIONS TO LEGAL CATEGORY

Preparations of fluticasone propionate can be sold to the public for nasal administration (other than by pressurised nasal spray) if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years, subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 3 mg.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

##### Fluticasone (Non-proprietary)

**Fluticasone propionate 50 microgram per 1 dose** Fluticasone propionate 50micrograms/dose nasal spray | 60 dose [PoM] no price available | 150 dose [PoM] no price available DT price = £11.01

##### Avamys (GlaxoSmithKline UK Ltd)

**Fluticasone furoate 27.5 microgram per 1 dose** Avamys 27.5micrograms/dose nasal spray | 120 dose [PoM] £6.44 DT price = £6.44

##### Flixonase (GlaxoSmithKline UK Ltd)

**Fluticasone propionate 50 microgram per 1 dose** Flixonase 50micrograms/dose aqueous nasal spray | 150 dose [PoM] £11.01 DT price = £11.01

##### Nasofan (Teva UK Ltd)

**Fluticasone propionate 50 microgram per 1 dose** Nasofan 50micrograms/dose aqueous nasal spray | 150 dose [PoM] £8.04 DT price = £11.01

##### Nasal drops

EXCIPIENTS: May contain Polysorbates

##### Flixonase (GlaxoSmithKline UK Ltd)

**Fluticasone propionate 400 microgram** Flixonase Nasule 400microgram/unit dose nasal drops | 28 unit dose [PoM] £12.99 DT price = £12.99

## Fluticasone with azelastine

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluticasone p. 1103, azelastine hydrochloride p. 1059.

#### INDICATIONS AND DOSE

**Moderate to severe seasonal and perennial allergic rhinitis, if monotherapy with antihistamine or corticosteroid is inadequate**

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child 12-17 years: 1 spray twice daily, dose to be administered into each nostril
- ▶ Adult: 1 spray twice daily, dose to be administered into each nostril

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

##### Fluticasone with azelastine (Non-proprietary)

**Fluticasone propionate 50 microgram per 1 actuation, Azelastine hydrochloride 137 microgram per 1 actuation** Fluticasone propionate 50micrograms/dose / Azelastine 137micrograms/dose nasal spray | 120 dose [PoM] no price available DT price = £14.80

##### Dymista (Meda Pharmaceuticals Ltd)

**Fluticasone propionate 50 microgram per 1 actuation, Azelastine hydrochloride 137 microgram per 1 actuation** Dymista 137micrograms/dose / 50micrograms/dose nasal spray | 120 dose [PoM] £14.80 DT price = £14.80

F 1102

## Mometasone furoate

#### INDICATIONS AND DOSE

**Prophylaxis and treatment of allergic rhinitis**

##### BY INTRANASAL ADMINISTRATION

- ▶ Child 6-11 years: 50 micrograms daily, dose to be sprayed into each nostril
- ▶ Child 12-17 years: 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril
- ▶ Adult: 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril

##### Nasal polyps

##### BY INTRANASAL ADMINISTRATION

- ▶ Adult: Initially 100 micrograms daily for 5-6 weeks, dose to be sprayed into each nostril, then increased if necessary to 100 micrograms twice daily, dose to be sprayed into each nostril, consider alternative treatment if no improvement after further 5-6 weeks, reduce to the lowest effective dose when control achieved

- **INTERACTIONS** → Appendix 1: corticosteroids

- **SIDE-EFFECTS** Nasal ulceration occurs commonly with preparations containing mometasone furoate.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

##### Mometasone furoate (Non-proprietary)

**Mometasone furoate 50 microgram per 1 dose** Mometasone 50micrograms/dose nasal spray | 140 dose [PoM] £7.30 DT price = £2.12

##### Nasonex (Merck Sharp & Dohme Ltd)

**Mometasone furoate 50 microgram per 1 dose** Nasonex 50micrograms/dose nasal spray | 140 dose [PoM] £7.68 DT price = £2.12

F 1102

## Triamcinolone acetonide

#### INDICATIONS AND DOSE

**Prophylaxis and treatment of allergic rhinitis**

##### BY INTRANASAL ADMINISTRATION

- ▶ Child 6-11 years: 55 micrograms once daily, dose to be sprayed into each nostril, increased if necessary to 110 micrograms once daily, dose to be sprayed into each nostril; reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when

control achieved; maximum duration of treatment 3 months

- **Child 12–17 years:** 110 micrograms once daily, dose to be sprayed into each nostril, reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when control achieved
- **Adult:** 110 micrograms once daily, dose to be sprayed into each nostril, reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when control achieved

#### • UNLICENSED USE

Not licensed for use in children under 6 years.

#### • INTERACTIONS → Appendix 1: corticosteroids

#### • EXCEPTIONS TO LEGAL CATEGORY

Preparations of triamcinolone acetonide can be sold to the public for nasal administration as a non-pressurised nasal spray if supplied for the symptomatic treatment of seasonal allergic rhinitis in adults over 18 years, subject to maximum daily dose of 110 micrograms per nostril for maximum 3 months, and a pack size of 3.575 mg.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

##### • Nasacort (Sanofi)

**Triamcinolone acetonide 55 microgram per 1 dose** Nasacort  
Allergy 55micrograms/dose nasal spray | 30 dose [P] £3.01  
Nasacort 55micrograms/dose nasal spray | 120 dose [PoM] £7.39 DT  
price = £7.39

## MAST-CELL STABILISERS

### Sodium cromoglicate

(Sodium cromoglycate)

#### • INDICATIONS AND DOSE

##### Prophylaxis of allergic rhinitis

##### ► BY INTRANASAL ADMINISTRATION

- **Child:** 1 spray 2–4 times a day, to be administered into each nostril
- **Adult:** 1 spray 2–4 times a day, to be administered into each nostril

#### • UNLICENSED USE

Licensed for use in children (age range not specified by manufacturers).

#### • SIDE-EFFECTS

- **Rare** Transient bronchospasm
- **Frequency not known** Local irritation

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Oropharynx

### 1 Dry mouth

#### Treatment of dry mouth

##### Overview

Dry mouth (xerostomia) may be caused by drugs with antimuscarinic (anticholinergic) side-effects (e.g. antispasmodics, tricyclic antidepressants, and some

antipsychotics), by diuretics, by irradiation of the head and neck region or by damage to or disease of the salivary glands. Patients with a persistently dry mouth may develop a burning or scalded sensation and have poor oral hygiene; they may develop increased dental caries, periodontal disease, intolerance of dentures, and oral infections (particularly candidiasis). Dry mouth may be relieved in many patients by simple measures such as frequent sips of cool drinks or sucking pieces of ice or sugar-free fruit pastilles. Sugar-free chewing gum stimulates salivation in patients with residual salivary function.

**Artificial saliva** can provide useful relief of dry mouth. A properly balanced artificial saliva should be of a neutral pH and contain electrolytes (including fluoride) to correspond approximately to the composition of saliva. The acidic pH of some artificial saliva products may be inappropriate. Of the proprietary preparations, *Aquoral*®, *Biotène Oralbalance*® gel or *Xerotin*® can be used for any condition giving rise to a dry mouth. *BioXtra*®, *Glandosane*®, *Saliva Orthana*®, and *Saliveze*®, have ACBS approval for dry mouth associated only with radiotherapy or sicca syndrome. *Salivix*® pastilles, which act locally as salivary stimulants, are also available for any condition leading to a dry mouth and SST tablets may be prescribed for dry mouth in patients with salivary gland impairment (and patent salivary ducts).

Pilocarpine below tablets are licensed for the treatment of xerostomia following irradiation for head and neck cancer and for dry mouth and dry eyes (xerophthalmia) in Sjögren's syndrome. They are effective only in patients who have some residual salivary gland function, and therefore should be withdrawn if there is no response.

## PARASYMPATHOMIMETICS

### Pilocarpine

#### • INDICATIONS AND DOSE

##### Xerostomia following irradiation for head and neck cancer

##### ► BY MOUTH

- **Adult:** 5 mg 3 times a day for 4 weeks, then increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with or immediately after meals (last dose always with evening meal), maximum therapeutic effect normally within 4–8 weeks; discontinue if no improvement after 2–3 months

##### Dry mouth and dry eyes in Sjögren's syndrome

##### ► BY MOUTH

- **Adult:** 5 mg 4 times a day; increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with meals and at bedtime, discontinue if no improvement after 2–3 months

- **CONTRA-INDICATIONS** Acute iritis · chronic obstructive pulmonary disease (increased bronchial secretions and increased airways resistance) · uncontrolled asthma (increased bronchial secretions and increased airways resistance) · uncontrolled cardiorenal disease
- **CAUTIONS** Asthma (avoid if uncontrolled) · biliary-tract disease · cardiovascular disease (avoid if uncontrolled) · cholelithiasis · chronic obstructive pulmonary disease (avoid if uncontrolled) · cognitive disturbances · maintain adequate fluid intake to avoid dehydration associated with excessive sweating · peptic ulceration · psychiatric disturbances · risk of increased renal colic · risk of increased urethral smooth muscle tone · susceptibility to angle-closure glaucoma

#### • INTERACTIONS → Appendix 1: pilocarpine

#### • SIDE-EFFECTS

- **Common or very common** Influenza-like symptoms · abdominal pain · asthenia · conjunctivitis · constipation · diarrhoea · dizziness · dyspepsia · flushing · headache ·

hypertension • increased urinary frequency • lacrimation • nausea • ocular pain • palpitation • pruritus • rash • rhinitis • sweating • visual disturbances • vomiting

► **Uncommon** Flatulence • urinary urgency

● **PREGNANCY** Avoid—smooth muscle stimulant; toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Reduce initial oral dose in moderate or severe cirrhosis.

● **RENAL IMPAIRMENT** Manufacturer advises caution with tablets.

● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks**

Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21, 27

► **Salagen** (Merus Labs Luxco S.a.R.L.)

**Pilocarpine hydrochloride 5 mg** Salagen 5mg tablets | 84 tablet (POM) £41.14 DT price = £41.14

## LUBRICANTS

### Artificial saliva products

● **ARTIFICIAL SALIVA PRODUCTS**

**AS SALIVA ORTHANA® LOZENGES**

Mucin 65 mg, xylitol 59 mg, in a sorbitol basis, pH neutral

● **INDICATIONS AND DOSE**

**Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)**

► **BY MOUTH**

► **Adult:** 1 lozenge as required, allow to dissolve slowly in the mouth

● **PRESCRIBING AND DISPENSING INFORMATION** *AS Saliva Orthana®* lozenges do not contain fluoride.

**AS Saliva Orthana lozenges** (A S Pharma Ltd)  
30lozenge(ACBS) • NHS indicative price = £3.50

**AS SALIVA ORTHANA® SPRAY**

Gastric mucin (porcine) 3.5%, xylitol 2%, sodium fluoride 4.2 mg/litre, with preservatives and flavouring agents, pH neutral.

● **INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth**

► **BY MOUTH**

► **Adult:** Apply 2–3 sprays as required, spray onto oral and pharyngeal mucosa

● **PROFESSION SPECIFIC INFORMATION**

Dental practitioners' formulary

*AS Saliva Orthana®* Oral Spray may be prescribed.

**BIOXTA® GEL**

Lactoperoxidase, lactoferrin, lysozyme, whey colostrum, xylitol and other ingredients.

● **INDICATIONS AND DOSE**

**Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)**

► **BY MOUTH**

► **Adult:** Apply as required, apply to oral mucosa

● **PROFESSION SPECIFIC INFORMATION**

Dental practitioners' formulary

*BioXtra®* Gel may be prescribed.

**BioXtra Dry Mouth oral gel** (R.I.S. Products Ltd)  
40ml • NHS indicative price = £3.94 • Drug Tariff (Part IXa)

**BIOTENE ORALBALANCE®**

Lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis.

● **INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth**

► **BY MOUTH**

► **Adult:** Apply as required, apply to gums and tongue

● **PATIENT AND CARER ADVICE** Avoid use with toothpastes containing detergents (including foaming agents).

● **PROFESSION SPECIFIC INFORMATION**

Dental practitioners' formulary

*Bioteine Oralbalance®* Saliva Replacement Gel may be prescribed as Artificial Saliva Gel.

**Bioteine Oralbalance dry mouth saliva replacement gel** (GlaxoSmithKline Consumer Healthcare) **Glucose oxidase 12000 unit, Lactoferrin 12 mg, Lactoperoxidase 12000 unit, Muramidase 12 mg** 50gram • NHS indicative price = £4.46 • Drug Tariff (Part IXa)

**GLANDOSANE®**

Carmellose sodium 500 mg, sorbitol 1.5 g, potassium chloride 60 mg, sodium chloride 42.2 mg, magnesium chloride 2.6 mg, calcium chloride 7.3 mg, and dipotassium hydrogen phosphate 17.1 mg/50 g, pH 5.75.

● **INDICATIONS AND DOSE**

**Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)**

► **BY MOUTH**

► **Adult:** Apply as required, spray onto oral and pharyngeal mucosa

● **PROFESSION SPECIFIC INFORMATION**

Dental practitioners' formulary

*Glandosane®* Aerosol Spray may be prescribed.

**Glandosane synthetic saliva spray lemon** (Fresenius Kabi Ltd)  
50ml • NHS indicative price = £5.68

**Glandosane synthetic saliva spray natural** (Fresenius Kabi Ltd)  
50ml • NHS indicative price = £5.68

**Glandosane synthetic saliva spray peppermint** (Fresenius Kabi Ltd)  
50ml • NHS indicative price = £5.68

**ORALIEVE GEL**

● **INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth**

► **BY MOUTH**

► **Adult:** Apply as required, particularly at night, to oral mucosa

● **PRESCRIBING AND DISPENSING INFORMATION** Contains traces of milk protein and egg white protein.

**Oralieve moisturising mouth gel** (Inspiration Pharma Ltd)  
50ml • NHS indicative price = £2.96 • Drug Tariff (Part IXa)

**SST®**

Sugar-free, citric acid, malic acid and other ingredients in a sorbitol base.

**● INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth in patients with impaired salivary gland function and patent salivary ducts**

- ▶ BY MOUTH
- ▶ Adult: 1 tablet as required, allow tablet to dissolve slowly in the mouth

**● PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

May be prescribed as Saliva Stimulating Tablets.

**SST saliva stimulating tablets** (Sinclair IS Pharma Plc)  
100tablet • NHS indicative price = £4.86 • Drug Tariff (Part IXa)

**SALIVEZE®**

Carmellose sodium (sodium carboxymethylcellulose), calcium chloride, magnesium chloride, potassium chloride, sodium chloride, and dibasic sodium phosphate, pH neutral.

**● INDICATIONS AND DOSE**

**Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)**

- ▶ BY MOUTH
- ▶ Adult: Apply 1 spray as required, spray onto oral mucosa

**● PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

**Saliveze®** Oral Spray may be prescribed.

**Saliveze mouth spray** (Wyvern Medical Ltd)  
50ml(ACBS) • NHS indicative price = £3.50

**SALIVIX®**

Sugar-free, reddish-amber, acacia, malic acid and other ingredients.

**● INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth**

- ▶ BY MOUTH USING PASTILLES
- ▶ Adult: 1 unit as required, suck pastille

**● PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

**Salivix®** Pastilles may be prescribed as Artificial Saliva Pastilles.

**Salivix pastilles** (Galen Ltd)  
50pastille • NHS indicative price = £3.55 • Drug Tariff (Part IXa)

**XEROTIN®**

Sugar-free, water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral.

**● INDICATIONS AND DOSE**

**Symptomatic treatment of dry mouth**

- ▶ BY MOUTH
- ▶ Adult: 1 spray as required

**● PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

**Xerotin®** Oral Spray may be prescribed as Artificial Saliva Oral Spray.

**Xerotin spray** (SpePharm UK Ltd)  
100ml • NHS indicative price = £6.86 • Drug Tariff (Part IXa)

## 2 Oral hygiene

### Mouthwashes and other preparations for oropharyngeal use

#### Lozenges and sprays

There is no convincing evidence that antiseptic lozenges and sprays have a beneficial action and they sometimes irritate and cause sore tongue and sore lips. Some of these preparations also contain local anaesthetics which relieve pain but may cause sensitisation.

#### Mouthwashes, gargles, and dentifrices

Superficial infections of the mouth are often helped by warm mouthwashes which have a mechanical cleansing effect and cause some local hyperaemia. However, to be effective, they must be used frequently and vigorously. A warm saline mouthwash is ideal and can be prepared either by dissolving half a teaspoonful of salt in a glassful of warm water or by diluting compound sodium chloride mouthwash p. 1109 with an equal volume of warm water.

Mouthwashes containing an oxidising agent, such as hydrogen peroxide p. 1109, may be useful in the treatment of acute ulcerative gingivitis (Vincent's infection) since the organisms involved are anaerobes. It also has a mechanical cleansing effect arising from frothing when in contact with oral debris.

Chlorhexidine p. 1108 is an effective antiseptic which has the advantage of inhibiting plaque formation on the teeth. It does not, however, completely control plaque deposition and is not a substitute for effective toothbrushing. Moreover, chlorhexidine preparations do not penetrate significantly into stagnation areas and are therefore of little value in the control of dental caries or of periodontal disease once pocketing has developed.

Chlorhexidine mouthwash is used in the treatment of denture stomatitis. It is also used in the prevention of oral candidiasis in immunocompromised patients. Chlorhexidine mouthwash reduces the incidence of alveolar osteitis following tooth extraction. Chlorhexidine mouthwash should not be used for the prevention of endocarditis in patients undergoing dental procedures.

Chlorhexidine can be used as a mouthwash, spray or gel for secondary infection in mucosal ulceration and for controlling gingivitis, as an adjunct to other oral hygiene measures. These preparations may also be used instead of toothbrushing where there is a painful periodontal condition (e.g. primary herpetic stomatitis) or if the patient has a haemorrhagic disorder, or is disabled.

Chlorhexidine preparations are of little value in the control of acute necrotising ulcerative gingivitis. With prolonged use, chlorhexidine causes reversible brown staining of teeth and tongue. Chlorhexidine may be incompatible with some ingredients in toothpaste, causing an unpleasant taste in the mouth; rinse the mouth thoroughly with water between using toothpaste and chlorhexidine-containing products.

There is no convincing evidence that gargles are effective in adults.

## ANTISEPTICS AND DISINFECTANTS

## Chlorhexidine

## • INDICATIONS AND DOSE

**Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of aphthous ulcers**

## ► BY MOUTH USING MOUTHWASH

- Child: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)
- Adult: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)

**Denture stomatitis**

## ► MOUTHWASH

- Adult: Cleanse and soak dentures in mouthwash solution for 15 minutes twice daily

**Oral hygiene and plaque inhibition and gingivitis**

## ► BY MOUTH USING DENTAL GEL

- Child: Apply 1–2 times a day, to be brushed on the teeth
- Adult: Apply 1–2 times a day, to be brushed on the teeth

**Oral candidiasis | Management of aphthous ulcers**

## ► BY MOUTH USING DENTAL GEL

- Child: Apply 1–2 times a day, to affected areas
- Adult: Apply 1–2 times a day, to affected areas

**Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of aphthous ulcers**

## ► BY MOUTH USING OROMUCOSAL SPRAY

- Child: Apply up to 12 sprays twice daily as required, to be applied tooth, gingival, or ulcer surfaces
- Adult: Apply up to 12 sprays twice daily as required, to be applied tooth, gingival, or ulcer surfaces

**Bladder irrigation and catheter patency solutions**

## ► BY INTRAVESICAL INSTILLATION

- Adult: (consult product literature)

- **UNLICENSED USE** *Corsodyl*® not licensed for use in children under 12 years (unless on the advice of a healthcare professional).
- **SIDE-EFFECTS** Anaphylaxis · hypersensitivity · mucosal irritation · parotid gland swelling · reversible brown staining of composite restorations · reversible brown staining of silicate compositions · reversible brown staining of teeth · taste disturbance · tongue discolouration
- SIDE-EFFECTS, FURTHER INFORMATION** If desquamation occurs with mucosal irritation, discontinue treatment or dilute mouthwash with an equal volume of water.
- **PATIENT AND CARER ADVICE** Chlorhexidine gluconate may be incompatible with some ingredients in toothpaste; rinse the mouth thoroughly with water between using toothpaste and chlorhexidine-containing product.
- **PROFESSION SPECIFIC INFORMATION**  
Dental practitioners' formulary  
*Corsodyl*® dental gel may be prescribed as Chlorhexidine Gluconate Gel; *Corsodyl*® mouthwash may be prescribed as Chlorhexidine Mouthwash; *Corsodyl*® oral spray may be prescribed as Chlorhexidine Oral Spray.

## • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid, irrigation solution

**Dental gel**► *Corsodyl* (GlaxoSmithKline Consumer Healthcare)

Chlorhexidine gluconate 10 mg per 1 gram *Corsodyl* 1% dental gel sugar-free | 50 gram **P** £1.26 DT price = £1.26

**Spray**► *Corsodyl* (GlaxoSmithKline Consumer Healthcare)

Chlorhexidine gluconate 2 mg per 1 ml *Corsodyl* 0.2% oral spray | 60 ml **P** £4.28 DT price = £1.26

**Mouthwash**► **Chlorhexidine (Non-proprietary)**

Chlorhexidine gluconate 2 mg per 1 ml Chlorhexidine gluconate 0.2% mouthwash aniseed | 300 ml **GSL** £1.99 DT price = £3.82

Colgate Pro Gum Health 0.2% antiseptic mouthwash | 300 ml **GSL** £3.06 DT price = £3.82  
Chlorhexidine gluconate 0.2% mouthwash original | 300 ml **GSL** £4.02 DT price = £3.82  
Chlorhexidine gluconate 0.2% mouthwash alcohol free | 300 ml **GSL** no price available DT price = £3.82 | 500 ml **GSL** no price available

► **Corsodyl** (GlaxoSmithKline Consumer Healthcare)

Chlorhexidine gluconate 2 mg per 1 ml *Corsodyl* Mint 0.2% mouthwash | 300 ml **GSL** £2.44 DT price = £3.82 | 600 ml **GSL** £4.76  
*Corsodyl* 0.2% mouthwash aniseed | 300 ml **GSL** £2.44 DT price = £3.82  
*Corsodyl* 0.2% mouthwash alcohol free | 300 ml **GSL** £3.06 DT price = £3.82

► **Curasept** (Curaprox (UK) Ltd)

Chlorhexidine gluconate 2 mg per 1 ml *Curasept* 0.2% oral rinse | 200 ml no price available

**Irrigation solution**► **Chlorhexidine (Non-proprietary)**

Chlorhexidine acetate 200 microgram per 1 ml Chlorhexidine acetate 0.02% irrigation solution 1litre bottles | 1 bottle **P** no price available  
Chlorhexidine acetate 500 microgram per 1 ml Chlorhexidine acetate 0.05% irrigation solution 1litre bottles | 1 bottle **P** no price available

## Chlorhexidine with chlorobutanol

The properties listed below are those particular to the combination only. For the properties of the components please consider, chlorhexidine above.

## • INDICATIONS AND DOSE

**Oral hygiene and plaque inhibition**

## ► BY MOUTH USING MOUTHWASH

- Child 6–17 years: Rinse or gargle 10–15 mL 2–3 times a day, to be diluted with lukewarm water in measuring cup provided
- Adult: Rinse or gargle 10–15 mL 2–3 times a day, to be diluted with lukewarm water in measuring cup provided

**Denture disinfection**

- Adult: Soak previously cleansed dentures in mouthwash (diluted with 2 volumes of water) for 60 minutes

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of mouthwash may include mint.

• **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Hexetidine

## • INDICATIONS AND DOSE

**Oral hygiene**

## ► BY MOUTH USING MOUTHWASH

- Child 6–17 years: Rinse or gargle 15 mL 2–3 times a day, to be used undiluted
- Adult: Rinse or gargle 15 mL 2–3 times a day, to be used undiluted

### • SIDE-EFFECTS

- ▶ **Very rare** Taste disturbance • transient anaesthesia
- ▶ **Frequency not known** Local irritation

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Hydrogen peroxide

- **DRUG ACTION** Hydrogen peroxide is an oxidising agent.

### • INDICATIONS AND DOSE

#### Oral hygiene (with hydrogen peroxide 6%)

- ▶ **BY MOUTH USING MOUTHWASH**
- ▶ **Child:** Rinse or gargle 15 mL 2–3 times a day for 2–3 minutes, to be diluted in half a tumblerful of warm water
- ▶ **Adult:** Rinse or gargle 15 mL 2–3 times a day for 2–3 minutes, to be diluted in half a tumblerful of warm water

#### PEROXYL®

#### Oral hygiene

- ▶ **BY MOUTH USING MOUTHWASH**
- ▶ **Child 6–17 years:** Rinse or gargle 10 mL 3 times a day for about 1 minute, for maximum 7 days, to be used after meals and at bedtime
- ▶ **Adult:** Rinse or gargle 10 mL up to 4 times a day for about 1 minute, to be used after meals and at bedtime

- **SIDE-EFFECTS** Hypertrophy of papillae of tongue on prolonged used

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Hydrogen Peroxide Mouthwash, BP consists of hydrogen peroxide 6% solution (= approx. 20 volume) BP.

- **HANDLING AND STORAGE** Hydrogen peroxide bleaches fabric.

### • PROFESSION SPECIFIC INFORMATION

#### Dental practitioners' formulary

Hydrogen Peroxide Mouthwash may be prescribed.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Mouthwash

- ▶ **Peroxyl** (Colgate-Palmolive (UK) Ltd)  
**Hydrogen peroxide 15 mg per 1 mL** Peroxyl 1.5% mouthwash sugar-free | 300 mL **[GSL]** £2.94

## Sodium bicarbonate with sodium chloride

### • INDICATIONS AND DOSE

#### Oral hygiene

- ▶ **BY MOUTH USING MOUTHWASH**
- ▶ **Adult:** (consult product literature)

- **DIRECTIONS FOR ADMINISTRATION** For mouthwash, extemporaneous preparations should be prepared according to the following formula: sodium chloride 1.5 g, sodium bicarbonate 1 g, concentrated peppermint emulsion 2.5 mL, double-strength chloroform water 50 mL, water to 100 mL. To be diluted with an equal volume of warm water prior to administration.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of mouthwash may include peppermint.

### • PROFESSION SPECIFIC INFORMATION

#### Dental practitioners' formulary

Compound sodium chloride mouthwash may be prescribed.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: mouthwash

## Sodium chloride

### • INDICATIONS AND DOSE

#### Oral hygiene

- ▶ **BY MOUTH USING MOUTHWASH**
- ▶ **Child:** Rinse or gargle as required
- ▶ **Adult:** Rinse or gargle as required

- **DIRECTIONS FOR ADMINISTRATION** Extemporaneous mouthwash preparations should be prepared according to the following formula: sodium chloride 1.5 g, sodium bicarbonate 1 g, concentrated peppermint emulsion 2.5 mL, double-strength chloroform water 50 mL, water to 100 mL. To be diluted with an equal volume of warm water.

- **PRESCRIBING AND DISPENSING INFORMATION** No mouthwash preparations available—when prepared extemporaneously, the BP states Sodium Chloride Mouthwash, Compound, BP consists of sodium bicarbonate 1%, sodium chloride 1.5% in a suitable vehicle with peppermint flavour.

### • PROFESSION SPECIFIC INFORMATION

#### Dental practitioners' formulary

Compound Sodium Chloride Mouthwash may be prescribed.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## 2.1 Dental caries

### Fluoride

Availability of adequate fluoride confers significant resistance to dental caries. It is now considered that the topical action of fluoride on enamel and plaque is more important than the systemic effect.

When the fluoride content of drinking water is less than 700 micrograms per litre (0.7 parts per million), daily administration of fluoride tablets or drops provides suitable supplementation. Systemic fluoride supplements should not be prescribed without reference to the fluoride content of the local water supply. Infants need not receive fluoride supplements until the age of 6 months.

Dentifrices which incorporate sodium fluoride or monofluorophosphate are also a convenient source of fluoride.

Individuals who are either particularly caries prone or medically compromised may be given additional protection by use of fluoride rinses or by application of fluoride gels. Rinses may be used daily or weekly; daily use of a less concentrated rinse is more effective than weekly use of a more concentrated one. High-strength gels must be applied regularly under professional supervision; extreme caution is necessary to prevent children from swallowing any excess. Less concentrated gels are available for home use. Varnishes are also available and are particularly valuable for young or disabled children since they adhere to the teeth and set in the presence of moisture.

## VITAMINS AND TRACE ELEMENTS

## Sodium fluoride

## ● INDICATIONS AND DOSE

**Prophylaxis of dental caries for water content less than 300micrograms/litre (0.3 parts per million) of fluoride ion**

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6 months-2 years: 250 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 3-5 years: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 6-17 years: 1 mg daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Adult: 1 mg daily, doses expressed as fluoride ion (F<sup>-</sup>)

**Prophylaxis of dental caries for water content between 300 and 700micrograms/litre (0.3-0.7 parts per million) of fluoride ion**

- ▶ BY MOUTH USING TABLETS
- ▶ Child 3-5 years: 250 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 6-17 years: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Adult: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)

**Prophylaxis of dental caries for water content above 700micrograms/litre (0.7 parts per million) of fluoride ion**

- ▶ Child 6 months-17 years: Supplements not advised
- ▶ Adult: Supplements not advised

**Prophylaxis of dental caries for individuals who are caries prone or medically compromised**

- ▶ BY MOUTH USING MOUTHWASH
- ▶ Adult: Rinse or gargle 10 mL daily

**COLGATE DURAPHAT® 2800PPM FLUORIDE TOOTHPASTE**

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING PASTE
- ▶ Child 10-17 years: Apply 1 centimetre twice daily, to be applied using a toothbrush
- ▶ Adult: Apply 1 centimetre twice daily, to be applied using a toothbrush

**COLGATE DURAPHAT® 5000PPM FLUORIDE TOOTHPASTE**

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING PASTE
- ▶ Child 16-17 years: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush
- ▶ Adult: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush

**EN-DE-KAY® FLUORINSE**

**Prophylaxis of dental caries for individuals who are caries prone or medically compromised**

- ▶ BY MOUTH USING MOUTHWASH
- ▶ Adult: 5 drops daily, dilute 5 drops to 10 mL of water, alternatively 20 drops once weekly, dilute 20 drops to 10 mL

## DOSE EQUIVALENCE AND CONVERSION

- ▶ Sodium fluoride 2.2 mg provides approx. 1 mg fluoride ion.
- ▶ These doses reflect the recommendations of the British Dental Association, the British Society of Paediatric Dentistry and the British Association for the Study of Community Dentistry (*Br Dent J* 1997; **182**: 6-7).

- **CONTRA-INDICATIONS** Not for areas where drinking water is fluoridated

## ● SIDE-EFFECTS

- ▶ **Uncommon** Occasional white flecks on teeth with recommended doses

- ▶ **Rare** Yellowish-brown discoloration if recommended doses are exceeded

## ● DIRECTIONS FOR ADMINISTRATION

- ▶ With oral use Tablets should be sucked or dissolved in the mouth and taken preferably in the evening.
- ▶ With oral (topical) use For mouthwash, rinse mouth for 1 minute and then spit out.

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** Brush teeth for 1 minute before spitting out.

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** Brush teeth for 3 minutes before spitting out.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral tablet formulations may include orange.

## ● PATIENT AND CARER ADVICE

Mouthwash Avoid eating, drinking, or rinsing mouth for 15 minutes after use.

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** Patients or carers should be given advice on how to administer sodium fluoride toothpaste. Avoid drinking or rinsing mouth for 30 minutes after use.

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** Patients or carers should be given advice on how to administer Sodium fluoride toothpaste.

## ● PROFESSION SPECIFIC INFORMATION

**Dental practitioners' formulary**

Tablets may be prescribed as Sodium Fluoride Tablets. Oral drops may be prescribed as Sodium Fluoride Oral Drops. Mouthwashes may be prescribed as Sodium Fluoride Mouthwash 0.05% or Sodium Fluoride Mouthwash 2%.

**Dental information**

Fluoride mouthwash, oral drops, tablets and toothpaste are prescribable on form FP10D (GP14 in Scotland, WP10D in Wales).

There are also arrangements for health authorities to supply fluoride tablets in the course of pre-school dental schemes, and they may also be supplied in school dental schemes.

Fluoride gels are not prescribable on form FP10D (GP14 in Scotland, WP10D in Wales).

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** May be prescribed as Sodium Fluoride Toothpaste 0.619%.

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** May be prescribed as Sodium Fluoride Toothpaste 1.1%.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral solution

**Tablet**

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 1.1 mg** Endekay Fluotabs 3-6 Years 1.1mg tablets | 200 tablet [P] £2.38 DT price = £2.38

**Sodium fluoride 2.2 mg** Endekay Fluotabs 6+ Years 2.2mg tablets | 200 tablet [P] £2.38 DT price = £2.38

**Paste**

- ▶ **Colgate Duraphat** (Colgate-Palmolive (UK) Ltd)

**Fluoride (as Sodium fluoride) 2.8 mg per 1 gram** Colgate Duraphat 2800ppm fluoride toothpaste sugar-free | 75 ml [PoM] £3.26 DT price = £3.26

**Fluoride (as Sodium fluoride) 5 mg per 1 gram** Colgate Duraphat 5000ppm fluoride toothpaste sugar-free | 51 gram [PoM] £6.50 DT price = £6.50

**Oral drops**

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 3.7 mg per 1 ml** Endekay Fluodrops 0.37% drops paediatric sugar-free | 60 ml [P] £2.38 DT price = £2.38

**Chewable tablet**

- ▶ **Fluor-a-day** (Dental Health Products Ltd)

**Sodium fluoride 1.1 mg** Fluor-a-day 1.1mg chewable tablets sugar-free | 200 tablet [P] £3.38 DT price = £2.79

**Sodium fluoride 2.2 mg** Fluor-a-day 2.2mg chewable tablets sugar-free | 200 tablet [P] £3.38 DT price = £2.79

**Mouthwash**

- ▶ **Sodium fluoride (Non-proprietary)**

**Sodium fluoride 500 microgram per 1 ml** Sodium fluoride 0.05% mouthwash sugar free sugar-free | 250 ml [GSL] no price available DT price = £1.51 sugar-free | 400 ml [GSL] no price available sugar-free | 500 ml [GSL] no price available

Oral-B Anti-Plaque Alcohol-Free 0.05% mouth rinse sugar-free | 500 ml no price available

Colgate TOTAL Pro Gum Health daily mouthwash sugar-free | 400 ml £3.10

- ▶ **Colgate FluoridGard** (Colgate-Palmolive (UK) Ltd)

**Sodium fluoride 500 microgram per 1 ml** Colgate FluoridGard 0.05% daily dental rinse alcohol free sugar-free | 400 ml £2.99

Colgate FluoridGard 0.05% daily dental rinse sugar-free | 400 ml [GSL] £2.99

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 500 microgram per 1 ml** Endekay 0.05% daily fluoride mouthrinse sugar-free | 250 ml [GSL] £1.51 DT price = £1.51 sugar-free | 500 ml [GSL] £2.45

**Sodium fluoride 20 mg per 1 ml** Endekay Fluorinse 2% mouthwash sugar-free | 100 ml [PoM] £4.97

## 3 Oral ulceration and inflammation

### Oral ulceration and inflammation

**Ulceration and inflammation**

Ulceration of the oral mucosa may be caused by trauma (physical or chemical), recurrent aphthae, infections, carcinoma, dermatological disorders, nutritional deficiencies, gastro-intestinal disease, haematopoietic disorders, and drug therapy (see also *Chemotherapy induced mucositis* and *myelosuppression* under Cytotoxic drugs p. 825). It is important to establish the diagnosis in each case as the majority of these lesions require specific management in addition to local treatment. Local treatment aims to protect the ulcerated area, to relieve pain, to reduce inflammation, or to control secondary infection. Patients with an unexplained mouth ulcer of more than 3 weeks' duration require urgent referral to hospital to exclude oral cancer.

**Simple mouthwashes**

A **saline** mouthwash may relieve the pain of traumatic ulceration. The mouthwash is made up with warm water and used at frequent intervals until the discomfort and swelling subsides.

**Antiseptic mouthwashes**

Secondary bacterial infection may be a feature of any mucosal ulceration; it can increase discomfort and delay healing. Use of a chlorhexidine mouthwash p. 1108 is often beneficial and may accelerate healing of recurrent aphthae.

**Corticosteroids**

Topical corticosteroid therapy may be used for some forms of oral ulceration. In the case of aphthous ulcers it is most effective if applied in the 'prodromal' phase.

Thrush or other types of candidiasis are recognised complications of corticosteroid treatment.

Hydrocortisone oromucosal tablets p. 1113 are allowed to dissolve next to an ulcer and are useful in recurrent aphthae and erosive lichenoid lesions.

Beclomethasone dipropionate inhaler p. 1113 sprayed on the oral mucosa is used to manage oral ulceration [unlicensed indication]. Alternatively, betamethasone

soluble tablets p. 1113 dissolved in water can be used as a mouthwash to treat oral ulceration [unlicensed indication].

Systemic corticosteroid therapy (see under Corticosteroids, inflammatory disorders p. 1053), is reserved for severe conditions such as pemphigus vulgaris.

**Local analgesics**

Local analgesics have a limited role in the management of oral ulceration. When applied topically their action is of a relatively short duration so that analgesia cannot be maintained continuously throughout the day. The main indication for a topical local analgesic is to relieve the pain of otherwise intractable oral ulceration particularly when it is due to major aphthae. For this purpose lidocaine hydrochloride 5% ointment below or lozenges containing a local anaesthetic are applied to the ulcer. Lidocaine hydrochloride 10% solution as spray can be applied thinly to the ulcer [unlicensed indication] using a cotton bud. When local anaesthetics are used in the mouth care must be taken not to produce anaesthesia of the pharynx before meals as this might lead to choking.

**Preparations on sale to the public:** many mouth ulcer preparations, throat lozenges, and throat sprays on sale to the public contain a local anaesthetic. To identify the active ingredients in such preparations, consult the product literature of the manufacturer—the correct proprietary name should be ascertained as many products have very similar names but different active ingredients.

Benzydamine hydrochloride p. 1112 and flurbiprofen p. 1113 are non-steroidal anti-inflammatory drugs (NSAIDs). Benzydamine hydrochloride mouthwash or spray may be useful in reducing the discomfort associated with a variety of ulcerative conditions. It has also been found to be effective in reducing the discomfort of tonsillectomy and post-irradiation mucositis. Some patients find the full-strength mouthwash causes some stinging and, for them, it should be diluted with an equal volume of water. Flurbiprofen lozenges are licensed for the relief of sore throat.

Choline salicylate p. 1113 is a derivative of salicylic acid and has some analgesic action. The dental gel may provide relief for recurrent aphthae, but excessive application or confinement under a denture irritates the mucosa and can itself cause ulceration.

**Other preparations**

Doxycycline p. 1114 rinsed in the mouth may be of value for recurrent aphthous ulceration.

**Periodontitis**

Low-dose doxycycline (*Periostat*®) is licensed as an adjunct to scaling and root planing for the treatment of periodontitis; a low dose of doxycycline reduces collagenase activity without inhibiting bacteria associated with periodontitis.

For anti-infectives used in the treatment of destructive (refractory) forms of periodontal disease, see under Oropharyngeal bacterial infections p. 1114. See also Mouthwashes and other preparations for oropharyngeal use p. 1107 for mouthwashes used for oral hygiene and plaque inhibition.

**ANAESTHETICS, LOCAL**

### Lidocaine hydrochloride (Lignocaine hydrochloride)

**● INDICATIONS AND DOSE****Dental practice**

- ▶ BY BUCCAL ADMINISTRATION USING OINTMENT

- ▶ Adult: Rub gently into dry gum

continued →

**Relief of pain in oral lesions**

- ▶ TO THE LESION USING OINTMENT
- ▶ Adult: Apply as required, rub sparingly and gently on affected areas

**LARYNGOJET®****Anaesthesia of mucous membranes of oropharynx, trachea, or respiratory tract**

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: 40–200 mg, to be given as a single dose sprayed, instilled (if a cavity), or applied with a swab (reduce dose according to size, age and condition of patient); usual dose 160 mg

**XYLOCAINE®****Bronchoscopy | Laryngoscopy | Oesophagoscopy |****Endotracheal intubation**

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: Up to 20 doses

**Dental practice**

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: 1–5 doses

**Maxillary sinus puncture**

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: 3 doses

**Relief of pain in oral lesions**

- ▶ TO THE LESION
- ▶ Adult: Apply thinly to the ulcer using a cotton bud

- **UNLICENSED USE** Spray not licensed for the relief of pain in oral lesions.
- **CAUTIONS** Avoid anaesthesia of the pharynx before meals—risk of choking · can damage plastic cuffs of endotracheal tubes
- **INTERACTIONS** → Appendix 1: antiarrhythmics
- **SIDE-EFFECTS** A single application of a topical lidocaine preparation does not generally cause systemic side-effects.
- **ALLERGY AND CROSS-SENSITIVITY**
  - ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.
- **BREAST FEEDING** Present in milk but amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Caution—increased risk of side-effects.
- **RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.
- **PROFESSION SPECIFIC INFORMATION**
  - Dental practitioners' formulary Lidocaine ointment 5% may be prescribed. Spray may be prescribed as Lidocaine Spray 10%
  - XYLOCAINE® May be prescribed as lidocaine spray 10%.

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid, ointment

**Spray**

- ▶ **Xylocaine** (Aspen Pharma Trading Ltd)  
Lidocaine 10 mg per 1 actuation Xylocaine 10mg/dose spray sugar-free | 50 ml [P] £6.29

**Ointment**

- ▶ **Lidocaine hydrochloride (Non-proprietary)**  
Lidocaine hydrochloride 50 mg per 1 gram Lidocaine 5% ointment | 15 gram [P] £6.50 DT price = £6.18

**Liquid**

- ▶ **Laryngo Jet** (UCB Pharma Ltd)  
Lidocaine hydrochloride 40 mg per 1 mL Lidocaine 4% oromucosal solution Laryngojet pre-filled syringes | 1 pre-filled disposable injection [PoM] £5.10

**ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS****Benzydamine hydrochloride****INDICATIONS AND DOSE****Painful inflammatory conditions of oropharynx**

- ▶ TO THE LESION USING MOUTHWASH
- ▶ Child 13–17 years: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs
- ▶ Adult: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs
- ▶ TO THE LESION USING OROMUCOSAL SPRAY
- ▶ Child 1 month–5 years (body-weight 4–7 kg): 1 spray every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 8–11 kg): 2 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 12–15 kg): 3 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 16 kg and above): 4 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 6–11 years: 4 sprays every 1.5–3 hours, to be administered onto affected area
- ▶ Child 12–17 years: 4–8 sprays every 1.5–3 hours, to be administered onto affected area
- ▶ Adult: 4–8 sprays every 1.5–3 hours, to be administered onto affected area

- **INTERACTIONS** → Appendix 1: NSAIDs

**SIDE-EFFECTS**

- ▶ **Rare** Hypersensitivity reactions
- ▶ **Frequency not known** Occasional numbness or stinging

**PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

Salicylic acid 10 mg per 1 ml, Rhubarb extract 50 mg per 1 ml Pyralvex solution | 10 ml [P] £3.25

## 4 Oropharyngeal bacterial infections

### Oropharyngeal bacterial infections

#### Antibacterial therapy for pericoronitis

Antibacterial required only in presence of systemic features of infection, or of trismus, or persistent swelling despite local treatment.

- Metronidazole p. 512, or *alternatively*, amoxicillin p. 518
- ▶ *Suggested duration of treatment* 3 days or until symptoms resolve.

#### Antibacterial therapy for gingivitis: acute necrotising ulcerative

Antibacterial required only if systemic features of infection.

- Metronidazole, or *alternatively*, amoxicillin
- ▶ *Suggested duration of treatment* 3 days or until symptoms resolve.

#### Antibacterial therapy for periapical or periodontal abscess

Antibacterial required only in severe disease with cellulitis or if systemic features of infection.

- Amoxicillin, or *alternatively*, metronidazole
- ▶ *Suggested duration of treatment* 5 days.

#### Antibacterial therapy for periodontitis

Antibacterial used as an adjunct to debridement in severe disease or disease unresponsive to local treatment alone.

- Metronidazole, or *alternatively in adults and children over 12 years*, doxycycline below

#### Antibacterial therapy for throat infections

Most throat infections are caused by viruses and many do not require antibacterial therapy. Consider antibacterial, if history of valvular heart disease, if marked systemic upset, if peritonsillar cellulitis or abscess, or if at increased risk from acute infection (e.g. in immunosuppression, cystic fibrosis); prescribe antibacterial for beta-haemolytic streptococcal pharyngitis.

- Phenoxymethylpenicillin p. 518
- ▶ In severe infection, initial parenteral therapy with benzylpenicillin sodium p. 517, then oral therapy with phenoxymethylpenicillin or amoxicillin (or ampicillin p. 520). **Avoid** amoxicillin if possibility of glandular fever.
- ▶ *Suggested duration of treatment* 10 days.
- If *penicillin-allergic*, clarithromycin p. 508 (or azithromycin p. 507 or erythromycin p. 510)
- ▶ *Suggested duration of treatment* 10 days

### ANTIBACTERIALS > TETRACYCLINES AND RELATED DRUGS

## Doxycycline

#### INDICATIONS AND DOSE

##### Treatment of recurrent aphthous ulceration

- ▶ **BY MOUTH USING SOLUBLE TABLETS**
- ▶ Child 12–17 years: 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of water then rinsed around the mouth for 2–3 minutes, it should preferably not be swallowed
- ▶ Adult: 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of

water then rinsed around the mouth for 2–3 minutes, it should preferably not be swallowed

- **UNLICENSED USE** Not licensed for use in children under 12 years.
- **CAUTIONS** Alcohol dependence
- **INTERACTIONS** → Appendix 1: tetracyclines
- **SIDE-EFFECTS** Anorexia · anxiety · dry mouth · flushing · tinnitus
- **RENAL IMPAIRMENT** Use with caution (avoid excessive doses).
- **PATIENT AND CARER ADVICE** Counselling on administration advised (posture). Photosensitivity Patients should be advised to avoid exposure to sunlight or sun lamps.
- **PROFESSION SPECIFIC INFORMATION**  
Dental practitioners' formulary  
Doxycycline Capsules 100 mg may be prescribed. Dispersible tablets may be prescribed as Dispersible Doxycycline Tablets. Tablets may be prescribed as Doxycycline Tablets 20 mg.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Dispersible tablet

CAUTIONARY AND ADVISORY LABELS 6, 9, 11, 13

#### ▶ Vibramycin-D (Pfizer Ltd)

**Doxycycline (as Doxycycline monohydrate) 100 mg** Vibramycin-D 100mg dispersible tablets sugar-free | 8 tablet (POM) £4.91 DT price = £4.91

period. To prevent recurrence of the problem, dentures should not normally be worn at night. New dentures may be required if these measures fail despite good compliance.

Miconazole oral gel can be applied to the fitting surface of the denture before insertion (for short periods only). Denture stomatitis is not always associated with candidiasis and other factors such as mechanical or chemical irritation, bacterial infection, or rarely allergy to the dental base material, may be the cause.

#### Chronic hyperplastic candidiasis

Chronic hyperplastic candidiasis (candidal leucoplakia) carries an increased risk of malignancy; biopsy is essential—this type of candidiasis may be associated with varying degrees of dysplasia, with oral cancer present in a high proportion of cases. Chronic hyperplastic candidiasis is treated with a systemic antifungal such as fluconazole to eliminate candidal overlay. Patients should avoid the use of tobacco.

#### Angular cheilitis

Angular cheilitis (angular stomatitis) is characterised by soreness, erythema and fissuring at the angles of the mouth. It is commonly associated with denture stomatitis but may represent a nutritional deficiency or it may be related to orofacial granulomatosis or HIV infection. Both yeasts (*Candida* spp.) and bacteria (*Staphylococcus aureus* and beta-haemolytic streptococci) are commonly involved as interacting, infective factors. A reduction in facial height related to ageing and tooth loss with maceration in the deep occlusive folds that may subsequently arise, predisposes to such infection. While the underlying cause is being identified and treated, it is often helpful to apply miconazole cream or fusidic acid ointment p. 539; if the angular cheilitis is unresponsive to treatment, hydrocortisone with miconazole cream or ointment p. 1150 can be used.

#### Immunocompromised patients

See advice on prevention of fungal infections in *Immunocompromised patients* under Antifungals, systemic use p. 558.

#### Drugs used in oropharyngeal candidiasis

Nystatin is not absorbed from the gastro-intestinal tract and is applied locally (as a suspension) to the mouth for treating local fungal infections. Miconazole is applied locally (as an oral gel) in the mouth but it is absorbed to the extent that potential interactions need to be considered. Miconazole also has some activity against Gram-positive bacteria including streptococci and staphylococci. Fluconazole is given by mouth for infections that do not respond to topical therapy or when topical therapy cannot be used. It is reliably absorbed and effective. Itraconazole p. 564 can be used for fluconazole-resistant infections.

If candidal infection fails to respond to 1 to 2 weeks of treatment with antifungal drugs the patient should be sent for investigation to eliminate the possibility of underlying disease. Persistent infection may also be caused by reinfection from the genito-urinary or gastro-intestinal tract. Infection can be eliminated from these sources by appropriate anticandidal therapy; the patient's partner may also require treatment to prevent reinfection.

Antiseptic mouthwashes are used in the prevention of oral candidiasis in immunocompromised patients and in the treatment of denture stomatitis.

## 5 Oropharyngeal fungal infections

### Oropharyngeal fungal infections

#### Overview

Fungal infections of the mouth are usually caused by *Candida* spp. (candidiasis or candidosis). Different types of oropharyngeal candidiasis are managed as follows:

#### Thrush

Acute pseudomembranous candidiasis (thrush), is usually an acute infection but it may persist for months in patients receiving inhaled corticosteroids, cytotoxics or broad-spectrum antibacterials. Thrush also occurs in patients with serious systemic disease associated with reduced immunity such as leukaemia, other malignancies, and HIV infection. Any predisposing condition should be managed appropriately. When thrush is associated with corticosteroid inhalers, rinsing the mouth with water (or cleaning a child's teeth) immediately after using the inhaler may avoid the problem. Treatment with nystatin p. 1116 or miconazole p. 1116 may be needed. Fluconazole p. 562 is effective for unresponsive infections or if a topical antifungal drug cannot be used or if the patient has dry mouth. Topical therapy may not be adequate in immunocompromised patients and an oral triazole antifungal is preferred.

#### Acute erythematous candidiasis

Acute erythematous (atrophic) candidiasis is a relatively uncommon condition associated with corticosteroid and broad-spectrum antibacterial use and with HIV disease. It is usually treated with fluconazole.

#### Denture stomatitis

Patients with denture stomatitis (chronic atrophic candidiasis), should cleanse their dentures thoroughly and leave them out as often as possible during the treatment

## ANTIFUNGALS &gt; IMIDAZOLE ANTIFUNGALS

## Miconazole

## ● INDICATIONS AND DOSE

**Prevention and treatment of oral candidiasis**

## ▶ BY MOUTH USING ORAL GEL

- ▶ Child 2–17 years: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)
- ▶ Adult: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)

**Prevention and treatment of intestinal candidiasis**

## ▶ BY MOUTH USING ORAL GEL

- ▶ Child 4 months–17 years: 5 mg/kg 4 times a day (max. per dose 250 mg 4 times a day) treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared
- ▶ Adult: 5 mg/kg 4 times a day (max. per dose 250 mg 4 times a day) treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared

- **UNLICENSED USE** Not licensed for use in children under 4 months of age or during first 5–6 months of life of an infant born pre-term.
- **CONTRA-INDICATIONS** Infants with impaired swallowing reflex
- **CAUTIONS** Avoid in acute porphyrias p. 969
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS**
  - ▶ Common or very common Nausea · rash · vomiting
  - ▶ Very rare Diarrhoea (usually on long term treatment) · hepatitis · rash (in children) · Stevens-Johnson syndrome · toxic epidermal necrolysis
- **PREGNANCY** Manufacturer advises avoid if possible—toxicity at high doses in *animal* studies.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **HEPATIC IMPAIRMENT** Avoid.
- **DIRECTIONS FOR ADMINISTRATION** Oral gel should be held in mouth, after food.
- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral gel may include orange.
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer miconazole oromucosal gel.
- **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary**  
Miconazole Oromucosal Gel may be prescribed.
- **EXCEPTIONS TO LEGAL CATEGORY**  
15-g tube of oral gel can be sold to the public.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Oromucosal gel**

CAUTIONARY AND ADVISORY LABELS 9

▶ **Daktarin** (McNeil Products Ltd, Janssen-Cilag Ltd)

Miconazole 20 mg per 1 gram Daktarin 20mg/g oromucosal gel sugar-free | 80 gram [PoM] £4.38 DT price = £4.38

## ANTIFUNGALS &gt; POLYENE ANTIFUNGALS

## Nystatin

08-Feb-2017

● **INDICATIONS AND DOSE****Oral candidiasis**

## ▶ BY MOUTH

- ▶ Child: 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved
- ▶ Adult: 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved

- **SIDE-EFFECTS** Local irritation · local sensitisation · nausea
- **PATIENT AND CARER ADVICE** Counselling advised with oral suspension (use of pipette, hold in mouth, after food). Medicines for Children leaflet: Nystatin for Candida infection [www.medicinesforchildren.org.uk/nystatin-for-candida-infection](http://www.medicinesforchildren.org.uk/nystatin-for-candida-infection)

● **PROFESSION SPECIFIC INFORMATION****Dental practitioners' formulary**

Nystatin Oral Suspension may be prescribed.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

**Oral suspension**

CAUTIONARY AND ADVISORY LABELS 9

EXCIPIENTS: May contain Ethanol

▶ **Nystatin (Non-proprietary)**

Nystatin 100000 unit per 1 mL Nystatin 100,000units/mL oral suspension | 30 mL [PoM] £2.33 DT price = £2.09

▶ **Nystan** (Bristol-Myers Squibb Pharmaceuticals Ltd)

Nystatin 100000 unit per 1 mL Nystan 100,000units/mL oral suspension (ready mixed) | 30 mL [PoM] £1.80 DT price = £2.09

## 6 Oropharyngeal viral infections

### Oropharyngeal viral infections

**Management**

Viral infections are the most common cause of a sore throat. They do not benefit from anti-infective treatment.

The management of primary herpetic gingivostomatitis is a soft diet, adequate fluid intake, and analgesics as required, including local use of benzydamine hydrochloride p. 1112. The use of chlorhexidine mouthwash p. 1108 will control plaque accumulation if toothbrushing is painful and will also help to control secondary infection in general.

In the case of severe herpetic stomatitis, a systemic antiviral such as aciclovir p. 599 is required. Valaciclovir p. 602 and famciclovir p. 601 are suitable alternatives for oral lesions associated with herpes zoster. Aciclovir and valaciclovir are also used for the prevention of frequently recurring herpes simplex lesions of the mouth, particularly when implicated in the initiation of erythema multiforme.

### Skin conditions, management

Vehicles

The British Association of Dermatologists list of preferred unlicensed dermatological preparations (specials) is available at [www.bad.org.uk/specials](http://www.bad.org.uk/specials).

Both vehicle and active ingredients are important in the treatment of skin conditions; the vehicle alone may have more than a mere placebo effect. The vehicle affects the degree of hydration of the skin, has a mild anti-inflammatory effect, and aids the penetration of active drug.

**Applications** are usually viscous solutions, emulsions, or suspensions for application to the skin (including the scalp) or nails.

**Colloids** are painted on the skin and allowed to dry to leave a flexible film over the site of application.

**Creams** are emulsions of oil and water and are generally well absorbed into the skin. They may contain an antimicrobial preservative unless the active ingredient or basis is intrinsically bactericidal and fungicidal. Generally, creams are cosmetically more acceptable than ointments because they are less greasy and easier to apply.

**Gels** consist of active ingredients in suitable hydrophilic or hydrophobic bases; they generally have a high water content. Gels are particularly suitable for application to the face and scalp.

**Lotions** have a cooling effect and may be preferred to ointments or creams for application over a hairy area. Lotions in alcoholic basis can sting if used on broken skin. *Shake lotions* (such as calamine lotion) contain insoluble powders which leave a deposit on the skin surface.

**Ointments** are greasy preparations which are normally anhydrous and insoluble in water, and are more occlusive than creams. They are particularly suitable for chronic, dry lesions. The most commonly used ointment bases consist of soft paraffin or a combination of soft, liquid, and hard paraffin. Some ointment bases have both *hydrophilic and lipophilic* properties; they may have occlusive properties on the skin surface, encourage hydration, and also be miscible with water; they often have a mild anti-inflammatory effect. *Water-soluble ointments* contain macrogols which are freely soluble in water and are therefore readily washed off; they

have a limited but useful role where ready removal is desirable.

**Pastes** are stiff preparations containing a high proportion of finely powdered solids such as zinc oxide and starch suspended in an ointment. They are used for circumscribed lesions such as those which occur in lichen simplex, chronic eczema, or psoriasis. They are less occlusive than ointments and can be used to protect inflamed, lichenified, or excoriated skin.

**Dusting powders** are used only rarely. They reduce friction between opposing skin surfaces. Dusting powders should not be applied to moist areas because they can cake and abrade the skin. Talc is a lubricant but it does not absorb moisture; it can cause respiratory irritation. Starch is less lubricant but absorbs water.

**Dilution**

The BP directs that creams and ointments should **not** normally be diluted but that should dilution be necessary care should be taken, in particular, to prevent microbial contamination. The appropriate diluent should be used and heating should be avoided during mixing; excessive dilution may affect the stability of some creams. Diluted creams should normally be used within 2 weeks of preparation.

Suitable quantities for prescribing

Suitable quantities of dermatological preparations to be prescribed for specific areas of the body		
Area of body	Creams and Ointments	Lotions
Face	15–30 g	100 ml
Both hands	25–50 g	200 ml
Scalp	50–100 g	200 ml
Both arms or both legs	100–200 g	200 ml
Trunk	400 g	500 ml
Groins and genitalia	15–25 g	100 ml
These amounts are usually suitable for an adult for twice daily application for 1 week. The recommendations do not apply to corticosteroid preparations. For suitable quantities of corticosteroid preparations, see relevant table.		

## Excipients and sensitisation

Excipients in topical products rarely cause problems. If a patch test indicates allergy to an excipient, products containing the substance should be avoided. The following excipients in topical preparations are associated, rarely, with sensitisation; the presence of these excipients is indicated in the entries for topical products.

- Beeswax
- Benzyl alcohol
- Butylated hydroxyanisole
- Butylated hydroxytoluene
- Cetostearyl alcohol (including cetyl and stearyl alcohol)
- Chlorocresol
- Edetic acid (EDTA)
- Ethylenediamine
- Fragrances
- Hydroxybenzoates (parabens)
- Imidurea
- Isopropyl palmitate
- N-(3-Chloroallyl)hexaminium chloride (quaternium 15)
- Polysorbates
- Propylene glycol
- Sodium metabisulfite
- Sorbic acid
- Wool fat and related substances including lanolin (purified versions of wool fat have reduced the problem)

## 1 Dry and scaling skin disorders

### Emollient and barrier preparations

#### Borderline substances

The preparations marked 'ACBS' are regarded as drugs when prescribed in accordance with the advice of the Advisory Committee on Borderline Substances for the clinical conditions listed. Prescriptions issued in accordance with this advice and endorsed 'ACBS' will normally not be investigated.

#### Emollients

**Emollients** soothe, smooth and hydrate the skin and are indicated for all dry or scaling disorders. Their effects are short lived and they should be applied frequently even after improvement occurs. They are useful in dry and eczematous disorders, and to a lesser extent in psoriasis. The choice of an appropriate emollient will depend on the severity of the condition, patient preference, and the site of application. Some ingredients rarely cause sensitisation and this should be suspected if an eczematous reaction occurs. The use of aqueous cream as a leave-on emollient may increase the risk of skin reactions, particularly in eczema.

Preparations such as **aqueous cream** and **emulsifying ointment** can be used as soap substitutes for hand washing and in the bath; the preparation is rubbed on the skin before rinsing off completely. The addition of a bath oil may also be helpful.

Urea is occasionally used with other topical agents such as corticosteroids to enhance penetration of the skin.

#### Emollient bath and shower preparations

Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. In dry skin conditions soap should be avoided.

The quantities of bath additives recommended for adults are suitable for an adult-size bath. Proportionately less should be used for a child-size bath or a washbasin; recommended bath additive quantities for children reflect this.

#### MHRA/CHM update (April 2016): Fire risk with paraffin-based skin emollients on dressings and clothing

When patients are being treated with a paraffin-based emollient product that is covered by a dressing or clothing, there is a danger that smoking or using a naked flame could cause dressings or clothing to catch fire.

Patients should be advised not to smoke, use naked flames (or be near people who are smoking or using naked flames), or go near anything that may cause a fire while emollients are in contact with their medical dressings or clothing. Patients' clothing and bedding should be changed regularly—preferably daily—because emollients soak into fabric and can become a fire hazard.

#### Barrier preparations

Barrier preparations often contain water-repellent substances such as dimeticone p. 1134 or other silicones. They are used on the skin around stomas, bedsores, and pressure areas in the elderly where the skin is intact. Where the skin has broken down, barrier preparations have a limited role in protecting adjacent skin. Barrier preparations are not a substitute for adequate nursing care.

#### Nappy rash

The first line of treatment is to ensure that nappies are changed frequently and that tightly fitting water-proof pants are avoided. The rash may clear when left exposed to the air and a barrier preparation, applied with each nappy change, can be helpful. A mild corticosteroid such as hydrocortisone 0.5% or 1% p. 1145 can be used if inflammation is causing discomfort, but it should be avoided in neonates. The barrier preparation should be applied after the corticosteroid preparation to prevent further damage. Preparations containing hydrocortisone should be applied for no more than a week; the hydrocortisone should be discontinued as soon as the inflammation subsides. The occlusive effect of nappies and waterproof pants may increase absorption of corticosteroids. If the rash is associated with candidal infection, a topical antifungal such as clotrimazole cream p. 1130 can be used. Topical antibacterial preparations can be used if bacterial infection is present; treatment with an oral antibacterial may occasionally be required in severe or recurrent infection. Hydrocortisone may be used in combination with antimicrobial preparations if there is considerable inflammation, erosion, and infection.

### DERMATOLOGICAL DRUGS > BARRIER PREPARATIONS

#### Barrier creams and ointments

##### • INDICATIONS AND DOSE

##### For use as a barrier preparation

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

##### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Ointment

EXCIPIENTS: May contain Wool fat and related substances including lanolin

##### ▶ Barrier creams and ointments (Non-proprietary)

Cetostearyl alcohol 20 mg per 1 gram, Zinc oxide 75 mg per 1 gram, Beeswax white 100 mg per 1 gram, Arachis oil 305 mg per 1 gram, Castor oil 500 mg per 1 gram | Zinc and Castor oil ointment | 100 gram **[GSL]** £1.45 | 500 gram **[GSL]** £4.99-£5.37 DT price = £5.37

Zinc and Castor oil cream | 100 gram **[GSL]** £1.45

▶ Brands may include Metanium

**Spray**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), wool fat and related substances including lanolin

► **Sprilon** (J M Loveridge Ltd)

**Dimeticone 10.4 mg per 1 gram, Zinc oxide 125 mg per 1 gram** Sprilon aerosol spray | 115 gram [GSL] £8.90 DT price = £8.90

**Cream**

EXCIPIENTS: May contain Beeswax, butylated hydroxyanisole, butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, fragrances, hydroxybenzoates (parabens), propylene glycol, wool fat and related substances including lanolin

► **Conotrane** (LEO Pharma)

**Benzalkonium chloride 1 mg per 1 gram, Dimeticone 220 mg per 1 gram** Conotrane cream | 100 gram [GSL] £0.88 DT price = £0.88 | 500 gram [GSL] £3.51

► **Drapolene** (Omega Pharma Ltd)

**Benzalkonium chloride 100 microgram per 1 gram, Cetrimide 2 mg per 1 gram** Drapolene cream | 100 gram [GSL] £1.76 | 200 gram [GSL] £2.86 | 350 gram [GSL] £4.28

► **Siopel** (Derma UK Ltd)

**Cetrimide 3 mg per 1 gram, Dimeticone 1000 100 mg per 1 gram** Siopel cream | 50 gram [GSL] £4.65

► **Sudocrem** (Teva UK Ltd)

**Benzyl cinnamate 1.5 mg per 1 gram, Benzyl alcohol 3.9 mg per 1 gram, Benzyl benzoate 10.1 mg per 1 gram, Wool fat hydrous 40 mg per 1 gram, Zinc oxide 152.5 mg per 1 gram** Sudocrem antiseptic healing cream | 60 gram [GSL] £1.45 | 125 gram [GSL] £2.15 | 250 gram [GSL] £3.67 | 400 gram [GSL] £5.25

**DERMATOLOGICAL DRUGS > EMOLLIENTS****Emollient bath and shower products, antimicrobial-containing**

31-Aug-2016

● **INDICATIONS AND DOSE****DERMOL® 200 SHOWER EMOLLIENT****Dry and pruritic skin conditions including eczema and dermatitis**► **TO THE SKIN**

- Child: To be applied to the skin or used as a soap substitute
- Adult: To be applied to the skin or used as a soap substitute

**DERMOL® 600® BATH EMOLLIENT****Dry and pruritic skin conditions including eczema and dermatitis**► **TO THE SKIN**

- Child 1-23 months: 5-15 mL/bath, not to be used undiluted
- Child 2-17 years: 15-30 mL/bath, not to be used undiluted
- Adult: Up to 30 mL/bath, not to be used undiluted

**DERMOL® WASH EMULSION****Dry and pruritic skin conditions including eczema and dermatitis**► **TO THE SKIN**

- Child: To be applied to the skin or used as a soap substitute
- Adult: To be applied to the skin or used as a soap substitute

**EMULSIDERM®****Dry skin conditions including eczema and ichthyosis**► **TO THE SKIN**

- Child 1-23 months: 5-10 mL/bath, alternatively, to be rubbed into dry skin until absorbed
- Child 2-17 years: 7-30 mL/bath, alternatively, to be rubbed into dry skin until absorbed
- Adult: 7-30 mL/bath, alternatively, to be rubbed into dry skin until absorbed

**OILATUM® PLUS****Topical treatment of eczema, including eczema at risk from infection**► **TO THE SKIN**

- Child 6-11 months: 1 mL/bath, not to be used undiluted
- Child 1-17 years: 1-2 capfuls/bath, not to be used undiluted
- Adult: 1-2 capfuls/bath, not to be used undiluted

**IMPORTANT SAFETY INFORMATION**

These preparations make skin and surfaces slippery—particular care is needed when bathing.

MHRA/CHM UPDATE (APRIL 2016): FIRE RISK WITH PARAFFIN-BASED SKIN EMOLLIENTS ON DRESSINGS OR CLOTHING

See Emollient and barrier preparations p. 1118.

- **DIRECTIONS FOR ADMINISTRATION** Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10-20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

● **PRESCRIBING AND DISPENSING INFORMATION**

Preparations containing an antibacterial should be avoided unless infection is present or is a frequent complication.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Bath additive**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Acetylated lanolin alcohols, isopropyl palmitate, polysorbates

► **Dermol 600** (Dermal Laboratories Ltd)

**Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per 1 gram** Dermol 600 bath emollient | 600 ml [P] £7.55

► **Emulsiderm** (Dermal Laboratories Ltd)

**Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per 1 gram** Emulsiderm emollient | 300 ml [P] £3.85 | 1000 ml [P] £12.00

► **Oilatum Plus** (GlaxoSmithKline Consumer Healthcare)

**Triclosan 20 mg per 1 gram, Benzalkonium chloride 60 mg per 1 gram, Liquid paraffin light 525 mg per 1 gram** Oilatum Plus bath additive | 500 ml [GSL] £7.22

**Liquid**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

► **Dermol 200** (Dermal Laboratories Ltd)

**Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram** Dermol 200 shower emollient | 200 ml [P] £3.55

► **Dermol Wash** (Dermal Laboratories Ltd)

**Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram** Dermol Wash cutaneous emulsion | 200 ml [P] £3.55

## Emollient bath and shower products, colloidal oatmeal-containing

### • INDICATIONS AND DOSE

#### Endogenous and exogenous eczema | Xeroderma | Ichthyosis

- ▶ TO THE SKIN
- ▶ Child 2-17 years: 20–30 mL/bath, alternatively apply to wet skin and rinse

**Isopropyl myristate 130 mg per 1 ml, Liquid paraffin light 378 mg per 1 ml** Hydromol Bath & Shower emollient | 350 ml [GSL] £3.88 | 500 ml [GSL] £4.42 | 1000 ml [GSL] £8.80

► **LPL** (Huxley Europe Ltd)

**Liquid paraffin light 634 mg per 1 ml** LPL 63.4 bath additive and emollient | 500 ml £3.10 DT price = £4.57

► **Oilatum** (GlaxoSmithKline Consumer Healthcare)

**Liquid paraffin light 634 mg per 1 ml** Oilatum Bath Formula | 150 ml [GSL] £2.95 DT price = £2.84 | 300 ml [GSL] £5.02 DT price = £4.88  
Oilatum Emollient | 250 ml [GSL] £2.75 DT price = £2.75 | 500 ml [GSL] £5.27 DT price = £4.57

► **Oilatum junior** (GlaxoSmithKline Consumer Healthcare)

**Liquid paraffin light 634 mg per 1 ml** Oilatum Junior bath additive | 150 ml [GSL] £2.95 DT price = £2.84 | 250 ml [GSL] £4.44 DT price = £2.75 | 300 ml [GSL] £5.02 DT price = £4.88 | 600 ml [GSL] £6.67 DT price = £5.89

► **QV** (Crawford Healthcare Ltd)

**Liquid paraffin light 850.9 mg per 1 gram** QV 85.09% bath oil | 250 ml £2.91 | 500 ml £4.76

► **Zerolatum** (Thornton & Ross Ltd)

**Acetylated wool alcohols 50 mg per 1 gram, Liquid paraffin 650 mg per 1 gram** Zerolatum Emollient bath additive | 500 ml £4.79

**Gel**

## CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

► **Doublebase** (Dermal Laboratories Ltd)

**Isopropyl myristate 150 mg per 1 gram, Liquid paraffin 150 mg per 1 gram** Doublebase emollient wash gel | 200 gram [P] £5.21  
Doublebase emollient shower gel | 200 gram [P] £5.21

**Cream**

## CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

► **Emollient bath and shower products, paraffin-containing (Non-proprietary)**

**Phenoxyethanol 10 mg per 1 gram, Liquid paraffin 60 mg per 1 gram, Emulsifying wax 90 mg per 1 gram, White soft paraffin 150 mg per 1 gram, Purified water 690 mg per 1 gram** Aqueous cream | 100 gram [GSL] £1.81 DT price = £0.87 | 500 gram [GSL] £6.35 DT price = £4.35

**Wash**

## CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates

► **Aquamax** (Intrapharm Laboratories Ltd)

Aquamax wash | 250 gram £2.99

► **E45 emollient wash** (Forum Health Products Ltd)

E45 emollient wash cream | 250 ml (ACBS) £3.30

► **QV Gentle** (Crawford Healthcare Ltd)

QV Gentle wash | 250 ml £3.17 | 500 ml £5.29

## Emollient bath and shower products, soya-bean oil-containing

### ● INDICATIONS AND DOSE

#### BALNEUM® BATH OIL

**Dry skin conditions including those associated with dermatitis and eczema**

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5–15 mL/bath, not to be used undiluted
- ▶ Child 2-17 years: 20–60 mL/bath, not to be used undiluted
- ▶ Adult: 20–60 mL/bath, not to be used undiluted

#### BALNEUM® PLUS BATH OIL

**Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced**

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 2-17 years: 10–20 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 20 mL/bath, alternatively, to be applied to wet skin and rinse

#### ZERONEUM®

**Dry skin conditions including eczema**

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 5 mL/bath
- ▶ Child 12-17 years: 20 mL/bath
- ▶ Adult: 20 mL/bath

### IMPORTANT SAFETY INFORMATION

These preparations make skin and surfaces slippery—particular care is needed when bathing.

- **DIRECTIONS FOR ADMINISTRATION** Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Bath additive

EXCIPIENTS: May contain Butylated hydroxytoluene, fragrances, propylene glycol

#### ▶ Balneum (Almirall Ltd)

**Laurumacrogols 150 mg per 1 gram, Soya oil 829.5 mg per 1 gram** Balneum Plus bath oil | 500 ml [GSL] £6.66

**Soya oil 847.5 mg per 1 gram** Balneum 84.75% bath oil | 200 ml [GSL] £2.48 | 500 ml [GSL] £5.38 | 1000 ml [GSL] £10.39

#### ▶ Zeronium (Thornton & Ross Ltd)

**Soya oil 833.5 mg per 1 gram** Zeronium 83.35% bath additive | 500 ml £4.48

## Emollient bath and shower products, tar-containing

17-Aug-2016

### ● INDICATIONS AND DOSE

#### POLYTAR EMOLLIENT®

**Psoriasis, eczema, atopic and pruritic dermatoses**

- ▶ TO THE SKIN
- ▶ Adult: 2–4 capfuls/bath, add 15–30 mL to an adult-size bath; soak for 20 minutes

### PSORIDERM® EMULSION

#### Psoriasis

- ▶ TO THE SKIN
- ▶ Adult: Up to 30 mL/bath, use 30mL in adult-size bath, soak for 5 minutes

### IMPORTANT SAFETY INFORMATION

These preparations make skin and surfaces slippery—particular care is needed when bathing.

- **DIRECTIONS FOR ADMINISTRATION** Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Bath additive

EXCIPIENTS: May contain Isopropyl palmitate, polysorbates

#### ▶ Psoriderm (Dermal Laboratories Ltd)

**Coal tar distilled 400 mg per 1 ml** Psoriderm Emulsion 40% tar additive | 200 ml [P] £2.74

## Emollient creams and ointments, antimicrobial-containing

17-Aug-2016

### ● INDICATIONS AND DOSE

**Dry and pruritic skin conditions including eczema and dermatitis**

- ▶ TO THE SKIN
- ▶ Child: To be applied to the skin or used as a soap substitute
- ▶ Adult: To be applied to the skin or used as a soap substitute

### IMPORTANT SAFETY INFORMATION

These preparations make skin and surfaces slippery—particular care is needed when bathing.

MHRA/CHM UPDATE (APRIL 2016): FIRE RISK WITH PARAFFIN-BASED SKIN EMOLLIENTS ON DRESSINGS OR CLOTHING  
See Emollient and barrier preparations p. 1118.

- **DIRECTIONS FOR ADMINISTRATION** Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.
- **PRESCRIBING AND DISPENSING INFORMATION** Preparations containing an antibacterial should be avoided unless infection is present or is a frequent complication.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

#### ▶ Dermal (Dermal Laboratories Ltd)

**Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 100 mg per**

**1 gram, Liquid paraffin 100 mg per 1 gram** Dermol cream | 100 gram [P] £2.86 | 500 gram [P] £6.63

## Emollients, urea-containing

- **DRUG ACTION** Urea is a keratin softener and hydrating agent used in the treatment of dry, scaling conditions (including ichthyosis) and may be useful in elderly patients.

