- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical

- **Verapamil** is predicted to increase the exposure to **topotecan**. [Severe] Study

- **Verapamil** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study

- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical

- Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Calcium chloride** → see calcium salts

**Calcium gluconate** → see calcium salts

**Calcium lactate** → see calcium salts

**Calcium phosphate** → see calcium salts

**Calcium salts**

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

**SEPARATION OF ADMINISTRATION** Calcium carbonate-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- Oral calcium salts decrease the absorption of **alkylating agents** (**estramustine**). [Severe] Study

- **Calcium carbonate** decreases the absorption of **antimalarials** (**chloroquine**). Separate administration by at least 4 hours. [Moderate] Study

- **Calcium carbonate** is predicted to decrease the absorption of **antimalarials** (**proguanil**). Separate administration by at least 2 hours. [Moderate] Study

- Oral calcium salts decrease the absorption of **bisphosphonates** (**alendronic acid**). Alendronic acid should be taken at least 30 minutes before calcium salts. [Moderate] Study

- Oral calcium salts are predicted to decrease the absorption of oral **bisphosphonates** (**ibandronic acid**). Avoid calcium salts for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical

- Oral calcium salts decrease the absorption of **bisphosphonates** (**risedronate**). Separate administration by at least 2 hours. [Moderate] Study

- Oral calcium salts decrease the absorption of **bisphosphonates** (**sodium clodronate**). Avoid calcium salts for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study

- **Cephalosporins** (**ceftriaxone**) increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. [Severe] Anecdotal

- **Cephalosporins** (**ceftriaxone**) increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. [Severe] Anecdotal

- Intravenous **calcium salts** increase the concentration of **digoxin**. Avoid. [Moderate] Anecdotal

- Oral calcium salts decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study

- Oral calcium salts decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [Severe] Study

- **Calcium carbonate** decreases the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study

- **Calcium carbonate** decreases the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. [Moderate] Study

- **Calcium carbonate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical

- Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal

- **Calcium carbonate** decreases the absorption of **quinolones** (**ciprofloxacin**, **nalidixic acid**). Separate administration by 2 hours. [Moderate] Study

- **Calcium carbonate** decreases the absorption of **quinolones** (**norfloxacin**). **Norfloxacin** should be taken 2 hours before or 4 hours after **calcium carbonate**. [Moderate] Study

- **Calcium carbonate** is predicted to slightly decrease the exposure to **rilpivirine**. **Calcium carbonate** should be taken 2 hours before or 4 hours after **rilpivirine**. [Severe] Theoretical

- Oral calcium salts decrease the absorption of **strontium ranelate**. Separate administration by 2 hours. [Moderate] Study

- **Calcium carbonate** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical

- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal

- **Calcium carbonate** is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal

- Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study

**Canagliflozin** → see TABLE 14 p. 1267 (antidiabetic drugs), TABLE 8 p. 1265 (hypotension)

- **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 661. [Moderate] Study

**Canakinumab** → see monoclonal antibodies

**Candesartan** → see angiotensin-II receptor antagonists

**Cangrelor** → see TABLE 4 p. 1264 (antiplatelet effects)

**Cannabis extract** → see TABLE 11 p. 1266 (CNS depressant effects)

- **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1266

- **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

- **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

- **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical

- **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

- **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical

- **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical

**Capecitabine** → see TABLE 15 p. 1267 (myelosuppression)

- **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study

- **Capecitabine** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). [Severe] Anecdotal

- **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal

- **Folates** (**folic acid**) are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal

- **Folates** (**folic acid**) increase the risk of toxicity when given with **capecitabine**. [Severe] Study

- **H<sub>2</sub> receptor antagonists** (**cimetidine**) are predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. Public Health England advises avoid. [Severe] Theoretical

► **Metronidazole** is predicted to increase the risk of **capecitabine** toxicity when given with **capecitabine**. [Severe] Theoretical

**Capreomycin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268 (ototoxicity)

**Captopril** → see ACE inhibitors

**Carbamazepine** → see antiepileptics

**Carbapenems**

ertapenem • imipenem • meropenem

► **Carbapenems** decrease the concentration of **antiepileptics (valproate)**. Avoid. [Severe] Anecdotal

► **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal

► **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal

**Carbidopa**

► **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. [Moderate] Theoretical

**Carbimazole** → see TABLE 15 p. 1267 (myelosuppression)

► **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical

► **Carbimazole** decreases the effects of **metypapone**. Avoid. [Moderate] Theoretical

**Carboplatin** → see platinum compounds

**Carfilzomib** → see TABLE 15 p. 1267 (myelosuppression)

**Carmustine** → see alkylating agents

**Carteolol** → see beta blockers, non-selective

**Carvedilol** → see beta blockers, non-selective

**Caspofungin**

► **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 560. [Moderate] Theoretical

► **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study

► **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 560. [Moderate] Theoretical

► **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study

► **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical

► **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 560. [Moderate] Study

**Catumaxomab** → see monoclonal antibodies

**Cefaclor** → see cephalosporins

**Cefadroxil** → see cephalosporins

**Cefalexin** → see cephalosporins

**Cefixime** → see cephalosporins

**Cefotaxime** → see cephalosporins

**Cefradine** → see cephalosporins

**Ceftaroline** → see cephalosporins

**Ceftazidime** → see cephalosporins

**Ceftobiprole** → see cephalosporins

**Ceftolozane** → see cephalosporins

**Ceftriaxone** → see cephalosporins

**Cefuroxime** → see cephalosporins

**Celecoxib** → see NSAIDs

**Celiprolol** → see beta blockers, selective

**Cephalosporins** → see TABLE 2 p. 1264 (nephrotoxicity)

cefaclor • cefadroxil • cefalexin • cefixime • cefotaxime • cefradine • ceftaroline • ceftazidime • ceftobiprole • ceftolozane • ceftriaxone • cefuroxime

► **Ceftobiprole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical

► **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts (calcium chloride)**. Avoid. [Severe] Anecdotal

► **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts (calcium gluconate)**. Avoid. [Severe] Anecdotal

► **Ceftriaxone** potentially increases the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal

► **Ceftriaxone** potentially increases the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal

► **Ceftobiprole** is predicted to increase the concentration of **statins**. [Moderate] Theoretical

► **Ceftobiprole** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical

**Ceritinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

► **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical

► **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical

► **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266

► **Ceritinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical

► **Aprepitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical

► **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

► **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study

► **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical

► **Ceritinib** is predicted to increase the exposure to **coumarins (warfarin)**. Avoid. [Severe] Theoretical

► **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266

► **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical

► **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical

► **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical

► **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study

► **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical

► **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267

► **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical

► **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical

► **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266

► **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical

► **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 15 p. 1267

► **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267

► **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

► **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical

► **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266

## Ceritinib (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs** (**celecoxib**, **diclofenac**). Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **opioids** (**alfentanil**, **fentanyl**). Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **sulfonylureas** (**glimepiride**). Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1267

**Certolizumab pegol** → see monoclonal antibodies

**Certirizine** → see antihistamines, non-sedating

**Cetuximab** → see monoclonal antibodies

**Chenodeoxycholic acid**

- ▶ **Antacids** are predicted to decrease the absorption of **chenodeoxycholic acid**. [Mild] Theoretical

**Chloral hydrate** → see TABLE 11 p. 1266 (CNS depressant effects)

- ▶ Intravenous **loop diuretics** (**furosemide**) potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal

**Chlorambucil** → see alkylating agents

**Chloramphenicol**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Antiepileptics** (**phenobarbital**, **primidone**) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**) and **antiepileptics** (**fosphenytoin**, **phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** decreases the efficacy of intravenous **iron** (**injectable**). [Moderate] Anecdotal
- ▶ **Chloramphenicol** decreases the efficacy of oral **iron** (**oral**). [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- ▶ **Chlordiazepoxide** → see TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Chlorthalidone** affects the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlorthalidone**. [Moderate] Theoretical
- ▶ **Chlorprocaine** → see TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Chloroquine** → see antimalarials
- ▶ **Chlorphenamine** → see antihistamines, sedating
- ▶ **Chlorpromazine** → see phenothiazines
- ▶ **Chlorthalidone** → see thiazide diuretics

**Cholera vaccine**

- ▶ **Antimalarials** (**chloroquine**) decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical

**Cholic acid**

- ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ **Antiepileptics** (**phenobarbital**) decrease the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study

**Choline salicylate**

- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study

**Ciclesonide** → see corticosteroids

**Ciclosporin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 16 p. 1268 (increased serum potassium)

- ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1268
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 179. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **anthracyclines** (**daunorubicin**, **doxorubicin**, **epirubicin**, **idarubicin**, **mitoxantrone**). [Severe] Study
- ▶ **Antiarrhythmics** (**amiodarone**) increase the concentration of **ciclosporin**. Monitor **ciclosporin** concentration and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics** (**dronedarone**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **antiarrhythmics** (**dronedarone**). Avoid. [Severe] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics** (**oxcarbazepine**) decrease the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antifungals**, azoles (**miconazole**) increase the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Aprepitant** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **beta blockers**, non-selective (**nadolol**). [Moderate] Study
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **nicardipine**, **verapamil**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **calcium channel blockers** (**lercanidipine**). Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **ciclosporin**. [Severe] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
  - ▶ **Danazol** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
  - ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust edoxaban dose, p. 122. [Severe] Study
  - ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor **ciclosporin** concentration and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
  - ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
  - ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
  - ▶ **Fibrates (bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
  - ▶ **Fibrates (fenofibrate)** increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
  - ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **ciclosporin**. [Mild] Study
  - ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Imatinib** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Landreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. Public Health England advises avoid. [Severe] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** increase the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Netupitant** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
  - ▶ **Nilotinib** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Ciclosporin** increases the concentration of **NSAIDs (diclofenac)**. [Severe] Study → Also see TABLE 2 p. 1264 → Also see TABLE 16 p. 1268
  - ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 788. [Severe] Anecdotal
  - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
  - ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **sacubitril**. [Moderate] Theoretical
  - ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
  - ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
  - ▶ **Ciclosporin** very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 196. [Severe] Study
  - ▶ **Ciclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
  - ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust **pravastatin** dose. [Severe] Study
  - ▶ **Ciclosporin** markedly increases the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
  - ▶ **Sulfapyrazone** decreases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1264 → Also see TABLE 16 p. 1268
  - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
  - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
  - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- Cilostazol** → see TABLE 4 p. 1264 (antiplatelet effects)

**GENERAL INFORMATION** Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

## Cilostazol (continued)

- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to cilostazol. Adjust cilostazol dose, p. 226. [Moderate] Study
- **Macrolides (erythromycin)** slightly increase the exposure to cilostazol. Adjust cilostazol dose, p. 226. [Moderate] Study
- **Moclobemide** is predicted to increase the exposure to cilostazol. [Moderate] Theoretical
- **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to cilostazol. [Moderate] Theoretical
- **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to cilostazol. Adjust cilostazol dose, p. 226. [Moderate] Study
- **Rifampicin** is predicted to alter the effects of cilostazol. [Moderate] Theoretical
- **SSRIs (fluvoxamine)** are predicted to increase the exposure to cilostazol. Adjust cilostazol dose, p. 226. [Moderate] Theoretical
- Also see TABLE 4 p. 1264
- **St John's Wort** is predicted to alter the effects of cilostazol. [Moderate] Theoretical

Cimetidine → see H<sub>2</sub> receptor antagonists

## Cinacalcet

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- **Cinacalcet** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- **Cinacalcet** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (donepezil)**. [Moderate] Theoretical
- **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to cinacalcet. Adjust dose. [Moderate] Study
- **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- **Cinacalcet** is predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Study
- **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- **Cobicistat** is predicted to moderately increase the exposure to cinacalcet. Adjust dose. [Moderate] Study
- **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to cinacalcet. Adjust dose. [Moderate] Study
- **Idelalisib** is predicted to moderately increase the exposure to cinacalcet. Adjust dose. [Moderate] Study
- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to cinacalcet. Adjust dose. [Moderate] Study
- **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- **SSRIs (fluvoxamine)** are predicted to increase the exposure to cinacalcet. Adjust dose. [Moderate] Theoretical
- **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study

- **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Cinnarizine** → see antihistamines, sedating
- Ciprofibrate** → see fibrates
- Ciprofloxacin** → see quinolones
- Cisatracurium** → see neuromuscular blocking drugs, non-depolarising
- Cisplatin** → see platinum compounds
- Citalopram** → see SSRIs
- Cladribine** → see TABLE 15 p. 1267 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cladribine. Public Health England advises avoid. [Severe] Theoretical

Clarithromycin → see macrolides

Clemastine → see antihistamines, sedating

Clevipidine → see calcium channel blockers

## Clindamycin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- Clobazam**
- **Antiepileptics (stiripentol)** increase the concentration of clobazam. [Severe] Study
- **Clobazam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- Clofarabine** → see TABLE 15 p. 1267 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with clofarabine. Public Health England advises avoid. [Severe] Theoretical

## Clofazimine

- **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study

Clomethiazole → see TABLE 11 p. 1266 (CNS depressant effects)

**FOOD AND LIFESTYLE** Alcohol consumption can cause serious, potentially fatal, CNS depression with clomethiazole.

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
- Also see TABLE 11 p. 1266
- **Enzalutamide** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
- **Rifampicin** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
- Clomipramine** → see tricyclic antidepressants
- Clonazepam** → see TABLE 11 p. 1266 (CNS depressant effects)
- **Clonazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- Clonidine** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- **Clonidine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- Also see TABLE 8 p. 1265
- **Tricyclic antidepressants** decrease the antihypertensive effects of clonidine. Monitor and adjust dose. [Moderate] Anecdotal
- Also see TABLE 8 p. 1265

Clopamide → see thiazide diuretics

Clopidogrel → see TABLE 4 p. 1264 (antiplatelet effects)

- **Antifungals, azoles (fluconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical
- **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
- **Grapefruit juice** markedly decreases the exposure to clopidogrel. [Severe] Study
- **Clopidogrel** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- **Moclobemide** is predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study

- ▶ **Clopidogrel** is predicted to increase the exposure to **pioglitazone**. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Clopidogrel** increases the exposure to **repaglinide**. [Severe] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1264
- ▶ **Clopidogrel** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- Clotrimazole** → see antifungals, azoles
- Clozapine** → see TABLE 8 p. 1265 (hypotension), TABLE 15 p. 1267 (myelosuppression), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)
  - ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
  - ▶ Avoid concomitant use of clozapine with drugs that have a substantial potential for causing agranulocytosis.
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1266
- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 10 p. 1266
- ▶ **Clozapine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Quinolones (ciprofloxacin)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- Co-trimoxazole** → see sulfonamides
- Cobicistat**
  - ▶ **Cobicistat** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
  - ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** very markedly increases the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (fluconazole, posaconazole)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Adjust **itraconazole** dose, p. 564. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Adjust **ketoconazole** dose, p. 641. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to affect the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **antimalarials (artemether)** (with lumefantrine). [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study
- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). MHRA advises avoid or monitor for **beclomethasone** side effects. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (betamethasone)**. MHRA advises avoid or monitor side effects and consider **beclomethasone** as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (budesonide)**. MHRA advises avoid or monitor side effects and consider **beclomethasone** as an alternative. [Severe] Theoretical

## Cobicistat (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (ciclesonide)**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (deflazacort)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to inhaled **corticosteroids (fluticasone)**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (hydrocortisone)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** potentially increases the concentration of **corticosteroids (methylprednisolone)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (mometasone)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (prednisolone)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (prednisone)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **corticosteroids (triamcinolone)**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **daclatasvir**. Adjust daclatasvir dose, p. 591. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 335. [Moderate] Study
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 902. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust midazolam dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment, p. 736. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Mild] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust nitisinone dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid or adjust olaparib dose, p. 919. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust pazopanib dose, p. 909. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust sildenafil dose, p. 766. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust ponatinib dose, p. 911. [Moderate] Study

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1157. [Moderate] Theoretical
  - ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Cobimetinib**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Flavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- Codeine** → see opioids
- Colchicine**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study

## Colchicine (continued)

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Certitinib** is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to affect the exposure to **colchicine**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Theoretical
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Anecdotal
- ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [\[Severe\]](#) Theoretical

**Colecalciferol** → see vitamin D substances

## Colesevelam

**SEPARATION OF ADMINISTRATION** Manufacturer advises take 4 hours before, or after, other drugs.

## Colestipol

**SEPARATION OF ADMINISTRATION** Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.

## Colestyramine

**SEPARATION OF ADMINISTRATION** Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.

**Colistimethate** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 20 p. 1268 (neuromuscular blocking effects)

- ▶ **Colistimethate** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 20 p. 1268
- ▶ **Colistimethate** increases the effects of **suxamethonium**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 20 p. 1268

## Combined hormonal contraceptives

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of combined hormonal contraceptives. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)**. Adjust **lamotrigine** dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **dopamine receptor agonists (ropinrole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir)** (unboosted) increase the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Oral combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metryapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **monoamine-oxidase B inhibitors (selegiline)**. Avoid. [\[Severe\]](#) Study

- ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 747. [\[Severe\]](#) Study
- ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **combined hormonal contraceptives**. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see **Contraceptives**, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456. [\[Moderate\]](#) Theoretical

#### **Corticosteroids** → see TABLE 17 p. 1268 (reduced serum potassium)

beclomethasone • betamethasone • budesonide • ciclesonide • deflazacort • dexamethasone • fluticasone • hydrocortisone • methylprednisolone • mometasone • prednisolone • prednisone • triamcinolone

- ▶ Interactions do not generally apply to corticosteroids used for topical action (including inhalation) unless specified.
- ▶ With intravitreal use of **dexamethasone**: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
- ▶ **Antacids** are predicted to decrease the absorption of **deflazacort**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antacids** decrease the absorption of **dexamethasone**. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **prednisone**. [\[Mild\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (**budesonide, dexamethasone, methylprednisolone, prednisolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **budesonide**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ciclesonide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to inhaled **fluticasone**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mometasone**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of side-effects when given with **triamcinolone**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**dexamethasone, methylprednisolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** moderately increases the exposure to **dexamethasone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dexamethasone** is predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 560. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). MHRA advises avoid or monitor for beclomethasone side effects. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **betamethasone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **budesonide**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ciclesonide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **deflazacort**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **dexamethasone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to inhaled **fluticasone**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **hydrocortisone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** potentially increases the concentration of **methylprednisolone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **mometasone**. [\[Moderate\]](#) Theoretical

## Corticosteroids (continued)

- ▶ **Cobicistat** is predicted to increase the concentration of **prednisolone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **prednisone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of **triamcinolone**. MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide**, **dexamethasone**, **methylprednisolone**, **prednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **prednisone**. [Mild] Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **ciclesonide**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to inhaled **fluticasone**. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **mometasone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **budesonide**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the risk of side-effects when given with **triamcinolone**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the concentration of **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). MHRA advises avoid or monitor for **beclomethasone** side effects. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the concentration of corticosteroids (**betamethasone**, **budesonide**, **deflazacort**, **dexamethasone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisone**, **triamcinolone**). MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **budesonide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ciclesonide**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to inhaled **fluticasone**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mometasone**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of side-effects when given with **triamcinolone**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators** (**deferasirox**). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to corticosteroids (**methylprednisolone**, **prednisone**). Adjust dose. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **budesonide**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **ciclesonide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to inhaled **fluticasone**. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **mometasone**. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the risk of side-effects when given with **triamcinolone**. [Severe] Theoretical
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to corticosteroids (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** increases the exposure to **dexamethasone**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**budesonide**, **dexamethasone**, **methylprednisolone**, **prednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **prednisone**. [Mild] Study
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal

**Coumarins** → see TABLE 3 p. 1264 (anticoagulant effects)

acenocoumarol · warfarin

**FOOD AND LIFESTYLE** The effects of coumarins can be reduced or abolished by vitamin K, including that found in health

foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate increases the INR in response to warfarin and is predicted to increase the INR in response to acenocoumarol.

- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the effects of coumarins. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of warfarin. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Bosentan** decreases the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Capecitabine** increases the effects of coumarins. Monitor INR and adjust dose. [Moderate] Anecdotal
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with coumarins. [Severe] Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to warfarin. Avoid. [Severe] Theoretical
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of coumarins. [Moderate] Study
- ▶ **Cranberry juice** potentially increases the anticoagulant effect of warfarin. Avoid. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Danazol** potentially increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Disulfiram** increases the anticoagulant effect of coumarins. Monitor and adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of coumarins. Adjust dose. [Moderate] Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Enzalutamide** potentially decreases the exposure to coumarins. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ **Erlotinib** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Etravirine** increases the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Fluorouracil** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Glucagon** increases the anticoagulant effect of warfarin. [Severe] Study
- ▶ **Glucosamine** increases the anticoagulant effect of warfarin. Avoid. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of coumarins. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Invacator** is predicted to increase the anticoagulant effect of warfarin. [Severe] Theoretical
- ▶ **Ivermectin** potentially increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Leflunomide** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Live vaccines (influenza vaccine)** potentially increase the risk of bleeding events when given with coumarins. [Severe] Anecdotal
- ▶ **Lomitapide** increases the exposure to warfarin. Monitor INR and adjust warfarin dose. [Severe] Study
- ▶ **Lumacaftor** is predicted to affect the exposure to warfarin. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Mercaptopurine** decreases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Metronidazole** increases the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to warfarin. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of coumarins. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** potentially alters the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Oxymetholone** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Paracetamol** increases the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Penicillins** potentially alter the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Pitolisant** is predicted to decrease the exposure to warfarin. [Unknown] Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Quinolones** increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Ranibizumab** increases the risk of bleeding events when given with coumarins. [Severe] Theoretical
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Study
- ▶ **Rifampicin** decreases the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical

## Coumarins (continued)

- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
  - ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
  - ▶ **Sucralfate** potentially decreases the effects of **warfarin**. Separate administration by 2 hours. [Moderate] Anecdotal
  - ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Sulfipyrazone** increases the anticoagulant effect of **coumarins**. Avoid. [Severe] Study
  - ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
  - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Terflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
  - ▶ **Tindazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
  - ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
  - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Venetoclax** slightly increases the exposure to **warfarin**. [Moderate] Study
  - Cranberry juice**
  - ▶ **Cranberry juice** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Severe] Anecdotal
  - Crisantaspase** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)
  - ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinitib**. [Severe] Theoretical → Also see TABLE 15 p. 1267
  - ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
  - ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
  - Crizotinib** → see TABLE 6 p. 1265 (bradycardia), TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)
- GENERAL INFORMATION** Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.
- ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 185. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
  - ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266

- ▶ **Crizotinib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical

- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **crizotinib**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1265
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266 → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Cyclizine** → see antihistamines, sedating
- Cyclopenthiiazide** → see thiazide diuretics
- Cyclopentolate** → see TABLE 10 p. 1266 (antimuscarinics)
- Cyclophosphamide** → see alkylating agents
- Cycloserine**
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- Cyproheptadine** → see antihistamines, sedating
- Cytarabine** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid. [Severe] Theoretical
- Dabigatran** → see TABLE 3 p. 1264 (anticoagulant effects)
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 131. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 131. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical

**Dabigatran** (continued)

- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Lucasfator** is predicted to affect the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Macrolides (azithromycin, clarithromycin, erythromycin)** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Unknown] Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- Dabrafenib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antacids** are predicted to decrease the absorption of **dabrafenib**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1267
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical

**Dacarbazine** → see alkylating agents**Daclatasvir**

- ▶ **Daclatasvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Daclatasvir** slightly increases the concentration of **digoxin**. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical

**Daclizumab** → see monoclonal antibodies**Dactinomycin** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid. [Severe] Theoretical

**Dairy products**

- ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical
- ▶ **Dairy products** decrease the exposure to **tetracyclines (demeclocycline, oxytetracycline, tetracycline)**. Avoid. [Moderate] Study

**Dalteparin** → see low molecular-weight heparins**Danaparoid** → see TABLE 3 p. 1264 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical

**Danazol**

- ▶ **Danazol** moderately increases the concentration of **antiepileptics (carbamazepine)**. Monitor **carbamazepine** concentration and adjust dose. [Severe] Study
- ▶ **Danazol** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. [Severe] Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Avoid. [Severe] Anecdotal
- ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal

**Dantrolene** → see TABLE 1 p. 1264 (hepatotoxicity)

- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Anecdotal

**Dantron** → see TABLE 17 p. 1268 (reduced serum potassium)**Dapagliflozin** → see TABLE 14 p. 1267 (antidiabetic drugs), TABLE 8 p. 1265 (hypotension)**Dapoxetine** → see SSRIs**Dapsone**

- ▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of

methaemoglobinaemia when given with **dapsone**. [Severe]

Theoretical

- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Rifabutin** increases the clearance of **dapsone**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **dapsone**. [Moderate] Study
- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study

#### Daptomycin

- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical

**Daratumumab** → see monoclonal antibodies

**Darbepoetin alfa** → see TABLE 5 p. 1264 (thromboembolism), TABLE 16 p. 1268 (increased serum potassium)

**Darifenacin** → see TABLE 10 p. 1266 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of antiarrhythmics (**flecainide**). [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study

- ▶ **HIV-protease inhibitors (indinavir)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1266

#### Darunavir

#### Dasabuvir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (gemfibrozil)** very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of **loop diuretics (furosemide)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Dasabuvir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 197. [Moderate] Study

**Dasatinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 4 p. 1264 (antiplatelet effects)

- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study

## Dasatinib (continued)

- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **statins (simvastatin)**. [Moderate] Theoretical
- Daurorubicin** → see anthracyclines
- Decitabine** → see TABLE 15 p. 1267 (myelosuppression)
- Deferasirox** → see iron chelators
- Deferiprone** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. [Severe] Theoretical
- Deflazacort** → see corticosteroids
- Delamanid** → see TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- Demeclocycline** → see tetracyclines
- Denosumab** → see monoclonal antibodies
- Desferrioxamine** → see iron chelators
- Desflurane** → see volatile halogenated anaesthetics
- Desloratadine** → see antihistamines, non-sedating

**Desmopressin** → see TABLE 18 p. 1268 (hyponatraemia)

- ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
- ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- Desogestrel**
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
- Dexamethasone** → see corticosteroids
- Dexamfetamine** → see amfetamines
- Dexibuprofen** → see NSAIDs
- Dextetropfen** → see NSAIDs
- Dexmedetomidine** → see TABLE 11 p. 1266 (CNS depressant effects)
- Dextrazoxane** → see iron chelators
- Diamorphine** → see opioids
- Diazepam** → see TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study

**Diazoxide** → see TABLE 8 p. 1265 (hypotension)

- **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1265

**Diclofenac** → see NSAIDs

**Dicycloverin** → see TABLE 10 p. 1266 (antimuscarinics)

**Didanosine** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 12 p. 1267 (peripheral neuropathy)

**ROUTE-SPECIFIC INFORMATION** Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart.

- **Allopurinol** moderately increases the exposure to **didanosine**. Avoid. [Severe] Study
  - **Didanosine** (buffered) decreases the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Separate administration by 2 hours. [Severe] Study → Also see TABLE 1 p. 1264
  - **Febuxostat** is predicted to increase the exposure to **didanosine**. [Severe] Theoretical
  - **Ganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
  - **HIV-protease inhibitors (tipranavir)** decrease the exposure to **dicycloverin** → see TABLE 10 p. 1266 by 2 hours. [Moderate] Study
  - **Didanosine** (buffered) decreases the exposure to **HIV-protease inhibitors (atazanavir)**. **Didanosine** should be taken 2 hours after **atazanavir**. [Severe] Study
  - **Didanosine** (buffered) is predicted to decrease the exposure to **HIV-protease inhibitors (darunavir)** boosted with **ritonavir**. **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [Moderate] Theoretical
  - **Didanosine** (buffered) decreases the exposure to **HIV-protease inhibitors (indinavir)**. Separate administration by 1 hour. [Severe] Study
  - **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
  - **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 12 p. 1267
  - **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. [Severe] Study
  - **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after **quinolones**. [Moderate] Study
  - **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. [Severe] Study
  - **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study → Also see TABLE 12 p. 1267
  - **Tenofovir** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
  - **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- Digoxin** → see TABLE 6 p. 1265 (bradycardia)

**GENERAL INFORMATION** Drugs that reduce serum potassium are predicted to increase the risk of digoxin toxicity, see TABLE 17 p. 1268.

- **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study
- **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [Mild] Study
- **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
- **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 106. [Severe] Study → Also see TABLE 6 p. 1265
- **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- **Antifungals, azoles (itraconazole)** markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [Severe] Theoretical
- **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [Severe] Theoretical
- **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
- **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 106. [Severe] Anecdotal
- **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
- **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1265
- **Intravenous calcium salts** increase the concentration of **digoxin**. Avoid. [Moderate] Anecdotal
- **Carbamazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **Certinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical
- **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- **Daclatasvir** slightly increases the concentration of **digoxin**. [Severe] Study
- **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
- **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- **Levothyroxine** is predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **Liothyronine** is predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- **Mirabegron** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose. [Severe] Study
- **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- **NSAIDs (indometacin)** increase the concentration of **digoxin**. [Severe] Study
- **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Unknown] Theoretical
- **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
- **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
- **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
- **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study

## Digoxin (continued)

- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [\[Severe\]](#) Theoretical

**Dihydrocodeine** → see opioids**Dihydrochachysterol** → see vitamin D substances**Diltiazem** → see calcium channel blockers**Dimenhydrinate** → see TABLE 10 p. 1266 (antimuscarinics)**Dimethyl fumarate**

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid. [\[Severe\]](#) Theoretical

**Dimethyl sulfoxide**

- ▶ Topical **dimethyl sulfoxide** potentially increases the risk of peripheral neuropathy when given with **NSAIDs (sulindac)**. Avoid. [\[Severe\]](#) Anecdotal

**Diphenoxylate** → see opioids**Dipipanone** → see opioids**Dipyridamole** → see TABLE 8 p. 1265 (hypotension), TABLE 4 p. 1264 (antiplatelet effects)

- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical

- ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [\[Severe\]](#) Study

- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical

- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical

**Disopyramide** → see antiarrhythmics**Disulfiram** → see TABLE 12 p. 1267 (peripheral neuropathy)

**FOOD AND LIFESTYLE** Disulfiram gives rise to an extremely unpleasant systemic reaction after the ingestion of even a small amount of alcohol. Ensure that alcohol is not consumed for at least 24 hours before initiating treatment and should be avoided for at least 1 week after stopping treatment.

- ▶ **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see TABLE 12 p. 1267

- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study

- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see TABLE 12 p. 1267

- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical

**Dobutamine** → see sympathomimetics, inotropic**Docetaxel** → see taxanes**Docusate sodium** → see TABLE 17 p. 1268 (reduced serum potassium)**Dolutegravir**

- ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **antacids**. [\[Moderate\]](#) Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Theoretical

- ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. [\[Moderate\]](#) Study

- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [\[Severe\]](#) Study

- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study

- ▶ **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. [\[Severe\]](#) Study

- ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. **Iron (oral)** should be taken 2 hours before or 6 hours after **dolutegravir**. [\[Moderate\]](#) Study

- ▶ **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. [\[Severe\]](#) Study

- ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study

- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [\[Moderate\]](#) Study

**Domperidone** → see TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [\[Moderate\]](#) Theoretical

- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Macrolides (clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study

**Donepezil** → see anticholinesterases, centrally acting**Dopamine** → see sympathomimetics, inotropic**Dopamine receptor agonists** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 10 p. 1266 (antimuscarinics)

amantadine • apomorphine • bromocriptine • cabergoline • pergolide • pramipexole • quinagolide • ropinirole • rotigotine

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to dopamine receptor agonists (**bromocriptine, cabergoline**). [\[Severe\]](#) Theoretical

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to dopamine receptor agonists (**bromocriptine, cabergoline**). [\[Severe\]](#) Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to dopamine receptor agonists (**bromocriptine, cabergoline**). [\[Severe\]](#) Study

- ▶ **Aprepitant** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine, cabergoline**). [\[Severe\]](#) Theoretical

- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1265

- ▶ **Asenapine** is predicted to decrease the effects of dopamine receptor agonists. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Benperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Bupropion** increases the risk of side-effects when given with **amantadine**. [Moderate] Study
  - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Clozapine** is predicted to decrease the effects of dopamine receptor agonists. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 10 p. 1266
  - ▶ **Cobicistat** increases the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Moderate] Theoretical
  - ▶ Dopamine receptor agonists (**cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ Dopamine receptor agonists (**bromocriptine**, **cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**pergolide**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ Dopamine receptor agonists (**amantadine**) are predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust **pramipexole** dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Droperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
  - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**cabergoline**, **pergolide**). Avoid. [Moderate] Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**, **cabergoline**). Avoid. [Moderate] Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. [Moderate] Theoretical
  - ▶ **Flupentixol** is predicted to decrease side effects dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
  - ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Study
  - ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Idelalisib** increases the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Loxapine** is predicted to decrease the effects of dopamine receptor agonists. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 10 p. 1266
  - ▶ **Macrolides** (**clarithromycin**) increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Study
  - ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolid**, **ropinirole**, **rotigotine**). [Moderate] Theoretical
  - ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolid**, **ropinirole**, **rotigotine**). Avoid. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Severe] Theoretical
  - ▶ **Olanzapine** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
  - ▶ **Paliperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
  - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
  - ▶ **Phenothiazines** are predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Study → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
  - ▶ **Pimozide** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
  - ▶ **Quetiapine** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Quinolones** (**ciprofloxacin**) are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Risperidone** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 (QT-interval prolongation)
  - ▶ **SRLs** (**fluvoxamine**) are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
  - ▶ **Sulpiride** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
  - ▶ **Zuclopenthixol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
- Dopexamine** → see sympathomimetics, inotropic
- Dorzolamide**
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Dosulepin** → see tricyclic antidepressants
- Doxapram**
- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
  - ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- Doxazosin** → see alpha blockers
- Doxepin** → see tricyclic antidepressants
- Doxorubicin** → see anthracyclines
- Doxycycline** → see tetracyclines
- Dronedarone** → see antiarrhythmics
- Droperidol** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Droperidol** is predicted to decrease the effects of dopamine receptor agonists. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266

Droperidol (continued)

- **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1265
- Drosiprenone** → see TABLE 16 p. 1268 (increased serum potassium)
- **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **drosiprenone**. [Severe] Study
- Dulaglutide** → see TABLE 14 p. 1267 (antidiabetic drugs)
- Duloxetine** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 13 p. 1267 (serotonin syndrome), TABLE 4 p. 1264 (antipletelet effects)
- **Duloxetine** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- **Duloxetine** is predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Theoretical
- **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- **Duloxetine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Moderate] Study → Also see TABLE 13 p. 1267
- **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- **SSRIs (fluvoxamine)** markedly increase the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267 → Also see TABLE 4 p. 1264

#### Dutasteride

- **Antiarrhythmics (dronedarone)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **HIV-protease inhibitors (indinavir)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study

**Eculizumab** → see monoclonal antibodies

**Edoxaban** → see TABLE 3 p. 1264 (anticoagulant effects)

- **Antiarrhythmics (amiodarone)** slightly increase the exposure to **edoxaban**. [Severe] Study
- **Antiarrhythmics (dronedarone)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- **Antifungals, azoles (itraconazole)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Antifungals, azoles (ketoconazole)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical
- **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **edoxaban**. [Moderate] Theoretical
- **Macrolides (azithromycin, clarithromycin)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Macrolides (erythromycin)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
- **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical

#### Efavirenz

- **Efavirenz** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- **Antiepileptics (carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **antiepileptics (carbamazepine)**. [Severe] Study
- **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Theoretical
- **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (phenobarbital)**. [Severe] Theoretical
- **Efavirenz** is predicted to affect the efficacy of **antiepileptics (primidone)** and **antiepileptics (primidone)** are predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- **Efavirenz** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- **Efavirenz** slightly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid **efavirenz** for 14 days before and during treatment with **itraconazole**. [Moderate] Study
- **Efavirenz** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. [Severe] Study
- **Efavirenz** slightly decreases the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- **Efavirenz** moderately decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** slightly increase the exposure to **efavirenz**. Adjust dose. [Severe] Study
- **Efavirenz** decreases the concentration of **antimalarials (artemether)**. [Severe] Study
- **Efavirenz** moderately decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- **Efavirenz** affects the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- **Efavirenz** moderately decreases the exposure to **bupropion**. [Moderate] Study
- **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- **Efavirenz** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine,**

- lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem, verapamil**). [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
  - ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor ciclosporin concentration and adjust dose. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
  - ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **efavirenz**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** decreases the exposure to **macrolides** (**clarithromycin**). [Moderate] Study
  - ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
  - ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Efavirenz** decreases the exposure to **opioids** (**methadone**). Monitor and adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** with ritonavir and ombitasvir. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Unknown] Theoretical
  - ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
  - ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** slightly decreases the exposure to **statins** (**atorvastatin**). [Mild] Study
  - ▶ **Efavirenz** moderately decreases the exposure to **statins** (**simvastatin**). [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
  - ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ### Elbasvir
- ▶ **Antiepileptics** (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles** (**itraconazole, ketoconazole, voriconazole**) slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
  - ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Cobicistat** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
  - ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
  - ▶ **HIV-protease inhibitors** (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
  - ▶ **Idelalisib** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
  - ▶ **Macrolides** (**clarithromycin**) slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study

## Elbasvir (continued)

- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** potentially increases the exposure to **statins** (**atorvastatin**). Adjust **atorvastatin** dose, p. 196. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins** (**fluvastatin**). Adjust **fluvastatin** dose, p. 196. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins** (**simvastatin**). Adjust **simvastatin** dose, p. 198. [Unknown] Theoretical

**Eletriptan** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides** (**erythromycin**) moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study

**Elotuzumab** → see monoclonal antibodies**Eltrombopag**

- ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **antacids**. [Severe] Study
- ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [Severe] Study
- ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [Severe] Theoretical
- ▶ **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc** (zinc acetate, zinc sulfate). [Severe] Theoretical

**Elvitegravir**

- ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** (**atazanavir**, **lopinavir**) boosted with **ritonavir** increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical

**Empagliflozin** → see TABLE 14 p. 1267 (antidiabetic drugs), TABLE 8 p. 1265 (hypotension)

**Enalapril** → see ACE inhibitors

**Enoxaparin** → see low molecular-weight heparins

**Entacapone**

- ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Entacapone** is predicted to increase the exposure to **methylodopa**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic** (**dobutamine**, **dopamine**). [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Study

**Enteral feeds**

- ▶ **Antacids** (**aluminium hydroxide**) increase the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ **Enteral feeds** decrease the absorption of **antiepileptics** (**phenytoin**). [Severe] Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **quinolones** (**ciprofloxacin**). [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study

**Enzalutamide**

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Enzalutamide** is predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust **alprazolam** dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiarrhythmics** (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **antiarrhythmics** (**propafenone**). [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **anticholinesterases, centrally acting** (**donepezil**). [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics** (**brivaracetam**). [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiepileptics** (**perampanel**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antifungals, azoles** (**isavuconazole**). Avoid. [Severe] Study

- ▶ **Enzalutamide** is predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buspione**. Use with caution and adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **calcium channel blockers (diltiazem)**. [Severe] Study
- ▶ **Enzalutamide** decreases the exposure to **calcium channel blockers (isradipine)**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **corticosteroids (budesonide, dexamethasone, methylprednisolone, prednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **corticosteroids (prednisone)**. [Mild] Study
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 899. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 874. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 335. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** markedly decreases the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **monoclonal antibodies (trastuzumab emtansine)**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study

## Enzalutamide (continued)

- ▶ Enzalutamide is predicted to slightly decrease the exposure to **nateliglide**. [Mild] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **netupitant**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **paracetamol**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **paritaprevir** with ritonavir and ombitasvir. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **proton pump inhibitors (omeprazole)**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Enzalutamide is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Enzalutamide markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **risperidone**. Adjust **risperidone** dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **rufinilast**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ruixolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **sirrolimus**. Avoid. [Severe] Study

- ▶ Enzalutamide is predicted to decrease the exposure to **sofenacin**. [Moderate] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
  - ▶ Enzalutamide decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ Enzalutamide decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
  - ▶ Enzalutamide is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ Enzalutamide is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ Enzalutamide is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ Enzalutamide is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Ephedrine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 1264 (thromboembolism), TABLE 16 p. 1268 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 1264 (thromboembolism), TABLE 16 p. 1268 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 1264 (thromboembolism), TABLE 16 p. 1268 (increased serum potassium)
- Epoprostenol** → see TABLE 4 p. 1264 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatide** → see TABLE 4 p. 1264 (antiplatelet effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline, pergolide)**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [Severe] Anecdotal
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [Severe] Anecdotal

### Ergotamine

- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical

- ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [Moderate] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study

**Eribulin** → see TABLE 15 p. 1267 (myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 9 p. 1266 (QT-interval prolongation)

### Erlotinib

**FOOD AND LIFESTYLE** Dose adjustment may be necessary if smoking started or stopped during treatment.

- ▶ **Antacids** are predicted to decrease the absorption of **erlotinib**. **Antacids** should be taken 4 hours before or 2 hours after **erlotinib**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 899. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical

## Erlotinib (continued)

- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [Severe] Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 899. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Macrolides** (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- ▶ **Quinolones** (**ciprofloxacin**) slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 899. [Severe] Study
- ▶ **SSRIs** (**fluvoxamine**) are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical

- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**.