### ● INDICATIONS AND DOSE

#### ● AQUADRATE<sup>®</sup>

##### Dry, scaling, and itching skin

###### ► TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily, to be applied thinly

#### ● BALNEUM<sup>®</sup> CREAM

##### Dry skin conditions

###### ► TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

#### ● BALNEUM<sup>®</sup> PLUS CREAM

##### Dry, scaling, and itching skin

###### ► TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

#### ● CALMURID<sup>®</sup>

##### Dry, scaling, and itching skin

###### ► TO THE SKIN

- Child: Apply twice daily, apply a thick layer for 3–5 minutes, massage into area, and remove excess. Can be diluted with aqueous cream (life of diluted cream is 14 days). Half-strength cream can be used for 1 week if stinging occurs
- Adult: Apply twice daily, apply a thick layer for 3–5 minutes, massage into area, and remove excess. Can be diluted with aqueous cream (life of diluted cream is 14 days). Half-strength cream can be used for 1 week if stinging occurs

#### ● DERMATONICS ONCE HEEL BALM<sup>®</sup>

##### Dry skin on soles of feet

###### ► TO THE SKIN

- Child 12–17 years: Apply once daily
- Adult: Apply once daily

#### ● E45<sup>®</sup> ITCH RELIEF CREAM

##### Dry, scaling, and itching skin

###### ► TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

#### ● EUCERIN<sup>®</sup> INTENSIVE CREAM

##### Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis

###### ► TO THE SKIN

- Child: Apply twice daily, to be applied thinly and rubbed into area
- Adult: Apply twice daily, to be applied thinly and rubbed into area

#### ● EUCERIN<sup>®</sup> INTENSIVE LOTION

##### Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis

###### ► TO THE SKIN

- Child: Apply twice daily, to be applied sparingly and rubbed into area
- Adult: Apply twice daily, to be applied sparingly and rubbed into area

#### ● FLEXITOL<sup>®</sup>

##### Dry skin on soles of feet and heels

###### ► TO THE SKIN

- Child 12–17 years: Apply 1–2 times a day
- Adult: Apply 1–2 times a day

**HYDROMOL® INTENSIVE****Dry, scaling, and itching skin**

## ► TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily, to be applied thinly

**IMUDERM® EMOLLIENT****Dry skin conditions including eczema, psoriasis or dermatitis**

## ► TO THE SKIN

- Adult: Apply to skin or use as a soap substitute

**NUTRAPLUS®****Dry, scaling, and itching skin**

## ► TO THE SKIN

- Child: Apply 2–3 times a day
- Adult: Apply 2–3 times a day

- **DIRECTIONS FOR ADMINISTRATION** Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

## 2 Infections of the skin

### Skin infections

**Antibacterial preparations**

*Cellulitis*, a rapidly spreading deeply seated inflammation of the skin and subcutaneous tissue, requires systemic antibacterial treatment. Lower leg infections or infections spreading around wounds are almost always cellulitis.

*Erysipelas*, a superficial infection with clearly defined edges (and often affecting the face), is also treated with a systemic antibacterial.

In the community, acute *impetigo* on small areas of the skin may be treated by short-term topical application of fusidic acid p. 539; mupirocin p. 1129 should be used only to treat meticillin-resistant *Staphylococcus aureus*. If the impetigo is extensive or longstanding, an oral antibacterial such as flucloxacillin p. 523 (or clarithromycin p. 508 in penicillin allergy) should be used. Mild antiseptics can be used to soften crusts.

Although many antibacterial drugs are available in topical preparations, some are potentially hazardous and frequently their use is not necessary if adequate hygienic measures can be taken. Moreover, not all skin conditions that are oozing, crusted, or characterised by pustules are actually infected. Topical antibacterials should be **avoided** on *leg ulcers* unless used in short courses for defined infections; treatment of bacterial colonisation is generally inappropriate.

To minimise the development of resistant organisms it is advisable to limit the choice of antibacterials applied topically to those not used systemically. Unfortunately some of these, for example neomycin sulfate p. 1127, may cause sensitisation, and there is cross-sensitivity with other aminoglycoside antibiotics, such as gentamicin p. 491. If *large areas of skin* are being treated, ototoxicity may also be a hazard with aminoglycoside antibiotics (and also with polymyxins p. 1128), particularly in children, in the elderly, and in those with renal impairment. *Resistant organisms* are more common in hospitals, and whenever possible swabs should be taken for bacteriological examination before beginning treatment.

Mupirocin is not related to any other antibacterial in use; it is effective for skin infections, particularly those due to Gram-positive organisms but it is not indicated for pseudomonal infection. Although *Staphylococcus aureus* strains with low-level resistance to mupirocin are emerging, it is generally useful in infections resistant to other antibacterials. To avoid the development of resistance, mupirocin or fusidic acid should not be used for longer than 10 days and local microbiology advice should be sought before using it in hospital. In the presence of mupirocin-resistant MRSA infection, a topical antiseptic such as povidone-iodine p. 1172, chlorhexidine p. 1173, or alcohol can be used; their use should be discussed with the local microbiologist.

Retapamulin p. 1129 can be used for impetigo and other superficial bacterial skin infections caused by *Staphylococcus aureus* and *Streptococcus pyogenes* that are resistant to first-line topical antibacterials. However, it is not effective against MRSA.

Tedizolid p. 541 is licensed for the treatment of acute bacterial skin and skin structure infections.

Silver sulfadiazine p. 1128 is used in the treatment of infected burns.

**Antibacterial preparations also used systemically**

Fusidic acid is a narrow-spectrum antibacterial used for staphylococcal infections. Fusidic acid has a role in the treatment of impetigo.

An ointment containing fusidic acid is used in the fissures of angular cheilitis when associated with staphylococcal infection. See Oropharyngeal fungal infections p. 1115 for further information on angular cheilitis.

Metronidazole p. 1127 is used topically for rosacea and to reduce the odour associated with anaerobic infections; oral metronidazole is used to treat wounds infected with anaerobic bacteria.

### Antifungal preparations

Most localised fungal infections are treated with topical preparations. To prevent relapse, local antifungal treatment should be continued for 1–2 weeks after the disappearance of all signs of infection. Systemic therapy is necessary for scalp infection or if the skin infection is widespread, disseminated, or intractable; although topical therapy may be used to treat some nail infections, systemic therapy is more effective. Skin scrapings should be examined if systemic therapy is being considered or where there is doubt about the diagnosis.

#### Dermatophytoses

Ringworm infection can affect the scalp (*tinea capitis*), body (*tinea corporis*), groin (*tinea cruris*), hand (*tinea manuum*), foot (*tinea pedis*, athlete's foot), or nail (*tinea unguium*). Scalp infection requires systemic treatment; additional application of a topical antifungal, during the early stages of treatment, may reduce the risk of transmission. A topical antifungal can also be used to treat asymptomatic carriers of scalp ringworm. Most other local ringworm infections can be treated adequately with topical antifungal preparations (including shampoos). The imidazole antifungals clotrimazole p. 1130, econazole nitrate p. 1130, ketoconazole p. 1130, and miconazole p. 1131 are all effective. Terbinafine cream p. 1132 is also effective but it is more expensive. Other topical antifungals include griseofulvin p. 1132 and the **undecenoates**. **Compound benzoic acid ointment** (Whitfield's ointment) has been used for ringworm infections but it is cosmetically less acceptable than proprietary preparations. Topical preparations for athlete's foot containing **tolnaftate** are on sale to the public.

Antifungal dusting powders are of little therapeutic value in the treatment of fungal skin infections and may cause skin irritation; they may have some role in preventing re-infection.

Antifungal treatment may not be necessary in asymptomatic patients with tinea infection of the nails. If treatment is necessary, a systemic antifungal is more effective than topical therapy. However, topical application of amorolfine p. 1131 or tioconazole p. 1131 may be useful for treating early onychomycosis when involvement is limited to mild distal disease, or for superficial white onychomycosis, or where there are contra-indications to systemic therapy.

#### Pityriasis versicolor

Pityriasis (*tinea*) versicolor can be treated with ketoconazole shampoo. Alternatively, **selenium sulfide** shampoo [unlicensed indication] can be used as a lotion (diluting with a small amount of water can reduce irritation) and left on the affected area for 10 minutes before rinsing off; it should be applied once daily for 7 days, and the course repeated if necessary.

Topical imidazole antifungals such as clotrimazole, econazole nitrate, ketoconazole, and miconazole, or topical terbinafine are alternatives, but large quantities may be required.

If topical therapy fails, or if the infection is widespread, pityriasis versicolor is treated systemically with a triazole antifungal. Relapse is common, especially in the immunocompromised.

### Candidiasis

Candidal skin infections can be treated with a topical imidazole antifungal, such as clotrimazole, econazole nitrate, ketoconazole, or miconazole; topical terbinafine is an alternative. Topical application of nystatin is also effective for candidiasis but it is ineffective against dermatophytosis. Refractory candidiasis requires systemic treatment generally with a triazole such as fluconazole p. 562; systemic treatment with terbinafine is **not appropriate** for refractory candidiasis.

#### Angular cheilitis

Miconazole cream is used in the fissures of angular cheilitis when associated with *Candida*.

#### Compound topical preparations

Combination of an imidazole and a mild corticosteroid (such as hydrocortisone 1% p. 1145) may be of value in the treatment of eczematous intertrigo and, in the first few days only, of a severely inflamed patch of ringworm.

Combination of a mild corticosteroid with either an imidazole or nystatin may be of use in the treatment of intertrigo associated with candida.

### Antiviral preparations

Aciclovir p. 1135 cream is licensed for the treatment of initial and recurrent labial and genital *herpes simplex infections*; treatment should begin as early as possible. Systemic treatment is necessary for buccal or vaginal infections and for *herpes zoster* (*shingles*).

#### Herpes labialis

Aciclovir cream can be used for the treatment of initial and recurrent labial herpes simplex infections (cold sores). It is best applied at the earliest possible stage, usually when prodromal changes of sensation are felt in the lip and before vesicles appear.

Penciclovir cream is also licensed for the treatment of herpes labialis; it needs to be applied more frequently than aciclovir cream.

Systemic treatment is necessary if cold sores recur frequently or for infections in the mouth.

### Parasiticial preparations

#### Suitable quantities of parasiticial preparations

Area of body	Skin creams	Lotions	Cream rinses
Scalp (head lice)		50–100 mL	50–100 mL
Body (scabies)	30–60 g	100 mL	
Body (crab lice)	30–60 g	100 mL	
These amounts are usually suitable for an adult for single application.			

#### Scabies

Permethrin p. 1135 is used for the treatment of *scabies* (*Sarcoptes scabiei*); malathion p. 1135 can be used if permethrin is inappropriate.

Benzyl benzoate p. 1134 is an irritant and should be avoided in children; it is less effective than malathion and permethrin.

Ivermectin p. 571 (available on a named patient basis from 'special-order' manufacturers or specialist importing companies) by mouth has been used, in combination with topical drugs, for the treatment of hyperkeratotic (crusted or 'Norwegian') scabies that does not respond to topical treatment alone; further doses may be required.

#### Application

Although acaricides have traditionally been applied after a hot bath, this is **not** necessary and there is even evidence that a hot bath may increase absorption into the blood, removing them from their site of action on the skin.

All members of the affected household should be treated simultaneously. Treatment should be applied to the whole body including the scalp, neck, face, and ears. Particular attention should be paid to the webs of the fingers and toes and lotion brushed under the ends of nails. It is now recommended that malathion and permethrin should be applied twice, one week apart; in the case of benzyl benzoate in adults, up to 3 applications on consecutive days may be needed. It is important to warn users to reapply treatment to the hands if they are washed. Patients with hyperkeratotic scabies may require 2 or 3 applications of acaricide on consecutive days to ensure that enough penetrates the skin crusts to kill all the mites.

#### Itching

The *itch* and *eczema* of scabies persists for some weeks after the infestation has been eliminated and treatment for pruritus and eczema may be required. Application of crotamiton p. 1161 can be used to control itching after treatment with more effective acaricides. A topical corticosteroid may help to reduce itch and inflammation after scabies has been treated successfully; however, persistent symptoms suggest that scabies eradication was not successful. Oral administration of a **sedating antihistamine** at night may also be useful.

#### Head lice

Dimeticone p. 1134 is effective against head lice (*Pediculus humanus capitis*). It coats head lice and interferes with water balance in lice by preventing the excretion of water; it is less active against eggs and treatment should be repeated after 7 days. Malathion, an organophosphorus insecticide, is an alternative, but resistance has been reported. Benzyl benzoate is licensed for the treatment of head lice but it is less effective than other drugs and not recommended for use in children. Permethrin is active against head lice but the formulation and licensed methods of application of the current products make them unsuitable for the treatment of head lice.

Head lice infestation (pediculosis) should be treated using lotion or liquid formulations only if live lice are present. Shampoos are diluted too much in use to be effective. A contact time of 8–12 hours or overnight treatment is recommended for lotions and liquids; a 2-hour treatment is not sufficient to kill eggs.

In general, a course of treatment for head lice should be 2 applications of product 7 days apart to kill lice emerging from any eggs that survive the first application. All affected household members should be treated simultaneously.

#### Wet combing methods

Head lice can be mechanically removed by combing wet hair meticulously with a plastic detection comb (probably for at least 30 minutes each time) over the whole scalp at 4-day intervals for a minimum of 2 weeks, and continued until no lice are found on 3 consecutive sessions; hair conditioner or vegetable oil can be used to facilitate the process.

Several devices for the removal of head lice such as combs and topical solutions, are available and some are prescribable on the NHS.

The Drug Tariffs can be accessed online at:

- National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)
- Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)
- Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

#### Crab lice

Permethrin and malathion are used to eliminate *crab lice* (*Phthirus pubis*). An aqueous preparation should be applied, allowed to dry naturally and washed off after 12 hours; a second treatment is needed after 7 days to kill lice emerging from surviving eggs. All surfaces of the body should be treated, including the scalp, neck, and face (paying particular

attention to the eyebrows and other facial hair). A different insecticide should be used if a course of treatment fails.

## 2.1 Bacterial skin infections

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Neomycin sulfate

##### • INDICATIONS AND DOSE

##### Bacterial skin infections

##### ▶ TO THE SKIN

- ▶ Child: Apply up to 3 times a day, for short-term use only
- ▶ Adult: Apply up to 3 times a day, for short-term use only

##### • UNLICENSED USE

- ▶ In children *Neomycin Cream BPC*—no information available.

##### • CONTRA-INDICATIONS Neonates

- **CAUTIONS** If large areas of skin are being treated ototoxicity may be a hazard, particularly in children, the elderly, and in those with renal impairment.

##### • INTERACTIONS → Appendix 1: neomycin

- **SIDE-EFFECTS** Sensitisation (cross sensitivity with other aminoglycosides may occur)

- **RENAL IMPAIRMENT** Ototoxicity may be a hazard if large areas of skin are treated.

- **LESS SUITABLE FOR PRESCRIBING** Neomycin sulfate cream is less suitable for prescribing.

##### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream

### ANTIBACTERIALS > NITROIMIDAZOLE DERIVATIVES

#### Metronidazole

- **DRUG ACTION** Metronidazole is an antimicrobial drug with high activity against anaerobic bacteria and protozoa.

##### • INDICATIONS AND DOSE

##### ACEA<sup>®</sup>

##### Acute inflammatory exacerbation of rosacea

##### ▶ TO THE SKIN

- ▶ Adult: Apply twice daily for 8 weeks, to be applied thinly

##### ANABACT<sup>®</sup>

##### Malodorous fungating tumours and malodorous gravitational and decubitus ulcers

##### ▶ TO THE SKIN

- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

##### METROGEL<sup>®</sup>

##### Acute inflammatory exacerbation of rosacea

##### ▶ TO THE SKIN

- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

##### Malodorous fungating tumours

##### ▶ TO THE SKIN

- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

continued →

**METROSA®****Acute exacerbation of rosacea**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for up to 8 weeks, to be applied thinly

**ROSICED®****Inflammatory papules and pustules of rosacea**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 6 weeks (longer if necessary)

**ROZEX® CREAM****Inflammatory papules, pustules and erythema of rosacea**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

**ROZEX® GEL****Inflammatory papules, pustules and erythema of rosacea**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

**ZYOMET®****Acute inflammatory exacerbation of rosacea**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

- **CAUTIONS** Avoid exposure to strong sunlight or UV light
- **INTERACTIONS** → Appendix 1: metronidazole
- **SIDE-EFFECTS** Skin irritation

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Gel**

EXCIPIENTS: May contain Benzyl alcohol, disodium edetate, hydroxybenzoates (parabens), propylene glycol

- ▶ **Acea** (Ferndale Pharmaceuticals Ltd)

Metronidazole 7.5 mg per 1 gram Acea 0.75% gel | 40 gram [PoM]  
£9.95 DT price = £22.63

- ▶ **Anabact** (Cambridge Healthcare Supplies Ltd)

Metronidazole 7.5 mg per 1 gram Anabact 0.75% gel | 15 gram [PoM] £4.47 DT price = £4.47 | 30 gram [PoM] £7.89

- ▶ **Metrogel** (Galderma (UK) Ltd)

Metronidazole 7.5 mg per 1 gram Metrogel 0.75% gel | 40 gram [PoM] £22.63 DT price = £22.63

- ▶ **Metrosa** (M & A Pharmachem Ltd)

Metronidazole 7.5 mg per 1 gram Metrosa 0.75% gel | 30 gram [PoM] £12.00 | 40 gram [PoM] £19.90 DT price = £22.63

- ▶ **Rozex** (Galderma (UK) Ltd)

Metronidazole 7.5 mg per 1 gram Rozex 0.75% gel | 30 gram [PoM] £6.60 | 40 gram [PoM] £9.88 DT price = £22.63

- ▶ **Zyomet** (AMCo)

Metronidazole 7.5 mg per 1 gram Zyomet 0.75% gel | 30 gram [PoM] £12.00

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, isopropyl palmitate, propylene glycol

- ▶ **Rosiced** (Pierre Fabre Dermo-Cosmetique)

Metronidazole 7.5 mg per 1 gram Rosiced 0.75% cream | 30 gram [PoM] £7.50 DT price = £6.60

- ▶ **Rozex** (Galderma (UK) Ltd)

Metronidazole 7.5 mg per 1 gram Rozex 0.75% cream | 30 gram [PoM] £6.60 DT price = £6.60 | 40 gram [PoM] £9.88 DT price = £9.88

- **CAUTIONS** If large areas of skin are being treated nephrotoxicity and neurotoxicity may be a hazard, particularly in children, in the elderly, and in those with renal impairment.
- **INTERACTIONS** → Appendix 1: polymyxins
- **SIDE-EFFECTS** Sensitisation

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

Combinations available: *Bacitracin with polymyxin B*, p. 1129

**ANTIBACTERIALS > SULFONAMIDES****Silver sulfadiazine**● **INDICATIONS AND DOSE****Prophylaxis and treatment of infection in burn wounds**

- ▶ TO THE SKIN
- ▶ Child: Apply daily, may be applied more frequently if very exudative
- ▶ Adult: Apply daily, may be applied more frequently if very exudative

**For conservative management of finger-tip injuries**

- ▶ TO THE SKIN
- ▶ Child: Apply every 2–3 days, consult product literature for details
- ▶ Adult: Apply every 2–3 days, consult product literature for details

**Adjunct to prophylaxis of infection in skin graft donor sites and extensive abrasions**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

**Adjunct to short-term treatment of infection in pressure sores**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days

**As an adjunct to short-term treatment of infection in leg ulcers**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days, not recommended if ulcer is very exudative

● **UNLICENSED USE**

- ▶ In children No age range specified by manufacturer.

- **CONTRA-INDICATIONS** Not recommended for neonates (in children)

● **CAUTIONS** G6PD deficiency**CAUTIONS, FURTHER INFORMATION**

- ▶ Large areas Plasma-sulfadiazine concentrations may approach therapeutic levels with *side-effects* and *interactions* as for sulfonamides if large areas of skin are treated.

- **INTERACTIONS** → Appendix 1: silver sulfadiazine

- **SIDE-EFFECTS** Allergic reactions · argyria (following treatment of large areas of skin or prolonged use) · burning · itching · leucopenia · rashes

**SIDE-EFFECTS, FURTHER INFORMATION**

- ▶ Severe blood and skin disorders Owing to the association of sulfonamides with severe blood and skin disorders, treatment should be stopped immediately if blood disorders or rashes develop.

Leucopenia developing 2–3 days after starting treatment of burns patients is reported usually to be self-limiting and silver sulfadiazine need not usually be discontinued provided blood counts are monitored carefully to ensure return to normality within a few days.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with sensitivity to sulfonamides.

**ANTIBACTERIALS > POLYMYXINS****Polymyxins**● **INDICATIONS AND DOSE****Bacterial skin infections**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily, may be applied more frequently if required

- **PREGNANCY** Risk of neonatal haemolysis and methaemoglobinemia in third trimester.
- **BREAST FEEDING** Small risk of kernicterus in jaundiced infants and of haemolysis in G6PD-deficient infants.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution if significant impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution if significant impairment.
- **MONITORING REQUIREMENTS** Monitor for leucopenia.
- **DIRECTIONS FOR ADMINISTRATION** Apply with sterile applicator.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- ▶ **Flamazine** (Smith & Nephew Healthcare Ltd)

**Sulfadiazine silver 10 mg per 1 gram** Flamazine 1% cream | 20 gram [PoM] £2.91 | 50 gram [PoM] £3.85 DT price = £3.85 | 250 gram [PoM] £10.32 DT price = £10.32 | 500 gram [PoM] £18.27 DT price = £18.27

## ANTIBACTERIALS > OTHER

### Bacitracin with polymyxin B

#### ● INDICATIONS AND DOSE

##### **Bacterial skin infections**

###### ▶ TO THE SKIN

- ▶ Child: Apply twice daily, can be applied more frequently if required
- ▶ Adult: Apply twice daily, can be applied more frequently if required

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Nephrotoxicity • neurotoxicity

##### **CAUTIONS, FURTHER INFORMATION**

If large areas of skin are being treated nephrotoxicity and neurotoxicity may be a hazard, particularly in children with renal impairment.

- **INTERACTIONS** → Appendix 1: bacitracin, polymyxins

- **SIDE-EFFECTS** Contact sensitisation

- **RENAL IMPAIRMENT** Renal impairment increases the risk of nephrotoxicity and neurotoxicity.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Ointment**

- ▶ **Polyfax** (Teva UK Ltd)

**Bacitracin zinc 500 unit per 1 gram, Polymyxin B sulfate 10000 unit per 1 gram** Polyfax ointment | 4 gram [PoM] £3.26 | 20 gram [PoM] £4.62 DT price = £4.62

### Mupirocin

#### ● INDICATIONS AND DOSE

##### **Bacterial skin infections, particularly those caused by Gram-positive organisms (except pseudomonal infection)**

###### ▶ TO THE SKIN

- ▶ Child: Apply up to 3 times a day for up to 10 days
- ▶ Adult: Apply up to 3 times a day for up to 10 days

- **UNLICENSED USE** Mupirocin ointment licensed for use in children (age range not specified by manufacturer). *Bactroban*® cream not recommended for use in children under 1 year.

- **SIDE-EFFECTS** Burning sensation • local reactions • pruritus • rash • urticaria
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** No information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution when mupirocin ointment used in moderate or severe impairment because it contains macrogols (polyethylene glycol).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Ointment**

- ▶ **Mupirocin (Non-proprietary)**

**Mupirocin 20 mg per 1 gram** Mupirocin 2% ointment | 15 gram [PoM] £12.50 DT price = £5.26

- ▶ **Bactroban** (GlaxoSmithKline UK Ltd)

**Mupirocin 20 mg per 1 gram** Bactroban 2% ointment | 15 gram [PoM] £5.26 DT price = £5.26

##### **Cream**

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Bactroban** (GlaxoSmithKline UK Ltd)

**Mupirocin (as Mupirocin calcium) 20 mg per 1 gram** Bactroban 2% cream | 15 gram [PoM] £5.26 DT price = £5.26

### Retapamulin

#### ● INDICATIONS AND DOSE

##### **Superficial bacterial skin infection caused by *Staphylococcus aureus* and *Streptococcus pyogenes* (if resistant to first line topical antibacterials)**

###### ▶ TO THE SKIN

- ▶ Child 9 months-17 years: Apply twice daily for 5 days, to be applied thinly, maximum area of skin treated 2% of body surface area, review treatment if no response within 2–3 days
- ▶ Adult: Apply twice daily for 5 days, to be applied thinly, maximum area of skin treated 100 cm<sup>2</sup> or lesion length 10 cm, review treatment if no response within 2–3 days

- **CONTRA-INDICATIONS** Contact with eyes • contact with mucous membranes

- **SIDE-EFFECTS** Contact dermatitis • localised erythema • localised irritation • localised pain • pruritus

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### **Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* (SMC) has advised (March 2008) that retapamulin (*Altargo*®) is **not** recommended for use within NHS Scotland for the treatment of superficial skin infections.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Ointment**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxytoluene

- ▶ **Altargo** (GlaxoSmithKline UK Ltd)

**Retapamulin 10 mg per 1 gram** Altargo 10mg/g ointment | 5 gram [PoM] £7.89

## 2.2 Fungal skin infections

### ANTIFUNGALS > IMIDAZOLE ANTIFUNGALS

#### Clotrimazole

##### ● INDICATIONS AND DOSE

##### Fungal skin infections

##### ► TO THE SKIN

- Child: Apply 2–3 times a day
- Adult: Apply 2–3 times a day

- **CAUTIONS** Contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS** Local irritation · erythema · hypersensitivity reactions · itching · mild burning sensation
- SIDE-EFFECTS, FURTHER INFORMATION**  
Treatment should be discontinued if side-effects are severe.
- **PREGNANCY** Minimal absorption from skin; not known to be harmful.
- **PRESCRIBING AND DISPENSING INFORMATION** Spray may be useful for application of clotrimazole to large or hairy areas of the skin.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

##### ► Clotrimazole (Non-proprietary)

Clotrimazole 10 mg per 1 gram Clotrimazole 1% cream | 20 gram [P] £2.06 DT price = £1.12 | 50 gram [P] £5.45 DT price = £2.80

##### ► Canesten (clotrimazole) (Bayer Plc)

Clotrimazole 10 mg per 1 gram Canesten 1% cream | 20 gram [P] £2.14 DT price = £1.12 | 50 gram [P] £3.50 DT price = £2.80

Canesten Antifungal 1% cream | 20 gram [P] £1.85 DT price = £1.12  
Canesten Dual Action 1% cream

Clotrimazole 20 mg per 1 gram Canesten 2% thrush cream | 10 gram [P] no price available | 20 gram [P] £4.46 DT price = £4.46

Clotrimazole 100 mg per 1 gram Canesten 10% VC cream | 5 gram [PoM] £4.50 DT price = £6.23

##### Liquid

##### ► Canesten (clotrimazole) (Bayer Plc)

Clotrimazole 10 mg per 1 ml Canesten 1% solution | 20 ml [P] £2.30 DT price = £2.30

Combinations available: **Hydrocortisone with clotrimazole**, p. 1150

#### Econazole nitrate

##### ● INDICATIONS AND DOSE

##### Fungal skin infections

##### ► TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

##### Fungal nail infections

##### ► BY TRANSUNGUAL APPLICATION

- Child: Apply once daily, applied under occlusive dressing
- Adult: Apply once daily, applied under occlusive dressing

- **CAUTIONS** Avoid contact with eyes and mucous membranes
- **SIDE-EFFECTS** Burning sensation · erythema · hypersensitivity reactions · itching · occasional local irritation

##### SIDE-EFFECTS, FURTHER INFORMATION

Treatment should be discontinued if side-effects are severe.

- **PREGNANCY** Minimal absorption from skin; not known to be harmful.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Butylated hydroxyanisole, fragrances

##### ► Pevaryl (Janssen-Cilag Ltd)

Econazole nitrate 10 mg per 1 gram Pevaryl 1% cream | 30 gram [P] £3.71

#### Ketoconazole

16-Jun-2017

##### ● INDICATIONS AND DOSE

##### Tinea pedis

##### ► TO THE SKIN USING CREAM

- Adult: Apply twice daily

##### Fungal skin infection (not Tinea pedis)

##### ► TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day

##### Treatment of seborrhoeic dermatitis and dandruff

##### ► TO THE SKIN USING SHAMPOO

- Child 12–17 years: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing
- Adult: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing

##### Prophylaxis of seborrhoeic dermatitis and dandruff

##### ► TO THE SKIN USING SHAMPOO

- Child 12–17 years: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing
- Adult: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing

##### Treatment of pityriasis versicolor

##### ► TO THE SKIN USING SHAMPOO

- Child 12–17 years: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing
- Adult: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing

##### Prophylaxis of pityriasis versicolor

##### ► TO THE SKIN USING SHAMPOO

- Child 12–17 years: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing
- Adult: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing

- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS** Erythema · hypersensitivity reactions · itching · mild burning sensation · occasional local irritation
- SIDE-EFFECTS, FURTHER INFORMATION**  
Treatment should be discontinued if side-effects are severe.
- **CONCEPTION AND CONTRACEPTION** Effect on latex condoms and diaphragms not yet known.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NHS restrictions** Ketoconazole cream is not prescribable on the NHS except for seborrhoeic dermatitis and pityriasis versicolor and endorsed 'SLs'.
- **EXCEPTIONS TO LEGAL CATEGORY**  
A 15-g tube is available for sale to the public for the treatment of tinea pedis, tinea cruris, and candidal intertrigo.

Can be sold to the public for the prevention and treatment of dandruff and seborrhoeic dermatitis of the scalp as a shampoo formulation containing ketoconazole maximum 2%, in a pack containing maximum 120 mL and labelled to show a maximum frequency of application of once every 3 days.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- ▶ **Daktarin Gold** (McNeil Products Ltd)  
Ketoconazole 20 mg per 1 gram Daktarin Gold 2% cream | 15 gram [P] £3.16
- ▶ **Daktarin Intensiv** (McNeil Products Ltd)  
Ketoconazole 20 mg per 1 gram Daktarin Intensiv 2% cream | 15 gram [GSL] £3.16
- ▶ **Nizoral** (Janssen-Cilag Ltd)  
Ketoconazole 20 mg per 1 gram Nizoral 2% cream | 30 gram [PoM] £4.24 DT price = £4.24

#### **Shampoo**

EXCIPIENTS: May contain Imidurea

- ▶ **Ketoconazole (Non-proprietary)**  
Ketoconazole 20 mg per 1 gram Ketoconazole 2% shampoo | 120 ml [PoM] £2.77 DT price = £2.77
- ▶ **Dandrazol** (Transdermal Ltd)  
Ketoconazole 20 mg per 1 gram Dandrazol 2% shampoo | 120 ml [PoM] £5.20 DT price = £2.77
- ▶ **Nizoral** (Janssen-Cilag Ltd, McNeil Products Ltd)  
Ketoconazole 20 mg per 1 gram Nizoral 2% shampoo | 120 ml [PoM] £3.59 DT price = £2.77

## Miconazole

### ● INDICATIONS AND DOSE

#### **Fungal skin infections**

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily continuing for 10 days after lesions have healed
- ▶ Adult: Apply twice daily continuing for 10 days after lesions have healed

#### **Fungal nail infections**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day
- ▶ Adult: Apply 1–2 times a day

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CAUTIONS** Avoid in acute porphyrias p. 969 • contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS**
- ▶ Common or very common Nausea • rash • vomiting
- ▶ Frequency not known Burning sensation • erythema • hypersensitivity reactions • itching • occasional local irritation

#### **SIDE-EFFECTS, FURTHER INFORMATION**

Treatment should be discontinued if side effects are severe.

- **PREGNANCY** Absorbed from the skin in small amounts; manufacturer advises caution.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **PROFESSION SPECIFIC INFORMATION**  
Dental practitioners' formulary  
Miconazole cream may be prescribed.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
NHS restrictions Miconazole nitrate 2% powder is not prescribable on the NHS.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Cream**

EXCIPIENTS: May contain Butylated hydroxyanisole

- ▶ **Daktarin** (McNeil Products Ltd, Janssen-Cilag Ltd)  
Miconazole nitrate 20 mg per 1 gram Daktarin 2% cream | 15 gram [P] £2.14 | 30 gram [P] £1.82 DT price = £1.82

#### **Powder**

- ▶ **Daktarin** (McNeil Products Ltd)  
Miconazole nitrate 20 mg per 1 gram Daktarin 2% powder | 20 gram [P] £2.58 DT price = £2.58

## Tioconazole

### ● INDICATIONS AND DOSE

#### **Fungal nail infection**

- ▶ BY TRANSUNGUAL APPLICATION
- ▶ Child: Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin
- ▶ Adult: Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CAUTIONS** Contact with eyes and mucous membranes should be avoided • use with caution if child likely to suck affected digits (in children)
- **SIDE-EFFECTS** Burning sensation • dry skin • erythema • exfoliation • hypersensitivity reactions • itching • local oedema • nail discoloration • nail pain • occasional local irritation • periungual inflammation • rash
- SIDE-EFFECTS, FURTHER INFORMATION**  
Treatment should be discontinued if side-effects are severe.
- **PREGNANCY** Manufacturer advises avoid.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Paint**

- ▶ **Tioconazole (Non-proprietary)**  
Tioconazole 283 mg per 1 ml Tioconazole 283mg/ml medicated nail lacquer | 12 ml [PoM] £27.38–£28.74 DT price = £28.74
- ▶ **Trosyl** (Pfizer Ltd)  
Tioconazole 283 mg per 1 ml Trosyl 283mg/ml nail solution | 12 ml [PoM] £27.38 DT price = £28.74

## ANTIFUNGALS > OTHER

## Amorolfine

### ● INDICATIONS AND DOSE

#### **Fungal nail infections**

- ▶ BY TRANSUNGUAL APPLICATION
- ▶ Child 12–17 years: Apply 1–2 times a week for 6 months to treat finger nails and for toe nails 9–12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes
- ▶ Adult: Apply 1–2 times a week for 6 months to treat finger nails and for toe nails 9–12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes

- **UNLICENSED USE** Not licensed for use in children under 12 years.

- **CAUTIONS** Avoid contact with ears • avoid contact with eyes and mucous membranes • use with caution in child likely to suck affected digits
- **SIDE-EFFECTS** Burning sensation • erythema • hypersensitivity reactions • itching • occasional local irritation
- SIDE-EFFECTS, FURTHER INFORMATION**  
Treatment should be discontinued if side-effects are severe.
- **PATIENT AND CARER ADVICE** Avoid nail varnish or artificial nails during treatment.
- **EXCEPTIONS TO LEGAL CATEGORY**
  - In adults Amorolfine nail lacquer can be sold to the public if supplied for the treatment of mild cases of distal and lateral subungual onychomycoses caused by dermatophytes, yeasts and moulds; subject to treatment of max. 2 nails, max. strength of nail lacquer amorolfine 5% and a pack size of 3 mL.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Medicated nail lacquer

CAUTIONARY AND ADVISORY LABELS 10

## Griseofulvin

#### • INDICATIONS AND DOSE

##### Tinea pedis

###### ➢ TO THE SKIN

- Adult: Apply 400 micrograms once daily, apply to an area approximately 13 cm<sup>2</sup>; increased if necessary to 1.2 mg once daily for maximum treatment duration of 4 weeks, allow each spray to dry between application

- **CAUTIONS** Avoid contact with eyes and mucous membranes
- **INTERACTIONS** → Appendix 1: griseofulvin
- **SIDE-EFFECTS** Burning sensation • erythema • hypersensitivity reactions • itching • occasional local irritation
- SIDE-EFFECTS, FURTHER INFORMATION**  
Treatment should be discontinued if side-effects are severe.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Spray

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Benzyl alcohol

##### ➢ Grisoful AF (Transdermal Ltd)

**Griseofulvin 10 mg per 1 gram** Grisoful AF 1% spray | 20 mL **[P]** £3.35

## Terbinafine

#### • INDICATIONS AND DOSE

##### Tinea pedis

###### ➢ TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1 week, to be applied thinly

###### ➢ BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 2–6 weeks

##### Tinea corporis

###### ➢ TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

###### ➢ BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 4 weeks

##### Tinea cruris

###### ➢ TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

###### ➢ BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 2–4 weeks

##### Dermatophyte infections of the nails

###### ➢ BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 6 weeks–3 months (occasionally longer in toenail infections)

##### Cutaneous candidiasis | Pityriasis versicolor

###### ➢ TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for 2 weeks, to be applied thinly, review treatment after 2 weeks

#### • CAUTIONS

- With oral use autoimmune disease (risk of lupus-erythematosus-like effect) • psoriasis (risk of exacerbation)
- With topical use contact with eyes and mucous membranes should be avoided

#### • INTERACTIONS → Appendix 1: terbinafine

#### • SIDE-EFFECTS

##### ➢ Common or very common

- With oral use Abdominal discomfort • anorexia • arthralgia • diarrhoea • dyspepsia • headache • myalgia • nausea • rash • urticaria

##### ➢ Uncommon

- With oral use Taste disturbance

##### ➢ Rare

- With oral use Cholestasis • dizziness • hepatitis • hypoaesthesia • jaundice • liver toxicity • malaise • paraesthesia

##### ➢ Very rare

- With oral use Alopecia • blood disorders • lupus erythematosus-like effect • neutropenia • photosensitivity • serious skin reactions • Stevens-Johnson syndrome • thrombocytopenia • toxic epidermal necrolysis

##### ➢ Frequency not known

- With oral use Disturbances in smell • exacerbation of psoriasis • hearing disturbances • influenza-like symptoms • pancreatitis • rhabdomyolysis • vasculitis

- With topical use Erythema • hypersensitivity reactions • itching • mild burning sensation • occasional local irritation

#### SIDE-EFFECTS, FURTHER INFORMATION

##### ➢ Liver toxicity

- With oral use Discontinue treatment if liver toxicity develops (including jaundice, cholestasis and hepatitis).

##### ➢ Serious skin reactions

- With oral use Discontinue treatment in progressive skin rash (including Stevens-Johnson syndrome and toxic epidermal necrolysis).

##### ➢ Topical application

- With topical use Treatment should be discontinued if side effects are severe.

**● PREGNANCY**

- With topical use Manufacturer advises use only if potential benefit outweighs risk—*animal* studies suggest no adverse effects.
- With oral use Manufacturer advises use only if potential benefit outweighs risk—no information available.

**● BREAST FEEDING**

- With topical use Manufacturer advises avoid—present in milk. Less than 5% of the dose is absorbed after topical application of terbinafine; avoid application to mother's chest.
- With oral use Avoid—present in milk.

**● HEPATIC IMPAIRMENT**

- With oral use Manufacturer advises avoid—elimination reduced.

**● RENAL IMPAIRMENT**

- With oral use Use half normal dose if eGFR less than 50 mL/minute/1.73 m<sup>2</sup> and no suitable alternative available.

**● MONITORING REQUIREMENTS**

- With oral use Monitor hepatic function before treatment and then every 4–6 weeks during treatment—discontinue if abnormalities in liver function tests.

**● EXCEPTIONS TO LEGAL CATEGORY**

- With topical use Preparations of terbinafine hydrochloride (maximum 1%) can be sold to the public for use in those over 16 years for external use for the treatment of tinea pedis as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis and cruris as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis, cruris, and corporis as a spray in a pack containing maximum 30 mL spray or as a gel in a pack containing maximum 30 g gel.

**● MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

## BENZOATES

## Benzoic acid with salicylic acid

## ● INDICATIONS AND DOSE

**Ringworm (tinea)**

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Avoid broken or inflamed skin • avoid contact with eyes • avoid contact with mucous membranes

**CAUTIONS, FURTHER INFORMATION**

Salicylate toxicity may occur particularly if applied on large areas of skin.

- **SIDE-EFFECTS** Erythema • hypersensitivity reactions • itching • mild burning sensation • occasional local irritation

**SIDE-EFFECTS, FURTHER INFORMATION**

Treatment should be discontinued if side effects are severe.

- **PRESCRIBING AND DISPENSING INFORMATION** Benzoic Acid Ointment, Compound, BP has also been referred to as Whitfield's ointment.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

## SALICYLIC ACID AND DERIVATIVES

## Boric acid with salicylic acid and tannic acid

## ● INDICATIONS AND DOSE

**Fungal nail infection, particularly tinea**

- ▶ BY TRANSUNGUAL APPLICATION
- ▶ Child 5–17 years: Apply twice daily, and after washing
- ▶ Adult: Apply twice daily, and after washing

- **CAUTIONS** Avoid broken or inflamed skin • contact with eyes and mucous membranes should be avoided • use with caution in children likely to suck affected digits

**CAUTIONS, FURTHER INFORMATION**

Salicylate toxicity can occur particularly if applied on large areas of skin.

- **SIDE-EFFECTS** Burning sensation • erythema • hypersensitivity reactions • itching • occasional local irritation

**SIDE-EFFECTS, FURTHER INFORMATION**

Treatment should be discontinued if side-effects are severe.

- **PREGNANCY** Avoid.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. No licensed medicines listed.

## 2.3 Parasitic skin infections

## PARASITICIDES

## Benzyl benzoate

## ● INDICATIONS AND DOSE

**Scabies**

- ▶ TO THE SKIN
- ▶ Adult: Apply over the whole body; repeat without bathing on the following day and wash off 24 hours later; a third application may be required in some cases

- **CAUTIONS** Avoid contact with eyes and mucous membranes • children (not recommended) • do not use on broken or secondarily infected skin

- **SIDE-EFFECTS** Burning sensation (especially on genitalia and excoriations) • rashes • skin irritation

- **BREAST FEEDING** Suspend feeding until product has been washed off.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Benzyl Benzoate Application, BP consists of benzyl benzoate 25% in an emulsion basis.

Some manufacturers recommend application to the body but to exclude the head and neck. However, application should be extended to the scalp, neck, face, and ears. Note—dilution to reduce irritant effect also reduces efficacy.

- **LESS SUITABLE FOR PRESCRIBING** Benzyl benzoate is less suitable for prescribing.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

## Dimeticone

## ● INDICATIONS AND DOSE

**Head lice**

- ▶ TO THE SKIN
- ▶ Child: Apply once weekly for 2 doses, rub into dry hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)
- ▶ Adult: Apply once weekly for 2 doses, rub into dry hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)

- **UNLICENSED USE** Not licensed for use in children under 6 months except under medical supervision.

- **CAUTIONS** Avoid contact with eyes • children under 6 months, medical supervision required

- **SIDE-EFFECTS** Skin irritation

- **PATIENT AND CARER ADVICE** Patients should be told to keep hair away from fire and flames during treatment.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

condition. Mild corticosteroids are generally used on the face and on flexures; potent corticosteroids are generally required for use on adults with discoid or lichenified eczema or with eczema on the scalp, limbs, and trunk. Treatment should be reviewed regularly, especially if a potent corticosteroid is required. In patients with frequent flares (2–3 per month), a topical corticosteroid can be applied on 2 consecutive days each week to prevent further flares.

Bandages (including those containing ichthammol with zinc oxide p. 1151) are sometimes applied over topical corticosteroids or emollients to treat eczema of the limbs. Dry-wrap dressings can be used to provide a physical barrier to help prevent scratching and improve retention of emollients. See *Wound management products and elasticated garments* for details of elasticated viscose stockinette tubular bandages and garments, and silk clothing.

See Eczema and psoriasis, drugs affecting the immune response p. 1137 for the role of topical pimecrolimus p. 1154 and tacrolimus p. 1155 in atopic eczema.

#### Infection

Bacterial infection (commonly with *Staphylococcus aureus* and occasionally with *Streptococcus pyogenes*) can exacerbate eczema and requires treatment with topical or systemic **antibacterial drugs**. Antibacterial drugs should be used in short courses (typically 1 week) to reduce the risk of drug resistance or skin sensitisation. Associated eczema is treated simultaneously with a topical corticosteroid which can be combined with a topical antimicrobial.

Eczema involving widespread or recurrent infection requires the use of a systemic antibacterial that is active against the infecting organism. Products that combine an antiseptic with an emollient application and with a bath emollient can also be used; antiseptic shampoos can be used on the scalp.

Intertriginous eczema commonly involves candida and bacteria; it is best treated with a mild or moderately potent topical corticosteroid and a suitable antimicrobial drug.

Widespread herpes simplex infection may complicate atopic eczema and treatment with a systemic antiviral drug is indicated.

#### Management of other features of eczema

**Lichenification**, which results from repeated scratching is treated initially with a potent corticosteroid. Bandages containing **ichthammol** paste p. 1151 (to reduce pruritus) and other substances such as **zinc oxide** can be applied over the corticosteroid or emollient. **Coal tar** and ichthammol can be useful in some cases of *chronic eczema*.

A *non-sedating antihistamine* may be of some value in relieving severe itching or urticaria associated with eczema. A *sedating antihistamine* can be used if itching causes sleep disturbance.

**Exudative ('weeping') eczema** requires a potent corticosteroid initially; infection may also be present and require specific treatment. Potassium permanganate solution (1 in 10,000) p. 1172 can be used in exudating eczema for its antiseptic and astringent effects; treatment should be stopped when exudation stops.

#### Severe refractory eczema

**Severe refractory eczema** is best managed under specialist supervision; it may require phototherapy or drugs that act on the immune system. Alitretinoin p. 1157 is licensed for the treatment of severe chronic hand eczema refractory to potent topical corticosteroids; patients with hyperkeratotic features are more likely to respond to alitretinoin than those with pompholyx.

#### Seborrhoeic dermatitis

**Seborrhoeic dermatitis (seborrhoeic eczema)** is associated with species of the yeast *Malassezia* and affects the scalp, paranasal areas, and eyebrows. Shampoos active against the yeast (including those containing ketoconazole p. 1130 and

## 3 Inflammatory skin conditions

### 3.1 Eczema and psoriasis

#### Eczema

##### Types and management

Eczema (dermatitis) has several causes, which may influence treatment. The main types of eczema are irritant, allergic contact, atopic, venous and discoid; different types may co-exist. Lichenification, due to scratching and rubbing, may complicate any chronic eczema. *Atopic eczema* is the most common type and it usually involves dry skin as well as infection and lichenification.

Management of eczema involves the removal or treatment of contributory factors including occupational and domestic irritants. Known or suspected contact allergens should be avoided. Rarely, ingredients in topical medicinal products may sensitise the skin; the BNF lists active ingredients together with excipients that have been associated with skin sensitisation.

Skin dryness and the consequent irritant eczema requires **emollients** applied regularly (at least twice daily) and liberally to the affected area; this can be supplemented with bath or shower emollients. The use of emollients should continue even if the eczema improves or if other treatment is being used.

**Topical corticosteroids** are also required in the management of eczema; the potency of the corticosteroid should be appropriate to the severity and site of the

coal tar) and combinations of mild corticosteroids with suitable antimicrobials are used.

## Eczema and psoriasis, drugs affecting the immune response

### Overview

Drugs affecting the immune response are used for eczema or psoriasis. Systemic drugs acting on the immune system are used under specialist supervision.

Pimecrolimus p. 1154 by topical application is licensed for *mild to moderate atopic eczema*. Tacrolimus p. 1155 is licensed for topical use in *moderate to severe atopic eczema*. Both are drugs whose long-term safety is still being evaluated and they should not usually be considered first-line treatments unless there is a specific reason to avoid or reduce the use of topical corticosteroids. Treatment of atopic eczema with topical pimecrolimus or topical tacrolimus should be initiated only by prescribers experienced in managing the condition. Topical tacrolimus and pimecrolimus have a role in the treatment of psoriasis.

A short course of a systemic corticosteroid can be given for eczema flares that have not improved despite appropriate topical treatment.

Ciclosporin p. 788 by mouth can be used for *severe psoriasis* and for *severe eczema*. Azathioprine p. 787 or mycophenolate mofetil p. 796 are used for severe refractory eczema [unlicensed indication].

Methotrexate p. 844 can be used for *severe psoriasis*, the dose being adjusted according to severity of the condition and haematological and biochemical measurements. Folic acid p. 937 should be given to reduce the possibility of side-effects associated with methotrexate. Folic acid can be given once weekly [unlicensed indication], on a different day from the methotrexate; alternative regimens of folic acid may be used in some settings.

Etanercept p. 1012, adalimumab p. 1008, and infliximab p. 1016 inhibit the activity of tumour necrosis factor (TNF $\alpha$ ). They are used for *severe plaque psoriasis* either refractory to at least 2 standard systemic treatments and photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications; while either etanercept or adalimumab is considered to be the first choice in stable disease, infliximab or adalimumab may be useful when rapid disease control is required. Secukinumab p. 1004 and ixekizumab p. 1155 inhibit the activity of interleukin-17A. They are used for *moderate to severe plaque psoriasis* in patients who are candidates for systemic therapy. Secukinumab is also licensed for psoriatic arthritis and ankylosing spondylitis. Ustekinumab p. 1006 (a monoclonal antibody that inhibits interleukins 12 and 23) can be used for *severe plaque psoriasis* that has not responded to at least 2 standard systemic treatments and photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications. Adalimumab is also licensed for the treatment of active moderate to severe hidradenitis suppurativa (acne inversa) in patients who have had inadequate response to conventional systemic therapy. Adalimumab, etanercept, infliximab and ustekinumab are also licensed for psoriatic arthritis.

## Psoriasis

### Management

Psoriasis is characterised by epidermal thickening and scaling. It commonly affects extensor surfaces and the scalp.

Occasionally, psoriasis is provoked or exacerbated by drugs such as lithium, chloroquine and hydroxychloroquine,

beta-blockers, non-steroidal anti-inflammatory drugs, and ACE inhibitors. Psoriasis may not be seen until the drug has been taken for weeks or months.

**Emollients**, in addition to their effects on dryness, scaling and cracking, may have an anti-proliferative effect in psoriasis, and may be the only treatment necessary for mild psoriasis. They are particularly useful in *inflammatory psoriasis* and in *plaque psoriasis of palms and soles*, in which irritant factors can perpetuate the condition. Emollients are useful adjuncts to other more specific treatment.

More specific topical treatment for *chronic stable plaque psoriasis* on extensor surfaces of trunk and limbs involves the use of **vitamin D analogues**, coal tar p. 1152, dithranol p. 1151, and the retinoid tazarotene p. 1158. However, they can irritate the skin and they are not suitable for the more inflammatory forms of psoriasis; their use should be suspended during an inflammatory phase of psoriasis. The efficacy and the irritancy of each substance varies between patients. If a substance irritates significantly, it should be stopped or the concentration reduced; if it is tolerated, its effects should be assessed after 4 to 6 weeks and treatment continued if it is effective.

*Scalp psoriasis* is usually scaly, and the scale may be thick and adherent; this will require softening with an emollient cream, ointment, or oil. A tar-based shampoo is first-line treatment for scalp psoriasis; a keratolytic, such as salicylic acid, should also be used if there is significant scaling, to allow other treatments to work.

Some preparations prescribed for psoriasis affecting the scalp, combine salicylic acid with coal tar or sulfur. The product should be applied generously, and an adequate quantity should be prescribed. It should be left on for at least an hour, often more conveniently overnight, before washing off. The use of scalp preparations containing a potent corticosteroid or a vitamin D analogue, either alone or in combination, can also be helpful.

*Facial, flexural and genital psoriasis* can be managed with short-term use of a mild or moderate potency topical corticosteroid (a mild potency topical corticosteroid is preferred for the initial treatment of facial psoriasis). Calcitriol p. 1159 or tacalcitol p. 1159 can be used for longer-term treatment, or if the response to mild or moderate potency topical corticosteroids is inadequate; calcipotriol p. 1158 is more likely to cause irritation. Low strength tar preparations can also be used. Pimecrolimus p. 1154 or tacrolimus p. 1155 by topical application [unlicensed indication] can be used short-term, under specialist supervision, in patients whose condition has not responded adequately to other treatments, or who are intolerant of them.

*Widespread unstable psoriasis* of erythrodermic or generalised pustular type requires urgent specialist assessment. Initial topical treatment should be limited to using emollients frequently and generously; emollients should be prescribed in quantities of 1 kg or more. More localised acute or subacute *inflammatory psoriasis* with hot, spreading or itchy lesions, should be treated topically with emollients or with a corticosteroid of moderate potency.

Calcipotriol and tacalcitol are analogues of vitamin D that affect cell division and differentiation. Calcitriol is an active form of vitamin D. Vitamin D and its analogues are used first-line for the long-term treatment of plaque psoriasis; they do not smell or stain and they may be more acceptable than tar or dithranol products. Of the vitamin D analogues, tacalcitol and calcitriol are less likely to irritate.

**Coal tar** has anti-inflammatory properties that are useful in chronic plaque psoriasis; it also has antiscaling properties. Crude coal tar (coal tar, BP) is the most effective form, typically in a concentration of 1 to 10% in a soft paraffin base, but few outpatients tolerate the smell and mess. Cleaner extracts of coal tar included in proprietary preparations, are more practicable for home use but they are

less effective and improvement takes longer. Contact of coal tar products with normal skin is not normally harmful and they can be used for widespread small lesions; however, irritation, contact allergy, and sterile folliculitis can occur. The milder tar extracts can be used on the face and flexures. Tar baths and tar shampoos are also helpful.

Dithranol is effective for chronic plaque psoriasis. Its major disadvantages are irritation (for which individual susceptibility varies) and staining of skin and of clothing. Dithranol is not generally suitable for widespread small lesions nor should it be used in the flexures or on the face. Proprietary preparations are more suitable for home use; they are usually washed off after 5 to 60 minutes ('short contact'). Specialist nurses may apply intensive treatment with dithranol paste which is covered by stockinette dressings and usually retained overnight. Dithranol should be discontinued if even a low concentration causes acute inflammation; continued use can result in the psoriasis becoming unstable.

Tazarotene, a retinoid, has a similar efficacy to vitamin D and its analogues, but is associated with a greater incidence of irritation. Although irritation is common, it is minimised by applying tazarotene sparingly to the plaques and avoiding normal skin; application to the face and in flexures should also be avoided. Tazarotene does not stain and is odourless.

A topical **corticosteroid** is not generally suitable for long-term use or as the sole treatment of extensive chronic plaque psoriasis; any early improvement is not usually maintained and there is a risk of the condition deteriorating or of precipitating an unstable form of psoriasis (e.g. erythrodermic psoriasis or generalised pustular psoriasis) on withdrawal. Topical use of potent corticosteroids on widespread psoriasis can also lead to systemic as well as local side-effects. However, topical corticosteroids used short-term may be appropriate to treat psoriasis in specific sites such as the face or flexures (with a mild or moderate corticosteroid), and psoriasis of the scalp, palms, and soles (with a potent corticosteroid). Very potent corticosteroids should only be used under specialist supervision.

Combining the use of a corticosteroid with another specific topical treatment may be beneficial in chronic plaque psoriasis; the drugs may be used separately at different times of the day or used together in a single formulation. *Eczema* co-existing with psoriasis may be treated with a corticosteroid, or coal tar, or both.

#### Phototherapy

**Phototherapy** is available in specialist centres under the supervision of a dermatologist. **Ultraviolet B (UVB)** radiation is usually effective for *chronic stable psoriasis* and for *guttate psoriasis*. It may be considered for patients with moderately severe psoriasis in whom topical treatment has failed, but it may irritate inflammatory psoriasis.

**Photochemotherapy** combining long-wave ultraviolet A radiation with a psoralen (PUVA) is available in specialist centres under the supervision of a dermatologist. The psoralen, which enhances the effect of irradiation, is administered either by mouth or topically. PUVA is effective in most forms of psoriasis, including *localised palmoplantar pustular psoriasis*. Early adverse effects include phototoxicity and pruritus. Higher cumulative doses exaggerate skin ageing, increase the risk of dysplastic and neoplastic skin lesions, especially squamous cancer, and pose a theoretical risk of cataracts.

Phototherapy combined with coal tar, dithranol, tazarotene, topical vitamin D or vitamin D analogues, or oral acitretin, allows reduction of the cumulative dose of phototherapy required to treat psoriasis.

#### Systemic treatment

**Systemic treatment** is required for severe, resistant, unstable or complicated forms of psoriasis, and it should be initiated only under specialist supervision. Systemic drugs for psoriasis include acitretin and drugs that affect the

immune response (such as ciclosporin p. 788 and methotrexate p. 844).

Systemic corticosteroids should be used only rarely in psoriasis because rebound deterioration may occur on reducing the dose.

Acitretin p. 1156, a metabolite of etretinate, is a retinoid (vitamin A derivative); it is prescribed by specialists. The main indication for acitretin is *psoriasis*, but it is also used in disorders of keratinisation such as severe *Darier's disease* (keratosis follicularis), and some forms of *ichthyosis*. Although a minority of cases of psoriasis respond well to acitretin alone, it is only moderately effective in many cases and it is combined with other treatments. A therapeutic effect occurs after 2 to 4 weeks and the maximum benefit after 4 months. Consideration should be given to stopping acitretin if the response is inadequate after 4 months at the optimum dose. The manufacturers of acitretin do not recommend continuous treatment for longer than 6 months. However, some patients may benefit from longer treatment, provided that the lowest effective dose is used, patients are monitored carefully for adverse effects, and the need for treatment is reviewed regularly.

Apart from teratogenicity, which remains a risk for 3 years after stopping, acitretin is the least toxic systemic treatment for psoriasis; in women with a potential for child-bearing, the possibility of pregnancy must be excluded before treatment and effective contraception must be used during treatment and for at least 3 years afterwards (oral progestogen-only contraceptives not considered effective).

#### Topical treatment

The vitamin D and analogues, calcipotriol p. 1158, calcitriol p. 1159, and tacalcitol p. 1159 are used for the management of plaque psoriasis. They should be avoided by those with calcium metabolism disorders, and used with caution in generalised pustular or erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia).

**Other drugs used for Eczema and psoriasis** Apremilast, p. 1018

## CORTICOSTEROIDS

### Topical corticosteroids

#### Overview

Topical corticosteroids are used for the treatment of inflammatory conditions of the skin (other than those arising from an infection), in particular eczema, contact dermatitis, insect stings, and eczema of scabies.

Corticosteroids suppress the inflammatory reaction during use; they are not curative and on discontinuation a rebound exacerbation of the condition may occur. They are generally used to relieve symptoms and suppress signs of the disorder when other measures such as emollients are ineffective.

Topical corticosteroids are not recommended in the routine treatment of urticaria; treatment should only be initiated and supervised by a specialist. They should not be used indiscriminately in pruritus (where they will only benefit if inflammation is causing the itch) and are **not** recommended for acne vulgaris.

Systemic or very potent topical corticosteroids should be avoided or given only under specialist supervision in *psoriasis* because, although they may suppress the psoriasis in the short term, relapse or vigorous rebound occurs on withdrawal (sometimes precipitating severe pustular psoriasis). See the role of topical corticosteroids in the treatment of psoriasis.

In general, the most potent topical corticosteroids should be reserved for recalcitrant dermatoses such as *chronic discoid lupus erythematosus*, *lichen simplex chronicus*, *hypertrophic lichen planus*, and *palmoplantar pustulosis*.

Potent corticosteroids should generally be avoided on the face and skin flexures, but specialists occasionally prescribe them for use on these areas in certain circumstances.

When topical treatment has failed, intralesional corticosteroid injections may be used. These are more effective than the very potent topical corticosteroid preparations and should be reserved for severe cases where there are localised lesions such as *keloid scars*, *hypertrophic lichen planus*, or *localised alopecia areata*.

#### Perioral lesions

Hydrocortisone cream 1% p. 1145 can be used for up to 7 days to treat uninfected inflammatory lesions on the lips. Hydrocortisone with miconazole cream or ointment p. 1150 is useful where infection by susceptible organisms and inflammation co-exist, particularly for initial treatment (up to 7 days) e.g. in angular cheilitis. Organisms susceptible to miconazole include *Candida* spp. and many Gram-positive bacteria including streptococci and staphylococci.

#### Choice of formulation

Water-miscible corticosteroid *creams* are suitable for moist or weeping lesions whereas *ointments* are generally chosen for dry, lichenified or scaly lesions or where a more occlusive effect is required. *Lotions* may be useful when minimal application to a large or hair-bearing area is required or for the treatment of exudative lesions. *Occlusive polythene* or *hydrocolloid dressings* increase absorption, but also increase the risk of side effects; they are therefore used only under supervision on a short-term basis for areas of very thick skin (such as the palms and soles). The inclusion of urea or salicylic acid also increases the penetration of the corticosteroid.

In the BNF publications topical corticosteroids for the skin are categorised as 'mild', 'moderately potent', 'potent' or 'very potent'; the **least potent** preparation which is effective should be chosen but dilution should be avoided whenever possible.

#### Absorption through the skin

*Mild* and *moderately potent* topical corticosteroids are associated with few side-effects but care is required in the use of *potent* and *very potent* corticosteroids. Absorption through the skin can rarely cause adrenal suppression and even Cushing's syndrome, depending on the area of the body being treated and the duration of treatment. Absorption is greatest where the skin is thin or raw, and from intertriginous areas; it is increased by occlusion.

#### Suitable quantities of corticosteroid preparations to be prescribed for specific areas of the body

Area of body	Creams and Ointments
Face and neck	15 to 30 g
Both hands	15 to 30 g
Scalp	15 to 30 g
Both arms	30 to 60g
Both legs	100 g
Trunk	100 g
Groins and genitalia	15 to 30 g
These amounts are usually suitable for an adult for a single daily application for 2 weeks	

#### Compound preparations

The advantages of including other substances (such as antibacterials or antifungals) with corticosteroids in topical preparations are uncertain, but such combinations may have a place where inflammatory skin conditions are associated with bacterial or fungal infection, such as infected eczema. In these cases the antimicrobial drug should be chosen

according to the sensitivity of the infecting organism and used regularly for a short period (typically twice daily for 1 week). Longer use increases the likelihood of resistance and of sensitisation.

The keratolytic effect of salicylic acid p. 1182 facilitates the absorption of topical corticosteroids; however, excessive and prolonged use of topical preparations containing salicylic acid may cause salicylism.

#### Topical corticosteroid preparation potencies

Potency of a topical corticosteroid preparation is a result of the formulation as well as the corticosteroid. Therefore, proprietary names are shown.

##### Mild

- Hydrocortisone 0.1–2.5%
- Dioderm
- Mildison
- Synalar 1 in 10 dilution

##### Mild with antimicrobials

- Canesten HC
- Daktaort
- Econacort
- Fucidin H
- Nystaform-HC
- Terra-Cortril
- Timodine

##### Moderate

- Betnovate-RD
- Eumovate
- Haelan
- Modrasone
- Synalar 1 in 4 Dilution
- Ultralanum Plain

##### Moderate with antimicrobials

- Trimovate

##### Moderate with urea:

- Alphaderm

##### Potent

- Beclometasone dipropionate 0.025%
- Betamethasone valerate 0.1%
- Betacap
- Betesil
- Bettamousse
- Betnovate
- Cutivate
- Diprosone
- Elocon
- Hydrocortisone butyrate
- Locoid
- Locoid Crelo
- Metosyn
- Mometasone furoate 0.1%
- Nerisone
- Synalar

##### Potent with antimicrobials

- Aureocort
- Betamethasone and clioquinol
- Betamethasone and neomycin
- Fucibet
- Lotriderm
- Synalar C
- Synalar N

##### Potent with salicylic acid

- Diprosalic

##### Very potent

- Clarelux
- Dermovate
- Etrivex
- Nerisone Forte

**Very potent with antimicrobials**

- Clobetasol with neomycin and nystatin

**Use in children**

Children, especially infants, are particularly susceptible to side-effects. However, concern about the safety of topical corticosteroids in children should not result in the child being undertreated. The aim is to control the condition as well as possible; inadequate treatment will perpetuate the condition. A mild corticosteroid such as hydrocortisone 0.5% or 1% is useful for treating nappy rash and hydrocortisone 1% for atopic eczema in childhood. A moderately potent or potent corticosteroid may be appropriate for severe atopic eczema on the limbs, for 1–2 weeks only, switching to a less potent preparation as the condition improves. In an acute flare-up of atopic eczema, it may be appropriate to use more potent formulations of topical corticosteroids for a short period to regain control of the condition. A very potent corticosteroid should be initiated under the supervision of a specialist. Carers of young children should be advised that treatment should **not** necessarily be reserved to 'treat only the worst areas' and they may need to be advised that patient information leaflets may contain inappropriate advice for the patient's condition.

**Corticosteroids (topical)**

- **CONTRA-INDICATIONS** Acne · perioral dermatitis · potent corticosteroids in widespread plaque psoriasis · rosacea (in adults) · untreated bacterial, fungal or viral skin lesions
- **CAUTIONS** Avoid prolonged use (particularly on the face) · cautions applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · dermatoses of infancy, including nappy rash (extreme caution required—treatment should be limited to 5–7 days) · infection · keep away from eyes · use potent or very potent topical corticosteroids under specialist supervision (in children) · use potent or very potent topical corticosteroids under specialist supervision in psoriasis (can result in rebound relapse, development of generalised pustular psoriasis, and local and systemic toxicity) (in adults)

**• SIDE-EFFECTS**

- **Rare** Adrenal suppression · Cushing's syndrome
- **Frequency not known** Acne · contact dermatitis · hypertrichosis · irreversible striae atrophicae · irreversible telangiectasia · mild depigmentation (may be reversible) · perioral dermatitis · side-effects applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · spread and worsening of untreated infection · thinning of the skin (may be restored over a period after stopping treatment but the original structure may never return) · worsening of acne · worsening of rosacea

**SIDE-EFFECTS, FURTHER INFORMATION**

In order to minimise the side-effects of a topical corticosteroid, it is important to apply it **thinly** to affected areas **only**, no more frequently than **twice daily**, and to use the least potent formulation which is fully effective.

- **DIRECTIONS FOR ADMINISTRATION** Topical corticosteroid preparations should be applied no more frequently than twice daily; once daily is often sufficient. Topical corticosteroids should be spread thinly on the skin but in sufficient quantity to cover the affected areas. The length of cream or ointment expelled from a tube may be used to specify the quantity to be applied to a given area of skin. This length can be measured in terms of a *finger tip unit* (the distance from the tip of the adult index finger to the first crease). One finger tip unit (approximately 500 mg from a tube with a standard 5 mm diameter nozzle) is sufficient to cover an area that is twice that of the flat adult

handprint (palm and fingers). Mixing topical preparations on the skin should be avoided where possible; several minutes should elapse between application of different preparations.

- ▶ In children 'Wet-wrap bandaging' increases absorption into the skin, but should be initiated only by a dermatologist and application supervised by a healthcare professional trained in the technique.
- **PRESCRIBING AND DISPENSING INFORMATION** The potency of each topical corticosteroid should be included on the label with the directions for use. The label should be attached to the container (for example, the tube) rather than the outer packaging.
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer corticosteroid creams and ointments. If a patient is using topical corticosteroids of different potencies, the patient should be told when to use each corticosteroid. Patients and their carers should be reassured that side effects such as skin thinning and systemic effects rarely occur when topical corticosteroids are used appropriately.

## Calcipotriol with betamethasone

30-May-2017

The properties listed below are those particular to the combination only. For the properties of the components please consider, calcipotriol p. 1158, betamethasone above.

### INDICATIONS AND DOSE

#### DOVOBET® GEL

#### Scalp psoriasis

##### ▶ TO THE SKIN

- Adult: Apply 1–4 g once daily usual duration of therapy 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, shampoo off after leaving on scalp overnight or during day, when different preparations containing calcipotriol used together, maximum total calcipotriol 5 mg in any one week

continued →

**Mild to moderate plaque psoriasis**

## ► TO THE SKIN

- Adult: Apply once daily for 8 weeks; if necessary, treatment may be continued beyond 8 weeks or repeated, on the advice of a specialist, apply to maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day

**DOVOBET® OINTMENT****Stable plaque psoriasis**

## ► TO THE SKIN

- Adult: Apply once daily for 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, apply to a maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day

**ENSTILAR®****Psoriasis**

## ► TO THE SKIN

- Adult: Apply once daily to be applied to the affected area for up to 4 weeks—consult product literature for further information; maximum 15 g per day

● **CONTRA-INDICATIONS**

**ENSTILAR®** Erythrodermic psoriasis · pustular psoriasis

● **NATIONAL FUNDING/ACCESS DECISIONS****ENSTILAR®****Scottish Medicines Consortium (SMC) Decisions**

The *Scottish Medicines Consortium* has advised (September 2016) that calcipotriol with betamethasone (*Enstilar®*) is accepted for use within NHS Scotland for the treatment of psoriasis vulgaris.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxytoluene

500 microgram per 1 gram Dovobet gel Applicator | 60 gram [PoM] £37.21 DT price = £37.21

Dovobet gel | 60 gram [PoM] £37.21 DT price = £37.21 | 120 gram [PoM] £69.11

**Clobetasol propionate**● **INDICATIONS AND DOSE**

**Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas unresponsive to less potent corticosteroids | Psoriasis**

## ► TO THE SKIN

- Child: Apply 1–2 times a day for up to 4 weeks, to be applied thinly
- Adult: Apply 1–2 times a day for up to 4 weeks, to be applied thinly, maximum 50 g of 0.05% preparation per week

**ETRIVEX®****Moderate scalp psoriasis**

## ► TO THE SKIN

- Adult: Apply once daily maximum duration of treatment 4 weeks, to be applied thinly then rinsed off after 15 minutes; frequency of application should be reduced after clinical improvement

**POTENCY**

Clobetasol propionate 0.05% cream, foam, ointment, scalp application, and shampoo: very potent.

- **UNLICENSED USE** *Dermovate®* not licensed for use in children under 1 year.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clobetasol propionate foam, liquid (scalp application), cream, ointment and shampoo.

Scalp application Patients or carers should be advised to apply foam directly to scalp lesions (foam begins to subside immediately on contact with skin).

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment, paste

**Foam**

Skin

## Hydrocortisone butyrate

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ► TO THE SKIN

- Child 1–17 years: Apply 1–2 times a day, to be applied thinly
- Adult: Apply 1–2 times a day, to be applied thinly

### POTENCY

Hydrocortisone butyrate 0.1% cream, liquid, and ointment: potent

### ● PATIENT AND CARER ADVICE

Patients or carers should be given advice on how to administer hydrocortisone butyrate lotion, cream, ointment and scalp lotion.

Medicines for Children leaflet: Hydrocortisone (topical) for eczema [www.medicinesforchildren.org.uk/hydrocortisone-topical-for-eczema](http://www.medicinesforchildren.org.uk/hydrocortisone-topical-for-eczema)

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

#### ► Locoid (LEO Pharma)

**Hydrocortisone butyrate 1 mg per 1 gram** Locoid 0.1% ointment | 30 gram [PoM] £1.60 DT price = £1.60 | 100 gram [PoM] £4.93 DT price = £4.93

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

#### ► Locoid (LEO Pharma)

**Hydrocortisone butyrate 1 mg per 1 gram** Locoid 0.1% cream | 30 gram [PoM] £1.60 DT price = £1.60 | 100 gram [PoM] £4.93 DT price = £4.93

#### ► Locoid Lipocream (LEO Pharma)

**Hydrocortisone butyrate 1 mg per 1 gram** Locoid 0.1% Lipocream | 30 gram [PoM] £1.69 DT price = £1.60 | 100 gram [PoM] £5.17 DT price = £4.93

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15(excluding Locoid Crelo topical emulsion), 28

EXCIPIENTS: May contain Butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), propylene glycol

#### ► Locoid (LEO Pharma)

**Hydrocortisone butyrate 1 mg per 1 ml** Locoid 0.1% scalp lotion | 100 ml [PoM] £6.83 DT price = £6.83

#### ► Locoid Crelo (LEO Pharma)

**Hydrocortisone butyrate 1 mg per 1 gram** Locoid Crelo 0.1% topical emulsion | 100 gram [PoM] £5.91

## Hydrocortisone with urea

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas**

#### ► TO THE SKIN

- Child: To be applied thinly (consult product literature)
- Adult: To be applied thinly (consult product literature)

### POTENCY

Hydrocortisone 1% with urea cream: moderate

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with urea cream.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

#### ► Alphaderm (Alliance Pharmaceuticals Ltd)

**Hydrocortisone 10 mg per 1 gram, Urea 100 mg per 1 gram** Alphaderm 1%/10% cream | 30 gram [PoM] £2.38 DT price = £2.38 | 100 gram [PoM] £7.03 DT price = £7.03

## Mometasone furoate

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ► TO THE SKIN

- Child 2–17 years: Apply once daily, to be applied thinly (to scalp in case of lotion)
- Adult: Apply once daily, to be applied thinly (to scalp in case of lotion)

### POTENCY

Mometasone furoate 0.1% cream, ointment, and scalp lotion: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids

- **PATIENT AND CARER ADVICE** Patients and carers should be advised on the application of topical mometasone.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Beeswax

#### ► Mometasone furoate (Non-proprietary)

**Mometasone furoate 1 mg per 1 gram** Mometasone 0.1% cream | 30 gram [PoM] £4.36 DT price = £1.81 | 100 gram [PoM] £12.58 DT price = £6.03

#### ► Elocon (Merck Sharp & Dohme Ltd)

**Mometasone furoate 1 mg per 1 gram** Elocon 0.1% cream | 30 gram [PoM] £4.80 DT price = £1.81 | 100 gram [PoM] £15.10 DT price = £6.03

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Beeswax, propylene glycol

#### ► Mometasone furoate (Non-proprietary)

**Mometasone furoate 1 mg per 1 gram** Mometasone 0.1% ointment | 15 gram [PoM] £4.32 | 30 gram [PoM] £4.45 DT price = £1.86 | 50 gram [PoM] £12.44 | 100 gram [PoM] £12.82 DT price = £6.20

#### ► Elocon (Merck Sharp & Dohme Ltd)

**Mometasone furoate 1 mg per 1 gram** Elocon 0.1% ointment | 30 gram [PoM] £4.32 DT price = £1.86 | 100 gram [PoM] £12.44 DT price = £6.20

#### Liquid

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol

#### ► Elocon (Merck Sharp & Dohme Ltd)

**Mometasone furoate 1 mg per 1 gram** Elocon 0.1% scalp lotion | 30 ml [PoM] £4.36 DT price = £4.36

## CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

### Betamethasone with clioquinol

18-Nov-2015

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1141.

#### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

#### POTENCY

Betamethasone (as valerate) 0.1% with clioquinol cream and ointment: potent.

- **UNLICENSED USE** Betamethasone and clioquinol preparations are not licensed for use in children under 1 year.
- **PATIENT AND CARER ADVICE** Stains clothing. Patients or carers should be counselled on application of betamethasone with clioquinol preparations.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Ointment

CAUTIONARY AND ADVISORY LABELS 28

##### ▶ Betamethasone with clioquinol (Non-proprietary)

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram** Betamethasone valerate 0.1% / Clioquinol 3% ointment | 30 gram **[PoM]** £38.88 DT price = £38.88

##### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

##### ▶ Betamethasone with clioquinol (Non-proprietary)

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram** Betamethasone valerate 0.1% / Clioquinol 3% cream | 30 gram **[PoM]** £38.88 DT price = £38.88

### Betamethasone with clotrimazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1141, clotrimazole p. 781.

#### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

#### POTENCY

Betamethasone dipropionate 0.064% (=betamethasone 0.5%) with clotrimazole cream: potent.

- **UNLICENSED USE** Lotiderm<sup>®</sup> not licensed for use in children under 12 years.
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer betamethasone with clotrimazole cream.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

##### ▶ Lotiderm (Merck Sharp & Dohme Ltd)

**Betamethasone dipropionate 640 microgram per 1 gram, Clotrimazole 10 mg per 1 gram** Lotiderm cream | 30 gram **[PoM]** £6.34 DT price = £6.34

### Betamethasone with fusidic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1141, fusidic acid p. 539.

#### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

#### POTENCY

Betamethasone (as valerate) 0.1% with fusidic acid cream: potent.

- **UNLICENSED USE** Fucibet<sup>®</sup> Lipid Cream is not licensed for use in children under 6 years.

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on application of betamethasone with fusidic acid preparations.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, hydroxybenzoates (parabens)

##### ▶ Betamethasone with fusidic acid (Non-proprietary)

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Fusidic acid 20 mg per 1 gram** Betamethasone valerate 0.1% / Fusidic acid 2% cream | 30 gram **[PoM]** £7.71 DT price = £6.38 | 60 gram **[PoM]** £15.42 DT price = £12.76

##### ▶ Fucibet (LEO Pharma)

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Fusidic acid 20 mg per 1 gram** Fucibet cream | 30 gram **[PoM]** £6.38 DT price = £6.38 | 60 gram **[PoM]** £12.76 DT price = £12.76  
Fucibet Lipid Cream | 30 gram **[PoM]** £6.74 DT price = £6.38

##### ▶ Xemacort (Mylan Ltd)

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Fusidic acid 20 mg per 1 gram** Xemacort cream | 30 gram **[PoM]** £6.05 DT price = £6.38 | 60 gram **[PoM]** £12.45 DT price = £12.76

### Betamethasone with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1141, neomycin sulfate p. 492.

#### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child 2-17 years: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

#### POTENCY

Betamethasone (as valerate) 0.1% with neomycin cream and ointment: potent.

- **UNLICENSED USE** Betamethasone and neomycin preparations not licensed for use in children under 2 years.
- **PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone with neomycin cream and ointment (application).

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

▶ **Betamethasone with neomycin (Non-proprietary)**

Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram Betamethasone valerate 0.1% / Neomycin 0.5% ointment | 30 gram [PoM] £38.88 DT price = £31.36 | 100 gram [PoM] £97.00 DT price = £104.52

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

▶ **Betamethasone with neomycin (Non-proprietary)**

Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram Betamethasone valerate 0.1% / Neomycin 0.5% cream | 30 gram [PoM] £38.88 DT price = £31.36 | 100 gram [PoM] £97.00 DT price = £104.52

**Betamethasone with salicylic acid**

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1141, salicylic acid p. 1182.