[Moderate] Theoretical

**Ertapenem** → see carbapenems

**Erythromycin** → see macrolides

**Escitalopram** → see SSRIs

**Eslicarbazepine** → see antiepileptics

**Emolol** → see beta blockers, selective

**Esomeprazole** → see proton pump inhibitors

**Estramustine** → see alkylating agents

**Etanercept**

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid. [Severe] Theoretical

**Ethambutol**

▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal

**Ethosuximide** → see antiepileptics

**Etodolac** → see NSAIDs

**Etomidate** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

**Etonogestrel**

▶ **Antiepileptics** (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Fosamprenavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal

▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical

▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical

▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical

**Etoposide** → see TABLE 15 p. 1267 (myelosuppression)

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study

▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid. [Severe] Theoretical

**Etoricoxib** → see NSAIDs**Etravirine**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [Moderate] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
  - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **HIV-protease inhibitors (indinavir)**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)**. [Severe] Study
  - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
  - ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- Everolimus** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267

- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical

**Evolocumab** → see monoclonal antibodies**Exemestane**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical

**Exenatide** → see TABLE 14 p. 1267 (antidiabetic drugs)

**SEPARATION OF ADMINISTRATION** With standard-release exenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.

**Ezetimibe**

- **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal

**Famotidine** → see H<sub>2</sub> receptor antagonists

**Fampridine**

- H<sub>2</sub> receptor antagonists (**cimetidine**) increase the concentration of fampridine. Avoid. [Severe] Theoretical

**Febuxostat**

- **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- **Febuxostat** is predicted to increase the exposure to **didanosine**. [Severe] Theoretical
- **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical

**Felbinac** → see NSAIDs

**Felodipine** → see calcium channel blockers

**Fenofibrate** → see fibrates

**Fenoprofen** → see NSAIDs

**Fentanyl** → see opioids

**Ferric carboxymaltose** → see iron (injectable)

**Ferric maltol** → see iron (oral)

**Ferrous fumarate** → see iron (oral)

**Ferrous gluconate** → see iron (oral)

**Ferrous sulfate** → see iron (oral)

**Fesoterodine** → see TABLE 10 p. 1266 (antimuscarinics)

- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine**

dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study

- **Macrolides (erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical

**Fexofenadine** → see antihistamines, non-sedating

**Fibrates**

bezafibrate • ciprofibrate • fenofibrate • gemfibrozil

- **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. [Moderate] Study
- **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- **Colchicine** increases the risk of rhabdomyolysis when given with fibrates. [Severe] Anecdotal
- **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- **Gemfibrozil** very markedly increases the exposure to **dasabuvir**. Avoid. [Severe] Study
- **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 874. [Severe] Study
- **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical
- **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- **Gemfibrozil** markedly increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- **Gemfibrozil** markedly increases the exposure to **repaglinide**. Avoid. [Severe] Study
- **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [Severe] Study
- **Gemfibrozil** is predicted to increase the exposure to **selexipag**. Avoid. [Severe] Theoretical
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [Severe] Study
- **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 193. [Severe] Anecdotal
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [Severe] Study
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Adjust **fenofibrate** dose, p. 193. [Severe] Theoretical
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Theoretical
- **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Study

- **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 193, p. 197. [Severe] Anecdotal
- **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 197. [Severe] Study
- **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 198. [Severe] Study
- **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

### Fidaxomicin

- **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

**Fingolimod** → see TABLE 6 p. 1265 (bradycardia), TABLE 9 p. 1266 (QT-interval prolongation)

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical

**Flavoxate** → see TABLE 10 p. 1266 (antimuscarinics)

**Flecainide** → see antiarrhythmics

**Flucloxacillin** → see penicillins

**Fluconazole** → see antifungals, azoles

### Flucytosine

- **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study
- **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [Severe] Study

**Fludarabine** → see TABLE 15 p. 1267 (myelosuppression)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid. [Severe] Theoretical
- **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267

**Fludrocortisone** → see TABLE 17 p. 1268 (reduced serum potassium)

### Fluocinolone

**ROUTE-SPECIFIC INFORMATION** With intravitreal use in adults: caution with concurrent administration of anticoagulant or

antiplatelet drugs (higher incidence of conjunctival haemorrhage).

**Fluorouracil** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Fluorouracil** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. [Severe] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **fluorouracil**. [Severe] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid. [Severe] Theoretical
- **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study

**Fluoxetine** → see SSRIs

**Flupentixol** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

- **Flupentixol** is predicted to decrease side effects **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265

- **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1265

**Fluphenazine** → see phenothiazines

**Flurazepam** → see TABLE 11 p. 1266 (CNS depressant effects)

- **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical

**Flurbiprofen** → see NSAIDs

**Fluticasone** → see corticosteroids

**Fluvastatin** → see statins

**Fluvoxamine** → see SSRIs

### Folates

folic acid · folinic acid · levofolinic acid

- **Folic acid** decreases the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. [Severe] Study
- **Folinic acid** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. [Severe] Theoretical
- **Folic acid** is predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
- **Folinic acid** increases the risk of toxicity when given with **capecitabine**. [Severe] Study
- **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
- **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. [Severe] Theoretical
- **Folic acid** is predicted to alter the effects of **ralitrexed**. Avoid. [Moderate] Theoretical
- **Folinic acid** alters the effects of **ralitrexed**. Avoid. [Moderate] Study
- **Sulfasalazine** decreases the absorption of **folic acid**. [Moderate] Study
- **Sulfasalazine** is predicted to decrease the absorption of **folinic acid**. [Moderate] Theoretical
- **Folic acid** is predicted to increase the risk of **tegafur** toxicity when given with **tegafur**. [Severe] Theoretical
- **Folinic acid** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- **Folic acid** → see folates
- **Folinic acid** → see folates
- **Fondaparinux** → see TABLE 3 p. 1264 (anticoagulant effects)
- **Formoterol** → see beta<sub>2</sub> agonists

**Fosamprenavir** → see HIV-protease inhibitors

### Fosaprepitant

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ **Fosaprepitant** is predicted to increase the exposure to **corticosteroids** (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Foscarnet** → see TABLE 2 p. 1264 (nephrotoxicity)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1264
- ▶ **Fosinopril** → see ACE inhibitors
- ▶ **Fosphenytoin** → see antiepileptics
- ▶ **Frovatriptan** → see TABLE 13 p. 1267 (serotonin syndrome)
- ▶ **SSRIs** (**fluvoxamine**) increase the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **Fulvestrant** → see TABLE 5 p. 1264 (thromboembolism)
- ▶ **Furosemide** → see loop diuretics
- ▶ **Fusidic acid**
  - ▶ **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Gabapentin** → see antiepileptics

**Galantamine** → see anticholinesterases, centrally acting

**Ganciclovir** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbapenems** (**imipenem**). Avoid. [Severe] Anecdotal
- ▶ **Ganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Gefitinib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Gemcitabine** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

gemcitabine. Public Health England advises avoid. [Severe]

Theoretical

**Gemfibrozil** → see fibrates

**Gentamicin** → see aminoglycosides

**Glibenclamide** → see sulfonylureas

**Gliclazide** → see sulfonylureas

**Glimepiride** → see sulfonylureas

**Glipizide** → see sulfonylureas

**Glucagon**

▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study

**Glucosamine**

▶ **Glucosamine** increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

**Glucose** → see TABLE 3 p. 1264 (anticoagulant effects)

**Glycerol** → see TABLE 17 p. 1268 (reduced serum potassium)

**Glyceryl trinitrate** → see nitrates

**Glycopyrronium** → see TABLE 10 p. 1266 (antimuscarinics)

**Golimimumab** → see monoclonal antibodies

**Granisetron** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation)

▶ **Dopamine receptor agonists (amorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical

**Grapefruit juice**

▶ **Grapefruit juice** moderately decreases the exposure to **alskiren**. Avoid. [Severe] Study

▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study

▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study

▶ **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor carbamazepine concentration and adjust dose. [Moderate] Study

▶ **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilstine)**. Bilstine should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study

▶ **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study

▶ **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperazine)**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical

▶ **Grapefruit juice** greatly decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** increases the exposure to **buspirone**. Avoid. [Mild] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

▶ **Grapefruit juice** very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mild] Study

▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nicardipine)**. [Mild] Study

▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mild] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study

▶ **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. [Severe] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study

▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **roxolitinib**. [Severe] Theoretical

▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical

▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study

▶ **Grapefruit juice** moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study

▶ **Grapefruit juice** increases the exposure to **statins (atorvastatin)**. [Mild] Study

▶ **Grapefruit juice** increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study

▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical

▶ **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. [Severe] Study

▶ **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study

**Grapefruit juice** (continued)

- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

**Grass pollen extract**

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Grazoprevir**

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **statins** (**atorvastatin**). Adjust **atorvastatin** dose, p. 196. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins** (**fluvastatin**). Adjust **fluvastatin** dose, p. 196. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins** (**simvastatin**). Adjust **simvastatin** dose, p. 198. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

**Griseofulvin**

**FOOD AND LIFESTYLE** Disulfiram-like reaction might occur on consumption of alcohol.

- ▶ **Antiepileptics** (**phenobarbital**, **primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal

- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal

**Guanethidine** → see TABLE 8 p. 1265 (hypotension)

- ▶ **Amfetamines** (**dexamfetamine**) decrease the effects of **guanethidine**. [Severe] Study
- ▶ **Benperidol** is predicted to decrease the effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Monoamine-oxidase A and B inhibitors**, **irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics**, **inotropic** (**dopamine**). [Severe] Theoretical
- ▶ **Guanethidine** is predicted to increase the effects of **sympathomimetics**, **vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Study
- ▶ **Guanethidine** increases the effects of **sympathomimetics**, **vasoconstrictor** (**metaraminol**). [Severe] Anecdotal
- ▶ **Guanethidine** increases the effects of **sympathomimetics**, **vasoconstrictor** (**phenylephrine**). [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Study → Also see TABLE 8 p. 1265

**Guanfacine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiarrhythmics** (**dronedrone**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Antiepileptics** (**oxcarbazepine**) are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics** (**valproate**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical

## H<sub>2</sub> receptor antagonists

cimetidine • famotidine • nizatidine • ranitidine

- ▶ **Cimetidine** decreases the clearance of **albendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [Mild] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin)**. Monitor phenytoin concentration and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (phenytoin)**. Monitor phenytoin concentration and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [Moderate] Study
- ▶ **Cimetidine** decreases the clearance of **antimalarials (chloroquine)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antimalarials (quinine)**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers (diltiazem, isradipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. [Moderate] Theoretical
- ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers (nifedipine)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **calcium channel blockers (verapamil)**. [Moderate] Study
- ▶ **Cimetidine** is predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the concentration of **cyclosporin**. [Mild] Study
- ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [Severe] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **fluorouracil**. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see sofosbuvir with ledipasvir p. 596. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to **lomipate**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to affect the exposure to **ranitidine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **macrolides (erythromycin)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 346. [Mild] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **Cimetidine** increases the concentration of **opioids (alfentanil)**. Use with caution and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **opioids (fentanyl)**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
- ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study

H<sub>2</sub> receptor antagonists (continued)

- ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the exposure to **rilpivirine**. H<sub>2</sub> receptor antagonists should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **roflumilast**. [Moderate] Study
- ▶ H<sub>2</sub> receptor antagonists potentially decrease the exposure to **sofosbuvir**. Adjust dose, see sofosbuvir with ledipasvir and sofosbuvir with velpatasvir p. 596. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **SSRIs** (**paroxetine**, **sertraline**). [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ H<sub>2</sub> receptor antagonists are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 596. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **venlafaxine**. [Mild] Study
- ▶ **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 456. [Mild] Study

**Haloperidol** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics** (**zonisamide**). Avoid in children. [Severe] Theoretical
- ▶ **Antifungals**, **azoles** (**itraconazole**) increase the concentration of **haloperidol**. [Moderate] Study
- ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
- ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
- ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1265
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **SSRIs** (**fluoxetine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **SSRIs** (**fluvoxamine**) increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1266 → Also see TABLE 11 p. 1266

**Heparin (unfractionated)** → see TABLE 16 p. 1268 (increased serum potassium), TABLE 3 p. 1264 (anticoagulant effects)

- ▶ **Ranibizumab** increases the risk of bleeding events when given with heparin (unfractionated). [Severe] Theoretical

**Histamine** → see TABLE 8 p. 1265 (hypotension)

- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **Antimalarials** (**artemether**, **atovaquone**, **chloroquine**, **mefloquine**, **primaquine**, **proguanil**, **pyrimethamine**, **quinine**) are predicted to affect the exposure to **histamine**. Avoid. [Severe] Theoretical

- ▶ **Clonidine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Clozapine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Corticosteroids** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to affect the exposure to **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Olanzapine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Phenothiazines** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Quetiapine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Risperidone** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265

**HIV-protease inhibitors** → see TABLE 9 p. 1266 (QT-interval prolongation)

atazanavir · darunavir · fosamprenavir · indinavir · lopinavir · ritonavir · saquinavir · tipranavir

- ▶ Caution on concurrent use of **atazanavir**, **lopinavir** with **ritonavir**, or **ritonavir** with drugs that prolong the PR interval.
- ▶ Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.
- ▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

- ▶ **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Ritonavir** decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**ritonavir**, **saquinavir**) are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **alpha blockers** (**alfuzosin**, **tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **alpha blockers** (**doxazosin**). [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **alprazolam**. [Severe] Study

- ▶ HIV-protease inhibitors (ritonavir, tipranavir) are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ Ritonavir decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of atazanavir. Atazanavir should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of tipranavir. Separate administration by 2 hours. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Ritonavir is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [Severe] Study
- ▶ Indinavir is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to HIV-protease inhibitors. Monitor and adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to slightly increase the exposure to **antiepileptics (perampanel)**. [Mid] Study
- ▶ HIV-protease inhibitors are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) slightly increase the exposure to tipranavir. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of HIV-protease inhibitors. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to HIV-protease inhibitors. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to HIV-protease inhibitors. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Indinavir is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **antimalarials (artemether)** with lumefantrine. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ HIV-protease inhibitors decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Ritonavir is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Indinavir is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1266
- ▶ Indinavir is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ Ritonavir is predicted to increase the exposure to **beta blockers, non-selective (carvedilol)**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (lopinavir, ritonavir, saquinavir) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Ritonavir (high-dose) is predicted to increase the exposure to **beta blockers, non-selective (timolol)**. [Moderate] Theoretical
- ▶ Ritonavir is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust bosutinib dose. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Indinavir is predicted to increase the exposure to **bosutinib**. Avoid or adjust bosutinib dose. [Severe] Theoretical
- ▶ Ritonavir slightly to moderately decreases the exposure to **bupropion**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **bupirone**. Adjust bupirone dose, p. 325. [Severe] Study
- ▶ Indinavir is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) slightly increase the

## HIV-protease inhibitors (continued)

exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266

- ▶ **Indinavir** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **isradipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **calcium channel blockers** (**lercanidipine**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 226. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1020. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose, p. 1020. [Severe] Study
- ▶ **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the concentration of **corticosteroids** (**beclomethasone**) (risk with beclomethasone is likely to be lower than with other corticosteroids). MHRA advises avoid or monitor side effects and consider beclomethasone side effects. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to increase the concentration of **corticosteroids** (**betamethasone**, **budesonide**, **deflazacort**, **dexamethasone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **prednisolone**, **triamcinolone**). MHRA advises avoid or monitor side effects and consider beclomethasone as an alternative. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **corticosteroids** (**budesonide**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to

increase the exposure to **corticosteroids** (**ciclesonide**). Avoid.

[Moderate] Theoretical

- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **corticosteroids** (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to inhaled **corticosteroids** (**fluticasone**). [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **corticosteroids** (**mometasone**). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) are predicted to increase the risk of side-effects when given with **corticosteroids** (**triamcinolone**). [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **daclatasvir**. Adjust daclatasvir dose, p. 591. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **Didanosine** (buffered) decreases the exposure to **atazanavir**. **Didanosine** should be taken 2 hours after **atazanavir**. [Severe] Study
- ▶ **Didanosine** (buffered) is predicted to decrease the exposure to **darunavir** (boosted with ritonavir). **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. [Moderate] Theoretical
- ▶ **Didanosine** (buffered) decreases the exposure to **indinavir**. Separate administration by 1 hour. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **didanosine**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study

- ▶ **Fosamprenavir** (boosted with ritonavir) slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Indinavir** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** slightly to moderately increase the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **eltetriptan**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **Lopinavir** increases the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Indinavir** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Indinavir** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Etravirine** increases the exposure to **fosamprenavir** (boosted with ritonavir). Refer to specialist literature. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **indinavir**. Avoid. [Severe] Theoretical
- ▶ **Tipranavir** decreases the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Indinavir** increases the exposure to **ivabradine**. Adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or **lumacaftor** with **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study  
→ Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical

## HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **saquinavir** and **saquinavir** increases the exposure to **macrolides (clarithromycin)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saquinavir**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, indinavir, lopinavir, ritonavir) are predicted to increase the exposure to **macrolides (clarithromycin)**. Monitor renal function and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, indinavir, lopinavir, ritonavir, tipranavir) are predicted to increase the exposure to **macrolides (erythromycin)**. [Severe] Theoretical
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, lopinavir, ritonavir, saquinavir) increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust midazolam dose. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment, p. 736. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ HIV-protease inhibitors (lopinavir, ritonavir, saquinavir) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **naloxegol**. Adjust naloxegol dose and monitor side effects, p. 63. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **netupitant**. [Mild] Study
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ HIV-protease inhibitors (lopinavir, ritonavir, saquinavir) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **nitisinone**. Adjust nitisinone dose. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Ritonavir** moderately decreases the exposure to **olanzapine**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **olaparib**. Avoid or adjust olaparib dose, p. 919. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **olaparib**. Avoid or adjust olaparib dose, p. 919. [Moderate] Theoretical
- ▶ **Indinavir** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids (pethidine)**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **opioids (tramadol)**. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Indinavir** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **palbociclib**. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **panobinostat**. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **paritaprevir** with ritonavir and ombitasvir. Avoid. [Severe] Theoretical
- ▶ **Indinavir** potentially increases the exposure to **paritaprevir**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **pazopanib**. Avoid or adjust pazopanib dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Indinavir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust avanafil dose, p. 765. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust sildenafil dose, p. 766. [Moderate] Study
- ▶ HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust sildenafil dose, p. 766. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical

- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** (boosted with **ritonavir**) decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** (boosted with **ritonavir**). Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Indinavir** increases the exposure to **rifabutin** and **rifabutin** decreases the exposure to **indinavir**. Avoid. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **indinavir**, **lopinavir**, **saquinavir**, **tipranavir**). Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **ritonavir**. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Indinavir** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Indinavir** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid, or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to HIV-protease inhibitors. Avoid. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ HIV-protease inhibitors slightly to moderately increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Indinavir** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Indinavir** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Indinavir** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to

## HIV-protease inhibitors (continued)

- moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Severe\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Indinavir** is predicted to increase the concentration of **temsirolimus**. [\[Moderate\]](#) Theoretical
  - ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [\[Mild\]](#) Study
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
  - ▶ **Indinavir** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Indinavir** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Indinavir** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**ritonavir, tipranavir**) are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
  - ▶ **Indinavir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
  - ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **venumafenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1266
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **venetoclax**. Avoid or adjust venetoclax dose, p. 919. [\[Severe\]](#) Study
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **venlafaxine**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1266
  - ▶ HIV-protease inhibitors are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1266

- ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [\[Moderate\]](#) Study
  - ▶ **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study
  - ▶ HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Indinavir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Homatropine** → see TABLE 10 p. 1266 (antimuscarinics)
- Hormone replacement therapy**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rifinamide, topiramate)** are predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to alter the exposure to **antiepileptics (lamotrigine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Bosentan** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Hormone replacement therapy** decreases the clearance of **dopamine receptor agonists (ropinrole)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Fosaprepitant** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [\[Severe\]](#) Theoretical
  - ▶ Oral **Hormone replacement therapy** is predicted to decrease the effects of **levothyroxine**. [\[Moderate\]](#) Theoretical
  - ▶ Oral **Hormone replacement therapy** is predicted to decrease the effects of **liothyronine**. [\[Moderate\]](#) Theoretical
  - ▶ **Modafinil** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **monoamine-oxidase B inhibitors (selegiline)**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **Hormone replacement therapy**. [\[Moderate\]](#) Study
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [\[Severe\]](#) Theoretical
  - ▶ **Rifabutin** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **Hormone replacement therapy**. [\[Moderate\]](#) Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical
- Hydralazine** → see TABLE 8 p. 1265 (hypotension)
- ▶ **Diazoxide** increases the risk of severe hypotension when given with hydralazine. [\[Severe\]](#) Study → Also see TABLE 8 p. 1265
- Hydrochlorothiazide** → see thiazide diuretics
- Hydrocortisone** → see corticosteroids
- Hydroflumethiazide** → see thiazide diuretics
- Hydromorphone** → see opioids
- Hydroxycarbamide** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid. [\[Severe\]](#) Theoretical

- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study

### Hydroxychloroquine

- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
- Hydroxyzine** → see antihistamines, sedating
- Hyoscine** → see TABLE 10 p. 1266 (antimuscarinics)
- Ibandronic acid** → see bisphosphonates
- Ibrutinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 4 p. 1264 (antiplatelet effects)

**FOOD AND LIFESTYLE** Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- Ibuprofen** → see NSAIDs
- icatibant**
- ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icatibant** and **icatibant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical
- Idarubicin** → see anthracyclines
- Idarucizumab** → see monoclonal antibodies
- Idelalisib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Idelalisib** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antimalarials (artemether)** with lumafantrine. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 15 p. 1267

## Idelalisib (continued)

- ▶ Idelalisib is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 325. [Severe] Study
- ▶ Idelalisib slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **isradipine**, **lacidipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Idelalisib is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Idelalisib is predicted to markedly increase the exposure to **calcium channel blockers** (**lercanidipine**). Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib increases the concentration of **ciclosporin**. [Severe] Study
- ▶ Idelalisib is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ Idelalisib is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Idelalisib is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **corticosteroids** (**budesonide**). Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **corticosteroids** (**ciclesonide**). Avoid. [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **corticosteroids** (**dexamethasone**, **methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Idelalisib is predicted to increase the exposure to inhaled **corticosteroids** (**fluticasone**). [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **corticosteroids** (**mometasone**). [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the risk of side-effects when given with **corticosteroids** (**triamcinolone**). [Severe] Theoretical
- ▶ Idelalisib is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ Idelalisib is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ Idelalisib increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Idelalisib increases the exposure to **dopamine receptor agonists** (**bromocriptine**, **cabergoline**). [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ Idelalisib slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ Idelalisib is predicted to markedly increase the exposure to **elotriptan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ Idelalisib is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ Idelalisib is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Idelalisib is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ Idelalisib is predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also increased risk of myelosuppression on concurrent use, see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or **lumacaftor** with **ivacaftor** dose, p. 281. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ Idelalisib is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ Idelalisib markedly increases the exposure to **maraviric**. Adjust dose. [Severe] Theoretical
- ▶ Idelalisib is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
- ▶ Idelalisib is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ Idelalisib is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **monoclonal antibodies** (**trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **netupitant**. [Mild] Study
- ▶ Idelalisib is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **opioids** (**methadone**). [Moderate] Theoretical
- ▶ Idelalisib is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Idelalisib is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 909. [Severe] Study
- ▶ Idelalisib is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ Idelalisib is predicted to increase the exposure to **paritaprevir** with **ritonavir** and **ombitasvir**. Avoid. [Severe] Theoretical

- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust **sildenafil** dose, p. 766. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid, or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- Iloprost** → see TABLE 4 p. 1264 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical

## Imatinib (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **isradipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspace** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**, **cabergoline**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **fosetorodine**. Adjust **fosetorodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids** (**methadone**, **sufentanil**). [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**). Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**ildenafil**). Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical

- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Imidapril** → see ACE inhibitors
- Imipenem** → see carbapenems
- Imipramine** → see tricyclic antidepressants
- Indacaterol** → see beta<sub>2</sub> agonists
- Indapamide** → see thiazide diuretics
- Indinavir** → see HIV-protease inhibitors
- Indometacin** → see NSAIDs
- Indoramin** → see alpha blockers
- Infliximab** → see monoclonal antibodies
- Influenza vaccine** → see live vaccines
- Insulin** → see insulins
- Insulin aspart** → see insulins
- Insulin degludec** → see insulins
- Insulin detemir** → see insulins
- Insulin glargine** → see insulins
- Insulin glulisine** → see insulins
- Insulin lispro** → see insulins
- Insulin zinc suspension** → see insulins
- Insulins** → see TABLE 14 p. 1267 (antidiabetic drugs)
  - biphasic insulin aspart • biphasic insulin lispro • biphasic isophane insulin • insulin • insulin aspart • insulin degludec • insulin detemir • insulin glargine • insulin glulisine • insulin lispro • insulin zinc suspension • isophane insulin • protamine zinc insulin
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical
- Interferon alpha** → see interferons
- Interferon beta** → see interferons
- Interferons** → see TABLE 15 p. 1267 (myelosuppression)
  - interferon alpha • interferon beta • peginterferon alpha
- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Interferon alpha** is predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Theoretical
- ▶ **Peginterferon alpha** increases the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study
- Ipilimumab** → see monoclonal antibodies
- Ipratropium** → see TABLE 10 p. 1266 (antimuscarinics)
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal
- Irbesartan** → see angiotensin-II receptor antagonists
- Irinotecan** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1267
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid. [Severe] Theoretical
  - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
  - ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Unknown] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
  - ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
  - ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- Iron (injectable)**

ferric carboxymaltose • iron dextran • iron isomaltoside 1000 • iron sucrose

- ▶ **Chloramphenicol** decreases the efficacy of intravenous iron (injectable). [Moderate] Anecdotal
- Iron (oral)**
- ferric maltol • ferrous fumarate • ferrous gluconate • ferrous sulfate • polysaccharide-iron complex • sodium feredetate
  - ▶ **Antacids** decrease the absorption of **iron (oral)**. **Iron (oral)** should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
  - ▶ **Iron (oral)** is predicted to decrease the absorption of oral **bisphosphonates** (**ibandronic acid**). Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
  - ▶ **Iron (oral)** decreases the absorption of **bisphosphonates** (**risedronate**). Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Iron (oral)** decreases the absorption of **bisphosphonates** (**sodium clodronate**). Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
  - ▶ **Calcium salts** (**calcium carbonate**) decrease the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. [Moderate] Study
  - ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. [Moderate] Theoretical
  - ▶ **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. [Moderate] Theoretical
  - ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. **Iron (oral)** should be taken 2 hours before or 6 hours after **dolutegravir**. [Moderate] Study
  - ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [Severe] Theoretical
  - ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ **Iron (oral)** decreases the absorption of **levodopa**. [Moderate] Study
  - ▶ **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Iron (oral)** decreases the effects of **methyldopa**. [Moderate] Study
  - ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [Mild] Study
  - ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. [Moderate] Study
  - ▶ **Trintene** potentially decreases the absorption of **iron (oral)**. [Moderate] Theoretical

## Iron (oral) (continued)

- ▶ **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** are predicted to decrease the efficacy of **zinc**. [Moderate] Study

## Iron chelators

deferasirox · desferrioxamine · dextrazoxane

- ▶ **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the exposure to **deferasirox**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **desferrioxamine**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. [Severe] Theoretical
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dextrazoxane**. Avoid. [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Deferasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical

**Iron dextran** → see iron (injectable)

**Iron isomaltoside 1000** → see iron (injectable)

**Iron sucrose** → see iron (injectable)

**Isavuconazole** → see antifungals, azoles

**Isocarboxazid** → see monoamine-oxidase A and B inhibitors, irreversible

**Isflurane** → see volatile halogenated anaesthetics

**Isomethepene** → see sympathomimetics, vasoconstrictor

**Isoniazid** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 12 p. 1267 (peripheral neuropathy)

**FOOD AND LIFESTYLE** Avoid tyramine or histamine rich foods, as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
- ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor carbamazepine concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study → Also see TABLE 12 p. 1267
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 12 p. 1267
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal

- ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1264

- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [Severe] Theoretical → Also see TABLE 12 p. 1267

- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal

**Isophane insulin** → see insulins

**Isosorbide dinitrate** → see nitrates

**Isosorbide mononitrate** → see nitrates

**Isotretinoin** → see retinoids

**Isradipine** → see calcium channel blockers

**Itraconazole** → see antifungals, azoles

**Ivabradine** → see TABLE 6 p. 1265 (bradycardia), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1265
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** increase the exposure to **ivabradine**. Adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Neupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study

## Ivacaftor

**FOOD AND LIFESTYLE** Avoid bitter (Seville) oranges as they are predicted to increase the exposure to ivacaftor.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **coumarins (warfarin)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Enzalutamide** markedly decreases the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Idealisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or lumacaftor with ivacaftor dose, p. 281. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Theoretical
- Ivermectin**
- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Ixazomib**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ixekizumab** → see monoclonal antibodies
- Kaolin**
- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical
- Ketamine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical
- Ketoconazole** → see antifungals, azoles
- Ketoprofen** → see NSAIDs
- Ketorolac** → see NSAIDs
- Ketotifen** → see antihistamines, sedating
- Labetalol** → see beta blockers, non-selective
- Lacidipine** → see calcium channel blockers
- Lacosamide** → see antiepileptics

**Lamivudine** → see TABLE 12 p. 1267 (peripheral neuropathy)

- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study

**Lamotrigine** → see antiepileptics

**Lanreotide**

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

**Lansoprazole** → see proton pump inhibitors

**Lanthanum**

- ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **levothyroxine**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Lanthanum** decreases the absorption of **liothyronine**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical

**Lapatinib** → see TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **alisikren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical

**Lapatinib** (continued)

- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

**Laronidase**

- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical

**Ledipasvir**

- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see sofosbuvir with ledipasvir p. 596. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see sofosbuvir with ledipasvir p. 596. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ledipasvir** (with sofosbuvir) is predicted to increase the exposure to **statins (fluvastatin, pravastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir**. [Moderate] Study

**Leflunomide** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)

**PHARMACOLOGY** Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid. [Severe] Theoretical

**Lenalidomide** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Severe] Theoretical

**Lercanidipine** → see calcium channel blockers

**Levamisole**

**FOOD AND LIFESTYLE** Disulfiram-like reaction might occur on consumption of alcohol.

- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study

**Levetiracetam** → see antiepileptics

**Levobunolol** → see beta blockers, non-selective

**Levobupivacaine** → see anaesthetics, local

**Levocetirizine** → see antihistamines, non-sedating

**Levodopa** → see TABLE 8 p. 1265 (hypotension)

**GENERAL INFORMATION** Drugs with antimuscarinic effects might reduce the absorption of levodopa.

- ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **levodopa**. [Moderate] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1265

- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. **[Severe]** Study → Also see **TABLE 8** p. 1265
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. **[Moderate]** Study
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Droperidol** decreases the effects of **levodopa**. **[Severe]** Study → Also see **TABLE 8** p. 1265
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. **[Moderate]** Study
- ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Haloperidol** decreases the effects of **levodopa**. **[Severe]** Study → Also see **TABLE 8** p. 1265
- ▶ **Iron (oral)** decreases the absorption of **levodopa**. **[Moderate]** Study
- ▶ **Isoniazid** decreases the effects of **levodopa**. **[Moderate]** Study
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. **[Severe]** Theoretical
- ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. **[Moderate]** Theoretical
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. **[Moderate]** Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. **[Moderate]** Study
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. **[Severe]** Study → Also see **TABLE 8** p. 1265
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. **[Mild]** Study → Also see **TABLE 8** p. 1265
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. **[Severe]** Anecdotal → Also see **TABLE 8** p. 1265
- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust **levodopa** dose. **[Moderate]** Study
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. **[Severe]** Study → Also see **TABLE 8** p. 1265
- ▶ **Pimozide** decreases the effects of **levodopa**. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Quetiapine** decreases the effects of **levodopa**. **[Severe]** Anecdotal → Also see **TABLE 8** p. 1265
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. **[Severe]** Anecdotal → Also see **TABLE 8** p. 1265
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. **[Moderate]** Theoretical
- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. **[Moderate]** Study
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. **[Severe]** Theoretical → Also see **TABLE 8** p. 1265
- Levofloxacin** → see quinolones
- Levofolinic acid** → see folates
- Levomopromazine** → see phenothiazines
- Levonorgestrel**
  - ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. **[Severe]** Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. **[Severe]** Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. **[Severe]** Theoretical
- Levothyroxine**
  - ▶ **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. **[Moderate]** Anecdotal
  - ▶ **Antiarrhythmics (amiodarone)** increase the risk of thyroid dysfunction when given with **levothyroxine**. Avoid. **[Moderate]** Study
  - ▶ **Antiepileptics (carbamazepine)** increase the risk of hypothyroidism when given with **levothyroxine**. Monitor and adjust dose. **[Moderate]** Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the risk of hypothyroidism when given with **levothyroxine**. **[Moderate]** Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **levothyroxine**. **[Moderate]** Theoretical
  - ▶ Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. **[Moderate]** Anecdotal
  - ▶ **Levothyroxine** is predicted to affect the concentration of **digoxin**. Monitor and adjust dose. **[Moderate]** Theoretical
  - ▶ Oral **Hormone replacement therapy** is predicted to decrease the effects of **levothyroxine**. **[Moderate]** Theoretical
  - ▶ **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. **[Moderate]** Study
  - ▶ **Lanthanum** decreases the absorption of **levothyroxine**. Separate administration by 2 hours. **[Moderate]** Study
  - ▶ **Polystyrene sulfonate** is predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. **[Moderate]** Theoretical
  - ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. **[Moderate]** Study
- Lidocaine** → see antiarrhythmics
- Linagliptin** → see **TABLE 14** p. 1267 (antidiabetic drugs)
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. **[Moderate]** Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. **[Moderate]** Study
  - ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. **[Moderate]** Theoretical

## Linagliptin (continued)

- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study

**Linezolid** → see TABLE 15 p. 1267 (myelosuppression), TABLE 13 p. 1267 (serotonin syndrome)

**FOOD AND LIFESTYLE** Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Methyphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Sympathomimetics, inotropic (dobutamine, dopamine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isomethepene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor (pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study

**Liothyronine**

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **liothyronine**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **liothyronine**. [Moderate] Theoretical
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **liothyronine**. [Moderate] Theoretical
- ▶ **Liothyronine** is predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Oral **Hormone replacement therapy** is predicted to decrease the effects of **liothyronine**. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **liothyronine**. Separate administration by 2 hours. [Moderate] Study

**Liraglutide** → see TABLE 14 p. 1267 (antidiabetic drugs)

**Lisdesamfetamine** → see amfetamines

**Lisinopril** → see ACE inhibitors

**Lithium** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Aldosterone antagonists (eplerenone)** are predicted to increase the concentration of **lithium**. Avoid. [Moderate] Theoretical
- ▶ **Aldosterone antagonists (spironolactone)** potentially increase the concentration of **lithium**. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Theoretical
- ▶ **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor **lithium** (lithium carbonate, lithium citrate) concentration and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust **lithium** (lithium carbonate, lithium citrate) dose. [Severe] Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
- ▶ **Potassium-sparing diuretics (triamterene)** potentially increase the clearance of **lithium**. [Moderate] Study
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust **lithium** (lithium carbonate, lithium citrate) dose and monitor **lithium** (lithium carbonate, lithium citrate) concentration. [Severe] Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266 → Also see TABLE 13 p. 1267
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266

**Live vaccines**

Bacillus Calmette-Guérin vaccine • influenza vaccine • measles, mumps and rubella vaccine, live • rotavirus vaccine • typhoid vaccine • varicella-zoster vaccine • yellow fever vaccine, live

**ROUTE-SPECIFIC INFORMATION** Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; melfloquine should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid. [Severe] Theoretical

## Live vaccines (continued)

- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes** (**docetaxel**, **paclitaxel**). Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid. **[Severe]** Theoretical
- Venetoclax** potentially decreases the efficacy of live vaccines. Avoid. **[Severe]** Theoretical
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid. **[Severe]** Theoretical

**Lixisenatide** → see TABLE 14 p. 1267 (antidiabetic drugs)

**SEPARATION OF ADMINISTRATION** Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.

**Lofepramine** → see tricyclic antidepressants

**Lofexidine** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)

**Lomitapide** → see TABLE 1 p. 1264 (hepatotoxicity)

**FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- Alprazolam** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Antiarrhythmics (amiodarone)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Antiarrhythmics (dronedarone)** are predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to lomitapide. Monitor and adjust dose. **[Moderate]** Theoretical → Also see TABLE 1 p. 1264
- Antifungals, azoles (clotrimazole)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical → Also see TABLE 1 p. 1264
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to lomitapide. Avoid. **[Severe]** Study → Also see TABLE 1 p. 1264
- Aprépitant** is predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Bicalutamide** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Calcium channel blockers (amlodipine, lacidipine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Ciclosporin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Cilostazol** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Cobicistat** is predicted to markedly increase the exposure to lomitapide. Avoid. **[Severe]** Study
- Oral **combined hormonal contraceptives** slightly increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Lomitapide** increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust warfarin dose. **[Severe]** Study
- Crizotinib** is predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Enzalutamide** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. **[Moderate]** Theoretical
- Everolimus** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Fosaprepitant** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Grapefruit juice** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- H<sub>2</sub> receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to lomitapide. Avoid. **[Severe]** Study
- HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Idelalisib** is predicted to markedly increase the exposure to lomitapide. Avoid. **[Severe]** Study
- Imatinib** is predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Isoniazid** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Unknown]** Theoretical → Also see TABLE 1 p. 1264
- Ivacaftor** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Lapatinib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Linagliptin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Macrolides (azithromycin)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Macrolides (clarithromycin)** are predicted to markedly increase the exposure to lomitapide. Avoid. **[Severe]** Study
- Macrolides (erythromycin)** are predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Netupitant** is predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Nilotinib** is predicted to increase the exposure to lomitapide. Avoid. **[Moderate]** Theoretical
- Pazopanib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Peppermint oil** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Propiverine** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Ranolazine** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Moderate]** Theoretical
- Rifampicin** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. **[Moderate]** Theoretical
- SSRIs (fluoxetine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. **[Unknown]** Theoretical

- **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Lomitapide** increases the exposure to **statins (atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours. [Mild] Study → Also see TABLE 1 p. 1264
- **Lomitapide** increases the exposure to **statins (simvastatin)**. Monitor and adjust **simvastatin** dose, p. 198. [Moderate] Study → Also see TABLE 1 p. 1264
- **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