**INDICATIONS AND DOSE****DIPROSALIC® OINTMENT**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

▶ **TO THE SKIN**

- ▶ Child: Apply 1–2 times a day, max. 60 g per week
- ▶ Adult: Apply 1–2 times a day, max. 60 g per week

**POTENCY**

For *Diprosalic*® ointment: Betamethasone (as dipropionate) 0.05% with salicylic acid 3%: potent.

**DIPROSALIC® SCALP APPLICATION**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

▶ **TO THE SKIN**

- ▶ Child: Apply 1–2 times a day, apply a few drops
- ▶ Adult: Apply 1–2 times a day, apply a few drops

**POTENCY**

For *Diprosalic*® scalp application: Betamethasone (as dipropionate) 0.05% with salicylic acid 2%: potent.

**INTERACTIONS** → Appendix 1: corticosteroids**PATIENT AND CARER ADVICE** Patients or carers should be counselled on application of betamethasone and salicylic acid preparations.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

▶ **Diprosalic** (Merck Sharp & Dohme Ltd)

Betamethasone (as Betamethasone dipropionate) 500 microgram per 1 gram, Salicylic acid 30 mg per 1 gram Diprosalic 0.05%/3% ointment | 30 gram [PoM] £3.18 DT price = £3.18 | 100 gram [PoM] £9.14 DT price = £9.14

**Liquid**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Disodium edetate

▶ **Diprosalic** (Merck Sharp & Dohme Ltd)

Betamethasone (as Betamethasone dipropionate) 500 microgram per 1 ml, Salicylic acid 20 mg per 1 ml Diprosalic 0.05%/2% scalp application | 100 ml [PoM] £10.10 DT price = £10.10

**Chlortetracycline with triamcinolone****INDICATIONS AND DOSE**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (associated with infection) | Psoriasis (associated with infection)**

▶ **TO THE SKIN**

- ▶ Adult: To be applied thinly (consult product literature)

**POTENCY**

Triamcinolone acetonide 0.1%, chlortetracycline hydrochloride 3% ointment: potent.

**PATIENT AND CARER ADVICE** Stains clothing. Patients or carers should be counselled on the application of chlortetracycline with triamcinolone products.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

No licensed medicines listed.

**Clobetasol propionate with neomycin sulfate and nystatin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasol propionate p. 1142, neomycin sulfate p. 492.

**INDICATIONS AND DOSE**

**Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis associated with infection**

▶ **TO THE SKIN**

- ▶ Adult: (consult product literature)

**POTENCY**

Clobetasol propionate 0.05% with neomycin sulfate and nystatin cream and ointment: very potent.

**PATIENT AND CARER ADVICE** Patients or carers should be advised on application of clobetasol propionate, neomycin sulfate and nystatin containing preparations.**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

▶ **Clobetasol propionate with neomycin sulfate and nystatin (Non-proprietary)**

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g ointment | 30 gram [PoM] £87.00 DT price = £87.00

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

▶ **Clobetasol propionate with neomycin sulfate and nystatin (Non-proprietary)**

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g cream | 30 gram [PoM] £87.00 DT price = £87.00

## Clobetasone butyrate with nystatin and oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasone butyrate p. 1143, oxytetracycline p. 536.

### ● INDICATIONS AND DOSE

**Steroid-responsive dermatoses where candidal or bacterial infection is present**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### POTENCY

Clobetasone butyrate 0.05% with nystatin and oxytetracycline cream: moderate.

- **PATIENT AND CARER ADVICE** Stains clothing.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, sodium metabisulfite

- ▶ **Trimovate** (GlaxoSmithKline UK Ltd)

Clobetasone butyrate 500 microgram per 1 gram, Oxytetracycline (as Oxytetracycline calcium) 30 mg per 1 gram, Nystatin 100000 unit per 1 gram Trimovate cream | 30 gram (PoM) £3.29

## Fluocinolone acetonide with clioquinol

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1144.

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection**

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

### POTENCY

Clioquinol 3% with fluocinolone acetonide 0.025% cream and ointment: potent

- **PATIENT AND CARER ADVICE** Patient counselling is advised for clioquinol with fluocinolone acetonide cream and ointment (application). Ointment stains clothing.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol, wool fat and related substances including lanolin

- ▶ **Synalar C** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C ointment | 15 gram (PoM) £2.66

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens), polysorbates, propylene glycol

- ▶ **Synalar C** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C cream | 15 gram (PoM) £2.66

## Fluocinolone acetonide with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1144, neomycin sulfate p. 492.

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection**

- ▶ TO THE SKIN
- ▶ Child 1–17 years: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds
- ▶ Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

### POTENCY

Fluocinolone acetonide 0.025% with neomycin 0.5% cream and ointment: potent.

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of fluocinolone acetonide with neomycin preparations.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol, wool fat and related substances including lanolin

- ▶ **Synalar N** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram Synalar N ointment | 30 gram (PoM) £4.36

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates, propylene glycol

- ▶ **Synalar N** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram Synalar N cream | 30 gram (PoM) £4.36

## Hydrocortisone with benzalkonium chloride, dimeticone and nystatin

15-Mar-2016

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, dimeticone p. 1134.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN
- ▶ Child: Apply 3 times a day until lesion has healed, to be applied thinly
- ▶ Adult: Apply 3 times a day until lesion has healed, to be applied thinly

### POTENCY

Benzalkonium with dimeticone, hydrocortisone acetate 0.5%, and nystatin cream: mild.

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of benzalkonium with dimeticone and hydrocortisone and nystatin preparations.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sodium metabisulfite, sorbic acid

- ▶ **Timodine** (Alliance Pharmaceuticals Ltd)  
Benzalkonium chloride 1 mg per 1 gram, Hydrocortisone 5 mg per 1 gram, Dimeticone 350 100 mg per 1 gram, Nystatin 100000 unit per 1 gram Timodine cream | 30 gram [PoM] £3.37

## Hydrocortisone with chlorhexidine hydrochloride and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, chlorhexidine p. 1108.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas

- ▶ TO THE SKIN
- ▶ Child: To be applied thinly (consult product literature)
- ▶ Adult: To be applied thinly (consult product literature)

#### POTENCY

Hydrocortisone 0.5% with chlorhexidine hydrochloride 1% and nystatin cream: mild  
Hydrocortisone 1% with chlorhexidine hydrochloride 1% and nystatin ointment: mild

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on application of chlorhexidine hydrochloride with hydrocortisone and nystatin preparations.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**  
Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine acetate 1% / Hydrocortisone 1% ointment | 30 gram [PoM] £5.29
- ▶ **Nystaform HC** (Typharm Ltd)  
Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC ointment | 30 gram [PoM] £2.66

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

- EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates
- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**  
Hydrocortisone 5 mg per 1 gram, Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine hydrochloride 1% / Hydrocortisone 0.5% cream | 30 gram [PoM] £5.29
- ▶ **Nystaform HC** (Typharm Ltd)  
Hydrocortisone 5 mg per 1 gram, Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC cream | 30 gram [PoM] £2.66

## Hydrocortisone with clotrimazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, clotrimazole p. 781.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas (associated with fungal infection)

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

#### POTENCY

Clotrimazole with hydrocortisone 1% cream: mild

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clotrimazole with hydrocortisone cream.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube is on sale to the public for the treatment of athlete's foot and fungal infection of skin folds with associated inflammation in patients 10 years and over.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Canesten HC** (Bayer Plc)

Clotrimazole 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram Canesten HC cream | 30 gram [PoM] £2.42 DT price = £2.42

## Hydrocortisone with fusidic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, fusidic acid p. 539.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas

- ▶ TO THE SKIN
- ▶ Child: To be applied thinly (consult product literature)
- ▶ Adult: To be applied thinly (consult product literature)

#### POTENCY

Hydrocortisone with fusidic acid cream: mild

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with fusidic acid preparations.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, potassium sorbate

- ▶ **Fucidin H (Fusidic acid / Hydrocortisone)** (LEO Pharma)

Hydrocortisone acetate 10 mg per 1 gram, Fusidic acid 20 mg per 1 gram Fucidin H cream | 30 gram [PoM] £6.02 DT price = £6.02 | 60 gram [PoM] £12.05 DT price = £12.05

## Hydrocortisone with miconazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, miconazole p. 782.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas associated with infections

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

#### POTENCY

Hydrocortisone 1% with miconazole cream and ointment: mild

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with miconazole preparations.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary**  
May be prescribed as Miconazole and Hydrocortisone Cream or Ointment for max. 7 days.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube of hydrocortisone with miconazole cream is on sale to the

public for the treatment of athlete's foot and candidal intertrigo.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

##### ▶ **Daktacort** (Janssen-Cilag Ltd)

Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort ointment | 30 gram **[PoM]** £2.50 DT price = £2.50

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, disodium edetate

##### ▶ **Daktacort** (McNeil Products Ltd, Janssen-Cilag Ltd)

Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort 2%/1% cream | 30 gram **[PoM]** £2.49 DT price = £2.49

## Hydrocortisone with oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1145, oxytetracycline p. 536.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas

##### ▶ TO THE SKIN

- ▶ Child 12–17 years: (consult product literature)
- ▶ Adult: (consult product literature)

#### POTENCY

Hydrocortisone 1% with oxytetracycline ointment: mild.

- **CONTRA-INDICATIONS** Children under 12 years
- **PREGNANCY** Tetracyclines should not be given to pregnant women. Effects on skeletal development have been documented when tetracyclines have been used in the first trimester in animal studies. Administration during the second or third trimester may cause discoloration of the child's teeth.
- **BREAST FEEDING** Tetracyclines should not be given to women who are breast-feeding (although absorption and therefore discoloration of teeth in the infant is probably usually prevented by chelation with calcium in milk).
- **PATIENT AND CARER ADVICE** Patients should be given advice on the application of hydrocortisone with oxytetracycline ointment.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

##### ▶ **Terra-Cortril** (Intrapharm Laboratories Ltd)

Hydrocortisone 10 mg per 1 gram, Oxytetracycline (as Oxytetracycline hydrochloride) 30 mg per 1 gram Terra-Cortril ointment | 30 gram **[PoM]** £5.01 DT price = £5.01

## DERMATOLOGICAL DRUGS > ANTI-INFECTIVES

## Ichthammol

### ● INDICATIONS AND DOSE

#### Chronic lichenified eczema

##### ▶ TO THE SKIN

- ▶ Child 1–17 years: Apply 1–3 times a day
- ▶ Adult: Apply 1–3 times a day

### ● UNLICENSED USE

- ▶ In children No information available.

### ● SIDE-EFFECTS Skin irritation

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

#### Liquid

##### ▶ **Ichthammol (Non-proprietary)**

Ichthammol 1 mg per 1 mg Ichthammol liquid | 100 gram **[GSL]** £11.42 DT price = £11.42 | 500 gram **[GSL]** £34.27

## Ichthammol with zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, ichthammol above.

### ● INDICATIONS AND DOSE

#### Chronic lichenified eczema

##### ▶ TO THE SKIN

- ▶ Adult: (consult product literature)

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

#### Impregnated dressing

##### ▶ **Ichthopaste** (Smith & Nephew Healthcare Ltd)

Ichthopaste bandage 7.5cm × 6m | 1 bandage £3.72

## DERMATOLOGICAL DRUGS > ANTRACEN DERIVATIVES

## Dithranol

### (Anthralin)

### ● INDICATIONS AND DOSE

#### Subacute and chronic psoriasis

##### ▶ TO THE SKIN

- ▶ Adult: (consult product literature)

#### DITHROCREAM®

#### Subacute and chronic psoriasis

##### ▶ TO THE SKIN

- ▶ Adult: For application to skin or scalp, 0.1–0.5% cream suitable for overnight treatment, 1–2% cream for maximum 1 hour (consult product literature)

#### MICANOL®

#### Subacute and chronic psoriasis

##### ▶ TO THE SKIN

- ▶ Adult: Apply once daily, for application to skin or scalp, to be applied for up to 30 minutes, apply 1% cream, if necessary 3% cream can be used under medical supervision

- **CONTRA-INDICATIONS** Acute and pustular psoriasis · hypersensitivity

- **CAUTIONS** Avoid sensitive areas of skin · avoid use near eyes

- **SIDE-EFFECTS** Local burning sensation · local irritation · stains hair · stains skin

- **PREGNANCY** No adverse effects reported.

- **BREAST FEEDING** No adverse effects reported.

- **DIRECTIONS FOR ADMINISTRATION** When applying dithranol, hands should be protected by gloves or they should be washed thoroughly afterwards. Dithranol should be applied to chronic extensor plaques only, carefully avoiding normal skin.

**MICANOL®** At the end of contact time, use plenty of lukewarm (not hot) water to rinse off cream; soap may be used after the cream has been rinsed off; use shampoo

before applying cream to scalp and if necessary after cream has been rinsed off.

- **PRESCRIBING AND DISPENSING INFORMATION** Treatment should be started with a low concentration such as dithranol 0.1%, and the strength increased gradually every few days up to 3%, according to tolerance.
- **PATIENT AND CARER ADVICE** Dithranol can stain the skin, hair and fabrics.
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine if dithranol content more than 1%, otherwise may be sold to the public.
- **MEDICINAL FORMS**  
There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

- ▶ **Dithrocream** (Dermal Laboratories Ltd)

**Dithranol 1 mg per 1 gram** Dithrocream 0.1% cream | 50 gram [P] £3.77

**Dithranol 2.5 mg per 1 gram** Dithrocream 0.25% cream | 50 gram [P] £4.04

**Dithranol 5 mg per 1 gram** Dithrocream 0.5% cream | 50 gram [P] £4.66

**Dithranol 10 mg per 1 gram** Dithrocream HP 1% cream | 50 gram [P] £5.42

**Dithranol 20 mg per 1 gram** Dithrocream 2% cream | 50 gram [PoM] £5.77

- ▶ **Micanol** (Reig Jofre UK Ltd)

**Dithranol 10 mg per 1 gram** Micanol 1% cream | 50 gram [P] £16.18

**Dithranol 30 mg per 1 gram** Micanol 3% cream | 50 gram [PoM] £20.15

Combinations available: *Coal tar with dithranol and salicylic acid*, p. 1153

## Dithranol with salicylic acid and zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, dithranol p. 1151, salicylic acid p. 1182.

### • INDICATIONS AND DOSE

#### Subacute and chronic psoriasis

- ▶ TO THE SKIN
- ▶ Adult: (consult local protocol)

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

## DERMATOLOGICAL DRUGS > TARS

### Coal tar

### • INDICATIONS AND DOSE

#### Psoriasis | Chronic atopic eczema

- ▶ TO THE SKIN USING PASTE
- ▶ Child: Apply 1–3 times a day, start application with low-strength preparations
- ▶ Adult: Apply 1–3 times a day, start application with low-strength preparations
- ▶ TO THE SKIN
- ▶ Child: 100 mL/bath, to be added to an adult sized bath; add proportionally less for a child's bath. Use Coal Tar Solution BP

- ▶ Adult: 100 mL/bath, to be added to an adult sized bath. Use Coal Tar Solution BP

### ALPHOSYL 2 IN 1<sup>®</sup> SHAMPOO

#### Psoriasis | Seborrhoeic dermatitis | Scaling | Itching

- ▶ TO THE SKIN
- ▶ Adult: Apply every 2–3 days
- Dandruff**
- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a week as required

### EXOREX<sup>®</sup> LOTION

#### Psoriasis

- ▶ TO THE SKIN
- ▶ Adult: Apply 2–3 times a day, to be applied to skin or scalp; in elderly, lotion can be diluted with a few drops of water before applying

- **CONTRA-INDICATIONS** Avoid broken or inflamed skin • avoid eye area • avoid genital area • avoid mucosal areas • avoid rectal area • infection • sore, acute, or pustular psoriasis
- **CAUTIONS** Application to face • application to skin flexures
- **SIDE-EFFECTS** Acne-like eruptions • photosensitivity • skin irritation
- **PRESCRIBING AND DISPENSING INFORMATION** Coal Tar Solution BP contains coal tar 20%, Strong Coal Tar Solution BP contains coal tar 40%.
- **HANDLING AND STORAGE** Use suitable chemical protection gloves for extemporaneous preparation. May stain skin, hair and fabric.
- **PATIENT AND CARER ADVICE** May stain skin, hair and fabric.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: paste

#### Bath additive

- ▶ **Psoriderm** (Dermal Laboratories Ltd)

**Coal tar distilled 400 mg per 1 ml** Psoriderm Emulsion 40% bath additive | 200 ml [P] £2.74

## Coal tar with arachis oil extract of coal tar, cade oil, light liquid paraffin and tar

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar above.

### • INDICATIONS AND DOSE

#### Psoriasis | Eczema | Atopic dermatoses | Pruritic dermatoses

- ▶ TO THE SKIN
- ▶ Child: 2–4 capfuls/bath, alternatively 15–30 mL, to be added in an adult-size bath and soak for 20 minutes (proportionally less for a child's bath)
- ▶ Adult: 2–4 capfuls/bath, alternatively 15–30 mL, to be added in an adult-size bath and soak for 20 minutes

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Coal tar with calamine

31-Aug-2016

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152.

### ● INDICATIONS AND DOSE

**Psoriasis | Chronic atopic eczema (occasionally)**

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM UPDATE (APRIL 2016): FIRE RISK WITH PARAFFIN-BASED SKIN EMOLLIENTS ON DRESSINGS OR CLOTHING  
See Emollient and barrier preparations p. 1118.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Calamine and Coal Tar Ointment BP, consists of calamine 12.5 g, strong coal tar solution 2.5 g, zinc oxide 12.5 g, hydrous wool fat 25 g, white soft paraffin 47.5 g.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Coal tar with coconut oil and salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152, salicylic acid p. 1182.

### ● INDICATIONS AND DOSE

**Scaly scalp disorders | Psoriasis | Seborrhoeic dermatitis | Dandruff | Cradle cap**

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child: Apply daily as required
- ▶ Adult: Apply daily as required

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

- ▶ **Capasal** (Dermal Laboratories Ltd)  
Salicylic acid 5 mg per 1 gram, Coal tar distilled 10 mg per 1 gram, Coconut oil 10 mg per 1 gram | Capasal Therapeutic shampoo | 250 ml | £4.69

## Coal tar with dithranol and salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152, dithranol p. 1151, salicylic acid p. 1182.

### ● INDICATIONS AND DOSE

**Subacute and chronic psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply up to twice daily
- ▶ Adult: Apply up to twice daily

- **UNLICENSED USE** *Psorin*<sup>®</sup> is licensed for use in children (age range not specified by manufacturer).

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

## Coal tar with lecithin

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152.

### ● INDICATIONS AND DOSE

**PSORIDERM<sup>®</sup> CREAM**

**Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day, cream to be applied to the skin or scalp
- ▶ Adult: Apply 1–2 times a day, cream to be applied to the skin or scalp

**PSORIDERM<sup>®</sup> SCALP LOTION**

**Scalp psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

### ● MEDICINAL FORMS

## Coal tar with salicylic acid and precipitated sulfur

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152, salicylic acid p. 1182.

### ● INDICATIONS AND DOSE

#### COCOIS<sup>®</sup> OINTMENT

**Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ INITIALLY TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply once weekly as required, alternatively (to the skin) apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply once weekly as required, alternatively (to the skin) apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

#### SEBCO<sup>®</sup> OINTMENT

**Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

#### ▶ **Cocois** (Focus Pharmaceuticals Ltd)

Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram | Cocois ointment | 40 gram [GSL] £6.22 | 100 gram [GSL] £11.69

#### ▶ **Sebco** (Derma UK Ltd)

Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram | Sebco ointment | 40 gram [GSL] £5.91 | 100 gram [GSL] £11.11

## Coal tar with zinc oxide

26-Aug-2016

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152.

### ● INDICATIONS AND DOSE

**Psoriasis | Chronic atopic eczema**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day
- ▶ Adult: Apply 1–2 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM UPDATE (APRIL 2016): FIRE RISK WITH PARAFFIN-BASED SKIN EMOLLIENTS ON DRESSINGS OR CLOTHING  
See Emollient and barrier preparations p. 1118.

- **PRESCRIBING AND DISPENSING INFORMATION** No preparations available—when prepared extemporaneously, the BP states Zinc and Coal Tar Paste, BP consists of zinc oxide 6%, coal tar 6%, emulsifying wax 5%, starch 38%, yellow soft paraffin 45%.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

## Extract of coal tar with arachis oil

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1152.

### ● INDICATIONS AND DOSE

**Scalp disorders | Psoriasis | Seborrhoea | Eczema | Pruritus | Dandruff**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a week, to the scalp
- ▶ Adult: Apply 1–2 times a week, to the scalp

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## IMMUNOSUPPRESSANTS > CALCINEURIN INHIBITORS AND RELATED DRUGS

## Pimecrolimus

### ● INDICATIONS AND DOSE

**Short-term treatment of mild to moderate atopic eczema (including flares) when topical corticosteroids cannot be used (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until symptoms resolve (stop treatment if eczema worsens or no response after 6 weeks)

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until symptoms resolve (maximum duration of treatment 4 weeks)

- **UNLICENSED USE** Pimecrolimus is not licensed for short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy.

- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · congenital epidermal barrier defects · contact with eyes · contact with mucous membranes · generalised erythroderma · immunodeficiency · infection at treatment site

- **CAUTIONS** Alcohol consumption (risk of facial flushing and skin irritation) · avoid other topical treatments except emollients at treatment site · UV light (avoid excessive exposure to sunlight and sunlamps)

- **INTERACTIONS** → Appendix 1: pimecrolimus

### ● SIDE-EFFECTS

- ▶ **Common or very common** Burning sensation · erythema · folliculitis · pruritus · skin infections
- ▶ **Uncommon** Herpes simplex · herpes zoster · impetigo · molluscum contagiosum
- ▶ **Rare** Dryness · local reactions including pain · oedema · papilloma · paraesthesia · peeling · skin discoloration · worsening of eczema
- ▶ **Frequency not known** Skin malignancy

- **PREGNANCY** Manufacturer advises avoid; toxicity in animal studies following systemic administration.

- **BREAST FEEDING** Manufacturer advises caution; ensure infant does not come in contact with treated areas.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 4, 11, 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

▶ **Elidel** (Meda Pharmaceuticals Ltd)

**Pimecrolimus 10 mg per 1 gram** Elidel 1% cream | 30 gram [PoM] £19.69 DT price = £19.69 | 60 gram [PoM] £37.41 DT price = £37.41 | 100 gram [PoM] £59.07 DT price = £59.07

## Tacrolimus

### DRUG ACTION Tacrolimus is a calcineurin inhibitor.

#### INDICATIONS AND DOSE

**Short-term treatment of moderate to severe atopic eczema (including flares) in patients unresponsive to, or intolerant of conventional therapy (initiated by a specialist)**

▶ TO THE SKIN

▶ **Adult:** Apply twice daily until lesion clears (consider other treatment if eczema worsens or no improvement after 2 weeks), initially 0.1% ointment to be applied thinly, reduce frequency to once daily or strength of ointment to 0.03% if condition allows

**Prevention of flares in patients with moderate to severe atopic eczema and 4 or more flares a year who have responded to initial treatment with topical tacrolimus (initiated by a specialist)**

▶ TO THE SKIN

▶ **Adult:** Apply twice weekly, 0.1% ointment to be applied thinly, with an interval of 2–3 days between applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated under specialist supervision)**

▶ TO THE SKIN

▶ **Adult:** Apply twice daily until symptoms resolve, 0.1% ointment to be applied thinly, reduce to once daily or switch to 0.03% ointment if condition allows, maximum duration of treatment 4 weeks

### UNLICENSED USE Short-term treatment of facial, flexural, or genital psoriasis is unlicensed.

### CONTRA-INDICATIONS Application to malignant or potentially malignant skin lesions · application under occlusion · avoid contact with eyes · avoid contact with mucous membranes · congenital epidermal barrier defects · generalised erythroderma · immunodeficiency · infection at treatment site

### CAUTIONS UV light (avoid excessive exposure to sunlight and sunlamps)

### INTERACTIONS → Appendix 1: tacrolimus

### SIDE-EFFECTS

▶ **Common or very common** Application-site infections · application-site reactions · herpes simplex infection · irritation (at application-site) · Kaposi's varicelliform eruption · pain at application-site · rash

▶ **Uncommon** Acne

▶ **Frequency not known** Cutaneous lymphoma · malignancies · other types of lymphomas · rosacea · skin malignancy

### ALLERGY AND CROSS-SENSITIVITY Contra-indicated if history of hypersensitivity to macrolides.

### PREGNANCY Manufacturer advises avoid unless essential; toxicity in animal studies following systemic administration.

### BREAST FEEDING Avoid—present in breast milk (following systemic administration).

### PATIENT AND CARER ADVICE Avoid excessive exposure to UV light including sunlight.

### NATIONAL FUNDING/ACCESS DECISIONS

#### NICE technology appraisals (TAs)

### Tacrolimus and pimecrolimus for atopic eczema (August 2004) NICE TA82

Topical tacrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy).

Topical tacrolimus is recommended for moderate to severe atopic eczema. Tacrolimus should be used within its licensed indications.

[www.nice.org.uk/TA82](http://www.nice.org.uk/TA82)

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (March 2010) that tacrolimus ointment (*Protopic*®) is accepted for restricted use within NHS Scotland for the prevention of flares in patients with moderate to severe atopic eczema in accordance with the licensed indications; initiation of treatment is restricted to doctors (including general practitioners) with a specialist interest and experience in treating atopic eczema with immunomodulatory therapy.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 4, 11, 28

## Ixekizumab

20-Apr-2017

### DRUG ACTION Ixekizumab is a human monoclonal antibody that binds to interleukin-17A and inhibits the release of pro-inflammatory cytokines and chemokines.

#### INDICATIONS AND DOSE

**Moderate-to-severe plaque psoriasis (under expert supervision)**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** Initially 160 mg for 1 dose, followed by 80 mg after 2 weeks, then 80 mg every 2 weeks for 5 further doses (at weeks 4, 6, 8, 10 and 12) and maintenance 80 mg every 4 weeks, consider discontinuation of treatment if no response after 16–20 weeks

### CONTRA-INDICATIONS Active infections (including active tuberculosis)

### CAUTIONS Chronic infection—monitor carefully and discontinue if serious, unresponsive infection develops · Crohn's disease · ulcerative colitis

#### CAUTIONS, FURTHER INFORMATION

- ▶ Severe hypersensitivity reactions Severe hypersensitivity reactions have been reported—discontinue treatment immediately if symptoms occur.
- ▶ Latent tuberculosis Manufacturer advises that patients with latent tuberculosis should complete anti-tuberculosis therapy before starting ixekizumab.
- ▶ Inflammatory bowel disease Manufacturer advises to monitor closely for exacerbation.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Infection · nausea · oropharyngeal pain
  - ▶ **Uncommon** Bone marrow suppression · urticaria
  - ▶ **Frequency not known** Hypersensitivity reactions (occasionally late-onset) · inflammatory bowel disease (new or exacerbation)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for at least 10 weeks after treatment in women of childbearing potential.
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to avoid injecting into areas of the skin that show psoriasis; injection sites may be alternated. Patients may self-administer Taltz<sup>®</sup>, after appropriate training in subcutaneous injection technique.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C).
- **PATIENT AND CARER ADVICE**  
Self-administration If appropriate, patients and their carers should be given training in subcutaneous injection technique.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**Scottish Medicines Consortium (SMC) Decisions**  
The Scottish Medicines Consortium has advised (April 2017) that ixekizumab (Taltz<sup>®</sup>) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe plaque psoriasis only in patients who have failed to respond to standard systemic therapies (including ciclosporin, methotrexate and phototherapy), are intolerant to, or have a contra-indication to these treatments. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland, or a list price that is equivalent or lower.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPENTS: May contain Polysorbates

- ▶ **Taltz** (Eli Lilly and Company Ltd) ▼  
Ixekizumab 80 mg per 1 ml Taltz 80mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only)  
Taltz 80mg/1ml solution for injection pre-filled pen | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only) | 2 pre-filled disposable injection [PoM] £2,250.00 (Hospital only)

## RETINOID AND RELATED DRUGS

### Acitretin

- **DRUG ACTION** Acitretin is a metabolite of etretinate.

#### ● INDICATIONS AND DOSE

**Severe extensive psoriasis resistant to other forms of therapy (under expert supervision) | Palmoplantar pustular psoriasis (under expert supervision) | Severe congenital ichthyosis (under expert supervision)**

▶ **BY MOUTH**

- ▶ **Adult:** Initially 25–30 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily, increased to up to 75 mg daily, dose only increased to 75 mg daily for short periods in psoriasis

#### Severe Darier's disease (keratosis follicularis) (under expert supervision)

▶ **BY MOUTH**

- ▶ **Adult:** Initially 10 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily

- **CONTRA-INDICATIONS** Hyperlipidaemia
- **CAUTIONS** Avoid excessive exposure to sunlight and unsupervised use of sunlamps · diabetes (can alter glucose tolerance—initial frequent blood glucose checks) · do not donate blood during and for 2 years after stopping therapy (teratogenic risk) · in children use only in exceptional circumstances and monitor growth parameters and bone development (premature epiphyseal closure reported) · investigate atypical musculoskeletal symptoms
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · abnormal hair texture · alopecia (reversible on withdrawal) · arthralgia · brittle nails · dermatitis · diarrhoea · dryness and inflammation of mucous membranes · dryness of conjunctiva (causing conjunctivitis and decreased tolerance to contact lenses) · epidermal fragility · erythema · headache · myalgia · nausea · paronychia · peripheral oedema · pruritus · reversible increase in serum-cholesterol (with high doses) · reversible increase in serum-triglyceride concentrations (with high doses) · skin exfoliation · sticky skin · vomiting
  - ▶ **Uncommon** Dizziness · hepatitis · photosensitivity · visual disturbances
  - ▶ **Rare** Peripheral neuropathy
  - ▶ **Very rare** Benign intracranial hypertension · bone pain · exostosis · night blindness · ulcerative keratitis
  - ▶ **Frequency not known** Drowsiness · dry skin · flushing · granulomatous lesions · impaired hearing · initial worsening of psoriasis · malaise · rectal haemorrhage · sweating · taste disturbance · tinnitus
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ **Exostosis** Skeletal hyperostosis and extra-osseous calcification reported following long-term treatment with etretinate (of which Acitretin is a metabolite) and premature epiphyseal closure in children.
  - ▶ **Benign intracranial hypertension** Discontinue if severe headache, nausea, vomiting, or visual disturbances occur.
- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used.

Pregnancy prevention In females of child-bearing potential (including those with a history of infertility), exclude pregnancy up to 3 days before treatment, every month during treatment, and every 1–3 months for 3 years after stopping treatment. Treatment should be started on day 2 or 3 of menstrual cycle. Females of child-bearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 3 years after stopping treatment. Females should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Females should be advised to seek medical attention immediately if they become pregnant during treatment or within 3 years of stopping treatment. They should also be advised to avoid alcohol during treatment and for 2 months after stopping treatment.

- **PREGNANCY** Avoid—teratogenic.
- **BREAST FEEDING** Avoid.
- **HEPATIC IMPAIRMENT** Avoid in severe impairment—risk of further impairment.

- **RENAL IMPAIRMENT** Avoid in severe impairment; increased risk of toxicity.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor serum-triglyceride and serum-cholesterol concentrations before treatment, 1 month after starting, then every 3 months.
  - ▶ Check liver function at start, then every 2–4 weeks for first 2 months and then every 3 months.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Prescribing for women of child-bearing potential Each prescription for acitretin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription.
- **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.  
Females of child-bearing potential must be advised on pregnancy prevention.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Capsule

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

#### ▶ Acitretin (Non-proprietary)

Acitretin 10 mg Acitretin 10mg capsules | 60 capsule **[PoM]** £23.80  
DT price = £23.80

Acitretin 25 mg Acitretin 25mg capsules | 60 capsule **[PoM]** £55.24  
DT price = £55.24

#### ▶ Neotigason (Teva UK Ltd)

Acitretin 10 mg Neotigason 10mg capsules | 60 capsule **[PoM]**  
£17.30 DT price = £23.80 (Hospital only)

Acitretin 25 mg Neotigason 25mg capsules | 60 capsule **[PoM]**  
£43.00 DT price = £55.24 (Hospital only)

## Alitretinoin

#### ● INDICATIONS AND DOSE

##### Severe chronic hand eczema refractory to potent topical corticosteroids

#### ▶ BY MOUTH

- ▶ Adult (prescribed by or under supervision of a consultant dermatologist): 30 mg once daily; reduced if not tolerated to 10 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

##### Severe chronic hand eczema refractory to potent topical corticosteroids in patients with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease

#### ▶ BY MOUTH

- ▶ Adult (prescribed by or under supervision of a consultant dermatologist): Initially 10 mg once daily, increased if necessary up to 30 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

Manufacturer advises reduce dose to 10 mg once daily with concurrent use of potent inhibitors of CYP3A4, CYP2C8 and moderate inhibitors of CYP2C9.

- **CONTRA-INDICATIONS** Hypervitaminosis A · uncontrolled hyperlipidaemia · uncontrolled hypothyroidism
- **CAUTIONS** Avoid blood donation during treatment and for at least 1 month after stopping treatment · dry eye syndrome · history of depression
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · arthralgia · changes in thyroid function tests · cheilitis · conjunctivitis · dry eyes · dryness of lips · dryness of skin · erythema · eye

irritation · flushing · headache · myalgia · raised creatine kinase · raised serum concentration of triglycerides and of cholesterol (risk of pancreatitis if triglycerides above 9 mmol/litre)

- ▶ **Uncommon** Ankylosing spondylitis · asteototic eczema · blurred vision · cataracts · epistaxis · hyperostosis · pruritus
- ▶ **Rare** Benign intracranial hypertension · vasculitis
- ▶ **Frequency not known** Decreased tolerance to contact lenses · depression · impaired night vision · keratitis · mood changes · suicidal ideation

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ **Dry eyes** Dry eyes may respond to lubricating eye ointment or tear replacement therapy.
- ▶ **Benign intracranial hypertension** Discontinue treatment if severe headache, nausea, vomiting, papilloedema, or visual disturbances occur.

- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used.

**Pregnancy prevention** In women of child-bearing potential, exclude pregnancy 1 month before treatment, up to 3 days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 5 weeks after stopping treatment—perform pregnancy test in the first 3 days of the menstrual cycle.

Women must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. Women should be advised to use at least 1 method of contraception but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods.

Women should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- **PREGNANCY** Avoid—teratogenic.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.
- **MONITORING REQUIREMENTS** Monitor serum lipids (more frequently in those with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease)—discontinue if uncontrolled hyperlipidaemia.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Prescribing for women of child-bearing potential Each prescription for alitretinoin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription.
- **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.

**Patient advice required around conception and contraception** Women of child-bearing potential must be counselled on pregnancy prevention.

- **NATIONAL FUNDING/ACCESS DECISIONS**

#### NICE technology appraisals (TAs)

- ▶ **Alitretinoin for the treatment of severe chronic hand eczema in adults (August 2009)** NICE TA177  
Alitretinoin is recommended for the treatment of severe chronic hand eczema that has not responded to potent topical corticosteroids. Treatment should be stopped as soon as an adequate response has been achieved (hands clear or almost clear), or if the eczema remains severe after

12 weeks, or if an adequate response has not been achieved by 24 weeks.

[www.nice.org.uk/TA177](http://www.nice.org.uk/TA177)

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Capisule

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

► **Tactino** (Stiefel Laboratories (UK) Ltd)

**Alitretinoin 10 mg** Tactino 10mg capsules | 30 capsule [PoM]  
£411.43

**Alitretinoin 30 mg** Tactino 30mg capsules | 30 capsule [PoM]  
£411.43

## Tazarotene

#### INDICATIONS AND DOSE

**Mild to moderate plaque psoriasis affecting up to 10% of skin area**

► TO THE SKIN

► Adult: Apply once daily usually for up to 12 weeks, apply in the evening

- **CAUTIONS** Avoid contact with eczematous skin · avoid contact with eyes · avoid contact with face · avoid contact with hair-covered scalp · avoid contact with inflamed skin · avoid contact with intertriginous areas

- **INTERACTIONS** → Appendix 1: retinoids

#### SIDE-EFFECTS

- **Rare** Dry or painful skin · stinging and inflamed skin
- **Frequency not known** Burning · contact dermatitis · desquamation · erythema · local irritation · non-specific rash · pruritus · worsening of psoriasis

#### SIDE-EFFECTS, FURTHER INFORMATION

- **Local irritation** Local irritation is more common with higher concentration and may require discontinuation.

- **CONCEPTION AND CONTRACEPTION** Effective contraception required (oral progestogen-only contraceptives not considered effective).

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light (including sunlight, solariums, PUVA or UVB treatment). Do not apply emollients or cosmetics within 1 hour of application. Wash hands immediately after use.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Gel

EXCIPIENTS: May contain Benzyl alcohol, butylated hydroxyanisole, butylated hydroxytoluene, disodium edetate, polysorbates

► **Zorac** (Allergan Ltd)

**Tazarotene 500 microgram per 1 gram** Zorac 0.05% gel | 30 gram [PoM] £14.09

**Tazarotene 1 mg per 1 gram** Zorac 0.1% gel | 30 gram [PoM]  
£14.80

## SALICYLIC ACID AND DERIVATIVES

## Salicylic acid with zinc oxide

#### INDICATIONS AND DOSE

**Hyperkeratotic skin disorders**

► TO THE SKIN

► Adult: Apply twice daily

- **CAUTIONS** Avoid broken skin · avoid inflamed skin

#### CAUTIONS, FURTHER INFORMATION

- **Salicylate toxicity** Salicylate toxicity may occur particularly if applied on large areas of skin or neonatal skin.
- **SIDE-EFFECTS** Excessive drying · irritation · sensitivity · systemic effects (after widespread use)
- **PRESCRIBING AND DISPENSING INFORMATION** Zinc and Salicylic Acid Paste BP is also referred to as Lassar's Paste. When prepared extemporaneously, the BP states Zinc and Salicylic Acid Paste, BP (Lassar's Paste) consists of zinc oxide 24%, salicylic acid 2%, starch 24%, white soft paraffin 50%.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: paste

## VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES

## Calcipotriol

#### INDICATIONS AND DOSE

**Plaque psoriasis**

► TO THE SKIN USING OINTMENT

► Adult: Apply 1–2 times a day, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 100 g per week

**Scalp psoriasis**

► TO THE SKIN USING SCALP LOTION

► Adult: Apply twice daily, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 60 mL per week

- **CONTRA-INDICATIONS** Calcium metabolism disorders

- **CAUTIONS** Avoid excessive exposure to sunlight and sunlamps · avoid use on face · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)

- **INTERACTIONS** → Appendix 1: vitamin D substances

#### SIDE-EFFECTS

- **Common or very common** Burning · dermatitis · erythema · itching · local skin reactions · paraesthesia
- **Rare** Facial dermatitis · perioral dermatitis
- **Frequency not known** Aggravation of psoriasis · dry skin · photosensitivity

- **PREGNANCY** Manufacturers advise avoid unless essential.

- **BREAST FEEDING** No information available.

#### PATIENT AND CARER ADVICE

Advice on application Patient information leaflet for *Dovonex*® ointment advises liberal application. However, patients should be advised of maximum recommended weekly dose.

Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

##### Ointment

EXCIPIENTS: May contain Disodium edetate, propylene glycol

► **Calcipotriol (Non-proprietary)**

**Calcipotriol 50 microgram per 1 gram** Calcipotriol 50micrograms/g ointment | 30 gram [PoM] £7.37 DT price = £5.78 | 60 gram [PoM] £11.56-£13.86 | 120 gram [PoM] £23.12-£27.75

► **Dovonex** (LEO Pharma)

**Calcipotriol 50 microgram per 1 gram** Dovonex 50micrograms/g ointment | 30 gram [PoM] £5.78 DT price = £5.78 | 60 gram [PoM] £11.56

**Liquid**

► **Calcipotriol (Non-proprietary)**

**Calcipotriol (as Calcipotriol hydrate) 50 microgram per 1 ml** Calcipotriol 50micrograms/ml scalp solution | 60 ml [PoM] £56.94 DT price = £56.94 | 120 ml [PoM] £113.88 DT price = £113.88

Combinations available: **Calcipotriol with betamethasone**, p. 1141

## Calcitriol

### (1,25-Dihydroxycholecalciferol)

● **INDICATIONS AND DOSE**

**Mild to moderate plaque psoriasis**

- TO THE SKIN
- Adult: Apply twice daily, not more than 35% of body surface to be treated daily; maximum 30 g per day

- **CONTRA-INDICATIONS** Do not apply under occlusion - patients with calcium metabolism disorders
- **CAUTIONS** Erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
  - **Common or very common** Burning · dermatitis · erythema · itching · local skin reactions · paraesthesia
  - **Frequency not known** Aggravation of psoriasis
- **PREGNANCY** Manufacturer advises use in restricted amounts only if clearly necessary.  
Monitor urine- and serum-calcium concentration in pregnancy.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises avoid—no information available.
- **HANDLING AND STORAGE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

**Ointment**

- **Silkis** (Galderma (UK) Ltd)  
**Calcitriol 3 microgram per 1 gram** Silkis ointment | 100 gram [PoM] £18.06 DT price = £18.06

## Tacalcitol

● **INDICATIONS AND DOSE**

**Plaque psoriasis**

- TO THE SKIN
- Adult: Apply once daily, preferably at bedtime, maximum 10 g ointment or 10 mL lotion daily, when lotion and ointment used together, maximum total tacalcitol 280 micrograms in any one week (e.g. lotion 30 mL with ointment 40 g)

- **CONTRA-INDICATIONS** Calcium metabolism disorders
- **CAUTIONS** Avoid eyes · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia) · if used in conjunction with UV treatment

**CAUTIONS, FURTHER INFORMATION**

- **UV treatment** If tacalcitol is used in conjunction with UV treatment, UV radiation should be given in the morning and tacalcitol applied at bedtime.
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
  - **Common or very common** Burning · dermatitis · erythema · itching · local skin reactions · paraesthesia
  - **Frequency not known** Aggravation of psoriasis
- **PREGNANCY** Manufacturer advises avoid unless no safer alternative—no information available.
- **BREAST FEEDING** Manufacturer advises avoid application to breast area; no information available on presence in milk.
- **MONITORING REQUIREMENTS** Monitor serum calcium if risk of hypercalcaemia.
- **PATIENT AND CARER ADVICE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

► **Curatoderm** (Almirall Ltd)

**Tacalcitol (as Tacalcitol monohydrate) 4 microgram per 1 gram** Curatoderm 4micrograms/g ointment | 30 gram [PoM] £13.40 DT price = £13.40 | 60 gram [PoM] £23.14 DT price = £23.14 | 100 gram [PoM] £30.86 DT price = £30.86

**Liquid**

EXCIPIENTS: May contain Disodium edetate, propylene glycol

► **Curatoderm** (Almirall Ltd)

**Tacalcitol (as Tacalcitol monohydrate) 4 microgram per 1 gram** Curatoderm 4micrograms/g lotion | 30 ml [PoM] £12.73

## 4 Perspiration

### 4.1 Hyperhidrosis

## Hyperhidrosis

16-May-2017

### Overview

Aluminium chloride hexahydrate p. 1160 is a potent antiperspirant used in the treatment of hyperhidrosis. Aluminium salts are also incorporated in preparations used for minor fungal skin infections associated with hyperhidrosis.

Limited evidence suggests that oxybutynin hydrochloride p. 733 [unlicensed indication] can be used to treat hyperhidrosis in patients whose symptoms are not adequately managed through lifestyle modifications and antiperspirants.

In more severe cases specialists use glycopyrronium bromide p. 1160 as a 0.05% solution in the iontophoretic treatment of hyperhidrosis of plantar and palmar areas. *Botox*® contains botulinum toxin type A complex p. 387 and is licensed for use intradermally for severe hyperhidrosis of the axillae unresponsive to topical antiperspirant or other antihidrotic treatment.

## ANTIMUSCARINICS

Glycopyrronium bromide  
(Glycopyrrolate)

17-Oct-2016

## ● INDICATIONS AND DOSE

## Iontophoretic treatment of hyperhidrosis

## ► TO THE SKIN

- Adult: Only 1 site to be treated at a time, maximum 2 sites treated in any 24 hours, treatment not to be repeated within 7 days (consult product literature)

- **CONTRA-INDICATIONS** Infections affecting the treatment site

## CONTRA-INDICATIONS, FURTHER INFORMATION

Contra-indications applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

- **CAUTIONS** Cautions applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

- **INTERACTIONS** → Appendix 1: glycopyrronium

- **SIDE-EFFECTS** Tingling at administration site

**SIDE-EFFECTS, FURTHER INFORMATION** The possibility of systemic side-effects should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for iontophoresis**► **Glycopyrronium bromide (Non-proprietary)**

Glycopyrronium bromide 1 mg per 1 mg Glycopyrronium bromide powder for solution for iontophoresis | 3 gram [PaM] £327.00

## DERMATOLOGICAL DRUGS ► ASTRINGENTS

## Aluminium chloride hexahydrate

## ● INDICATIONS AND DOSE

## Hyperhidrosis affecting axillae, hands or feet

## ► TO THE SKIN

- Adult: Apply once daily, apply liquid formulation at night to dry skin, wash off the following morning, reduce frequency as condition improves—do not bathe immediately before use

**Hyperhidrosis | Bromidrosis | Intertrigo | Prevention of tinea pedis and related conditions**

## ► TO THE SKIN

- Adult: Apply powder to dry skin

- **CAUTIONS** Avoid contact with eyes • avoid contact with mucous membranes • avoid use on broken or irritated skin • do not shave axillae or use depilatories within 12 hours of application

- **SIDE-EFFECTS** Skin irritation

- **PATIENT AND CARER ADVICE** Avoid contact with clothing.

- **EXCEPTIONS TO LEGAL CATEGORY** A 30 mL pack of aluminium chloride hexahydrate 20% is on sale to the public.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Liquid**

## CAUTIONARY AND ADVISORY LABELS 15

► **Aluminium chloride hexahydrate (Non-proprietary)**

Aluminium chloride 200 mg per 1 ml Aluminium chloride 20% solution | 60 ml [P] no price available DT price = £2.51

- **Anhydrol** (Dermal Laboratories Ltd)

Aluminium chloride 200 mg per 1 ml Anhydrol Forte 20% solution | 60 ml [P] £2.51 DT price = £2.51

- **Driclor** (GlaxoSmithKline Consumer Healthcare)

Aluminium chloride 200 mg per 1 ml Driclor 20% solution | 75 ml [P] £3.01 DT price = £3.01

## 5 Pruritus

## Topical local antipruritics

## Overview

*Pruritus* may be caused by systemic disease (such as obstructive jaundice, endocrine disease, chronic renal disease, iron deficiency, and certain malignant diseases), skin disease (e.g. psoriasis, eczema, urticaria, and scabies), drug hypersensitivity, or as a side-effect of opioid analgesics. Where possible, the underlying causes should be treated. An **emollient** may be of value where the pruritus is associated with dry skin. Pruritus that occurs in otherwise healthy elderly people can also be treated with an emollient.

Levomethol **cream** p. 1161 can be used to relieve pruritus; it exerts a cooling effect on the skin. Local antipruritics have a role in the treatment of pruritus in palliative care.

Preparations containing crothamiton p. 1161 are sometimes used but are of uncertain value. Preparations containing calamine are often ineffective.

A topical preparation containing doxepin 5% p. 1161 is licensed for the relief of pruritus in eczema; it can cause drowsiness and there may be a risk of sensitisation.

Pruritus is common in biliary obstruction, especially in primary biliary cirrhosis and drug-induced cholestasis. Oral administration of colestyramine p. 191 is the treatment of choice.

Topical antihistamines and local anaesthetics are only marginally effective and occasionally cause hypersensitivity. For *insect stings* and *insect bites*, a short course of a topical corticosteroid is appropriate. Short-term treatment with a **sedating antihistamine** may help in insect stings and in intractable pruritus where sedation is desirable. Calamine preparations are of little value for the treatment of insect stings or bites.

Topical local anaesthetics are indicated for the relief of local pain. Preparations may be absorbed, especially through mucosal surfaces, therefore excessive application should be avoided and they should preferably not be used for more than 3 days; not generally suitable for young children and are less suitable for prescribing.

Topical antihistamines should be avoided in eczema and are not recommended for longer than 3 days. They are less suitable for prescribing.

**Other drugs used for Pruritus** Alimemazine tartrate, p. 271 • Cetirizine hydrochloride, p. 268 • Chlorphenamine maleate, p. 272 • Hydroxyzine hydrochloride, p. 274 • Levocetirizine hydrochloride, p. 270

## ANTIPRURITICS

## Calamine with zinc oxide

31-Aug-2016

## ● INDICATIONS AND DOSE

**Pruritus**

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

## IMPORTANT SAFETY INFORMATION

MHRA/CHM UPDATE (APRIL 2016): FIRE RISK WITH PARAFFIN-BASED SKIN EMOLLIENTS ON DRESSINGS OR CLOTHING  
See Emollient and barrier preparations p. 1118.

- **CONTRA-INDICATIONS** Avoid application of preparations containing zinc oxide prior to x-ray (zinc oxide may affect outcome of x-ray)
- **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing.

## ● MEDICINAL FORMS

Phenol liquefied 5 mg per 1 ml, Sodium citrate 5 mg per 1 ml, Bentonite 30 mg per 1 ml, Glycerol 50 mg per 1 ml, Zinc oxide 50 mg per 1 ml, Calamine 150 mg per 1 ml Cala Soothe lotion | 200 ml £19.50 DT price = £1.04

## Crotamiton

## ● INDICATIONS AND DOSE

**Pruritus (including pruritus after scabies)**

## ▶ TO THE SKIN

- ▶ Child 1 month-2 years (on doctor's advice only): Apply once daily
- ▶ Child 3-17 years: Apply 2-3 times a day
- ▶ Adult: Apply 2-3 times a day

- **CONTRA-INDICATIONS** Acute exudative dermatoses
- **CAUTIONS** Avoid use in buccal mucosa · avoid use near eyes · avoid use on broken skin · avoid use on very inflamed skin · use on doctor's advice for children under 5 years
- **PREGNANCY** Manufacturer advises avoid, especially during the first trimester—no information available.
- **BREAST FEEDING** No information available; avoid application to nipple area.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Beeswax, cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, hydroxybenzoates (parabens)

## ▶ Crotamiton (Non-proprietary)

Crotamiton 100 mg per 1 gram 30 gram [GSL] no price available

DT price = £2.50

- ▶ Brands may include Eurax

## Doxepin

## ● INDICATIONS AND DOSE

**Pruritus in eczema**

## ▶ TO THE SKIN

- ▶ Child 12-17 years: Apply up to 3 g 3-4 times a day, apply thinly; coverage should be less than 10% of body surface area; maximum 12 g per day
- ▶ Adult: Apply up to 3 g 3-4 times a day, apply thinly; coverage should be less than 10% of body surface area; maximum 12 g per day

- **CAUTIONS** Avoid application to large areas · cardiac arrhythmias · mania · severe heart disease · susceptibility to angle-closure glaucoma · urinary retention
  - **INTERACTIONS** → Appendix 1: tricyclic antidepressants
  - **SIDE-EFFECTS**
    - ▶ Common or very common Dizziness · drowsiness
    - ▶ Frequency not known Antimuscarinic effects · fever · gastro-intestinal disturbances · headache · irritation · local burning · rash · stinging · tingling
  - **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
  - **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe liver disease.
  - **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.
- Driving and skilled tasks**  
Drowsiness may affect performance of skilled tasks (e.g. driving).  
Effects of alcohol enhanced.

## 6 Rosacea and acne

### Rosacea and Acne

#### Acne

Treatment of acne should be commenced early to prevent scarring. Patients should be counselled that an improvement may not be seen for at least a couple of months. The choice of treatment depends on whether the acne is predominantly inflammatory or comedonal and its severity.

*Mild to moderate acne* is generally treated with topical preparations. Systemic treatment with oral antibacterials is generally used for *moderate to severe acne* or where topical preparations are not tolerated or are ineffective or where application to the site is difficult. Another oral preparation used for acne is the hormone treatment co-cyprindiol (cyproterone acetate with ethinylestradiol) p. 1163; it is for women only.

*Severe acne*, acne unresponsive to prolonged courses of oral antibacterials, scarring, or acne associated with psychological problems calls for early referral to a consultant dermatologist who may prescribe isotretinoin p. 1166 for administration by mouth.

#### Topical preparations for acne

In mild to moderate acne, comedones and inflamed lesions respond well to benzoyl peroxide p. 1164 or to a topical retinoid. Alternatively, topical application of an antibacterial such as erythromycin p. 510 or clindamycin p. 1164 may be effective for inflammatory acne. If topical preparations prove inadequate, oral preparations may be needed.

#### Benzoyl peroxide and azelaic acid

Benzoyl peroxide is effective in mild to moderate acne. Both comedones and inflamed lesions respond well to benzoyl peroxide. The lower concentrations seem to be as effective as higher concentrations in reducing inflammation. It is usual to start with a lower strength and to increase the concentration of benzoyl peroxide gradually. Adverse effects include local skin irritation, particularly when therapy is initiated, but the scaling and redness often subside with treatment continued at a reduced frequency of application. If the acne does not respond after 2 months then use of a topical antibacterial should be considered.

Azelaic acid p. 1165 has antimicrobial and anticomedonal properties. It may be an alternative to benzoyl peroxide or to a topical retinoid for treating mild to moderate comedonal acne, particularly of the face. Some patients prefer azelaic acid because it is less likely to cause local irritation than benzoyl peroxide.

#### Topical antibacterials for acne

For many patients with mild to moderate inflammatory acne, topical antibacterials may be no more effective than topical benzoyl peroxide or tretinoin p. 867. Topical antibacterials are probably best reserved for patients who wish to avoid oral antibacterials or who cannot tolerate them. Topical preparations of erythromycin and clindamycin are effective for inflammatory acne. Topical antibacterials can produce mild irritation of the skin, and on rare occasions cause sensitisation; gastro-intestinal disturbances have been reported with topical clindamycin.

Antibacterial resistance of *Propionibacterium acnes* is increasing; there is cross-resistance between erythromycin and clindamycin. To avoid development of resistance:

- when possible use non-antibiotic antimicrobials (such as benzoyl peroxide or azelaic acid);
- avoid concomitant treatment with different oral and topical antibacterials;
- if a particular antibacterial is effective, use it for repeat courses if needed (short intervening courses of benzoyl peroxide or azelaic acid may eliminate any resistant propionibacteria);
- do not continue treatment for longer than necessary (however, treatment with a topical preparation should be continued for at least 6 months).

Some manufacturers of topical antibacterial preparations for acne advise that preparations containing alcohol are not suitable for use with benzoyl peroxide.

#### Topical retinoids and related preparations for acne

Topical tretinoin, its isomer isotretinoin, and adapalene p. 1165 (a retinoid-like drug), are useful for treating comedones and inflammatory lesions in mild to moderate acne. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. Isotretinoin is given by mouth in severe acne.

#### Other topical preparations for acne

Preparations containing aluminium oxide p. 1165 are not considered beneficial in acne.

A topical preparation of nicotinamide p. 1168 is available for inflammatory acne.

#### Oral preparations for acne

Systemic antibacterial treatment is useful for inflammatory acne if topical treatment is not adequately effective or if it is inappropriate. Anticomedonal treatment (e.g. with topical benzoyl peroxide) may also be required.

Either oxytetracycline p. 536 or tetracycline p. 536 is usually given for acne. If there is no improvement after the first 3 months another oral antibacterial should be used. Maximum improvement usually occurs after 4 to 6 months but in more severe cases treatment may need to be continued for 2 years or longer.

Doxycycline p. 534 and lymecycline p. 535 are alternatives to tetracycline.

Although minocycline p. 535 is as effective as other tetracyclines for acne, it is associated with a greater risk of lupus erythematosus-like syndrome. Minocycline sometimes causes irreversible pigmentation; it is given in a once or twice daily dose.

Erythromycin in a twice daily dose is an alternative for the management of acne but *propionibacteria* strains resistant to erythromycin are becoming widespread and this may explain poor response.

Trimethoprim p. 542 may be used for acne resistant to other antibacterials [unlicensed indication]. Prolonged treatment with trimethoprim may depress haematopoiesis; it should generally be initiated by specialists.

Concomitant use of different topical and systemic antibacterials is undesirable owing to the increased likelihood of the development of bacterial resistance.

#### Hormone treatment for acne

Co-cyprindiol (cyproterone acetate with ethinylestradiol) contains an anti-androgen. It is licensed for use in women with moderate to severe acne that has not responded to topical therapy or oral antibacterials, and for moderately severe hirsutism. Although it is an effective hormonal contraceptive, it should not be used solely for contraception.

Improvement of acne with co-cyprindiol probably occurs because of decreased sebum secretion which is under androgen control. Some women with moderately severe hirsutism may also benefit because hair growth is also androgen-dependent.

#### Oral retinoid for acne

The retinoid isotretinoin reduces sebum secretion. It is used for the systemic treatment of nodulo-cystic and conglobate acne, severe acne, scarring, acne which has not responded to an adequate course of a systemic antibacterial, or acne which is associated with psychological problems. It is also useful in women who develop acne in the third or fourth decades of life, since late onset acne is frequently unresponsive to antibacterials.

Isotretinoin is a toxic drug that should be prescribed **only** by, or under the supervision of, a consultant dermatologist. It is given for at least 16 weeks; repeat courses are not normally required.

Side-effects of isotretinoin include severe dryness of the skin and mucous membranes, nose bleeds, and joint pains. The drug is **teratogenic** and must **not** be given to women of child-bearing age unless they practise effective contraception (oral progestogen-only contraceptives not considered effective) and then only after detailed assessment and explanation by the physician. Women must also be registered with a pregnancy prevention programme.

Although a causal link between isotretinoin p. 1166 use and psychiatric changes (including suicidal ideation) has not been established, the possibility should be considered before initiating treatment; if psychiatric changes occur during treatment, isotretinoin should be stopped, the prescriber informed, and specialist psychiatric advice should be sought.

#### Rosacea

Rosacea is not comedonal (but may exist with acne which may be comedonal). Brimonidine tartrate p. 1169 is licensed for the treatment of facial erythema in rosacea. The pustules and papules of rosacea respond to topical azelaic acid p. 1165, topical ivermectin p. 1169 or to topical metronidazole p. 1127. Alternatively oral administration of oxytetracycline p. 536 or tetracycline p. 536, or erythromycin p. 510, can be used; courses usually last 6–12 weeks and are repeated intermittently. Doxycycline p. 534 can be used [unlicensed indication] if oxytetracycline or tetracycline is inappropriate (e.g. in renal impairment). A modified-release preparation of doxycycline is licensed in low daily doses for the treatment of facial rosacea. Isotretinoin is occasionally given in refractory cases [unlicensed indication]. Camouflagers may be required for the redness.

## 6.1 Acne

### ANTI-ANDROGENS

#### Co-cyprindiol

##### • INDICATIONS AND DOSE

**Moderate to severe acne in females of child-bearing age refractory to topical therapy or oral antibacterials |**

**Moderately severe hirsutism**

##### ► BY MOUTH

- Females of childbearing potential: 1 tablet daily for 21 days, to be started on day 1 of menstrual cycle; subsequent courses repeated after a 7-day interval (during which withdrawal bleeding occurs), time to symptom remission, at least 3 months; review need for treatment regularly

- **CONTRA-INDICATIONS** Acute porphyria • gallstones • heart disease associated with pulmonary hypertension or risk of embolus • history during pregnancy of cholestatic jaundice • history during pregnancy of chorea • history during pregnancy of pemphigoid gestationis • history during pregnancy of pruritus • history of breast cancer but can be used after 5 years if no evidence of disease and non-hormonal methods unacceptable • history of haemolytic uraemic syndrome • migraine with aura • personal history of venous or arterial thrombosis • sclerosing treatment for varicose veins • severe or multiple risk factors for arterial disease or for venous thromboembolism • systemic lupus erythematosus with (or unknown) antiphospholipid antibodies • transient cerebral ischaemic attacks without headaches • undiagnosed vaginal bleeding

- **CAUTIONS** Active trophoblastic disease (until return to normal of urine- and plasma-gonadotrophin concentration)—seek specialist advice • arterial disease • gene mutations associated with breast cancer (e.g. BRCA 1) • history of severe depression especially if induced by hormonal contraceptive • hyperprolactinaemia—seek specialist advice • inflammatory bowel disease including Crohn's disease • migraine • personal or family history of hypertriglyceridaemia (increased risk of pancreatitis) • risk factors for venous thromboembolism • sickle-cell disease • undiagnosed breast mass

##### CAUTIONS, FURTHER INFORMATION

- Venous thromboembolism There is an increased risk of venous thromboembolism in women taking co-cyprindiol, particularly during the first year of use. The incidence of venous thromboembolism is 1.5–2 times higher in women using co-cyprindiol than in women using combined oral contraceptives containing levonorgestrel, but the risk may be similar to that associated with use of combined oral contraceptives containing third generation progestogens (desogestrel and gestodene) or drospirenone. Women requiring co-cyprindiol may have an inherently increased risk of cardiovascular disease.

- **INTERACTIONS** → Appendix 1: combined hormonal contraceptives

##### • SIDE-EFFECTS

- **Rare** Rarely gallstones • systemic lupus erythematosus
- **Very rare** Photosensitivity
- **Frequency not known** Abdominal cramps • absence of withdrawal bleeding • amenorrhoea after discontinuation • breast enlargement • breast secretion • breast tenderness • cervical erosion • changes in libido • changes in lipid metabolism • changes in vaginal discharge • chloasma • chorea • contact lenses may irritate • depression • fluid retention • headache • hepatic tumours • hypertension • irritability • leg cramps • liver impairment • nausea • nervousness • reduced menstrual loss • skin reactions •

thrombosis (more common when factor V Leiden present or in blood groups A, B, and AB) · visual disturbances · vomiting · ‘spotting’ in early cycles

- **PREGNANCY** Avoid—risk of feminisation of male fetus with cyproterone.
- **BREAST FEEDING** Manufacturer advises avoid; possibility of anti-androgen effects in neonate with cyproterone.
- **HEPATIC IMPAIRMENT** Avoid in active liver disease including disorders of hepatic excretion (e.g. Dubin-Johnson or Rotor syndromes), infective hepatitis (until liver function returns to normal), and liver tumours.
- **PRESCRIBING AND DISPENSING INFORMATION** A mixture of cyproterone acetate and ethinylestradiol in the mass proportions 2000 parts to 35 parts, respectively.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Tablet

###### ► Co-cyprindiol (Non-proprietary)

Ethinylestradiol 35 microgram, Cyproterone acetate 2 mg  
Co-cyprindiol 2000microgram/35microgram tablets | 63 tablet [PoM]  
£5.70 DT price = £5.70

###### ► Clairette (Stragen UK Ltd)

Ethinylestradiol 35 microgram, Cyproterone acetate  
2 mg Clairette 2000/35 tablets | 63 tablet [PoM] £5.90 DT price =  
£5.70

###### ► Dianette (Bayer Plc)

Ethinylestradiol 35 microgram, Cyproterone acetate  
2 mg Dianette tablets | 63 tablet [PoM] £7.71 DT price = £5.70

###### ► Teragezza (Morningside Healthcare Ltd)

Ethinylestradiol 35 microgram, Cyproterone acetate  
2 mg Teragezza 2000microgram/35microgram tablets | 63  
tablet [PoM] £11.10 DT price = £5.70

## ANTIBACTERIALS > LINCOSAMIDES

### Clindamycin

#### • INDICATIONS AND DOSE

##### DALACIN T® LOTION

###### Acne vulgaris

###### ► TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily, to be applied thinly

##### DALACIN T® SOLUTION

###### Acne vulgaris

###### ► TO THE SKIN

- Child: Apply twice daily, to be applied thinly
- Adult: Apply twice daily, to be applied thinly

Clindamycin (as Clindamycin phosphate) 10 mg per  
1 gram Zindaclin 1% gel | 30 gram [PoM] £8.66 DT price = £8.66

##### Liquid

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), propylene glycol

###### ► Dalacin T (Pfizer Ltd)

Clindamycin (as Clindamycin phosphate) 10 mg per 1 ml Dalacin T  
1% topical lotion | 30 ml [PoM] £5.08 DT price = £5.08 | 60 ml [PoM]  
£10.16

Dalacin T 1% topical solution | 30 ml [PoM] £4.34 DT price = £4.34 |  
50 ml [PoM] £7.23

Combinations available: **Benzoyl peroxide with clindamycin**,  
p. 1165 · **Tretinoin with clindamycin**, p. 1168

## ANTIBACTERIALS > MACROLIDES

### Erythromycin with zinc acetate

#### • INDICATIONS AND DOSE

##### Acne vulgaris

###### ► TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

- **CAUTIONS** Some manufacturers advise preparations containing alcohol are not suitable for use with benzoyl peroxide

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Liquid

###### ► Zineryt (LEO Pharma)

Zinc acetate 12 mg per 1 ml, Erythromycin 40 mg per 1 ml Zineryt  
lotion | 30 ml [PoM] £9.25 DT price = £9.25 | 90 ml [PoM] £20.02 DT  
price = £20.02

## ANTISEPTICS AND DISINFECTANTS > PEROXIDES

### Benzoyl peroxide

#### • INDICATIONS AND DOSE

##### Acne vulgaris

###### ► TO THE SKIN

- Child 12-17 years: Apply 1-2 times a day, preferably apply after washing with soap and water, start treatment with lower-strength preparations
- Adult: Apply 1-2 times a day, preferably apply after washing with soap and water, start treatment with lower-strength preparations

- **UNLICENSED USE** Not licensed for use in treatment of infantile acne.

- **CAUTIONS** Avoid contact with broken skin · avoid contact with eyes · avoid contact with mouth · avoid contact with mucous membranes · avoid excessive exposure to sunlight

- **SIDE-EFFECTS** Skin irritation

#### SIDE-EFFECTS, FURTHER INFORMATION

- Skin irritation Reduce frequency or suspend use until irritation subsides and re-introduce at reduced frequency.
- **PATIENT AND CARER ADVICE** May bleach fabrics and hair.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, isopropyl palmitate, propylene glycol

Azelaic acid 150 mg per 1 gram Finacea 15% gel | 30 gram [PoM] £7.48 DT price = £7.48

## RETINOID AND RELATED DRUGS

## Adapalene

### ● INDICATIONS AND DOSE

#### Mild to moderate acne vulgaris

- ▶ TO THE SKIN
- ▶ Child 12-17 years: Apply once daily, apply thinly in the evening
- ▶ Adult: Apply once daily, apply thinly in the evening

- **CAUTIONS** Avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid in severe acne involving large areas · caution in sensitive areas such as the neck

- **INTERACTIONS** → Appendix 1: retinoids

- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Amount of drug in milk probably too small to be harmful; ensure infant does not come in contact with treated areas.

- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

### Gel

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Disodium edetate, polysorbates, propylene glycol

#### Adapalene with benzoyl peroxide (Non-proprietary)

Adapalene 1 mg per 1 gram, Benzoyl peroxide 25 mg per 1 gram Adapalene 0.1% / Benzoyl peroxide 2.5% gel | 45 gram [PoM] no price available DT price = £19.53

#### Epiduo (Galderma (UK) Ltd)

Adapalene 1 mg per 1 gram, Benzoyl peroxide 25 mg per 1 gram Epiduo 0.1%/2.5% gel | 45 gram [PoM] £19.53 DT price = £19.53

## Isotretinoin

### INDICATIONS AND DOSE

#### Topical treatment of mild to moderate acne

##### ► TO THE SKIN

- Adult: Apply 1–2 times a day, to be applied thinly

**Severe acne (under expert supervision) | Acne which is associated with psychological problems (under expert supervision) | Acne which has not responded to an adequate course of a systemic antibacterial (under expert supervision) | Acne with scarring (under expert supervision) | Systemic treatment of nodulo-cystic and conglobate acne (under expert supervision)**

##### ► BY MOUTH

- Adult: Initially 500 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily for 16–24 weeks, repeat treatment course after a period of at least 8 weeks if relapse after first course; maximum 150 mg/kg per course

### CONTRA-INDICATIONS

- With oral use Hyperlipidaemia · hypervitaminosis A
- With topical use Perioral dermatitis · rosacea

### CAUTIONS

- With oral use avoid blood donation during treatment and for at least 1 month after treatment · diabetes · dry eye syndrome (associated with risk of keratitis) · history of depression · monitor for depression
- With topical use allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · alternating a preparation that causes peeling with a topical retinoid may give rise to contact dermatitis (reduce frequency of retinoid application) · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid in severe acne involving large areas · avoid use of topical retinoids with abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck · personal or familial history of non-melanoma skin cancer

### INTERACTIONS → Appendix 1: retinoids

### SIDE-EFFECTS

#### ► Common or very common

- With oral use Anaemia · arthralgia · dryness of eyes (with blepharitis and conjunctivitis) · dryness of lips (sometimes cheilitis) · dryness of nasal mucosa (with epistaxis) · dryness of pharyngeal mucosa (with hoarseness) · dryness of skin (with dermatitis, scaling, thinning, erythema, pruritus) · epidermal fragility (trauma may cause blistering) · haematuria · headache · myalgia · neutropenia · proteinuria · raised blood-glucose concentration · raised plasma-triglyceride concentration · raised serum-cholesterol concentration (with reduced high-density lipoprotein concentration) · raised serum-transaminase concentration · thrombocytopenia · thrombocytosis

#### ► Rare

- With oral use Aggressive behaviour · alopecia · anxiety · depression · mood changes · skin reactions

#### ► Very rare

- With oral use Acne fulminans · allergic vasculitis · arthritis · benign intracranial hypertension · blurred vision · bone changes following long-term administration · calcification of tendons and ligaments following long-term administration · cataracts · colour blindness · convulsions · corneal opacities · decreased night vision · decreased tolerance to contact lenses · diabetes mellitus · dizziness · drowsiness · early epiphyseal closure following long-term administration · exacerbation of acne · gastrointestinal haemorrhage · glomerulonephritis · Gram-positive infections of skin and mucous membranes · granulomatous

lesions • haemorrhagic diarrhoea • hepatitis • hirsutism • hyperuricaemia • impaired hearing • increased sweating • inflammatory bowel disease • keratitis • lymphadenopathy • malaise • nail dystrophy • nausea • papilloedema • paronychia • photophobia • photosensitivity • psychosis • raised serum-creatinine kinase concentration • reduced bone density following long-term administration • skeletal hyperostosis following long-term administration • skin hyperpigmentation • suicidal ideation • tendinitis • visual disturbances

#### ► Frequency not known

- With oral use Stevens-Johnson syndrome • toxic epidermal necrolysis
- With topical use Blistering of skin • burning • crusting of skin • dry or peeling skin • erythema • eye irritation • increased sensitivity to UVB light or sunlight • oedema • pruritus • stinging

#### SIDE-EFFECTS, FURTHER INFORMATION

- Management of side-effects Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

Psychiatric side-effects require expert referral.

Discontinue treatment if skin peeling severe or haemorrhagic diarrhoea develops.

Visual disturbances require expert referral and possible withdrawal.

#### ● CONCEPTION AND CONTRACEPTION

Pregnancy prevention

- With oral use Effective contraception must be used. In women of child-bearing potential, exclude pregnancy up to 3 days before treatment (start treatment on day 2 or 3 of menstrual cycle), every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 5 weeks after stopping treatment—perform pregnancy test in the first 3 days of the menstrual cycle. Women must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. Women should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone, but can be used in conjunction with other contraceptive methods. Each prescription for isotretinoin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription; repeat prescriptions or faxed prescriptions are not acceptable. Women should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.
- With topical use Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).

- **PREGNANCY** Contra-indicated in pregnancy (teratogenic).

- **BREAST FEEDING** Avoid.

- **HEPATIC IMPAIRMENT**

- With oral use Avoid—further impairment may occur.

- **RENAL IMPAIRMENT**

- With oral use In severe impairment, reduce initial dose (e.g. 10 mg daily) and increase gradually up to 1 mg/kg daily as tolerated.

- **MONITORING REQUIREMENTS**

- With oral use Measure hepatic function and serum lipids before treatment, 1 month after starting and then every 3 months (reduce dose or discontinue if transaminase or serum lipids persistently raised).

- **PRESCRIBING AND DISPENSING INFORMATION** Isotretinoin is an isomer of tretinoin.

#### ● PATIENT AND CARER ADVICE

- With oral use Warn patient to avoid wax epilation (risk of epidermal stripping), dermabrasion, and laser skin treatments (risk of scarring) during treatment and for at least 6 months after stopping; patient should avoid exposure to UV light (including sunlight) and use sunscreen and emollient (including lip balm) preparations from the start of treatment.

Patients and carers should be told how to recognise signs and symptoms of psychiatric disorders such as depression, anxiety, and rarely suicidal thoughts.

- With topical use Patients should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Capsule

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

##### ► Isotretinoin (Non-proprietary)

**Isotretinoin 5 mg** Isotretinoin 5mg capsules | 30 capsule [PoM](#)

£10.15 | 56 capsule [PoM](#) £14.78 DT price = £14.78

**Isotretinoin 10 mg** Isotretinoin 10mg capsules | 30 capsule [PoM](#)

£14.54 DT price = £14.54

**Isotretinoin 20 mg** Isotretinoin 20mg capsules | 30 capsule [PoM](#)

£20.00 DT price = £16.46 | 56 capsule [PoM](#) £37.85

**Isotretinoin 40 mg** Isotretinoin 40mg capsules | 30 capsule [PoM](#)

£38.98 DT price = £38.98

##### ► Roaccutane (Roche Products Ltd)

**Isotretinoin 10 mg** Roaccutane 10mg capsules | 30 capsule [PoM](#)

£14.54 DT price = £14.54

**Isotretinoin 20 mg** Roaccutane 20mg capsules | 30 capsule [PoM](#)

£20.02 DT price = £16.46

## Isotretinoin with erythromycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, isotretinoin p. 1166, erythromycin p. 510.

#### ● INDICATIONS AND DOSE

##### Topical treatment of mild to moderate acne

- TO THE SKIN
- Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: macrolides, retinoids

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Gel

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Butylated hydroxytoluene

##### ► Isotrexin (Stiefel Laboratories (UK) Ltd)

**Isotretinoin 500 microgram per 1 gram, Erythromycin 20 mg per**

**1 gram** Isotrexin gel | 30 gram [PoM](#) £7.47 DT price = £7.47

## Tretinoin with clindamycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, tretinoin p. 867, clindamycin p. 1164.

### ● INDICATIONS AND DOSE

#### Facial acne

##### ► TO THE SKIN

- Child 12–17 years: Apply daily, (to be applied thinly at bedtime)
- Adult: Apply daily, (to be applied thinly at bedtime)

- **CONTRA-INDICATIONS** Perioral dermatitis · personal or familial history of non-melanoma skin cancer · rosacea
- **CAUTIONS** Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · alternating a preparation that causes peeling with a topical retinoid may give rise to contact dermatitis (reduce frequency of retinoid application) · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid in severe acne involving large areas · avoid use of topical retinoids with abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck
- **INTERACTIONS** → Appendix 1: clindamycin, retinoids
- **SIDE-EFFECTS** Blistering of skin · burning · crusting of skin · dry or peeling skin (discontinue if severe) · erythema · eye irritation · increased sensitivity to UVB light or sunlight · oedema · pruritus · stinging · temporary changes of skin pigmentation
- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).
- **PREGNANCY** Contra-indicated in pregnancy.
- **BREAST FEEDING** Amount of drug in milk after topical application probably too small to be harmful; ensure infant does not come in contact with treated areas.
- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

Patients and carers should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop.

#### Liquid

##### CAUTIONARY AND ADVISORY LABELS 11

##### ► Aknemycin Plus (Almirall Ltd)

Tretinoin 250 microgram per 1 gram, Erythromycin 40 mg per 1 gram Aknemycin Plus solution | 25 ml [PoM] £7.05 DT price = £7.05

## VITAMINS AND TRACE ELEMENTS > VITAMIN B GROUP

## Nicotinamide

### ● INDICATIONS AND DOSE

#### Inflammatory acne vulgaris

##### ► TO THE SKIN

- Adult: Apply twice daily, reduced to once daily or on alternate days, dose reduced if irritation occurs

- **CAUTIONS** Avoid contact with eyes • avoid contact with mucous membranes (including nose and mouth) • reduce frequency of application if excessive dryness, irritation or peeling
- **SIDE-EFFECTS** Burning • dry skin • erythema • irritation • pruritus

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Gel

- **Nicam** (Dermal Laboratories Ltd)  
Nicotinamide 40 mg per 1 gram Nicam 4% gel | 60 gram **P** £7.10

## 6.2 Rosacea

**Other drugs used for Rosacea** Azelaic acid, p. 1165

### ANTHELMINTICS

#### Ivermectin

17-May-2017

##### INDICATIONS AND DOSE

###### Papulopustular rosacea

###### ► TO THE SKIN

- **Adult:** Apply daily for up to 4 months, the treatment course may be repeated; discontinue if no improvement after 3 months

- **INTERACTIONS** → Appendix 1: ivermectin

##### SIDE-EFFECTS

- **Common or very common** Burning sensation
- **Uncommon** Dry skin • pruritus • skin irritation
- **Frequency not known** Contact dermatitis • erythema

- **PREGNANCY** Manufacturer advises avoid—limited information but toxicity following *oral* use in *animal* studies.