**Lomustine** → see alkylating agents

**Loop diuretics** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 8 p. 1265 (hypotension), TABLE 19 p. 1268 (ototoxicity), TABLE 17 p. 1268 (reduced serum potassium)

bumetanide • furosemide • torasemide

- **Aliskiren** slightly decreases the exposure to **furosemide**. [Moderate] Study → Also see TABLE 8 p. 1265
- **Loop diuretics** increase the risk of nephrotoxicity and ototoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1268
- **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [Moderate] Study
- Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of **furosemide**. Adjust dose. [Moderate] Study
- **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **furosemide**. Adjust **furosemide** dose. [Moderate] Theoretical
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical

#### Loperamide

- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- **Clopidogrel** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
- **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **loperamide**. [Moderate] Theoretical
- **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical

**Lopinavir** → see HIV-protease inhibitors

**Loprazolam** → see TABLE 11 p. 1266 (CNS depressant effects)

**Loratadine** → see antihistamines, non-sedating

**Lorazepam** → see TABLE 11 p. 1266 (CNS depressant effects)

► **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study

**Lormetazepam** → see TABLE 11 p. 1266 (CNS depressant effects)

**Losartan** → see angiotensin-II receptor antagonists

**Low molecular-weight heparins** → see TABLE 16 p. 1268 (increased serum potassium), TABLE 3 p. 1264 (anticoagulant effects)

dalteparin • enoxaparin • tinzaparin

- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- **Loxapine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimutagenicity)
- **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

- **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 10 p. 1266
- **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- **SSRIs (fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

#### Lumacaftor

- **Lumacaftor** is predicted to affect the exposure to **aliskiren**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Mild] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (itraconazole, ketoconazole, voriconazole)**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **antihistamines, non-sedating (fexofenadine)**. Monitor and adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **colchicine**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **corticosteroids (methylprednisolone, prednisone)**. Adjust dose. [Severe] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **coumarins (warfarin)**. [Severe] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **edoxaban**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **H<sub>2</sub> receptor antagonists (ranitidine)**. Monitor and adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to affect the exposure to **loperamide**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **montelukast**. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **proton pump inhibitors (esomeprazole, lansoprazole, omeprazole)**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **repaglinide**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **SSRIs (citalopram, escitalopram, sertraline)**. Adjust dose. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical

**Lumacaftor** (continued)

- ▶ **Lumacaftor** is predicted to affect the exposure to **taxanes** (**paclitaxel**). [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to affect the exposure to **topotecan**. [Moderate] Theoretical
- Lumefantrine** → see antimalarials
- Lurasidone** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1266
  - ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study → Also see TABLE 8 p. 1265
  - ▶ **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
  - ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical

**Lymecycline** → see tetracyclines**Macitentan**

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study

- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical

**Macrolides** → see TABLE 9 p. 1266 (QT-interval prolongation)

azithromycin · clarithromycin · erythromycin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Clarithromycin** is predicted to increase the exposure to **abiraterone**. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers** (**alfuzosin**, **tamsulosin**). Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers** (**doxazosin**). [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [Moderate] Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust **aminophylline** dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics** (**dronedaron**). Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics** (**dronedaron**). Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **antiarrhythmics** (**lidocaine**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics** (**propafenone**). Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics** (**propafenone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases**, **centrally acting** (**galantamine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics** (**carbamazepine**). Monitor **carbamazepine** concentration and adjust dose. [Severe] Study
- ▶ **Erythromycin** markedly increases the concentration of **antiepileptics** (**carbamazepine**). Monitor **carbamazepine** concentration and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **antiepileptics** (**perampanel**). [Mild] Study

- ▶ **Clarithromycin** is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to antihistamines, non-sedating (**mizolastine**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to antihistamines, non-sedating (**mizolastine**). [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to antimalarials (**artemether**) with lumefantrine. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of antimalarials (**piperaquine**). [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ Macrolides are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bupirone**. Adjust bupirone dose, p. 325. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 895. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose, p. 1020. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (budesonide)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (ciclesonide)**. Avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to inhaled **corticosteroids (fluticasone)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (mometasone)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of side-effects when given with **corticosteroids (triamcinolone)**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **crizotinib**. [Moderate] Theoretical
- ▶ Macrolides (**azithromycin, clarithromycin, erythromycin**) are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 591. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Macrolides increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 122. [Severe] Study
- ▶ Macrolides (**azithromycin**, **clarithromycin**) are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** slightly to moderately increases the exposure to **elbasvir**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose; avoid in hepatic and renal impairment, p. 732. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ Macrolides are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, indinavir, lopinavir, ritonavir)** slightly to moderately increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, indinavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
- ▶ **Clarithromycin** increases the exposure to **HIV-protease inhibitors (saquinavir)** and **HIV-protease inhibitors (saquinavir)** increase the exposure to **clarithromycin**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Clarithromycin** is predicted to increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** or **lumacaftor** with **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin**, **erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lurasidone**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **netupitant**. [Mild] Study
- ▶ **Nevirapine** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ Macrolides are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical

- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids** (**methadone**). [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids** (**methadone**, **sufentanil**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 909. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Clarithromycin** is predicted to increase the exposure to **paritaprevir** (with **ritonavir** and **ombitasvir**). Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**). Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **varidenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Avoid or adjust **sildenafil** dose, p. 766. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). Use with caution or avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**varidenafil**). Adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- ▶ **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Clarithromycin** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **sofenacin**. Adjust **sofenacin** or **tamsulosin** with **sofenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **statins** (**pravastatin**). [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**pravastatin**). [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins** (**simvastatin**). Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **taxanes** (**docetaxel**). Avoid or adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical

## Macrolides (continued)

- ▶ Erythromycin decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of erythromycin. Adjust dose. [Severe] Study
- ▶ Macrolides (azithromycin, clarithromycin) are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ Azithromycin is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ Clarithromycin is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Clarithromycin is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ Erythromycin is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ Clarithromycin is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Severe] Study
- ▶ Erythromycin is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ Macrolides are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Clarithromycin is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ Clarithromycin is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Macrolides are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Clarithromycin is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ Erythromycin is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Clarithromycin is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ Erythromycin is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ Clarithromycin is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ Azithromycin is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to **venetoclax**. Avoid or adjust venetoclax dose, p. 919. [Moderate] Study
- ▶ Clarithromycin is predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ Macrolides (clarithromycin, erythromycin) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ Clarithromycin is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ Clarithromycin decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Clarithromycin is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ Erythromycin is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

## Magnesium

- ▶ Oral magnesium decreases the absorption of **bisphosphonates (alendronic acid)**. Alendronic acid should be taken at least 30 minutes before magnesium. [Moderate] Study
- ▶ Oral magnesium is predicted to decrease the absorption of oral **bisphosphonates (ibandronic acid)**. Avoid magnesium for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral magnesium decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral magnesium decreases the absorption of **bisphosphonates (sodium clodronate)**. Avoid magnesium for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ Intravenous magnesium potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, clevidipine, felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** in pregnant women. [Severe] Anecdotal

- ▶ Intravenous magnesium increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ Intravenous magnesium is predicted to increase the effects of **suxamethonium**. [Moderate] Study

Magnesium carbonate → see antacids

Magnesium trisilicate → see antacids

## Maraviroc

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir, ritonavir, saquinavir**) increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical

Measles, mumps and rubella vaccine, live → see live vaccines

## Mebendazole

- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [Moderate] Study

## Medroxyprogesterone

- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical

Mefenamic acid → see NSAIDs

Mefloquine → see antimalarials

Melatonin → see TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical

- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical

- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. [Severe] Study

Meloxicam → see NSAIDs

Melphalan → see alkylating agents

## Memantine

- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. [Moderate] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical

## Mepacrine

- ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials (primaquine)**. Avoid. [Moderate] Theoretical

Mepivacaine → see anaesthetics, local

Mepolizumab → see monoclonal antibodies

Meprobamate → see TABLE 11 p. 1266 (CNS depressant effects)

**Meptazinol** → see opioids

**Mercaptopurine** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)

- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 844. [Severe] Study
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine**. Public Health England advises avoid. [Severe] Theoretical

**Meropenem** → see carbapenems

**Mesalazine**

**ROUTE-SPECIFIC INFORMATION** The manufacturers of some mesalazine gastro-resistant and modified-release medicines (Asacol MR tablets, Ipocol, Salofalk granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

**Metaraminol** → see sympathomimetics, vasoconstrictor

**Metformin** → see TABLE 14 p. 1267 (antidiabetic drugs)

**FOOD AND LIFESTYLE** Excessive alcohol consumption might increase the risk of lactic acidosis with metformin.

- ▶ **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study

**Methadone** → see opioids

**Methenamine**

- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

**Methocarbamol** → see TABLE 11 p. 1266 (CNS depressant effects)

**Methotrexate** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity), TABLE 5 p. 1264 (thromboembolism)

- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
- ▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical
- ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. [Severe] Study → Also see TABLE 2 p. 1264
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical

- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate**. Use with caution or avoid. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. Avoid. [Severe] Anecdotal
- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Theoretical → Also see TABLE 2 p. 1264

**Methyldopa** → see TABLE 8 p. 1265 (hypotension)

- ▶ **Enalapapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the effects of **methyldopa**. [Moderate] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265

**Methylphenidate**

- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical

**Methylprednisolone** → see corticosteroids

**Methylthioninium chloride** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Metoclopramide**

- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine**). Avoid. [Moderate] Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study

**Metolazone** → see thiazide diuretics

**Metoprolol** → see beta blockers, selective

**Metronidazole** → see TABLE 12 p. 1267 (peripheral neuropathy)

- ▶ Disulfiram-like reaction can occur on the ingestion of alcohol. Ensure that alcohol is not consumed for at least

48 hours after stopping metronidazole.

- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Metronidazole** increases the risk of toxicity when given with alkylating agents (**busulfan**). [Severe] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ **Metronidazole** is predicted to increase the risk of **capecitabine** p. 839 toxicity when given with **capecitabine**. [Severe] Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study

#### Metyrapone

- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the effects of **metyrapone**. Avoid. [Moderate] Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metyrapone**. Avoid. [Moderate] Study
- ▶ **Carbamazole** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

**Mianserin** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversibly**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal

**Micafungin** → see TABLE 1 p. 1264 (hepatotoxicity)

- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study

**Miconazole** → see antifungals, azoles

**Midazolam** → see TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study

- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust **midazolam** dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study

**Midodrine** → see sympathomimetics, vasoconstrictor

#### Mifamurtide

- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

#### Mifepristone

- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical

**Minocycline** → see tetracyclines

**Minoxidil** → see TABLE 8 p. 1265 (hypotension)

#### Mirabegron

- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 736. [Moderate] Study
  - ▶ **Mirabegron** is predicted to decrease the efficacy of **opioids (tramadol)**. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical
  - ▶ **Mirtazapine** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 11 p. 1266 (CNS depressant effects)
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
  - ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
  - ▶ **Mitomycin** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid. [Severe] Theoretical
  - ▶ **Mitotane** → see TABLE 15 p. 1267 (myelosuppression)
  - ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Mitoxantrone** → see anthracyclines
  - ▶ **Mivacurium** → see neuromuscular blocking drugs, non-depolarising
  - ▶ **Mizolastine** → see antihistamines, non-sedating
  - ▶ **Moclobemide** → see TABLE 13 p. 1267 (serotonin syndrome)
- FOOD AND LIFESTYLE** Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines (dexamfetamine)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines (lisdexamfetamine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the exposure to **clotazol**. [Moderate] Theoretical
  - ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 346. [Mild] Study
  - ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Methyphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
  - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the effects of **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** increases the risk of side-effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isomethepene, phenylephrine, pseudoephedrine)**. Avoid. [Severe] Study
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Tricyclic antidepressants** are predicted to increase the effects of **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Moclobemide** (continued)

- **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456. [Moderate] Study → Also see TABLE 13 p. 1267

**Modafinil**

- **Antiepileptics** (**carbamazepine**, **phenobarbital**, **primidone**) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- **Antiepileptics** (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Moderate] Theoretical
- **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Unknown] Theoretical
- **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Modafinil** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal

**Moexipril** → see ACE inhibitors

**Mometasone** → see corticosteroids

**Monoamine-oxidase A and B inhibitors, irreversible** → see

TABLE 8 p. 1265 (hypotension), TABLE 13 p. 1267 (serotonin syndrome)

isocarboxazid · phenelzine · tranylcypromine

**FOOD AND LIFESTYLE** Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **alpha blockers** (**indoramin**). Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- **Antiepileptics** (**phenobarbital**, **primidone**) are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. [Severe] Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1267
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
- **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to affect the exposure to **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1265
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methylidopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Monoamine-oxidase B inhibitors** (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 13 p. 1267
- **Monoamine-oxidase B inhibitors** (**safinamide**) are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical

- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - ▶ **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- Monoamine-oxidase B inhibitors** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 13 p. 1267 (serotonin syndrome)
- rasagiline • safinamide • selegiline
- FOOD AND LIFESTYLE** Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
  - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
  - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1265
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **saferinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** is predicted to increase the effects of **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **saferinamide**. Avoid and for 1 week after stopping **saferinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 13 p. 1267
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **saferinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. [Severe] Theoretical
  - ▶ **Rasagiline** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **saferinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Selegiline** increases the risk of side-effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1267
  - ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
  - ▶ **Monoamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
  - ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **tedizolid**. Avoid and for 1 week after stopping **saferinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- Monoclonal antibodies** → see TABLE 15 p. 1267 (myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 4 p. 1264 (antiplatelet effects)
- adalimumab • alemtuzumab • alirocicab • basiliximab • belimumab • bevacizumab • blinatumomab • brentuximab vedotin • canakinumab • catumaxomab • certolizumab pegol • cetuximab • dactilizumab • daratumumab • denosumab • eculizumab • elotuzumab • evolocumab • golimumab • idarucizumab • infliximab • ipilimumab • ixekizumab • meplizumab • natalizumab • necitumab • nivolumab • obinutuzumab • ofatumumab • omalizumab • panitumumab • pembrolizumab • pertuzumab • ramucicromab • reslizumab • rituximab • secukinumab • siltuximab • tocilizumab • trastuzumab • trastuzumab emtansine • ustekinumab • vedolizumab
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical

**Monoclonal antibodies** (continued)

- ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (trastuzumab, trastuzumab emtansine). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1267
- ▶ **Antiarrhythmics (dronedaron)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trastuzumab emtansine**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1267
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **trastuzumab emtansine**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1267
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** decreases the effects of **brentuximab vedotin**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **trastuzumab emtansine**. [\[Severe\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tocilizumab** moderately decreases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

**Montelukast**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study
- ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [\[Moderate\]](#) Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **montelukast**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [\[Mild\]](#) Study

**Morphine** → see opioids**Moxifloxacin** → see quinolones**Moxisylyte** → see TABLE 8 p. 1265 (hypotension)**Moxonidine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1265

**Mycophenolate** → see TABLE 15 p. 1267 (myelosuppression)

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Antacids** decrease the exposure to **mycophenolate**. [\[Moderate\]](#) Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1267
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1267
- ▶ **Nabilone** → see TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [\[Severe\]](#) Theoretical
- ▶ **Nabumetone** → see NSAIDs
- ▶ **Nadolol** → see beta blockers, non-selective
- ▶ **Nalidixic acid** → see quinolones
- ▶ **Nalmefene**

**GENERAL INFORMATION** Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [\[Severe\]](#) Theoretical

**Naloxegol**

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study

- ▶ **Idelalisib** is predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor side effects, p. 63. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to naloxegol. Avoid. [Moderate] Theoretical

### Naltrexone

GENERAL INFORMATION Avoid concurrent use of opioids.

### Nandrolone

- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

### Naproxen

→ see NSAIDs

### Naratriptan

→ see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical

### Natalizumab

→ see monoclonal antibodies

### Nateglinide

→ see TABLE 14 p. 1267 (antidiabetic drugs)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to nateglinide. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to nateglinide. [Mild] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to nateglinide. [Mild] Study
- ▶ **Sulfinpyrazone** slightly increases the exposure to nateglinide. [Mild] Study

### Nebivolol

→ see beta blockers, selective

### Necitumumab

→ see monoclonal antibodies

### Nefopam

→ see TABLE 10 p. 1266 (antimuscarinics)

- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Nelarabine** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Neomycin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268 (ototoxicity), TABLE 20 p. 1268 (neuromuscular blocking effects)
- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study

### Neostigmine

→ see TABLE 6 p. 1265 (bradycardia), TABLE 20 p. 1268 (neuromuscular blocking effects)

- ▶ **Aminoglycosides** are predicted to decrease the effects of neostigmine. [Moderate] Theoretical → Also see TABLE 20 p. 1268

### Nepafenac

→ see NSAIDs

### Netupitant

- ▶ **Netupitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 185. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to netupitant. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to netupitant. [Mild] Study
- ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust bosutinib dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Netupitant** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to netupitant. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose, p. 1020. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **crizotinib**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to netupitant. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fosetorodine**. Adjust fosetorodine dose in hepatic and renal impairment, p. 732. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust guanfacine dose, p. 335. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to netupitant. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose, p. 902. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to netupitant. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust ivabradine dose, p. 205. [Severe] Theoretical

## Netupitant (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **netupitant**. [\[Mild\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [\[Mild\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **temsirolimus**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical

- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

**Neuromuscular blocking drugs, non-depolarising** → see TABLE 6 p. 1265 (bradycardia), TABLE 20 p. 1268 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- ▶ **Aminoglycosides** are predicted to increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Theoretical → Also see TABLE 20 p. 1268
- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1265
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [\[Moderate\]](#) Study
- ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
- ▶ **Colistimethate** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 20 p. 1268
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
- ▶ **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [\[Severe\]](#) Anecdotal
- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
- ▶ **Intravenous magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
- ▶ **Penicillins (piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. [\[Unknown\]](#) Theoretical

**Nevirapine**

- ▶ **Nevirapine** is predicted to decrease the exposure to **antiarrhythmics (dronedrone)**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to **nevirapine**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid **nevirapine** for 14 days before and during treatment with **itraconazole**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (ketconazole)**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical

- ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the exposure to **macrolides (clarithromycin)**. [Moderate] Study
- ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Nevirapine** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- Nicardipine** → see calcium channel blockers
- Nicorandil** → see TABLE 8 p. 1265 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal
- ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- Nicotinic acid** → see TABLE 3 p. 1264 (anticoagulant effects)
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 185. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical

## Nilotinib (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical → Also see **TABLE 9** p. 1266
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust **bosutinib** dose. [\[Severe\]](#) Theoretical → Also see **TABLE 15** p. 1267 → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267 → Also see **TABLE 9** p. 1266
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267 → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** increases the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose, p. 1020. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see **TABLE 15** p. 1267 → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine, cabergoline)**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dufatamide**. [\[Mild\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see **TABLE 15** p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose in hepatic and renal impairment, p. 732. [\[Mild\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 335. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [\[Mild\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [\[Severe\]](#) Theoretical → Also see **TABLE 15** p. 1267
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 15** p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 205. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose, p. 281. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 63. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **opioids (methadone, sufentanil)**. [\[Moderate\]](#) Theoretical → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Theoretical → Also see **TABLE 15** p. 1267 → Also see **TABLE 9** p. 1266
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **statins (simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust **venetoclax** dose, p. 919. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266 → Also see TABLE 15 p. 1267
- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- ▶ **Nimodipine** → see calcium channel blockers
- Nintedanib**
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study

- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study

## Nitisinone

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust **nitisinone** dose. [Moderate] Theoretical

**Nitrates** → see TABLE 7 p. 1265 (first-dose hypotension), TABLE 8 p. 1265 (hypotension)

glyceryl trinitrate · isosorbide dinitrate · isosorbide mononitrate

**PHARMACOLOGY** Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Study → Also see TABLE 8 p. 1265
- ▶ **Nitrazepam** → see TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [Moderate] Study
- Nitrofurantoin**
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Antacids (magnesium trisilicate)** decrease the absorption of **nitrofurantoin**. [Moderate] Study
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrous oxide** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Nivolumab** → see monoclonal antibodies
- ▶ **Nizatidine** → see H<sub>2</sub> receptor antagonists
- ▶ **Noradrenaline/norepinephrine** → see sympathomimetics, vasoconstrictor
- Norethisterone**
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal

## Norethisterone (continued)

- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [\[Severe\]](#) Theoretical

Norfloxacin → see quinolones

Nortriptyline → see tricyclic antidepressants

**NSAIDs** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 2 p. 1264 (nephrotoxicity), TABLE 16 p. 1268 (increased serum potassium), TABLE 4 p. 1264 (antiplatelet effects)

aceclofenac · acemetacin · benzydamine · bromfenac · celecoxib · dexibuprofen · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · fenoprofen · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tofenamic acid

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Celecoxib** is predicted to increase the exposure to **antiarrhythmics (flecainide, propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1031. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronic acid, ibandronic acid)**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (sodium clodronate)**. [\[Severe\]](#) Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** increases the concentration of **diclofenac**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1264 → Also see TABLE 16 p. 1268
  - ▶ **Etoricoxib** slightly increases the exposure to **combined hormonal contraceptives**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study
  - ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical
  - ▶ **Indometacin** increases the concentration of **digoxin**. [\[Severe\]](#) Study
  - ▶ Topical **dimethyl sulfoxide** potentially increases the risk of peripheral neuropathy when given with **sulindac**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
  - ▶ **Etoricoxib** slightly increases the exposure to **Hormone replacement therapy**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferisirox)**. [\[Severe\]](#) Theoretical
  - ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust **lithium** (lithium carbonate, lithium citrate) dose. [\[Severe\]](#) Study
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **ibuprofen**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 2 p. 1264
  - ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
  - ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1264
  - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical
  - ▶ **Regorafenib** is predicted to increase the exposure to **mefenamic acid**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1264
  - ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1268
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1264
- Obinutuzumab** → see monoclonal antibodies
- Octreotide**
- ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 788. [\[Severe\]](#) Anecdotal
- Ofatumumab** → see monoclonal antibodies
- Oflaxacin** → see quinolones
- Olanzapine** → see TABLE 8 p. 1265 (hypotension), TABLE 15 p. 1267 (myelosuppression), TABLE 11 p. 1266 (CNS depressant effects)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Olanzapine** is predicted to decrease the effects of **histamine**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1265
  - ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **olanzapine**. [\[Moderate\]](#) Study
  - ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 1265
  - ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [\[Severe\]](#) Anecdotal
- Olaparib** → see TABLE 15 p. 1267 (myelosuppression)
- FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to olaparib.
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [\[Moderate\]](#) Theoretical

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid or adjust **olaparib** dose, p. 919. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- Olmesartan** → see angiotensin-II receptor antagonists
- Olsodaterol** → see beta<sub>2</sub> agonists
- Olsalazine** → see TABLE 15 p. 1267 (myelosuppression)
- Omalizumab** → see monoclonal antibodies
- Ombitasvir**
  - ▶ **Antiepileptics** (**carbamazepine**) are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- Omega-3-acid ethyl esters** → see TABLE 3 p. 1264 (anticoagulant effects)
- Omeprazole** → see proton pump inhibitors
- Ondansetron** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Dopamine receptor agonists** (**apomorphine**) increase the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study

### Opicapone

- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust **levodopa** dose. [Moderate] Study
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase B inhibitors** (**rasagiline**, **selegiline**). [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic** (**dobutamine**, **dopamine**). [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Theoretical

**Opioids** → see TABLE 6 p. 1265 (bradycardia), TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)

alfentanil • buprenorphine • codeine • diamorphine • dihydrocodeine • diphenoxylate • dipipanone • fentanyl • hydromorphone • meptazinol • methadone • morphine • oxycodone • papaveretum • pentazocine • pethidine • remifentanyl • sufentanyl • tapentadol • tramadol

**FOOD AND LIFESTYLE** Alcohol has been associated with rapid release of **hydromorphone** and **morphine** from extended-release preparations. Avoid alcohol consumption with extended-release preparations.

- ▶ **Abiraterone** is predicted to decrease the efficacy of **tramadol**. [Moderate] Study
- ▶ **Antiarrhythmics** (**amiodarone**) are predicted to increase the concentration of **fentanyl**. [Moderate] Theoretical → Also see TABLE 6 p. 1265
- ▶ **Antiarrhythmics** (**propafenone**) are predicted to decrease the efficacy of **tramadol**. [Moderate] Study
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to opioids (**methadone**, **sufentanyl**). [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics** (**carbamazepine**) decrease the concentration of **tramadol**. Adjust dose. [Severe] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1266
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1266
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to opioids (**alfentanil**, **fentanyl**). [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

## Opioids (continued)

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Bosentan** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Bupropion** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study → Also see TABLE 13 p. 1267
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1265
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1265
- ▶ **Certinib** is predicted to increase the exposure to opioids (**alfentanil**, **fentanyl**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1265
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Duloxetine** is predicted to decrease the efficacy of **tramadol**. [\[Moderate\]](#) Study → Also see TABLE 13 p. 1267
- ▶ **Efavirenz** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to opioids (**alfentanil**, **fentanyl**). [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **fentanyl**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **tramadol**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**, **sufentanil**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Mirabegron** is predicted to decrease the efficacy of **tramadol**. [\[Moderate\]](#) Study
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [\[Severe\]](#) Study → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (rasagiline)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 1 week after stopping **safranamide**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase B inhibitors (selegiline)** increase the risk of side-effects when given with **pethidine**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1267
- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical
- ▶ **Neurapine** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**methadone**, **sufentanil**). [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**, **pethidine**, **remifentanyl**, **sufentanil**, **tapentadol**, **tramadol**). [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1266 → Also see TABLE 13 p. 1267
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**, **codeine**, **diamorphine**, **dihydrocodeine**, **dipipanone**, **fentanyl**,

hydromorphone, meptazinol, methadone, morphine, oxycodone, papaveretum). [Severe] Theoretical → Also see TABLE 13 p. 1267 → Also see TABLE 11 p. 1266

- ▶ **Palbociclib** is predicted to increase the exposure to opioids (alfentanil, fentanyl). Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to morphine. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to buprenorphine. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to opioids (alfentanil, fentanyl). [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to opioids (codeine, morphine). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to oxycodone. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of codeine. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of tramadol. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **St John's Wort** decreases the exposure to methadone. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **St John's Wort** moderately decreases the exposure to oxycodone. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of codeine. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of tramadol. [Severe] Study

#### Orlistat

**SEPARATION OF ADMINISTRATION** Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

**Orphenadrine** → see TABLE 10 p. 1266 (antimuscarinics)

**Osimertinib** → see TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to osimertinib. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to osimertinib. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to osimertinib. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to osimertinib. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to osimertinib. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to osimertinib. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to osimertinib. Avoid. [Moderate] Theoretical
- ▶ **Osimertinib** slightly increases the exposure to **statins (rosuvastatin)**. [Moderate] Study

**Oxaliplatin** → see platinum compounds

**Oxapem** → see TABLE 11 p. 1266 (CNS depressant effects)

**Oxcarbazepine** → see antiepileptics

**Oxprenolol** → see beta blockers, non-selective

**Oxybuprocaine** → see anaesthetics, local

**Oxybutynin** → see TABLE 10 p. 1266 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to oxybutynin. [Mild] Study
- ▶ **Aprepitant** is predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to oxybutynin. [Mild] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to oxybutynin. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to oxybutynin. [Mild] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to oxybutynin. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to oxybutynin. [Mild] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to oxybutynin. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to oxybutynin. [Mild] Theoretical

**Oxycodone** → see opioids

#### Oxymetholone

▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal

▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal

**Oxytetracycline** → see tetracyclines

**Paclitaxel** → see taxanes

#### Palbociclib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to palbociclib. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to palbociclib. Avoid or adjust palbociclib dose, p. 909. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to palbociclib. Avoid. [Severe] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical

**Paliperidone** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of paliperidone. Adjust dose. [Moderate] Study

## Paliperidone (continued)

- ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Rifampicin** is predicted to decrease the exposure to paliperidone. Monitor and adjust paliperidone dose. [Moderate] Theoretical
- ▶ **Palonosetron** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Dopamine receptor agonists (amorphine)** are predicted to increase the risk of severe hypotension when given with palonosetron. [Severe] Theoretical
- ▶ **Pamidronate** → see bisphosphonates
- ▶ **Pancreatin**
- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical
- ▶ **Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- ▶ **Panitumumab** → see monoclonal antibodies
- ▶ **Panobinostat** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid, p. 864. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Panobinostat** is predicted to increase the exposure to **phenothiazines (perphenazine)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **tolterodine**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

**Pantoprazole** → see proton pump inhibitors

**Papaveretum** → see opioids

**Paracetamol** → see TABLE 1 p. 1264 (hepatotoxicity)

**FOOD AND LIFESTYLE** Severe liver damage can occur with chronic alcohol consumption in some alcoholics and persistent heavy drinkers who take only moderate doses of paracetamol.

- ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [Moderate] Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to paracetamol. [Moderate] Study → Also see TABLE 1 p. 1264
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to paracetamol. [Moderate] Study
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with paracetamol. [Severe] Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Pitoisant** is predicted to decrease the exposure to paracetamol. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to paracetamol. [Moderate] Study
- ▶ **Paraldehyde** → see antiepileptics
- ▶ **Parecoxib** → see NSAIDs
- ▶ **Paricalcitol** → see vitamin D substances

## Paritaprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir) and paritaprevir (with ritonavir and ombitasvir) is predicted to increase the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** potentially increase the exposure to paritaprevir. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loop diuretics (furosemide)**. Adjust furosemide dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **statins (fluvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (pravastatin)**. Adjust pravastatin dose, p. 197. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 197. [Moderate] Study
- Paroxetine** → see SSRIs
- Pasireotide** → see TABLE 6 p. 1265 (bradycardia), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- Pazopanib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after **antacids**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitinapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 909. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- Pegaspargase** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- Peginterferon alfa** → see interferons
- Peginterferon beta-1a** → see TABLE 15 p. 1267 (myelosuppression)
- Pembrolizumab** → see monoclonal antibodies
- Pemetrexed** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity)
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1264
- Penicillamine** → see TABLE 2 p. 1264 (nephrotoxicity)
- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [Mild] Study
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [Mild] Theoretical
- Penicillins**  
amoxicillin · ampicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin · ticarcillin
- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [Moderate] Study
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Theoretical
- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Piperacillin** increases the effects of **suxamethonium**. [Moderate] Study
- Pentamidine** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity), TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Didanosis** is predicted to increase the risk of pruritis when given with **pentamidine**. Avoid. [Severe] Study
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1264
- Pentazocine** → see opioids

**Pentostatin** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1267 → Also see TABLE 5 p. 1264
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267

#### Pentoxifylline

- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study

#### Peppermint oil

- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

**Perampanel** → see antiepileptics

**Pergolide** → see dopamine receptor agonists

**Pericyazine** → see phenothiazines

**Perindopril** → see ACE inhibitors

**Perphenazine** → see phenothiazines

**Pertuzumab** → see monoclonal antibodies

**Pethidine** → see opioids

**Phenelzine** → see monoamine-oxidase A and B inhibitors, irreversible

**Phenindione** → see TABLE 3 p. 1264 (anticoagulant effects)

**FOOD AND LIFESTYLE** The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decreases the effects of **phenindione**. [Severe] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

**Phenobarbital** → see antiepileptics

**Phenothiazines** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimuscarinics)

chlorpromazine · fluphenazine · levomepromazine · pericyazine · perphenazine · prochlorperazine · promazine · trifluoperazine

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment with chlorpromazine and fluphenazine.

- ▶ **Amfetamines** are predicted to decrease the effects of **chlorpromazine**. [Moderate] Study
- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
- ▶ **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Phenothiazines** are predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1265
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
- ▶ **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Moclobemide** increases the risk of side-effects when given with **levomepromazine**. [Moderate] Study
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Panobinostat** is predicted to increase the exposure to **perphenazine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **SSRIs (paroxetine)** markedly increase the exposure to **perphenazine**. [Severe] Study

**Phenoxymethylpenicillin** → see penicillins

**Phenylephrine** → see sympathomimetics, vasoconstrictor

**Phenytoin** → see antiepileptics

**Pholcodine**

- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical

**Phosphodiesterase type-5 inhibitors** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation)

avanafil · sildenafil · tadalafil · vardenafil

- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [\[Severe\]](#) Study → Also see TABLE 8 p. 1265
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid or adjust **sildenafil** dose, p. 766. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **Aprepitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1265
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1265
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1265
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid or adjust **sildenafil** dose, p. 766. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1266
- ▶ **Flavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **sildenafil**. Avoid or adjust **sildenafil** dose, p. 766. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid or adjust **sildenafil** dose, p. 766. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical

**Phosphodiesterase type-5 inhibitors** (continued)

- **Imatinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid or adjust **sildenafil** dose, p. 766. [Severe] Study → Also see TABLE 9 p. 1266
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- **Macrolides (erythromycin)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varidenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **Netupitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- **Netupitant** is predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study
- **Netupitant** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- **Netupitant** is predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical
- **Nevirapine** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. [Moderate] Theoretical
- **Nicorandil** is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 765. [Moderate] Theoretical
- **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor and adjust **sildenafil** dose, p. 766. [Moderate] Study → Also see TABLE 9 p. 1266
- **Nilotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- **Nilotinib** is predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Nitrate** potentially increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [Severe] Study → Also see TABLE 8 p. 1265
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [Severe] Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varidenafil**). [Moderate] Theoretical
- **Riociguat** is predicted to increase the risk of hypotension when given with phosphodiesterase type-5 inhibitors. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- **St John's Wort** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors. [Moderate] Theoretical

**Pilocarpine**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Pimecrolimus**

**FOOD AND LIFESTYLE** Risk of facial flushing and skin irritation with alcohol consumption.

- **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- **Pimozide** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 10 p. 1266 (antimutagenicity)

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- **Aprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266 → Also see TABLE 10 p. 1266
- **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266
- **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical

**Pindolol** → see beta blockers, non-selective

**Pioglitazone** → see TABLE 14 p. 1267 (antidiabetic drugs)

► **Clopidogrel** is predicted to increase the exposure to **pioglitazone**. [Severe] Theoretical

► **Fibrates (gemfibrozil)** markedly increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study

► **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust **pioglitazone** dose. [Moderate] Study

► **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study

**Piperacillin** → see penicillins

**Piperazine** → see antimalarials

**Pirfenidone**

**FOOD AND LIFESTYLE** Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study

**Piroxicam** → see NSAIDs

### Pitolisant

- ▶ **Abiraterone** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Unknown] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Unknown] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical

- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical

**Pivmecillinam** → see penicillins

**Pixantrone** → see anthracyclines

**Pizotifen** → see antihistamines, sedating

**Platinum compounds** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268 (ototoxicity), TABLE 12 p. 1267 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid. [Severe] Theoretical

**Polymyxins** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 20 p. 1268 (neuromuscular blocking effects)

**Polysaccharide-iron complex** → see iron (oral)

### Polystyrene sulfonate

- ▶ **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ **Polystyrene sulfonate** is predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Theoretical

**Pomalidomide** → see TABLE 15 p. 1267 (myelosuppression), TABLE 5 p. 1264 (thromboembolism)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 886. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 886. [Moderate] Study

### Ponatinib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to

**Ponatinib** (continued)

- slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
- **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
  - **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 911. [Moderate] Study
  - **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
  - **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- Posaconazole** → see antifungals, azoles
- Potassium canrenoate** → see TABLE 16 p. 1268 (increased serum potassium)
- Potassium chloride** → see TABLE 16 p. 1268 (increased serum potassium)
- Potassium citrate**
- Potassium citrate is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - Potassium citrate increases the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 16 p. 1268 (increased serum potassium)
- amiloride • triamterene
- Triamterene potentially increases the clearance of **lithium**. [Moderate] Study
- Pramipexole** → see dopamine receptor agonists
- Prasugrel** → see TABLE 4 p. 1264 (antiplatelet effects)
- Pravastatin** → see statins
- Praziquantel**
- Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
  - Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - Antimalarials (**chloroquine**) moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
  - **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - Corticosteroids (**dexamethasone**) decrease the exposure to **praziquantel**. [Moderate] Study
  - **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
  - **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study
  - H<sub>2</sub> receptor antagonists (**cimetidine**) moderately increase the exposure to **praziquantel**. [Moderate] Study
  - HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- Prazosin** → see alpha blockers
- Prednisolone** → see corticosteroids
- Prednisone** → see corticosteroids
- Pregabalin** → see antiepileptics
- Prilocaine** → see anaesthetics, local
- Primaquine** → see antimalarials
- Primidone** → see antiepileptics
- Procarbazine** → see TABLE 15 p. 1267 (myelosuppression), TABLE 13 p. 1267 (serotonin syndrome)

**FOOD AND LIFESTYLE** Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®,

Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines). Alcohol consumption can cause a disulfiram-like reaction.

- Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) potentially increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
  - **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid. [Severe] Theoretical
- Prochlorperazine** → see phenothiazines
- Procydiline** → see TABLE 10 p. 1266 (antimuscarinics)
- **SSRIs (paroxetine)** slightly increase the exposure to **procydiline**. Monitor and adjust **procydiline** dose. [Moderate] Study
- Proguanil** → see antimalarials
- Promazine** → see phenothiazines
- Promethazine** → see antihistamines, sedating
- Propafenone** → see antiarrhythmics
- Propantheline** → see TABLE 10 p. 1266 (antimuscarinics)
- Propiverine** → see TABLE 10 p. 1266 (antimuscarinics)
- Propiverine is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Propofol** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- Propranolol** → see beta blockers, non-selective
- Propylthiouracil** → see TABLE 15 p. 1267 (myelosuppression)
- Propylthiouracil is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- Protamine zinc insulin** → see insulins
- Proton pump inhibitors**
- esomeprazole • lansoprazole • omeprazole • pantoprazole • rabeprazole
- Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to **proton pump inhibitors**. [Mild] Study
  - Antifungals, azoles (**voriconazole**) increase the exposure to **proton pump inhibitors (esomeprazole, omeprazole)**. Adjust dose. [Moderate] Study
  - **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer **itraconazole** capsules with an acidic beverage. [Moderate] Study
  - **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer **ketoconazole** with an acidic beverage. [Moderate] Study
  - **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** (oral suspension). Avoid. [Moderate] Study
  - **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
  - **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
  - **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
  - **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Study
  - Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
  - **Proton pump inhibitors** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Severe] Theoretical
  - **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
  - **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
  - **Enzalutamide** is predicted to moderately decrease the exposure to **omeprazole**. [Moderate] Study
  - **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
  - **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical

- ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see sofosbuvir with ledipasvir p. 596. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to proton pump inhibitors (**esomeprazole**, **lansoprazole**, **omeprazole**). Adjust dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate**. Use with caution or avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **omeprazole**. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see sofosbuvir with ledipasvir and sofosbuvir with velpatasvir p. 596. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **proton pump inhibitors**. [Mild] Study
- ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 596. [Moderate] Study
- Proxymetacaine** → see anaesthetics, local
- Pseudoephedrine** → see sympathomimetics, vasoconstrictor
- Pyrazinamide**
  - ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical
  - ▶ **Pyrazinamide** is predicted to decrease the effects of **sulfipyrazole**. [Moderate] Theoretical
- Pyridostigmine** → see TABLE 6 p. 1265 (bradycardia), TABLE 20 p. 1268 (neuromuscular blocking effects)
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical → Also see TABLE 20 p. 1268
- Pyrimethamine** → see antimalarials
- Quetiapine** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
  - ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1266
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1265
  - ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **Quetiapine** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1265
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- Quinagolide** → see dopamine receptor agonists
- Quinapril** → see ACE inhibitors
- Quinine** → see antimalarials
- Quinolones** → see TABLE 9 p. 1266 (QT-interval prolongation)
 

ciprofloxacin • levofloxacin • moxifloxacin • nalidixic acid • norfloxacin • ofloxacin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
  - ▶ **Quinolones (ciprofloxacin, norfloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
  - ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mild] Study
  - ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Aspirin** (high-dose) potentially increases the risk of seizures when given with **quinolones**. [Severe] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **norfloxacin**. **Norfloxacin** should be taken 2 hours before or 4 hours after **calcium carbonate**. [Moderate] Study
  - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **quinolones (ciprofloxacin, nalidixic acid)**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Ciprofloxacin** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after **quinolones**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
  - ▶ **Enteral feeds** decreases the exposure to **ciprofloxacin**. [Moderate] Study
  - ▶ **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study