- **BREAST FEEDING** Manufacturer advises avoid—limited information but present in milk following *oral* use.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in severe impairment—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply thinly to the face only, avoiding contact with eyes, lips and mucosa.

- **PATIENT AND CARER ADVICE** Wash hands immediately after use.

##### NATIONAL FUNDING/ACCESS DECISIONS

###### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (December 2015) that ivermectin (*Soolantra*®) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe inflammatory lesions of rosacea (papulopustular) where a topical treatment is considered appropriate.

###### All Wales Medicines Strategy Group (AWMSG) Decisions

The All Wales Medicines Strategy Group has advised (April 2016) that ivermectin (*Soolantra*®) is recommended as an option for use within NHS Wales for the topical treatment of inflammatory lesions of rosacea (papulopustular) in adult patients.

##### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, isopropyl palmitate, propylene glycol

- **Soolantra** (Galderma (UK) Ltd)  
Ivermectin 10 mg per 1 gram Soolantra 10mg/g cream | 30 gram **PoM** £18.29

### SYMPATHOMIMETICS > ALPHA<sub>2</sub>-ADRENOCEPTOR AGONISTS

#### Brimonidine tartrate

13-Jan-2017

- **DRUG ACTION** Brimonidine, an alpha<sub>2</sub>-adrenoceptor agonist, is used to reduce erythema in rosacea by cutaneous vasoconstriction.

##### INDICATIONS AND DOSE

###### Facial erythema in rosacea

###### ► TO THE SKIN

- **Adult:** Apply once daily until erythema subsides, apply thinly, divide dose over forehead, chin, nose, and cheeks, max. 1 g of gel per day

###### DOSE EQUIVALENCE AND CONVERSION

- 1 g of gel contains 5 mg of brimonidine tartrate (equivalent to 3.3 mg of brimonidine).

##### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: BRIMONIDINE GEL (*MIRVASO*®): RISK OF EXACERBATION OF ROSACEA (NOVEMBER 2016)

Symptom exacerbation has been reported very commonly in patients treated with brimonidine gel. Treatment should be initiated with a small amount of gel (less than the maximum dose) for at least 1 week, then increased gradually, based on tolerability and response. Patients should be counselled on the importance of not exceeding the maximum daily dose, and advised to stop treatment and seek medical advice if symptoms worsen during treatment.

- **CONTRA-INDICATIONS** Neonates and children under 2 years (risk of severe systemic side-effects)
- **CAUTIONS** Cerebral insufficiency • coronary insufficiency • depression • postural hypotension • Raynaud's syndrome • severe cardiovascular disease • thromboangitis obliterans
- **INTERACTIONS** → Appendix 1: brimonidine
- **SIDE-EFFECTS**
  - **Common or very common** Burning sensation at application site • stinging at application site
  - **Uncommon** Dry mouth • dry skin • headache • paraesthesia • skin irritation
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **DIRECTIONS FOR ADMINISTRATION** Avoid contact with eyes, mouth, and mucous membranes; avoid use on irritated skin or open wounds; apply other topical preparations (including cosmetics) only after brimonidine gel has dried on skin.
- **PATIENT AND CARER ADVICE** Patients should be advised on administration of gel.  
**Driving and skilled tasks**  
Drowsiness may affect performance of skilled tasks (e.g. driving).
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**Scottish Medicines Consortium (SMC) Decisions**  
The *Scottish Medicines Consortium* has advised (December 2014) that brimonidine (*Mirvaso*®) is accepted for restricted use within NHS Scotland for the symptomatic

treatment of moderate to severe persistent facial erythema associated with rosacea in adult patients.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Gel

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

► **Mirvaso** (Galderma (UK) Ltd)

**Brimonidine (as Brimonidine tartrate) 3 mg per 1 gram** Mirvaso 3mg/g gel | 30 gram [PoM] £33.69

## 7 Scalp and hair conditions

### Scalp and hair conditions

#### Overview

*Dandruff* is considered to be a mild form of seborrhoeic dermatitis. Shampoos containing antimicrobial agents such as **pyrithione zinc** (which are widely available) and selenium below may have beneficial effects. Shampoos containing **tar** extracts may be useful and they are also used in *psoriasis*. Ketoconazole shampoo p. 1130 should be considered for more persistent or severe dandruff or for seborrhoeic dermatitis of the scalp.

**Corticosteroid** gels and lotions can also be used.

Shampoos containing coal tar with salicylic acid p. 1153 may also be useful. A cream or an ointment containing coal tar with salicylic acid is very helpful in Psoriasis p. 1137 that affects the scalp. Patients who do not respond to these treatments may need to be referred to exclude the possibility of other skin conditions.

*Cradle cap* in infants may be treated with **coconut oil** or **olive oil** applications followed by shampooing.

#### Hirsutism

Hirsutism may result from hormonal disorders or as a side-effect of drugs such as minoxidil p. 1171, corticosteroids, anabolic steroids, androgens, danazol p. 699, and progestogens.

Weight loss can reduce hirsutism in obese women.

Women should be advised about local methods of hair removal, and in the mildest cases this may be all that is required.

Eflornithine p. 1171 an antiprotozoal drug, inhibits the enzyme ornithine decarboxylase in hair follicles. Topical eflornithine can be used as an adjunct to laser therapy for facial hirsutism in women.

Co-cyprindiol p. 1163 may be effective for moderately severe hirsutism. Metformin hydrochloride p. 652 is an alternative in women with polycystic ovary syndrome [unlicensed indication]. Systemic treatment is required for 6–12 months before benefit is seen.

#### Androgenetic alopecia

Finasteride p. 742 is licensed for the treatment of androgenetic alopecia in men. Continuous use for 3–6 months is required before benefit is seen, and effects are reversed 6–12 months after treatment is discontinued.

Topical application of minoxidil may stimulate limited hair growth in a small proportion of adults but only for as long as it is used.

**Other drugs used for Scalp and hair conditions** Coal tar, p. 1152 · Coal tar with lecithin, p. 1153 · Coal tar with salicylic acid and precipitated sulfur, p. 1154

## ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

### Cetrimide with undecenoic acid

#### • INDICATIONS AND DOSE

**Scalp psoriasis | Seborrhoeic dermatitis | Dandruff**

► TO THE SKIN

► Child: Apply 3 times a week for 1 week, then apply twice weekly

► Adult: Apply 3 times a week for 1 week, then apply twice weekly

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

► **Ceanel** (Alliance Pharmaceuticals Ltd)

**Undecenoic acid 10 mg per 1 ml, Phenylethyl alcohol 75 mg per 1 ml, Cetrimide 100 mg per 1 ml** Ceanel Concentrate shampoo | 150 ml [P] £3.40 | 500 ml [P] £9.80

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Benzalkonium chloride

#### • INDICATIONS AND DOSE

**Seborrhoeic scalp conditions associated with dandruff and scaling**

► TO THE SKIN

► Child: Apply as required

► Adult: Apply as required

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

► **Dermax** (Dermal Laboratories Ltd)

**Benzalkonium chloride 5 mg per 1 ml** Dermax Therapeutic 0.5% shampoo | 250 ml [P] £5.69

## VITAMINS AND TRACE ELEMENTS

### Selenium

#### • INDICATIONS AND DOSE

**Seborrhoeic dermatitis | Dandruff**

► TO THE SKIN USING SHAMPOO

► Child 5–17 years: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

► Adult: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

**Pityriasis versicolor**

► TO THE SKIN USING SHAMPOO

► Adult: Apply once daily for 7 days, apply to the affected area and leave on for 10 minutes before rinsing off. The course may be repeated if necessary. Diluting with a small amount of water prior to application can reduce irritation

• **UNLICENSED USE** The use of selenium sulfide shampoo as a lotion for the treatment of pityriasis (tinea) versicolor is an unlicensed indication.

• **INTERACTIONS** → Appendix 1: selenium

• **PATIENT AND CARER ADVICE** Avoid using 48 hours before or after applying hair colouring, straightening or waving preparations.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Shampoo

EXCIPIENTS: May contain Fragrances

► **Selsun** (Chatterm (U.K.) Ltd)

Selenium sulfide 25 mg per 1 ml Selsun 2.5% shampoo | 50 ml [P] £1.61 DT price = £1.61 | 100 ml [P] £2.15 DT price = £2.15 | 150 ml [P] £3.06 DT price = £3.06

## 7.1 Alopecia

**Other drugs used for Alopecia** Finasteride, p. 742

## VASODILATORS

### Minoxidil

#### INDICATIONS AND DOSE

##### REGAINE® FOR MEN EXTRA STRENGTH FOAM

###### Androgenetic alopecia

► TO THE SKIN

► Adult: Apply 0.5 capful twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 16 weeks

##### REGAINE® FOR MEN EXTRA STRENGTH SOLUTION

###### Androgenetic alopecia

► TO THE SKIN

► Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

##### REGAINE® FOR WOMEN REGULAR STRENGTH

###### Androgenetic alopecia

► TO THE SKIN

► Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

● **CONTRA-INDICATIONS** Pheochromocytoma

● **CAUTIONS** Avoid contact with broken, infected, shaved, or inflamed skin · avoid contact with eyes · avoid contact with mouth · avoid contact with mucous membranes · avoid inhalation of spray mist · avoid occlusive dressings

#### CAUTIONS, FURTHER INFORMATION

When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

● **INTERACTIONS** → Appendix 1: minoxidil

#### SIDE-EFFECTS

► **Common or very common** Headache · local irritation  
► **Uncommon** Changes in hair colour or texture (discontinue if increased hair loss persists for more than 2 weeks) · hypotension

#### SIDE-EFFECTS, FURTHER INFORMATION

When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

● **PREGNANCY** Avoid—possible toxicity including reduced placental perfusion. Neonatal hirsutism reported.

● **BREAST FEEDING** Present in milk but not known to be harmful.

● **PATIENT AND CARER ADVICE** Ensure hair and scalp dry before application. Patients and their carers should be advised to wash hands after application of liquid or foam.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Liquid

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Propylene glycol

► **Regaine** (McNeil Products Ltd)

**Minoxidil 20 mg per 1 mL** Regaine for Women Regular Strength 2% solution | 60 mL [GSL] £14.16

**Minoxidil 50 mg per 1 mL** Regaine for Men Extra Strength 5% solution | 180 mL [P] £39.71

### Foam

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

► **Regaine** (McNeil Products Ltd)

**Minoxidil 50 mg per 1 gram** Regaine for Men Extra Strength 5% scalp foam | 60 gram [GSL] £21.84 | 180 gram [GSL] £46.83

## 7.2 Hirsutism

**Other drugs used for Hirsutism** Co-cyprindiol, p. 1163

## ANTIPROTOZOALS

### Eflornithine

● **DRUG ACTION** An antiprotozoal drug that inhibits the enzyme ornithine decarboxylase in hair follicles.

#### INDICATIONS AND DOSE

##### Adjunct to laser therapy for facial hirsutism in women

► TO THE SKIN

► Adult: Apply twice daily, to be applied thinly, discontinue use if no improvement after 4 months of treatment

#### SIDE-EFFECTS

► **Common or very common** Acne · burning at application site · rash · stinging at application site  
► **Uncommon** Abnormal hair growth · abnormal hair texture

● **PREGNANCY** Toxicity in *animal* studies—manufacturer advises avoid.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **PATIENT AND CARER ADVICE** Medicines must be rubbed in thoroughly. Cosmetics may be applied over treated area 5 minutes after eflornithine, do not wash treated area for 4 hours after application.

#### NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (September 2005) that eflornithine for facial hirsutism be restricted for use in women in whom alternative drug treatment cannot be used.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

► **Vaniqua** (Almirall Ltd)

**Eflornithine (as Eflornithine monohydrate chloride) 115 mg per 1 gram** Vaniqua 11.5% cream | 60 gram [PoM] £56.87 DT price = £56.87

## 8 Skin cleansers, antiseptics and desloughing agents

### Skin cleansers, antiseptics and desloughing agents

#### Skin cleansers and antiseptics

Soap or detergent is used with water to cleanse intact skin; emollient preparations such as aqueous cream or emulsifying ointment can be used in place of soap or detergent for cleansing dry skin.

An antiseptic is used for skin that is infected or that is susceptible to recurrent infection. Detergent preparations containing chlorhexidine p. 1173 or povidone-iodine below, which should be thoroughly rinsed off, are used. Emollients may also contain antiseptics.

Antiseptics such as chlorhexidine or povidone-iodine are used on intact skin before surgical procedures; their antiseptic effect is enhanced by an alcoholic solvent. Antiseptic solutions containing cetrimide can be used if a detergent effect is also required.

Hydrogen peroxide p. 1174, an oxidising agent, can be used in solutions of up to 6% for skin disinfection, such as cleansing and deodorising wounds and ulcers. Hydrogen peroxide is also available as a cream for superficial bacterial skin infections.

For irrigating ulcers or wounds, lukewarm sterile sodium chloride 0.9% solution is used, but tap water is often appropriate.

Potassium permanganate below solution 1 in 10000, a mild antiseptic with astringent properties, can be used for exudative eczematous areas; treatment should be stopped when the skin becomes dry.

#### Desloughing agents

Alginate, hydrogel and hydrocolloid dressings are effective at wound debridement. Sterile larvae (maggots) (available from BioMonde) are also used for managing sloughing wounds and are prescribable on the NHS.

Desloughing solutions and creams are of little clinical value. Substances applied to an open area are easily absorbed and perilesional skin is easily sensitised. Gravitational dermatitis may be complicated by superimposed contact sensitivity to substances such as neomycin sulfate p. 492 or lanolin.

### ANTISEPTICS AND DISINFECTANTS

#### Potassium permanganate

##### ● INDICATIONS AND DOSE

**Cleansing and deodorising suppurating eczematous reactions and wounds**

► TO THE SKIN

► Adult: For wet dressings or baths, use approximately 0.01% (1 in 10 000) solution

● **CAUTIONS** Irritant to mucous membranes

● **DIRECTIONS FOR ADMINISTRATION** Potassium permanganate 0.1% solution to be diluted 1 in 10 to provide a 0.01% (1 in 10 000) solution. With potassium permanganate tablets for solution, 1 tablet dissolved in 4 litres of water provides a 0.01% (1 in 10 000) solution.

● **PATIENT AND CARER ADVICE** Can stain clothing, skin and nails (especially with prolonged use).

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

##### **Tablet for cutaneous solution**

► **Potassium permanganate (Non-proprietary)**

**Potassium permanganate 400 mg** Potassium permanganate 400mg tablets for cutaneous solution | 30 tablet no price available DT price = £17.50

► **Permitabs** (Alliance Pharmaceuticals Ltd)

**Potassium permanganate 400 mg** Permitabs 400mg tablets for cutaneous solution | 30 tablet £17.50 DT price = £17.50

### ANTISEPTICS AND DISINFECTANTS > ALCOHOL DISINFECTANTS

#### Alcohol

(Industrial methylated spirit)

##### ● INDICATIONS AND DOSE

**Skin preparation before injection**

► TO THE SKIN

► Child: Apply as required

► Adult: Apply as required

● **CONTRA-INDICATIONS** Neonates

● **CAUTIONS** Avoid broken skin · flammable · patients have suffered severe burns when diathermy has been preceded by application of alcoholic skin disinfectants

##### ● SIDE-EFFECTS

##### **Overdose**

Features of acute alcohol intoxication include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis.

For details on the management of poisoning, see Alcohol, under Emergency treatment of poisoning p. 1249.

● **PRESCRIBING AND DISPENSING INFORMATION** Industrial methylated spirits defined by the BP as a mixture of 19 volumes of ethyl alcohol of an appropriate strength with 1 volume of approved wood naphtha.

##### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Liquid**

► **Alcohol (Non-proprietary)**

Industrial methylated spirit 70% | 600 ml £6.30

**Wood naphtha 50 ml per 1 litre, Ethanol 950 ml per**

**1 litre** Industrial methylated spirit 95% | 600 ml £5.04 | 1000 ml £4.46-£12.45

### ANTISEPTICS AND DISINFECTANTS > IODINE PRODUCTS

#### Povidone-iodine

##### ● INDICATIONS AND DOSE

**Skin disinfection**

► TO THE SKIN

► Child: (consult product literature)

► Adult: (consult product literature)

##### **BETADINE® DRY POWDER SPRAY**

**Skin disinfection, particularly minor wounds and infections**

► TO THE SKIN

► Adult: Not for use in serous cavities (consult product literature)

**SAVLON® DRY****Skin disinfection of minor wounds**

- ▶ TO THE SKIN

**8.1 Minor cuts and abrasions****Minor cuts and abrasions****Management**

Many preparations traditionally used to manage minor burns, and abrasions have fallen out of favour. Preparations containing camphor and sulfonamides should be avoided. Preparations such as magnesium sulfate paste are now rarely used to treat carbuncles and boils as these are best treated with antibiotics.

Cetrimide is used to treat minor cuts and abrasions and proflavine above may be used to treat infected wounds or burns, but its use has now been largely superseded by other antiseptics or suitable antibacterials. The effervescent effect of hydrogen peroxide p. 1174 is used to clean minor cuts and abrasions.

Flexible collodion (see castor oil with collodion and colophony p. 1176) may be used to seal minor cuts and wounds that have partially healed; skin tissue adhesives are used similarly, and also for additional suture support.

**ANTISEPTICS AND DISINFECTANTS****Glycerol with magnesium sulfate and phenol****INDICATIONS AND DOSE****Treat carbuncles and boils**

## ► TO THE SKIN

- Adult: To be applied under dressing

- **DIRECTIONS FOR ADMINISTRATION** Paste should be stirred before use.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Paste

## 10 Sun protection and photodamage

### Photodamage

#### Overview

Patients should be advised to use a high-SPF sunscreen and to minimise exposure of the skin to direct sunlight or sun lamps.

Topical treatments can be used for actinic keratosis. An emollient may be sufficient for mild lesions. Diclofenac sodium gel p. 1177 is suitable for the treatment of superficial lesions in mild disease. Fluorouracil cream p. 1178 is effective against most types of non-hypertrophic actinic keratosis; a solution containing fluorouracil with salicylic acid p. 1178 is available for the treatment of low or moderately thick hyperkeratotic actinic keratosis. Imiquimod p. 1181 is used for lesions on the face and scalp when cryotherapy or other topical treatments cannot be used. Fluorouracil and imiquimod produce a more marked inflammatory reaction than diclofenac sodium but lesions resolve faster. A short course of ingenol mebutate p. 1178 is licensed for the treatment of non-hypertrophic actinic keratosis; response to treatment can usually be assessed 8 weeks after the course. Photodynamic therapy in

## 9 Skin disfigurement

### Camouflagers

#### Overview

Disfigurement of the skin can be very distressing to patients and may have a marked psychological effect. In skilled hands, or with experience, camouflage cosmetics can be very effective in concealing scars and birthmarks. The depigmented patches in vitiligo are also very disfiguring and camouflage creams are of great cosmetic value.

Opaque cover foundation or cream is used to mask skin pigment abnormalities; careful application using a combination of dark- and light-coloured cover creams set

combination with methyl-5-aminolevulinate cream (Metvix<sup>®</sup>, available from Galderma) or 5-aminolevulinic acid gel (Ameluz<sup>®</sup>, available from Spirit Healthcare) is used in specialist centres for treating superficial and confluent, non-hypertrophic actinic keratosis when other treatments are inadequate or unsuitable; it is particularly suitable for multiple lesions, for periorbital lesions, or for lesions located at sites of poor healing.

Imiquimod or topical fluorouracil is used for treating superficial basal cell carcinomas. Photodynamic therapy in combination with methyl-5-aminolevulinate cream is used in specialist centres for treating superficial, nodular basal cell carcinomas when other treatments are unsuitable.

## Sunscreen

### Sunscreen preparations

Solar ultraviolet irradiation can be harmful to the skin. It is responsible for disorders such as *polymorphic light eruption*, *solar urticaria*, and it provokes the various *cutaneous porphyrias*. It also provokes (or at least aggravates) skin lesions of *lupus erythematosus* and may aggravate *rosacea* and some other *dermatoses*. Certain drugs, such as demeclocycline, phenothiazines, or amiodarone, can cause photosensitivity. All these conditions (as well as *sunburn*) may occur after relatively short periods of exposure to the sun. Solar ultraviolet irradiation may provoke attacks of recurrent herpes labialis (but it is not known whether the effect of sunlight exposure is local or systemic).

The effects of exposure over longer periods include *ageing changes* and more importantly the initiation of *skin cancer*.

Solar ultraviolet radiation is approximately 200–400 nm in wavelength. The medium wavelengths (290–320 nm, known as UVB) cause *sunburn*. The long wavelengths (320–400 nm, known as UVA) are responsible for many *photosensitivity reactions* and *photodermatoses*. Both UVA and UVB contribute to long-term *photodamage* and to the changes responsible for *skin cancer* and ageing.

Sunscreen preparations contain substances that protect the skin against UVA and UVB radiation, but they are no substitute for covering the skin and avoiding sunlight. The sun protection factor (SPF, usually indicated in the preparation title) provides guidance on the degree of protection offered against UVB; it indicates the multiples of protection provided against burning, compared with unprotected skin; for example, an SPF of 8 should enable a person to remain 8 times longer in the sun without burning. However, in practice, users do not apply sufficient sunscreen product and the protection is lower than that found in experimental studies.

Some manufacturers use a star rating system to indicate the protection against UVA relative to protection against UVB for sunscreen products. However, the usefulness of the star rating system remains controversial. The EU Commission (September 2006) has recommended that the UVA protection factor for a sunscreen should be at least one-third of the sun protection factor (SPF); products that achieve this requirement will be labelled with a UVA logo alongside the SPF classification. Preparations that also contain reflective substances, such as titanium dioxide, provide the most effective protection against UVA.

Sunscreen preparations may rarely cause allergic reactions.

For optimum photoprotection, sunscreen preparations should be applied **thickly** and **frequently** (approximately 2 hourly). In photodermatoses, they should be used from spring to autumn. As maximum protection from sunlight is desirable, preparations with the highest SPF should be prescribed.

### Ingredient nomenclature in sunscreen preparations

rINN	INCI
amiloxate	isoamyl <i>p</i> -methoxycinnamate
avobenzene	butyl methoxydibenzoylmethane
bemotrizinol	bis-ethylhexyloxyphenol methoxyphenyl triazine
bisotrizole	methylene bis-benzotriazolyl tetramethylbutylphenol
ecamsule	terephthalylidene dicamphor sulfonic acid
ensulizole	phenylbenzimidazole sulfonic acid
enzacamene	4-methylbenzylidene camphor
octinoxate	octyl (or ethylhexyl) methoxycinnamate
octocriene	octocrylene
oxybenzone	benzophenone-3

The European Commission Cosmetic Products Regulation (EC) 1223/2009 requires the use of INCI (International Nomenclature of Cosmetic Ingredients) for cosmetics and sunscreens. This table includes the rINN and the INCI synonym for the active ingredients of sunscreen preparations in the BNF

### Borderline substances

*Anthelios*<sup>®</sup> XL SPF 50+ Melt-in cream; *Sunsense*<sup>®</sup> Ultra; *Uvistat*<sup>®</sup> Lipscreen SPF 50; and *Uvistat*<sup>®</sup> Suncream SPF 30 and 50 (see *Borderline substances*) are regarded as drugs when prescribed for skin protection against ultraviolet radiation in abnormal cutaneous photosensitivity resulting from genetic disorders or photodermatoses, including vitiligo and those resulting from radiotherapy; chronic or recurrent herpes simplex labialis. Preparations with SPF less than 30 should not normally be prescribed

### ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

## Diclofenac sodium

### ● INDICATIONS AND DOSE

#### SOLARAZE<sup>®</sup>

#### Actinic keratosis

##### ► TO THE SKIN

- Adult: Apply twice daily for 60–90 days, to be applied thinly; maximum 8 g per day

- **CAUTIONS** Avoid contact with eyes • avoid contact with inflamed or broken skin • avoid contact with mucous membranes • not for use with occlusive dressings • topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

- **INTERACTIONS** → Appendix 1: NSAIDs

- **SIDE-EFFECTS** Paraesthesia • photosensitivity • rash (discontinue use if develops)

#### SIDE-EFFECTS, FURTHER INFORMATION

Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.

- **BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.
- **DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.
- **PRESCRIBING AND DISPENSING INFORMATION** Caution—topical preparations not generally suitable for children.
- **PATIENT AND CARER ADVICE** For topical preparations, patients and their carers should be advised to wash hands immediately after use.  
Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.
- **EXCEPTIONS TO LEGAL CATEGORY** Various pack sizes of gel preparations may be available on sale to the public.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Gel

EXCIPIENTS: May contain Benzyl alcohol, fragrances, propylene glycol

► **Solaraze** (Almirall Ltd)

**Diclofenac sodium 30 mg per 1 gram** Solaraze 3% gel | 50 gram [PoM] £38.30 DT price = £38.30 | 100 gram [PoM] £76.60

### ANTINEOPLASTIC DRUGS > ANTIMETABOLITES

## Fluorouracil

#### INDICATIONS AND DOSE

##### Superficial malignant and pre-malignant skin lesions

► TO THE SKIN USING CREAM

- **Adult:** Apply 1–2 times a day for 3–4 weeks (usual duration of initial therapy), apply thinly to the affected area, maximum area of skin 500 cm<sup>2</sup> (e.g. 23 cm × 23 cm) treated at one time, alternative regimens may be used in some settings

- **CAUTIONS** Avoid contact with eyes and mucous membranes • do not apply to bleeding lesions
- **INTERACTIONS** → Appendix 1: fluorouracil
- **SIDE-EFFECTS** Erythema multiforme • local irritation (use a topical corticosteroid for severe discomfort associated with inflammatory reactions) • photosensitivity
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 825.
- **PREGNANCY** Manufacturers advise avoid (teratogenic).
- **BREAST FEEDING** Manufacturers advise avoid.
- **HANDLING AND STORAGE** Caution in handling—irritant to tissues.
- **MEDICINAL FORMS**  
There can be variation in the licensing of different medicines containing the same drug.  
**Cream**  
EXCIPIENTS: May contain Cetearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates, propylene glycol  
► **Efudil** (Meda Pharmaceuticals Ltd)  
**Fluorouracil 50 mg per 1 gram** Efudil 5% cream | 40 gram [PoM] £32.90 DT price = £32.90

## Fluorouracil with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluorouracil above, salicylic acid p. 1182.

#### INDICATIONS AND DOSE

##### Low or moderately thick hyperkeratotic actinic keratosis

► TO THE SKIN

- **Adult:** Apply once daily for up to 12 weeks, reduced to 3 times a week if severe side effects occur and until side-effects improve, to be applied to the affected area, if treating area with thin epidermis, reduce frequency of application and monitor response more often; maximum area of skin treated at one time, 25 cm<sup>2</sup> (e.g. 5 cm × 5 cm)

#### INTERACTIONS → Appendix 1: fluorouracil

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cutaneous solution

CAUTIONARY AND ADVISORY LABELS 15

► **Actikerall** (Almirall Ltd)

**Fluorouracil 5 mg/g, Salicylic acid 100 mg/g** Actikerall 5mg/g / 100mg/g cutaneous solution | 25 ml [PoM] £38.30

### PROTEIN KINASE C ACTIVATORS

## Ingenol mebutate

#### INDICATIONS AND DOSE

##### Actinic keratosis on face and scalp

► TO THE SKIN

- **Adult:** Apply once daily for 3 days, use the 150 microgram/g gel

##### Actinic keratosis on trunk and extremities

► TO THE SKIN

- **Adult:** Apply once daily for 2 days, use the 500 microgram/g gel

- **CAUTIONS** Avoid contact with broken skin • avoid contact with eyes • avoid contact with inside of ears • avoid contact with inside of nostrils • avoid contact with lips • avoid occlusive dressings on treated area
- **SIDE-EFFECTS**  
► **Common or very common** Blistering • crusting • erosion • erythema • exfoliation • headache • infection • local reactions • oedema • pain • pruritus  
► **Uncommon** Local ulceration • paraesthesia
- **PREGNANCY** Not absorbed from skin, but manufacturer advises avoid.
- **BREAST FEEDING** Not absorbed from skin; ensure infant does not come in contact with treated area for 6 hours after application.
- **DIRECTIONS FOR ADMINISTRATION** One tube covers skin area of 25 cm<sup>2</sup>. Allow gel to dry on treatment area for 15 minutes. Avoid washing or touching the treated area for 6 hours after application; after this time, area may be washed with mild soap and water. Avoid use immediately after shower or less than 2 hours before bedtime.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Gel

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Benzyl alcohol

► **Picato** (LEO Pharma) ▼

**Ingenol mebutate 150 microgram per 1 gram** Picato 150micrograms/g gel | 1.41 gram [PoM] £65.00

**Ingenol mebutate 500 microgram per 1 gram** Picato 500micrograms/g gel | .94 gram [PoM] £65.00

## 11 Superficial soft-tissue injuries and superficial thrombophlebitis

### Topical circulatory preparations

#### Overview

These preparations are used to improve circulation in conditions such as bruising, superficial thrombophlebitis, chilblains and varicose veins but are of little value. Chilblains are best managed by avoidance of exposure to cold; neither systemic nor topical vasodilator therapy is established as being effective.

#### HEPARINOIDS

##### Heparinoid

###### ● INDICATIONS AND DOSE

**Superficial thrombophlebitis | Bruising | Haematoma**

► TO THE SKIN

► Adult: Apply up to 4 times a day

● **CONTRA-INDICATIONS** Should not be used on large areas of skin, broken or sensitive skin, or mucous membranes

● **LESS SUITABLE FOR PRESCRIBING** *Hirudoid*® is less suitable for prescribing.

###### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

► **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% cream | 50 gram [P]  
£3.99 DT price = £3.99

##### Gel

EXCIPIENTS: May contain Fragrances, propylene glycol

► **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% gel | 50 gram [P] £3.99  
DT price = £3.99

## 12 Warts and calluses

### Warts and calluses

#### Overview

Warts (verrucae) are caused by a human papillomavirus, which most frequently affects the hands, feet (plantar warts), and the anogenital region; treatment usually relies on local tissue destruction. Warts may regress on their own and treatment is required only if the warts are painful, unsightly, persistent, or cause distress.

Preparations of salicylic acid p. 1182, formaldehyde p. 1180, glutaraldehyde p. 1180 or silver nitrate p. 1181 are available for purchase by the public; they are suitable for the removal of warts on hands and feet. Salicylic acid is a useful keratolytic which may be considered first-line; it is also suitable for the removal of *corns and calluses*. Preparations of salicylic acid in a collodion basis are available but some patients may develop an allergy to colophony in the formulation; collodion should be avoided in children allergic to elastic adhesive plaster. Cryotherapy causes pain, swelling, and blistering, and may be no more effective than topical salicylic acid in the treatment of warts.

#### Anogenital warts

The treatment of anogenital warts (condylomata acuminata) should be accompanied by screening for other sexually transmitted infections. Podophyllotoxin p. 1180 (the major active ingredient of podophyllum) may be used for *soft, non-keratinised* external anogenital warts. Patients with a limited number of external warts or *keratinised* lesions may be better treated with cryotherapy or other forms of physical ablation.

Imiquimod cream p. 1181 is licensed for the treatment of external anogenital warts; it may be used for both keratinised and non-keratinised lesions. It is also licensed for the treatment of superficial basal cell carcinoma and actinic keratosis. Camellia sinensis below ointment is licensed for the treatment of external anogenital warts.

Inosine pranobex p. 599 is licensed for adjunctive treatment of genital warts but it has been superseded by more effective drugs.

#### ANTINEOPLASTIC DRUGS > PLANT ALKALOIDS

##### Camellia sinensis

03-May-2017

● **DRUG ACTION** Camellia sinensis is an extract from green tea leaves. The exact mechanism of action is not known; non-clinical studies have shown inhibition of the growth of activated keratinocytes, and anti-oxidative effects at the site of application.

###### ● INDICATIONS AND DOSE

**Warts (external genital and perianal) in immunocompetent patients**

► TO THE LESION

► Adult: Apply up to 250 mg 3 times a day until complete clearance of warts (maximum 16 weeks), do not exceed treatment period even if new warts develop; maximum 750 mg per day

###### DOSE EQUIVALENCE AND CONVERSION

► 250 mg is equivalent to 0.5 cm of ointment.

● **CAUTIONS** Avoid broken skin • avoid contact with eyes • avoid contact with lips • avoid contact with mouth • avoid contact with nostrils • avoid inflamed skin • uncircumcised males (risk of phimosis) • vulvar region

###### ● SIDE-EFFECTS

► **Common or very common** Local reactions • lymphadenopathy • phimosis  
► **Uncommon** Balanitis • dyspareunia • dysuria • local infection • pollakiuria • rash • urinary urgency • vulvovaginitis

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises *Catephen*® may weaken condoms and vaginal diaphragms—alternative methods of contraception should be considered.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises risk to infant cannot be excluded—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply to each wart, ensuring a thin layer is left on the wart. It is not necessary to wash off the ointment from the area before next application.

● **PATIENT AND CARER ADVICE** Manufacturer advises the ointment should be washed off before sexual activity. Manufacturer advises female patients using tampons should insert tampon before applying the ointment.

###### ● NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (April 2016) that camellia sinensis (green tea) leaf extract (*Catephen*®)

is accepted for restricted use within NHS Scotland for the treatment of external genital and perianal warts in patients not suitable for podophyllotoxin or who have not responded to treatment with podophyllotoxin.

#### All Wales Medicines Strategy Group (AWMSG) Decisions

The *All Wales Medicines Strategy Group* has advised (October 2016) that green tea leaf extract (*camellia sinensis*), (*Catephen*®), is recommended for restricted use within NHS Wales for the treatment of external genital and perianal warts in patients not suitable for podophyllotoxin or who have not responded to treatment with podophyllotoxin.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Ointment

- ▶ **Catephen** (KoRa Healthcare)  
**Camellia sinensis extract 100 mg per 1 gram** Catephen 10% ointment | 15 gram [PoM] £39.00

## Podophyllotoxin

#### INDICATIONS AND DOSE

##### CONDYLINE®

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION
- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of five 3-day treatment courses, direct medical supervision for lesions in the female and for lesions greater than 4 cm<sup>2</sup> in the male, maximum 50 single applications ('loops') per session (consult product literature)

##### WARTICON® CREAM

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION
- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>

##### WARTICON® LIQUID

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION
- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>, maximum 50 single applications ('loops') per session (consult product literature)

- **CAUTIONS** Avoid normal skin · avoid open wounds · keep away from face · very irritant to eyes
- **SIDE-EFFECTS** Local irritation
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sorbic acid

- ▶ **Warticon** (Stiefel Laboratories (UK) Ltd)  
**Podophyllotoxin 1.5 mg per 1 gram** Warticon 0.15% cream | 5 gram [PoM] £17.83 DT price = £17.83

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Condylone** (Takeda UK Ltd)  
**Podophyllotoxin 5 mg per 1 ml** Condylone 0.5% solution | 3.5 ml [PoM] £14.49 DT price = £14.49
- ▶ **Warticon** (Stiefel Laboratories (UK) Ltd)  
**Podophyllotoxin 5 mg per 1 ml** Warticon 0.5% solution | 3 ml [PoM] £14.86 DT price = £14.86

## ANTISEPTICS AND DISINFECTANTS > ALDEHYDES AND DERIVATIVES

## Formaldehyde

#### INDICATIONS AND DOSE

#### Warts, particularly plantar warts

- ▶ TO THE LESION
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Impaired peripheral circulation · not suitable for application to anogenital region · not suitable for application to face · not suitable for application to large areas · patients with diabetes at risk of neuropathic ulcers · protect surrounding skin and avoid broken skin · significant peripheral neuropathy

- **SIDE-EFFECTS** Skin irritation · skin ulceration (with high concentrations)

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

##### Gel

- ▶ **Veracur** (Typharm Ltd)  
**Formaldehyde 7.5 mg per 1 gram** Veracur 0.75% gel | 15 gram [GSL] £2.41

##### Liquid

#### Formaldehyde (Non-proprietary)

- ▶ **Formaldehyde 40 mg per 1 ml** Formaldehyde (Buffered) 4% solution | 1000 ml £3.90
- ▶ **Formaldehyde 350 mg per 1 gram** Formaldehyde solution | 500 ml £5.90 DT price = £5.90 | 2000 ml £16.98

## Glutaraldehyde

#### INDICATIONS AND DOSE

#### Warts, particularly plantar warts

- ▶ TO THE LESION
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Not for application to anogenital areas · not for application to face · not for application to mucosa · protect surrounding skin

- **SIDE-EFFECTS** Rashes · skin irritation (discontinue if severe) · stains skin brown

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Paint

- ▶ **Glutarol** (Dermal Laboratories Ltd)  
**Glutaraldehyde 100 mg per 1 ml** Glutarol 10% cutaneous solution | 10 ml [P] £2.07 DT price = £2.07

**ANTISEPTICS AND DISINFECTANTS > OTHER****Silver nitrate**● **INDICATIONS AND DOSE****Common warts**▶ **TO THE LESION**

- ▶ **Child:** Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ **Adult:** Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Verrucae**▶ **TO THE LESION**

- ▶ **Child:** Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ **Adult:** Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Umbilical granulomas**▶ **TO THE SKIN**

- ▶ **Child:** Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin
- ▶ **Adult:** Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin

● **UNLICENSED USE**

- ▶ In children No age range specified by manufacturer.

- **CAUTIONS** Avoid broken skin · not suitable for application to ano-genital region · not suitable for application to face · not suitable for application to large areas · protect surrounding skin

- **SIDE-EFFECTS** Chemical burns on surrounding skin · stains skin

- **PATIENT AND CARER ADVICE** Patients should be advised that silver nitrate may stain fabric.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Stick**▶ **Silver nitrate (Non-proprietary)**

**Silver nitrate 400 mg per 1 gram** Silver nitrate 40% caustic pencils | 1 applicator [P] no price available

### 1 Immunoglobulin therapy

**IMMUNE SERA AND IMMUNOGLOBULINS > IMMUNOGLOBULINS**

#### Immunoglobulins

**Passive immunity**

Immunity with immediate protection against certain infective organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought. The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated. Antibodies of human origin are usually termed immunoglobulins. The term antiserum is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antisera, this therapy has been replaced wherever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins but reports of such reactions are very rare.

Two types of human immunoglobulin preparation are available, normal immunoglobulin p. 1186 and **disease-specific immunoglobulins**.

Human immunoglobulin is a sterile preparation of concentrated antibodies (immune globulins) recovered from pooled human plasma or serum obtained from outside the UK, tested and found non-reactive for hepatitis B surface antigen and for antibodies against hepatitis C virus and human immunodeficiency virus (types 1 and 2). A global shortage of human immunoglobulin and the rapidly increasing range of clinical indications for treatment with immunoglobulins has resulted in the need for a Demand Management programme in the UK, for further information consult [www.ivig.nhs.uk](http://www.ivig.nhs.uk) and *Clinical Guidelines for Immunoglobulin Use*, [www.gov.uk/dh](http://www.gov.uk/dh).

Further information on the use of immunoglobulins is included in Public Health England's *Immunoglobulin Handbook* [www.gov.uk/phe](http://www.gov.uk/phe), and in the Department of Health's publication, *Immunisation against Infectious Disease*, [www.gov.uk/dh](http://www.gov.uk/dh).

**Availability**

Normal immunoglobulin for intramuscular administration is available from some regional Public Health laboratories for protection of contacts and the control of outbreaks of hepatitis A, measles, and rubella only. For other indications, subcutaneous or intravenous normal immunoglobulin should be purchased from the manufacturer.

**Disease-specific immunoglobulins** are available from some regional Public Health laboratories, with the exception of tetanus immunoglobulin p. 1188 which is available from

BPL, hospital pharmacies, or blood transfusion departments. Rabies immunoglobulin p. 1188 is available from the Specialist and Reference Microbiology Division, Public Health England, Colindale. Hepatitis B immunoglobulin p. 1186 required by transplant centres should be obtained commercially.

In Scotland all immunoglobulins are available from the *Scottish National Blood Transfusion Service* (SNBTS).

In Wales all immunoglobulins are available from the *Welsh Blood Service* (WBS).

In Northern Ireland all immunoglobulins are available from the *Northern Ireland Blood Transfusion Service* (NIBTS).

**Normal immunoglobulin**

Human normal immunoglobulin ('HNIG') is prepared from pools of at least 1000 donations of human plasma; it contains immunoglobulin G (IgG) and antibodies to hepatitis A, measles, mumps, rubella, varicella, and other viruses that are currently prevalent in the general population.

**Uses**

Normal immunoglobulin (containing 10%–18% protein) is administered by *intramuscular injection* for the protection of susceptible contacts against **hepatitis A** virus (infectious hepatitis), **measles** and, to a lesser extent, **rubella**. Injection of immunoglobulin produces immediate protection lasting several weeks.

Normal immunoglobulin (containing 3%–12% protein) for *intravenous administration* is used as *replacement therapy* for patients with congenital agammaglobulinaemia and hypogammaglobulinaemia, and for the short-term treatment of idiopathic thrombocytopenic purpura and Kawasaki disease; it is also used for the prophylaxis of infection following bone-marrow transplantation and in children with symptomatic HIV infection who have recurrent bacterial infections. Normal immunoglobulin for replacement therapy may also be given intramuscularly or subcutaneously, but intravenous formulations are normally preferred. Intravenous immunoglobulin is also used in the treatment of Guillain-Barré syndrome as an alternative to plasma exchange.

For guidance on the use of intravenous normal immunoglobulin and alternative therapies for certain conditions, consult *Clinical Guidelines for Immunoglobulin Use* ([www.gov.uk/dh](http://www.gov.uk/dh)).

**Hepatitis A**

Hepatitis A vaccine p. 1209 is preferred for individuals at risk of infection including those visiting areas where the disease is highly endemic (all countries excluding Northern and Western Europe, North America, Japan, Australia, and New Zealand). In unimmunised individuals, transmission of hepatitis A is reduced by good hygiene. Intramuscular normal immunoglobulin is no longer recommended for routine prophylaxis in travellers, but it may be indicated for immunocompromised patients if their antibody response to the vaccine is unlikely to be adequate.

Intramuscular normal immunoglobulin is recommended for prevention of infection in close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV infection, or who are immunosuppressed or over 50 years of age; normal immunoglobulin should be given as soon as possible, preferably within 14 days of exposure to the primary case. However, normal immunoglobulin can still be given to contacts at risk of severe disease up to 28 days after exposure to the primary case. Hepatitis A vaccine can be given at the same time, but it should be given at a separate injection site.

### Measles

Intravenous or subcutaneous normal immunoglobulin may be given to prevent or attenuate an attack of measles in individuals who do not have adequate immunity. Patients with compromised immunity who have come into contact with measles should receive intravenous or subcutaneous normal immunoglobulin as soon as possible after exposure. It is most effective if given within 72 hours but can be effective if given within 6 days.

Subcutaneous or intramuscular normal immunoglobulin should also be considered for the following individuals if they have been in contact with a confirmed case of measles or with a person associated with a local outbreak:

- non-immune pregnant women
- infants under 9 months

Further advice should be sought from the Centre for Infections, Public Health England (tel. (020) 8200 6868).

Individuals with normal immunity who are not in the above categories and who have not been fully immunised against measles, can be given measles, mumps and rubella vaccine, live p. 1213 for prophylaxis following exposure to measles.

### Rubella

Intramuscular immunoglobulin after exposure to rubella does **not** prevent infection in non-immune contacts and is **not** recommended for protection of pregnant women exposed to rubella. It may, however, reduce the likelihood of a clinical attack which may possibly reduce the risk to the fetus. Risk of intra-uterine transmission is greatest in the first 11 weeks of pregnancy, between 16 and 20 weeks there is minimal risk of deafness only, after 20 weeks there is no increased risk. Intramuscular normal immunoglobulin should be used only if termination of pregnancy would be unacceptable to the pregnant woman—it should be given as soon as possible after exposure. Serological follow-up of recipients is essential to determine if the woman has become infected despite receiving immunoglobulin.

For routine prophylaxis against Rubella, see measles, mumps and rubella vaccine, live p. 1213.

### Disease-specific immunoglobulins

Specific immunoglobulins are prepared by pooling the plasma of selected human donors with high levels of the specific antibody required. For further information, see *Immunoglobulin Handbook* ([www.gov.uk/phe](http://www.gov.uk/phe)).

There are no specific immunoglobulins for hepatitis A, measles, or rubella—normal immunoglobulin p. 1186 is used in certain circumstances. There is no specific immunoglobulin for mumps; neither normal immunoglobulin nor measles, mumps and rubella vaccine, live is effective as post-exposure prophylaxis.

### Hepatitis B immunoglobulin

Disease-specific hepatitis B immunoglobulin p. 1186 ('HBIG') is available for use in association with hepatitis B vaccine p. 1210 for the prevention of infection in laboratory and other personnel who have been accidentally inoculated with hepatitis B virus, and in infants born to mothers who have become infected with this virus in pregnancy or who are high-risk carriers. Hepatitis B immunoglobulin will not

inhibit the antibody response when given at the same time as hepatitis B vaccine but should be given at different sites.

An intravenous and subcutaneous preparation of hepatitis B immunoglobulin is licensed for the prevention of hepatitis B recurrence in HBV-DNA negative patients who have undergone liver transplantation for liver failure caused by the virus.

### Rabies immunoglobulin

Following exposure of an unimmunised individual to an animal in or from a country where the risk of rabies is high the site of the bite should be washed with soapy water and specific rabies immunoglobulin p. 1188 of human origin administered. All of the dose should be injected around the site of the wound; if this is difficult or the wound has completely healed it can be given in the anterolateral thigh (remote from the site used for vaccination).

Rabies vaccine p. 1214 should also be given intramuscularly at a different site (for details see rabies vaccine). If there is delay in giving the rabies immunoglobulin, it should be given within 7 days of starting the course of rabies vaccine.

### Tetanus immunoglobulin

For the management of tetanus-prone wounds, tetanus immunoglobulin p. 1188 should be used in addition to wound cleansing and, where appropriate, antibacterial prophylaxis and a tetanus-containing vaccine. Tetanus immunoglobulin, together with metronidazole p. 512 and wound cleansing, should also be used for the treatment of established cases of tetanus.

### Varicella-zoster immunoglobulin

Varicella-zoster immunoglobulin p. 1189 (VZIG) is recommended for individuals who are at increased risk of severe varicella *and* who have no antibodies to varicella-zoster virus *and* who have significant exposure to chickenpox or herpes zoster. Those at increased risk include:

- neonates whose mothers develop chickenpox in the period 7 days before to 7 days after delivery;
- susceptible neonates exposed in the first 7 days of life;
- susceptible neonates or infants exposed whilst requiring intensive or prolonged special care nursing;
- susceptible women exposed at any stage of pregnancy (but when supplies of VZIG are short, may only be issued to those exposed in the first 20 weeks' gestation or to those near term) providing VZIG is given within 10 days of contact;
- immunocompromised individuals including those who have received corticosteroids in the previous 3 months at the following dose equivalents of prednisolone: *children* 2 mg/kg daily for at least 1 week or 1 mg/kg daily for 1 month; *adults* about 40 mg daily for more than 1 week.

**Important:** for full details consult *Immunisation against Infectious Disease*. Varicella-zoster vaccine p. 1216 is available.

### Anti-D (Rh<sub>0</sub>) immunoglobulin

Anti-D (Rh<sub>0</sub>) immunoglobulin p. 1185 is prepared from plasma taken from rhesus-negative donors who have been immunised against the anti-D-antigen. Anti-D (Rh<sub>0</sub>) immunoglobulin is used to prevent a rhesus-negative mother from forming antibodies to fetal rhesus-positive cells which may pass into the maternal circulation. The objective is to protect any subsequent child from the hazard of haemolytic disease of the newborn.

Anti-D (Rh<sub>0</sub>) immunoglobulin should be administered to the mother following any sensitising episode (e.g. abortion, miscarriage and birth); it should be injected within 72 hours of the episode but even if a longer period has elapsed it may still give protection and should be administered.

Anti-D (Rh<sub>0</sub>) immunoglobulin is also given when significant feto-maternal haemorrhage occurs in rhesus-negative women during delivery. The dose of Anti-D (Rh<sub>0</sub>)

immunoglobulin is determined according to the level of exposure to rhesus-positive blood.

Use of routine *antenatal* anti-D prophylaxis should be given irrespective of previous anti-D prophylaxis for a sensitising event early in the same pregnancy. Similarly, *postpartum* anti-D prophylaxis should be given irrespective of previous routine antenatal anti-D prophylaxis or antenatal anti-D prophylaxis for a sensitising event in the same pregnancy.

Anti-D (Rh<sub>0</sub>) immunoglobulin is also given to women of child-bearing potential after the inadvertent transfusion of rhesus-incompatible blood components and is used for the treatment of idiopathic thrombocytopenia purpura.

#### MMR vaccine

Measles, mumps and rubella vaccine, live may be given in the postpartum period with Anti-D (Rh<sub>0</sub>) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

## Anti-D (Rh<sub>0</sub>) immunoglobulin

### ● INDICATIONS AND DOSE

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following birth of rhesus-positive infant

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 500 units, dose to be administered immediately or within 72 hours; for transplacental bleed of over 4 mL fetal red cells, extra 100–125 units per mL fetal red cells, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) up to 20 weeks' gestation

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 250 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) after 20 weeks' gestation

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 500 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 500 units, dose to be given at weeks 28 and 34 of pregnancy, if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis (alternative NICE recommendation)

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 1000–1650 units, dose to be given at weeks 28 and 34 of pregnancy, alternatively 1500 units for 1 dose, dose to be given between 28 and 30 weeks gestation

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following Rh<sub>0</sub>(D) incompatible blood transfusion

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 100–125 units per mL of transfused rhesus-positive red cells, subcutaneous route used for patients with bleeding disorders

### RHOPHYLAC®

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following birth of rhesus-positive infant

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1000–1500 units, dose to be administered immediately or within 72 hours; for large transplacental bleed, extra 100 units per mL fetal red cells (preferably by intravenous injection), intravenous route recommended for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. abortion, amniocentesis, chorionic villous sampling) up to 12 weeks' gestation

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1000 units per episode, dose to be administered immediately or within 72 hours, intravenous route recommended for patients with bleeding disorders, higher doses may be required after 12 weeks gestation

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1500 units, dose to be given between weeks 28–30 of pregnancy; if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, intravenous route recommended for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following Rh<sub>0</sub>(D) incompatible blood transfusion

- ▶ BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 50 units per mL of transfused rhesus-positive blood, alternatively 100 units per mL of erythrocyte concentrate, intravenous route recommended for patients with bleeding disorders

- **CONTRA-INDICATIONS** Treatment of idiopathic thrombocytopenia purpura in rhesus negative patients • treatment of idiopathic thrombocytopenia purpura in splenectomised patients

- **CAUTIONS** Immunoglobulin A deficiency • possible interference with live virus vaccines

### CAUTIONS, FURTHER INFORMATION

MMR vaccine may be given in the postpartum period with anti-D (Rh<sub>0</sub>) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

### ● SIDE-EFFECTS

#### GENERAL SIDE-EFFECTS

- ▶ **Rare** Anaphylaxis • dyspnoea • hypotension • tachycardia • urticaria
- ▶ **Frequency not known** Abdominal pain • arthralgia • asthenia • back pain • diarrhoea • dizziness • drowsiness • fever • headache • hypertension • hypotension • injection site pain

• malaise • myalgia • nausea • pruritus • rash • sweating • vomiting

#### SPECIFIC SIDE-EFFECTS

- ▶ With intravenous use Abdominal distension • blood pressure fluctuations • deep vein thrombosis • haemolytic anaemia • injection site reactions • myocardial infarction • pulmonary embolism • stroke • thromboembolic events

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### NICE technology appraisals (TAs)

- ▶ Routine antenatal anti-D prophylaxis for rhesus-negative women (August 2008) NICE TA156  
Routine antenatal anti-D prophylaxis should be offered to all non-sensitised pregnant women who are rhesus negative.  
[www.nice.org.uk/TA156](http://www.nice.org.uk/TA156)

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **D-Gam** (Bio Products Laboratory Ltd)  
**Anti-D (RH<sub>0</sub>) immunoglobulin 500 unit** D-Gam Anti-D immunoglobulin 500unit solution for injection vials | 1 vial [PoM]  
£33.75
- Anti-D (RH<sub>0</sub>) immunoglobulin 1500 unit** D-Gam Anti-D immunoglobulin 1,500unit solution for injection vials | 1 vial [PoM]  
£58.00
- ▶ **Rhophylac** (CSL Behring UK Ltd)  
**Anti-D (RH<sub>0</sub>) immunoglobulin 750 unit per 1 ml** Rhophylac 1,500units/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £39.52

## Hepatitis B immunoglobulin

#### ● INDICATIONS AND DOSE

##### Prophylaxis against hepatitis B infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 500 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure

##### Prophylaxis against hepatitis B infection, after exposure to hepatitis B virus-contaminated material

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Dose to be administered as soon as possible after exposure, but no later than 72 hours (consult product literature)

##### Prevention of hepatitis B in haemodialysed patients

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

##### Prophylaxis against re-infection of transplanted liver

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

##### Prevention of hepatitis B re-infection more than 6 months after liver transplantation in stable HBV-DNA negative patients

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult (body-weight up to 75 kg): 500 units once weekly, increased if necessary up to 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin

- ▶ Adult (body-weight 75 kg and above): 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin

- **CAUTIONS** IgA deficiency • interference with live virus vaccines

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Injection site reactions
- ▶ **Uncommon** Abdominal pain • anaphylaxis • arthralgia • buccal ulceration • chest pain • dizziness • dyspnoea • glossitis • headache • tremor
- SPECIFIC SIDE-EFFECTS**
- ▶ With intravenous use Abdominal distension • blood pressure fluctuations • deep vein thrombosis • haemolytic anaemia • injection site reactions • myocardial infarction • pulmonary embolism • stroke • thromboembolic events

- **PRESCRIBING AND DISPENSING INFORMATION** Vials containing 200 units or 500 units (for intramuscular injection), available from selected Public Health England and NHS laboratories (except for Transplant Centres), also available from BPL.

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

##### ▶ Hepatitis B immunoglobulin (Non-proprietary)

**Hepatitis B immunoglobulin human 200 unit** Hepatitis B immunoglobulin human 200unit solution for injection vials | 1 vial [PoM] £150.00

**Hepatitis B immunoglobulin human 500 unit** Hepatitis B immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £300.00

- ▶ **Zutectra** (Biotest (UK) Ltd)  
Zutectra 500units/1ml solution for injection pre-filled syringes | 5 syringe [PoM] £1,275.00

##### Solution for infusion

##### ▶ Hepatect CP (Biotest (UK) Ltd)

**Hepatitis B immunoglobulin human 50 unit per 1 ml** Hepatect CP 100units/2ml solution for infusion vials | 1 vial [PoM] £51.00

Hepatect CP 2000units/40ml solution for infusion vials | 1 vial [PoM] £935.00

Hepatect CP 500units/10ml solution for infusion vials | 1 vial [PoM] £255.00

Hepatect CP 5000units/100ml solution for infusion vials | 1 vial [PoM] £2,337.50

##### ▶ Omri-Hep-B (Imported (Israel))

**Hepatitis B immunoglobulin human 50 unit per 1 ml** Omri-Hep-B 5000units/100ml solution for infusion vials | 1 vial [PoM] no price available

## Normal immunoglobulin

#### ● INDICATIONS AND DOSE

##### To control outbreaks of hepatitis A

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 500 mg

##### Rubella in pregnancy, prevention of clinical attack

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 750 mg

**Antibody deficiency syndromes**

## ► BY SUBCUTANEOUS INFUSION

- Adult: (consult product literature)

**SUBGAM®****Hepatitis A prophylaxis in outbreaks**

## ► BY INTRAMUSCULAR INJECTION

- Adult: 750 mg

**• UNLICENSED USE**

**SUBGAM®** Subgam® is not licensed for prophylactic use, but due to difficulty in obtaining suitable immunoglobulin products, Public Health England recommends intramuscular use for prophylaxis against Hepatitis A or rubella.

**• CONTRA-INDICATIONS** Patients with selective IgA deficiency who have known antibody against IgA

**HIZENTRA®** Hyperprolinaemia (contains -proline)

**FLEBOGAMMA® DIF** Hereditary fructose intolerance (contains sorbitol)

**PRIVIGEN®** Hyperprolinaemia (contains -proline)

**GAMMAPLEX®** Hereditary fructose intolerance (contains sorbitol)

**• CAUTIONS** Agammaglobulinaemia with or without IgA deficiency · hypogammaglobulinaemia with or without IgA deficiency · interference with live virus vaccines**CAUTIONS, FURTHER INFORMATION**

- Interference with live virus vaccines Normal immunoglobulin may **interfere with the immune response to live virus vaccines** which should therefore only be given at **least 3 weeks before or 3 months after** an injection of normal immunoglobulin (this does not apply to yellow fever vaccine since normal immunoglobulin does not contain antibody to this virus).

**OCTAGAM®** Falsely elevated results with blood glucose testing systems (contains maltose)

**• SIDE-EFFECTS**

- Rare** Acute renal failure · anaphylaxis · aseptic meningitis · cutaneous skin reactions · hypotension
- Frequency not known** Arthralgia · chills · diarrhoea · dizziness · fever · headache · low back pain · muscle spasms · myalgia · nausea

**SIDE-EFFECTS, FURTHER INFORMATION**

Adverse reactions are more likely to occur in patients receiving normal immunoglobulin for the first time, or following a prolonged period between treatments, or when a different brand of normal immunoglobulin is administered.

**• MONITORING REQUIREMENTS** Monitor for acute renal failure; consider discontinuation if renal function deteriorates. Intravenous preparations with added sucrose have been associated with cases of renal dysfunction and acute renal failure.**• DIRECTIONS FOR ADMINISTRATION**

Preparations for subcutaneous use May be administered by intramuscular injection if subcutaneous route not possible; intramuscular route **not** for patients with thrombocytopenia or other bleeding disorders.

**GAMUNEX®** Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

**KIOVIG®** Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

**• PRESCRIBING AND DISPENSING INFORMATION** Antibody titres can vary widely between normal immunoglobulin preparations from different manufacturers—formulations are **not interchangeable**; patients should be maintained on the same formulation throughout long-term treatment to avoid adverse effects.

- With intramuscular use Available from the Centre for Infections and other regional Public Health England offices (for contacts and control of outbreaks only).

- HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

**• MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

ELECTROLYTES: May contain Sodium

## Rabies immunoglobulin

### • INDICATIONS AND DOSE

#### ► **Post-exposure prophylaxis against rabies infection**

##### ► BY LOCAL INFILTRATION, OR BY INTRAMUSCULAR INJECTION

- **Child:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site)
- **Adult:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site)

### • **CAUTIONS** IgA deficiency · interference with live virus vaccines

### • **SIDE-EFFECTS**

- **Rare** Anaphylaxis · arthralgia · buccal ulceration · chest tightness · dizziness · dyspnoea · glossitis · tremor
- **Frequency not known** Facial oedema · injection site pain · injection site swelling

► **PRESCRIBING AND DISPENSING INFORMATION** The potency of individual batches of rabies immunoglobulin from the manufacturer may vary; potency may also be described differently by different manufacturers. It is therefore critical to know the potency of the batch to be used and the weight of the patient in order to calculate the specific volume required to provide the necessary dose.

Available from Specialist and Reference Microbiology Division, Public Health England (also from BPL).

► **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

### • **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

##### ► **Rabies immunoglobulin (Non-proprietary)**

**Rabies immunoglobulin human 500 unit** Rabies immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £600.00

## Tetanus immunoglobulin

### • INDICATIONS AND DOSE

#### ► **Post-exposure prophylaxis**

##### ► BY INTRAMUSCULAR INJECTION

- **Child:** Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns
- **Adult:** Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns

#### **Treatment of tetanus infection**

##### ► BY INTRAMUSCULAR INJECTION

- **Child:** 150 units/kg, dose may be given over multiple sites
- **Adult:** 150 units/kg, dose may be given over multiple sites

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **SIDE-EFFECTS**
  - ▶ **Rare** Anaphylaxis · arthralgia (in children) · buccal ulceration (in children) · chest tightness (in children) · dizziness (in children) · dyspnoea (in children) · glossitis (in children) · tremor (in children)
  - ▶ **Frequency not known** Facial oedema (in children) · injection site swelling · pain at injection site
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **Tetanus immunoglobulin (Non-proprietary)**  
Tetanus immunoglobulin human 250 unit Tetanus immunoglobulin human 250unit solution for injection vials | 1 vial [PoM] £125.00

## Varicella-zoster immunoglobulin

(Antivaricella-zoster Immunoglobulin)

#### INDICATIONS AND DOSE

##### Prophylaxis against varicella infection

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ **Adult:** 1 g, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **SIDE-EFFECTS**
  - ▶ **Rare** Anaphylaxis
  - ▶ **Frequency not known** Injection site pain · injection site swelling
- **DIRECTIONS FOR ADMINISTRATION** Normal immunoglobulin for intravenous use may be used in those unable to receive intramuscular injections.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from selected Public Health England and NHS laboratories (also from BPL).
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **Varicella-Zoster** (Bio Products Laboratory Ltd)  
Varicella-Zoster immunoglobulin human 250 mg Varicella-Zoster immunoglobulin human 250mg solution for injection vials | 1 vial [PoM] £450.00

## 2 Post-exposure prophylaxis

### IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

#### Botulism antitoxin

- **DRUG ACTION** A preparation containing the specific antitoxic globulins that have the power of neutralising the toxins formed by types A, B, and E of *Clostridium botulinum*.

#### INDICATIONS AND DOSE

##### Post exposure prophylaxis of botulism

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ **Adult:** (consult product literature)

- **SIDE-EFFECTS** Hypersensitivity reactions
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ **Hypersensitivity reactions** It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc.
- **PRE-TREATMENT SCREENING** All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).
- **PRESCRIBING AND DISPENSING INFORMATION** Available from local designated centres, for details see TOXBASE (requires registration) [www.toxbase.org](http://www.toxbase.org). For supplies outside working hours apply to other designated centres or to the Public Health England Colindale duty doctor (Tel (020) 8200 6868). For major incidents, obtain supplies from the local blood bank.  
The BP title Botulinum Antitoxin is not used because the preparation currently in use may have a different specification.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

## Diphtheria antitoxin

(Dip/Ser)

#### INDICATIONS AND DOSE

##### Passive immunisation in suspected cases of diphtheria

- ▶ **BY INTRAVENOUS INFUSION**
- ▶ **Adult:** Dose should be given without waiting for bacteriological confirmation (consult product literature)

#### CAUTIONS

##### CAUTIONS, FURTHER INFORMATION

- ▶ **Hypersensitivity** Hypersensitivity is common after administration; resuscitation facilities should be available.  
Diphtheria antitoxin is no longer used for prophylaxis because of the risk of hypersensitivity; unimmunised contacts should be promptly investigated and given antibacterial prophylaxis and vaccine.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Hypersensitivity reactions
- **PRE-TREATMENT SCREENING** Diphtheria antitoxin is derived from horse serum and reactions are common; tests for hypersensitivity should be carried out before use.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from Centre for Infections (Tel (020) 8200 6868) or in

Northern Ireland from Public Health Laboratory, Belfast City Hospital (Tel (028) 9032 9241).

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

##### ▶ Diphtheria antitoxin (Non-proprietary)

**Diphtheria antitoxin 1000 unit per 1 ml** Antidiphtheria serum 10,000units/10ml solution for injection ampoules | 1 ampoule (PoM)  
no price available

## 3 Tuberculosis diagnostic test

### DIAGNOSTIC AGENTS

#### Tuberculin purified protein derivative (Tuberculin PPD)

##### ● INDICATIONS AND DOSE

##### Mantoux test

- ▶ BY INTRADERMAL INJECTION
- ▶ Child: 2 units for one dose
- ▶ Adult: 2 units for one dose

##### Mantoux test (if first test is negative and a further test is considered appropriate)

- ▶ BY INTRADERMAL INJECTION
- ▶ Child: 10 units for 1 dose
- ▶ Adult: 10 units for 1 dose

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ 2 units is equivalent to 0.1 mL of 20 units/mL strength.
- ▶ 10 units is equivalent to 0.1 mL of 100 units/mL strength.

#### ● CAUTIONS

##### CAUTIONS, FURTHER INFORMATION

- ▶ Mantoux test Response to tuberculin may be suppressed by viral infection, sarcoidosis, corticosteroid therapy, or immunosuppression due to disease or treatment and the MMR vaccine. If a tuberculin skin test has already been initiated, then the MMR should be delayed until the skin test has been read unless protection against measles is required urgently. If a child has had a recent MMR, and requires a tuberculin test, then a 4 week interval should be observed. Apart from tuberculin and MMR, all other live vaccines can be administered at any time before or after tuberculin.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from ImmForm (SSI brand).  
The strength of tuberculin PPD in currently available products may be different to the strengths of products used previously for the Mantoux test; care is required to select the correct strength.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Solution for injection

##### ▶ Tuberculin purified protein derivative (Non-proprietary)

**Tuberculin purified protein derivative 20 tuberculin unit per 1 ml** Tuberculin PPD RT 23 SSI 20 tuberculin units/ml solution for injection 1.5ml vials | 1 vial no price available

**Tuberculin purified protein derivative 100 tuberculin unit per 1 ml** Tuberculin PPD RT 23 SSI 100 tuberculin units/ml solution for injection 1.5ml vials | 1 vial no price available

## 4 Vaccination

### Vaccines

14-Jun-2017

#### Active immunity

Active immunity can be acquired by natural disease or by vaccination. **Vaccines** stimulate production of antibodies and other components of the immune mechanism; they consist of either:

- a *live attenuated* form of a virus (e.g. measles, mumps and rubella vaccine) or bacteria (e.g. BCG vaccine), or
- *inactivated* preparations of the virus (e.g. influenza vaccine) or bacteria, or
- *detoxified exotoxins* produced by a micro-organism (e.g. tetanus vaccine), or
- *extracts* of a micro-organism, which may be derived from the organism (e.g. pneumococcal vaccine) or produced by recombinant DNA technology (e.g. hepatitis B vaccine).

**Live attenuated vaccines** usually produce a durable immunity, but not always as long-lasting as that resulting from natural infection.

**Inactivated vaccines** may require a primary series of injections of vaccine to produce an adequate antibody response, and in most cases booster (reinforcing) injections are required; the duration of immunity varies from months to many years. Some inactivated vaccines are adsorbed onto an adjuvant (such as aluminium hydroxide) to enhance the antibody response.

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI).

Chapters from the handbook (including updates since 2013) are available at [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book).

The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates.

#### Immunisation schedule

Vaccines for the childhood immunisation schedule should be obtained from **local health organisations** or from **ImmForm** ([www.immform.dh.gov.uk](http://www.immform.dh.gov.uk))—not to be prescribed on FP10 (HS21 in Northern Ireland; GP10 in Scotland; WP10 in Wales).

For the most up to date immunisation schedule consult 'The complete routine immunisation schedule', available at [www.gov.uk](http://www.gov.uk).

#### Preterm birth

Babies born preterm should receive all routine immunisations based on their actual date of birth. The risk of apnoea following vaccination is increased in preterm babies, particularly in those born at or before 28 weeks gestational age. If babies at risk of apnoea are in hospital at the time of their first immunisation, they should be monitored for 48–72 hours after immunisation. If a baby develops apnoea, bradycardia, or desaturation after the first immunisation, the second immunisation should also be given in hospital with similar monitoring. Seroconversion may be unreliable in babies born earlier than 28 weeks' gestation or in babies treated with corticosteroids for chronic lung disease; consideration should be given to testing for antibodies against *Haemophilus influenzae* type b, meningococcal C, and hepatitis B after primary immunisation.

#### Vaccines and HIV infection

HIV-positive individuals with or without symptoms can receive the following live vaccines:

- MMR (but avoid if immunity significantly impaired; use of normal immunoglobulin should be considered after

## Routine immunisation schedule

When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Neonates at risk only (see BCG vaccine and Hepatitis B vaccine, below)	<ul style="list-style-type: none"> <li>► Bacillus Calmette-Guérin vaccine p. 1204</li> <li>► Hepatitis B vaccine p. 1210</li> </ul>
2 months	<ul style="list-style-type: none"> <li>► Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1203 First dose</li> <li>► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 1206 First dose</li> <li>► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1207 First dose</li> <li>► Rotavirus vaccine p. 1215 First dose</li> </ul>
3 months	<ul style="list-style-type: none"> <li>► Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1203 Second dose</li> <li>► Rotavirus vaccine p. 1215 Second dose</li> </ul>
4 months	<ul style="list-style-type: none"> <li>► Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1203 Third dose</li> <li>► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 1206 Second dose</li> <li>► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1207 Second dose</li> </ul>
12–13 months	<ul style="list-style-type: none"> <li>► Measles, mumps and rubella vaccine, live p. 1213 First dose</li> <li>► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 1206 Single booster dose</li> <li>► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1207 Single booster dose</li> <li>► Haemophilus influenzae type B with meningococcal group C vaccine p. 1205 Single booster dose</li> </ul>
2–8 years (including children in school years 1, 2, 3 and 4)	<ul style="list-style-type: none"> <li>► Influenza vaccine p. 1212 Each year from September. <b>Note:</b> Flu nasal spray is recommended (<i>Fluenz Tetra</i><sup>®</sup>). If contra-indicated and child is in clinical risk group, use inactivated flu vaccine</li> </ul>
Between 3 years and 4 months, and 5 years	<ul style="list-style-type: none"> <li>► Diphtheria with pertussis, poliomyelitis vaccine and tetanus p. 1203 Single booster dose. <b>Note:</b> Preferably allow interval of at least 3 years after completing primary course</li> <li>► Measles, mumps and rubella vaccine, live p. 1213 Second dose</li> </ul>
11–14 years (females only). First dose of HPV vaccine will be offered to females aged 12–13 years of age in England, Wales, and Northern Ireland, and 11–13 years of age in Scotland.	<ul style="list-style-type: none"> <li>► Human papillomavirus vaccines p. 1212 Two doses; second dose 6–24 months after first dose. If a 3-dose course of HPV vaccine has been started under the 2013/2014 programme, where possible, the course should be completed (2 doses less than 6 months apart does not provide long-term protection). The two human papillomavirus vaccines are not interchangeable and, ideally, one vaccine product should be used for the entire course. However, since 2012, only <i>Gardasil</i><sup>®</sup> is offered as part of the national immunisation programme; for those females who started the schedule with <i>Cervarix</i><sup>®</sup> under the national immunisation programme, but did not complete the vaccination course, the course can be completed with <i>Gardasil</i><sup>®</sup>.</li> </ul>
13–15 years	<ul style="list-style-type: none"> <li>► Meningococcal groups A with C and W135 and Y vaccine p. 1206 Single booster dose</li> </ul>
13–18 years	<ul style="list-style-type: none"> <li>► Diphtheria with poliomyelitis and tetanus vaccine p. 1203 Single booster dose. <b>Note:</b> Can be given at the same time as the dose of meningococcal group A with C and W135 and Y vaccine at 13–15 years of age.</li> </ul>
During adult life, women of child-bearing age susceptible to rubella	<ul style="list-style-type: none"> <li>► Measles, mumps and rubella vaccine, live p. 1213 Women of child-bearing age who have not received 2 doses of a rubella-containing vaccine or who do not have a positive antibody test for rubella should be offered rubella immunisation (using the MMR vaccine)—exclude pregnancy before immunisation.</li> </ul>
Pregnant women	<ul style="list-style-type: none"> <li>► Acellular pertussis-containing vaccine administered as diphtheria with pertussis, poliomyelitis vaccine and tetanus p. 1203 (<i>Boostrix-IPV</i><sup>®</sup>) 1 dose from the 16th week of pregnancy, preferably after the foetal anomaly scan (weeks 18–20)</li> <li>► Influenza vaccine p. 1212 (inactivated), Single dose administered from September, regardless of the stage of pregnancy</li> </ul>
Under 25 years, those entering university who are at risk of meningococcal disease	<ul style="list-style-type: none"> <li>► Meningococcal groups A with C and W135 and Y vaccine p. 1206 Single dose. <b>Note:</b> Should be offered to those aged under 25 years entering university who have not received the meningococcal groups A with C and W135 and Y vaccine over the age of 10 years</li> </ul>
During adult life, if not previously immunised	<ul style="list-style-type: none"> <li>► Diphtheria with poliomyelitis and tetanus vaccine p. 1203</li> </ul>
65 years	<ul style="list-style-type: none"> <li>► Pneumococcal polysaccharide vaccine p. 1207</li> </ul>
From 65 years	<ul style="list-style-type: none"> <li>► Influenza vaccine p. 1212 Each year from September</li> </ul>
70 years	<ul style="list-style-type: none"> <li>► Varicella-zoster vaccine p. 1216 Single dose</li> </ul>

exposure to measles), varicella-zoster vaccine against chickenpox (but avoid if immunity significantly impaired—consult product literature; varicella–zoster immunoglobulin should be considered after exposure to chickenpox or herpes zoster), rotavirus; and the following inactivated vaccines:

- anthrax, cholera (oral), diphtheria, haemophilus influenzae type b, hepatitis A, hepatitis B, human

papillomavirus, influenza (injection), meningococcal, pertussis, pneumococcal, poliomyelitis, rabies, tetanus, tick-borne encephalitis, typhoid (injection).

HIV-positive individuals should **not** receive:

- BCG, influenza nasal spray (unless stable HIV infection and receiving antiretroviral therapy), typhoid (oral), yellow fever (if yellow fever risk is unavoidable, specialist advice should be sought)

The above advice differs from that for other immunocompromised patients; *Immunisation Guidelines for HIV-infected Adults* issued by *British HIV Association* (BHIVA) are available at [www.bhiva.org](http://www.bhiva.org) and, *Immunisation of HIV-infected Children* issued by *Children's HIV Association* (CHIVA) are available at [www.chiva.org.uk](http://www.chiva.org.uk).

### Vaccines and asplenia

The following vaccines are recommended for asplenic patients, those with splenic dysfunction or complement disorders, depending on the age at which their condition is diagnosed:

- Haemophilus influenzae type B with meningococcal group C vaccine p. 1205;
- Influenza vaccine p. 1212;
- Meningococcal groups A with C and W135 and Y vaccine p. 1206 and meningococcal group B vaccine (rDNA, component, adsorbed) p. 1206;
- pneumococcal polysaccharide vaccine.

*Children first diagnosed under 1 year of age* should be vaccinated according to the Immunisation Schedule. Additionally, one dose of meningococcal groups A with C and W135 and Y vaccine should be given during infancy followed by a second dose at least one month apart. Two months following the routine 12 month booster vaccines, give a dose of meningococcal groups A with C and W135 and Y vaccine and an additional dose of 13-valent pneumococcal polysaccharide vaccine. An additional dose of haemophilus influenzae type B with meningococcal group C vaccine and 23-valent pneumococcal polysaccharide vaccine should be given after the second birthday. The influenza vaccine should be administered annually in children aged 6 months or older.

*Children first diagnosed between 1 and 2 years of age* should be vaccinated according to the Immunisation Schedule, including the 12 month boosters. Two months after the routine 12 month booster vaccines, give a dose of meningococcal groups A with C and W135 and Y vaccine and an additional dose of 13-valent pneumococcal polysaccharide vaccine. An additional dose of haemophilus influenzae type B with meningococcal group C vaccine and 23-valent pneumococcal polysaccharide vaccine should be given after the second birthday. The influenza vaccine should be administered annually.

*Children first diagnosed over 2 years of age* should be vaccinated according to the Immunisation schedule, including the 12 month boosters. The child should receive one additional booster dose of haemophilus influenzae type B with meningococcal group C vaccine along with the 23-valent pneumococcal polysaccharide vaccine, followed by one dose of meningococcal groups A with C and W135 and Y vaccine after 2 months. The influenza vaccine should be administered annually.

### Vaccines and antisera availability

Anthrax vaccine p. 1204 and yellow fever vaccine, live p. 1217, botulism antitoxin p. 1189, diphtheria antitoxin p. 1189, and snake and spider venom antitoxins are available from local designated holding centres.

For antivenom, see Emergency treatment of poisoning p. 1249.

Enquiries for vaccines not available commercially can also be made to:

Vaccines and Countermeasures Response Department  
Public Health England  
Wellington House  
133–155 Waterloo Road  
London  
SE1 8UG  
[vaccinesupply@phe.gov.uk](mailto:vaccinesupply@phe.gov.uk)

In Scotland information about availability of vaccines can be obtained from a Specialist in Pharmaceutical Public Health.

In Wales enquiries for vaccines not available commercially should be directed to:

Welsh Medicines Information Centre  
University Hospital of Wales  
Cardiff  
CF14 4XW  
(029) 2074 2979

In Northern Ireland:

Pharmacy and Medicines Management Centre  
Northern Health and Social Care Trust  
Beech House  
Antrim Hospital Site  
Bush Road  
Antrim  
BT41 2RL  
[rpmps.admin@northerntrust.hscni.net](mailto:rpmps.admin@northerntrust.hscni.net)

For further details of availability, see under individual vaccines.

### Anthrax vaccine

Anthrax vaccine is made from antigens from *B. anthracis*. Anthrax immunisation is indicated for individuals who handle infected animals, for those exposed to imported infected animal products, and for laboratory staff who work with *B. anthracis*. A 4-dose regimen is used for primary immunisation; booster doses should be given annually to workers at continued risk of exposure to anthrax.

In the event of possible contact with *B. anthracis*, post-exposure immunisation may be indicated, in addition to antimicrobial prophylaxis. Advice on the use of anthrax vaccine for post-exposure prophylaxis must be obtained from Public Health England Colindale (tel. 020 8200 4400).

### BCG vaccine

Bacillus Calmette-Guérin vaccine p. 1204 should be given intradermally by operators skilled in the technique.

The expected reaction to successful Bacillus Calmette-Guérin vaccine is induration at the site of injection followed by a local lesion which starts as a papule 2 or more weeks after vaccination; the lesion may ulcerate then subside over several weeks or months, leaving a small, flat scar. A dry dressing may be used if the ulcer discharges, but air should **not** be excluded.

BCG is recommended for the following groups if BCG immunisation has not previously been carried out and they are negative for tuberculin hypersensitivity:

- neonates with a family history of tuberculosis in the last 5 years;
- all neonates and infants (0–12 months) born in areas where the incidence of tuberculosis is greater than 40 per 100 000;
- neonates, infants, and children under 16 years with a parent or grandparent born in a country with an incidence of tuberculosis greater than 40 per 100 000;
- new immigrants aged under 16 years who were born in, or lived for more than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000;
- new immigrants aged 16–35 years from Sub-Saharan Africa or a country with an incidence of tuberculosis greater than 500 per 100 000;
- contacts aged under 36 years of those with active respiratory tuberculosis (for healthcare or laboratory workers who have had contact with clinical materials or patients with tuberculosis, age limit does not apply);
- healthcare workers and laboratory staff (irrespective of age) who are likely to have contact with patients, clinical materials, or derived isolates; other individuals under 35 years (there is inadequate evidence of protection by BCG vaccine in adults aged over 35 years; however, vaccination is recommended for healthcare workers irrespective of age because of the increased risk to them or their patients) at occupational risk including veterinary

and other staff who handle animal species susceptible to tuberculosis, and staff working directly with prisoners, in care homes for the elderly, or in hostels or facilities for the homeless or refugees;

- individuals under 16 years intending to live with local people for more than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000.

List of countries or primary care trusts where the incidence of tuberculosis is greater than 40 cases per 100 000 is available at [www.gov.uk/phe](http://www.gov.uk/phe).

Bladder instillations of BCG are licensed for the management of bladder carcinoma.

See also Tuberculosis p. 546 for advice on chemoprophylaxis; for the treatment of infection following vaccination, seek expert advice.

### Tuberculosis Diagnostic Agents

The *Mantoux test* is recommended for tuberculin skin testing, but no licensed preparation is currently available. Guidance for healthcare professionals is available at [www.dh.gov.uk/](http://www.dh.gov.uk/) immunisation.

In the Mantoux test, the diagnostic dose is administered by intradermal injection of tuberculin purified protein derivative (PPD) p. 1190.

The *Heaf test* (involving the use of multiple-puncture apparatus) is no longer available.

Two interferon gamma release assay (IGRA) tests are also available as an aid in the diagnosis of tuberculosis infection: *QuantIFERON® TB Gold* and *T-SPOT® TB*. Both tests measure T-cell mediated immune response to synthetic antigens. For further information on the use of interferon gamma release assay tests for tuberculosis, see [www.gov.uk/phe](http://www.gov.uk/phe).

### Botulism antitoxin

A polyvalent botulism antitoxin p. 1189 is available for the post-exposure prophylaxis of botulism and for the treatment of persons thought to be suffering from botulism. It specifically neutralises the toxins produced by *Clostridium botulinum* types A, B, and E. It is not effective against infantile botulism as the toxin (type A) is seldom, if ever, found in the blood in this type of infection.

### Cholera vaccine

Cholera vaccine (oral) p. 1205 contains inactivated Inaba (including El-Tor biotype) and Ogawa strains of *Vibrio cholerae*, serotype O1 together with recombinant B-subunit of the cholera toxin produced in Inaba strains of *V. cholerae*, serotype O1.

Oral cholera vaccine is licensed for travellers to endemic or epidemic areas on the basis of current recommendations. Immunisation should be completed at least 1 week before potential exposure. However, there is no requirement for cholera vaccination for international travel.

*Injectable cholera vaccine* provides unreliable protection and is no longer available in the UK.

### Diphtheria vaccine

Diphtheria-containing vaccines are prepared from the toxin of *Corynebacterium diphtheriae* and adsorption on aluminium hydroxide or aluminium phosphate improves antigenicity. The vaccine stimulates the production of the protective antibody. The quantity of diphtheria toxoid in a preparation determines whether the vaccine is defined as 'high dose' or 'low dose'. Vaccines containing the higher dose of diphtheria toxoid are used for primary immunisation of children under 10 years of age. Vaccines containing the lower dose of diphtheria toxoid are used for primary immunisation in adults and children over 10 years. Single-antigen diphtheria vaccine is not available and adsorbed diphtheria vaccine is given as a combination product containing other vaccines.

For primary immunisation of children aged between 2 months and 10 years vaccination is recommended usually in the form of 3 doses (separated by 1-month intervals) of **diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed)** (see Immunisation schedule). In unimmunised individuals aged over 10 years the primary course comprises of 3 doses of **adsorbed diphtheria** [low dose], **tetanus and poliomyelitis (inactivated) vaccine**.

A booster dose should be given 3 years after the primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed). Children under 10 years should receive **either adsorbed diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine or adsorbed diphtheria** [low dose], **tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine**. Individuals aged over 10 years should receive **adsorbed diphtheria** [low dose], **tetanus, and poliomyelitis (inactivated) vaccine**.

A second booster dose, of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, should be given 10 years after the previous booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed).

### Diphtheria-containing vaccines for children over 10 years and adults

A **low dose** of diphtheria toxoid is sufficient to recall immunity in individuals previously immunised against diphtheria but whose immunity may have diminished with time; it is insufficient to cause serious reactions in an individual who is already immune. Preparations containing low dose diphtheria should be used for adults and children over 10 years, for both primary immunisation and booster doses.

### Travel

Those intending to travel to areas with a risk of diphtheria infection should be fully immunised according to the UK schedule. If more than 10 years have lapsed since completion of the UK schedule, a dose of **adsorbed diphtheria** [low dose], **tetanus and poliomyelitis (inactivated) vaccine** should be administered.

### Contacts

Staff in contact with diphtheria patients or with potentially pathogenic clinical specimens or working directly with *C. diphtheriae* or *C. ulcerans* should receive a booster dose if fully immunised (with 5 doses of diphtheria-containing vaccine given at appropriate intervals); further doses should be given at 10-year intervals if risk persists. Individuals at risk who are not fully immunised should complete the primary course; a booster dose should be given after 5 years and then at 10-year intervals. **Adsorbed diphtheria** [low dose], **tetanus and poliomyelitis (inactivated) vaccine** is used for this purpose; immunity should be checked by antibody testing at least 3 months after completion of immunisation.

Advice on the management of cases, carriers, contacts and outbreaks must be sought from health protection units. The immunisation history of infected individuals and their contacts should be determined; those who have been incompletely immunised should complete their immunisation and fully immunised individuals should receive a reinforcing dose. See advice on antibacterial treatment to prevent a secondary case of diphtheria in a non-immune individual.

### Haemophilus influenzae type B conjugate vaccine

**Haemophilus influenzae type b (Hib) vaccine** is made from capsular polysaccharide; it is conjugated with a protein such as tetanus toxoid to increase immunogenicity, especially in young children. *Haemophilus influenzae* type b vaccine immunisation is given in combination with

diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine, as a component of the primary course of childhood immunisation (see Immunisation schedule). For infants under 1 year, the course consists of 3 doses of a vaccine containing *Haemophilus influenzae* type b component with an interval of 1 month between doses. A booster dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) should be given at 12–13 months of age.

Children 1–10 years who have not been immunised against *Haemophilus influenzae* type b need to receive only 1 dose of *Haemophilus influenzae* type b vaccine (combined with meningococcal group C conjugate vaccine). However, if a primary course of immunisation has not been completed, these children should be given 3 doses of diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus p. 1203. The risk of infection falls sharply in older children and the vaccine is not normally required for children over 10 years.

*Haemophilus influenzae* type b vaccine may be given to those over 10 years who are considered to be at increased risk of invasive *H. influenzae* type b disease (such as those with sickle-cell disease or complement deficiency, or those receiving treatment for malignancy).

#### Invasive *Haemophilus influenzae* type b disease

After recovery from infection, unimmunised and partially immunised index cases under 10 years of age should complete their age-specific course of immunisation. Previously vaccinated cases under 10 years of age should be given an additional dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) if Hib antibody concentrations are low or if it is not possible to measure antibody concentrations. Index cases of any age with asplenia or splenic dysfunction should complete their immunisation according to the recommendations below; fully vaccinated cases with asplenia or splenic dysfunction should be given an additional dose of haemophilus influenzae type b vaccine (combined with meningococcal group C conjugate vaccine) if they received their previous dose over 1 year ago.

See also use of rifampicin p. 549 in the prevention of secondary cases of *Haemophilus influenzae* type b disease.

#### Hepatitis A vaccine

Hepatitis A vaccine p. 1209 is prepared from formaldehyde-inactivated hepatitis A virus grown in human diploid cells. Immunisation is recommended for:

- laboratory staff who work directly with the virus;
- staff and residents of homes for those with severe learning difficulties;
- workers at risk of exposure to untreated sewage;
- individuals who work with primates;
- patients with haemophilia or other conditions treated with plasma-derived clotting factors;
- patients with severe liver disease;
- travellers to high-risk areas;
- individuals who are at risk due to their sexual behaviour;
- parenteral drug abusers.

Immunisation should be considered for:

- patients with chronic liver disease including chronic hepatitis B or chronic hepatitis C;
- prevention of secondary cases in close contacts of confirmed cases of hepatitis A, within 14 days of exposure to the primary case (within 8 weeks of exposure to the primary case where there is more than 1 contact in the household).

A booster dose is usually given 6–12 months after the initial dose. A second booster dose can be given 20 years after the previous booster dose to those who continue to be at risk. Specialist advice should be sought on re-immunisation of immunocompromised individuals.

For rapid protection against hepatitis A after exposure or during an outbreak, in adults a single dose of a monovalent vaccine is recommended; for children under 16 years, a single dose of the combined vaccine Ambirix® can also be used.

Intramuscular normal immunoglobulin p. 1186 is recommended for use in addition to hepatitis A vaccine for close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV infection, or who are immunosuppressed or over 50 years of age.

Post-exposure prophylaxis is not required for healthy children under 1 year of age, so long as all those involved in nappy changing are vaccinated against hepatitis A. However, children 2–12 months of age can be given a dose of hepatitis A vaccine if it is not possible to vaccinate their carers, or if the child becomes a source of infection to others [unlicensed use]; in these cases, if the child goes on to require long-term protection against hepatitis A after the first birthday, the full course of 2 doses should be given.

#### Hepatitis B vaccine

Hepatitis B vaccine p. 1210 contains inactivated hepatitis B virus surface antigen (HBsAg) adsorbed onto aluminium hydroxide adjuvant. It is made biosynthetically using recombinant DNA technology. The vaccine is used in individuals at high risk of contracting hepatitis B.

In the UK, groups at high-risk of hepatitis B include:

- parenteral drug misusers, their sexual partners, and household contacts; other drug misusers who are likely to 'progress' to injecting;
- individuals who change sexual partners frequently;
- close family contacts of a case or individual with chronic hepatitis B infection;
- babies whose mothers have had acute hepatitis B during pregnancy or are positive for hepatitis B surface antigen (regardless of e-antigen markers); hepatitis B vaccination is started immediately on delivery and *hepatitis B immunoglobulin* given at the same time (but preferably at a different site). Babies whose mothers are positive for hepatitis B surface antigen and for e-antigen antibody should receive the vaccine only (but babies weighing 1.5 kg or less should also receive the immunoglobulin regardless of the mother's e-antigen antibody status);
- individuals with haemophilia, those receiving regular blood transfusions or blood products, and carers responsible for the administration of such products;
- patients with chronic renal failure including those on haemodialysis. Haemodialysis patients should be monitored for antibodies annually and re-immunised if necessary. Home carers (of dialysis patients) should be vaccinated;
- individuals with chronic liver disease;
- healthcare personnel (including trainees) who have direct contact with blood or blood-stained body fluids or with patients' tissues;
- laboratory staff who handle material that may contain the virus;
- other occupational risk groups such as morticians and embalmers;
- staff and patients of day-care or residential accommodation for those with severe learning difficulties;
- staff and inmates of custodial institutions;
- those travelling to areas of high or intermediate prevalence who are at increased risk or who plan to remain there for lengthy periods;
- families adopting children from countries with a high or intermediate prevalence of hepatitis B;
- foster carers and their families.

Different immunisation schedules for hepatitis B vaccine are recommended for specific circumstances. Generally, three or four doses are required for primary immunisation; an 'accelerated schedule' is recommended for pre-exposure

prophylaxis in high-risk groups where rapid protection is required, and for post-exposure prophylaxis.

Immunisation may take up to 6 months to confer adequate protection; the duration of immunity is not known precisely, but a single booster 5 years after the primary course may be sufficient to maintain immunity for those who continue to be at risk.

Immunisation does not eliminate the need for commonsense precautions for avoiding the risk of infection from known carriers by the routes of infection which have been clearly established, consult *Guidance for Clinical Health Care Workers: Protection against Infection with Blood-borne Viruses* (available at [www.dh.gov.uk](http://www.dh.gov.uk)). Accidental inoculation of hepatitis B virus-infected blood into a wound, incision, needle-prick, or abrasion may lead to infection, whereas it is unlikely that indirect exposure to a carrier will do so.

Following significant exposure to hepatitis B, an accelerated schedule, with the second dose given 1 month, and the third dose 2 months after the first dose, is recommended. For those at continued risk, a fourth dose should be given 12 months after the first dose. More detailed guidance is given in the handbook *Immunisation against Infectious Disease*. Specific hepatitis B immunoglobulin p. 1186 ('HBIG') is available for use with the vaccine in those accidentally inoculated and in neonates at special risk of infection.

A combined hepatitis A and B vaccine p. 1208 is also available.

### Human papillomavirus vaccine

Human papillomavirus vaccine is available as a bivalent vaccine (*Cervarix*®) or a quadrivalent vaccine (*Gardasil*®). Since 2012, only *Gardasil*® is offered as part of the national immunisation programme. *Cervarix*® is licensed for use in females for the prevention of cervical cancer and other pre-cancerous lesions caused by human papillomavirus types 16 and 18. *Gardasil* is licensed for use in females for the prevention of cervical and anal cancers, genital warts and pre-cancerous genital (cervical, vulvar, and vaginal) and anal lesions caused by human papillomavirus types 6, 11, 16, and 18. The vaccines may also provide limited protection against disease caused by other types of human papillomavirus. The two vaccines are not interchangeable and one vaccine product should be used for an entire course.

Human papillomavirus vaccine will be most effective if given before sexual activity starts. From September 2014, a 2-dose schedule is recommended, as long as the first dose is received before the age of 15 years. The first dose is given to females aged 11 to 14 years, and the second dose is given 6–24 months after the first dose (for the purposes of planning the national immunisation programme, it is appropriate to give the second dose 12 months after the first—see Immunisation schedule). If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.

Females receiving their first dose aged 15 years or older require a 3-dose schedule (see *Cervarix*® and *Gardasil*®), with the second and third doses given 1 and 4–6 months after the first dose; all 3 doses should be given within a 12-month period. If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

If a 3-dose course of vaccination had been started before September 2014 in a female aged under 15 years, then where possible this should be completed; the interrupted course should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

Under the national programme in England, females remain eligible to receive the human papillomavirus vaccine up to

the age of 18 years if they did not receive the vaccine when scheduled. Where appropriate, immunisation with human papillomavirus vaccine should be offered to females coming into the UK as they may not have been offered protection in their country of origin. The duration of protection has not been established, but current studies suggest that protection is maintained for at least 6 years after completion of the primary course.

As the vaccines do not protect against all strains of human papillomavirus, routine cervical screening should continue.

### Influenza vaccine

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccine p. 1212 in use contain the H and N components of the prevalent strain or strains as recommended each year by the World Health Organization.

Immunisation is recommended for persons at high risk, and to reduce transmission of infection. Annual immunisation is strongly recommended for individuals aged over 6 months with the following conditions:

- chronic respiratory disease (includes asthma treated with continuous or repeated use of inhaled or systemic corticosteroids or asthma with previous exacerbations requiring hospital admission);
- chronic heart disease;
- chronic liver disease;
- chronic renal disease at stage 3, 4 or 5;
- chronic neurological disease;
- complement disorders;
- diabetes mellitus;
- immunosuppression because of disease (including asplenia or splenic dysfunction) or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone: *adult and child over 20 kg*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily] and chemotherapy);
- HIV infection (regardless of immune status);
- morbid obesity (BMI of 40 kg/m<sup>2</sup> and above).

Seasonal influenza vaccine (inactivated) is also recommended for all pregnant women, for all persons aged over 65 years, for residents of nursing or residential homes for the elderly and other long-stay facilities, and for carers of persons whose welfare may be at risk if the carer falls ill. Influenza immunisation should also be considered for household contacts of immunocompromised individuals.

As part of winter planning, NHS employers should offer vaccination to health and social care workers who are directly involved in patient care.

Unless contra-indicated, the live influenza vaccine, administered as a nasal spray (*Fluenz Tetra*®), is preferred in children aged 2–17 years because it provides a higher level of protection than the inactivated influenza vaccine. In the 2017/2018 national influenza immunisation programme, seasonal influenza vaccine will also be offered to all children aged 2–8 years on 31 August 2017 (including those in school years 1, 2, 3 and 4) and to all primary school-aged children in former primary school pilot areas..

Information on pandemic influenza, avian influenza and swine influenza may be found at [www.gov.uk/pandemic-flu](http://www.gov.uk/pandemic-flu) and at [www.gov.uk/phe](http://www.gov.uk/phe).

### Japanese encephalitis vaccine

Japanese encephalitis vaccine p. 1213 is indicated for travellers to areas in Asia and the Far East where infection is endemic and for laboratory staff at risk of exposure to the virus. The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre ([www.nathnac.org](http://www.nathnac.org)).

### Measles, Mumps and Rubella vaccine

**Measles vaccine** has been replaced by a combined live measles, mumps and rubella vaccine, live p. 1213 (MMR vaccine).

Measles, mumps and rubella vaccine, live aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children aged 12–13 months. A second dose is given before starting school at 3 years and 4 months–5 years of age (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 3 months later by a second dose.

At school-leaving age or at entry into further education, measles, mumps and rubella vaccine, live immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of measles, mumps and rubella vaccine, live in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella vaccine, live are required, the second dose should be given one month after the initial dose. The decision on whether to vaccinate adults should take into consideration their vaccination history, the likelihood of the individual remaining susceptible, and the future risk of exposure and disease.

Measles, mumps and rubella vaccine, live p. 1213 should be used to protect against rubella in *seronegative women of child-bearing age* (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously *unimmunised and seronegative post-partum women* (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

### Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged over 6 months who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as those with history of recent severe illness) can be given normal immunoglobulin after exposure to measles; routine measles, mumps and rubella vaccine, live immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live is **not suitable** for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children and adults with impaired immune response should not receive live vaccines (see advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin.

### Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given.

### Meningococcal vaccines

Almost all childhood meningococcal disease in the UK is caused by *Neisseria meningitidis* serogroups B and C.

**Meningococcal group C conjugate vaccine** protects only against infection by serogroup C and **Meningococcal group B vaccine** protects only against infection by serogroup B. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetavalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the **meningococcal groups A, C, W135, and Y conjugate vaccine** is likely to provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal [not currently available in the UK].

A **meningococcal group B vaccine**, *Bexsero*®, is licensed in the UK against infection caused by *Neisseria meningitidis* serogroup B and is recommended in the Immunisation Schedule. *Bexsero*® contains 3 recombinant *Neisseria meningitidis* serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against *Neisseria meningitidis* serogroup B; the proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

### Childhood immunisation

**Meningococcal group C conjugate vaccine** provides long-term protection against infection by serogroup C of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 12 months of age (as the haemophilus influenzae type B with meningococcal group C vaccine p. 1205) and a second dose given at 13–15 years of age (as the meningococcal groups A with C and W135 and Y vaccine p. 1206) (see Immunisation Schedule).

**Meningococcal group B vaccine** provides protection against infection by serogroup B of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 2 months of age, a second dose at 4 months of age, and a booster dose at 12 months of age (see *Immunisation Schedule* above).

Unimmunised children aged under 12 months should be given 1 dose of meningococcal group B vaccine (rDNA, component, adsorbed) p. 1206 followed by a second dose of meningococcal group B vaccine (rDNA, component, adsorbed) two months later. They should then be vaccinated according to the Immunisation Schedule (ensuring at least a two month interval between doses of meningococcal group B vaccines). Unimmunised children aged 12–23 months should

be given 2 doses of meningococcal group B vaccine (rDNA, component, adsorbed) separated by an interval of two months if they have received less than 2 doses in the first year of life. Unimmunised children aged 2–9 years should be given a single dose of meningococcal group C vaccine (as the haemophilus influenzae type B with meningococcal group C vaccine) followed by a booster dose of meningococcal groups A with C and W135 and Y vaccine at 13–15 years of age.

From 2015, unimmunised individuals aged 10–25 years, including those aged under 25 years who are attending university for the first time, should be given a single dose of meningococcal groups A with C and W135 and Y vaccine; a booster dose is not required.

Patients under 25 years of age with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

### Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetavalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of meningococcal outbreaks and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre ([www.nathnac.org](http://www.nathnac.org)).

Proof of vaccination with the tetavalent meningococcal groups A with C and W135 and Y vaccine is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

### Contacts

For advice on the immunisation of *laboratory workers* and *close contacts* of cases of meningococcal disease in the UK and on the role of the vaccine in the control of *local outbreaks*, consult Guidance for Public Health Management of Meningococcal Disease in the UK at [www.gov.uk/phe](http://www.gov.uk/phe). Also see for antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

The need for immunisation of laboratory staff who work directly with *Neisseria meningitidis* should be considered.

### Pertussis vaccine

**Pertussis vaccine** is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of *Bordetella pertussis*. Primary immunisation against pertussis (whooping cough) requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed. Children aged 1–10 years who have not received a *pertussis-containing* vaccine as part of their primary immunisation should be offered 1 dose of a suitable

pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

### Vaccination of pregnant women against pertussis

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis-specific antibodies that are transferred through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine; *Boostrix-IPV*<sup>®</sup>) between 16 and 32 weeks of pregnancy. Public Health England has advised (2016) that the vaccine is probably best offered after the foetal anomaly scan at around 18–20 weeks. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 16–32 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

### Contacts

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

### Side-effects

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

### Pneumococcal vaccine

Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1207 protects against infection with *Streptococcus pneumoniae* (pneumococcus); the vaccines contain polysaccharide from capsular pneumococci. **Pneumococcal polysaccharide vaccine** contains purified polysaccharide from 23 capsular types of pneumococci, whereas **pneumococcal polysaccharide conjugate vaccine (adsorbed)** contains polysaccharide from either 10 capsular types (*Synflorix*<sup>®</sup>) or 13 capsular types (*Prevenar 13*<sup>®</sup>) and the polysaccharide is conjugated to protein.

The 13-valent conjugate vaccine (*Prevenar 13*<sup>®</sup>) is used in the childhood immunisation schedule. The recommended schedule consists of 3 doses, the first at 2 months of age, the second at 4 months, and the third at 12–13 months (see Immunisation Schedule).

Pneumococcal polysaccharide conjugate vaccine (adsorbed) is recommended for individuals at increased risk of pneumococcal infection as follows:

- age over 65 years;

- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac disease which could lead to splenic dysfunction);
- chronic respiratory disease (includes asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- chronic neurological conditions;
- complement disorders;
- diabetes mellitus requiring insulin or oral hypoglycaemic drugs;
- immune deficiency because of disease (e.g. HIV infection) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *adult and child over 20 kg*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid may occur;
- child under 5 years with a history of invasive pneumococcal disease;
- at risk of occupational exposure to metal fume (e.g. welders).

Where possible, the vaccine should be given at least 2 weeks before splenectomy, cochlear implant surgery, chemotherapy, or radiotherapy; patients should be given advice about increased risk of pneumococcal infection. If it is not practical to vaccinate at least 2 weeks before splenectomy, chemotherapy, or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy or, where possible, at least 3 months after completion of chemotherapy or radiotherapy. Prophylactic antibacterial therapy against pneumococcal infection should not be stopped after immunisation. A patient card and information leaflet for patients with asplenia are available from the Department of Health or in Scotland from the Scottish Government, Health Protection Division (Tel (0131) 244 2879).

#### Choice of vaccine

Children under 2 years at increased risk of pneumococcal infection (see list) should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) at the recommended ages, followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday. Children at increased risk of pneumococcal infection presenting late for vaccination should receive 2 doses (separated by at least 1 month) of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) before the age of 12 months, and a third dose at 12–13 months. Children over 12 months and under 5 years (who have not been vaccinated or not completed the primary course) should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) (2 doses separated by an interval of 2 months in the immunocompromised or those with asplenia or splenic dysfunction). All children under 5 years at increased risk of pneumococcal infection should receive a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday and at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children over 5 years and adults who are at increased risk of pneumococcal disease should receive a single dose of the 23-valent unconjugated pneumococcal polysaccharide vaccine.

#### Revaccination

In individuals with higher concentrations of antibodies to pneumococcal polysaccharides, revaccination with the 23-valent pneumococcal polysaccharide vaccine more commonly produces adverse reactions. Revaccination is therefore not recommended, except every 5 years in

individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction and nephrotic syndrome). If there is doubt, the need for revaccination should be discussed with a haematologist, immunologist, or microbiologist.

#### Poliomyelitis vaccine

Two types of poliomyelitis vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated poliomyelitis vaccine (for injection) and live (oral) poliomyelitis vaccine. **Inactivated** poliomyelitis vaccines, only available in combined preparation, is recommended for routine immunisation.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliomyelitis vaccines, starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised adults; no adult should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliomyelitis vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses are only necessary for adults at special risk, such as travellers to endemic areas, or laboratory staff likely to be exposed to the viruses, or healthcare workers in possible contact with cases; booster doses should be given to such individuals every 10 years.

**Live (oral) poliomyelitis vaccine** is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must **not** be used for immunosuppressed individuals or their household contacts. The use of inactivated poliomyelitis vaccines removes the risk of vaccine-associated paralytic polio altogether.

#### Travel

Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliomyelitis vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**. Information about countries with a high incidence of poliomyelitis can be obtained from [www.travax.nhs.uk](http://www.travax.nhs.uk) or from the National Travel Health Network and Centre ([www.nathnac.org](http://www.nathnac.org)).

#### Rabies vaccine

Rabies vaccine p. 1214 contains inactivated rabies virus cultivated in either human diploid cells or purified chick embryo cells; vaccines are used for pre- and post-exposure prophylaxis.

#### Pre-exposure prophylaxis

Immunisation should be offered to those at high risk of exposure to rabies—laboratory staff who handle the rabies virus, those working in quarantine stations, animal handlers, veterinary surgeons and field workers who are likely to be bitten by infected wild animals, certain port officials, and bat handlers. Transmission of rabies by humans has not been recorded but it is advised that those caring for patients with the disease should be vaccinated.

Immunisation against rabies is also recommended where there is limited access to prompt medical care for those living in areas where rabies is enzootic, for those travelling to such areas for longer than 1 month, and for those on shorter visits who may be exposed to unusual risk.

Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

Up-to-date country-by-country information on the incidence of rabies can be obtained from the National Travel Health Network and Centre ([www.nathnac.org](http://www.nathnac.org)) and, in Scotland, from Health Protection Scotland ([www.hps.scot.nhs.uk](http://www.hps.scot.nhs.uk)).

Immunisation against rabies requires 3 doses of rabies vaccine, with further booster doses for those who remain at frequent risk. To ensure continued protection in persons at high risk (e.g. laboratory workers), the concentration of antibodies in plasma is used to determine the intervals between doses.

#### Post-exposure management

Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible after exposure. Disinfectant and a simple dressing can be applied, but suturing should be delayed because it may increase the risk of introducing rabies virus into the nerves.

Post-exposure prophylaxis against rabies depends on the level of risk in the country, the nature of exposure, and the individual's immunity. In each case, expert risk assessment and advice on appropriate management should be obtained from the local Public Health England Centre or Public Health England's Virus Reference Department, Colindale (tel. (020) 8200 4400) or the PHE Colindale Duty Doctor (tel. (020) 8200 6868), in Wales from the Public Health Wales local Health Protection Team or Public Health Wales Virus Reference Laboratory (tel. (029) 2074 7747), in Scotland from the local on-call infectious diseases consultant, and in Northern Ireland from the Public Health Agency Duty Room (tel (028) 9055 3997/(028) 9063 2662) or the Regional Virology Service (tel. (028) 9024 0503).

There are no specific contra-indications to the use of rabies vaccine for post-exposure prophylaxis and its use should be considered whenever a patient has been attacked by an animal in a country where rabies is enzootic, even if there is no direct evidence of rabies in the attacking animal. Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis.

For post-exposure prophylaxis of *fully immunised* individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine), 2 doses of cell-derived vaccine are likely to be sufficient; the first dose is given on day 0 and the second dose is given between day 3–7. Rabies immunoglobulin p. 1188 is not necessary in such cases.

Post-exposure treatment for *unimmunised individuals* (or those whose prophylaxis is possibly incomplete) comprises 5 doses of rabies vaccine given over 1 month (on days 0, 3, 7, 14, and the fifth dose is given between day 28–30); also, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin p. 1188 is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine p. 1214. The immunisation course can be discontinued if it is proved that the individual was not at risk.

#### Rotavirus vaccine

Rotavirus vaccine p. 1215 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection. The recommended schedule consists of 2 doses, the first at 2 months of age, and the second at 3 months of age (see Immunisation schedule). The first dose of rotavirus vaccine must be given between 6–15 weeks of age and the

second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal association between vaccination and intussusception; the course must be completed before 24 weeks of age.

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with *immunosuppressed* close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

#### Smallpox vaccine

Limited supplies of **smallpox vaccine** are held at the Specialist and Reference Microbiology Division, Public Health England Colindale (Tel. (020) 8200 4400) for the exclusive use of workers in laboratories where pox viruses (such as vaccinia) are handled.

If a wider use of the vaccine is being considered, *Guidelines for smallpox response and management in the post-eradication era* should be consulted at [www.gov.uk/phe](http://www.gov.uk/phe).

#### Tetanus vaccine

**Tetanus vaccine** contains a cell-free purified toxin of *Clostridium tetani* adsorbed on aluminium hydroxide or aluminium phosphate to improve antigenicity.

Primary immunisation for children under 10 years consists of 3 doses of a combined preparation containing adsorbed tetanus vaccine, with an interval of 1 month between doses. Following routine childhood vaccination, 2 booster doses of a preparation containing adsorbed tetanus vaccine are recommended, the first before school entry and the second before leaving school (see Immunisation schedule).

The recommended schedule of tetanus vaccination not only gives protection against tetanus in childhood but also gives the basic immunity for subsequent booster doses. In most circumstances, a total of 5 doses of tetanus vaccine is considered sufficient for long term protection.

For primary immunisation of adults and children over 10 years previously unimmunised against tetanus, 3 doses of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine** are given with an interval of 1 month between doses (see Diphtheria-containing Vaccines).

When an individual presents for a booster dose but has been vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, the booster should still be given to ensure adequate protection against all antigens in the booster vaccine.

Very rarely, tetanus has developed after abdominal surgery; patients awaiting elective surgery should be asked about tetanus immunisation and immunised if necessary.

Parenteral drug abuse is also associated with tetanus; those abusing drugs by injection should be vaccinated if unimmunised—booster doses should be given if there is any doubt about their immunisation status.

All laboratory staff should be offered a primary course if unimmunised.

#### Wounds

Wounds are considered to be tetanus-prone if they are sustained more than 6 hours before surgical treatment or at any interval after injury and are puncture-type (particularly if contaminated with soil or manure) or show much devitalised tissue or are septic or are compound fractures or contain foreign bodies. All wounds should receive thorough cleansing.

- For *clean wounds*: fully immunised individuals (those who have received a total of 5 doses of a tetanus-containing

vaccine at appropriate intervals) and those whose primary immunisation is complete (with boosters up to date), do not require tetanus vaccine; individuals whose primary immunisation is incomplete or whose boosters are not up to date require a reinforcing dose of a tetanus-containing vaccine (followed by further doses as required to complete the schedule); non-immunised individuals (or those whose immunisation status is not known or who have been fully immunised but are now immunocompromised) should be given a dose of the appropriate tetanus-containing vaccine immediately (followed by completion of the full course of the vaccine if records confirm the need)

- For *tetanus-prone wounds*: management is as for clean wounds with the addition of a dose of tetanus immunoglobulin given at a different site; in fully immunised individuals and those whose primary immunisation is complete (with boosters up to date) the immunoglobulin is needed only if the risk of infection is especially high (e.g. contamination with manure). Antibacterial prophylaxis (with benzylpenicillin, co-amoxiclav, or metronidazole) may also be required for tetanus-prone wounds.

### Tick-borne encephalitis vaccine

Tick-borne encephalitis vaccine, inactivated p. 1216 contains inactivated tick-borne encephalitis virus cultivated in chick embryo cells. It is recommended for immunisation of those working in, or visiting, high-risk areas (see International Travel). Those working, walking or camping in warm forested areas of Central and Eastern Europe, Scandinavia, Northern and Eastern China, and some parts of Japan, particularly from April to November when ticks are most prevalent, are at greatest risk of tick-borne encephalitis. For full protection, 3 doses of the vaccine are required; booster doses are required every 3–5 years for those still at risk. Ideally, immunisation should be completed at least one month before travel.

### Typhoid vaccine

Typhoid vaccine p. 1208 is available as Vi capsular polysaccharide (from *Salmonella typhi*) vaccine for injection and as live attenuated *Salmonella typhi* for oral use.

Typhoid immunisation is advised for:

- travellers to areas where typhoid is endemic, especially if staying with or visiting local people;
- travellers to endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely
- laboratory personnel who, in the course of their work, may be exposed to *Salmonella typhi*.

Typhoid vaccination is not a substitute for scrupulous personal hygiene.

Capsular polysaccharide typhoid vaccine is usually given by *intramuscular injection*. Children under 2 years may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). Revaccination is needed every 3 years on continued exposure.

**Oral** typhoid vaccine p. 1208 is a **live attenuated** vaccine contained in an enteric-coated capsule. One capsule taken on alternate days for a total of 3 doses, provides protection 7–10 days after the last dose. Protection may persist for up to 3 years in those constantly (or repeatedly) exposed to *Salmonella typhi*, but those who only occasionally travel to endemic areas require further courses at intervals of 1 year.

### Varicella-zoster vaccine

The live varicella-zoster vaccine p. 1216, *Varilrix*® and *Varivax*®, are licensed for immunisation against varicella (chickenpox) in seronegative individuals. They are not recommended for routine use in children, but can be given to seronegative healthy children over 1 year who come into

close contact with individuals at high risk of severe varicella infections. The Department of Health recommends these vaccines for seronegative healthcare workers who come into direct contact with patients. Those with a history of chickenpox or shingles can be considered immune, but healthcare workers with a negative or uncertain history should be tested.

Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy;

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

### National shingles immunisation programme

The aim of the national shingles immunisation programme is to lower the incidence and severity of shingles in older people using the high potency, live varicella-zoster vaccine, *Zostavax*®. It is recommended that vaccination is routinely offered to people aged 70 years. A catch-up programme has also been rolled out (since 2013) in those aged 70–79 years, as this age group is likely to have the greatest benefit from vaccination.

In the 2016–2017 immunisation programme, varicella-zoster vaccine is recommended in adults who were 70 or 78 years of age on 1st September 2016. Patients who were eligible for vaccination in the first 3 years of the programme but have not been vaccinated against *herpes zoster* remain eligible until their 80th birthday; this includes patients who were aged 71–73 or 79 on 1st September 2016. Patients who have reached 80 years are no longer eligible for vaccination. A single dose of *Zostavax*® is likely to give protection for at least 7 years, but the need for, or timing of, a booster dose has not been established. Although *Zostavax*® is not recommended for the treatment of shingles or post-herpetic neuralgia, it can be given to those with a previous history of shingles; ideally the vaccine should be delayed until systemic antiviral therapy has been completed.

Varicella-zoster immunoglobulin p. 1189 is used to protect susceptible individuals at increased risk of varicella infection.

### Yellow fever vaccine

Yellow fever vaccine, live p. 1217 is indicated for those travelling or living in areas where infection is endemic and for laboratory staff who handle the virus or who handle clinical material from suspected cases. Infants under 6 months of age should not be vaccinated because there is a small risk of encephalitis; infants aged 6–9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (seek expert advice). The immunity which probably lasts for life is officially accepted for 10 years starting from 10 days after primary immunisation and for a further 10 years immediately after revaccination.

## Vaccines for travel

### Immunisation

See advice on Malaria, treatment p. 580.

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although all travellers should have immunity to tetanus and

poliomyelitis (and childhood immunisations should be up to date); Tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of **poliomyelitis** or **tuberculosis** should be immunised with the appropriate vaccine; in the case of poliomyelitis previously immunised travellers may be given a booster dose of a preparation containing inactivated poliomyelitis vaccine. BCG immunisation is recommended for travellers aged under 16 years proposing to stay for longer than 3 months (or in close contact with the local population) in countries with an incidence of tuberculosis greater than 40 per 100 000 (list of countries where the incidence of tuberculosis is greater than 40 cases per 100 000 is available from [www.gov.uk/phe](http://www.gov.uk/phe)); it should preferably be given 3 months or more before departure.

**Yellow fever** immunisation is recommended for travel to the endemic zones of Africa and South America. Many countries require an International Certificate of Vaccination from individuals arriving from, or who have been travelling through, endemic areas; other countries require a certificate from all entering travellers (consult the Department of Health handbook, *Health Information for Overseas Travel*, [www.dh.gov.uk](http://www.dh.gov.uk)).

Immunisation against **meningococcal meningitis** is recommended for a number of areas of the world.

Protection against **hepatitis A** is recommended for travellers to high-risk areas outside Northern and Western Europe, North America, Japan, Australia and New Zealand. Hepatitis A vaccine is preferred and it is likely to be effective even if given shortly before departure; normal immunoglobulin is no longer given routinely but may be indicated in the immunocompromised. Special care must also be taken with food hygiene.

**Hepatitis B** vaccine is recommended for those travelling to areas of high or intermediate prevalence who intend to seek employment as healthcare workers or who plan to remain there for lengthy periods and who may therefore be at increased risk of acquiring infection as the result of medical or dental procedures carried out in those countries. Short-term tourists or business travellers are not generally at increased risk of infection but may put themselves at risk by their sexual behaviour when abroad.

Prophylactic immunisation against **rabies** is recommended for travellers to enzootic areas on long journeys or to areas out of reach of immediate medical attention.

Travellers who have not had a **tetanus** booster in the last 10 years and are visiting areas where medical attention may not be accessible should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, even if they have received 5 doses of a tetanus-containing vaccine previously.

**Typhoid vaccine** is indicated for travellers to countries where typhoid is endemic, but the vaccine is no substitute for personal precautions.

There is no requirement for cholera vaccination as a condition for entry into any country, but **oral cholera vaccine** should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on **diphtheria**, on **Japanese encephalitis**, and on **tick-borne encephalitis** is included in *Health Information for Overseas Travel*.

## Food hygiene

In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers' diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

## Information on health advice for travellers

Health professionals and travellers can find the latest information on immunisation requirements and precautions for avoiding disease while travelling from: [www.nathnac.org](http://www.nathnac.org).

The handbook, *Health Information for Overseas Travel* (2010), which draws together essential information for *healthcare professionals* regarding health advice for travellers, can also be obtained from this website.

Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country or from:

## VACCINES

## Vaccines

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (APRIL 2016)

Following reports of death in neonates who received a live attenuated vaccine after exposure to a tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitor in utero, the MHRA has issued the following advice:

- any infant who has been exposed to immunosuppressive treatment from the mother either in utero during pregnancy or via breastfeeding should have any live attenuated vaccination deferred for as long as a postnatal influence on the immune status of the infant remains possible;
- in the case of infants who have been exposed to TNF- $\alpha$  inhibitors and other biological medicines in utero, any live attenuated vaccination should be deferred until the infant is age 6 months, after which time vaccination should be considered.

#### ● CONTRA-INDICATIONS

##### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Impaired immune response Severely immunosuppressed patients should not be given live vaccines (including those with severe primary immunodeficiency).

#### ● CAUTIONS Acute illness · minor illnesses

##### CAUTIONS, FURTHER INFORMATION

Vaccination may be postponed if the individual is suffering from an acute illness; however, it is not necessary to postpone immunisation in patients with minor illnesses without fever or systemic upset.

- ▶ Impaired immune response and drugs affecting immune response Immune response to vaccines may be reduced in immunosuppressed patients and there is also a risk of generalised infection with live vaccines.

Specialist advice should be sought for those being treated with high doses of corticosteroids (dose equivalents of prednisolone: **adults**, at least 40 mg daily for more than 1 week; **children**, 2 mg/kg (or more than 40 mg) daily for at least 1 week or 1 mg/kg daily for 1 month), or other immunosuppressive drugs, and those being treated for malignant conditions with chemotherapy or generalised radiotherapy. Live vaccines should be postponed until at least 3 months after stopping high-dose systemic corticosteroids and at least 6 months after stopping other immunosuppressive drugs or generalised radiotherapy (at least 12 months after discontinuing immunosuppressants following bone-marrow transplantation).

The Royal College of Paediatrics and Child Health has produced a statement, *Immunisation of the Immunocompromised Child* (2002) (available at [www.rcpch.ac.uk](http://www.rcpch.ac.uk)).

- ▶ Predisposition to neurological problems When there is a personal or family history of febrile convulsions, there is an increased risk of these occurring during fever from any cause including immunisation, but this is not a contra-indication to immunisation. In children who have had a seizure associated with fever without neurological deterioration, immunisation is *recommended*; advice on the *management of fever* (see Post-immunisation Pyrexia in Infants) should be given before immunisation. When a child has had a convulsion not associated with fever, and the neurological condition is not deteriorating, immunisation is *recommended*.

Children with stable neurological disorders (e.g. spina bifida, congenital brain abnormality, and peri-natal hypoxic-ischaemic encephalopathy) should be immunised according to the recommended schedule.

When there is a *still evolving neurological problem*, including poorly controlled epilepsy, immunisation should be deferred and the child referred to a specialist. Immunisation is recommended if a cause for the neurological disorder is identified. If a cause is not identified, immunisation should be deferred until the condition is stable.

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Fatigue · fever · gastro-intestinal disturbances · headache · irritability · loss of appetite · lymphangitis · malaise · myalgia
- ▶ **Very rare** Anaphylaxis (can be fatal) · angioedema (can be fatal) · bronchospasm (can be fatal) · hypersensitivity reactions (can be fatal) · urticaria (can be fatal)
- ▶ **Frequency not known** Arthralgia · asthenia · dizziness · drowsiness · influenza-like symptoms · lymphadenopathy · paraesthesia · rash

##### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**

- ▶ With intradermal use or intramuscular use or subcutaneous use Induration may develop at the injection site · inflammation · local reactions · pain · redness · sterile abscess may develop at the injection site

##### SIDE-EFFECTS, FURTHER INFORMATION

Occasionally serious adverse reactions can occur—these should always be reported to the CHM.

- ▶ Post-immunisation pyrexia in infants The parent should be advised that if pyrexia develops after childhood immunisation, and the infant seems distressed, paracetamol can be given. Ibuprofen can be used if paracetamol is unsuitable. The parent should be warned to seek medical advice if the pyrexia persists.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a confirmed anaphylactic reaction to a preceding dose of a vaccine containing the same antigens or vaccine component (such as antibacterials in viral vaccines).

- **PREGNANCY** Live vaccines should not be administered routinely to pregnant women because of the theoretical risk of fetal infection but where there is a significant risk of exposure to disease, the need for vaccination usually outweighs any possible risk to the fetus. Termination of pregnancy following inadvertent immunisation is not recommended. There is no evidence of risk from vaccinating pregnant women with inactivated viral or bacterial vaccines or toxoids.

- **BREAST FEEDING** Although there is a theoretical risk of live vaccine being present in breast milk, vaccination is not contra-indicated for women who are breast-feeding when there is significant risk of exposure to disease. There is no evidence of risk from vaccinating women who are breast-feeding, with inactivated viral or bacterial vaccines or toxoids.

- **DIRECTIONS FOR ADMINISTRATION** If alcohol or disinfectant is used for cleansing the skin it should be allowed to evaporate before vaccination to prevent possible inactivation of live vaccines.

When 2 or more live vaccines are required (and are not available as a combined preparation), they can be administered at any time before or after each other at different sites, preferably in a different limb; if more than one injection is to be given in the same limb, they should be administered at least 2.5 cm apart. See also Bacillus Calmette-Guérin vaccine p. 1204.

Vaccines should not be given intravenously. Most vaccines are given by the intramuscular route, although some are given by either the intradermal, deep subcutaneous, or oral route. The intramuscular route should not be used in patients with **bleeding disorders** such as haemophilia or thrombocytopenia, vaccines usually given by the intramuscular route should be given by deep subcutaneous injection instead.

The Department of Health has advised *against the use of jet guns* for vaccination owing to the risk of transmitting blood borne infections, such as HIV.

Particular attention must be paid to instructions on the use of diluents. Vaccines which are liquid suspensions or

are reconstituted before use should be adequately mixed to ensure uniformity of the material to be injected.

- **HANDLING AND STORAGE** Care must be taken to store all vaccines under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many vaccines need to be stored at 2–8°C and not allowed to freeze. Vaccines should be protected from light. Reconstituted vaccines and opened multidose vials must be used within the period recommended in the product literature. Unused vaccines should be disposed of by incineration at a registered disposal contractor.

## VACCINES > BACTERIAL AND VIRAL VACCINES, COMBINED

F 1201

### Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus

#### ● INDICATIONS AND DOSE

##### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2 months–10 years: 0.5 mL every month for 3 doses

- **UNLICENSED USE** *Infanrix-IPV + Hib*® not licensed for use in children over 36 months; *Pediacel*® not licensed in children over 4 years. However, the Department of Health recommends that these be used for children up to 10 years.

- **SIDE-EFFECTS** Atopic dermatitis · hypotonia · restlessness · sleep disturbances · unusual crying in infants

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Side effects of vaccines containing pertussis The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contraindicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Powder and suspension for suspension for injection

- ▶ **Infanrix-IPV + Hib** (GlaxoSmithKline UK Ltd)  
Infanrix-IPV + Hib vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £27.86

##### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Pediacel** (sanofi pasteur MSD Ltd)  
Pediacel vaccine suspension for injection 0.5ml vials | 1 vial [PoM] £32.00

### Diphtheria with pertussis, poliomyelitis vaccine and tetanus

F 1201

#### ● INDICATIONS AND DOSE

##### First booster dose

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–9 years: 0.5 mL, to be given 3 years after primary immunisation

##### Vaccination of pregnant women against pertussis (using low dose vaccines)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 0.5 mL for 1 dose

- **SIDE-EFFECTS** Restlessness · sleep disturbances · unusual crying in infants

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Side effects of vaccines containing pertussis The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contraindicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

- **PREGNANCY** Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological complications following previous immunisation against diphtheria or tetanus.

- **PRESCRIBING AND DISPENSING INFORMATION** Pregnant women should be vaccinated using low dose vaccines (brands may include *Boostrix-IPV*® or *Repevax*®).

Available as part of childhood immunisation schedule from health organisations or ImmForm.

Available for vaccination of pregnant women from ImmForm.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Boostrix-IPV** (GlaxoSmithKline UK Ltd)  
Boostrix-IPV suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.74
- ▶ **Infanrix-IPV** (GlaxoSmithKline UK Ltd)  
Infanrix-IPV vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £17.56
- ▶ **Repevax** (sanofi pasteur MSD Ltd)  
Repevax vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.00

F 1201

### Diphtheria with poliomyelitis and tetanus vaccine

#### ● INDICATIONS AND DOSE

##### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL every month for 3 doses
- ▶ Adult: 0.5 mL every month for 3 doses

continued →

**Booster doses**

## ► BY INTRAMUSCULAR INJECTION

- Child 10–17 years: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine
- Adult: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

- **SIDE-EFFECTS** Restlessness · sleep disturbances · unusual crying in infants
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

► **Revaxis** (sanofi pasteur MSD Ltd)

Revaxis vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £6.50

**VACCINES > BACTERIAL VACCINES**

F 1201

**Anthrax vaccine**● **INDICATIONS AND DOSE****Pre-exposure immunisation against anthrax | Post-exposure immunisation**

## ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 1 dose every 3 weeks for 3 doses, followed by 1 dose after 6 months, to be administered in the deltoid region, 1 dose is equivalent to 0.5 mL

**Booster**

## ► BY INTRAMUSCULAR INJECTION

- Adult: 1 dose every 12 months, to be administered in deltoid region, 1 dose is equivalent to 0.5 mL

- **PRESCRIBING AND DISPENSING INFORMATION** Available from Public Health England's Centre for Emergency Preparedness and Response (Porton Down).

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Thiomersal

► **Anthrax vaccine (Non-proprietary)**

Anthrax vaccine (alum precipitated sterile filtrate) suspension for injection 0.5mL ampoules | 5 ampoule [PoM] no price available

**Bacillus Calmette-Guérin vaccine (BCG Vaccine)**

F 1201

- **DRUG ACTION** BCG (Bacillus Calmette-Guérin) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of immunity to *M. tuberculosis*.

● **INDICATIONS AND DOSE****Immunisation against tuberculosis**

## ► BY INTRADERMAL INJECTION

- Child 1–11 months: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- Child 1–17 years: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- Adult: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**

- **CONTRA-INDICATIONS** Generalised septic skin conditions
- **CONTRA-INDICATIONS, FURTHER INFORMATION** A lesion-free site should be used to administer BCG vaccine to patients with eczema.

● **CAUTIONS****CAUTIONS, FURTHER INFORMATION**

BCG vaccine can be given simultaneously with another live vaccine, but if they are not given at the same time an interval of 4 weeks should normally be allowed. When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

- **INTERACTIONS** → Appendix 1: live vaccines

● **SIDE-EFFECTS**

- **Rare** Disseminated complications · osteitis · osteomyelitis
- **Frequency not known** Prolonged ulceration at the injection site · subcutaneous abscess at the injection site
- **PRE-TREATMENT SCREENING** Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculin (see tuberculin purified protein derivative p. 1190). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

● **DIRECTIONS FOR ADMINISTRATION**

Intradermal injection technique Skin is stretched between thumb and forefinger and needle (size 25G or 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb showing tips of hair follicles is sign of correct injection; 7 mm bleb ≡ 0.1 mL injection, 3 mm bleb ≡ 0.05 mL injection; if considerable resistance not felt, needle too deep and should be removed and reinserted before giving more vaccine.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from health organisations or direct from ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk) (SSI brand, multidose vial with diluent).

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for suspension for injection**

##### ▶ **Bacillus Calmette-Guérin vaccine (Non-proprietary)**

Bacillus Calmette-Guérin vaccine powder and solvent for suspension for injection vials | 10 vial [PoM] no price available

1201

## Cholera vaccine

### ● INDICATIONS AND DOSE

**Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)**

#### ▶ BY MOUTH

- ▶ Child 2-5 years: 1 dose every 1-6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Child 6-17 years: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Adult: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

#### **Booster**

#### ▶ BY MOUTH

- ▶ Child 2-5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
- ▶ Child 6-17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated
- ▶ Adult: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

### ● CONTRA-INDICATIONS Acute gastro-intestinal illness

### ● INTERACTIONS → Appendix 1: cholera vaccine

### ● SIDE-EFFECTS

- ▶ **Rare** Cough · respiratory symptoms · rhinitis
- ▶ **Very rare** Insomnia · sore throat
- ▶ **Frequency not known** Abdominal pain and cramps · diarrhoea · nausea · vomiting

### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2-5 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.
- ▶ In adults Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). Add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.

### ● PATIENT AND CARER ADVICE Counselling on administration advised. Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be

warned that scrupulous attention to food, water, and personal hygiene is **essential**.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Oral suspension**

##### ▶ **Dukoral** (Valneva UK Ltd)

Dukoral cholera vaccine oral suspension | 2 dose [PoM] £23.42

1201

## Haemophilus influenzae type B with meningococcal group C vaccine

### ● INDICATIONS AND DOSE

**Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component) and primary immunisation against *Neisseria meningitidis***

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 12-13 months: 0.5 mL for 1 dose

**Immunisation against *Neisseria meningitidis* in an unimmunised patient**

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-9 years: 0.5 mL for 1 dose

**Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) | Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)**

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-9 years: 0.5 mL for 1 dose

**Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)**

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)**

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be given after the second birthday, this is the second dose of haemophilus influenzae type B vaccine combined with meningococcal group C conjugate vaccine (the first dose is given during the routine immunisation schedule)

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at over 2 years of age)**

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be followed 2 months later by one dose of meningococcal A, C, W135, and Y conjugate vaccine (in patients from 11 years of age, this interval can be reduced to one month)
- ▶ Adult: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine

### ● UNLICENSED USE Not licensed for use in patients over 2 years.

### ● SIDE-EFFECTS

- ▶ **Rare** Symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)
- ▶ **Frequency not known** Atopic dermatitis · hypotonia

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of the childhood immunisation schedule from ImmForm.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for solution for injection**

- ▶ **Menitorix** (GlaxoSmithKline UK Ltd)

Menitorix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £37.76

F 1201

## Meningococcal group B vaccine (rDNA, component, adsorbed)

#### ● INDICATIONS AND DOSE

##### **Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see p. 422.
- ▶ Child 4 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see p. 422.

##### **Immunisation against *Neisseria meningitidis*, primary immunisation booster dose**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 12–23 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants)

##### **Immunisation against *Neisseria meningitidis*, primary immunisation (in unimmunised patients)**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 6–11 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given between 1–2 years of age and at least 2 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 12–23 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given 12–24 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 2–10 years: 0.5 mL for 2 doses, separated by an interval of at least 2 months. Injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 11–17 years: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region
- ▶ Adult: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

#### ● SIDE-EFFECTS

- ▶ **Rare** Kawasaki disease (in children) • symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)
- ▶ **Frequency not known** Unusual crying (in children)

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Suspension for injection**

EXCIPIENTS: May contain Kanamycin

- ▶ **Bexsero** (GlaxoSmithKline UK Ltd) ▼

Bexsero vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £75.00

F 1201

## Meningococcal group C vaccine

#### ● INDICATIONS AND DOSE

##### **Patients with confirmed serogroup C disease (who have previously been immunised)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: 0.5 mL for 1 dose, dose to be given before discharge from hospital
- ▶ Adult 18–24 years: 0.5 mL for 1 dose, dose to be given before discharge from hospital

#### ● SIDE-EFFECTS

- ▶ **Rare** Symptoms of meningitis (but no evidence that vaccine causes meningococcal C meningitis)

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children *Menjugate Kit*® may be used via subcutaneous route in children with bleeding disorders.

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Suspension for injection**

- ▶ **NeisVac-C** (Pfizer Ltd)

NeisVac-C vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection [PoM] £187.50

F 1201

## Meningococcal groups A with C and W135 and Y vaccine

#### ● INDICATIONS AND DOSE

##### **MENVEO®**

##### **Primary immunisation against *Neisseria meningitidis***

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13–15 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region

##### **Immunisation against *Neisseria meningitidis* in an unimmunised patient**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL for 1 dose, booster dose is not required
- ▶ Adult 18–24 years: 0.5 mL for 1 dose, booster dose is not required

##### **Immunisation against *Neisseria meningitidis* in those at risk of exposure to prevent invasive disease**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–11 months: 0.5 mL every month for 2 doses, dose preferably injected into deltoid region
- ▶ Child 1–17 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region
- ▶ Adult: 0.5 mL for 1 dose, dose preferably injected into deltoid region

##### **Patients attending university for the first time (who have not received the routine meningococcal A, C, W135, and Y conjugate vaccine over the age of 10 years)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 18–24 years: 0.5 mL for 1 dose

##### **NIMENRIX®**

##### **Primary immunisation against *Neisseria meningitidis***

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13–15 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region

### Immunisation against *Neisseria meningitidis* in an unimmunised patient

#### ► BY INTRAMUSCULAR INJECTION

- Child 10–17 years: 0.5 mL for 1 dose, booster dose is not required
- Adult 18–24 years: 0.5 mL for 1 dose, booster dose is not required

### Immunisation against *Neisseria meningitidis* in those at risk of exposure

#### ► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region (or anterolateral thigh in child 12–23 months), then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection
- Adult: 0.5 mL for 1 dose, to be injected preferably into deltoid region, then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

### Patients attending university for the first time (who have not received the routine meningococcal A, C, W135, and Y conjugate vaccine over the age of 10 years)

#### ► BY INTRAMUSCULAR INJECTION

- Adult 18–24 years: 0.5 mL for 1 dose

- **UNLICENSED USE** *Menveo*® is not licensed for use in children under 2 years.

#### ● **SIDE-EFFECTS**

- Rare Symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)

#### ● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for solution for injection**

- **Menveo** (GlaxoSmithKline UK Ltd)

Menveo vaccine powder and solvent for solution for injection 0.5mL vials | 1 vial [PoM] £30.00

- **Nimenrix** (Pfizer Ltd) ▼

Nimenrix vaccine powder and solvent for solution for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £30.00

1201

## Pneumococcal polysaccharide conjugate vaccine (adsorbed)

#### ● **INDICATIONS AND DOSE**

##### **PREVENAR 13®**

#### **Primary immunisation against pneumococcal infection (first dose)**

##### ► BY INTRAMUSCULAR INJECTION

- Child 2 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

#### **Primary immunisation against pneumococcal infection (second dose)**

##### ► BY INTRAMUSCULAR INJECTION

- Child 4 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

#### **Primary immunisation against pneumococcal infection (booster dose)**

##### ► BY INTRAMUSCULAR INJECTION

- Child 12–13 months: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants

### Immunisation against pneumococcal infection (in patients who have not been vaccinated or not completed the primary course)

#### ► BY INTRAMUSCULAR INJECTION

- Child 12 months–4 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants

### Immunisation against pneumococcal infection, in immunocompromised or asplenic patients or patients with splenic dysfunction (who have not been vaccinated or not completed the primary course)

#### ► BY INTRAMUSCULAR INJECTION

- Child 12 months–4 years: 0.5 mL every 2 months for 2 doses, deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants

#### **SYNFLORIX®**

### Immunisation against pneumococcal infection

#### ► BY INTRAMUSCULAR INJECTION

- Child 6 weeks–4 years: Deltoid muscle is preferred site of injection in young children; anterolateral thigh is preferred site in infants (consult product literature)

#### ● **UNLICENSED USE**

- **PREVENAR 13®** The dose in BNF publications may differ from that in product literature.

- **CONTRA-INDICATIONS** Concomitant use of high potency varicella-zoster vaccine (*Zostavax*®) with pneumococcal polysaccharide vaccine (in adults)

#### ● **PRESCRIBING AND DISPENSING INFORMATION**

- **PREVENAR 13®** Available as part of childhood immunisation schedule from ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

#### ● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

#### **Suspension for injection**

- **Prevenar** (Pfizer Ltd)

Prevenar 13 vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £49.10 | 10 pre-filled disposable injection [PoM] £491.00

- **Synflorix** (GlaxoSmithKline UK Ltd)

Synflorix vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £27.60

1201

## Pneumococcal polysaccharide vaccine

#### ● **INDICATIONS AND DOSE**

### Immunisation against pneumococcal infection

#### ► BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION

- Child 2–17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

### Immunisation in patients at increased risk of pneumococcal disease

#### ► BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION

- Child 2–4 years: 0.5 mL for 1 dose, dose should be administered after the second birthday or at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed)
- Child 5–17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

- ▶ **Pneumococcal polysaccharide vaccine (Non-proprietary)**  
Pneumococcal polysaccharide vaccine solution for injection 0.5ml vials  
| 1 vial [PoM] £8.32

F 1201

## Typhoid vaccine

### INDICATIONS AND DOSE

#### Immunisation against typhoid fever in children at high risk of typhoid fever

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12-23 months: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection, response may be suboptimal

#### Immunisation against typhoid fever

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ Adult: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ BY MOUTH
- ▶ Child 6-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5)
- ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5)

- **UNLICENSED USE** Not licensed for use in children under 2 years.

### CONTRA-INDICATIONS

- ▶ With oral use Acute gastro-intestinal illness

### INTERACTIONS

- Appendix 1: live vaccines

### SIDE-EFFECTS

- ▶ With oral use Abdominal cramps · abdominal pain · diarrhoea · nausea · vomiting

### DIRECTIONS FOR ADMINISTRATION

- ▶ Capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

### HANDLING AND STORAGE

- ▶ With oral use It is important to store capsules in a refrigerator.

### PATIENT AND CARER ADVICE

- ▶ With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

- ▶ **Typherix** (GlaxoSmithKline UK Ltd)  
Salmonella typhi Vi capsular polysaccharide 50 microgram per 1 mL Typherix 25micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.93 | 10 pre-filled disposable injection [PoM] £99.32
- ▶ **Thyphim Vi** (sanofi pasteur MSD Ltd)  
Salmonella typhi Vi capsular polysaccharide 50 microgram per 1 mL Thyphim Vi 25micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.30 | 10 pre-filled disposable injection [PoM] £93.00

### Gastro-resistant capsule

CAUTIONARY AND ADVISORY LABELS 25

#### Vivotif (PaxVax Ltd)

Vivotif vaccine gastro-resistant capsules | 3 capsule [PoM] £14.77

Combinations available: **Hepatitis A with typhoid vaccine**, p. 1209

## VACCINES > VIRAL VACCINES

## Hepatitis A and B vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1209, hepatitis B vaccine p. 1210.

### INDICATIONS AND DOSE

#### AMBRIX®

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-15 years: Initially 1 mL for 1 dose, then 1 mL after 6-12 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX® ADULT

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- ▶ Adult: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### Immunisation against hepatitis A and hepatitis B infection—accelerated schedule for travellers departing within 1 month

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- ▶ Adult: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX® PAEDIATRIC

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-15 years: Initially 0.5 mL every month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients

with bleeding disorders (but immune response may be reduced)

#### IMPORTANT SAFETY INFORMATION

*Ambirix*® and *Twinrix*® are not recommended for post-exposure prophylaxis following percutaneous (needle-stick), ocular, or mucous membrane exposure to hepatitis B virus.

#### ● PRESCRIBING AND DISPENSING INFORMATION

**TWINRIX® PAEDIATRIC** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**AMBIRIX®** Primary course should be completed with *Ambirix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**TWINRIX® ADULT** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Suspension for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Ambirix** (GlaxoSmithKline UK Ltd)  
Ambirix vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £31.18
- ▶ **Twinrix** (GlaxoSmithKline UK Ltd)  
Twinrix Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.79  
Twinrix Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £33.31 | 10 pre-filled disposable injection [PoM] £333.13

1201

## Hepatitis A vaccine

#### ● INDICATIONS AND DOSE

##### AVAXIM®

##### Immunisation against hepatitis A infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6-12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6-12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

##### HAVRIX MONODOSE®

##### Immunisation against hepatitis A infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6-12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- ▶ Child 16-17 years: Initially 1 mL for 1 dose, then 1 mL after 6-12 months, dose given as booster; booster dose

may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

- ▶ Adult: Initially 1 mL for 1 dose, then 1 mL after 6-12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

#### VAQTA® ADULT

##### Immunisation against hepatitis A infection

▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: Initially 1 mL for 1 dose, then 1 mL after 6-18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be delayed)

#### VAQTA® PAEDIATRIC

##### Immunisation against hepatitis A infection

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6-18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Suspension for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Avaxim** (Sanofi pasteur MSD Ltd)  
Avaxim vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £18.10 | 10 pre-filled disposable injection [PoM] £181.00
- ▶ **Havrix** (GlaxoSmithKline UK Ltd)  
Havrix Monodose vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.14 | 10 pre-filled disposable injection [PoM] £221.43  
Havrix Junior Monodose vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.77 | 10 pre-filled disposable injection [PoM] £167.68  
Havrix Junior Monodose vaccine suspension for injection 0.5ml vials | 1 vial [PoM] £16.77  
Havrix Monodose vaccine suspension for injection 1ml vials | 1 vial [PoM] £22.14
- ▶ **VAQTA** (Merck Sharp & Dohme Ltd)  
VAQTA Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £18.10  
VAQTA Adult vaccine suspension for injection 1ml vials | 1 vial [PoM] £18.10  
VAQTA Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £14.74

## Hepatitis A with typhoid vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine above, typhoid vaccine p. 1208.

#### ● INDICATIONS AND DOSE

##### HEPATYRIX®

##### Immunisation against hepatitis A and typhoid infection (primary course)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 15-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be continued →

injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

#### VIATIM®

#### Immunisation against hepatitis A and typhoid infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines
- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

#### ● INTERACTIONS → Appendix 1: live vaccines

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

#### ▶ Hepatyrrix (GlaxoSmithKline UK Ltd)

Hepatyrrix vaccine suspension for injection 1mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £37.21 | 10 pre-filled disposable injection [PoM] £372.10

#### ▶ VIATIM (sanofi pasteur MSD Ltd)

VIATIM vaccine suspension for injection 1mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £29.80

■ 1201

## Hepatitis B vaccine

#### ● INDICATIONS AND DOSE

#### ENGERIX B®

#### Immunisation against hepatitis B infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1 month-15 years: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (accelerated schedule)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Neonate: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.

- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection, alternative accelerated schedule

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 11-15 years: 20 micrograms for 1 dose, followed by 20 micrograms after 6 months, this schedule is not suitable if high risk of infection between doses or if compliance with second dose uncertain, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (accelerated schedule in exceptional cases, e.g. for travellers departing within 1 month)

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 7 days for 1 dose, followed by 20 micrograms after 14 days for 1 dose, followed by 20 micrograms for 1 dose, to be given 12 months after the first dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients)

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 2 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

- ▶ Adult: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients (accelerated schedule))

#### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

**FENDRIX®****Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)**

## ► BY INTRAMUSCULAR INJECTION

- Child 15–17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**HBVAXPRO®****Immunisation against hepatitis B infection**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule)**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of

injection in older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)

- Child 16–17 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Neonate born to hepatitis B surface antigen-positive mother**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every month for 3 doses, first dose given at birth with hepatitis B immunoglobulin injection (separate site), followed by 5 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced).

**Chronic haemodialysis patients**

## ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Thiomersal

► **Engerix B** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 20 microgram per 1 ml** Engerix B 20micrograms/1ml vaccine suspension for injection vials | 1 vial [PoM] £12.34 | 10 vial [PoM] £123.41  
 Engerix B 10micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.67  
 Engerix B 20micrograms/1ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.99 | 10 pre-filled disposable injection [PoM] £129.92

► **Fendrix** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 40 microgram per 1 ml** Fendrix 20micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £38.10

► **HBVAXPRO** (Merck Sharp & Dohme Ltd)

**Hepatitis B virus surface antigen 10 microgram per 1 ml** HBVAXPRO 10micrograms/1ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.20  
 HBVAXPRO 5micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £8.95

**Hepatitis B virus surface antigen 40 microgram per 1 ml** HBVaxPRO 40micrograms/1ml vaccine suspension for injection vials | 1 vial [PoM] £27.60

## Human papillomavirus vaccines

02-Mar-2017

### ● INDICATIONS AND DOSE

#### CERVARIX®

##### Prevention of premalignant genital lesions and cervical cancer

###### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 5–7 months for 1 dose, if second dose administered earlier than 5 months after the first, a third dose should be administered, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.
- Child 15–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.
- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

#### GARDASIL®

##### Prevention of premalignant genital (cervical, vulvar and vaginal) and anal lesions, cervical and anal cancers, and genital warts

###### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 6 months for 1 dose, if the second dose is administered earlier than 6 months after the first dose, a third dose should be administered, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.
- Child 15–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.
- Adult (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

### Prevention of premalignant genital (cervical, vulvar, and vaginal) and anal lesions, cervical and anal cancers, and genital warts (alternative schedule)

#### ► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

### ● UNLICENSED USE

**GARDASIL®** Two dose schedule not licensed for use in girls aged 14 years.

- **PREGNANCY** Not known to be harmful, but vaccination should be postponed until completion of pregnancy.

- **PRESCRIBING AND DISPENSING INFORMATION** To avoid confusion, prescribers should specify the brand to be dispensed.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

► **Cervarix** (GlaxoSmithKline UK Ltd)

Cervarix vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £80.50

► **Gardasil** (Merck Sharp & Dohme Ltd)

Gardasil vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £86.50

## Influenza vaccine

### ● INDICATIONS AND DOSE

#### Annual immunisation against seasonal influenza

##### ► BY INTRAMUSCULAR INJECTION

- Child 6 months–17 years: 0.5 mL for 1 dose
- Adult: 0.5 mL for 1 dose

##### ► BY INTRADERMAL INJECTION

- Adult 18–59 years: 9 micrograms for 1 dose, dose to be injected into deltoid region
  - Adult 60 years and over: 15 micrograms for 1 dose, dose to be injected into deltoid region
- ##### ► BY INTRANASAL ADMINISTRATION
- Child 2–17 years: 0.1 mL for 1 dose, dose to be administered into each nostril

- **UNLICENSED USE** Some products containing inactivated influenza vaccine (surface antigen) are not licensed for use in children under 4 years—check product literature.

**FLUVIRIN®** Not licensed for use in children under 4 years.

**FLUARIX TETRA®** Not licensed for use in children under 3 years of age.

**OPTAFLU®** Not licensed for use in children and adolescents under 18 years.

- **CONTRA-INDICATIONS** Preparations marketed by Pfizer, or CSL Biotherapies in child under 5 years—increased risk of febrile convulsions

**FLUENZ TETRA®** Active wheezing · concomitant use with antiviral therapy for influenza · severe asthma

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Concomitant use with antivirals Avoid antivirals for at least 2 weeks after immunisation; avoid immunisation for at least 48 hours after stopping the antiviral.

**ENZIRA®** Child under 5 years—increased risk of febrile convulsions

- **CAUTIONS** Increased risk of fever in child 5–9 years with preparations marketed by Pfizer or CSL Biotherapies—use alternative influenza vaccine if available
- **ENZIRA**® Child 5–9 years (increased risk of fever)—use alternative influenza vaccine if available
- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**

#### GENERAL SIDE-EFFECTS

- ▶ **Uncommon** Epistaxis
- ▶ **Frequency not known** Febrile convulsions · transient thrombocytopenia · vasculitis (in adults)

#### SPECIFIC SIDE-EFFECTS

- ▶ With intranasal use Rhinorrhoea
- **ALLERGY AND CROSS-SENSITIVITY** Individuals with a history of egg allergy can be immunised with either an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). Vaccines with an ovalbumin content more than 120 nanograms/mL or where content is not stated should not be used in individuals with egg allergy. If an influenza vaccine containing ovalbumin is being considered in those with a history of anaphylaxis to egg or egg allergy with uncontrolled asthma, these individuals should be referred to a specialist in hospital.
- **PREGNANCY** Inactivated vaccines not known to be harmful.
- **FLUENZ TETRA**® Avoid in pregnancy.
- **BREAST FEEDING** Inactivated vaccines not known to be harmful.
- **FLUENZ TETRA**® Avoid in breast-feeding.
- **PRESCRIBING AND DISPENSING INFORMATION**
- **FLUARIX TETRA**® Ovalbumin content less than 100 nanograms/mL.
- **PATIENT AND CARER ADVICE**
- **FLUENZ TETRA**® Avoid close contact with severely immunocompromised patients for 1–2 weeks after vaccination.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Gelatin, gentamicin

- ▶ **FluMist Quadrivalent** (AstraZeneca UK Ltd)  
FluMist Quadrivalent vaccine nasal suspension 0.2mL unit dose | 10 unit dose [PoM] £180.00

- ▶ **Fluenz Tetra** (AstraZeneca UK Ltd) ▼  
Fluenz Tetra vaccine nasal suspension 0.2mL unit dose | 10 unit dose [PoM] £180.00

##### Suspension for injection

EXCIPIENTS: May contain Gentamicin, kanamycin, neomycin penicillins, polymyxin b, thiomersal

- ▶ **Influenza vaccine (Non-proprietary)**  
Influenza vaccine (split virion, inactivated) suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £5.00–£6.59 | 10 pre-filled disposable injection [PoM] £65.90
- ▶ **Agrrippal** (Seqirus Ltd)  
Agrrippal vaccine suspension for injection 0.5mL pre-filled syringes | 10 pre-filled disposable injection [PoM] £58.50

F 1201

## Japanese encephalitis vaccine

### • INDICATIONS AND DOSE

#### Immunisation against Japanese encephalitis

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2 months–2 years: 0.25 mL every 28 days for 2 doses, anterolateral thigh is preferred site of injection in infants, the subcutaneous route may be used for patients with bleeding disorders
- ▶ Child 3–17 years: 0.5 mL every 28 days for 2 doses, deltoid muscle is preferred site in older children; anterolateral thigh is preferred in infants, the subcutaneous route may be used for patients with bleeding disorders
- ▶ Adult: 0.5 mL every 28 days for 2 doses, deltoid muscle is preferred site of injection, the subcutaneous route may be used for patients with bleeding disorders

#### Booster dose

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 0.5 mL after 1–2 years, deltoid muscle is preferred site of injection, the subcutaneous route may be used for patients with bleeding disorders, for those at continued risk, the booster dose should be given 1 year after completing the primary course

### • SIDE-EFFECTS

- ▶ **Uncommon** Cough (in children) · migraine (in adults) · vertigo (in adults)
- ▶ **Rare** Dyspnoea (in adults) · neuritis (in adults) · palpitation (in adults) · tachycardia (in adults) · thrombocytopenia (in adults)
- **PREGNANCY** Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

- ▶ **Ixiaro** (Valneva UK Ltd)  
Ixiaro vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £59.50

F 1201

## Measles, mumps and rubella vaccine, live

### • INDICATIONS AND DOSE

#### Primary immunisation against measles, mumps, and rubella (first dose)

##### ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION

- ▶ Child 12–13 months: 0.5 mL for 1 dose

#### Primary immunisation against measles, mumps, and rubella (second dose)

##### ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION

- ▶ Child 40 months–5 years: 0.5 mL for 1 dose continued →

**Rubella immunisation (in seronegative women, susceptible to rubella and in unimmunised, seronegative women, post-partum)**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Females of childbearing potential: (consult product literature or local protocols)

**Children presenting for pre-school booster, who have not received the primary immunisation (first dose) | Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course | Control of measles outbreak | Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6 months–17 years: (consult product literature or local protocols)
- ▶ Adult: (consult product literature or local protocols)

- **UNLICENSED USE** Not licensed for use in children under 9 months.

**IMPORTANT SAFETY INFORMATION****MMR VACCINATION AND BOWEL DISEASE OR AUTISM**

Reviews undertaken on behalf of the CSM, the Medical Research Council, and the Cochrane Collaboration, have not found any evidence of a link between MMR vaccination and bowel disease or autism. The Chief Medical Officers have advised that the MMR vaccine is the safest and best way to protect children against measles, mumps, and rubella. Information (including fact sheets and a list of references) may be obtained from [www.dh.gov.uk/immunisation](http://www.dh.gov.uk/immunisation).

- **CAUTIONS** Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion—leave an interval of at least 3 months before MMR immunisation

**CAUTIONS, FURTHER INFORMATION**

- ▶ Administration with other vaccines MMR vaccine should not be administered on the same day as yellow fever vaccine; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

MMR and varicella-zoster vaccine can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

**SIDE-EFFECTS**

- ▶ **Uncommon** Parotid swelling (usually in the third week) · sleep disturbances · unusual crying in infants
- ▶ **Rare** Arthropathy (2 to 3 weeks after immunisation) · idiopathic thrombocytopenic purpura
- ▶ **Frequency not known** Optic neuritis · peripheral neuritis

**SIDE-EFFECTS, FURTHER INFORMATION**

Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days. Leaflets are available for parents on advice for reducing fever (including the use of paracetamol).

Febrile seizures—occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection)

- ▶ **Idiopathic thrombocytopenic purpura** Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose.

The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR should undergo serological testing before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. The Specialist and Reference Microbiology Division, Health Protection Agency offers free serological testing for children who develop idiopathic thrombocytopenic purpura *within 6 weeks* of the first dose of MMR.

- ▶ **Aseptic meningitis** Post-vaccination aseptic meningitis was reported (rarely and with complete recovery) following vaccination with MMR vaccine containing Urabe mumps vaccine, which has now been discontinued; no cases have been confirmed in association with the currently used Jeryl Lynn mumps vaccine. Children with post-vaccination symptoms are not infectious.
- ▶ **Frequency of side effects** Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.
- **ALLERGY AND CROSS-SENSITIVITY** MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg. Dislike of eggs, refusal to eat egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist.
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before immunisation. Avoid pregnancy for at least 1 month after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from health organisations or ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

**MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Gelatin, neomycin

- ▶ **M-M-RVAXPRO** (Merck Sharp & Dohme Ltd)

M-M-RVAXPRO vaccine powder and solvent for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £11.00

**Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

- ▶ **Priorix** (GlaxoSmithKline UK Ltd)

Priorix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial **[PoM]** £7.64

▶ 1201

**Rabies vaccine****● INDICATIONS AND DOSE****Pre-exposure prophylaxis**

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child:** 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region or anterolateral thigh in infants, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel
- ▶ **Adult:** 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than

0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

#### Pre-exposure prophylaxis booster dose (for patients at frequent risk of exposure)

##### ► BY INTRAMUSCULAR INJECTION

- **Child:** 1 mL after 1 year for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region or anterolateral thigh in infants, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies
- **Adult:** 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies

#### Pre-exposure prophylaxis booster dose (for patients at infrequent risk of exposure)

##### ► BY INTRAMUSCULAR INJECTION

- **Child:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region or anterolateral thigh in infants
- **Adult:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region

#### Post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine)

##### ► BY INTRAMUSCULAR INJECTION

- **Child** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, rabies immunoglobulin is not necessary
- **Adult** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region, rabies immunoglobulin is not necessary

#### Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete)

##### ► BY INTRAMUSCULAR INJECTION

- **Child** (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region or anterolateral thigh in infants, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk
- **Adult** (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

• **INTERACTIONS** → Appendix 1: rabies vaccine

• **SIDE-EFFECTS** Paresis

• **PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-

exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Neomycin

##### ► **Rabies vaccine (Non-proprietary)**

Rabies vaccine powder and solvent for suspension for injection 1ml vials | 1 vial **[PoM]** £40.84

#### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

##### ► **Rabipur** (GlaxoSmithKline UK Ltd)

Rabipur vaccine powder and solvent for solution for injection 1ml vials | 1 vial **[PoM]** £34.56

1201

## Rotavirus vaccine

- **DRUG ACTION** Rotavirus vaccine is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

#### • INDICATIONS AND DOSE

##### **Immunisation against gastro-enteritis caused by rotavirus**

##### ► BY MOUTH

- **Child** 6–23 weeks: 1.5 mL for 2 doses separated by an interval of at least 4 weeks, first dose must be given between 6–14 weeks of age; course should be completed before 24 weeks of age (preferably before 16 weeks)

- **CONTRA-INDICATIONS** History of intussusception · predisposition to intussusception · severe combined immunosuppression

#### **CONTRA-INDICATIONS, FURTHER INFORMATION**

- **Immunosuppression** With the exception of severe combined immunodeficiency, rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from vaccination is likely to outweigh the risk, if there is any doubt, seek specialist advice.

- **CAUTIONS** Diarrhoea (postpone vaccination) · immunosuppressed close contacts · vomiting (postpone vaccination)

#### **CAUTIONS, FURTHER INFORMATION**

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.

- **INTERACTIONS** → Appendix 1: live vaccines

- **SIDE-EFFECTS** Abdominal cramps · abdominal pain · diarrhoea · nausea · vomiting

- **PATIENT AND CARER ADVICE** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Oral suspension**

##### ► **Rotarix** (GlaxoSmithKline UK Ltd)

Rotarix vaccine live oral suspension 1.5ml pre-filled syringes | 1 unit dose **[PoM]** £34.76

## Tick-borne encephalitis vaccine, inactivated

### ● INDICATIONS AND DOSE

#### Initial immunisation against tick-borne encephalitis

- BY INTRAMUSCULAR INJECTION
- Child 1–15 years: 0.25 mL for 1 dose, followed by 0.25 mL after 1–3 months for 1 dose, then 0.25 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- Child 16–17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- Adult: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- Elderly: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

#### Immunisation against tick-borne encephalitis, booster doses

- BY INTRAMUSCULAR INJECTION
- Child 1–17 years: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region or anterolateral thigh in infants (consult product literature)
- Adult: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region (consult product literature)

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Gentamicin, neomycin

#### ► TicoVac (Masta Ltd)

TicoVac Junior vaccine suspension for injection 0.25mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £28.00

TicoVac vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £32.00

## Varicella-zoster vaccine

### ● INDICATIONS AND DOSE

#### VARILRIX®

#### Prevention of varicella infection (chickenpox)

- BY SUBCUTANEOUS INJECTION
- Child 1–17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh
- Adult: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh

#### VARIVAX®

#### Prevention of varicella infection (chickenpox)

- BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- Child 1–12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)
- Child 13–17 years: 0.5 mL every 4–8 weeks for 2 doses, to be administered preferably into the deltoid region
- Adult: 0.5 mL every 4–8 weeks for 2 doses, to be administered preferably into the deltoid region

#### Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

- BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- Child 1–12 years: 0.5 mL every 12 weeks for 2 doses, to be administered into the deltoid region (or higher anterolateral thigh in young children)

#### ZOSTAVAX®

#### Prevention of herpes zoster (shingles)

- BY SUBCUTANEOUS INJECTION
- Adult 70–79 years: 0.65 mL for 1 dose, to be administered preferably into the deltoid region

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

### CAUTIONS, FURTHER INFORMATION

Rarely, the varicella–zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

- Administration with MMR vaccine Varicella–zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

### ● SIDE-EFFECTS

- Rare Thrombocytopenia
- Frequency not known Conjunctivitis · varicella-like rash

- **CONCEPTION AND CONTRACEPTION** Avoid pregnancy for 3 months after vaccination.

## ● PRESCRIBING AND DISPENSING INFORMATION

**ZOSTAVAX**® Advice in the BNF may differ from that in product literature.

## ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### **Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Gelatin, neomycin

#### ▶ **Varivax** (Merck Sharp & Dohme Ltd)

Varivax vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £30.28

Stamiril vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £33.10

1201

## Yellow fever vaccine, live

## ● INDICATIONS AND DOSE

### **Immunisation against yellow fever**

#### ▶ BY DEEP SUBCUTANEOUS INJECTION

- ▶ Child 6–8 months (administered on expert advice): Infants under 9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (consult product literature or local protocols)
- ▶ Child 9 months–17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

- **CONTRA-INDICATIONS** Children under 6 months · history of thymus dysfunction

- **CAUTIONS** Individuals over 60 years—greater risk of vaccine-associated adverse effects (in adults)

### **CAUTIONS, FURTHER INFORMATION**

- ▶ Administration with MMR vaccine Yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

- **SIDE-EFFECTS** Neurotropic disease · viscerotropic disease

### **SIDE-EFFECTS, FURTHER INFORMATION**

- ▶ Vaccine-associated adverse effects *Very rare* adverse effects, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These *very rare* adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity.

- **ALLERGY AND CROSS-SENSITIVITY** Yellow fever vaccine should only be considered under the guidance of a specialist in individuals with evidence of previous anaphylactic reaction to egg.

- **PREGNANCY** Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.

- **BREAST FEEDING** Avoid; seek specialist advice if exposure to virus cannot be avoided.

## General anaesthesia

### General anaesthesia

#### Overview

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated patients and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

#### Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using 'rapid sequence induction'); lower doses may be required in premedicated patients.

#### Total intravenous anaesthesia

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to

predicted plasma-drug concentrations in ventilated adult patients.

#### Drugs used for intravenous anaesthesia

Propofol p. 1220, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in adults and children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures and sedation in adults in intensive care.

Thiopental sodium p. 322 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect and recovery is much slower.

Etomidate p. 1220 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 1234 is used rarely. Ketamine causes less hypotension than thiopental sodium and propofol during induction. It is used mainly for paediatric anaesthesia, particularly when repeated administration is required (such as for serial burns dressings); recovery is relatively slow and there is a high incidence of extraneous muscle movements. The main disadvantage of ketamine is the high incidence of hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 327 or midazolam p. 323.

#### Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. *Gaseous anaesthetics* require suitable equipment for storage and administration. *Volatile liquid anaesthetics* are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 1222 is being administered.

### Volatile liquid anaesthetics

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isflurane p. 1222 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isflurane anaesthesia, but heart-rate can rise, particularly in younger patients. Systemic arterial pressure and cardiac output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isflurane is the preferred inhalational anaesthetic for use in obstetrics.

Desflurane p. 1222 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract.

Sevoflurane p. 1223 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia; it has little effect on heart rhythm compared with other volatile liquid anaesthetics.

### Nitrous oxide

Nitrous oxide is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For anaesthesia, nitrous oxide is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (*Entonox*®, *Equanox*®) is used. Self-administration using a demand valve is popular in obstetric practice, for changing painful dressings, as an aid to postoperative physiotherapy, and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

### Malignant hyperthermia

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride p. 1226 has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in patients at high risk of malignant hyperthermia.

Dantrolene sodium p. 1236 is used in the treatment of malignant hyperthermia.

## Sedation, anaesthesia, and resuscitation in dental practice

### Overview

Sedation for dental procedures should be limited to conscious sedation. Diazepam p. 327 and temazepam p. 463 are effective anxiolytics for dental treatment in adults.

For details of sedation, anaesthesia, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated documents. Further details can also be found in *Standards for Conscious Sedation in the Provision of Dental Care*; report of an Intercollegiate Advisory Committee for Sedation in Dentistry, 2015 [www.rcseng.ac.uk/library-and-publications/college-publications/docs/dental-sedation-report](http://www.rcseng.ac.uk/library-and-publications/college-publications/docs/dental-sedation-report).

## Surgery and long-term medication

### Overview

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about **all** drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids).

Other drugs that should normally not be stopped before surgery include antiepileptics, antiparkinsonian drugs, antipsychotics, anxiolytics, bronchodilators, cardiovascular drugs (but see potassium-sparing diuretics, angiotensin-converting enzyme inhibitors, and angiotensin-II receptor antagonists), glaucoma drugs, immunosuppressants, drugs of dependence, and thyroid or antithyroid drugs. Expert advice is required for patients receiving antivirals for HIV infection. See general advice on surgery in diabetic patients in Diabetes, surgery and medical illness p. 649.

Patients taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) p. 128 or low molecular weight heparin therapy.

Drugs that should be stopped before surgery include combined oral contraceptives, see Contraceptives, hormonal p. 745; for advice on hormone replacement therapy, see Sex hormones p. 707. MAOIs can have important interactions with some drugs used during surgery, such as pethidine hydrochloride p. 445. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or if there is tissue damage. Angiotensin-converting enzyme (ACE) inhibitors and angiotensin-II receptor antagonists can be associated with severe hypotension after induction of anaesthesia; these drugs may need to be discontinued

24 hours before surgery. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

## ANAESTHETICS, GENERAL › INTRAVENOUS ANAESTHETICS

### Etomidate

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)
- ▶ Elderly: 150–200 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)

#### IMPORTANT SAFETY INFORMATION

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · acute porphyrias p. 969 (avoid) · adrenal insufficiency · cardiovascular disease · elderly · fixed cardiac output · hypovolaemia
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Adrenal insufficiency Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.

- **INTERACTIONS** → Appendix 1: etomidate

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Apnoea · hyperventilation · hypotension · nausea · rash · stridor · vomiting
- ▶ **Uncommon** Arrhythmias · cough · hiccups · hypersalivation · hypertension · phlebitis
- ▶ **Frequency not known** AV block · cardiac arrest · extraneous muscle movement (high incidence) · pain on injection · respiratory depression · seizures · shivering · Stevens-Johnson syndrome

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Pain on injection Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.
- ▶ Extraneous muscle movement Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

- **PREGNANCY** May depress neonatal respiration if used during delivery.

- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **HEPATIC IMPAIRMENT** Reduce dose in liver cirrhosis.

- **DIRECTIONS FOR ADMINISTRATION** To be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous).

#### ● PATIENT AND CARER ADVICE

##### Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible

persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

EXCIPIENTS: May contain Propylene glycol

- ▶ **Hypnomidate** (Janssen-Cilag Ltd)

**Etomidate 2 mg per 1 ml** Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £6.90

##### Emulsion for injection

- ▶ **Etomidate-Lipuro** (B.Braun Medical Ltd)

**Etomidate 2 mg per 1 ml** Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoule [PoM] £15.62

### Propofol

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia using 0.5% or 1% injection

- ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response, for debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Induction of anaesthesia using 2% injection

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Maintenance of anaesthesia using 1% injection

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 4–12 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response

##### Maintenance of anaesthesia using 2% injection

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 4–12 mg/kg/hour, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour

##### Sedation of ventilated patients in intensive care using 1% or 2% injection

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

##### Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

##### Maintenance of sedation for surgical and diagnostic procedures using 0.5% injection

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in

sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

#### Maintenance of sedation for surgical and diagnostic procedures using 1% injection

##### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

#### Maintenance of sedation for surgical and diagnostic procedures using 2% injection

##### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, using 0.5% or 1% injection (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

#### IMPORTANT SAFETY INFORMATION

Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · cardiac impairment · cardiovascular disease · elderly · epilepsy · fixed cardiac output · hypotension · hypovolaemia · raised intracranial pressure · respiratory impairment
- **INTERACTIONS** → Appendix 1: propofol
- **SIDE-EFFECTS**
  - **Common or very common** Headache · hypotension · tachycardia · transient apnoea
  - **Uncommon** Phlebitis · thrombosis
  - **Rare** Anaphylaxis · arrhythmia · convulsions (onset can be delayed) · delayed recovery from anaesthesia · euphoria
  - **Very rare** Discoloration of urine · pancreatitis · pulmonary oedema · sexual disinhibition
  - **Frequency not known** Bradycardia · pain on intravenous injection · propofol infusion syndrome · significant extraneous muscle movements

#### SIDE-EFFECTS, FURTHER INFORMATION

- Bradycardia Bradycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.
- Extraneous muscle movement Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.
- Pain on injection Can be reduced by intravenous lidocaine.
- Propofol infusion syndrome Prolonged infusion of propofol doses exceeding 4 mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.
- **PREGNANCY** Max. dose for maintenance of anaesthesia 6 mg/kg/hour. May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Use with caution.
- **RENAL IMPAIRMENT** Use with caution.
- **MONITORING REQUIREMENTS** Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.

- **DIRECTIONS FOR ADMINISTRATION** Shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% **emulsion** for injection or intermittent infusion; may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% **emulsion** for injection or infusion; may be administered undiluted, or diluted with Glucose 5% (*Diprivan*®) or (*Propofol-Lipuro*®) or Sodium chloride 0.9% (*Propofol-Lipuro*® only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% **emulsion** for infusion; do not dilute.

#### ● PATIENT AND CARER ADVICE

##### Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Emulsion for infusion

- **Propofol-Lipuro** (B.Braun Melsungen AG)  
**Propofol 10 mg per 1 ml** Propofol-Lipuro 1% emulsion for infusion 50ml ampoules | 10 ampoule [PoM] £94.72 (Hospital only)
- **Diprivan** (Aspen Pharma Trading Ltd)  
**Propofol 10 mg per 1 ml** Diprivan 1% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £10.68  
**Propofol 20 mg per 1 ml** Diprivan 2% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £15.16

##### Emulsion for injection

- **Diprivan** (Aspen Pharma Trading Ltd)  
**Propofol 10 mg per 1 ml** Diprivan 1% emulsion for injection 20ml ampoules | 5 ampoule [PoM] £15.36 (Hospital only)
- **Propofol-Lipuro** (B.Braun Melsungen AG)  
**Propofol 5 mg per 1 ml** Propofol-Lipuro 0.5% emulsion for injection 20ml ampoules | 5 ampoule [PoM] £14.71

## ANAESTHETICS, GENERAL > VOLATILE LIQUID ANAESTHETICS

### Volatile halogenated anaesthetics

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia · raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
  - **Common or very common** Arrhythmias · cardiorespiratory depression · hypotension
  - **Frequency not known** Convulsions · mood changes (that can last several days)
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.
- **DIRECTIONS FOR ADMINISTRATION** Volatile liquid anaesthetics are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the

carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times.

#### ● PATIENT AND CARER ADVICE

##### Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

F 1221

## Desflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (but not recommended)

- BY INHALATION
- Adult: 4–11 %, to be inhaled through specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide–oxygen)

- BY INHALATION
- Adult: 2–6 %, to be inhaled through a specifically calibrated vaporiser

##### Maintenance of anaesthesia (in oxygen or oxygen-enriched air)

- BY INHALATION
- Adult: 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS** Apnoea · breath-holding · cough · increased secretions · laryngospasm
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Inhalation vapour

- **Desflurane (Non-proprietary)**  
Desflurane 1 ml per 1 ml Desflurane volatile liquid | 240 ml PoM  
no price available (Hospital only)

F 1221

## Isoflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (in oxygen or nitrous oxide–oxygen)

- BY INHALATION
- Adult: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide–oxygen)

- BY INHALATION
- Adult: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1 % may be required when given with oxygen alone

##### Maintenance of anaesthesia in caesarean section (in nitrous oxide–oxygen)

- BY INHALATION
- Adult: 0.5–0.75 %, to be administered using specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics

- **SIDE-EFFECTS** Breath-holding · cough · irritate mucous membrane · laryngospasm
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Inhalation vapour

- **Isoflurane (Non-proprietary)**  
Isoflurane 1 ml per 1 ml Isoflurane inhalation vapour | 250 ml PoM £35.29 (Hospital only)  
Isoflurane volatile liquid | 250 ml P £47.50 (Hospital only)
- **AErrane** (Baxter Healthcare Ltd)  
Isoflurane 1 ml per 1 ml AErrane volatile liquid | 250 ml P no price available (Hospital only)

## Nitrous oxide

#### ● INDICATIONS AND DOSE

##### Maintenance of anaesthesia in conjunction with other anaesthetic agents

- BY INHALATION
- Adult: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen

##### Analgesia

- BY INHALATION
- Adult: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs

#### IMPORTANT SAFETY INFORMATION

Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Entrapped air following recent underwater dive · pneumothorax · presence of intracranial air after head injury · recent intra-ocular gas injection

#### CAUTIONS, FURTHER INFORMATION

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

- **INTERACTIONS** → Appendix 1: nitrous oxide
- **SIDE-EFFECTS** Depression of white cell formation · hypoxia · megaloblastic anaemia · neurological toxic effects
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Hypoxia Hypoxia can occur immediately following the administration of nitrous oxide; additional oxygen should always be given for several minutes after stopping the flow of nitrous oxide.
  - Prolonged exposure Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B<sub>12</sub>; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.
- **PREGNANCY** May depress neonatal respiration if used during delivery.

- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MONITORING REQUIREMENTS**
  - ▶ Assessment of plasma-vitamin B<sub>12</sub> concentration should be considered in those at risk of deficiency, including the elderly, those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
  - ▶ Nitrous oxide should **not** be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.
- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (*Entonox*<sup>®</sup>, *Equanox*<sup>®</sup>) is used.
- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

## Sevoflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

###### ▶ BY INHALATION

- **Adult:** Initially 0.5–1%, then increased to up to 8%, increased gradually, according to response, to be administered using specifically calibrated vaporiser

##### Maintenance of anaesthesia (in oxygen or nitrous oxide-oxygen)

###### ▶ BY INHALATION

- **Adult:** 0.5–3%, adjusted according to response, to be administered using specifically calibrated vaporiser

- **CAUTIONS** Susceptibility to QT-interval prolongation
- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS** Cardiac arrest · dystonia · leucopenia · torsade de pointes · urinary retention
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **RENAL IMPAIRMENT** Use with caution.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Inhalation vapour

###### ▶ Sevoflurane (Non-proprietary)

**Sevoflurane 1 ml per 1 ml** Sevoflurane volatile liquid | 250 ml [PoM] £123.00 (Hospital only)

## 1 Anaesthesia adjuvants

### Pre-medication and peri-operative drugs

#### Drugs that affect gastric pH

Regurgitation and aspiration of gastric contents (Mendelson's syndrome) can be an important complication of general anaesthesia, particularly in obstetrics and during emergency surgery, and requires prophylaxis against acid aspiration. Prophylaxis is also needed in those with gastro-oesophageal reflux disease and in circumstances where gastric emptying may be delayed.

A **H<sub>2</sub>-receptor antagonist** can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H<sub>2</sub>-receptor antagonist can be given 1–2 hours before the procedure. Antacids are frequently used to neutralise the acidity of the fluid already in the stomach; 'clear' (non-particulate) antacids such as sodium citrate p. 743 are preferred.

#### Antimuscarinic drugs

Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some inhalational anaesthetics. They are also used before or with neostigmine p. 1024 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol p. 1220 and suxamethonium chloride p. 1226.

Atropine sulfate p. 1224 is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulfate may have a role in acute arrhythmias after myocardial infarction.

Hyoscine hydrobromide p. 417 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulfate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 1225 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulfate. It is widely used with neostigmine for reversal of non-depolarising neuromuscular blocking drugs.

**Phenothiazines** do not effectively reduce secretions when used alone.

#### Sedative drugs

Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a **benzodiazepine**. Premedication may also augment the action of anaesthetics and provide some degree of pre-operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures.

Premedicants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

#### Benzodiazepines

Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used in

intensive care units for sedation, particularly in those receiving assisted ventilation. Flumazenil p. 1258 is used to antagonise the effects of benzodiazepines.

Diazepam p. 327 is used to produce mild sedation with amnesia. It is a long-acting drug with active metabolites and a second period of drowsiness can occur several hours after its administration. Peri-operative use of diazepam in children is not recommended; its effect and timing of response are unreliable and paradoxical effects may occur.

Diazepam is relatively insoluble in water and preparations formulated in organic solvents are painful on intravenous injection and give rise to a high incidence of venous thrombosis (which may not be noticed for several days after the injection). Intramuscular injection of diazepam is painful and absorption is erratic. An emulsion formulated for intravenous injection is less irritant and reduces the risk of venous thrombosis; it is not suitable for intramuscular injection.

Temazepam p. 463 is given by mouth for premedication and has a shorter duration of action and a more rapid onset than oral diazepam; anxiolytic and sedative effects last about 90 minutes although there may be residual drowsiness.

Lorazepam p. 322 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Midazolam p. 323 is a water-soluble benzodiazepine that is often used in preference to intravenous diazepam; recovery is faster than from diazepam, but may be significantly longer in the elderly, in patients with a low cardiac output, or after repeated dosing. Midazolam is associated with profound sedation when high doses are given intravenously or when it is used with certain other drugs.

#### Other drugs for sedation

Dexmedetomidine p. 1235 and clonidine hydrochloride p. 139 are alpha<sub>2</sub>-adrenergic agonists with sedative properties. Dexmedetomidine is licensed for the sedation of patients receiving intensive care who need to remain responsive to verbal stimulation. Clonidine hydrochloride [unlicensed indication] can be used by mouth or by intravenous injection as a sedative agent when adequate sedation cannot be achieved with standard treatment.

#### Antagonists for central and respiratory depression

Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by naloxone hydrochloride p. 1259. Naloxone hydrochloride will immediately reverse opioid-induced respiratory depression but the dose may have to be repeated because of the short duration of action of naloxone hydrochloride; however, naloxone hydrochloride will also antagonise the analgesic effect.

Flumazenil is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become resedated.

Doxapram hydrochloride p. 286 is a central and respiratory stimulant but is of limited value in anaesthesia.

### ANTIMUSCARINICS

F 732

#### Atropine sulfate

##### ● INDICATIONS AND DOSE

**Bradycardia due to acute massive overdosage of beta-blockers**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 40 micrograms/kg (max. per dose 3 mg)
- ▶ Adult: 3 mg

#### **Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning
- ▶ Adult: 2 mg every 5–10 minutes until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

#### **Symptomatic relief of gastro-intestinal disorders characterised by smooth muscle spasm**

- ▶ BY MOUTH
- ▶ Adult: 0.6–1.2 mg daily, dose to be taken at night

#### **Premedication**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

#### **Intra-operative bradycardia**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, larger doses may be used in emergencies
- ▶ Adult: 300–600 micrograms, larger doses may be used in emergencies

#### **Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 0.6–1.2 mg
- ▶ Adult: 0.6–1.2 mg

#### **Excessive bradycardia associated with beta-blocker use**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 0.6–2.4 mg in divided doses (max. per dose 600 micrograms)

#### **Bradycardia following myocardial infarction (particularly if complicated by hypotension)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 500 micrograms every 3–5 minutes; maximum 3 mg per course

- **UNLICENSED USE** Not licensed for use in children under 12 years for intra-operative bradycardia or by intravenous route for premedication.

#### **IMPORTANT SAFETY INFORMATION**

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- **INTERACTIONS** → Appendix 1: atropine
- **PREGNANCY** Not known to be harmful; manufacturer advises caution.
- **BREAST FEEDING** May suppress lactation; small amount present in milk—manufacturer advises caution.
- **MONITORING REQUIREMENTS**
  - ▶ Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block. Since atropine has a shorter duration of action than neostigmine, late unopposed

bradycardia may result; close monitoring of the patient is necessary.

- **LESS SUITABLE FOR PRESCRIBING** Atropine tablets less suitable for prescribing. Any clinical benefit as a gastro-intestinal antispasmodic is outweighed by atropinic side-effects.
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

#### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, solution for infusion

##### Tablet

##### Atropine sulfate (Non-proprietary)

**Atropine sulfate 600 microgram** Atropine 600microgram tablets | 28 tablet [PoM] £52.92 DT price = £49.53

##### Solution for injection

##### Atropine sulfate (Non-proprietary)

**Atropine sulfate 100 microgram per 1 ml** Atropine 500micrograms/5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.40-£13.00 | 10 pre-filled disposable injection [PoM] £69.00-£130.00

**Atropine sulfate 200 microgram per 1 ml** Atropine 1mg/5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.08-£13.00 | 10 pre-filled disposable injection [PoM] £130.00

**Atropine sulfate 300 microgram per 1 ml** Atropine 3mg/10ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.08-£13.00 DT price = £7.19 | 10 pre-filled disposable injection [PoM] £130.00

**Atropine sulfate 400 microgram per 1 ml** Atropine 400micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £80.48-£82.32 DT price = £79.11

**Atropine sulfate 600 microgram per 1 ml** Atropine 600micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £11.71 DT price = £11.70  
Atropine 600micrograms/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.08

**Atropine sulfate 1 mg per 1 ml** Atropine 1mg/1ml solution for injection ampoules | 10 ampoule [PoM] £74.29-£75.98 DT price = £73.03

## Glycopyrronium bromide (Glycopyrrolate)

### INDICATIONS AND DOSE

#### Premedication at induction

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms)

#### Intra-operative bradycardia

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms), repeated if necessary

#### Control of muscarinic side-effects of neostigmine in reversal of non-depolarising neuromuscular block

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 10–15 micrograms/kg, alternatively, 200 micrograms per 1 mg of neostigmine to be administered

#### Bowel colic in palliative care | Excessive respiratory secretions in palliative care

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 200 micrograms every 4 hours and when required, hourly use is occasionally necessary, particularly in excessive respiratory secretions

- ▶ BY SUBCUTANEOUS INFUSION
- ▶ Adult: 0.6–1.2 mg/24 hours

### IMPORTANT SAFETY INFORMATION

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- **INTERACTIONS** → Appendix 1: glycopyrronium

### PRESCRIBING AND DISPENSING INFORMATION

#### Palliative care

For further information on the use of glycopyrronium bromide in palliative care, see [www.palliativedrugs.com/formulary/en/glycopyrronium.html](http://www.palliativedrugs.com/formulary/en/glycopyrronium.html).

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### Glycopyrronium bromide (Non-proprietary)

**Glycopyrronium bromide 200 microgram per 1 ml** Glycopyrronium bromide 200micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £14.00 DT price = £12.40  
Glycopyrronium bromide 600micrograms/3ml solution for injection ampoules | 3 ampoule [PoM] £8.00-£9.75 | 10 ampoule [PoM] £11.50

Combinations available: *Neostigmine with glycopyrronium bromide*, p. 1229

## 1.1 Neuromuscular blockade

### Neuromuscular blockade

#### Neuromuscular blocking drugs

Neuromuscular blocking drugs used in anaesthesia are also known as **muscle relaxants**. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in musculoskeletal disorders that act on the spinal cord or brain.

Patients who have received a neuromuscular blocking drug should **always** have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

#### Non-depolarising neuromuscular blocking drugs

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 1024. Non-depolarising neuromuscular blocking drugs can be divided into the **aminosteroid** group, comprising pancuronium bromide p. 1228, rocuronium bromide p. 1228, and vecuronium bromide p. 1229, and the **benzylisoquinolinium** group, comprising atracurium besilate p. 1227, cisatracurium p. 1227, and mivacurium p. 1228.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride p. 1226. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as atracurium besilate and vecuronium bromide, are more

widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzyliisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney function, thus allowing its use in patients with hepatic or renal impairment. Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects.

Mivacurium, a benzyliisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in patients receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity.

Vecuronium bromide, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects.

#### Depolarising neuromuscular blocking drugs

Suxamethonium chloride has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required, e.g. with tracheal intubation. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. While tachycardia occurs with single use, bradycardia may occur with repeated doses in adults and with the first dose in children. Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride use.

Prolonged paralysis may occur in **dual block**, which occurs with high or repeated doses of suxamethonium chloride and is caused by the development of a non-depolarising block following the initial depolarising block. Individuals with myasthenia gravis are resistant to suxamethonium chloride but can develop dual block resulting in delayed recovery.

Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

## NEUROMUSCULAR BLOCKING DRUGS > DEPOLARISING

### Suxamethonium chloride

#### (Succinylcholine chloride)

- **DRUG ACTION** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (short duration) during surgery and intubation

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 1–1.5 mg/kg

- **UNLICENSED USE** Doses of suxamethonium in BNF may differ from those in product literature.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Duchenne muscular dystrophy · family history of malignant hyperthermia · hyperkalaemia · low plasma-cholinesterase activity (including severe liver disease) · major trauma · neurological disease involving acute wasting of major muscle · personal or family history of congenital myotonic disease · prolonged immobilisation (risk of hyperkalaemia) · severe burns
- **CAUTIONS** Cardiac disease · neuromuscular disease · raised intra-ocular pressure (avoid in penetrating eye injury) · respiratory disease · severe sepsis (risk of hyperkalaemia)
- **INTERACTIONS** → Appendix 1: suxamethonium
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Flushing · hyperkalaemia · increased gastric pressure · increased intra-ocular pressure · myoglobinaemia · myoglobinuria · postoperative muscle pain · rash
  - ▶ **Rare** Apnoea · arrhythmias · bronchospasm · cardiac arrest · limited jaw mobility · prolonged respiratory depression
  - ▶ **Very rare** Anaphylactic reactions · malignant hyperthermia
  - ▶ **Frequency not known** Bradycardia (may occur with repeated doses) · hypertension · hypotension · rhabdomyolysis · tachycardia (occurs with single use)
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - ▶ Bradycardia Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium use.
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Mildly prolonged maternal neuromuscular blockade may occur.
- **BREAST FEEDING** Unlikely to be present in breast milk in significant amounts (ionised at physiological pH). Breast-feeding may be resumed once the mother recovered from neuromuscular block.
- **HEPATIC IMPAIRMENT** Prolonged apnoea may occur in severe liver disease because of reduced hepatic synthesis of pseudocholinesterase.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### Suxamethonium chloride (Non-proprietary)

Suxamethonium chloride 50 mg per 1 ml Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule [PoM](#) £28.80–£50.00

##### Anectine (GlaxoSmithKline UK Ltd)

Suxamethonium chloride 50 mg per 1 ml Anectine 100mg/2ml solution for injection ampoules | 5 ampoule [PoM](#) £3.57

## NEUROMUSCULAR BLOCKING DRUGS > NON-DEPOLARISING

## Non-depolarising neuromuscular blocking drugs

### IMPORTANT SAFETY INFORMATION

Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

- **CAUTIONS** Burns (resistance can develop, increased doses may be required) • cardiovascular disease (reduce rate of administration) • electrolyte disturbances (response unpredictable) • fluid disturbances (response unpredictable) • hypothermia (activity prolonged, lower doses required) • myasthenia gravis (activity prolonged, lower doses required) • neuromuscular disorders (response unpredictable)
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.
- **BREAST FEEDING** Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

## Atracurium besilate

(Atracurium besylate)

### INDICATIONS AND DOSE

#### Neuromuscular blockade (short to intermediate duration) for surgery and intubation

##### INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg as required, alternatively (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour

#### Neuromuscular blockade during intensive care

##### INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### SIDE-EFFECTS

- ▶ Very rare Anaphylactoid reactions
- ▶ Frequency not known Acute myopathy (after prolonged use in intensive care) • bronchospasm • hypotension • seizures • skin flushing • tachycardia

### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Cardiovascular effects Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.
- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Tracrium®; Atracurium besilate injection, Hospira; Atracurium injection/infusion, Genus), give continuously in Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent; dilute requisite dose with infusion fluid to a concentration of 0.5–5 mg/mL.

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### Atracurium besilate (Non-proprietary)

Atracurium besilate 10 mg per 1 ml Atracurium besilate 250mg/25ml solution for injection vials | 1 vial [PoM](#) £16.50  
Atracurium besilate 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM](#) £9.25  
Atracurium besilate 50mg/5ml solution for injection ampoules | 5 ampoule [PoM](#) £17.50 | 10 ampoule [PoM](#) £35.00

##### Tracrium (GlaxoSmithKline UK Ltd)

Atracurium besilate 10 mg per 1 ml Tracrium 250mg/25ml solution for injection vials | 2 vial [PoM](#) £25.81  
Tracrium 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM](#) £8.28  
Tracrium 50mg/5ml solution for injection ampoules | 5 ampoule [PoM](#) £15.02

## Cisatracurium

### INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 150 micrograms/kg, then (by intravenous injection) maintenance 30 micrograms/kg every 20 minutes, alternatively (by intravenous infusion) initially 180 micrograms/kg/hour, then (by intravenous infusion) maintenance 60–120 micrograms/kg/hour, maintenance dose administered after stabilisation

#### Neuromuscular blockade (intermediate duration) during intensive care

##### INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 150 micrograms/kg, initial dose is optional, then (by intravenous infusion) 180 micrograms/kg/hour, adjusted according to response; (by intravenous infusion) usual dose 30–600 micrograms/kg/hour

### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) • bradycardia

- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Nimbex®, Nimbex Forte®), give continuously in Glucose 5% or Sodium Chloride 0.9%; solutions of 2 mg/mL and 5 mg/mL may be infused undiluted; alternatively dilute with infusion fluid to a concentration of 0.1–2 mg/mL.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

#### ► Cisatracurium (Non-proprietary)

Cisatracurium (as Cisatracurium besilate) 2 mg per 1 ml Cisatracurium besilate 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £32.09  
Cisatracurium besilate 20mg/10ml solution for injection vials | 5 vial [PoM] £37.75 (Hospital only)  
Cisatracurium (as Cisatracurium besilate) 5 mg per 1 ml Cisatracurium besilate 150mg/30ml solution for injection vials | 1 vial [PoM] £45.00 (Hospital only) | 1 vial [PoM] £26.43

#### ► Nimblex (GlaxoSmithKline UK Ltd)

Cisatracurium (as Cisatracurium besilate) 2 mg per 1 ml Nimblex 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £37.75  
Cisatracurium (as Cisatracurium besilate) 5 mg per 1 ml Nimblex Forte 150mg/30ml solution for injection vials | 1 vial [PoM] £31.09

F 1227

## Mivacurium

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (short duration) during surgery and intubation

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: 70–250 micrograms/kg; (by intravenous injection) maintenance 100 micrograms/kg every 15 minutes, alternatively (by intravenous infusion) maintenance 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 6–7 micrograms/kg/minute

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **CAUTIONS** Burns (low plasma cholinesterase activity; dose titration required) • elderly

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

#### • SIDE-EFFECTS

- Very rare Anaphylactoid reactions
- Frequency not known Bronchospasm • hypotension • skin flushing • tachycardia

- **HEPATIC IMPAIRMENT** Reduce dose in severe impairment.

- **RENAL IMPAIRMENT** Clinical effect prolonged in renal failure—reduce dose according to response.

- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion, give continuously in Glucose 5% or Sodium chloride 0.9%. Dilute to a concentration of 500 micrograms/mL; may also be given undiluted. Doses up to 150 micrograms/kg may be given over 5–15 seconds, higher doses should be given over 30 seconds. In asthma, cardiovascular disease or in those sensitive to reduced arterial blood pressure, give over 60 seconds.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

#### ► Mivacron (GlaxoSmithKline UK Ltd)

Mivacurium (as Mivacurium chloride) 2 mg per 1 ml Mivacron 10mg/5ml solution for injection ampoules | 5 ampoule [PoM] £13.95  
Mivacron 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £22.57

## Pancuronium bromide

F 1227

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (long duration) during surgery and intubation

##### ► BY INTRAVENOUS INJECTION

- Adult: Initially 100 micrograms/kg, then 20 micrograms/kg as required

#### Neuromuscular blockade (long duration) during intensive care

##### ► BY INTRAVENOUS INJECTION

- Adult: Initially 100 micrograms/kg, initial dose is optional, then 60 micrograms/kg every 60–90 minutes

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) • hypertension • tachycardia

#### SIDE-EFFECTS, FURTHER INFORMATION

Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

- **HEPATIC IMPAIRMENT** Possibly slower onset, higher dose requirement, and prolonged recovery time.

- **RENAL IMPAIRMENT** Use with caution; prolonged duration of block.

### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

#### ► Pancuronium bromide (Non-proprietary)

Pancuronium bromide 2 mg per 1 ml Pancuronium bromide 4mg/2ml solution for injection ampoules | 10 ampoule [PoM] £50.00

## Vecuronium bromide

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: 80–100 micrograms/kg; (by intravenous injection) maintenance 20–30 micrograms/kg, adjusted according to response, max. 100 micrograms/kg in caesarian section, alternatively (by intravenous infusion) maintenance 0.8–1.4 micrograms/kg/minute, adjusted according to response

##### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **SIDE-EFFECTS**
  - Very rare Anaphylactoid reactions
- **Frequency not known** Acute myopathy (after prolonged use in intensive care) • bronchospasm • hypotension • skin flushing • tachycardia
- **HEPATIC IMPAIRMENT** Use with caution in significant impairment.
- **RENAL IMPAIRMENT** Use with caution.
- **DIRECTIONS FOR ADMINISTRATION** Reconstitute each vial with 5 mL Water for Injections to give 2 mg/mL solution; alternatively reconstitute with up to 10 mL Glucose 5% or Sodium Chloride 0.9% or Water for Injections—unsuitable for further dilution if not reconstituted with Water for Injections. For *continuous intravenous infusion*, dilute reconstituted solution to a concentration up to 40 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%; reconstituted solution can also be given via drip tubing.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

##### ► Norcuron (Merck Sharp & Dohme Ltd)

**Vecuronium bromide 10 mg** Norcuron 10mg powder and solvent for solution for injection vials | 10 vial [PoM] £33.73 (Hospital only)

## 1.2 Neuromuscular blockade reversal

### Neuromuscular blockade reversal

#### Drugs for reversal of neuromuscular blockade

##### Anticholinesterases

Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide but they prolong the action of the depolarising neuromuscular blocking drug suxamethonium chloride.

Neostigmine is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary. Glycopyrronium bromide p. 1225 or alternatively atropine sulfate p. 1224, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

##### Other drugs for reversal of neuromuscular blockade

Sugammadex p. 1230 is a modified gamma cyclodextrin that can be used for rapid reversal of neuromuscular blockade induced by rocuronium bromide or vecuronium bromide. In practice, sugammadex is used mainly for rapid reversal of neuromuscular blockade in an emergency.

#### ANTICHOLINESTERASES

### Neostigmine with glycopyrronium bromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, neostigmine p. 1024, glycopyrronium bromide p. 1225.

#### ● INDICATIONS AND DOSE

##### Reversal of non-depolarising neuromuscular blockade

##### ► BY INTRAVENOUS INJECTION

- Adult: 1–2 mL, repeated if necessary, alternatively 0.02 mL/kilogram, repeated if necessary; maximum 2 mL per course

- **INTERACTIONS** → Appendix 1: glycopyrronium, neostigmine
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give over 10–30 seconds.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Neostigmine with glycopyrronium bromide (Non-proprietary)

**Glycopyrronium bromide 500 microgram per 1 mL, Neostigmine metilsulfate 2.5 mg per 1 mL** Neostigmine 2.5mg/1mL / Glycopyrronium bromide 500micrograms/1mL solution for injection ampoules | 10 ampoule [PoM] £11.50

## ANTIDOTES AND CHELATORS

## Sugammadex

## ● INDICATIONS AND DOSE

**Routine reversal of neuromuscular blockade induced by rocuronium or vecuronium**

- BY INTRAVENOUS INJECTION
- Adult: Initially 2–4 mg/kg, then 4 mg/kg if required, administered if recurrence of neuromuscular blockade occurs; consult product literature for further details

**Immediate reversal of neuromuscular blockade induced by rocuronium**

- BY INTRAVENOUS INJECTION
- Adult: 16 mg/kg (consult product literature)

## IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CAUTIONS** Cardiovascular disease (recovery may be delayed) · elderly (recovery may be delayed) · pre-existing coagulation disorders · recurrence of neuromuscular blockade—monitor respiratory function until fully recovered · use of anticoagulants (unrelated to surgery) · wait 24 hours before re-administering rocuronium · wait 24 hours before re-administering vecuronium
- **INTERACTIONS** → Appendix 1: sugammadex
- **SIDE-EFFECTS** Bradycardia · bronchospasm · cardiac arrest · hypersensitivity reactions
- **PREGNANCY** Use with caution—no information available.
- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**Scottish Medicines Consortium (SMC) Decisions**  
The *Scottish Medicines Consortium*, has advised (February 2013) that sugammadex (*Bridion*®) is accepted for restricted use within NHS Scotland for the routine reversal of neuromuscular blockade in high-risk patients only, or where prompt reversal of neuromuscular block is required.

## ● MEDICAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

ELECTROLYTES: May contain Sodium

- **Bridion** (Merck Sharp & Dohme Ltd)

**Sugammadex (as Sugammadex sodium) 100 mg per 1 ml** Bridion 500mg/5ml solution for injection vials | 10 vial [PoM] £1,491.00 (Hospital only)  
Bridion 200mg/2ml solution for injection vials | 10 vial [PoM] £596.40 (Hospital only)

## 1.3 Peri-operative analgesia

## Peri-operative analgesia

## Non-opioid analgesics

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain. NSAIDs may be inadequate for the relief of severe pain. Acemetacin p. 1030, diclofenac sodium p. 1034, diclofenac potassium p. 1033, flurbiprofen p. 1040, ibuprofen p. 1041, ketoprofen p. 1044, paracetamol p. 422, parecoxib p. 1232, and ketorolac trometamol p. 1231 are licensed for postoperative use. Diclofenac and paracetamol can be given by injection as well as by mouth. Diclofenac

sodium can be given by intravenous infusion for the treatment or prevention of postoperative pain. Intramuscular injections of diclofenac sodium and ketoprofen are rarely used; they are given deep into the gluteal muscle to minimise pain and tissue damage. Ketorolac trometamol is less irritant on intramuscular injection but pain has been reported; it can also be given by intravenous injection.

Suppositories of diclofenac sodium and ketoprofen may be effective alternatives to the parenteral use of these drugs.

## Opioid analgesics

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Pre-operative use of opioid analgesics is generally limited to those patients who require control of existing pain. See general notes on opioid analgesics and their use in postoperative pain.

See the management of opioid-induced respiratory depression in Pre-medication and peri-operative drugs p. 1223.

## Intra-operative analgesia

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia.

Alfentanil p. 1232, fentanyl p. 434, and remifentanyl p. 1233 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect. Repeated intra-operative doses of alfentanil or fentanyl should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. Alfentanil, fentanyl, and remifentanyl can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanyl should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

## ANAESTHETICS, LOCAL

## Bupivacaine with fentanyl

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1238, fentanyl p. 434.

## ● INDICATIONS AND DOSE

**During labour (once epidural block established)**

- BY CONTINUOUS LUMBAR EPIDURAL INFUSION
- Adult: 10–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in 24 hours and 16–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours

**Postoperative pain (once epidural block established)**

- BY CONTINUOUS EPIDURAL INFUSION
- Adult: 4–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in

24 hours and 8–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours, to be administered by thoracic, upper abdominal or lower abdominal epidural infusion

● **INTERACTIONS** → Appendix 1: anaesthetics, local, opioids

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

**Solution for infusion**

► **Buflolol** (AMCo)

**Fentanyl 2 microgram per 1 ml, Bupivacaine hydrochloride 1 mg per 1 ml** Buflolol 1mg/ml and 2micrograms/ml 500ml infusion bags | 10 bag [PoM] £92.00 (Hospital only) [CD2]

Buflolol 1mg/ml and 2micrograms/ml 250ml infusion bags | 20 bag [PoM] £170.00 (Hospital only) [CD2]

**Fentanyl (as Fentanyl citrate) 2 microgram per 1 ml, Bupivacaine hydrochloride 1.25 mg per 1 ml** Buflolol 1.25mg/ml and 2micrograms/ml 250ml infusion bags | 20 bag [PoM] £181.00 (Hospital only) [CD2]

Buflolol 1.25mg/ml and 2micrograms/ml 500ml infusion bags | 10 bag [PoM] £92.00 (Hospital only) [CD2]

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Ketorolac trometamol

● **INDICATIONS AND DOSE**

**Short-term management of moderate to severe acute postoperative pain only**

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day
- Adult (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
- Elderly: Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

● **CONTRA-INDICATIONS** Active or history of gastro-intestinal bleeding · active or history of gastro-intestinal ulceration · coagulation disorders · complete or partial syndrome of nasal polyps · confirmed or suspected cerebrovascular bleeding · dehydration · following operations with high risk of haemorrhage or incomplete haemostasis · haemorrhagic diatheses · history of gastro-intestinal perforation · hypovolaemia · severe heart failure

● **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · Crohn's disease (may be exacerbated) · elderly (risk of serious side-effects and fatalities) · heart failure · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · ulcerative colitis (may be exacerbated) · uncontrolled hypertension

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**

- **Rare** Alveolitis · aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · hepatic damage · interstitial fibrosis associated with NSAIDs can

lead to renal failure · pancreatitis · papillary necrosis associated with NSAIDs can lead to renal failure · pulmonary eosinophilia · Stevens-Johnson syndrome · toxic epidermal necrolysis

- **Frequency not known** Abnormal dreams · angioedema · asthma · blood disorders · bradycardia · bronchospasm · chest pain · colitis (induction of or exacerbation of) · confusion · convulsions · Crohn's disease (induction of or exacerbation of) · depression · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · euphoria · fluid retention (rarely precipitating congestive heart failure) · flushing · gastro-intestinal bleeding · gastro-intestinal discomfort · gastro-intestinal disturbances · gastro-intestinal ulceration · haematuria · hallucinations · headache · hearing disturbances · hyperkalaemia · hyperkinesia · hypersensitivity reactions · hypertension · hyponatraemia · insomnia · malaise · myalgia · nausea · nervousness · optic neuritis · pain at injection site · pallor · palpitation · paraesthesia · photosensitivity · psychosis · purpura · raised blood pressure · rashes · renal failure (especially in patients with pre-existing renal impairment) · sweating · taste disturbances · thirst · tinnitus · urinary frequency · vertigo · visual disturbances

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if serum creatinine greater than 160 micromol/litre. The lowest effective dose should be used for the shortest possible duration. Max. 60 mg daily by intramuscular injection or intravenous injection.  
Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give over at least 15 seconds.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

► **Ketorolac trometamol (Non-proprietary)**

**Ketorolac trometamol 30 mg per 1 ml** Ketorolac 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £5.47 (Hospital only) | 6 ampoule [PoM] £6.56

► **Toradol** (Attnahs Pharma UK Ltd)

**Ketorolac trometamol 30 mg per 1 ml** Toradol 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £5.36

## Parecoxib

- **DRUG ACTION** Parecoxib is a selective inhibitor of cyclo-oxygenase-2.

### ● INDICATIONS AND DOSE

#### Short-term management of acute postoperative pain

- BY DEEP INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- Adult: Initially 40 mg, then 20–40 mg every 6–12 hours as required for up to 3 days; maximum 80 mg per day
- Elderly (body-weight up to 50 kg): Initially 20 mg; maximum 40 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding • active gastro-intestinal ulceration • cerebrovascular disease • inflammatory bowel disease • ischaemic heart disease • mild to severe heart failure • peripheral arterial disease
- **CAUTIONS** Allergic disorders • cardiac impairment (NSAIDs may impair renal function) • coagulation defects • connective-tissue disorders • Crohn's disease (may be exacerbated) • dehydration • elderly (risk of serious side-effects and fatalities) • following coronary artery bypass graft surgery • history of cardiac failure • hypertension • left ventricular dysfunction • oedema • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated)
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Common or very common** Alveolar osteitis • flatulence • hypoaesthesia • hypokalaemia • hypotension • postoperative anaemia • sweating
  - **Uncommon** Anorexia • arthralgia • bradycardia • cardiovascular events • ecchymosis • hyperglycaemia • malaise • pulmonary embolism
  - **Rare** Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • hepatic damage • interstitial fibrosis associated with NSAIDs can lead to renal failure • pancreatitis • papillary necrosis associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis • visual disturbances
  - **Frequency not known** Angioedema • blood disorders • blood pressure may be raised • bronchospasm • circulatory collapse • colitis (induction of or exacerbation of) • Crohn's disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • fluid retention (rarely precipitating congestive heart failure) • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal disturbances • gastro-intestinal ulceration • haematuria • headache • hearing disturbances • hypersensitivity reactions • insomnia • nausea • nervousness • photosensitivity • rashes • renal failure (especially in patients with pre-existing renal impairment) • tachycardia • tinnitus • vertigo
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Serious side-effects For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1028.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contra-indicated in patients with a history of allergic drug reactions including sulfonamide hypersensitivity.

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Avoid—present in milk.
- **HEPATIC IMPAIRMENT** Halve dose in moderate impairment (max. 40 mg daily). Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** The lowest effective dose should be used for the shortest possible duration. Avoid if possible or use with caution. In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) Decisions**  
The *Scottish Medicines Consortium* has advised (January 2003) that parecoxib is **not** recommended for use within NHS Scotland.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

- **Dynastat** (Pfizer Ltd)

Parecoxib (as Parecoxib sodium) 40 mg Dynastat 40mg powder and solvent for solution for injection vials | 5 vial **PoM** £28.34

#### Powder for solution for injection

- **Dynastat** (Pfizer Ltd)

Parecoxib (as Parecoxib sodium) 40 mg Dynastat 40mg powder for solution for injection vials | 10 vial **PoM** £49.60

## ANALGESICS > OPIOIDS

425

## Alfentanil

### ● INDICATIONS AND DOSE

#### Spontaneous respiration: analgesia and enhancement of anaesthesia for short procedures

- BY INTRAVENOUS INJECTION
- Adult: Initially up to 500 micrograms, dose to be administered over 30 seconds; supplemental doses 250 micrograms

#### Assisted ventilation: analgesia and enhancement of anaesthesia for short procedures

- BY INTRAVENOUS INJECTION
- Adult: Initially 30–50 micrograms/kg, supplemental doses 15 micrograms/kg

#### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia for longer procedures

- BY INTRAVENOUS INFUSION
- Adult: Initially 50–100 micrograms/kg, dose to be administered over 10 minutes or as a bolus, followed by maintenance 30–60 micrograms/kg/hour

#### Assisted ventilation: analgesia and suppression of respiratory activity during intensive care for up to 4 days

- BY INTRAVENOUS INFUSION
- Adult: Initially 2 mg/hour, adjusted according to response; usual dose 0.5–10 mg/hour, alternatively initially 5 mg in divided doses, to be administered over 10 minutes; dose used for more rapid initial control, reduce rate of administration if hypotension or bradycardia occur; additional doses of 0.5–1 mg may be

given by intravenous injection during short painful procedures

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### ● CAUTIONS

##### CAUTIONS, FURTHER INFORMATION

- Repeated intra-operative doses Repeated intra-operative doses of alfentanil should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive.

- **INTERACTIONS** → Appendix 1: opioids

#### ● SIDE-EFFECTS

- Common or very common Hypertension • myoclonic movements
- Uncommon Arrhythmias • hiccup • laryngospasm
- Rare Epistaxis
- Frequency not known Cardiac arrest • convulsions • cough • muscle rigidity • pyrexia

##### SIDE-EFFECTS, FURTHER INFORMATION

- Muscle rigidity Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.
- **BREAST FEEDING** Present in milk—withhold breast-feeding for 24 hours.
- **RENAL IMPAIRMENT** Avoid use or reduce dose; opioid effects increased and prolonged and increased cerebral sensitivity occurs.
- **DIRECTIONS FOR ADMINISTRATION** 5 mg/mL injection to be diluted before use. For *continuous or intermittent intravenous infusion* dilute in Glucose 5% or Sodium Chloride 0.9%.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Solution for injection

###### ▶ Alfentanil (Non-proprietary)

**Alfentanil (as Alfentanil hydrochloride) 500 microgram per 1 ml** Alfentanil 1mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £5.95 **[CD2]**

Alfentanil 5mg/10ml solution for injection ampoules | 5 ampoule **[PoM]** £13.90 **[CD2]**

**Alfentanil (as Alfentanil hydrochloride) 5 mg per 1 ml** Alfentanil 5mg/1ml solution for injection ampoules | 10 ampoule **[PoM]** £21.95 **[CD2]**

###### ▶ Rapifen (Janssen-Cilag Ltd)

**Alfentanil (as Alfentanil hydrochloride) 500 microgram per 1 ml** Rapifen 5mg/10ml solution for injection ampoules | 5 ampoule **[PoM]** £14.50 **[CD2]**  
Rapifen 1mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £6.34 **[CD2]**

**Alfentanil (as Alfentanil hydrochloride) 5 mg per 1 ml** Rapifen Intensive Care 5mg/1ml solution for injection ampoules | 10 ampoule **[PoM]** £23.19 (Hospital only) **[CD2]**

## Papaveretum with hyoscine hydrobromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, papaveretum p. 445, hyoscine hydrobromide p. 417.

#### ● INDICATIONS AND DOSE

##### Premedication

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.5–1 mL

- **INTERACTIONS** → Appendix 1: hyoscine, opioids

- **LESS SUITABLE FOR PRESCRIBING** Hyoscine hydrobromide with papaveretum is less suitable for prescribing.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.  
No licensed medicines listed.

425

## Remifentanyl

#### ● INDICATIONS AND DOSE

##### Analgesia and enhancement of anaesthesia at induction (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

##### Analgesia and enhancement of anaesthesia at induction with or without initial bolus dose

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 30–60 micrograms/kg/hour, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

##### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds

##### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia with or without initial bolus dose

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 3–120 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, in light anaesthesia additional doses can be given by *intravenous injection* every 2–5 minutes during the intravenous infusion

##### Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

##### Assisted ventilation: analgesia and sedation in intensive-care patients (for max 3 days)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 6–9 micrograms/kg/hour, then adjusted in steps of 1.5 micrograms/kg/hour, allow at least 5 minutes between dose adjustments; usual dose 0.36–44.4 micrograms/kg/hour, if an infusion rate of 12 micrograms/kg/hour does not produce continued →

adequate sedation add another sedative (consult product literature for details)

#### Assisted ventilation: additional analgesia during stimulating or painful procedures in intensive-care patients

##### ► BY INTRAVENOUS INFUSION

- Adult: Usual dose 15–45 micrograms/kg/hour, maintain infusion rate of at least 6 micrograms/kg/hour for at least 5 minutes before procedure and adjust every 2–5 minutes according to requirements

#### Cardiac surgery

- Adult: (consult product literature)

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Remifentanyl doses in BNF may differ from those in product literature.
- **CONTRA-INDICATIONS** Analgesia in conscious patients
- **INTERACTIONS** → Appendix 1: opioids
- **SIDE-EFFECTS**
  - Common or very common Hypertension
  - Uncommon Hypoxia
  - Rare Asystole
  - Frequency not known AV block · convulsions
- **SIDE-EFFECTS, FURTHER INFORMATION**
  - Muscle rigidity Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.
  - Respiratory depression In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by non-specific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression.
- **PREGNANCY** No information available.
- **BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** No dose adjustment necessary in renal impairment.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (Ultiva®), give continuously in Glucose 5% or Sodium Chloride 0.9% or Water for Injections; reconstitute with infusion fluid to a concentration of 1 mg/mL then dilute further to a concentration of 20–250 micrograms/mL (50 micrograms/mL recommended for general anaesthesia, 20–50 micrograms/mL recommended when used with target controlled infusion (TCI) device).
- **PRESCRIBING AND DISPENSING INFORMATION** Remifentanyl should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

#### ● MEDICAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ► Remifentanyl (Non-proprietary)

Remifentanyl (as Remifentanyl hydrochloride) 1 mg Remifentanyl 1mg powder for concentrate for solution for injection vials | 5 vial [PoM] £25.58–£25.60 (Hospital only) [CD2]

Remifentanyl (as Remifentanyl hydrochloride) 2 mg Remifentanyl 2mg powder for concentrate for solution for injection vials | 5 vial [PoM] £51.13–£51.15 (Hospital only) [CD2]

Remifentanyl (as Remifentanyl hydrochloride) 5 mg Remifentanyl 5mg powder for concentrate for solution for injection vials | 5 vial [PoM] £127.88–£127.90 (Hospital only) [CD2]

##### ► Ultiva (GlaxoSmithKline UK Ltd)

Remifentanyl (as Remifentanyl hydrochloride) 1 mg Ultiva 1mg powder for solution for injection vials | 5 vial [PoM] £25.58 (Hospital only) [CD2]

Remifentanyl (as Remifentanyl hydrochloride) 2 mg Ultiva 2mg powder for solution for injection vials | 5 vial [PoM] £51.15 (Hospital only) [CD2]

Remifentanyl (as Remifentanyl hydrochloride) 5 mg Ultiva 5mg powder for solution for injection vials | 5 vial [PoM] £127.88 (Hospital only) [CD2]

## 1.4 Peri-operative sedation

### Conscious sedation for clinical procedures

#### Overview

Sedation of patients during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure; some procedures are safer and more successful under anaesthesia. The patient should be *monitored carefully*; monitoring should begin as soon as the sedative is given or when the patient becomes drowsy, and should be continued until the patient wakes up.

#### ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

### Ketamine

#### ● INDICATIONS AND DOSE

##### Induction and maintenance of anaesthesia for short procedures

##### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 6.5–13 mg/kg, adjusted according to response, a dose of 10 mg/kg usually produces 12–25 minutes of surgical anaesthesia

##### ► BY INTRAVENOUS INJECTION

- Adult: Initially 1–4.5 mg/kg, adjusted according to response, to be administered over at least 60 seconds, a dose of 2 mg/kg usually produces 5–10 minutes of surgical anaesthesia

##### Diagnostic manoeuvres and procedures not involving intense pain

##### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 4 mg/kg

##### Induction and maintenance of anaesthesia for long procedures

##### ► BY INTRAVENOUS INFUSION

- Adult: Initially 0.5–2 mg/kg, using an infusion solution containing 1 mg/mL; maintenance 10–45 micrograms/kg/minute, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 969 · eclampsia · head trauma · hypertension · pre-eclampsia · raised intracranial pressure · severe cardiac disease · stroke
- **CAUTIONS** Acute circulatory failure (shock) · cardiovascular disease · dehydration · elderly · fixed cardiac output · hallucinations · head injury · hypertension · hypovolaemia · increased cerebrospinal fluid pressure · intracranial mass lesions · nightmares · predisposition to

seizures • psychotic disorders • raised intra-ocular pressure  
• respiratory tract infection • thyroid dysfunction

● **INTERACTIONS** → Appendix 1: ketamine

● **SIDE-EFFECTS**

► **Common or very common** Diplopia • hallucinations • hypertension • nausea • nightmares • nystagmus • rash • tachycardia • transient psychotic effects • vomiting

► **Uncommon** Arrhythmias • bradycardia • hypotension • laryngospasm • respiratory depression

► **Rare** Apnoea • cystitis • cystitis • haemorrhagic cystitis • hypersalivation • insomnia

► **Frequency not known** Raised intra-ocular pressure during delivery.

**SIDE-EFFECTS, FURTHER INFORMATION**

► **Transient psychotic effects** Incidence of hallucinations, nightmares, and other transient psychotic effects can be reduced by a benzodiazepine such as diazepam or midazolam.

● **PREGNANCY** May depress neonatal respiration if used during delivery.

● **BREAST FEEDING** Avoid for at least 12 hours after last dose.

● **HEPATIC IMPAIRMENT** Consider dose reduction.

● **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of 1 mg/mL with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia. For *intravenous injection*, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9% or Water for Injections.

● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks**

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**

► **Ketamine (Non-proprietary)**

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 ml** Ketamine 500mg/10ml solution for injection vials | 10 vial [PoM] £70.00 [CD2]

► **Ketalar (Pfizer Ltd)**

**Ketamine (as Ketamine hydrochloride) 10 mg per 1 ml** Ketalar 200mg/20ml solution for injection vials | 1 vial [PoM] £5.06 (Hospital only) [CD2]

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 ml** Ketalar 500mg/10ml solution for injection vials | 1 vial [PoM] £8.77 (Hospital only) [CD2]

## **HYPNOTICS, SEDATIVES AND ANXIOLYTICS >**

### **NON-BENZODIAZEPINE HYPNOTICS AND SEDATIVES**

## **Dexmedetomidine**

● **INDICATIONS AND DOSE**

**Maintenance of sedation during intensive care**

► **BY INTRAVENOUS INFUSION**

► **Adult:** 0.7 microgram/kg/hour, adjusted according to response; usual dose 0.2–1.4 micrograms/kg/hour

**IMPORTANT SAFETY INFORMATION**

Dexmedetomidine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management.

● **CONTRA-INDICATIONS** Acute cerebrovascular disorders • second- or third-degree AV block (unless pacemaker fitted) • uncontrolled hypotension

● **CAUTIONS** Abrupt withdrawal after prolonged use • bradycardia • ischaemic heart disease • malignant hyperthermia • severe cerebrovascular disease (especially at higher doses) • severe neurological disorders • spinal cord injury

● **INTERACTIONS** → Appendix 1: dexmedetomidine

● **SIDE-EFFECTS**

► **Common or very common** Agitation • blood pressure changes • bradycardia • changes in blood sugar • dry mouth • hyperthermia • myocardial infarction • myocardial ischaemia • nausea • tachycardia • vomiting

► **Uncommon** Abdominal distension • AV block • decreased cardiac output • dyspnoea • hallucination • hyponatraemia • metabolic acidosis • thirst

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies.

● **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—present in milk in *animal* studies.

● **HEPATIC IMPAIRMENT** Dose reduction may be required. Manufacturer advises caution.

● **MONITORING REQUIREMENTS**

► Monitor cardiac function.

► Monitor respiratory function in non-intubated patients.

● **DIRECTIONS FOR ADMINISTRATION** To be diluted before use. For *intravenous infusion* given continuously in Glucose 5% or Sodium chloride 0.9%, dilute to a concentration of 4 micrograms/mL.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

► **Dexdor (Orion Pharma (UK) Ltd)**

**Dexmedetomidine (as Dexmedetomidine hydrochloride)**

**100 microgram per 1 ml** Dexdor 1mg/10ml concentrate for solution for infusion vials | 4 vial [PoM] £313.20 (Hospital only)

Dexdor 400micrograms/4ml concentrate for solution for infusion vials | 4 vial [PoM] £125.28 (Hospital only)

Dexdor 200micrograms/2ml concentrate for solution for infusion ampoules | 5 ampoule [PoM] £78.30 (Hospital only) | 25 ampoule [PoM] £391.50 (Hospital only)

## 2 Malignant hyperthermia

### MUSCLE RELAXANTS > DIRECTLY ACTING

#### Dantrolene sodium

- **DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

#### ● INDICATIONS AND DOSE

##### Malignant hyperthermia

- ▶ BY RAPID INTRAVENOUS INJECTION

- ▶ Adult: Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg/kg per course

##### Chronic severe spasticity of voluntary muscle

- ▶ BY MOUTH

- ▶ Adult: Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals; usual dose 75 mg 3 times a day

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in the use of dantrolene when used for malignant hyperthermia.

#### ● CONTRA-INDICATIONS

- ▶ With oral use Acute muscle spasm • avoid when spasticity is useful, for example, locomotion

#### ● CAUTIONS

- ▶ With intravenous use Avoid extravasation (risk of tissue necrosis)
- ▶ With oral use Females (hepatotoxicity) • history of liver disorders (hepatotoxicity) • if doses greater than 400 mg daily (hepatotoxicity) • impaired cardiac function • impaired pulmonary function • patients over 50 years (hepatotoxicity) • therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

- **INTERACTIONS** → Appendix 1: dantrolene

#### ● SIDE-EFFECTS

- ▶ Common or very common
- ▶ With oral use Abdominal pain • anorexia • asthenia • chills • diarrhoea (withdraw if severe, discontinue treatment if recurs on re-introduction) • dizziness • drowsiness • fatigue • fever • headache • hepatotoxicity • nausea • pericarditis • pleural effusion • rash • respiratory depression • seizures • speech disturbances • visual disturbances • vomiting
- ▶ Uncommon
- ▶ With oral use Confusion • constipation • crystalluria • depression • dysphagia • dyspnoea • erratic blood pressure • exacerbation of cardiac insufficiency • haematuria • increased sweating • increased urinary frequency • insomnia • nervousness • tachycardia • urinary incontinence • urinary retention
- ▶ Frequency not known
- ▶ With intravenous use Dizziness • erythema • hepatotoxicity • injection-site reactions • pulmonary oedema • rash • swelling • thrombophlebitis • weakness

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Hepatotoxicity Potentially life-threatening hepatotoxicity reported—discontinue if abnormal liver function tests or symptoms of liver disorder; re-introduce only if complete reversal of hepatotoxicity.

#### ● PREGNANCY

- ▶ With intravenous use Use only if potential benefit outweighs risk.
- ▶ With oral use Avoid use in chronic spasticity—embryotoxic in animal studies.

#### ● BREAST FEEDING

- ▶ With intravenous use Present in milk—use only if potential benefit outweighs risk.
- ▶ With oral use Present in milk—manufacturer advises avoid use in chronic spasticity.

- **HEPATIC IMPAIRMENT** Avoid—may cause severe liver damage (injection may be used in an emergency for malignant hyperthermia).

#### ● MONITORING REQUIREMENTS

- ▶ With oral use Test liver function before and at intervals during therapy.

#### ● PATIENT AND CARER ADVICE

##### Driving and skilled tasks

- ▶ With oral use Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced. Hepatotoxicity
- ▶ With oral use Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

##### Powder for solution for injection

- ▶ **Dantrium** (Norgine Pharmaceuticals Ltd)

**Dantrolene sodium 20 mg** Dantrium Intravenous 20mg powder for solution for injection vials | 12 vial **[PoM]** £612.00 (Hospital only) | 36 vial **[PoM]** £1,836.00 (Hospital only)

##### Capsule

CAUTIONARY AND ADVISORY LABELS 2

- ▶ **Dantrium** (Norgine Pharmaceuticals Ltd)

**Dantrolene sodium 25 mg** Dantrium 25mg capsules | 100 capsule **[PoM]** £16.87 DT price = £16.87

**Dantrolene sodium 100 mg** Dantrium 100mg capsules | 100 capsule **[PoM]** £43.07 DT price = £43.07

## Local anaesthesia

### Local anaesthesia

#### Local anaesthetic drugs

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 1238 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Chloroprocaine hydrochloride p. 1240, a para-aminobenzoic acid ester, is used for spinal anaesthesia in adults where the planned procedure should not exceed 40 minutes.

Levobupivacaine p. 1241, an isomer of bupivacaine, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 1242 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should **not** usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 216) is about 90 minutes.

Prilocaine hydrochloride p. 1246 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride. A hyperbaric solution of prilocaine hydrochloride (containing glucose) may be used for spinal anaesthesia.

Ropivacaine hydrochloride p. 1247 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 1248, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. It is rapidly absorbed from mucous membranes and should **never** be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

### Administration by injection

The dose of local anaesthetic depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The patient's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity.

NHS Improvement has advised (September 2016) that, prior to administration, all injectable medicines must be drawn directly from their original ampoule or container into a syringe and should **never** be decanted into gallipots or open containers. This is to avoid the risk of medicines being confused with other substances, e.g. skin disinfectants, and to reduce the risk of contamination.

Great care must be taken to avoid accidental intravascular injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is commonly used during surgery, often combined with general anaesthesia, because of its protective effect against the stress response of surgery. It is often used when good postoperative pain relief is essential.

### Use of vasoconstrictors

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is **not** advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline/epinephrine should be used.

## Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine.

The amide-type local anaesthetics **articaine** and **mepivacaine hydrochloride** p. 1245 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine and articaine is available with adrenaline.

In patients with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin can cause coronary vasoconstriction when used at high doses; limit dose in patients with coronary artery disease.

## Toxicity

For management of toxicity see Severe local anaesthetic-induced cardiovascular toxicity below.

## Severe local anaesthetic-induced cardiovascular toxicity

### Overview

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as *Intralipid*<sup>®</sup> [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at [www.toxbase.org](http://www.toxbase.org) or can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic Toxicity and Management of Severe Local Anaesthetic Toxicity – Accompanying notes.

## ANAESTHETICS, LOCAL

## Adrenaline with articaine hydrochloride

(Carticaine hydrochloride with epinephrine)

## ● INDICATIONS AND DOSE

**Infiltration anaesthesia in dentistry**

- BY REGIONAL ADMINISTRATION
- Adult: Consult expert dental sources

**DOSES AT EXTREMES OF BODY-WEIGHT**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **CONTRA-INDICATIONS** Application to damaged skin · application to the middle ear (may cause ototoxicity) · complete heart block · injection into infected tissues · injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block)

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Arrhythmias · arteriosclerosis · cardiovascular disease · cerebrovascular disease · cor pulmonale · debilitated patients (consider dose reduction) · diabetes mellitus · elderly (consider dose reduction) · epilepsy · hypercalcaemia · hyperreflexia · hypertension · hyperthyroidism · hypokalaemia · hypovolaemia · impaired cardiac conduction · impaired respiratory function · ischaemic heart disease · myasthenia gravis · obstructive cardiomyopathy · occlusive vascular disease · organic brain damage · phaeochromocytoma · prostate disorders · psychoneurosis · severe angina · shock · susceptibility to angle-closure glaucoma

**CAUTIONS, FURTHER INFORMATION**

- Use of vasoconstrictors In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.
- **INTERACTIONS** → Appendix 1: articaine, sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Angina · angle-closure glaucoma · anorexia · anxiety · arrhythmias · blurred vision · cardiac arrest · cold extremities · confusion · convulsions · difficulty in micturition · dizziness · drowsiness · dry mouth · dyspnoea · feeling of inebriation · headache · hyperglycaemia · hypersalivation · hypertension (risk of cerebral haemorrhage) · hypokalaemia · insomnia · lightheadedness · metabolic acidosis · methaemoglobinemia · muscle

twitching · mydriasis · myocardial depression (resulting in hypotension and bradycardia) · myocardial infarction · nausea · numbness of the tongue and perioral region · pallor · palpitation · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · psychosis · pulmonary oedema (on excessive dosage or extreme sensitivity) · restlessness · sweating · tachycardia · tinnitus · tissue necrosis at injection site and of extremities, bowel, liver and kidneys · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremor · urinary retention · vomiting · weakness

**SIDE-EFFECTS, FURTHER INFORMATION**

- Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

● **ALLERGY AND CROSS-SENSITIVITY**

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Avoid breast-feeding for 48 hours after administration.
- **HEPATIC IMPAIRMENT** Use with caution; increased risk of side-effects in severe impairment.
- **RENAL IMPAIRMENT** Manufacturers advise use with caution in severe impairment.
- **MONITORING REQUIREMENTS** Consider monitoring blood pressure and ECG (advised with systemic adrenaline/epinephrine).

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

EXCIPIENTS: May contain Sulfites

- **Septanest** (Septodont Ltd)

**Adrenaline (as Adrenaline acid tartrate) 10 microgram per 1 mL, Articaine hydrochloride 40 mg per 1 mL** Septanest 1 in 100,000 solution for injection cartridges | 50 cartridge (PoM) no price available

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Articaine hydrochloride 40 mg per 1 mL** Septanest 1 in 200,000 solution for injection cartridges | 50 cartridge (PoM) no price available

## Bupivacaine hydrochloride

● **INDICATIONS AND DOSE****Surgical anaesthesia, lumbar epidural block**

- BY REGIONAL ADMINISTRATION
- Adult: 75–150 mg, dose administered using a 5 mg/mL (0.5%) solution

**Surgical anaesthesia, field block**

## ► BY REGIONAL ADMINISTRATION

- Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, thoracic epidural block**

## ► BY THORACIC EPIDURAL

- Adult: 12.5–50 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, caudal epidural block**

## ► BY REGIONAL ADMINISTRATION

- Adult: 50–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, major nerve block**

## ► BY REGIONAL ADMINISTRATION

- Adult: 50–175 mg, dose administered using 5 mg/mL (0.5%) solution

**Acute pain, intra-articular block**

## ► BY INTRA-ARTICULAR INJECTION

- Adult: Up to 100 mg, dose administered using a 2.5 mg/mL (0.25%) solution; when co-administered with bupivacaine by another route, total max. 150 mg

**Acute pain, thoracic epidural block**

## ► BY CONTINUOUS EPIDURAL INFUSION

- Adult: 6.3–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

**Acute pain, labour**

## ► BY CONTINUOUS EPIDURAL INFUSION

- Adult: 6.25–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

**Acute pain, lumbar epidural block**

## ► INITIALLY BY LUMBAR EPIDURAL

- Adult: 15–37.5 mg, then (by lumbar epidural) 15–37.5 mg, repeated when required at intervals of at least 30 minutes, dose administered by intermittent injection using a 2.5 mg/mL (0.25%) solution, alternatively (by continuous epidural infusion) 12.5–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

**Acute pain, field block**

## ► BY REGIONAL ADMINISTRATION

- Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

**MARCAIN HEAVY®****Intrathecal anaesthesia for surgery**

## ► BY INTRATHECAL INJECTION

- Adult: 10–20 mg

**DOSES AT EXTREMES OF BODY-WEIGHT**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous

regional anaesthesia (Bier's block) · should not be applied to damaged skin

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS** Cardiovascular disease · cerebral atheroma · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypertension · hypotension · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · myocardial depression may be more severe and more resistant to treatment · shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION**

- **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

• **ALLERGY AND CROSS-SENSITIVITY**

- **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Use with caution in severe impairment.

- **RENAL IMPAIRMENT** Use with caution in severe impairment.

• **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

**Bupivacaine hydrochloride 1.25 mg per 1 ml** Bupivacaine 312.5mg/250ml (0.125%) infusion bags | 20 bag [PoM] no price available

## Bupivacaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1238, adrenaline/epinephrine p. 216.

#### • INDICATIONS AND DOSE

##### Surgical anaesthesia

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION, OR BY CAUDAL EPIDURAL
- ▶ Adult: (consult product literature)

##### Acute pain management

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION
- ▶ Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

#### • CAUTIONS

##### CAUTIONS, FURTHER INFORMATION

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: anaesthetics, local, sympathomimetics, vasoconstrictor

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **Bupivacaine with adrenaline (Non-proprietary)**  
**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 2.5 mg per 1 ml** Bupivacaine 25mg/10ml (0.25%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £40.00  
**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 5 mg per 1 ml** Bupivacaine 50mg/10ml (0.5%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £45.00

## Chloroprocaine hydrochloride

#### • INDICATIONS AND DOSE

##### Intrathecal anaesthesia for surgical procedures lasting up to 40 minutes

- ▶ BY SLOW INTRATHECAL INJECTION

- ▶ Adult: 40–50 mg, dose depends on desired length of block

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

#### IMPORTANT SAFETY INFORMATION

The licensed doses stated above may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered peripherally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · severe anaemia · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 969 · cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **INTERACTIONS** → Appendix 1: chloroprocaine
- **SIDE-EFFECTS**
  - ▶ **Uncommon** Hypertension
  - ▶ **Frequency not known** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local

anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Avoid—no information available.
- **BREAST FEEDING** Avoid—no information available.
- **HEPATIC IMPAIRMENT** Use with caution in severe impairment.
- **RENAL IMPAIRMENT** Use with caution in severe impairment.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

##### ▶ Ampres (AMCo)

Chlorprocaine hydrochloride 10 mg per 1 ml Ampres 50mg/5ml solution for injection ampoules | 10 ampoule (PoM) £87.50

## Levobupivacaine

#### ● INDICATIONS AND DOSE

##### **Acute postoperative pain**

###### ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 12.5–18.75 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

##### **Acute labour pain**

###### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 15–25 mg, repeated at intervals of at least 15 minutes, dose administered using a 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

###### ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 5–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

##### **Surgical anaesthesia, peripheral nerve block**

###### ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia, peribulbar nerve block**

###### ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 37.5–112.5 mg, dose administered using a 7.5 mg/mL (0.75%) solution

##### **Surgical anaesthesia for caesarean section**

###### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 75–150 mg, to be given over 15–20 minutes, dose administered using a 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia**

###### ▶ BY LUMBAR EPIDURAL

- ▶ Adult: 50–150 mg, to be given over 5 minutes, dose administered using a 5 mg/mL (0.5%) or 7.5 mg/mL (0.75%) solution

###### ▶ BY INTRATHECAL INJECTION

- ▶ Adult: 15 mg, dose administered using a 5 mg/mL (0.5%) solution

###### ▶ BY LOCAL INFILTRATION

- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

#### **DOSES AT EXTREMES OF BODY-WEIGHT**

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### **IMPORTANT SAFETY INFORMATION**

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### **CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS** Cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

- **SIDE-EFFECTS** Anaemia · arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · pyrexia · restlessness · sweating · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

#### **SIDE-EFFECTS, FURTHER INFORMATION**

- ▶ Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

#### ● **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—toxicity in *animal* studies. May cause fetal distress syndrome. Do not use for paracervical block in obstetrics. Do not use 7.5 mg/mL strength in obstetrics.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Use with caution.

- **DIRECTIONS FOR ADMINISTRATION** For 1.25 mg/mL concentration dilute standard solutions with sodium chloride 0.9%.

### ● PRESCRIBING AND DISPENSING INFORMATION

Levobupivacaine is an isomer of bupivacaine.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Chirocaine (AbbVie Ltd)

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Chirocaine 25mg/10ml solution for injection ampoules | 10 ampoule [PoM] £14.11 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Chirocaine 50mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Chirocaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £24.23 (Hospital only)

#### Infusion

##### ► Chirocaine (AbbVie Ltd)

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Chirocaine 125mg/100ml infusion bags | 24 bag [PoM] £174.22  
**Chirocaine 250mg/200ml infusion bags** | 12 bag [PoM] no price available

## Lidocaine hydrochloride

(Lignocaine hydrochloride)

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia

##### ► BY LOCAL INFILTRATION

- Adult: Dose to be given according to patient's weight and nature of procedure; max. 200 mg, maximum dose 500 mg if given in solutions containing adrenaline

#### DOSES AT EXTREMES OF BODY-WEIGHT

- When used by local infiltration To avoid excessive dosage in obese patients, weight-based doses for non-emergency indications may need to be calculated on the basis of ideal body-weight.

#### Intravenous regional anaesthesia and nerve block

##### ► BY REGIONAL ADMINISTRATION

- Adult: Seek expert advice

**Pain relief (in anal fissures, haemorrhoids, pruritus ani, pruritus vulvae, herpes zoster, or herpes labialis)**

**Lubricant in cystoscopy | Lubricant in proctoscopy**

##### ► TO THE SKIN USING OINTMENT

- Adult: Apply 1–2 mL as required, avoid long-term use

#### Sore nipples from breast-feeding

##### ► TO THE SKIN USING OINTMENT

- Adult: Apply using gauze and wash off immediately before next feed

#### LMX 4<sup>®</sup>

#### Anaesthesia before venous cannulation or venepuncture

##### ► TO THE SKIN

- Child 1-2 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 60 minutes, remove cream with gauze and perform procedure after approximately 5 minutes
- Child 3-11 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 4 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- Child 1-17 years: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time

5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

- Adult: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

#### VERSATIS<sup>®</sup>

#### Postherpetic neuralgia

##### ► TO THE SKIN

- Adult: Apply once daily for up to 12 hours, followed by a 12-hour plaster-free period; discontinue if no response after 4 weeks, to be applied to intact, dry, non-hairy, non-irritated skin, up to 3 plasters may be used to cover large areas; plasters may be cut

#### XYLOCAINE<sup>®</sup>

#### During delivery in obstetrics

##### ► TO THE SKIN

- Adult: Up to 20 doses

### IMPORTANT SAFETY INFORMATION

- When used by local infiltration

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

### ● CONTRA-INDICATIONS

- When used by regional administration All grades of atrioventricular block · application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · severe myocardial depression · should not be applied to damaged skin · sino-atrial disorders

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- When used by regional administration Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

### ● CAUTIONS

- When used by regional administration Acute porphyria (consider infusion with glucose for its anti-porphyrinogenic effects) · children (consider dose reduction) · congestive cardiac failure (consider lower dose) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · post cardiac surgery (consider lower dose) · shock

- **INTERACTIONS** → Appendix 1: antiarrhythmics

### ● SIDE-EFFECTS

- **Common or very common**

- When used by regional administration Bradycardia (may lead to cardiac arrest) · confusion · convulsions · dizziness (particularly if injection too rapid) · drowsiness (particularly if injection too rapid) · hypotension (may lead to cardiac arrest) · paraesthesia (particularly if injection too rapid) · respiratory depression

### ► Rare

- When used by regional administration Anaphylaxis

### ► Frequency not known

- When used by regional administration Transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · arrhythmias · blurred vision · cardiac arrest · feeling of inebriation · headache · hypoglycaemia (following intrathecal or extradural administration) · methaemoglobinaemia · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · nystagmus · peripheral vasodilatation (resulting in hypotension and bradycardia) · rash · restlessness · tinnitus · tremors · vomiting

### SIDE-EFFECTS, FURTHER INFORMATION

- Topical application A single application of a topical lidocaine preparation does not generally cause systemic side-effects.
- Toxic effects
- When used by regional administration Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.
- Methaemoglobinaemia
- When used by regional administration Methaemoglobinaemia can be treated with an intravenous injection of methylthioninium chloride.

### ● ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.

- BREAST FEEDING** Present in milk but amount too small to be harmful.

- HEPATIC IMPAIRMENT** Caution—increased risk of side-effects.

- RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.

### ● MONITORING REQUIREMENTS

- With systemic use Monitor ECG and have resuscitation facilities available.

### ● PROFESSION SPECIFIC INFORMATION

#### Dental practitioners' formulary

Lidocaine ointment 5% may be prescribed.

Spray may be prescribed as Lidocaine Spray 10%

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### VERSATIS®

#### Scottish Medicines Consortium (SMC) Decisions

The *Scottish Medicines Consortium* has advised (July 2008) that *Versatis*® is accepted for restricted use within NHS Scotland for the treatment of postherpetic neuralgia in patients who are intolerant of first-line systemic therapies or when they have been ineffective.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, ointment

#### Solution for injection

##### ► Lidocaine hydrochloride (Non-proprietary)

**Lidocaine hydrochloride 5 mg per 1 ml** Lidocaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM] £7.00

**Lidocaine hydrochloride 10 mg per 1 ml** Lidocaine 100mg/10ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £10.89

Lidocaine 100mg/10ml (1%) solution for injection ampoules | 10 ampoule [PoM] £4.40 DT price = £4.36

Lidocaine 100mg/10ml (1%) solution for injection Sure-Amp ampoules | 20 ampoule [PoM] £8.80

Lidocaine 200mg/20ml (1%) solution for injection vials | 10 vial [PoM] £19.00

Lidocaine 400mg/20ml (2%) solution for injection ampoules | 10 ampoule [PoM] £8.00–£9.90 DT price = £9.90

#### Medicated plaster

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

##### ► Versatis (Grunenthal Ltd)

**Lidocaine 50 mg per 1 gram** Versatis 5% medicated plasters | 30 plaster [PoM] £72.40 DT price = £72.40

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

##### ► LMX 4 (Ferndale Pharmaceuticals Ltd)

**Lidocaine 40 mg per 1 gram** LMX 4 cream | 5 gram [P] £2.98 DT price = £2.98 | 30 gram [P] £14.90 DT price = £14.90

#### Ointment

##### ► Lidocaine hydrochloride (Non-proprietary)

**Lidocaine hydrochloride 50 mg per 1 gram** Lidocaine 5% ointment | 15 gram [P] £6.50 DT price = £6.18

#### Spray

##### ► Xylolacine (Aspen Pharma Trading Ltd)

**Lidocaine 10 mg per actuation** Xylolacine 10mg/dose spray | 50 ml [P] £6.29

## Lidocaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1242, adrenaline/epinephrine p. 216.

### ● INDICATIONS AND DOSE

#### Local anaesthesia

##### ► BY LOCAL INFILTRATION

- Adult: Dosed according to the type of nerve block required (consult product literature)

### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a

concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **INTERACTIONS** → Appendix 1: antiarrhythmics, sympathomimetics, vasoconstrictor

#### • PROFESSION SPECIFIC INFORMATION

##### Dental information

A variety of lidocaine injections with adrenaline is available in dental cartridges.

Consult expert dental sources for specific advice in relation to dose of lidocaine for dental anaesthesia.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Solution for injection

EXCIPIENTS: May contain Sulfites

- ▶ **Lignospan Special** (Kent Pharmaceuticals Ltd)

Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Lignospan Special 2% injection 2.2mL cartridges | 50 cartridge [PoM] £19.95

- ▶ **Rexocaine** (Henry Schein Ltd)

Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Rexocaine 2% injection 2.2mL cartridges | 50 cartridge [PoM] no price available

- ▶ **Xylocaine with Adrenaline** (Aspen Pharma Trading Ltd)

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Lidocaine hydrochloride 10 mg per 1 mL Xylocaine 1% with Adrenaline 100micrograms/20mL (1 in 200,000) solution for injection vials | 5 vial [PoM] £9.66 DT price = £9.66

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Xylocaine 2% with Adrenaline 100micrograms/20mL (1 in 200,000) solution for injection vials | 5 vial [PoM] £8.85 DT price = £8.85

## Lidocaine with phenylephrine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1242, phenylephrine hydrochloride p. 183.

#### • INDICATIONS AND DOSE

**Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose**

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: Up to 8 sprays

- **INTERACTIONS** → Appendix 1: antiarrhythmics, sympathomimetics, vasoconstrictor

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Spray

- ▶ **Lidocaine with phenylephrine (Non-proprietary)**

Phenylephrine hydrochloride 5 mg per 1 mL, Lidocaine hydrochloride 50 mg per 1 mL Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 mL [PoM] £12.99 DT price = £12.27

## Lidocaine with prilocaine

14-Jun-2017

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1242, prilocaine hydrochloride p. 1246.

#### • INDICATIONS AND DOSE

**Anaesthesia before minor skin procedures including venepuncture**

- ▶ TO THE SKIN

- ▶ Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive

dressings, shorter application time of 15-30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day

- ▶ Child 3-11 months: Apply up to 2 g for maximum 1 hour before procedure, to be applied under occlusive dressings, shorter application time of 15-30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 1-11 years: Apply 1-5 hours before procedure, a thick layer should be applied under occlusive dressings, shorter application time of 15-30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 12-17 years: Apply 1-5 hours before procedure (2-5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressings, shorter application time of 15-30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)
- ▶ Adult: Apply 1-5 hours before procedure (2-5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressings

#### **Anaesthesia on genital skin before injection of local anaesthetics**

- ▶ TO THE SKIN

- ▶ Adult: Apply under occlusive dressing for 15 minutes (males) or 60 minutes (females) before procedure

#### **Anaesthesia before surgical treatment of lesions on genital mucosa**

- ▶ TO THE SKIN

- ▶ Adult: Apply up to 10 g, to be applied 5-10 minutes before procedure

#### **Anaesthesia before cervical curettage**

- ▶ TO THE SKIN

- ▶ Adult: Apply 10 g in lateral vaginal fornices for 10 minutes

#### **Anaesthesia before mechanical cleansing or debridement of leg ulcer**

- ▶ TO THE SKIN

- ▶ Adult: Apply up to 10 g for 30-60 minutes, to be applied under occlusive dressing

- **CONTRA-INDICATIONS** Use in child less than 37 weeks corrected gestational age

- **INTERACTIONS** → Appendix 1: anaesthetics, local, antiarrhythmics

#### • PATIENT AND CARER ADVICE

- ▶ **Lidocaine with prilocaine (Non-proprietary)**

Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Lidocaine 2.5% / Prilocaine 2.5% cream | 5 gram [P] no price available

- ▶ **Denela** (Teva UK Ltd)

Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Denela 5% cream | 5 gram [P] £2.84-£3.29 | 25 gram [P] £12.99 | 30 gram [P] £14.75 DT price = £12.30

- ▶ **Emla** (Aspen Pharma Trading Ltd)

Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Emla 5% cream | 5 gram [P] £2.25-£2.99 | 25 gram [P] £11.70 | 30 gram [P] £12.30 DT price = £12.30

## Lidocaine with tetracaine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1242, tetracaine p. 1248.

### ● INDICATIONS AND DOSE

#### Anaesthesia before dermatological procedures and venepuncture

##### ► TO THE SKIN

- Adult: Apply 1 mm layer using a spatula 30 minutes before procedure, then peel off immediately before procedure; max. application area 400 cm<sup>2</sup>, application time of 60 minutes indicated for certain procedures, such as laser-assisted tattoo removal and laser leg vein ablation

- **INTERACTIONS** → Appendix 1: anaesthetics, local, antiarrhythmics

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Hydroxybenzoates (parabens)

##### ► Plagiis (Galderma (UK) Ltd)

Lidocaine 70 mg, Tetracaine 70 mg Plagiis 70mg/g / 70mg/g cream / 15 gram [PoM] £22.95

## Mepivacaine hydrochloride

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia and nerve block in dentistry

- Child 3-17 years: Consult expert dental sources
- Adult: Consult expert dental sources

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching

- myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

### SIDE-EFFECTS, FURTHER INFORMATION

- Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

### ● ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use with caution in early pregnancy.

- **BREAST FEEDING** Use with caution.

- **HEPATIC IMPAIRMENT** Use with caution; increased risk of side-effects in severe impairment.

- **RENAL IMPAIRMENT** Use with caution; increased risk of side-effects.

### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Scandonest plain (Deproco UK Ltd)

Mepivacaine hydrochloride 30 mg per 1 ml Scandonest plain 3% solution for injection 2.2ml cartridges / 50 cartridge [PoM] no price available

## Mepivacaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, mepivacaine hydrochloride above, adrenaline/epinephrine p. 216.

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia and nerve block in dentistry

##### ► BY LOCAL INFILTRATION

- Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 500 micrograms and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **INTERACTIONS** → Appendix 1: anaesthetics, local, sympathomimetics, vasoconstrictor

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

EXCIPIENTS: May contain Sulfites

► **Scandonest special** (Deproco UK Ltd)

**Adrenaline 10 microgram per 1 ml, Mepivacaine hydrochloride 20 mg per 1 ml** Scandonest special 2% solution for injection 2.2ml cartridges | 50 cartridge [PoM] no price available

## Prilocaine hydrochloride

### INDICATIONS AND DOSE

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### CITANEST 1%®

##### Infiltration anaesthesia | Nerve block

► BY REGIONAL ADMINISTRATION

► Adult: 100–200 mg/minute, alternatively may be given in incremental doses; dose adjusted according to site of administration and response, and in elderly and debilitated patients (smaller doses may be required); maximum 400 mg per course

#### PRILOTEKAL®

##### Spinal anaesthesia

► BY INTRATHECAL INJECTION

► Adult: Usual dose 40–60 mg (max. per dose 80 mg), dose may need to be reduced in elderly or debilitated patients, or in late pregnancy

### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acquired methaemoglobinaemia · anaemia · application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · congenital methaemoglobinaemia · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 969 · cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · severe or untreated hypertension · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · hypertension · lightheadedness · methaemoglobinaemia (with high doses) · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including

sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

#### SIDE-EFFECTS, FURTHER INFORMATION

- **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- **Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of methylthioninium chloride.

#### ALLERGY AND CROSS-SENSITIVITY

- **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or pudendal block in obstetrics (neonatal methaemoglobinaemia reported).

- **BREAST FEEDING** Present in milk but not known to be harmful.

- **HEPATIC IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.

- **RENAL IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.

#### NATIONAL FUNDING/ACCESS DECISIONS

##### PRILOTEKAL®

##### Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (December 2010) that prilocaine 2% hyperbaric solution for injection (*Prilotekal*®) is accepted for restricted use within NHS Scotland for use in spinal anaesthesia in ambulatory surgery settings.

## MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

### Solution for injection

► **Citanest** (Aspen Pharma Trading Ltd)

**Prilocaine hydrochloride 10 mg per 1 ml** Citanest 1% solution for injection 50ml vials | 1 vial [PoM] £5.06

► **Prilotekal** (AMCo)

**Prilocaine hydrochloride 20 mg per 1 ml** Prilotekal 100mg/5ml hyperbaric solution for injection ampoules | 10 ampoule [PoM] £78.75

## Prilocaine with felypressin

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 1246.

### ● INDICATIONS AND DOSE

#### Dental anaesthesia

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: Consult expert dental sources for specific advice

### ● INTERACTIONS → Appendix 1: anaesthetics, local

### ● MEDICINAL FORMS

#### Solution for injection

- ▶ **Citanest with Octapressin** (Dentsply Ltd)  
Prilocaine hydrochloride 30 mg per 1 mL, Felypressin.03 unit per 1 mL Citanest 3% with Octapressin Dental 0.054units/1.8ml solution for injection self aspirating cartridges | 100 cartridge (PoM) no price available  
Citanest 3% with Octapressin Dental 0.066units/2.2ml solution for injection self aspirating cartridges | 100 cartridge (PoM) no price available

## Ropivacaine hydrochloride

### ● INDICATIONS AND DOSE

#### Acute pain, peripheral nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 10–20 mg/hour, dose administered as a continuous infusion or by intermittent injection using a 2 mg/mL (0.2%) solution

#### Acute pain, field block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 2–200 mg, dose administered using a 2 mg/mL (0.2%) solution

#### Acute pain, lumbar epidural block

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 20–40 mg, followed by 20–30 mg at least every 30 minutes, dose administered using a 2 mg/mL (0.2%) solution

#### Acute labour pain

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–20 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

#### Acute postoperative pain

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: Up to 28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

#### Postoperative pain, thoracic epidural block

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

#### Surgical anaesthesia, field block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 7.5–225 mg, dose administered using a 7.5 mg/mL (0.75%) solution

#### Surgical anaesthesia, major nerve block (brachial plexus block)

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 225–300 mg, dose administered using a 7.5 mg/mL (0.75%) solution

#### Surgical anaesthesia, thoracic epidural block (to establish block for postoperative pain)

- ▶ BY THORACIC EPIDURAL
- ▶ Adult: 38–113 mg, dose administered using a 7.5 mg/mL (0.75%) solution

### Surgical anaesthesia for caesarean section

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–150 mg, to be administered in incremental doses using a 7.5 mg/mL (0.75%) solution

### Surgical anaesthesia, lumbar epidural block

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–200 mg, dose administered using a 7.5 mg/mL (0.75%) or 10 mg/mL (1%) solution

### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal bodyweight.

### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

### CONTRA-INDICATIONS, FURTHER INFORMATION

### Emergency treatment of poisoning

Overview

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either **TOXBASE** or the **UK National Poisons Information Service** be consulted when there is doubt about the degree of risk or about management.

Hospital admission

Patients who have features of poisoning should generally be admitted to hospital. Patients who have taken poisons with delayed action should also be admitted, even if they appear well. Delayed-action poisons include aspirin p. 117, iron, paracetamol p. 422, tricyclic antidepressants, and co-phenotrope p. 64 (diphenoxylate with atropine, *Lomotil*®); the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

Further information

**TOXBASE**, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at [www.toxbase.org](http://www.toxbase.org) (a backup site is available at [www.toxbasebackup.org](http://www.toxbasebackup.org) if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the **UK National Poisons Information Service** on the following number: Tel: 0344 892 0111.

Advice on laboratory analytical services can be obtained from **TOXBASE** or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

General care

It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol, and iron) have specific antidotes; few patients require active removal of the poison. In most patients, treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual and from carers or parents. However, such information

should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The **National Poisons Information Service** should be consulted when there is doubt about any aspect of suspected poisoning.

Respiration

Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

Blood pressure

Hypotension is common in severe poisoning with central nervous system depressants. A systolic blood pressure of less than 70 mmHg may lead to irreversible brain damage or renal tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 953 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service.

Fluid depletion without hypotension is common after prolonged coma and after aspirin poisoning due to vomiting, sweating, and hyperpnoea.

Hypertension, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amfetamines, phencyclidine, and cocaine.

Heart

Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias often respond to correction of underlying hypoxia, acidosis,

or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

### Body temperature

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate re-warming as clinically indicated.

Hyperthermia can develop in patients taking CNS stimulants; children and the elderly are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with tepid water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require **urgent** hospitalisation for assessment and supportive treatment.

### Convulsions

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 322 or diazepam p. 327 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzodiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 323 [unlicensed use in adults and children under 3 months] can be given by the buccal route or diazepam can be administered as a rectal solution.

### Methaemoglobinaemia

Drug- or chemical-induced methaemoglobinaemia should be treated with methylthioninium chloride p. 1261 if the methaemoglobin concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthioninium chloride reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthioninium chloride can itself cause methaemoglobinaemia.

### Removal and elimination

#### Prevention of absorption

Given by mouth, charcoal, activated p. 1256 can bind many poisons in the gastro-intestinal system, thereby reducing their absorption. The **sooner** it is given the **more effective** it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

#### Active elimination techniques

Repeated doses of charcoal, activated p. 1256 by mouth *enhance the elimination* of some drugs after they have been absorbed; repeated doses are given after overdosage with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of

charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Charcoal, activated should **not** be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalisation of the urine for salicylates.

#### Removal from the gastro-intestinal tract

Gastric lavage is rarely required; for substances that cannot be removed effectively by other means (e.g. iron), it should be considered only if a life-threatening amount has been ingested within the previous hour. It should be carried out only if the airway can be protected adequately. Gastric lavage is contra-indicated if a corrosive substance or a petroleum distillate has been ingested, but it may occasionally be considered in patients who have ingested drugs that are not adsorbed by charcoal, such as iron or lithium. Induction of *emesis* (e.g. with ipecacuanha) is **not** recommended because there is no evidence that it affects absorption and it may increase the risk of aspiration.

*Whole bowel irrigation* (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with iron and lithium salts, and if illicit drugs are carried in the gastro-intestinal tract ('body-packing'). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

### Alcohol

Acute intoxication with alcohol (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur in children and some adults. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

### Aspirin

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young and the elderly, and clinical and biochemical assessment is necessary. Generally, the clinical severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5).

Patients whose plasma-paracetamol concentrations are on or above the **treatment line** should be treated with acetylcysteine by intravenous infusion.

The prognostic accuracy after 15 hours is uncertain, but a plasma-paracetamol concentration on or above the treatment line should be regarded as carrying a serious risk of liver damage.

Graph reproduced courtesy of Medicines and Healthcare products Regulatory Agency

Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalinisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis.

### Opioids

Opioids (narcotic analgesics) cause coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 1259 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone.

Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene. The long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required. Norpropoxyphene, a metabolite of dextropropoxyphene, also has cardiotoxic effects which may require treatment

with sodium bicarbonate p. 950 or magnesium sulfate p. 963, or both. Arrhythmias may occur for up to 12 hours.

### Paracetamol

In cases of **intravenous paracetamol poisoning** contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol p. 422 may cause severe hepatocellular necrosis and, much less frequently, renal tubular necrosis. Nausea and vomiting, the only early features of poisoning, usually settle within 24 hours. Persistence beyond this time, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol overdose and may lead to encephalopathy, haemorrhage, hypoglycaemia, cerebral oedema, and death. Therefore, despite a lack of significant early symptoms, patients who have taken an overdose of paracetamol should be transferred to hospital urgently.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese patients who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 1260 protects the liver if infused up to, and possibly beyond, 24 hours of ingesting paracetamol. It is most effective if given within 8 hours of ingestion, after which effectiveness declines. Very rarely, giving acetylcysteine by mouth [unlicensed route] is an alternative if intravenous access is not possible—contact the National

Poisons Information Service for advice.

Neonates less than 45 weeks corrected gestational age may be more susceptible to paracetamol-induced liver toxicity, therefore, treatment with acetylcysteine p. 1260 should be considered in all paracetamol p. 422 overdoses, and advice should be sought from the National Poisons Information Service.

#### Acute overdose

Hepatotoxicity may occur after a single ingestion of more than 150 mg/kg paracetamol taken in less than 1 hour. Rarely, hepatotoxicity may develop with single ingestions as low as 75 mg/kg of paracetamol taken in less than 1 hour. Patients who have ingested 75 mg/kg or more of paracetamol in less than 1 hour should be referred to hospital. Administration of charcoal, activated p. 1256 should be considered if paracetamol in excess of 150 mg/kg is thought to have been ingested within the previous hour.

Patients at risk of liver damage and, therefore, requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration, related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples may be misleading. The concentration is plotted on a paracetamol treatment graph, with a reference line ('treatment line') joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours. Acetylcysteine treatment should commence immediately in patients:

- whose plasma-paracetamol concentration falls on or above the *treatment line* on the paracetamol treatment graph;
- who present 8–24 hours after taking an acute overdose of more than 150 mg/kg of paracetamol, even if the plasma-paracetamol concentration is not yet available; acetylcysteine can be discontinued if the plasma-paracetamol concentration is later reported to be below the *treatment line* on the paracetamol treatment graph, provided that the patient is asymptomatic and liver function tests, serum creatinine and INR are normal.

The prognostic accuracy of a plasma-paracetamol concentration taken after 15 hours is uncertain, but a concentration on or above the *treatment line* on the paracetamol treatment graph should be regarded as carrying a serious risk of liver damage. If more than 15 hours have elapsed since ingestion, or there is doubt about appropriate management, advice should be sought from the National Poisons Information Service.

#### 'Staggered' overdose, uncertain time of overdose, or therapeutic excess

A 'staggered' overdose involves ingestion of a potentially toxic dose of paracetamol over more than one hour, with the possible intention of causing self-harm. Therapeutic excess is the inadvertent ingestion of a potentially toxic dose of paracetamol during its clinical use. The paracetamol treatment graph is unreliable if a 'staggered' overdose is taken, if there is uncertainty about the time of the overdose, or if there is therapeutic excess. In these cases, patients who have taken more than 150 mg/kg of paracetamol in any 24-hour period are at risk of toxicity and should be commenced on acetylcysteine immediately, unless it is more than 24 hours since the last ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal.

Rarely, toxicity can occur with paracetamol doses between 75–150 mg/kg in any 24-hour period; clinical judgement of the individual case is necessary to determine whether to treat those who have ingested this amount of paracetamol. For small adults, this may be within the licensed dose, but ingestion of a licensed dose of paracetamol is not considered an overdose.

Although there is some evidence suggesting that factors such as the use of liver enzyme-inducing drugs (e.g.

carbamazepine p. 297, efavirenz p. 608, nevirapine p. 609, phenobarbital p. 318, phenytoin p. 308, primidone p. 319, rifabutin p. 543, rifampicin p. 549, St John's wort), chronic alcoholism, and starvation may increase the risk of hepatotoxicity, the CHM has advised that these should no longer be used in the assessment of paracetamol toxicity.

Significant toxicity is unlikely if, 24 hours or longer after the last paracetamol ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal. Patients with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. If there is uncertainty about a patient's risk of toxicity after paracetamol overdose, treatment with acetylcysteine should be commenced. Advice should be sought from the National Poisons Information Service whenever necessary.

#### Acetylcysteine dose and administration

For paracetamol overdosage, acetylcysteine is given in a total dose that is divided into 3 consecutive intravenous infusions over a total of 21 hours. The tables below include the dose of acetylcysteine, for adults and children of body-weight 40 kg and over, in terms of the volume of acetylcysteine Concentrate for Intravenous Infusion required for each of the 3 infusions. The requisite dose of acetylcysteine is added to glucose intravenous infusion 5% p. 955.

First infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare first infusion
40–49 kg	34 mL
50–59 kg	42 mL
60–69 kg	49 mL
70–79 kg	57 mL
80–89 kg	64 mL
90–99 kg	72 mL
100–109 kg	79 mL
≥110 kg	83 mL (max. dose)

*First infusion* (based on an acetylcysteine dose of approx. 150 mg/kg)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 200 mL Glucose Intravenous Infusion 5%; infuse over 1 hour.

Second infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare second infusion
40–49 kg	12 mL
50–59 kg	14 mL
60–69 kg	17 mL
70–79 kg	19 mL
80–89 kg	22 mL
90–99 kg	24 mL
100–109 kg	27 mL
≥110 kg	28 mL (max. dose)

*Second infusion* (based on an acetylcysteine dose of approx. 50 mg/kg; start immediately after completion of first infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 500 mL Glucose Intravenous Infusion 5%; infuse over 4 hours.

Third infusion

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare third infusion
40–49 kg	23 mL
50–59 kg	28 mL
60–69 kg	33 mL
70–79 kg	38 mL
80–89 kg	43 mL
90–99 kg	48 mL
100–109 kg	53 mL
≥110 kg	55 mL (max. dose)

*Third infusion* (based on an acetylcysteine dose of approx. 100 mg/kg; start immediately after completion of second infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 1 litre Glucose Intravenous Infusion 5%; infuse over 16 hours.

Antidepressants

Tricyclic and related antidepressants

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis. The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam given by mouth is usually adequate to sedate delirious patients but large doses may be required.

Selective serotonin re-uptake inhibitors (SSRIs)

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSRI poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam, diazepam, or midazolam oromucosal solution [unlicensed use in adults and children under 3 months] (see *Convulsions*). Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

Antimalarials

Overdose with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include

arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

Antipsychotics

Phenothiazines and related drugs

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hypothermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 391 or diazepam p. 327 (emulsion preferred).

Second-generation antipsychotic drugs

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 1256 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

Benzodiazepines

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 1258 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in patients with a reduced level of consciousness.

Beta blockers

Therapeutic overdoses with beta-blockers may cause lightheadedness, dizziness, and possibly syncope as a result of bradycardia and hypotension; heart failure may be precipitated or exacerbated. These complications are most likely in patients with conduction system disorders or impaired myocardial function. Bradycardia is the most common arrhythmia caused by beta-blockers, but sotalol may induce ventricular tachyarrhythmias (sometimes of the torsade de pointes type). The effects of massive overdose can vary from one beta-blocker to another; propranolol overdose in particular may cause coma and convulsions.

*Acute massive overdose* must be managed in hospital and expert advice should be obtained. Maintenance of a clear airway and adequate ventilation is mandatory. An intravenous injection of atropine sulfate p. 1224 is required to treat bradycardia. Cardiogenic shock unresponsive to atropine sulfate is probably best treated with an intravenous injection of glucagon p. 681 [unlicensed] in glucose 5% (with precautions to protect the airway in case of vomiting) followed by an intravenous infusion. If glucagon is not available, intravenous isoprenaline (available from 'special-order' manufacturers or specialist importing companies) is an alternative. A cardiac pacemaker can be used to increase the heart rate.

## Calcium-channel blockers

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated should be considered if the patient presents within 1 hour of overdosage with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In patients with significant features of poisoning, calcium chloride p. 959 or calcium gluconate p. 959 is given by injection; atropine sulfate is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

## Iron salts

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepatocellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour.

Mortality is reduced by intensive and specific therapy with desferrioxamine mesilate p. 941, which chelates iron. The serum-iron concentration is measured as an emergency and intravenous desferrioxamine mesilate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesilate should be given immediately without waiting for the result of the serum-iron measurement.

## Lithium

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the patient's depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Gastric lavage may be considered if it can be performed within

1 hour of ingesting significant quantities of lithium. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

## Stimulants

Amfetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam p. 327 or lorazepam p. 322; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

## Cocaine

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves intravenous administration of diazepam to control agitation and cooling measures for hyperthermia (see Body temperature); hypertension and cardiac effects require specific treatment and expert advice should be sought.

## Ecstasy

Ecstasy (methylenedioxymethamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use.

Treatment of methylenedioxymethamphetamine poisoning is supportive, with diazepam to control severe agitation or persistent convulsions and close monitoring including ECG. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

'Liquid ecstasy' is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

## Theophylline

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of activated charcoal can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 414 may be effective for severe vomiting that is resistant to other antiemetics [unlicensed indication]. Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 968 and may be so severe as to require 60 mmol/hour (high doses require ECG monitoring). Convulsions should be controlled by intravenous administration of lorazepam or diazepam (see Convulsions). Sedation with diazepam may be necessary in agitated patients.

Provided the patient does not suffer from asthma, a short-acting beta-blocker can be administered intravenously to reverse severe tachycardia, hypokalaemia, and hyperglycaemia.

## Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE, see under the National Poisons Information Service.

### Cyanides

**Oxygen** should be administered to patients with cyanide poisoning. The choice of antidote depends on the severity of poisoning, certainty of diagnosis, and the cause. Dicalbalt edetate p. 1257 is the antidote of choice when there is a strong clinical suspicion of severe cyanide poisoning, but it should **not** be used as a precautionary measure. Dicalbalt edetate itself is toxic, associated with anaphylactoid reactions, and is potentially fatal if administered in the absence of cyanide poisoning. A regimen of sodium nitrite p. 1257 followed by sodium thiosulfate p. 1257 is an alternative if dicalbalt edetate is not available.

Hydroxocobalamin p. 938 (*Cyanokit*<sup>®</sup>—no other preparation of hydroxocobalamin is suitable) can be considered for use in victims of smoke inhalation who show signs of significant cyanide poisoning.

### Ethylene glycol and methanol

**Fomepizole** (available from 'special-order' manufacturers or specialist importing companies) is the treatment of choice for ethylene glycol and methanol (methyl alcohol) poisoning. If necessary, **ethanol** (by mouth or by intravenous infusion) can be used, but with caution. Advice on the treatment of ethylene glycol and methanol poisoning should be obtained from the National Poisons Information Service. It is important to start antidote treatment promptly in cases of suspected poisoning with these agents.

### Heavy metals

Heavy metal antidotes include succimer (DMSA) [unlicensed], unithiol (DMPS) [unlicensed], sodium calcium edetate [unlicensed], and dimercaprol. Dimercaprol in the management of heavy metal poisoning has been superseded by other chelating agents. In all cases of heavy metal poisoning, the advice of the National Poisons Information Service should be sought.

## Noxious gases

### Carbon monoxide

Carbon monoxide poisoning is usually due to inhalation of smoke, car exhaust, or fumes caused by blocked flues or incomplete combustion of fuel gases in confined spaces.

Immediate treatment of carbon monoxide poisoning is essential. The person should be moved to fresh air, the airway cleared, and high-flow **oxygen** 100% administered through a tight-fitting mask with an inflated face seal. Artificial respiration should be given as necessary and continued until adequate spontaneous breathing starts, or stopped only after persistent and efficient treatment of cardiac arrest has failed. The patient should be admitted to hospital because complications may arise after a delay of hours or days. Cerebral oedema may occur in severe poisoning and is treated with an intravenous infusion of mannitol p. 222. Referral for hyperbaric oxygen treatment should be discussed with the National Poisons Information Service if the patient is pregnant or in cases of severe poisoning, such as if the patient is or has been unconscious, or has psychiatric or neurological features other than a headache, or has myocardial ischaemia or an arrhythmia, or has a blood carboxyhaemoglobin concentration of more than 20%.

### Sulfur dioxide, chlorine, phosgene, ammonia

All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to 36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary

oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

## CS Spray

CS spray, which is used for riot control, irritates the eyes (hence 'tear gas') and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

## Nerve agents

Treatment of nerve agent poisoning is similar to organophosphorus insecticide poisoning, but advice must be sought from the National Poisons Information Service. The risk of cross-contamination is significant; adequate decontamination and protective clothing for healthcare personnel are essential. In emergencies involving the release of nerve agents, kits ('NAAS pods' containing pralidoxime chloride p. 1257 can be obtained through the Ambulance Service from the National Blood Service (or the Welsh Blood Service in South Wales or designated hospital pharmacies in Northern Ireland and Scotland—see TOXBASE for list of designated centres).

## Pesticides

### Organophosphorus insecticides

Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure.

Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the patient to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulfate p. 1224 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride, a cholinesterase reactivator, is used as an adjunct to atropine sulfate in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is continued until the patient has not required atropine sulfate for 12 hours. Pralidoxime chloride can be obtained from designated centres, the names of which are held by the National Poisons Information Service.

## Snake bites and animal stings

### Snake bites

Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegally, but the only indigenous venomous snake is the adder (*Vipera berus*). The bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with **adrenaline/epinephrine p. 216**. Indications for european viper snake venom antiserum p. 1261 treatment include **systemic envenoming**, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within 4 hours of the bite. For those patients who present with clinical features of **severe envenoming** (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the european viper snake venom antiserum is recommended; if symptoms of **systemic envenoming** persist contact the National Poisons Information Service.

Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the european viper snake venom antiserum.

European viper snake venom antiserum is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and for supply in an emergency, telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

### Insect stings

Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible.

Anaphylactic reactions require immediate treatment with intramuscular **adrenaline/epinephrine**; self-administered intramuscular adrenaline/epinephrine (e.g. *EpiPen*®) is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator should be used for asthmatic reactions, see also the management of anaphylaxis. A short course of an **oral antihistamine** or a **topical corticosteroid** may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

### Marine stings

The severe pain of weeverfish (*Trachinus vipera*) and Portuguese man-o'-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45°C). People stung by jellyfish and Portuguese man-o'-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing gloves or using tweezers) or washed off with seawater.

Alcoholic solutions, including suntan lotions, should **not** be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

### Other poisons

Consult either the National Poisons Information Service or TOXBASE.

## 1 Active elimination from the gastro-intestinal tract

### ANTIDOTES AND CHELATORS > INTESTINAL ADSORBENTS

#### Charcoal, activated

##### • INDICATIONS AND DOSE

##### Reduction of absorption of poisons in the gastro-intestinal system

###### ► BY MOUTH

- Child 1 month-11 years: 1 g/kg (max. per dose 50 g)
- Child 12-17 years: 50 g
- Adult: 50 g

##### Active elimination of poisons

###### ► BY MOUTH

- Child 1 month-11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy
- Child 12-17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy
- Adult: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy

##### Accelerated elimination of teriflunomide

###### ► BY MOUTH USING GRANULES

- Adult: 50 g every 12 hours for 11 days

##### Accelerated elimination of leflunomide (washout procedure)

###### ► BY MOUTH USING GRANULES

- Adult: 50 g 4 times a day for 11 days

- **UNLICENSED USE** Activated charcoal doses in BNF may differ from those in product literature.

- **CAUTIONS** Comatose patient (risk of aspiration—ensure airway is protected) · drowsy patient (risk of aspiration—ensure airway protected) · reduced gastrointestinal motility (risk of obstruction)

- **SIDE-EFFECTS** Black stools

- **DIRECTIONS FOR ADMINISTRATION** Suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.

##### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Oral suspension

- **Actidose-Aqua Advance** (Alliance Pharmaceuticals Ltd)

Activated charcoal 208 mg per 1 ml Actidose-Aqua Advance 1.04g/5ml oral suspension | 240 ml P £12.89

- **Charcodote** (Teva UK Ltd)

Activated charcoal 200 mg per 1 ml Charcodote 200mg/ml oral suspension sugar-free | 250 ml P £11.88

##### Granules

- **Carbomix** (Beacon Pharmaceuticals Ltd)

Activated charcoal 813 mg per 1 gram Carbomix 81.3% granules sugar-free | 50 gram P £11.90

## 2 Chemical toxicity

### 2.1 Cyanide toxicity

#### ANTIDOTES AND CHELATORS

##### Dicobalt edetate

###### ● INDICATIONS AND DOSE

###### Severe poisoning with cyanides

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: Consult the National Poisons Information Service
- ▶ Adult: 300 mg, to be given over 1 minute (or 5 minutes if condition less serious), dose to be followed immediately by 50 mL of glucose intravenous infusion 50%; if response inadequate a second dose of both may be given, but risk of cobalt toxicity

- **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness
- **SIDE-EFFECTS** Anaphylactoid reactions · cardiac abnormalities · facial oedema · hypotension · laryngeal oedema · tachycardia · vomiting
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

###### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

###### Solution for injection

###### ▶ Dicobalt edetate (Non-proprietary)

Dicobalt edetate 15 mg per 1 mL Dicobalt edetate 300mg/20mL solution for injection ampoules | 6 ampoule (PoM) £117.20

##### Sodium nitrite

###### ● INDICATIONS AND DOSE

###### Poisoning with cyanides (used in conjunction with sodium thiosulfate)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 4–10 mg/kg (max. per dose 300 mg), to be given over 5–20 minutes followed by sodium thiosulphate injection
- ▶ Adult: 300 mg, to be given over 5–20 minutes (as sodium nitrite injection 30 mg/mL)

###### DOSE EQUIVALENCE AND CONVERSION

- ▶ 4–10 mg/kg equates to 0.13–0.33 mL/kg of a 3% solution.
- ▶ Dose max. of 300 mg equates to 10 mL of a 3% solution.

- **SIDE-EFFECTS** Flushing (due to vasodilatation) · headache (due to vasodilatation)
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Sodium thiosulfate

###### ● INDICATIONS AND DOSE

###### Poisoning with cyanides (used in conjunction with sodium nitrite)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 400 mg/kg (max. per dose 12.5 g), to be given over 10 minutes, dose may be repeated in severe cyanide poisoning if dicobalt edetate not available
- ▶ Adult: 12.5 g, to be given over 10 minutes (as sodium thiosulfate injection 500 mg/mL), dose may be repeated in severe cyanide poisoning if dicobalt edetate not available

###### DOSE EQUIVALENCE AND CONVERSION

- ▶ 400 mg/kg equates to 0.8 mL/kg of a 50% solution.
- ▶ 12.5 g equates to 25 mL of a 50% solution.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

###### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, solution for infusion

### 2.2 Organophosphorus toxicity

#### Other drugs used for Organophosphorus toxicity

Atropine sulfate, p. 1224

#### ANTIDOTES AND CHELATORS

##### Pralidoxime chloride

###### ● INDICATIONS AND DOSE

###### Adjunct to atropine in the treatment of poisoning by organophosphorus insecticide or nerve agent

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day
- ▶ Adult: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

- **UNLICENSED USE** Pralidoxime chloride doses may differ from those in product literature. Licensed for use in children (age range not specified by manufacturer).
- **CONTRA-INDICATIONS** Poisoning with carbamates · poisoning with organophosphorus compounds without anticholinesterase activity
- **CAUTIONS** Myasthenia gravis
- **SIDE-EFFECTS** Disturbances of vision · dizziness · drowsiness · headache · hyperventilation · muscular weakness · nausea · tachycardia
- **RENAL IMPAIRMENT** Use with caution.
- **DIRECTIONS FOR ADMINISTRATION** The loading dose may be administered by intravenous injection (diluted to a concentration of 50 mg/mL with water for injections) over at least 5 minutes if pulmonary oedema is present or if it is not practical to administer an intravenous infusion.
  - ▶ In children For intravenous infusion, reconstitute each vial with 20 mL Water for Injections, then dilute to a concentration of 10–20 mg/mL with Sodium Chloride 0.9%.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres for organophosphorus insecticide poisoning or from the National Blood Service (or Welsh

Ambulance Services for Mid West and South East Wales)—see TOXBASE for list of designated centres).

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Powder for solution for injection**

##### ▶ **Pralidoxime chloride (Non-proprietary)**

▶ **Pralidoxime chloride 1 g** Protapam Chloride 1g powder for solution for injection vials | 6 vial **[PoM]** no price available

## 3 Drug toxicity

### 3.1 Benzodiazepine toxicity

#### ANTIDOTES AND CHELATORS >

#### BENZODIAZEPINE ANTAGONISTS

##### Flumazenil

#### • INDICATIONS AND DOSE

**Reversal of sedative effects of benzodiazepines in anaesthesia and clinical procedures**

##### ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** 200 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; usual dose 300–600 micrograms; maximum 1 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care**

##### ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** 300 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; maximum 2 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care (if drowsiness recurs after injection)**

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

▶ **Adult:** 100–400 micrograms/hour, adjusted according to response, alternatively (by intravenous injection) 300 micrograms, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Flumazenil should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines

- **CAUTIONS** Avoid rapid injection following major surgery • avoid rapid injection in high-risk or anxious patients • benzodiazepine dependence (may precipitate withdrawal symptoms) • elderly • ensure neuromuscular blockade cleared before giving • head injury (rapid reversal of benzodiazepine sedation may cause convulsions) • history of panic disorders (risk of recurrence) • prolonged benzodiazepine therapy for epilepsy (risk of convulsions) • short-acting (repeat doses may be necessary—benzodiazepine effects may persist for at least 24 hours)

#### • SIDE-EFFECTS

- ▶ **Common or very common** Nausea • vomiting
- ▶ **Uncommon** Anxiety • fear • palpitation
- ▶ **Frequency not known** Agitation • chills • convulsions (particularly in those with epilepsy) • dizziness • flushing • sensory disturbance • sweating • tachycardia • transient hypertension
- **PREGNANCY** Not known to be harmful.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours.

- **HEPATIC IMPAIRMENT** Carefully titrate dose.

- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute with Glucose 5% or Sodium Chloride 0.9%.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Solution for injection**

##### ▶ **Flumazenil (Non-proprietary)**

**Flumazenil 100 microgram per 1 ml** Flumazenil 500micrograms/5ml solution for injection ampoules | 5 ampoule **[PoM]** £65.50-£72.46

## 3.2 Digoxin toxicity

#### ANTIDOTES AND CHELATORS > ANTIBODIES

##### Digoxin-specific antibody

#### • INDICATIONS AND DOSE

**Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradyarrhythmias unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary**

##### ▶ BY INTRAVENOUS INFUSION

▶ **Child:** Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

▶ **Adult:** Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

#### • DIRECTIONS FOR ADMINISTRATION

- ▶ In adults For *intravenous infusion (DigiFab®)*, given intermittently in Sodium chloride 0.9%. Reconstitute with water for injections (4 mL/vial), then dilute with infusion fluid and give over 30 minutes.

#### • MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### **Powder for solution for infusion**

##### ▶ **DigiFab (BTG International Ltd)**

**Digoxin-specific antibody fragments 40 mg** DigiFab 40mg powder for solution for infusion vials | 1 vial **[PoM]** £750.00 (Hospital only)

## 3.3 Heparin toxicity

#### ANTIDOTES AND CHELATORS

##### Protamine sulfate

#### • INDICATIONS AND DOSE

**Overdosage with intravenous injection of unfractionated heparin**

##### ▶ BY INTRAVENOUS INJECTION

▶ **Adult:** Dose to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 80–100 units heparin when given within 15 minutes; if longer than 15 minute since heparin, less protamine required (consult product literature for details) as heparin rapidly excreted; maximum 50 mg

**Overdosage with intravenous infusion of unfractionated heparin**

## ► BY INTRAVENOUS INJECTION

- Adult: 25–50 mg, to be administered once heparin infusion stopped at a rate not exceeding 5 mg/minute

**Overdosage with subcutaneous injection of unfractionated heparin**

## ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 25–50 mg, to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 100 units heparin, then (by intravenous infusion), any remaining dose to be administered over 8–16 hours; maximum 50 mg per course

**Overdosage with subcutaneous injection of low molecular weight heparin**

## ► BY INTRAVENOUS INJECTION, OR BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: Dose to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute, 1 mg neutralises approx. 100 units low molecular weight heparin (consult product literature of low molecular weight heparin for details); maximum 50 mg

- **CAUTIONS** Excessive doses can have an anticoagulant effect
- **SIDE-EFFECTS** Anaphylaxis · angioedema · back pain · bradycardia · dyspnoea · flushing · hypersensitivity reactions · hypertension · hypotension · lassitude · nausea · pulmonary oedema · rebound bleeding · vomiting
- **ALLERGY AND CROSS-SENSITIVITY** Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile or who have had a vasectomy and who may have antibodies to protamine).
- **MONITORING REQUIREMENTS** Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.
- **PRESCRIBING AND DISPENSING INFORMATION** The long half-life of low molecular weight heparins should be taken into consideration when determining the dose of protamine sulfate; the effects of low molecular weight heparins can persist for up to 24 hours after administration.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

## ► Protamine sulfate (Non-proprietary)

Protamine sulfate 10 mg per 1 ml Protamine sulfate 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] no price available  
Protamine sulfate 50mg/5ml solution for injection ampoules | 10 ampoule [PoM] £49.55

## 3.4 Opioid toxicity

### OPIOID RECEPTOR ANTAGONISTS

#### Naloxone hydrochloride

● **INDICATIONS AND DOSE****Overdosage with opioids**

## ► BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

- Child 1 month–11 years: Initially 100 micrograms/kg, if no response, repeat at intervals of 1 minute to a total max. 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates

- Child 12–17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates
- Adult: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates
- BY CONTINUOUS INTRAVENOUS INFUSION
- Child: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory ventilation for at least 15 minutes
- Adult: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory ventilation for at least 15 minutes

**Overdosage with opioids in a non-medical setting**

## ► BY INTRAMUSCULAR INJECTION

- Adult: 400 micrograms every 2–3 minutes, each dose given in subsequent resuscitation cycles if patient not breathing normally, continue until consciousness regained, breathing normally, medical assistance available, or contents of syringe used up; to be injected into deltoid region or anterolateral thigh

**Reversal of postoperative respiratory depression**

## ► INITIALLY BY INTRAVENOUS INJECTION

- Child 1 month–11 years: 1 microgram/kg, repeated every 2–3 minutes if required
- Child 12–17 years: Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours
- Adult: Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours

**PHARMACOKINETICS**

Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

**Important:** Only give by subcutaneous or intramuscular routes if intravenous route is not feasible; intravenous administration has more rapid onset of action.

- **UNLICENSED USE** Naloxone doses in BNF may differ from those in product literature.

**IMPORTANT SAFETY INFORMATION****SAFE PRACTICE**

Doses used in acute opioid overdosage may not be appropriate for the management of opioid-induced respiratory depression and sedation in those receiving palliative care and in chronic opioid use.

- **CAUTIONS** Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects

reported) · maternal physical dependence on opioids (may precipitate withdrawal in newborn) · pain · physical dependence on opioids (precipitates withdrawal)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Titration of dose In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia.
- **INTERACTIONS** → Appendix 1: naloxone
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Cardiac arrest (in children) · dizziness · dyspnoea (in children) · headache · hypertension · hyperventilation (in children) · hypotension · nausea · pulmonary oedema (in children) · tachycardia · ventricular fibrillation (in children) · vomiting
  - ▶ **Uncommon** Agitation (in children) · arrhythmia (in adults) · bradycardia (in adults) · diarrhoea · dry mouth · excitement (in children) · hyperventilation (in adults) · paraesthesia (in children) · sweating · tremor
  - ▶ **Rare** Seizures (in adults)
  - ▶ **Very rare** Erythema multiforme (in adults) · cardiac arrest (in adults) · erythema multiforme · hypersensitivity reactions (in adults) · pulmonary oedema (in adults) · seizures (in children) · ventricular fibrillation (in adults)
  - ▶ **Frequency not known** Agitation (in adults)
- **PREGNANCY** Use only if potential benefit outweighs risk.
- **BREAST FEEDING** Not orally bioavailable.
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With intravenous use in children For *continuous intravenous infusion*, dilute to a concentration of up to 200 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%.
  - ▶ With intravenous use in adults For *intravenous infusion* (Minijet<sup>®</sup> Naloxone Hydrochloride), give continuously in Glucose 5% or Sodium Chloride 0.9%. Dilute to a concentration of up to 200 micrograms/mL and administer via an infusion pump.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Naloxone hydrochloride (Non-proprietary)**  
**Naloxone hydrochloride 20 microgram per 1 mL** Naloxone 40micrograms/2mL solution for injection ampoules | 10 ampoule [PoM] £55.00  
**Naloxone hydrochloride 400 microgram per 1 mL** Naloxone 400micrograms/1mL solution for injection ampoules | 3 ampoule [PoM] £17.70 | 10 ampoule [PoM] £41.00-£53.70  
**Naloxone hydrochloride 1 mg per 1 mL** Naloxone 2mg/2mL solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.80
- ▶ **Prenoxad** (Martindale Pharmaceuticals Ltd)  
**Naloxone hydrochloride 1 mg per 1 mL** Prenoxad 2mg/2mL solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £15.30

over 16 hours, dose to be administered in 14 mL/kg glucose 5%

- ▶ **Child (body-weight 20–39 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- ▶ **Child (body-weight 40 kg and above):** 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%
- ▶ **Adult (body-weight 40 kg and above):** 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%

#### DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, a ceiling weight of 110 kg should be used when calculating the dose for paracetamol overdose.

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: INTRAVENOUS ACETYLCYSTEINE FOR PARACETAMOL OVERDOSE: REMINDER OF AUTHORISED DOSE REGIMEN; POSSIBLE NEED FOR CONTINUED TREATMENT (JANUARY 2017)

The authorised dose regimen for acetylcysteine in paracetamol overdose is 3 consecutive intravenous infusions given over a total of 21 hours.

Continued treatment (given at the dose and rate as used in the third infusion) may be necessary depending on the clinical evaluation of the individual patient.

- **CAUTIONS** Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) · atopy · may slightly increase INR · may slightly increase prothrombin time

- **SIDE-EFFECTS** Hypersensitivity-like reactions · rashes · slight increase in INR and prothrombin time

#### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Hypersensitivity-like reactions Hypersensitivity-like reactions managed by reducing infusion rate or suspending until reaction settled (rash also managed by giving antihistamine; acute asthma managed by giving nebulised short-acting beta<sub>2</sub> agonist)—contact the National Poisons Information Service if reaction severe.

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Glucose 5% is preferred fluid; Sodium Chloride 0.9% is an alternative if Glucose 5% unsuitable.
- ▶ In adults For *intravenous infusion* (Parvolex<sup>®</sup>), give continuously in Glucose 5% or Sodium chloride 0.9%. Glucose Intravenous Infusion 5% is the preferred fluid; Sodium Chloride Intravenous Infusion 0.9% is an alternative if Glucose Intravenous Infusion 5% is unsuitable.

## 3.5 Paracetamol toxicity

### ANTIDOTES AND CHELATORS

#### Acetylcysteine

07-Feb-2017

#### ● INDICATIONS AND DOSE

##### Paracetamol overdose

- ▶ **BY INTRAVENOUS INFUSION**
- ▶ **Child (body-weight up to 20 kg):** Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg

### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

ELECTROLYTES: May contain Sodium

#### Acetylcysteine (Non-proprietary)

Acetylcysteine 200 mg per 1 mL Acetylcysteine 2g/10mL solution for infusion ampoules | 10 ampoule [PoM] £21.26-£24.99

#### Parvolex (Phoenix Labs Ltd)

Acetylcysteine 200 mg per 1 mL Parvolex 2g/10mL concentrate for solution for infusion ampoules | 10 ampoule [PoM] £22.50

## 4 Methaemoglobinaemia

### ANTIDOTES AND CHELATORS

#### Methylthioninium chloride

(Methylene blue)

##### INDICATIONS AND DOSE

##### Drug- or chemical-induced methaemoglobinaemia

##### BY SLOW INTRAVENOUS INJECTION

- Child 3 months-17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course
- Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course

##### Aniline- or dapsone-induced methaemoglobinaemia

##### BY SLOW INTRAVENOUS INJECTION

- Child 3 months-17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course
- Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- CAUTIONS** Children under 3 months (more susceptible to methaemoglobinaemia from high doses of methylthioninium) • chlorate poisoning (reduces efficacy of methylthioninium) • G6PD deficiency (seek advice from National Poisons Information Service) • methaemoglobinaemia due to treatment of cyanide poisoning with sodium nitrite (seek advice from National Poisons Information Service) • pulse oximetry may give false estimation of oxygen saturation

- INTERACTIONS** → Appendix 1: methylthioninium chloride

- SIDE-EFFECTS** Abdominal pain • agitation • anxiety • arrhythmia • blue-green discoloration of faeces • blue-green discoloration of skin • blue-green discoloration of urine • chest pain • confusion • dizziness • dyspnoea • fever • haemolytic anaemia • headache • hyperbilirubinaemia (in infants) • hypertension • hypotension • methaemoglobinaemia • mydriasis • nausea • sweating • tachypnoea • tremor • vomiting

- PREGNANCY** No information available, but risk to fetus of untreated methaemoglobinaemia likely to be significantly higher than risk of treatment.

- BREAST FEEDING** Manufacturer advises avoid breastfeeding for up to 6 days after administration—no information available.

- RENAL IMPAIRMENT** Use with caution in severe impairment; dose reduction may be required.

##### DIRECTIONS FOR ADMINISTRATION

- In children For *intravenous injection*, may be diluted with Glucose 5% to minimise injection-site pain; not compatible with Sodium Chloride 0.9%.

##### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Solution for injection

##### Methylthioninium chloride (Non-proprietary)

Methylthioninium chloride 5 mg per 1 mL Methylthioninium chloride Proveblue 50mg/10mL solution for injection ampoules | 5 ampoule [PoM] £167.36

## 5 Snake bites

### IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

#### European viper snake venom antiserum

##### INDICATIONS AND DOSE

##### Systemic envenoming from snake bites | Marked local envenoming

##### BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Child: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- Adult: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

##### Severe systemic envenoming from snake bites in patients presenting with clinical features

##### BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Child: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service
- Adult: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- DIRECTIONS FOR ADMINISTRATION** By *intravenous injection* given over 10–15 minutes or by *intravenous infusion* over 30 minutes after diluting in sodium chloride 0.9% (use 5 mL diluent/kg body-weight).

- PRESCRIBING AND DISPENSING INFORMATION** To order, email immform@dh.gsi.gov.uk.

##### MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

##### European viper snake venom antiserum (Non-proprietary)

European viper snake venom antiserum 100 mg per 1 mL Viper venom antiserum, European (equine) 1g/10mL solution for injection vials | 1 vial [PoM] no price available

# Appendix 1

## Interactions

Changes have been made to Appendix 1. For more information, see [www.bnf.org](http://www.bnf.org).

Two or more drugs given at the same time can exert their effects independently or they can interact. Interactions may be beneficial and exploited therapeutically; this type of interaction is not within the scope of this appendix. Many interactions are harmless, and even those that are potentially harmful can often be managed, allowing the drugs to be used safely together. Nevertheless, adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse Reactions to Drugs, p. 12), as for other adverse drug reactions.

Potentially harmful drug interactions may occur in only a small number of patients, but the true incidence is often hard to establish. Furthermore the severity of a harmful interaction is likely to vary from one patient to another. Patients at increased risk from drug interactions include the elderly and those with impaired renal or hepatic function.

Interactions can result in the potentiation or antagonism of one drug by another, or result in another effect, such as renal impairment. Drug interactions may develop either through pharmacokinetic or pharmacodynamic mechanisms.

### Pharmacodynamic interactions

These are interactions between drugs that have similar or antagonistic pharmacological effects or side-effects. They might be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs.

### Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or decreasing the amount of drug available to produce its pharmacological effects. Pharmacokinetic interactions occurring with one drug do not necessarily occur uniformly across a group of related drugs.

#### Affecting absorption

The rate of absorption and the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless a rapid effect is required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, can result in ineffective therapy.

#### Affecting distribution

##### *Due to changes in protein binding*

To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing the proportion free to diffuse from the plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces

more than transient potentiation because this increased concentration of free drug will usually be eliminated.

Displacement from protein binding does play a part in the potentiation of warfarin by sulfonamides but these interactions become clinically relevant mainly because warfarin metabolism is also inhibited.

#### *Induction or inhibition of drug transporter proteins*

Drug transporter proteins, such as P-glycoprotein, actively transport drugs across biological membranes. Transporters can be induced or inhibited, resulting in changes in the concentrations of drugs that are substrates for the transporter. For example, rifampicin induces P-glycoprotein, particularly in the gut wall, resulting in decreased plasma concentrations of digoxin, a P-glycoprotein substrate.

#### Affecting metabolism

Many drugs are metabolised in the liver. Drugs are either metabolised by phase I reactions (oxidation, reduction, or hydrolysis) or by phase II reactions (e.g. glucuronidation).

Phase I reactions are mainly carried out by the cytochrome P450 family of isoenzymes, of which CYP3A4 is the most important isoenzyme involved in the metabolism of drugs. Induction of cytochrome P450 isoenzymes by one drug can increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducing drug, plasma concentrations increase and toxicity can occur.

Conversely when one drug inhibits cytochrome P450 isoenzymes, it can decrease the metabolism of another, leading to higher plasma concentrations, resulting in an increased effect with a risk of toxicity.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. With knowledge of which isoenzymes are involved in a drug's metabolism, it is possible to predict whether certain pharmacokinetic interactions will occur. For example, carbamazepine is a potent inducer, ketoconazole is a potent inhibitor, and midazolam is a substrate of CYP3A4. Carbamazepine reduces midazolam concentrations, and it is therefore likely that other drugs that are potent inducers of CYP3A4 will interact similarly with midazolam. Ketoconazole, however, increases midazolam concentrations, and it can be predicted that other drugs that are potent inhibitors of CYP3A4 will interact similarly.

Less is known about the enzymes involved in phase II reactions. These include UDP-glucuronyltransferases which, for example, might be induced by rifampicin, resulting in decreased metabolism of mycophenolate (a substrate for this enzyme) to its active form, mycophenolic acid.

#### Affecting renal excretion

Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible. Changes in urinary pH can also affect the reabsorption of a small number of drugs, including methenamine.

**Relative importance of interactions**

**Severity of interactions**

Most interactions have been assigned a severity; this describes the likely effect of an unmanaged interaction on the patient.

**[Severe]** – the result may be a life-threatening event or have a permanent detrimental effect.

**[Moderate]** – the result could cause considerable distress or partially incapacitate a patient; they are unlikely to be life-threatening or result in long-term effects.

**[Mild]** – the result is unlikely to cause concern or incapacitate the majority of patients.

**[Unknown]** – used for those interactions that are predicted, but there is insufficient evidence to hazard a guess at the outcome.

**Appendix 1 structure**

**1 Drugs**

Drugs are listed alphabetically. If a drug is a member of a drug class, all interactions for that drug will be listed under the drug class entry; in this case the drug entry provides direction to the relevant drug class where its interactions can be found.

Within a drug or drug class entry, interactions are listed alphabetically by the interacting drug or drug class. The interactions describe the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. If two drugs have a pharmacodynamic effect in addition to a pharmacokinetic interaction, a cross-reference to the relevant pharmacodynamic effect table is included at the end of the pharmacokinetic message.

**2 Drug classes**

The drugs that are members of a drug class are listed underneath the drug class entry in a blue box. Interactions for the class are then listed alphabetically by the interacting drug or drug class. If the interaction only applies to certain drugs in the class, these drugs will be shown in brackets after the drug class name.

**3 Supplementary information**

If a drug has additional important information to be considered, this is shown in a blue box underneath the drug or drug class entry. This information might be food and lifestyle advice (including smoking and alcohol consumption), relate to the pharmacology of the drug or applicability of interactions to certain routes of administration, or it might be advice about separating administration times.

**Evidence for interactions**

Most interactions have been assigned a rating to indicate the weight of evidence behind the interaction.

**Study** – for interactions where the information is based on formal study including those for other drugs with the same mechanism (e.g. known inducers, inhibitors, or substrates of cytochrome P450 isoenzymes or P-glycoprotein).

**Anecdotal** – interactions based on either a single case report or a limited number of case reports.

**Theoretical** – interactions that are predicted based on sound theoretical considerations. The information may have been derived from *in vitro* studies or based on the way other members in the same class act.

**1 Drug entry**

- ▶ Details of interaction between **drug entry** and another **drug** or **drug class**. Action statement. **[Severity]** Evidence

**TABLE 1**  
**Name of pharmacodynamic effect**  
Explanation of the effect

Drug	Drug	Drug
Drug	Drug	Drug

**4 Pharmacodynamic effects**

Tables at the beginning of Appendix 1 cover pharmacodynamic effects. If a drug is included in one or more of these tables, this will be indicated at the top of the list of interactions for the drug or drug class. In addition to the list of interactions for a drug or drug class, these tables should always be consulted.

Each table describes the relevant pharmacodynamic effect and lists those drugs that are commonly associated with the effect. Concurrent use of two or more drugs from the same table is expected to increase the risk of the pharmacodynamic effect occurring. Please note these tables are not exhaustive.

Other than for QT interval prolongation, actions for pharmacodynamic effects are not included in the BNF, as these will depend on individual patient circumstances.

**TABLE 1****Drugs that cause hepatotoxicity**

The following is a list of some drugs that cause hepatotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alcohol (beverage)	demeclocycline	leflunomide	minocycline	sulfasalazine
asparaginase	didanoside	lenalidomide	oxytetracycline	tetracycline
atorvastatin	doxycycline	lomitapide	paracetamol	tigecycline
carbamazepine	fluconazole	lymecycline	pegaspargase	trabectedin
crisantaspase	fluvastatin	mercaptopurine	pravastatin	valproate
dactinomycin	isoniazid	methotrexate	rosuvastatin	vincristine
dantrolene	itraconazole	miconazole	simvastatin	

**TABLE 2****Drugs that cause nephrotoxicity**

The following is a list of some drugs that cause nephrotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

aceclofenac	ceftazidime	etoricoxib	nabumetone	tenofovir
acemetacin	ceftriaxone	fenoprofen	naproxen	tenoxicam
aciclovir	cefuroxime	flurbiprofen	neomycin	tiaprofenic acid
amikacin	ceftazidime	foscarnet	oxaliplatin	tobramycin
amphotericin	ceftriaxone	ganciclovir	parecoxib	tolfenamic acid
bacitracin	cefuroxime	gentamicin	pemetrexed	trimethoprim
capreomycin	celecoxib	ibuprofen	penicillamine	valaciclovir
carboplatin	ciclosporin	ifosfamide	pentamidine	valganciclovir
cefaclor	cisplatin	indometacin	piroxicam	vancomycin
cefadroxil	colistimethate	ketoprofen	piroxicam	zidovudine
cefelexin	dexibuprofen	ketorolac	streptomycin	zoledronic acid
cefixime	dextketoprofen	mefenamic acid	sulindac	
cefotaxime	diclofenac	meloxicam	tacrolimus	
cefradine	etodolac	methotrexate	telavancin	

**TABLE 3****Drugs with anticoagulant effects**

The following is a list of drugs that have anticoagulant effects. Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with antiplatelet effects (see table of drugs with antiplatelet effects) might also increase this risk.

acenocoumarol	dabigatran	fondaparinux	phenindione	tinzaparin
alteplase	dalteparin	glucose	reteplase	urokinase
apixaban	danaparoid	heparin (unfractionated)	rivaroxaban	warfarin
argatroban	edoxaban	nicotinic acid	streptokinase	
bivalirudin	enoxaparin	omega-3-acid ethyl esters	tenecteplase	

**TABLE 4****Drugs with antiplatelet effects**

The following is a list of drugs that have antiplatelet effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with anticoagulant effects (see table of drugs with anticoagulant effects) might also increase this risk.

abciximab	dapoxetine	etoricoxib	mefenamic acid	sulindac
aceclofenac	dasatinib	fenoprofen	meloxicam	tenoxicam
acemetacin	dexibuprofen	fluoxetine	nabumetone	tiaprofenic acid
anagrelide	dextketoprofen	flurbiprofen	naproxen	ticagrelor
aspirin	diclofenac	fluvoxamine	parecoxib	tirofiban
bevacizumab	dipyridamole	ibuprofen	paroxetine	tolfenamic acid
cangrelor	duoxetine	iloprost	piroxicam	trastuzumab
celecoxib	epoprostenol	indometacin	prasugrel	trastuzumab emtansine
cilostazol	efitibatide	ketoprofen	regorafenib	venlafaxine
citalopram	escitalopram	ketorolac	sertraline	vortioxetine
clopidogrel	etodolac		sulfinpyrazone	

**TABLE 5****Drugs that cause thromboembolism**

The following is a list of some drugs that cause thromboembolism (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

bleomycin	epoetin zeta	pentostatin	tibolone	vindesine
cyclophosphamide	fluciclovaxil	pomalidomide	toremifene	vinflunine
darbepoetin alfa	fulvestrant	raloxifene	tranexamic acid	vinorelbine
doxorubicin	lenalidomide	strontium ranelate	tretinoin	
epoetin alfa	methotrexate	tamoxifen	vinblastine	
epoetin beta	mitomycin	thalidomide	vincristine	

**TABLE 6**

**Drugs that cause bradycardia**

The following is a list of drugs that cause bradycardia (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	carvedilol	fentanyl	nadolol	rivastigmine
alfentanil	celiprolol	flingolmod	nebivolol	selegiline
amiodarone	cisatracurium	flecainide	neostigmine	sotalol
apraclonidine	clonidine	galantamine	oxprenolol	sufentanil
atenolol	crizotinib	ivabradine	pasireotide	thalidomide
betaxolol	digoxin	labetalol	pindolol	timolol
bisoprolol	diltiazem	levobunolol	propranolol	tizanidine
brimonidine	donepezil	methadone	pyridostigmine	verapamil
carteolol	esmolol	metoprolol	remifentanyl	

**TABLE 7**

**Drugs that cause first dose hypotension**

The following is a list of some drugs that can cause first-dose hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alfuzosin	eprosartan	isosorbide dinitrate	perindopril	terazosin
azilsartan	fosinopril	isosorbide mononitrate	prazosin	trandolapril
candesartan	glyceryl trinitrate	lisinopril	quinapril	valsartan
captopril	imidapril	losartan	ramipril	
doxazosin	indoramin	moexipril	tamsulosin	
enalapril	irbesartan	olmesartan	telmisartan	

**TABLE 8**

**Drugs that cause hypotension**

The following is a list of some drugs that cause hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	chlorpromazine	haloperidol	moxisylyte	riociguat
alcohol (beverage)	chlortalidone	histamine	moxonidine	risperidone
alfuzosin	clevidipine	hydralazine	nadolol	ropinirole
aliskiren	clomipramine	hydrochlorothiazide	nebivolol	rotigotine
alprostadil	clonidine	imidapril	nicardipine	sacubitril
amantadine	clopamide	imipramine	nicorandil	sapropterin
amitriptyline	clozapine	indapamide	nifedipine	selegiline
amlodipine	cyclopenthiazide	indoramin	nimodipine	sevoflurane
apomorphine	dapagliflozin	irbesartan	nitrous oxide	sildenafil
apraclonidine	desflurane	isocarboxazid	nortriptyline	sodium nitroprusside
aripiprazole	diazoxide	isoflurane	olanzapine	sodium oxybate
asenapine	diltiazem	isosorbide dinitrate	olmesartan	sotalol
atenolol	dipyridamole	isosorbide mononitrate	oxprenolol	spironolactone
avanafil	dosulepin	isradipine	paliperidone	sulpiride
azilsartan	doxazosin	ketamine	pergolide	tadalafil
baclofen	doxepin	labetalol	pericyazine	tamsulosin
bendroflumethiazide	droperidol	lercanidipine	perindopril	telmisartan
benperidol	empagliflozin	levobunolol	perphenazine	terazosin
betaxolol	enalapril	levodopa	phenelzine	thiopental
bisoprolol	eplerenone	levomepromazine	pimozide	timolol
bortezomib	eprosartan	lisinopril	pindolol	tizanidine
brimonidine	esmolol	lofepramine	pramipexole	torasemide
bromocriptine	etomidate	lofedidine	prazosin	trandolapril
bumetanide	felodipine	losartan	prochlorperazine	tranylcypromine
cabergoline	flupentixol	loxapine	promazine	trifluoperazine
canagliflozin	fluphenazine	lurasidone	propofol	trimipramine
candesartan	fosinopril	methylodopa	propranolol	valsartan
captopril	furosemide	metolazone	quetiapine	varafenil
carteolol	glyceryl trinitrate	metoprolol	quinagolide	verapamil
carvedilol	guanethidine	minoxidil	quinapril	xipamide
celiprolol	guanfacine	moexipril	ramipril	zuclopenthixol

**TABLE 9****Drugs that prolong the QT interval**

The following is a list of some drugs that prolong the QT-interval (note that this list is not exhaustive). In general, manufacturers advise that the use of two or more drugs that are associated with QT prolongation should be avoided. Increasing age, female sex, cardiac disease, and some metabolic disturbances (notably hypokalaemia) predispose to QT prolongation—concurrent use of drugs that reduce serum potassium might further increase this risk (see table of drugs that reduce serum potassium).

Drugs that are not known to prolong the QT interval but are predicted (by the manufacturer) to increase the risk of QT prolongation include: domperidone, erythromycin, fingolimod, granisetron, ivabradine, mefloquine, mizolastine, palonosetron, and pentamidine. Most manufacturers advise avoiding concurrent use with drugs that prolong the QT interval.

amifampridine	clarithromycin	hydroxyzine	pazopanib	tizanidine
amiodarone	clomipramine	lapatinib	pimozide	tolterodine
amisulpride	crizotinib	levomepromazine	quinine	toremifene
apomorphine	dasatinib	lithium	ranolazine	vandetanib
arsenic trioxide	delamanid	lofexidine	risperidone	vardenafil
artemether	disopyramide	methadone	saquinavir	vemurafenib
artenimol	dronedarone	moxifloxacin	sildenafil	venlafaxine
bedaquiline	droperidol	nilotinib	sorafenib	vinflunine
bosutinib	eribulin	ondansetron	sotalol	voriconazole
cabozantinib	escitalopram	osimertinib	sulpiride	zuclopenthixol
ceritinib	flecainide	paliperidone	sunitinib	
chlorthalidone	fluphenazine	panobinostat	telavancin	
citalopram	haloperidol	pasireotide	tetrabenazine	

**TABLE 10****Drugs with antimuscarinic effects**

The following is a list of some drugs that have antimuscarinic effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of these effects occurring.

acridinium	cyclopentolate	haloperidol	orphenadrine	tiotropium
amantadine	cyproheptadine	homatropine	oxybutynin	tolterodine
amitriptyline	darifenacin	hydroxyzine	perphenazine	trifluoperazine
atropine	dicycloverine	hyoscine	pimozide	trihexphenidyl
baclofen	dimenhydrinate	imipramine	prochlorperazine	trimipramine
chlorphenamine	disopyramide	ipratropium	procyclidine	tropicamide
chlorthalidone	dosulepin	levomepromazine	promethazine	trospium
clemastine	doxepin	lofepramine	propafenone	umclidinium
clomipramine	fesoterodine	loxapine	propantheline	
clozapine	flavoxate	nefopam	propiverine	
cyclizine	glycopyrronium	nortriptyline	solifenacin	

**TABLE 11****Drugs with CNS depressant effects**

The following is a list of some drugs with CNS depressant effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of CNS depressant effects, such as drowsiness, which might affect the ability to perform skilled tasks (see Drugs and Driving p. 3).

agomelatine	clomethiazole	isoflurane	nabilone	remifentanyl
alcohol (beverage)	clonazepam	ketamine	nitrazepam	risperidone
alfentanil	clonidine	ketotifen	nitrous oxide	ropivacaine
alimemazine	clozapine	lamotrigine	olanzapine	sevoflurane
alprazolam	codeine	levetiracetam	oxazepam	sodium oxybate
amisulpride	cyclizine	levomepromazine	oxycodone	sufentanil
apraclonidine	cyproheptadine	lidocaine	paliperidone	sulpiride
aripiprazole	desflurane	lofexidine	papaveretum	tapentadol
articaïne	dexmedetomidine	loprazolam	pentazocine	temazepam
asenapine	diamorphine	lorazepam	perampanel	tetracaine
baclofen	diazepam	lormetazepam	pericyazine	thalidomide
benperidol	dihydrocodeine	loxapine	perphenazine	thiopental
brimonidine	dipipanone	lurasidone	pethidine	tizanidine
bucizine	droperidol	melatonin	phenobarbital	tramadol
bupivacaine	etomidate	mepivacaine	pimozide	trazodone
buprenorphine	fentanyl	meprobamate	pizotifen	trifluoperazine
cannabis extract	flupentixol	meprobamate	pregabalin	venlafaxine
chloral hydrate	fluphenazine	methadone	prilocaine	zaleplon
chlorthalidone	flurazepam	methocarbamol	primidone	zolpidem
chlorprocaine	gabapentin	mianserin	propchlorperazine	zopiclone
chlorphenamine	guanfacine	midazolam	promazine	zuclopenthixol
chlorthalidone	haloperidol	mirtazapine	promethazine	
cinnarizine	hydromorphone	morphine	propofol	
clemastine	hydroxyzine	moxonidine	quetiapine	

**TABLE 12****Drugs that cause peripheral neuropathy**

The following is a list of some drugs that cause peripheral neuropathy (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amiodarone	didanosine	isoniazid	stavudine	vinflunine
bortezomib	disulfiram	lamivudine	thalidomide	vinorelbine
brentuximab vedotin	docetaxel	metronidazole	vinblastine	
cabazitaxel	eribulin	paclitaxel	vincristine	
cisplatin	fosphenytoin	phenytoin	vindesine	

**TABLE 13****Drugs that cause serotonin syndrome**

The following is a list of some drugs that cause serotonin syndrome (note that this list is not exhaustive). See Antidepressant drugs p. 342 for more information and specific advice on avoiding monoamine-oxidase inhibitors during and after administration of other serotonergic drugs.

almotriptan	fentanyl	methadone	pethidine	tapentadol
bupropion	fluoxetine	methylthioninium chloride	phenelzine	tedizolid
buspirone	fluvoxamine	mianserin	procarbazine	tramadol
citalopram	frovatriptan	mirtazapine	rasagiline	tranylcypromine
clomipramine	granisetron	moclobemide	rizatriptan	trazodone
dapoxetine	imipramine	naratriptan	safinamide	venlafaxine
dexamfetamine	isocarboxazid	ondansetron	selegiline	vortioxetine
duloxetine	linezolid	palonosetron	sertraline	zolmitriptan
eletriptan	lisdexamfetamine	paroxetine	St John's Wort	
escitalopram	lithium	pentazocine	sumatriptan	

**TABLE 14****Antidiabetic drugs**

The following is a list of antidiabetic drugs (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase the risk of hypoglycaemia.

acarbose	dulaglutide	insulin aspart	linagliptin	saxagliptin
albiglutide	empagliflozin	insulin degludec	liraglutide	saxagliptin
alogliptin	exenatide	insulin detemir	lixisenatide	tolbutamide
biphasic insulin aspart	glibenclamide	insulin glargine	metformin	vildagliptin
biphasic insulin lispro	gliclazide	insulin glulisine	nateglinide	
biphasic isophane insulin	glimepiride	insulin lispro	pioglitazone	
canagliflozin	glipizide	insulin zinc suspension	protamine zinc insulin	
dapagliflozin	insulin	isophane insulin	repaglinide	

**TABLE 15****Drugs that cause myelosuppression**

The following is a list of some drugs that cause myelosuppression (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

afatinib	carmustine	everolimus	nilotinib	rituximab
aflibercept	ceritinib	fludarabine	nivolumab	ruxolitinib
alemtuzumab	cetuximab	flucytosine	obinutuzumab	siltuximab
amsacrine	chlorambucil	ganciclovir	ofatumumab	sorafenib
anakinra	cisplatin	gefitinib	olanzapine	sulfadiazine
arsenic trioxide	cladribine	gemcitabine	olaparib	sulfasalazine
asparaginase	clofarabine	hydroxycarbamide	olsalazine	sunitinib
axitinib	clozapine	ibrutinib	oxaliplatin	temozolomide
azacitidine	co-trimoxazole	idarubicin	paclitaxel	temsirolimus
azathioprine	crisantaspase	idelalisib	panitumumab	thalidomide
balsalazide	crizotinib	ifosfamide	panobinostat	thiotepa
belimumab	cyclophosphamide	imatinib	pazopanib	tioguanine
bendamustine	cytarabine	interferon alfa	pegaspargase	topotecan
bevacizumab	dabrafenib	interferon beta	peginterferon alfa	trabectedin
bleomycin	dacarbazine	irinotecan	peginterferon beta-1a	trastuzumab emtansine
blinatumomab	dactinomycin	leflunomide	pemetrexed	treosulfan
bortezomib	dasatinib	lenalidomide	pentamidine	valganciclovir
bosutinib	daunorubicin	linezolid	pentostatin	vinblastine
brentuximab vedotin	decitabine	lomustine	pixantrone	vincristine
busulfan	deferiprone	melfalan	pomalidomide	vindesine
cabazitaxel	docetaxel	mercaptopurine	primaquine	vinflunine
cabozantinib	doxorubicin	methotrexate	procarbazine	vinorelbine
canakinumab	epirubicin	mitomycin	propylthiouracil	vismodegib
capecitabine	eribulin	mitotane	pyrimethamine	zidovudine
carbimazole	estramustine	mitoxantrone	raltitrexed	
carboplatin	ethosuximide	mycophenolate	ramucicromab	
carfilzomib	etoposide	nelarabine	regorafenib	

**TABLE 16****Drugs that increase serum potassium**

The following is a list of some drugs that increase serum potassium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyperkalaemia (hyperkalaemia is particularly notable when ACE inhibitors or angiotensin-II receptor antagonists are given with spironolactone or eplerenone).

aceclofenac	dexibuprofen	felbinac	meloxicam	spironolactone
acemetacin	dexketoprofen	fenoprofen	moexipril	sulindac
aliskiren	diclofenac	flurbiprofen	nabumetone	tacrolimus
amiloride	drospirenone	heparin (unfractionated)	naproxen	telmisartan
azilsartan	enalapril	ibuprofen	nepafenac	tenoxicam
benzydamine	enoxaparin	imidapril	olmesartan	tiaprofenic acid
bromfenac	eplerenone	indometacin	parecoxib	tinzaparin
candesartan	epoetin alfa	irbesartan	perindopril	tolfenamic acid
captopril	epoetin beta	ketoprofen	piroxicam	tolvaptan
celecoxib	epoetin zeta	ketorolac	potassium canrenoate	trandolapril
ciclosporin	eprosartan	lisinopril	potassium chloride	triarterene
dalteparin	etodolac	losartan	quinapril	trimethoprim
darbepoetin alfa	etoricoxib	mefenamic acid	ramipril	valsartan

**TABLE 17****Drugs that reduce serum potassium**

The following is a list of some drugs that reduce serum potassium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hypokalaemia. Hypokalaemia can increase the risk of torsade de pointes, which might be additive with the effects of drugs that prolong the QT interval (see table of drugs that prolong the QT interval).

aminophylline	bumetanide	fludrocortisone	indapamide	senna
amphotericin	chlortalidone	formoterol	methylprednisolone	sodium picosulfate
bambuterol	clopamide	furosemide	metolazone	terbutaline
beclometasone	cyclopenthiiazide	glycerol	olodaterol	theophylline
bendroflumethiazide	dantron	hydrochlorothiazide	prednisolone	torasemide
betamethasone	deflazacort	hydrocortisone	prednisone	triamcinolone
bisacodyl	dexamethasone	hydroflumethiazide	salbutamol	vilanterol
budesonide	docusate sodium	indacaterol	salmeterol	xipamide

**TABLE 18****Drugs that cause hyponatraemia**

The following is a list of some drugs that reduce sodium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyponatraemia.

aceclofenac	cyclopenthiiazide	etoricoxib	ketorolac	spironolactone
acemetacin	dapoxetine	fenoprofen	mefenamic acid	sulindac
amiloride	desmopressin	fluoxetine	meloxicam	tenoxicam
amitriptyline	dexibuprofen	flurbiprofen	metolazone	tiaprofenic acid
bendroflumethiazide	dexketoprofen	fluvoxamine	nabumetone	tolfenamic acid
bumetanide	diclofenac	furosemide	naproxen	torasemide
carbamazepine	dosulepin	hydrochlorothiazide	nortriptyline	triarterene
celecoxib	doxepin	ibuprofen	parecoxib	trimethoprim
chlortalidone	duloxetine	imipramine	paroxetine	trimipramine
citalopram	eplerenone	indapamide	piroxicam	xipamide
clomipramine	escitalopram	indometacin	sertraline	
clonidine	etodolac	ketoprofen	sodium picosulfate	

**TABLE 19****Drugs that cause ototoxicity**

The following is a list of some drugs that cause ototoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisplatin	oxaliplatin	torasemide	vindesine
bumetanide	furosemide	streptomycin	vancomycin	vinflunine
capreomycin	gentamicin	telavancin	vinblastine	vinorelbine
carboplatin	neomycin	tobramycin	vincristine	

**TABLE 20****Drugs with neuromuscular blocking effects**

The following is a list of some drugs with neuromuscular blocking effects (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisatracurium	neomycin	pyridostigmine	tobramycin
atracurium	colistimethate	neostigmine	rocuronium	vecuronium
botulinum toxin type A	gentamicin	pancuronium	streptomycin	
botulinum toxin type B	mivacurium	polymyxins	suxamethonium	

## List of drug interactions

The following is an alphabetical list of drugs and their interactions; to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

### Abacavir

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to abacavir. [Moderate] Theoretical
- Enzalutamide is predicted to decrease the exposure to abacavir. [Moderate] Theoretical
- HIV-protease inhibitors (tipranavir) slightly decrease the exposure to abacavir. Avoid. [Severe] Study
- Rifampicin is predicted to decrease the exposure to abacavir. [Moderate] Theoretical

### Abatacept

- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with abatacept. Public Health England advises avoid. [Severe] Theoretical

**Abciximab** → see TABLE 4 p. 1264 (antiplatelet effects)

### Abiraterone

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- Abiraterone is predicted to increase the exposure to antiarrhythmics (flecainide). [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to abiraterone. Avoid. [Severe] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to abiraterone. [Severe] Theoretical
- Abiraterone is predicted to increase the exposure to beta blockers, non-selective (carvedilol, timolol). [Moderate] Theoretical
- Abiraterone is predicted to increase the exposure to beta blockers, selective (metoprolol, nebivolol). [Moderate] Study
- Cobicistat is predicted to increase the exposure to abiraterone. [Severe] Theoretical
- Enzalutamide is predicted to decrease the exposure to abiraterone. Avoid. [Severe] Theoretical
- HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to abiraterone. [Severe] Theoretical
- Idelalisib is predicted to increase the exposure to abiraterone. [Severe] Theoretical
- Macrolides (clarithromycin) are predicted to increase the exposure to abiraterone. [Severe] Theoretical
- Abiraterone is predicted to decrease the efficacy of opioids (tramadol). [Moderate] Study
- Abiraterone is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- Rifampicin is predicted to decrease the exposure to abiraterone. Avoid. [Severe] Theoretical
- Abiraterone potentially increases the exposure to venlafaxine. [Severe] Theoretical

**Acarbose** → see TABLE 14 p. 1267 (antidiabetic drugs)

- Acarbose decreases the concentration of digoxin. [Moderate] Study
- Pancreatin is predicted to decrease the effects of acarbose. Avoid. [Moderate] Theoretical

**ACE inhibitors** → see TABLE 7 p. 1265 (first-dose hypotension), TABLE 8 p. 1265 (hypotension), TABLE 16 p. 1268 (increased serum potassium)

captopril • enalapril • fosinopril • imidapril • lisinopril • moexipril • perindopril • quinapril • ramipril • trandolapril

- ACE inhibitors increase the risk of renal impairment when given with aliskiren. Use with caution or avoid aliskiren in selected patients, p. 175. [Severe] Study → Also see TABLE 8 p. 1265 → Also see TABLE 16 p. 1268
- ACE inhibitors are predicted to increase the risk of hypersensitivity and haematological reactions when given with allopurinol. [Severe] Anecdotal

- ACE inhibitors are predicted to increase the risk of anaemia and/or leucopenia when given with azathioprine. [Severe] Anecdotal
- ACE inhibitors increase the risk of hypersensitivity when given with bee venom extract. Avoid. [Severe] Study
- ACE inhibitors are predicted to decrease the efficacy of icanitab and icanitab is predicted to decrease the efficacy of ACE inhibitors. Avoid. [Moderate] Theoretical
- ACE inhibitors are predicted to increase the concentration of lithium. Monitor and adjust dose. [Severe] Anecdotal
- ACE inhibitors are predicted to increase the risk of hypersensitivity when given with sodium aurothiomalate. [Severe] Anecdotal
- Quinapril (tablet) decreases the absorption of oral tetracyclines (tetracycline). Avoid. [Moderate] Study
- ACE inhibitors increase the risk of hypersensitivity when given with wasp venom extract. Avoid. [Severe] Study

**Acebutolol** → see beta blockers, selective

**Acetofenac** → see NSAIDs

**Acemetacin** → see NSAIDs

**Acenocoumarol** → see coumarins

### Acetazolamide

- Acetazolamide potentially increases the risk of overheating and dehydration when given with antiepileptics (zonisamide). Avoid in children. [Severe] Theoretical
- Acetazolamide increases the risk of severe toxic reaction when given with aspirin (high-dose). [Severe] Study
- Acetazolamide alters the concentration of lithium. [Severe] Anecdotal
- Acetazolamide is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical
- Acetazolamide increases the urinary excretion of methotrexate. [Moderate] Study

**Aciclovir** → see TABLE 2 p. 1264 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- Aciclovir increases the exposure to aminophylline. Monitor theophylline concentration and adjust dose. [Severe] Anecdotal
- Mycophenolate is predicted to increase the risk of haematological toxicity when given with aciclovir. [Moderate] Theoretical
- Aciclovir is predicted to increase the exposure to theophylline. Monitor theophylline concentration and adjust dose. [Severe] Theoretical

**Acitretin** → see retinoids

**Acidinium** → see TABLE 10 p. 1266 (antimuscarinics)

**Acrivastine** → see antihistamines, non-sedating

**Adalimumab** → see monoclonal antibodies

**Adapalene** → see retinoids

### Adefovir

Ataluren increases the exposure to adefovir. [Moderate] Study

**Adenosine** → see antiarrhythmics

**Adrenaline/epinephrine** → see sympathomimetics, vasoconstrictor

**Aftatinib** → see TABLE 15 p. 1267 (myelosuppression)

- Antiarrrhythmics (amiodarone, dronedarone) are predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- Antiepileptics (carbamazepine) are predicted to decrease the exposure to aftatinib. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- Calcium channel blockers (verapamil) are predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- Ciclosporin is predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- HIV-protease inhibitors (lopinavir, ritonavir, saquinavir) are predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- Lapatinib is predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study
- Macrolides are predicted to increase the exposure to aftatinib. Separate administration by 12 hours. [Moderate] Study

## Afatinib (continued)

- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

**Aflibercept** → see TABLE 15 p. 1267 (myelosuppression)

**Agalsidase**

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. [Moderate] Theoretical

**Agomelatine** → see TABLE 11 p. 1266 (CNS depressant effects)

- ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ Caution with concomitant use of drugs associated with hepatic injury.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] theoretical
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **agomelatine**. Avoid. [Severe] Study

**Albendazole**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **albendazole**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **albendazole**. [Moderate] Study
- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study

**Albiglutide** → see TABLE 14 p. 1267 (antidiabetic drugs)

**Alcohol (beverage)** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

**Aldosterone antagonists** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 8 p. 1265 (hypotension), TABLE 16 p. 1268 (increased serum potassium)

eplerenone • spironolactone

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1268
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study → Also see TABLE 8 p. 1265
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Eplerenone** very slightly increases the exposure to **digoxin**. [Mid] Study
  - ▶ **Spironolactone** increases the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Eplerenone** is predicted to increase the concentration of **lithium**. Avoid. [Moderate] Theoretical
  - ▶ **Spironolactone** potentially increases the concentration of **lithium**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Spironolactone** is predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Netupitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to slightly decrease the exposure to **eplerenone**. Avoid. [Moderate] Study
- Alemtuzumab** → see monoclonal antibodies
- Alendronic acid** → see bisphosphonates
- Alfacalcidol** → see vitamin D substances
- Alfentanil** → see opioids
- Alfuzosin** → see alpha blockers
- Alimemazine** → see antihistamines, sedating
- Alirocumab** → see monoclonal antibodies
- Aliskiren** → see TABLE 8 p. 1265 (hypotension), TABLE 16 p. 1268 (increased serum potassium)

**FOOD AND LIFESTYLE** Avoid apple juice and orange juice as they greatly decrease aliskiren concentrations and plasma renin activity.

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 175. [Severe] Study → Also see TABLE 8 p. 1265 → Also see TABLE 16 p. 1268
- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 175. [Severe] Study → Also see TABLE 8 p. 1265 → Also see TABLE 16 p. 1268
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to **aliskiren**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** markedly increase the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** moderately increase the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1265
- ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical

- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1268
- ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Aliskiren** slightly decreases the exposure to **loop diuretics (furosemide)**. [Moderate] Study → Also see TABLE 8 p. 1265
- ▶ **Lumacaftor** is predicted to affect the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Statins (atorvastatin)** slightly to moderately increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical

**Alitretnoin** → see retinoids

**Alkylating agents** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity), TABLE 5 p. 1264 (thromboembolism)

bendamustine • busulfan • carmustine • chlorambucil • cyclophosphamide • dacarbazine • estramustine • ifosfamide • lomustine • melphalan • temozolomide • thiotepa • treosulfan

- ▶ **Antacids** are predicted to decrease the absorption of **estramustine**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** increase the risk of **busulfan** toxicity when given with **busulfan**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **busulfan**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **estramustine**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Metronidazole** increases the risk of toxicity when given with **busulfan**. [Severe] Study
- ▶ **Paracetamol** is predicted to decrease the clearance of **busulfan**. [Moderate] Theoretical
- ▶ **Cyclophosphamide (high-dose)** increases the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1267 → Also see TABLE 5 p. 1264
- ▶ **Cyclophosphamide** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study

#### Allopurinol

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [Severe] Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 787. [Severe] Study
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study
- ▶ **Allopurinol** moderately increases the exposure to **didanosine**. Avoid. [Severe] Study
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 844. [Severe] Study
- ▶ **Allopurinol** increases the risk of skin rash when given with **penicillins (amoxicillin, ampicillin)**. [Moderate] Study

- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical

**Almotriptan** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [Mild] Study

**Allogliptin** → see TABLE 14 p. 1267 (antidiabetic drugs)

**Alpha blockers** → see TABLE 7 p. 1265 (first-dose hypotension), TABLE 8 p. 1265 (hypotension)

alfuzosin • doxazosin • indoramin • prazosin • tamsulosin • terazosin

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Cobicistat** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **doxazosin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **doxazosin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doxazosin**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **indoramin**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Netupitant** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical

## Alpha blockers (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **tamsulosin**. [Moderate] Theoretical
- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1265

**Alpha tocopherol** → see vitamin E substances

**Alpha tocopheryl acetate** → see vitamin E substances

**Alprazolam** → see TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust **alprazolam** dose. [Moderate] Theoretical → Also see TABLE 11 p. 1266
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust **alprazolam** dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust **alprazolam** dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **alprazolam**. Adjust dose. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study

**Alprostadil** → see TABLE 8 p. 1265 (hypotension)

**Alteplase** → see TABLE 3 p. 1264 (anticoagulant effects)

**Aluminium hydroxide** → see antacids

**Amantadine** → see dopamine receptor agonists

**Ambrisentan**

- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 179. [Moderate] Study
- ▶ **Rifampicin** transiently increases the exposure to **ambrisentan**. [Moderate] Study

**Amfetamines** → see TABLE 13 p. 1267 (serotonin syndrome)

dexamfetamine · lisdexamfetamine

- ▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical

- ▶ **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. [Severe] Theoretical
- ▶ **Dexamfetamine** decreases the effects of **guanethidine**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **dexamfetamine**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **lisdexamfetamine**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines**. [Moderate] Study
- ▶ **Amfetamines** are predicted to decrease the effects of **phenothiazines (chlorpromazine)**. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Amifampridine** → see TABLE 9 p. 1266 (QT-interval prolongation)

**Amikacin** → see aminoglycosides

**Amiloride** → see potassium-sparing diuretics

**Aminoglycosides** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268 (ototoxicity), TABLE 20 p. 1268 (neuromuscular blocking effects)

amikacin · gentamicin · streptomycin · tobramycin

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** potentially decrease the exposure to **tobramycin**. [Moderate] Anecdotal
- ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study
- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1264
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- ▶ **Loop diuretics** increase the risk of nephrotoxicity and ototoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1268
- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical → Also see TABLE 20 p. 1268
- ▶ **Aminoglycosides** are predicted to increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising**. [Severe] Theoretical → Also see TABLE 20 p. 1268
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical → Also see TABLE 20 p. 1268
- ▶ **Aminoglycosides** are predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Severe] Theoretical → Also see TABLE 20 p. 1268
- ▶ **Telavancin** is predicted to increase the risk of ototoxicity when given with **aminoglycosides**. [Moderate] Theoretical → Also see TABLE 19 p. 1264 → Also see TABLE 19 p. 1268
- ▶ **Vancomycin** increases the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 2 p. 1264 → Also see TABLE 19 p. 1268

**Aminophylline** → see TABLE 17 p. 1268 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase aminophylline clearance and increased doses of aminophylline are therefore

required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** increases the exposure to **aminophylline**. Monitor theophylline concentration and adjust dose. [Severe] Anecdotal
- ▶ **Aminophylline** is predicted to decrease the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **aminophylline**. Adjust **aminophylline** dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **macrolides (erythromycin)**. Adjust dose. [Severe] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin, norfloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal

#### Aminosalicylic acid

- ▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

**Amiodarone** → see antiarrhythmics

**Amisulpride** → see TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)

▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1266

▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical

**Amisulpride** → see tricyclic antidepressants

**Amiodipine** → see calcium channel blockers

**Amoxicillin** → see penicillins

**Amphotericin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 17 p. 1268 (reduced serum potassium)

▶ **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study

▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study

▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study

**Ampicillin** → see penicillins

**Amsacrine** → see TABLE 15 p. 1267 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. Public Health England advises avoid. [Severe] Theoretical

**Anaesthetics, local** → see TABLE 11 p. 1266 (CNS depressant effects)

bupivacaine • levobupivacaine • mepivacaine • oxybuprocaine • prilocaine • proxymetacaine • ropivacaine • tetracaine

▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [Severe] Theoretical → Also see TABLE 11 p. 1266

▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1266

▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical

▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical

▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical

▶ **SSRIs (fluvoxamine)** decrease the clearance of **ropivacaine**. Avoid prolonged use. [Moderate] Study

▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Anecdotal

**Anagrelide** → see TABLE 4 p. 1264 (antiplatelet effects)

▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical

▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical

▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1264

**Anakinra** → see TABLE 15 p. 1267 (myelosuppression)

## Anakinra (continued)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Public Health England advises avoid. [Severe] Theoretical

**Angiotensin-II receptor antagonists** → see TABLE 7 p. 1265 (first-dose hypotension), TABLE 8 p. 1265 (hypotension), TABLE 16 p. 1268 (increased serum potassium)

azilsartan · candesartan · eprosartan · irbesartan · losartan · olmesartan · telmisartan · valsartan

- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 175. [Severe] Study → Also see TABLE 8 p. 1265 → Also see TABLE 16 p. 1268
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal

**Antacids**

aluminium hydroxide · magnesium carbonate · magnesium trisilicate

**SEPARATION OF ADMINISTRATION** Antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ **Antacids** are predicted to decrease the absorption of **alkylating agents (estramustine)**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antiepileptics (gabapentin)**. **Gabapentin** should be taken 2 hours after **antacids**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antifungals, azoles (itraconazole)**. **Antacids** should be taken 1 hour before or 2 hours after **itraconazole**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antihistamines, non-sedating (fexofenadine)**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **aspirin** (high-dose). [Moderate] Study
- ▶ **Antacids** decrease the absorption of **bisphosphonates (alendronic acid)**. **Alendronic acid** should be taken at least 30 minutes before **antacids**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **bisphosphonates (ibandronic acid)**. Avoid **antacids** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **bisphosphonates (sodium clodronate)**. Avoid **antacids** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before **antacids**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **chenodeoxycholic acid**. [Mild] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **corticosteroids (deflazacort)**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **corticosteroids (dexamethasone)**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **dabrafenib**. Avoid. [Severe] Theoretical
- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Aluminium hydroxide** is predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **antacids**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **antacids**. [Severe] Study
- ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Aluminium hydroxide** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **erlotinib**. **Antacids** should be taken 4 hours before or 2 hours after **erlotinib**. [Moderate] Theoretical
- ▶ **Antacids** slightly to moderately decrease the exposure to **fibrates (gemfibrozil)**. [Moderate] Study
- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **HIV-protease inhibitors (atazanavir)**. **Atazanavir** should be taken 2 hours before or 1 hour after **antacids**. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **HIV-protease inhibitors (tipranavir)**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **iron (oral)**. **Iron (oral)** should be taken 1 hour before or 2 hours after **antacids**. [Moderate] Study
- ▶ **Aluminium hydroxide** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Avoid. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Magnesium trisilicate** decreases the absorption of **nitrofurantoin**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after **antacids**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- ▶ **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **antacids**. [Moderate] Study
- ▶ **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before **antacids**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the exposure to **rilpivirine**. **Antacids** should be taken 2 hours before or 4 hours after **rilpivirine**. [Severe] Theoretical
- ▶ **Antacids** slightly decrease the exposure to **riociguat**. **Antacids** should be taken 2 hours before or 1 hour after **riociguat**. [Mild] Study

- ▶ **Antacids** moderately decrease the absorption of **statins** (**rosuvastatin**). Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **strontium ranelate**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Study
- ▶ **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [\[Moderate\]](#) Theoretical

**Anthracyclines** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

daunorubicin · doxorubicin · epirubicin · idarubicin · mitoxantrone · pixantrone

**GENERAL INFORMATION** Caution is necessary with concurrent use of cardiotoxic drugs, or drugs that reduce cardiac contractility.

- ▶ **Calcium channel blockers** (**verapamil**) moderately increase the exposure to **doxorubicin**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** increases the concentration of anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone). [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to **epirubicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. Public Health England advises avoid. [\[Severe\]](#) Theoretical
- ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **monoclonal antibodies** (**trastuzumab**, **trastuzumab emtansine**). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1267

**Antiarrhythmics** → see TABLE 6 p. 1265 (bradycardia), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)

adenosine · amiodarone · disopyramide · dronedarone · flecainide · lidocaine · propafenone

- ▶ Amiodarone has a long half-life; there is potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped.
- ▶ Since systemic absorption can follow topical application of **lidocaine**, the possibility of interactions should be borne in mind.
- ▶ **Abiraterone** is predicted to increase the exposure to **flecainide**. [\[Severe\]](#) Theoretical
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 185. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 185. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **aliskiren**. [\[Severe\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Aminophylline** is predicted to decrease the efficacy of **adenosine**. Separate administration by 24 hours. [\[Mild\]](#) Theoretical
- ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1266
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**amiodarone**). Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ Antiarrhythmics (**amiodarone**) increase the concentration of antiarrhythmics (**flecainide**). Adjust **flecainide** dose and monitor side effects. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the exposure to antiarrhythmics (**flecainide**). [\[Severe\]](#) Theoretical
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**lidocaine**). [\[Moderate\]](#) Study
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Amiodarone** increases the risk of bradycardia when given with **anticholinesterases, centrally acting**. [\[Moderate\]](#) Anecdotal → Also see TABLE 6 p. 1265
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **propafenone**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics** (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **lidocaine**. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to slightly increase the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 12 p. 1267
- ▶ **Antifungals, azoles** (**fluconazole**) are predicted to increase the exposure to **dronedarone**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **disopyramide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **dronedarone**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles** (**miconazole**) are predicted to increase the exposure to **disopyramide**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles** (**posaconazole**) are predicted to increase the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **antifungals, azoles** (**isavuconazole**). [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **antihistamines, non-sedating** (**fexofenadine**, **mizolastine**). [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **antimalarials** (**piperaquine**). [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **apixaban**. [\[Moderate\]](#) Theoretical
- ▶ **Apixaban** increases the exposure to **dronedarone**. [\[Severe\]](#) Theoretical
- ▶ **Apixaban** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedarone**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular

## Antiarrhythmics (continued)

- side-effects when given with **beta blockers, non-selective** (**carteolol**, **labetalol**, **levobunolol**, **nadolol**, **oxprenolol**, **pindolol**, **sotalol**). Use with caution or avoid. [Severe] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, non-selective** (**carvedilol**). [Moderate] Theoretical
  - ▶ **Propafenone** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective** (**propranolol**). Use with caution or avoid. [Severe] Study
  - ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, non-selective** (**timolol**) and **beta blockers, non-selective** (**timolol**) are predicted to increase the risk of cardiodepression when given with **propafenone**. [Severe] Anecdotal
  - ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedaron**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
  - ▶ **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective** (**acebutolol**, **atenolol**, **betaxolol**, **bisoprolol**, **celiprolol**, **esmolol**). Use with caution or avoid. [Severe] Study
  - ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective** (**metoprolol**). [Moderate] Study
  - ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective** (**nebivolol**) and **beta blockers, selective** (**nebivolol**) are predicted to increase the risk of cardiodepression when given with **propafenone**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
  - ▶ **Dronedaron** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
  - ▶ **Bupropion** is predicted to increase the exposure to **flecainide**. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Dronedaron** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Dronedaron** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
  - ▶ **Caffeine citrate** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
  - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) increase the exposure to **dronedaron** and **dronedaron** increases the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Study
  - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Calcium channel blockers** (**verapamil**) increase the risk of cardiodepression when given with **flecainide**. [Severe] Anecdotal → Also see TABLE 6 p. 1265
  - ▶ **Dronedaron** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **isradipine**, **lacidipine**, **lercarnidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Amiodarone** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers** (**diltiazem**, **verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1265
  - ▶ **Disopyramide** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers** (**verapamil**). [Severe] Theoretical
  - ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
  - ▶ **Amiodarone** increases the concentration of **ciclosporin**. Monitor **ciclosporin** concentration and adjust dose. [Severe] Study
  - ▶ **Dronedaron** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** increases the exposure to **dronedaron**. Avoid. [Severe] Theoretical

- ▶ **Cinacalcet** is predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Propafenone** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 131. [Moderate] Study
- ▶ **Dronedaron** slightly increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Daclatasvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Dronedaron** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of **flecainide**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 106. [Severe] Study → Also see TABLE 6 p. 1265
- ▶ **Propafenone** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Dipyridamole** increases the exposure to **adenosine**. Avoid or adjust dose. [Severe] Study
- ▶ **Dronedaron** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**, **cabergoline**). [Severe] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Amiodarone** slightly increases the exposure to **edoxaban**. [Severe] Study
- ▶ **Dronedaron** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

- ▶ **Dronedaron** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **amiodarone**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **amiodarone**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **flecainide**. Monitor and adjust dose. [Mild] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **lidocaine**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **amiodarone**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **disopyramide**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lidocaine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Amiodarone** increases the risk of thyroid dysfunction when given with **levothyroxine**. Avoid. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the risk of thyroid dysfunction when given with **lithyronine**. Avoid. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **lidocaine**. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dronedaron**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Dronedaron** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedaron)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NSAIDs (celecoxib)** are predicted to increase the exposure to antiarrhythmics (**flecainide, propafenone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **opioids (fentanyl)**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Propafenone** is predicted to decrease the efficacy of **opioids (tramadol)**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Propafenone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Dronedaron** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Propafenone** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **lidocaine**. [Mild] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266

## Antiarrhythmics (continued)

- ▶ **Amiodarone** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Simeprevir** is predicted to increase the concentration of **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Dronedarone** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **SSRIs** (**fluoxetine**, **fluvoxamine**, **paroxetine**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs** (**clitalopram**, **escitalopram**, **fluoxetine**, **fluvoxamine**, **paroxetine**, **sertraline**). [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dronedarone**. Avoid. [Severe] Theoretical
- ▶ **Amiodarone** is predicted to increase the risk of rhabdomyolysis when given with **statins** (**atorvastatin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **statins** (**fluvastatin**). [Severe] Theoretical
- ▶ **Dronedarone** slightly increases the exposure to **statins** (**rosuvastatin**). Adjust dose. [Severe] Study
- ▶ **Amiodarone** increases the risk of rhabdomyolysis when given with **statins** (**simvastatin**). Adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Lidocaine** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **flecainide**. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study

- ▶ **Theophylline** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Dronedarone** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the concentration of **trametinitib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the risk of torsade de pointes when given with **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Propafenone** is predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1266
- ▶ **Dronedarone** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Dronedarone** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Anticholinesterases, centrally acting** → see TABLE 6 p. 1265 (bradycardia)

donepezil · galantamine · rivastigmine

- ▶ Antiarrhythmics (**amiodarone**) increase the risk of bradycardia when given with anticholinesterases, centrally acting. [Moderate] Anecdotal → Also see TABLE 6 p. 1265
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ Anticholinesterases, centrally acting are predicted to increase the risk of bradycardia when given with **beta blockers**, **non-selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1265
- ▶ Anticholinesterases, centrally acting are predicted to increase the risk of bradycardia when given with **beta blockers**, **selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1265
- ▶ **Bupropion** is predicted to increase the exposure to **donepezil**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) increase the risk of bradycardia when given with anticholinesterases, centrally acting. [Moderate] Anecdotal → Also see TABLE 6 p. 1265
- ▶ **Cinacalcet** is predicted to increase the exposure to **donepezil**. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study

- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Rifampicin** is predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **donepezil**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **donepezil**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study

**Antiepileptics** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 18 p. 1268 (hyponatraemia), TABLE 15 p. 1267 (myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 11 p. 1266 (CNS depressant effects)

brivacetam • carbamazepine • eslicarbazepine • ethosuximide • fosphenytoin • gabapentin • lacosamide • lamotrigine • levetiracetam • oxcarbazepine • paraldehyde • perampanel • phenobarbital • phenytoin • pregabalin • primidone • retigabine • rufinamide • stiripentol • tiagabine • topiramate • valproate • vigabatrin • zonisamide

**FOOD AND LIFESTYLE** Increased risk of blurred vision when retigabine taken with alcohol.

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Theoretical
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **albendazole**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1268
- ▶ **Carbamazepine** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **alprazolam**. Adjust alprazolam dose. [Moderate] Theoretical → Also see TABLE 11 p. 1266
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1266
- ▶ **Antacids** decrease the absorption of **gabapentin**. Gabapentin should be taken 2 hours after antacids. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to slightly increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antiarrhythmics (lidocaine)**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**brivacetam**). [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**brivacetam**). [Moderate] Study
- ▶ Antiepileptics (**lamotrigine**) potentially increase the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**lamotrigine**). Adjust lamotrigine dose and monitor carbamazepine concentration, p. 303. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) increase the concentration of antiepileptics (**phenobarbital**). Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**stiripentol**) increase the concentration of antiepileptics (**carbamazepine**). [Severe] Study
- ▶ Antiepileptics (**topiramate**) increase the risk of carbamazepine toxicity when given with antiepileptics (**carbamazepine**). [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to antiepileptics (**eslicarbazepine, oxcarbazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine**) increase the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to antiepileptics (**eslicarbazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**valproate**). [Severe] Study
- ▶ Antiepileptics (**vigabatrin**) decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Mild] Study
- ▶ Antiepileptics (**fosphenytoin**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust lamotrigine dose, p. 303. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust lamotrigine dose, p. 303. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**lamotrigine**). Adjust lamotrigine dose and monitor rash, p. 303. [Severe] Study
- ▶ Antiepileptics (**lamotrigine**) are predicted to increase the concentration of antiepileptics (**oxcarbazepine**) and antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of antiepileptics (**lamotrigine**). Monitor side effects and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of antiepileptics (**perampanel**) and antiepileptics (**perampanel**)

**Antiepileptics** (continued)

increase the concentration of antiepileptics (**oxcarbazepine**). Monitor and adjust dose. [Moderate] Study

- ▶ Antiepileptics (**phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenobarbital**) and antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**phenytoin**). [Moderate] Study
- ▶ Antiepileptics (**fosphephenytoin**) increase the concentration of antiepileptics (**phenobarbital**, **primidone**) and antiepileptics (**phenobarbital**, **primidone**) affect the concentration of antiepileptics (**fosphephenytoin**). [Moderate] Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**phenobarbital**, **primidone**). [Severe] Theoretical
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) potentially decrease the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) potentially decrease the concentration of antiepileptics (**carbamazepine**). Adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) affect the concentration of antiepileptics (**phenytoin**). [Moderate] Study
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**primidone**). Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphephenytoin**, **phenytoin**) decrease the exposure to antiepileptics (**retigabine**). [Moderate] Study
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**rufinamide**). Adjust rufinamide dose, p. 311. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphephenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to antiepileptics (**tiagabine**). Monitor and adjust tiagabine dose, p. 314. [Moderate] Study
- ▶ Antiepileptics (**fosphephenytoin**, **phenytoin**) decrease the concentration of antiepileptics (**topiramate**) and antiepileptics (**topiramate**) increase the concentration of antiepileptics (**fosphephenytoin**, **phenytoin**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antiepileptics (**topiramate**). [Mild] Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of antiepileptics (**valproate**) and antiepileptics (**valproate**) increase the concentration of antiepileptics (**phenobarbital**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**topiramate**) increase the risk of toxicity when given with antiepileptics (**valproate**). [Severe] Study
- ▶ Antiepileptics (**carbamazepine**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**) and antiepileptics (**zonisamide**) affect the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**fosphephenytoin**, **phenytoin**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**topiramate**) potentially increase the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antifungals, azoles (**miconazole**) increase the risk of carbamazepine toxicity when given with carbamazepine. Monitor and adjust dose. [Severe] Anecdotal

- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with **fosphephenytoin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with **phenytoin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (**fluconazole**) and antifungals, azoles (**fluconazole**) increase the concentration of carbamazepine. Avoid or monitor carbamazepine concentration and adjust dose accordingly. [Severe] Theoretical → Also see TABLE 1 p. 1264
- ▶ Antifungals, azoles (**fluconazole**) increase the concentration of antiepileptics (**fosphephenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphephenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Study
- ▶ Fosphephenytoin very markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid fosphephenytoin for 14 days before and during treatment with itraconazole. [Moderate] Study
- ▶ Phenobarbital decreases the concentration of antifungals, azoles (**itraconazole**). Avoid phenobarbital for 14 days before and during treatment with itraconazole. [Moderate] Study
- ▶ Phenytoin very markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid phenytoin for 14 days before and during treatment with itraconazole. [Moderate] Study
- ▶ Primidone is predicted to decrease the concentration of antifungals, azoles (**itraconazole**). [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of carbamazepine. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (**ketoconazole**) and antifungals, azoles (**ketoconazole**) slightly increase the concentration of carbamazepine. Avoid or monitor carbamazepine concentration and adjust dose accordingly. [Moderate] Study
- ▶ Phenobarbital is predicted to decrease the concentration of antifungals, azoles (**ketoconazole**). Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphephenytoin**, **phenytoin**) decrease the exposure to antifungals, azoles (**ketoconazole**). Avoid. [Moderate] Study
- ▶ Primidone is predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (**posaconazole**) and antifungals, azoles (**posaconazole**) increase the concentration of carbamazepine. Avoid. [Moderate] Theoretical
- ▶ Phenobarbital is predicted to decrease the concentration of antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphephenytoin**, **phenytoin**) are predicted to decrease the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ Fosphephenytoin decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to fosphephenytoin. Avoid or adjust voriconazole dose and monitor phenytoin concentration, p. 566. [Moderate] Study
- ▶ Phenytoin decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) increase the exposure to phenytoin. Avoid or adjust voriconazole dose and monitor phenytoin concentration, p. 566. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antifungals, azoles (**voriconazole**). Avoid. [Moderate] Theoretical
- ▶ Antihistamines, sedating (**hydroxyzine**) potentially increase the risk of overheating and dehydration when given with zonisamide. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphephenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antimalarials (**artemether**) (with lumefantrine). Avoid. [Severe] Study

- ▶ **Antimalarials (pyrimethamine)** increase the risk of haematological toxicity when given with antiepileptics (fosphenytoin, phenytoin). [\[Severe\]](#) Study
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of haematological toxicity when given with antiepileptics (phenobarbital, primidone). [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **beta blockers, non-selective (propranolol)**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) slightly decrease the exposure to **bortezomib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) affect the exposure to **bosentan**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **bupropion**. [\[Severe\]](#) Study
- ▶ Valproate increases the exposure to **bupropion**. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of carbamazepine. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **calcium channel blockers (diltiazem)**. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **calcium channel blockers (isradipine)**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cannabis extract**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1266
- ▶ **Capecitabine** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [\[Severe\]](#) Anecdotal
- ▶ **Carbapenems** decrease the concentration of valproate. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the concentration of **caspofungin**. Adjust caspofungin dose, p. 560. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **certinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (phenobarbital, primidone) decrease the concentration of **chloramphenicol**. [\[Moderate\]](#) Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Chlordiazepoxide** affects the concentration of antiepileptics (fosphenytoin, phenytoin). [\[Severe\]](#) Study
- ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ Oxcarbazepine decreases the concentration of **ciclosporin**. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Clobazam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). [\[Severe\]](#) Anecdotal
- ▶ **Stiripentol** increases the concentration of **clobazam**. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1266
- ▶ **Clonazepam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **clozapine**. [\[Moderate\]](#) Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) decrease the exposure to **clozapine**. [\[Moderate\]](#) Anecdotal → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cobicistat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oxcarbazepine is predicted to decrease the concentration of **cobicistat**. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **perampanel**. [\[Mild\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **cobimetinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine**. Adjust lamotrigine dose, p. 303. [\[Moderate\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **corticosteroids (budesonide, dexamethasone, methylprednisolone, prednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study

## Antiepileptics (continued)

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to corticosteroids (fluticasone). [Unknown] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to corticosteroids (prednisone). [Mild] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to alter the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) decrease the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Moderate] Study
- ▶ Carbamazepine decreases the effects of coumarins. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to crizotinib. Avoid. [Severe] Study
- ▶ Carbamazepine is predicted to decrease the exposure to dabigatran. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to dabrafenib. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to daclatasvir. Avoid. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to daclatasvir. Avoid. [Severe] Theoretical
- ▶ Danazol moderately increases the concentration of carbamazepine. Monitor carbamazepine concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to increase the risk of methaemoglobinemia when given with dapsone. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to darifenacin. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to dasabuvir. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to dasatinib. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to slightly decrease the exposure to delamanid. Avoid. [Moderate] Study
- ▶ Lamotrigine is predicted to increase the risk of hyponatraemia when given with desmopressin. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of desogestrel. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Desogestrel is predicted to increase the exposure to lamotrigine. [Moderate] Study
- ▶ Diazepam potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study
- ▶ Diazoxide decreases the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the effects of diazoxide. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the concentration of digoxin. [Moderate] Anecdotal
- ▶ Disulfiram increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to dolutegravir. Adjust dose. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to dolutegravir. Adjust dose. [Severe] Theoretical
- ▶ Carbamazepine is predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) slightly decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Theoretical
- ▶ Carbamazepine slightly decreases the exposure to efavirenz and efavirenz slightly decreases the exposure to carbamazepine. [Severe] Study
- ▶ Phenobarbital is predicted to decrease the exposure to efavirenz and efavirenz affects the concentration of phenobarbital. [Severe] Theoretical
- ▶ Efavirenz is predicted to affect the efficacy of primidone and primidone is predicted to slightly decrease the exposure to efavirenz. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to elbasvir. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ Enteral feeds decreases the absorption of phenytoin. [Severe] Study
- ▶ Enzalutamide is predicted to slightly decrease the exposure to brivaracetam. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to perampanel. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the effects of ergotamine. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to erlotinib. Avoid or adjust erlotinib dose, p. 899. [Severe] Study
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of etonogestrel. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the efficacy of etoposide. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to etravirine. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to fingolimod. [Moderate] Study
- ▶ Fluorouracil increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Folate (folic acid) decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). Monitor concentration and adjust dose. [Severe] Study
- ▶ Folate (folic acid) are predicted to decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to gefitinib. Avoid. [Severe] Study
- ▶ Grapefruit juice slightly increases the exposure to carbamazepine. Monitor carbamazepine concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to grazoprevir. Avoid. [Severe] Study

- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** transiently increase the concentration of **carbamazepine**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **fosphenytoin**. Monitor **phenytoin** concentration and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **phenytoin**. Monitor **phenytoin** concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Oxcarbazepine** decreases the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Isoniazid** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Moderate] Study → Also see TABLE 12 p. 1267
- ▶ **Isoniazid** markedly increases the concentration of **carbamazepine** and **carbamazepine** increases the risk of hepatotoxicity when given with **isoniazid**. Monitor **carbamazepine** concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **levodopa**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) increase the risk of hypothyroidism when given with **levothyroxine**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **levothyroxine**. [Moderate] Theoretical
- ▶ **Carbamazepine** increases the risk of hypothyroidism when given with **levothyroxine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to increase the risk of hypothyroidism when given with **liothyronine**. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **liothyronine**. [Moderate] Theoretical
- ▶ **Carbamazepine** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Oxcarbazepine** is predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** slightly increase the concentration of **carbamazepine**. Monitor **carbamazepine** concentration and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **Macrolides (erythromycin)** markedly increase the concentration of **carbamazepine**. Monitor **carbamazepine** concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Levetiracetam** decreases the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **metronidazole**. [Moderate] Study

## Antiepileptics (continued)

- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the effects of **metyrapone**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Carbamazepine markedly decreases the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Theoretical
- ▶ Carbamazepine is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **monoclonal antibodies (trastuzumab emtansine)**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to slightly decrease the exposure to **nateligline**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **netupitant**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [Moderate] Study
- ▶ Carbamazepine is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **nevirapine**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Carbamazepine is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nitisone**. Adjust nitisone dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ Carbamazepine potentially decreases the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Carbamazepine decreases the concentration of **opioids (tramadol)**. Adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Carbamazepine decreases the concentration of **paliperidone**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1264
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) decrease the concentration of **phenothiazines (chlorpromazine)**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **praziquantel**. Avoid. [Moderate] Study

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Quinolones** (**ciprofloxacin**) affect the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics (**phenobarbital**, **primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **brivacetam**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **lamotrigine**. Adjust **lamotrigine** dose, p. 303. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **risperidone**. Adjust **risperidone** dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 466. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sofenib**. [Moderate] Theoretical
- ▶ **SSRIs** (**fluoxetine**, **fluvoxamine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs** (**sertraline**) potentially increase the risk of toxicity when given with antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the concentration of **SSRIs** (**paroxetine**). [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **brivacetam**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, **eslicarbazepine**) are predicted to decrease the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) potentially decrease the exposure to **statins** (**atorvastatin**, **simvastatin**). [Moderate] Anecdotal
- ▶ **Carbamazepine** moderately decreases the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Eslicarbazepine** moderately decreases the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides** (**sulfadiazine**) increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Moderate] Study
- ▶ **Sulfonamides** (**sulfadiazine**) are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides** (**sulfadiazine**) increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes** (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes** (**docetaxel**). [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **tetracyclines** (**doxycycline**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1264
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical

## Antiepileptics (continued)

- ▶ Carbamazepine potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to carbamazepine. Adjust dose. [Moderate] Anecdotal
- ▶ Fosphenytoin is predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Study
- ▶ Phenytoin is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) increase the clearance of **topotecan**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **torsemide**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1264
- ▶ Carbamazepine decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ Carbamazepine decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1268
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Trimethoprim** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of **vitamin D substances**. [Moderate] Study

- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Valproate slightly increases the exposure to **zidovudine**. [Moderate] Study
- ▶ Carbamazepine moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266

**Antifungals, azoles** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 9 p. 1266 (QT-interval prolongation)

clotrimazole • fluconazole • isavuconazole • itraconazole • ketoconazole • miconazole • posaconazole • voriconazole

- ▶ In general, **fluconazole** interactions relate to multiple-dose treatment.
- ▶ The use of carbonated drinks, such as cola, improves **itraconazole**, **ketoconazole**, and **posaconazole** bioavailability.
- ▶ Disulfiram-like reaction might occur with **ketoconazole** on consumption of alcohol.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **ketoconazole** should be borne in mind.
- ▶ Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.

- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 185. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Itraconazole** increases the risk of **busulfan** toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) increase the exposure to **almotriptan**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alprazolam**. [Severe] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** potentially decreases the exposure to **aminoglycosides (tobramycin)**. [Moderate] Anecdotal
- ▶ **Antacids** decrease the absorption of **itraconazole**. **Antacids** should be taken 1 hour before or 2 hours after **itraconazole**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **isavuconazole**. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedaron)**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. [Severe] Theoretical → Also see TABLE 1 p. 1264
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid **fosphenytoin** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fosphenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 566. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the exposure to **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** decrease the concentration of **itraconazole**. Avoid **phenobarbital** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ **Miconazole** increases the risk of **carbamazepine** toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** increases the risk of **phenytoin** toxicity when given with **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Fluconazole** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Miconazole** increases the risk of **phenytoin** toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (artemether)** (with lumefantrine). [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Ketoconazole** increases the exposure to **antimalarials (mefloquine)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** slightly to moderately increases the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical

## Antifungals, azoles (continued)

- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (itraconazole, ketoconazole) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) slightly increase the exposure to **bortezomib**. [Moderate] Study
- Fluconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- Bosentan** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- Itraconazole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- Ketoconazole** moderately increases the exposure to **bosentan**. [Moderate] Study
- Voriconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **bosutinib**. Avoid or adjust bosutinib dose. [Severe] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust bosutinib dose. [Severe] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 325. [Severe] Study
- Miconazole** is predicted to increase the concentration of **buspirone**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- Miconazole** is predicted to increase the exposure to **calcium channel blockers (amlodipine, clevidipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- Fluconazole** (high-dose) is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- Posaconazole** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical

- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole) increase the concentration of **ciclosporin**. [Severe] Study
- Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 226. [Moderate] Study
- Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 226. [Moderate] Theoretical
- Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
- Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- Cobicistat** is predicted to increase the exposure to antifungals, azoles (fluconazole, posaconazole). [Moderate] Theoretical
- Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- Cobicistat** is predicted to increase the exposure to **itraconazole**. Adjust itraconazole dose, p. 564. [Moderate] Theoretical
- Cobicistat** is predicted to increase the exposure to **ketoconazole**. Adjust ketoconazole dose, p. 641. [Moderate] Theoretical
- Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole) are predicted to increase the exposure to **colchicine**. Adjust colchicine dose, p. 1020. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1020. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **corticosteroids (budesonide)**. Avoid. [Severe] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **corticosteroids (ciclesonide)**. Avoid. [Moderate] Theoretical
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to inhaled **corticosteroids (fluticasone)**. [Severe] Study
- Miconazole** is predicted to increase the concentration of **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids (mometasone)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of side-effects when given with **corticosteroids (triamcinolone)**. [Severe] Theoretical
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Didanosine** (buffered) decreases the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Separate administration by 2 hours. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Itraconazole** markedly increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [Severe] Theoretical
- ▶ **Posaconazole** is predicted to increase the concentration of **digoxin**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Study
- ▶ **Ketoconazole** moderately increases the exposure to **drosiprenone**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Itraconazole** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Ketoconazole** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **itraconazole**. Avoid **efavirenz** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **ketoconazole**. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mid] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefinitib**. [Moderate] Theoretical

## Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
- H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
- H<sub>2</sub> receptor antagonists** are predicted to slightly decrease the exposure to **posaconazole**. Avoid use of **posaconazole** oral suspension. [Moderate] Study
- Itraconazole** increases the concentration of **haloperidol**. [Moderate] Study
- HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- Fluconazole** slightly increases the exposure to **HIV-protease inhibitors** (**tipranavir**). Avoid or adjust dose. [Moderate] Study
- HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [Severe] Study
- HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [Moderate] Study
- Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- Imatinib** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or **lumacaftor** with **ivacaftor** dose, p. 281. [Severe] Study
- Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Theoretical

- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 1264
- Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**). [Moderate] Theoretical
- Lumacaftor** is predicted to decrease the exposure to **fluconazole**. Adjust dose. [Mild] Theoretical
- Lumacaftor** is predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- Macrolides** (**clarithromycin**) are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- Macrolides** (**erythromycin**) are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- Miconazole** is predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- Miconazole** is predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies** (**brentuximab vedotin**). Monitor and adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies** (**trastuzumab emtansine**). Avoid. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **netupitant**. [Mild] Study

- ▶ **Netupitant** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Fluconazole** slightly to moderately increases the exposure to **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** moderately decreases the exposure to **itraconazole**. Avoid **nevirapine** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- ▶ **Nevirapine** moderately decreases the exposure to **ketoconazole**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose, p. 1031. [Moderate] Study
- ▶ **Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 909. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **posaconazole**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Miconazole** greatly increases the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust **sildenafil** dose, p. 766. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **proton pump inhibitors**. [Mild] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** (oral suspension). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **proton pump inhibitors (esomeprazole, omeprazole)**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [Severe] Study

## Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1157. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of tretinoin toxicity when given with **retinoids (tretinoin)**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study
- Fluconazole** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- Rifabutin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- Ketoconazole** is predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **ketoconazole**. Avoid. [Severe] Theoretical
- Miconazole** is predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- Rifabutin** decreases the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 566. [Severe] Study
- Rifampicin** slightly decreases the exposure to **fluconazole**. Adjust dose. [Moderate] Study
- Rifampicin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- Rifampicin** markedly decreases the exposure to **itraconazole**. Avoid **rifampicin** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- Rifampicin** markedly decreases the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifampicin**. Avoid. [Moderate] Study
- Rifampicin** is predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Anecdotal
- Rifampicin** very markedly decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- Itraconazole** is predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Study
- Ketoconazole** moderately increases the exposure to **riociguat**. Avoid. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **rufoxitinib**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **rufoxitinib**. Adjust dose and monitor side effects. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **saxagliptin**. [Mid] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **saxagliptin**. [Moderate] Study

- Fluconazole** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- Voriconazole** is predicted to increase the exposure to **SSRIs (citalopram)**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid, or adjust **dapoxetine** dose, p. 773. [Severe] Study
- St John's Wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- St John's Wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- Miconazole** potentially increases the exposure to **statins (atorvastatin)**. [Severe] Anecdotal
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1264
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1264
- Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins (fluvastatin)**. [Severe] Theoretical → Also see TABLE 1 p. 1264
- Miconazole** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study → Also see TABLE 1 p. 1264
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study → Also see TABLE 1 p. 1264
- Antifungals, azoles (**fluconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- Miconazole** is predicted to increase the concentration of **taxanes** (**docetaxel**). Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **taxanes** (**docetaxel**). Avoid or adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1264
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1266
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 9 p. 1266
- Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**clotrimazole**, **ketoconazole**) are predicted to decrease the exposure to **vitamin D substances** (**colecalciferol**). [Moderate] Theoretical

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vitamin D substances** (**paricalcitol**). [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

**Antihistamines, non-sedating** → see TABLE 9 p. 1266 (QT-interval prolongation)

acrivastine • azelastine • bilastine • cetirizine • desloratadine • fexofenadine • levocetirizine • loratadine • mizolastine

**FOOD AND LIFESTYLE** Apple juice and orange juice decrease the exposure to fexofenadine.

- Antacids** decrease the absorption of **fexofenadine**. Separate administration by 2 hours. [Mild] Study
- Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Moderate] Theoretical
- Aprepitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Certinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
- Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- Crizotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Grapefruit juice** slightly decreases the exposure to **bilastine**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study
- Antihistamines, non-sedating** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- Imatinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Lapatinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
- Lumacaftor** is predicted to affect the exposure to **fexofenadine**. Monitor and adjust dose. [Moderate] Theoretical
- Macrolides** (**clarithromycin**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- Macrolides** (**erythromycin**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Mirabegron** is predicted to increase the exposure to **fexofenadine**. [Mild] Theoretical
- Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- Netupitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Nilotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- Rifampicin** is predicted to decrease the exposure to **bilastine**. [Moderate] Theoretical

**Antihistamines, non-sedating** (continued)

- ▶ **Rifampicin** increases the clearance of **fexofenadine**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **fexofenadine**. [Severe] Theoretical

**Antihistamines, sedating** → see TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)

alimemazine • buclizine • chlorphenamine • cinnarizine • clemastine • cyclizine • cyproheptadine • hydroxyzine • ketotifen • pizotifen • promethazine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
  - ▶ **Cyproheptadine** decreases the effects of **metirapone**. Avoid. [Moderate] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
  - ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [Moderate] Anecdotal
- Antimalarials** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

artemether • arteminol • atovaquone • chloroquine • lumefantrine • mefloquine • piperaquine • primaquine • proguanil • pyrimethamine • quinine

**PHARMACOLOGY** Piperaquine has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase**. Avoid. [Moderate] Theoretical
- ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antacids** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **artemether** (with lumefantrine). [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [Moderate] Study
- ▶ Antimalarials (**proguanil**) are predicted to increase the risk of side-effects when given with antimalarials (**pyrimethamine**). [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **artemether** (with lumefantrine). [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
- ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose. [Severe] Anecdotal
- ▶ **Efavirenz** decreases the concentration of **artemether**. [Severe] Study
- ▶ **Efavirenz** moderately decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to **proguanil**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **artemether**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **artemether**. [Unknown] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **piperaquine**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **chloroquine**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **quinine**. [Moderate] Study
- ▶ Antimalarials (**artemether, atovaquone, chloroquine, mefloquine, primaquine, proguanil, pyrimethamine, quinine**) are predicted to affect the exposure to **histamine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **artemether** (with lumefantrine). [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** is predicted to increase the exposure to **artemether** (with lumefantrine). [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical

- ▶ **Imatinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **artemether** (with lumefantrine). [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [Moderate] Theoretical
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Chloroquine** decreases the efficacy of **rabies vaccine**. Avoid. [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **mefloquine**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **quinine**. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
- ▶ **Pyrimethamine** increases the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Tetracyclines (tetracycline)** decrease the concentration of **atovaquone**. [Moderate] Study
- ▶ **Pyrimethamine** increases the risk of side-effects when given with **trimethoprim**. [Severe] Study
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- Apixaban** → see TABLE 3 p. 1264 (anticoagulant effects)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly to moderately increase the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
- Apomorphine** → see dopamine receptor agonists
- Apraclonidine** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- Apremilast**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
- Aprepitant**
- ▶ **Aprepitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem)** increase the exposure to **aprepitant** and **aprepitant** increases the exposure to **calcium channel blockers (diltiazem)**. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study

## Aprepitant (continued)

- ▶ Aprepitant is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ Aprepitant increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ Aprepitant is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ Aprepitant moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Aprepitant is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Aprepitant increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical
- ▶ Aprepitant is predicted to moderately increase the exposure to **dusteride**. [Mild] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **fosoterodine**. Adjust **fosoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ Aprepitant is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Aprepitant is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ Aprepitant is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ Aprepitant is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ Aprepitant is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Aprepitant is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Aprepitant increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Aprepitant is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Aprepitant is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Aprepitant is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Aprepitant is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical

- ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**.  
[[Mild](#)] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**.  
Adjust dose. [[Moderate](#)] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **trazodone**.  
[[Moderate](#)] Theoretical
- ▶ **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [[Severe](#)] Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **venetoclax**.  
Avoid or adjust **venetoclax** dose, p. 919. [[Severe](#)] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [[Severe](#)] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **zopiclone**.  
Adjust dose. [[Moderate](#)] Study
- Argatroban** → see TABLE 3 p. 1264 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [[Severe](#)] Theoretical
- Aripiprazole** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study → Also see TABLE 11 p. 1266
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [[Moderate](#)] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Idealalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [[Severe](#)] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Macrolides** (**clarithromycin**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [[Moderate](#)] Study
- Arsenic trioxide** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)
- Artemether** → see antimalarials
- Arteminol** → see antimalarials
- Articaine** → see TABLE 11 p. 1266 (CNS depressant effects)
- Ascorbic acid**
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [[Severe](#)] Theoretical
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **iron chelators** (**desferrioxamine**). [[Severe](#)] Theoretical
- Asenapine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [[Moderate](#)] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [[Severe](#)] Theoretical → Also see TABLE 8 p. 1265
- ▶ **SSRIs** (**fluvoxamine**) increase the exposure to **asenapine**. [[Moderate](#)] Study
- ▶ **SSRIs** (**paroxetine**) moderately increase the exposure to **asenapine**. [[Moderate](#)] Study
- Asparaginase** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [[Severe](#)] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Asparaginase** affects the efficacy of **methotrexate**. [[Severe](#)] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids** (**vincristine**). **Vincristine** should be taken 3 to 24 hours before **asparaginase**. [[Severe](#)] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- Aspirin** → see TABLE 4 p. 1264 (antiplatelet effects)
- ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [[Severe](#)] Study
- ▶ **Antacids** decrease the absorption of **aspirin** (high-dose). [[Moderate](#)] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates** (**alendronic acid**, **ibandronic acid**). [[Moderate](#)] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates** (**sodium clodronate**). [[Severe](#)] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [[Moderate](#)] Study
- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [[Moderate](#)] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [[Severe](#)] Theoretical
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators** (**deferasirox**). [[Severe](#)] Theoretical
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [[Severe](#)] Theoretical
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [[Severe](#)] Theoretical
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [[Severe](#)] Theoretical
- ▶ **Aspirin** (high-dose) potentially increases the risk of seizures when given with **quinolones**. [[Severe](#)] Theoretical
- ▶ **Aspirin** decreases the effects of **sulfipyrazone**. [[Moderate](#)] Study → Also see TABLE 4 p. 1264
- ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [[Severe](#)] Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [[Severe](#)] Study
- Ataluren**
  - ▶ **Ataluren** increases the exposure to **adefovir**. [[Moderate](#)] Study
  - ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [[Severe](#)] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [[Moderate](#)] Study
- Atazanavir** → see HIV-protease inhibitors
- Atenolol** → see beta blockers, selective
- Atomoxetine**
  - ▶ **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. [[Severe](#)] Theoretical
  - ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists** (high-dose). [[Moderate](#)] Study
  - ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [[Severe](#)] Study
  - ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [[Severe](#)] Study
  - ▶ **Monoamine-oxidase A and B inhibitors**, **irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [[Severe](#)] Theoretical

## Atomoxetine (continued)

- ▶ **Panobinostat** is predicted to increase the exposure to atomoxetine. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
  - ▶ **Terbinafine** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
- Atorvastatin** → see statins
- Atovaquone** → see antimalarials
- Atracurium** → see neuromuscular blocking drugs, non-depolarising
- Atropine** → see TABLE 10 p. 1266 (antimuscarinics)
- ▶ **Atropine** increases the risk of severe hypertension when given with **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study

**Avanafil** → see phosphodiesterase type-5 inhibitors

- ▶ **Axitinib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to axitinib. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to axitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Efavirenz** is predicted to decrease the exposure to axitinib. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to axitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to axitinib. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to axitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to axitinib. [Moderate] Theoretical

**Azacitidine** → see TABLE 15 p. 1267 (myelosuppression)

**Azathioprine** → see TABLE 15 p. 1267 (myelosuppression)

- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal
  - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust azathioprine dose, p. 787. [Severe] Study
  - ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
  - ▶ **Febuxostat** is predicted to increase the exposure to azathioprine. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with azathioprine. Public Health England advises avoid. [Severe] Theoretical
- Azelastine** → see antihistamines, non-sedating
- Azilsartan** → see angiotensin-II receptor antagonists
- Azithromycin** → see macrolides
- Bacillus Calmette-Guérin vaccine** → see live vaccines
- Bacitracin** → see TABLE 2 p. 1264 (nephrotoxicity)
- Baclofen** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)
- ▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1265
- Balsalazide** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
- Bambuterol** → see beta<sub>2</sub> agonists
- Basiliximab** → see monoclonal antibodies
- Bazedoxifene**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to bazedoxifene. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to bazedoxifene. [Moderate] Theoretical
- Beclometasone** → see corticosteroids
- Bedaquiline** → see TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to bedaquiline. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1266
- ▶ **Aprepitant** is predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to bedaquiline. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical
- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with bedaquiline. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Study
- ▶ **Crizotinib** is predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Efavirenz** is predicted to decrease the exposure to bedaquiline. Avoid. [Severe] Study
- ▶ **Enzalutamide** decreases the exposure to bedaquiline. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to bedaquiline. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to bedaquiline. Avoid prolonged use. [Mid] Study

- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study  
→ Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

#### Bee venom extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

- ▶ **ACE inhibitors** increase the risk of hypersensitivity when given with **bee venom extract**. Avoid. [Severe] Study

#### Belatacept

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid. [Severe] Theoretical

**Belimumab** → see monoclonal antibodies

**Bendamustine** → see alkylating agents

**Bendroflumethiazide** → see thiazide diuretics

**Benperidol** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265

▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1265

- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1265

**Benzydamine** → see NSAIDs

**Benzylopenicillin** → see penicillins

**Beta blockers, non-selective** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation)  
carteolol • carvedilol • labetalol • levobunolol • nadolol • oxprenolol • pindolol • propranolol • sotalol • timolol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **carteolol**, **levobunolol**, and **timolol**, the possibility of interactions should be borne in mind.

- ▶ **Abiraterone** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **carvedilol**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular side-effects when given with **propranolol**. Use with caution or avoid. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, non-selective (**carteolol**, **labetalol**, **levobunolol**, **nadolol**, **oxprenolol**, **pindolol**, **sotalol**). Use with caution or avoid. [Severe] Study
- ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Moderate] Anecdotal → Also see TABLE 6 p. 1265
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, non-selective (**carvedilol**, **labetalol**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ **Intravenous calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ **Oral calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **carvedilol**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** (high-dose) are predicted to increase the exposure to **timolol**. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **carvedilol**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **propranolol**. Monitor and adjust **propranolol** dose. [Moderate] Study
- ▶ **Propranolol** slightly to moderately increases the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to beta blockers, non-selective (**carvedilol**, **timolol**). [Moderate] Study
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with

**Beta blockers, non-selective** (continued)

sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Severe\]](#) Study

- ▶ **Terbinafine** is predicted to increase the exposure to beta blockers, non-selective (**carvedilol, timolol**). [\[Moderate\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study

**Beta blockers, selective** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension)

acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol

- ▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
- ▶ Orange juice greatly decreases the exposure to **celiprolol**.
- ▶ **Abiraterone** is predicted to increase the exposure to beta blockers, selective (**metoprolol, nebivolol**). [\[Moderate\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **nebivolol** and **nebivolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Moderate\]](#) Anecdotal → Also see TABLE 6 p. 1265
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ Intravenous **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ Oral **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1265 → Also see TABLE 8 p. 1265
- ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** greatly decreases the exposure to **celiprolol**. [\[Moderate\]](#) Study

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study

- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [\[Mild\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **celiprolol**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study

- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [\[Moderate\]](#) Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical

**Beta<sub>2</sub> agonists** → see TABLE 17 p. 1268 (reduced serum potassium)

bambuterol · formoterol · indacaterol · olodaterol · salbutamol · salmeterol · terbutaline · vilanterol

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists (high-dose)**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [\[Moderate\]](#) Anecdotal
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [\[Moderate\]](#) Anecdotal
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [\[Severe\]](#) Theoretical

**Betahistines**

- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical

**Betamethasone** → see corticosteroids

**Betaxolol** → see **beta blockers, selective**

**Bevacizumab** → see monoclonal antibodies

**Bexarotene** → see retinoids

**Bezafibrate** → see fibrates

**Bicalutamide**

- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

**Bilastine** → see antihistamines, non-sedating

**Biphasic insulin aspart** → see insulins

**Biphasic insulin lispro** → see insulins

**Biphasic isophane insulin** → see insulins

**Bisacodyl** → see TABLE 17 p. 1268 (reduced serum potassium)

**Bisoprolol** → see beta blockers, selective

**Bisphosphonates** → see TABLE 2 p. 1264 (nephrotoxicity)

alendronic acid • ibandronic acid • pamidronate • risedronate • sodium clodronate • zoledronic acid

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1264
- ▶ **Antacids** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **antacids**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **ibandronic acid**. Avoid **antacids** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **sodium clodronate**. Avoid **antacids** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates** (**alendronic acid**, **ibandronic acid**). [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronic acid**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **sodium clodronate**. Avoid **calcium salts** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Iron** (oral) is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **iron** (oral) for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ **Iron** (oral) decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Iron** (oral) decreases the absorption of **sodium clodronate**. Avoid **iron** (oral) for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators** (**deferasirox**). [Severe] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **sodium clodronate**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates** (**alendronic acid**, **ibandronic acid**). [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **sodium clodronate**. [Severe] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **alendronic acid**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study

- ▶ Oral **zinc** decreases the absorption of oral **sodium clodronate**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study

**Bivalirudin** → see TABLE 3 p. 1264 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical

**Bleomycin** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Monoclonal antibodies** (**brentuximab vedotin**) increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Platinum compounds** (**cisplatin**) increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1267

**Binatumomab** → see monoclonal antibodies

**Bortezomib** → see TABLE 8 p. 1265 (hypotension), TABLE 15 p. 1267 (myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Macrolides** (**clarithromycin**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study

## Bosentan

- ▶ **Bosentan** is predicted to decrease the exposure to **antiarrhythmics** (**dronedarone**). [Severe] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) affect the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**itraconazole**) are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**ketoconazole**) moderately increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Antifungals**, azoles (**voriconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antifungals**, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **isradipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ **Cephalosporins** (**ceftobiprole**) are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study

**Bosentan** (continued)

- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical

- ▶ **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
  - ▶ **Rifampicin** affects the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
  - ▶ **Bosentan** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
  - ▶ **Bosentan** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **Bosentan** increases the risk of hepatotoxicity when given with **sulfonylureas (glibenclamide)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
  - ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- Bosutinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before **antacids**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 9 p. 1266
  - ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study
  - ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
  - ▶ **Favirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study

- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical

**Botulinum toxin type A** → see TABLE 20 p. 1268 (neuromuscular blocking effects)

**Botulinum toxin type B** → see TABLE 20 p. 1268 (neuromuscular blocking effects)

### Bowel cleansing preparations

**ROUTE-SPECIFIC INFORMATION** Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption may be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

**Brentuximab vedotin** → see monoclonal antibodies

**Brimonidine** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

### Brinzolamide

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Brivaracetam** → see antiepileptics

**Bromfenac** → see NSAIDs

**Bromocriptine** → see dopamine receptor agonists

**Bucizine** → see antihistamines, sedating

**Budesonide** → see corticosteroids

**Bumetanide** → see loop diuretics

**Bupivacaine** → see anaesthetics, local

**Buprenorphine** → see opioids

**Bupropion** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Bupropion** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (donepezil)**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Antiepileptics (valproate)** increase the exposure to **bupropion**. [Severe] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [Moderate] Study
- ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **dopamine receptor agonists (amantadine)**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **bupropion**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** slightly to moderately decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [Moderate] Theoretical
- ▶ **Methylnthionium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1267

**Buspirone** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **buspirone**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **buspirone**. Avoid. [Mild] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study

**Busulfan** → see alkylating agents

**Cabazitaxel** → see taxanes

**Cabergoline** → see dopamine receptor agonists

**Cabozantinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266

- ▶ **Aprepitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Idelalisib** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical

#### Caffeine citrate

- ▶ **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly decrease the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

**Calcipotriol** → see vitamin D substances

#### Calcitonin (salmon)

- ▶ **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor **lithium** concentration and adjust dose. [Moderate] Study

**Calcitriol** → see vitamin D substances

**Calcium acetate** → see calcium salts

**Calcium carbonate** → see calcium salts

**Calcium channel blockers** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension)

amlodipine • clevipidine • diltiazem • felodipine • isradipine • lacidipine • lercanidipine • nicardipine • nifedipine • nimodipine • verapamil

- ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 185. **[Severe]** Study → Also see **TABLE 8 p. 1265**
- ▶ **Verapamil** moderately increases the exposure to **aliskiren**. **[Moderate]** Study → Also see **TABLE 8 p. 1265**
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. **[Moderate]** Theoretical → Also see **TABLE 8 p. 1265**
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alprazolam**. **[Severe]** Study
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. **[Moderate]** Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. **[Severe]** Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. **[Severe]** Theoretical → Also see **TABLE 6 p. 1265**
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the exposure to **antiarrhythmics (dronedaron)** and **antiarrhythmics (dronedaron)** increase the exposure to calcium channel blockers (**diltiazem, verapamil**). **[Moderate]** Study
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. **[Severe]** Anecdotal → Also see **TABLE 6 p. 1265**
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. **[Moderate]** Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. **[Moderate]** Anecdotal → Also see **TABLE 6 p. 1265**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **diltiazem**. **[Severe]** Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **isradipine**. Avoid. **[Moderate]** Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **verapamil**. **[Severe]** Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **antiepileptics (carbamazepine)**. **[Severe]** Anecdotal
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. **[Severe]** Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, clevipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**). Use with caution and adjust dose. **[Moderate]** Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Study
- ▶ **Antifungals, azoles (fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). **[Moderate]** Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). **[Severe]** Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. **[Severe]** Theoretical
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with calcium channel blockers. **[Severe]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **antimalarials (piperazine)**. **[Severe]** Theoretical
- ▶ **Verapamil** is predicted to increase the exposure to **apixaban**. **[Moderate]** Theoretical
- ▶ **Apixaban** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Study
- ▶ **Diltiazem** increases the exposure to **apixaban** and **apixaban** increases the exposure to **diltiazem**. **[Moderate]** Study
- ▶ **Verapamil** is predicted to increase the exposure to **apixaban** and **apixaban** is predicted to increase the exposure to **verapamil**. **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **axitinib**. **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. **[Mild]** Theoretical
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. **[Severe]** Study → Also see **TABLE 6 p. 1265** → Also see **TABLE 8 p. 1265**
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. **[Severe]** Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. **[Moderate]** Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cabozantinib**. **[Moderate]** Theoretical
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**). Monitor and adjust dose. **[Moderate]** Study → Also see **TABLE 8 p. 1265**
- ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. **[Moderate]** Study → Also see **TABLE 8 p. 1265**
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**).

**Calcium channel blockers** (continued)

Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1265

- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **certinib**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, nifedipine, verapamil**) increase the concentration of **ciclosporin**. [Severe] Study
- **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- **Crizotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **Verapamil** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 131. [Severe] Study
- Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Anecdotal
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1265
- Calcium channel blockers (**diltiazem, verapamil**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Verapamil** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **Enzalutamide** decreases the exposure to **diltiazem**. [Severe] Study
- **Enzalutamide** decreases the exposure to **isradipine**. Avoid. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **verapamil**. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical

- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **figulimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- **Grapefruit juice** very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- **Grapefruit juice** increases the exposure to calcium channel blockers (**nifedipine, verapamil**). Avoid. [Mild] Study
- **Grapefruit juice** increases the exposure to **felodipine**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- **Grapefruit juice** increases the exposure to **nifedipine**. [Mild] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- **H<sub>2</sub> receptor antagonists (cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **verapamil**. [Moderate] Study
- **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to calcium channel blockers (**diltiazem, isradipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1265
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study → Also see TABLE 8 p. 1265
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine, clevidipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**) in pregnant women. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1265
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **diltiazem**. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **isradipine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **nifedipine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **verapamil**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Amlodipine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 198. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Sulfapyrazone** decreases the exposure to **verapamil**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical

**Calcium channel blockers** (continued)