## Quinolones (continued)

- **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 902. [Severe] Theoretical
- **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. Avoid. [Severe] Anecdotal
- **Ciprofloxacin** slightly increases the exposure to **monoamine-oxidase B inhibitors (rasagiline)**. [Moderate] Study
- **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
- **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 886. [Moderate] Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- **Strontium ranelate** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Norfloxacin** is predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456. [Moderate] Theoretical

**Rabeprazole** → see proton pump inhibitors**Rabies vaccine**

- **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine**. Avoid. [Moderate] Study
- **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical

**Raloxifene** → see TABLE 5 p. 1264 (thromboembolism)**Raltegravir**

- **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
- **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
- **HIV-protease inhibitors (fosamprenavir)** boosted with **ritonavir** decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with **ritonavir**. Avoid. [Severe] Study
- **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose. [Moderate] Study
- **Raltitrexed** → see TABLE 15 p. 1267 (myelosuppression)
- **Folates (folic acid)** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Theoretical
- **Folates (folic acid)** alter the effects of **raltitrexed**. Avoid. [Moderate] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid. [Severe] Theoretical

**Ramipril** → see ACE inhibitors**Ramucirumab** → see monoclonal antibodies**Ranibizumab**

- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical

- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

**Ranitidine** → see H<sub>2</sub> receptor antagonists**Ranolazine** → see TABLE 9 p. 1266 (QT-interval prolongation)

- **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **Aprepitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Theoretical
- **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266
- **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266
- **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1266

- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1266
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 198. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

**Rasagiline** → see monoamine-oxidase B inhibitors

### Reboxetine

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal

**Regorafenib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 4 p. 1264 (antiplatelet effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study

- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Regorafenib** is predicted to increase the exposure to **NSAIDs (mefenamic acid)**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1264
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. [Severe] Theoretical

**Remifentanyl** → see opioids

**Repaglinide** → see TABLE 14 p. 1267 (antidiabetic drugs)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [Moderate] Study
- ▶ **Clopidogrel** increases the exposure to **repaglinide**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** markedly increase the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Iron chelators (deferasirox)** moderately increase the exposure to **repaglinide**. Avoid. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **repaglinide**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** increases the exposure to **repaglinide**. [Moderate] Study
- ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [Moderate] Study

**Reslizumab** → see monoclonal antibodies

**Reteplase** → see TABLE 3 p. 1264 (anticoagulant effects)

**Retigabine** → see antiepileptics

**Retinoids** → see TABLE 5 p. 1264 (thromboembolism)

acitretin • adapalene • alitretinoin • bexarotene • isotretinoin • tazarotene • tretinoin

- ▶ Consumption of alcohol might increase the serum concentration of etretinate in patients taking **acitretin**. Avoid alcohol during and for 2 months after stopping **acitretin**.

## Retinoids (continued)

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of **beaxotene**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Sulfapyrazone** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1157. [\[Moderate\]](#) Theoretical
- ▶ Retinoids (**acitretin**, **alitretinoin**, **isotretinoin**, **tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Beaxotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Retinoids (**acitretin**, **alitretinoin**, **isotretinoin**) are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [\[Severe\]](#) Study

## Rifabutin

- ▶ **Rifabutin** is predicted to increase the exposure to **didanosine**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifabutin** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifabutin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [\[Severe\]](#) Study

## Rifampicin

**GENERAL INFORMATION** Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [\[Severe\]](#) theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 566. [\[Severe\]](#) Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Study
- ▶ **Rifabutin** increases the clearance of **dapsone**. [\[Moderate\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** decreases the exposure to **etravirine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** markedly increase the exposure to **rifabutin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** increase the exposure to **rifabutin** and **rifabutin** decreases the exposure to **HIV-protease inhibitors (indinavir)**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the effects of **Hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal
- ▶ **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal

## Rifampicin

- ▶ **Rifampicin** is predicted to decrease the exposure to **abacavir**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **aliskiren**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust **alprazolam** dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** transiently increases the exposure to **ambrisentan**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before **antacids**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [\[Severe\]](#) Study

- ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust lamotrigine dose, p. 303. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid rifampicin for 14 days before and during treatment with itraconazole. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
- ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antimalarials (quinine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust propranolol dose, p. 145. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **bupropion**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **calcium channel blockers (diltiazem)**. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **calcium channel blockers (isradipine)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust canagliflozin dose, p. 661. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust caspofungin dose, p. 560. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlorthalidoxipoxide**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (budesonide, dexamethasone, methylprednisolone, prednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (prednisone)**. [Mild] Study
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical

## Rifampicin (continued)

- ▶ Rifampicin is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Rifampicin moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **digoxin**. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 899. [Severe] Study
- ▶ Rifampicin is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **fosetoridine**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 335. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ Rifampicin moderately to markedly decreases the exposure to HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **indinavir**, **lopinavir**, **saquinavir**, **tipranavir**). Avoid. [Severe] Study
- ▶ Rifampicin slightly decreases the exposure to HIV-protease inhibitors (**ritonavir**). [Severe] Study
- ▶ Rifampicin is predicted to decrease the effects of **Hormone replacement therapy**. [Moderate] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Rifampicin markedly decreases the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Rifampicin increases the clearance of **lorazepam**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ Rifampicin decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ Rifampicin decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **monoclonal antibodies (trastuzumab emtansine)**. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Rifampicin decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to slightly decrease the exposure to **nateginide**. [Mild] Study
- ▶ Rifampicin is predicted to decrease the exposure to **netupitant**. Avoid. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **nitisinone**. Adjust nitisinone dose. [Moderate] Theoretical
- ▶ Rifampicin increases the clearance of **nitrazepam**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ Rifampicin moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ Rifampicin decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust **paliperidone** dose. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **paracetamol**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
  - ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust **pioglitazone** dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **proton pump inhibitors (omeprazole)**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust **risperidone** dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to increase the exposure to **sacubitril**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **selexipag**. [Unknown] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
  - ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Atorvastatin should be taken at the same time as rifampicin. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
  - ▶ **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **zaleplon**. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **zolidem**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Rifaximin**
- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study
- Rilpivirine**
- ▶ **Antacids** are predicted to decrease the exposure to rilpivirine. Antacids should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to rilpivirine. Avoid. [Severe] Study

## Rilpivirine (continued)

- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to slightly decrease the exposure to rilpivirine. Calcium carbonate should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to rilpivirine. H<sub>2</sub> receptor antagonists should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to rilpivirine. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical

## Riluzole

**FOOD AND LIFESTYLE** Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- Riociguat** → see TABLE 8 p. 1265 (hypotension)
- ▶ **Antacids** slightly decrease the exposure to riociguat. Antacids should be taken 2 hours before or 1 hour after riociguat. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to riociguat. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to riociguat. Avoid. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to riociguat. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to riociguat. Avoid. [Moderate] Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265

**Risedronate** → see bisphosphonates

- Risperidone** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to risperidone. Adjust risperidone dose. [Moderate] Study → Also see TABLE 11 p. 1266
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Bupropion** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
- ▶ **Enzalutamide** is predicted to decrease the exposure to risperidone. Adjust risperidone dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266

- ▶ **Idelalisib** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1265
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Rifampicin** is predicted to decrease the exposure to risperidone. Adjust risperidone dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to risperidone. Adjust dose. [Moderate] Study

**Ritonavir** → see HIV-protease inhibitors

**Rituximab** → see monoclonal antibodies

**Rivaroxaban** → see TABLE 3 p. 1264 (anticoagulant effects)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to rivaroxaban. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to rivaroxaban. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to rivaroxaban. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study

**Rivastigmine** → see anticholinesterases, centrally acting

**Rizatriptan** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to rizatriptan. Adjust rizatriptan dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after rizatriptan. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to rizatriptan. Avoid. [Moderate] Study → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to rizatriptan. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Rocuronium** → see neuromuscular blocking drugs, non-depolarising

**Roflumilast**

- ▶ **Aminophylline** is predicted to slightly increase the exposure to roflumilast. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to roflumilast. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to roflumilast. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to roflumilast. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to roflumilast. [Moderate] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to roflumilast. Avoid. [Moderate] Theoretical
- Ropinirole** → see dopamine receptor agonists
- Ropivacaine** → see anaesthetics, local
- Rosuvastatin** → see statins

**Rotavirus vaccine** → see live vaccines

**Rotigotine** → see dopamine receptor agonists

**Rufinamide** → see antiepileptics

**Ruxolitinib** → see TABLE 15 p. 1267 (myelosuppression)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Apprepitant** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Efavirenz** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to ruxolitinib. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ruxolitinib. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to ruxolitinib. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to ruxolitinib. Monitor and adjust dose. [Moderate] Theoretical
- Sacubitril** → see TABLE 8 p. 1265 (hypotension)
- ▶ **Ciclosporin** is predicted to increase the exposure to sacubitril. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the exposure to sacubitril. [Moderate] Theoretical
- ▶ **Sacubitril** is predicted to increase the exposure to **statins**. [Severe] Study
- ▶ **Tenofovir** is predicted to increase the exposure to sacubitril. [Moderate] Theoretical
- Safinamide** → see monoamine-oxidase B inhibitors
- Salbutamol** → see beta<sub>2</sub> agonists
- Salmeterol** → see beta<sub>2</sub> agonists
- Sapropterin** → see TABLE 8 p. 1265 (hypotension)

- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1265
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- Saquinavir** → see HIV-protease inhibitors
- Saxagliptin** → see TABLE 14 p. 1267 (antidiabetic drugs)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Apprepitant** is predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to saxagliptin. [Mild] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to saxagliptin. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to saxagliptin. [Mild] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to saxagliptin. [Moderate] Study
- Secukinumab** → see monoclonal antibodies
- Selegiline** → see monoamine-oxidase B inhibitors
- Selenium**
  - ▶ **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **eltrombopag**. [Severe] Theoretical
- Selexipag**
  - ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical
  - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to selexipag. [Unknown] Theoretical
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to selexipag. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to selexipag. [Unknown] Theoretical
- Senna** → see TABLE 17 p. 1268 (reduced serum potassium)
- Sertraline** → see SSRIs
- Sevoflurane** → see volatile halogenated anaesthetics
- Sildenafil** → see phosphodiesterase type-5 inhibitors
- Siltuximab** → see monoclonal antibodies
- Silver sulfadiazine**

**PHARMACOLOGY** Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

**Simeprevir**

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Simeprevir** is predicted to increase the concentration of **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Appetitant** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
- ▶ **Simeprevir** moderately increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Simeprevir** is predicted to increase the exposure to **statins (pravastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Simeprevir** moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Simeprevir** slightly increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study

**Simvastatin** → see statins

**Sirolimus**

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Appetitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical

**Sitagliptin** → see TABLE 14 p. 1267 (antidiabetic drugs)

**Sodium aurothiomalate**

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [Severe] Anecdotal
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study

**Sodium bicarbonate**

- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

**Sodium citrate**

- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical

**Sodium clodronate** → see bisphosphonates**Sodium ferredate** → see iron (oral)**Sodium nitroprusside** → see TABLE 8 p. 1265 (hypotension)

- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical

**Sodium oxybate** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 466. [Moderate] Study

**Sodium phenylbutyrate**

- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal

**Sodium picosulfate** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 17 p. 1268 (reduced serum potassium)**Sodium stibogluconate**

- ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study

**Sofosbuvir**

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **sofosbuvir** with **ledipasvir** and **sofosbuvir** with **velpatasvir** p. 596. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **sofosbuvir** with **ledipasvir** and **sofosbuvir** with **velpatasvir** p. 596. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

**Solifenacin** → see TABLE 10 p. 1266 (antimuscarinics)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment, p. 734, p. 740. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

**Somatropin**

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical

**Sorafenib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

**Sotalol** → see beta blockers, non-selective**Spirolonactone** → see aldosterone antagonists**SSRIs** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 4 p. 1264 (antipletelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **alprazolam**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1264
- ▶ **Antiarrhythmics (dronedronare)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedronare)** are predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **anticholinesterases, centrally acting (donepezil)**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [Moderate] Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal

## SSRIs (continued)

- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of SSRIs. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 376. [Moderate] Study
- ▶ **Fluvoxamine** increases the exposure to **asenapine**. [Moderate] Study
- ▶ **Paroxetine** moderately increases the exposure to **asenapine**. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical → Also see TABLE 13 p. 1267
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 226. [Moderate] Theoretical → Also see TABLE 4 p. 1264
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to decrease the efficacy of **clodipogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1264
- ▶ **Fluvoxamine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **diazepam**. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267 → Also see TABLE 4 p. 1264
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** increases the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **Grapefruit juice** moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine**, **sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to SSRIs (**citalopram**, **escitalopram**, **sertraline**). Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid or adjust **dapoxetine** dose, p. 773. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose, p. 773. [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately increases the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Paroxetine** markedly increases the exposure to **phenothiazines (perphenazine)**. [Severe] Study
- ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 886. [Moderate] Study
- ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust **procyclidine** dose. [Moderate] Study
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **escitalopram**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **proton pump inhibitors**. [Mild] Study
- ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to SSRIs (**citalopram**, **escitalopram**). Monitor and adjust dose. [Severe] Study

- ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **roflumilast**. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267 → Also see TABLE 4 p. 1264
  - ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
  - ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
  - ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 1267 → Also see TABLE 18 p. 1268
  - ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267
  - ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1267 → Also see TABLE 4 p. 1264
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 456. [Severe] Theoretical → Also see TABLE 13 p. 1267
- St John's Wort** → see TABLE 13 p. 1267 (serotonin syndrome)
- ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
  - ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
  - ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dagibatran**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
  - ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical

**St John's Wort** (continued)

- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to  **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **Hormone replacement therapy**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1267
- ▶ **St John's Wort** moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
  - ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **simeprevir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
  - ▶ **St John's Wort** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- Statins** → see TABLE 1 p. 1264 (hepatotoxicity)

atorvastatin • fluvastatin • pravastatin • rosuvastatin • simvastatin

- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antacids** moderately decrease the absorption of **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1264
- ▶ **Antiepileptics (eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** potentially decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1264
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical → Also see TABLE 1 p. 1264
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 1264
- ▶ **Antifungals, azoles (miconazole)** potentially increase the exposure to **atorvastatin**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Appetitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Appetitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Bosentan** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Bosentan** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 198. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of **statins**. [Moderate] Theoretical
- ▶ **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 196. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 197. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. [Severe] Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Efavirenz** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Elbasvir** potentially increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 196. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 196. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 198. [Unknown] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 198. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 193. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 193, p. 197. [Severe] Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 193. [Severe] Anecdotal
- ▶ **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Grapefruit juice** increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 196. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 196. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 198. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study

## Statins (continued)

- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ledipasvir** (with sofosbuvir) is predicted to increase the exposure to statins (**fluvastatin, pravastatin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours. [\[Mild\]](#) Study → Also see TABLE 1 p. 1264
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 198. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1264
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pravastatin**. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Nevirapine** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **Nevirapine** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with statins. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 198. [\[Severe\]](#) Study
- ▶ **Osimertinib** slightly increases the exposure to **rosuvastatin**. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 197. [\[Moderate\]](#) Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [\[Moderate\]](#) Study
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 198. [\[Moderate\]](#) Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **atorvastatin**. **Atorvastatin** should be taken at the same time as rifampicin. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **fluvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** very markedly decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Sacubitril** is predicted to increase the exposure to statins. [\[Severe\]](#) Study
- ▶ **Simeprevir** moderately increases the exposure to **atorvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Simeprevir** is predicted to increase the exposure to **pravastatin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Simeprevir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [\[Moderate\]](#) Study
- ▶ **Simeprevir** slightly increases the exposure to **simvastatin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's Wort** slightly decreases the exposure to **atorvastatin**. [\[Mild\]](#) Study
- ▶ **St John's Wort** moderately decreases the exposure to **simvastatin**. [\[Moderate\]](#) Study
- ▶ **Sulfinpyrazone** is predicted to increase the exposure to **fluvastatin**. [\[Severe\]](#) Theoretical
- ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [\[Mild\]](#) Study
- ▶ **Tedizolid** is predicted to increase the exposure to **rosuvastatin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 197. [\[Moderate\]](#) Study
- ▶ **Ticagrelor** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 198. [\[Moderate\]](#) Study
- ▶ **Velpatasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor side effects, p. 197. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor side effects and adjust dose. [\[Severe\]](#) Theoretical
- Stavudine** → see TABLE 12 p. 1267 (peripheral neuropathy)
- ▶ **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 12 p. 1267
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [\[Severe\]](#) Theoretical → Also see TABLE 12 p. 1267
- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [\[Severe\]](#) Theoretical
- Stiripentol** → see antiepileptics
- Streptokinase** → see TABLE 3 p. 1264 (anticoagulant effects)
- Streptomycin** → see aminoglycosides
- Strontium ranelate** → see TABLE 5 p. 1264 (thromboembolism)
- ▶ **Antacids** decrease the absorption of **strontium ranelate**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **strontium ranelate**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Strontium ranelate** is predicted to decrease the absorption of **quinolones**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Strontium ranelate** is predicted to decrease the absorption of **tetracyclines**. Avoid. [\[Moderate\]](#) Theoretical

**Sucralfate**

- **Sucralfate** potentially decreases the effects of **coumarins** (**warfarin**). Separate administration by 2 hours. [Moderate] Anecdotal
- **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study

**Sufentanil** → see opioids

**Sugammadex**

- **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical

**Sulfadiazine** → see sulfonamides

**Sulfamethoxazole**

- **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study

**Sulfasalazine** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)

- **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- **Sulfasalazine** decreases the absorption of **folates** (**folic acid**). [Moderate] Study
- **Sulfasalazine** is predicted to decrease the absorption of **folates** (**folic acid**). [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Theoretical

**Sulfipyrazone** → see TABLE 4 p. 1264 (antiplatelet effects)

- **Sulfipyrazone** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). [Moderate] Study
- **Aspirin** decreases the effects of **sulfipyrazone**. [Moderate] Study → Also see TABLE 4 p. 1264
- **Sulfipyrazone** decreases the exposure to **calcium channel blockers** (**verapamil**). [Moderate] Study
- **Sulfipyrazone** decreases the concentration of **ciclosporin**. [Severe] Study
- **Sulfipyrazone** increases the anticoagulant effect of **coumarins**. Avoid. [Severe] Study
- **Sulfipyrazone** slightly increases the exposure to **nateglinide**. [Mild] Study
- **Pyrazinamide** is predicted to decrease the effects of **sulfipyrazone**. [Moderate] Theoretical

- **Sulfipyrazone** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose, p. 1157. [Moderate] Theoretical
- **Sulfipyrazone** is predicted to increase the exposure to **statins** (**fluvastatin**). [Severe] Theoretical
- **Sulfipyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study

**Sulfonamides** → see TABLE 15 p. 1267 (myelosuppression)

co-trimoxazole • sulfadiazine

- **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **anaesthetics**, **local** (**prilocaine**). Use with caution or avoid. [Severe] Anecdotal
- **Sulfadiazine** is predicted to increase the concentration of **antiepileptics** (**fosphenytoin**). Monitor and adjust dose. [Moderate] Study
- **Sulfadiazine** increases the concentration of **antiepileptics** (**phenytoin**). Monitor and adjust dose. [Moderate] Study
- **Antimalarials** (**pyrimethamine**) increase the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1267
- **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1267
- **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical

**Sulfonylureas** → see TABLE 14 p. 1267 (antidiabetic drugs)

glibenclamide • gliclazide • glimepiride • glipizide • tolbutamide

- **Antiarrhythmics** (**amiodarone**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - **Antifungals**, **azoles** (**fluconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - **Bosentan** increases the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
  - **Cephalosporins** (**ceftobiprole**) are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
  - **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical
  - **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
  - **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
  - **Macrolides** (**clarithromycin**) are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
  - **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
  - **Statins** (**fluvastatin**) slightly increase the exposure to **glibenclamide**. [Mild] Study
  - **Sulfipyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
  - **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- Sulindac** → see NSAIDs
- Sulpiride** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)
- **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
  - **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
  - **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266
  - **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study

**Sumatriptan** → see TABLE 13 p. 1267 (serotonin syndrome)

- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1267
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Sunitinib** → see TABLE 15 p. 1267 (myelosuppression), TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1267 → Also see TABLE 9 p. 1266
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 914. [Moderate] Study

**Suxamethonium** → see TABLE 20 p. 1268 (neuromuscular blocking effects)

- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Aminoglycosides** are predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Severe] Theoretical → Also see TABLE 20 p. 1268

- ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Colistimethate** increases the effects of **suxamethonium**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 20 p. 1268
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- ▶ **Intravenous magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
- ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical

#### Sympathomimetics, inotropic

dobutamine · dopamine · dopexamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, inotropic (**dobutamine, dopamine**). [Moderate] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
- ▶ **Guanethidine** is predicted to increase the effects of **dopamine**. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic (dobutamine, dopamine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, inotropic (**dobutamine, dopamine**). [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, inotropic (**dobutamine, dopamine**). [Moderate] Theoretical

#### Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isomethepene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study

- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
  - ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Severe] Study
  - ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Moderate] Study
  - ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [Severe] Anecdotal
  - ▶ **Guanethidine** increases the effects of **metaraminol**. [Severe] Anecdotal
  - ▶ **Guanethidine** increases the effects of **phenylephrine**. [Severe] Study
  - ▶ **Guanethidine** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Moderate] Study
  - ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
  - ▶ Sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, ephedrine, isomethepene, noradrenaline/norepinephrine, phenylephrine**) are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Mianserin** decreases the effects of **ephedrine**. [Severe] Anecdotal
  - ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor (**ephedrine, isomethepene, phenylephrine, pseudoephedrine**). Avoid. [Severe] Study
  - ▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor. Avoid and for 14 days after stopping the MAOI. [Severe] Study
  - ▶ **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor. Avoid. [Severe] Anecdotal
  - ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Severe] Theoretical
  - ▶ **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. [Moderate] Study
  - ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Moderate] Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [Severe] Study
  - ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine**). Avoid. [Severe] Study
- Tacalcitol** → see vitamin D substances
- Tacrolimus** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 16 p. 1268 (increased serum potassium)
- ▶ Risk of facial flushing and skin irritation with alcohol consumption in those using topical tacrolimus (does not apply to tacrolimus taken systemically). Pomelo might greatly increase the concentration of tacrolimus.
  - ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
  - ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Calcium channel blockers (nifedipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
  - ▶ **Certinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
  - ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1264 → Also see TABLE 16 p. 1268
  - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal
  - ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. [Severe] Study
  - ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid. [Severe] Theoretical
  - ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical

## Tacrolimus (continued)

- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal

**Tadalafil** → see phosphodiesterase type-5 inhibitors

**Tamoxifen** → see TABLE 5 p. 1264 (thromboembolism)

- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study

**Tamsulosin** → see alpha blockers

**Tapentadol** → see opioids

**Taxanes** → see TABLE 15 p. 1267 (myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy)

cabazitaxel • docetaxel • paclitaxel

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1267
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Certinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1267

- ▶ **Efavirenz** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1267
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel, paclitaxel**). Public Health England advises avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to affect the exposure to **paclitaxel**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to taxanes (**cabazitaxel, paclitaxel**). Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical

**Tazarotene** → see retinoids

**Tedizolid** → see TABLE 13 p. 1267 (serotonin syndrome)

**FOOD AND LIFESTYLE** Patients taking tedizolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical

- **Moclobemide** is predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Monamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Monamine-oxidase B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **tedizolid**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Monamine-oxidase B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **tedizolid**. Avoid and for 1 week after stopping **saquinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1267
- **Tedizolid** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Theoretical

### Tegafur

- **Tegafur** potentially increases the concentration of **antileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- **Folates (folic acid, folinic acid)** are predicted to increase the risk of **tegafur** toxicity when given with **tegafur**. [Severe] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid. [Severe] Theoretical
- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical

### Tecoplanin

**GENERAL INFORMATION** If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

**Telavancin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268

(ototoxicity), TABLE 9 p. 1266 (QT-interval prolongation)

- **Telavancin** is predicted to increase the risk of ototoxicity when given with **aminoglycosides**. [Moderate] Theoretical → Also see TABLE 2 p. 1264 → Also see TABLE 19 p. 1268

### Telbivudine

- **Interferons (interferon alfa)** are predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Theoretical
- **Interferons (peginterferon alfa)** increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Study

**Telmisartan** → see angiotensin-II receptor antagonists

**Temazepam** → see TABLE 11 p. 1266 (CNS depressant effects)

**Temocillin** → see penicillins

**Temozolomide** → see alkylating agents

**Temsirolimus** → see TABLE 15 p. 1267 (myelosuppression)

- **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **Appetizant** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

- **Crizotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **HIV-protease inhibitors (indinavir)** are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1267
- **Imatinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid. [Severe] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **Macrolides (erythromycin)** are predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Netupitant** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical
- **Nevirapine** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- **Nilotinib** is predicted to increase the concentration of **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- Tenecteplase** → see TABLE 3 p. 1264 (anticoagulant effects)
- Tenofovir** → see TABLE 2 p. 1264 (nephrotoxicity)
- **Tenofovir** increases the risk of toxicity when given with **didanosine**. Avoid. [Severe] Study
- **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir**. [Moderate] Study
- **Tenofovir** is predicted to increase the exposure to **sacubitril**. [Moderate] Theoretical
- **Velpatasvir** increases the exposure to **tenofovir**. [Moderate] Study
- Tenoxicam** → see NSAIDs
- Terazosin** → see alpha blockers

### Terbinafine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Terbinafine** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. [Severe] Theoretical
- **Terbinafine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (donepezil)**. [Moderate] Theoretical
- **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 376. [Moderate] Study
- **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- **Terbinafine** is predicted to increase the exposure to **beta blockers, non-selective (carvedilol, timolol)**. [Moderate] Study
- **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study

**Terbinafine** (continued)

- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids** (**codeine**). [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids** (**tramadol**). [Severe] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs** (**citalopram**, **dapoxetine**, **escitalopram**, **fluvoxamine**, **sertraline**). [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs** (**fluoxetine**). Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **SSRIs** (**paroxetine**). [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Terbutaline** → see beta<sub>2</sub> agonists

**Teriflunomide**

- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Teriflunomide** increases the exposure to **repaglinide**. [Moderate] Study
- ▶ **Teriflunomide** moderately increases the exposure to **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose. p. 197. [Moderate] Study

**Tetrabenazine** → see TABLE 9 p. 1266 (QT-interval prolongation)

- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors**, **irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

**Tetracaine** → see anaesthetics, local

**Tetracycline** → see tetracyclines

**Tetracyclines** → see TABLE 1 p. 1264 (hepatotoxicity)

- demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline · tigecycline
- ▶ **ACE inhibitors** (**quinapril**) (tablet) decrease the absorption of oral **tetracycline**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1264
- ▶ **Tetracycline** decreases the concentration of **antimalarials** (**atovaquone**). [Moderate] Study
- ▶ **Calcium salts** (**calcium carbonate**) are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
- ▶ **Dairy products** decreases the exposure to tetracyclines (demeclocycline, oxytetracycline, tetracycline). Avoid. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. [Moderate] Study

- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical

▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical

- ▶ **Retinoids** (**acitretin**, **alitretinoin**, **isotretinoin**, **tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal

▶ **Rifampicin** decreases the exposure to **doxycycline**. Monitor and adjust dose. [Moderate] Study

- ▶ **Strontium ranelate** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical

▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical

**Thalidomide** → see TABLE 6 p. 1265 (bradycardia), TABLE 15 p. 1267

(myelosuppression), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 5 p. 1264 (thromboembolism), TABLE 11 p. 1266 (CNS depressant effects)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study

▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical

**Theophylline** → see TABLE 17 p. 1268 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor **theophylline** concentration and adjust dose. [Severe] Theoretical

▶ **Theophylline** decreases the efficacy of **antiarrhythmics** (**adenosine**). Separate administration by 24 hours. [Mild] Study

- ▶ **Antiepileptics** (**carbamazepine**) potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics** (**carbamazepine**). Adjust dose. [Moderate] Anecdotal

▶ **Antiepileptics** (**fosphenytoin**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Study

▶ **Antiepileptics** (**phenobarbital**, **primidone**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical

▶ **Antiepileptics** (**phenytoin**) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study

▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical

▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical

▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study

▶ **Enteral feeds** decreases the exposure to **theophylline**. [Moderate] Study

▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) increase the concentration of **theophylline**. Adjust dose. [Severe] Study

▶ **HIV-protease inhibitors** (**ritonavir**) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study

▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study

▶ **Iron chelators** (**deferasirox**) increase the exposure to **theophylline**. Avoid. [Moderate] Study

▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal

▶ **Theophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Anecdotal

▶ **Macrolides** (**azithromycin**, **clarithromycin**) are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal

- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
  - ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Quinolones (norfloxacin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [\[Severe\]](#) Study
  - ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [\[Severe\]](#) Anecdotal
  - ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **theophylline**. Avoid in children. [\[Moderate\]](#) Study
  - ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
- Thiazide diuretics** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 8 p. 1265 (hypotension), TABLE 17 p. 1268 (reduced serum potassium)
- bendroflumethiazide • chlortalidon • clopamide • cyclopenthiazide • hydrochlorothiazide • hydroflumethiazide • indapamide • metolazone • xipamide •
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [\[Severe\]](#) Theoretical
  - ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical
  - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [\[Severe\]](#) Anecdotal
  - ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust **lithium** (lithium carbonate, lithium citrate) dose and monitor **lithium** (lithium carbonate, lithium citrate) concentration. [\[Severe\]](#) Study
  - ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1268
  - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [\[Moderate\]](#) Anecdotal
  - ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical
  - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [\[Moderate\]](#) Theoretical
- Thiopental** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [\[Moderate\]](#) Theoretical
  - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1265
- Thiotepa** → see alkylating agents
- Tiagabine** → see antiepileptics
- Tiaprofenic acid** → see NSAIDs
- Tibolone** → see TABLE 5 p. 1264 (thromboembolism)
- Ticagrelor** → see TABLE 4 p. 1264 (antiplatelet effects)
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Ticagrelor** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
  - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [\[Severe\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
  - ▶ **Ticagrelor** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 198. [\[Moderate\]](#) Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
- Ticarcillin** → see penicillins
- Tigecycline** → see tetracyclines
- Timolol** → see beta blockers, non-selective
- Tinidazole**
- FOOD AND LIFESTYLE** Disulfiram-like reaction is predicted to occur on the ingestion of alcohol. Ensure that alcohol is not consumed for 72 hours after stopping tinidazole.
- ▶ **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- Tinzaparin** → see low molecular-weight heparins
- Tioguanine** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid. [\[Severe\]](#) Theoretical
- Tiotropium** → see TABLE 10 p. 1266 (antimuscarinics)
- Tipranavir** → see HIV-protease inhibitors
- Tirofiban** → see TABLE 4 p. 1264 (antiplatelet effects)
- Tizanidine** → see TABLE 6 p. 1265 (bradycardia), TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [\[Mild\]](#) Study
  - ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [\[Mild\]](#) Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [\[Mild\]](#) Study

## Tizanidine (continued)

- **SSRIs** (**fluvoxamine**) very markedly increase the exposure to tizanidine. Avoid. [\[Severe\]](#) Study

**Tobramycin** → see aminoglycosides

**Tocilizumab** → see monoclonal antibodies

**Tolbutamide** → see sulfonylureas

**Tolcapone**

- Tolcapone increases the exposure to **levodopa**. Monitor and adjust dose. [\[Moderate\]](#) Study
- Tolcapone is predicted to increase the effects of **monoamine oxidase A and B inhibitors, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- Tolcapone is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic** (**dobutamine, dopamine**). [\[Moderate\]](#) Theoretical
- Tolcapone is predicted to increase the effects of **sympathomimetics, vasoconstrictor** (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [\[Moderate\]](#) Theoretical

**Tolfenamic acid** → see NSAIDs

**Tolerodine** → see TABLE 9 p. 1266 (QT-interval prolongation), TABLE 10 p. 1266 (antimuscarinics)

- **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 1266
- **Antifungals, azoles** (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Antifungals, azoles** (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- **Aprepitant** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Calcium channel blockers** (**diltiazem, verapamil**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study
- **Crizotinib** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 1266
- **HIV-protease inhibitors** (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study
- **Imatinib** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1266
- **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Netupitant** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical
- **Nilotinib** is predicted to increase the exposure to **tolterodine**. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 1266
- **Panobinostat** is predicted to increase the exposure to **tolterodine**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1266

**Tolvaptan** → see TABLE 16 p. 1268 (increased serum potassium)

**GENERAL INFORMATION** Avoid concurrent use of drugs that increase serum-sodium concentrations.

- **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Antiepileptics** (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tolvaptan**. Avoid. [\[Severe\]](#) Study
- **Antifungals, azoles** (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Antifungals, azoles** (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
- **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical

- **Bosentan** is predicted to decrease the exposure to **tolvaptan**. [\[Moderate\]](#) Theoretical
- **Calcium channel blockers** (**diltiazem, verapamil**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
- **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Tolvaptan** increases the concentration of **digoxin**. [\[Mild\]](#) Study
- **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. [\[Moderate\]](#) Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid. [\[Severe\]](#) Study
- **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [\[Moderate\]](#) Study
- **HIV-protease inhibitors** (**atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
- **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
- **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Severe\]](#) Study
- **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Nevirapine** is predicted to decrease the exposure to **tolvaptan**. [\[Moderate\]](#) Theoretical
- **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- **Rifampin** is predicted to decrease the exposure to **tolvaptan**. Avoid. [\[Severe\]](#) Study
- **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. [\[Moderate\]](#) Theoretical

**Topiramate** → see antiepileptics

**Topotecan** → see TABLE 15 p. 1267 (myelosuppression)

- **Antiarrhythmics** (**amiodarone, dronedaron**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Antiepileptics** (**fosphenytoin, phenytoin**) increase the clearance of **topotecan**. [\[Moderate\]](#) Study
- **Antifungals, azoles** (**itraconazole, ketoconazole**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Calcium channel blockers** (**verapamil**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Ceritinib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1267
- **Ciclosporin** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **HIV-protease inhibitors** (**lopinavir, ritonavir, saquinavir**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Lapatinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid. [\[Severe\]](#) Theoretical
- **Lumacaftor** is predicted to affect the exposure to **topotecan**. [\[Moderate\]](#) Theoretical
- **Macrolides** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **Mirabegron** is predicted to increase the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- **Ranolazine** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- **St John's Wort** is predicted to decrease the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [\[Moderate\]](#) Theoretical

- **Velpatasvir** is predicted to increase the exposure to **topotecan**.

[Severe] Theoretical

- **Vemurafenib** is predicted to increase the exposure to

**topotecan**. [Severe] Study

- **Torsemide** → see loop diuretics

- **Toremifene** → see TABLE 5 p. 1264 (thromboembolism), TABLE 9 p. 1266 (QT-interval prolongation)

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

- **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical

- **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical

- **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study

- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

- **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical

- **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1266

- **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study

- **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical

- **Trabectedin** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression)

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1264

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1264

- **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

- **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical

- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

- **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1267

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid. [Severe] Theoretical

- **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

- **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical

- **Tramadol** → see opioids

#### Trametinib

- **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

- **Trandolapril** → see ACE inhibitors

- **Tranexamic acid** → see TABLE 5 p. 1264 (thromboembolism)

- **Tranylcypromine** → see monoamine-oxidase A and B inhibitors, irreversible

- **Trastuzumab** → see monoclonal antibodies

- **Trastuzumab emtansine** → see monoclonal antibodies

- **Trazodone** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 11 p. 1266 (CNS depressant effects)

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal

- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- **Aprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Netupitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

- **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

#### Tree pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

- **Treosulfan** → see alkylating agents

- **Tretinoin** → see retinoids

- **Triamcinolone** → see corticosteroids

- **Triamterene** → see potassium-sparing diuretics

- **Tricyclic antidepressants** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 8 p. 1265 (hypotension), TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 10 p. 1266 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

- **Antiarrhythmics (dronedarone)** are predicted to increase the risk of torsade de pointes when given with **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1266

- **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1266

## Tricyclic antidepressants (continued)

- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to tricyclic antidepressants. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 18 p. 1268
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to tricyclic antidepressants. [\[Moderate\]](#) Study
- ▶ Tricyclic antidepressants (**clomipramine, imipramine**) potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 13 p. 1267
- ▶ **Cinacalcet** is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ Tricyclic antidepressants decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1265
- ▶ **Cobicistat** is predicted to slightly increase the exposure to tricyclic antidepressants. [\[Mild\]](#) Study
- ▶ **Darifenacin** is predicted to increase the exposure to tricyclic antidepressants. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1266
- ▶ Tricyclic antidepressants are predicted to decrease the antihypertensive effects of **guanethidine**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1265
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to tricyclic antidepressants. [\[Moderate\]](#) Study
- ▶ Tricyclic antidepressants are predicted to decrease the effects of **histamine**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1265
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to tricyclic antidepressants. [\[Moderate\]](#) Theoretical
- ▶ Tricyclic antidepressants potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 1266 → Also see TABLE 13 p. 1267
- ▶ **Amitriptyline** decreases the effects of **metoprolol**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Tricyclic antidepressants are predicted to increase the effects of **moclobemide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1267
- ▶ Tricyclic antidepressants are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 13 p. 1267
- ▶ Tricyclic antidepressants are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1265
- ▶ Tricyclic antidepressants are predicted to decrease the efficacy of **pitolisant**. [\[Mild\]](#) Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 13 p. 1267 → Also see TABLE 18 p. 1268
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to clomipramine. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267
- ▶ **SSRIs (fluvoxamine)** increase the exposure to tricyclic antidepressants (**amitriptyline, imipramine**). Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1268 → Also see TABLE 13 p. 1267
- ▶ **Sucalfate** is predicted to decrease the absorption of tricyclic antidepressants. [\[Moderate\]](#) Study
- ▶ Tricyclic antidepressants increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [\[Severe\]](#) Study
- ▶ Tricyclic antidepressants are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to tricyclic antidepressants. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study

- ▶ Tricyclic antidepressants increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1265

## Trientine

- ▶ Trientine potentially decreases the absorption of **iron (oral)**. [\[Moderate\]](#) Theoretical

- ▶ Trientine potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical

**Trifluoperazine** → see phenothiazines

**Trihexyphenidyl** → see TABLE 10 p. 1266 (antimuscarinics)

**Trimethoprim** → see TABLE 18 p. 1268 (hyponatraemia), TABLE 2 p. 1264 (nephrotoxicity), TABLE 16 p. 1268 (increased serum potassium)

- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study

- ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with trimethoprim. [\[Severe\]](#) Study

- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study

- ▶ **Dapsone** increases the exposure to trimethoprim and trimethoprim increases the exposure to **dapsone**. [\[Severe\]](#) Study

- ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study

- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [\[Moderate\]](#) Study

- ▶ **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1264

- ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study

- ▶ **Rifampicin** decreases the exposure to trimethoprim. [\[Moderate\]](#) Study

- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [\[Moderate\]](#) Theoretical

**Trimipramine** → see tricyclic antidepressants

**Tropicamide** → see TABLE 10 p. 1266 (antimuscarinics)

**Trospium** → see TABLE 10 p. 1266 (antimuscarinics)

**Typhoid vaccine** → see live vaccines

## Ulipristal

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rifinamide, topiramate)** decrease the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

- ▶ **Apripitant** decreases the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal

- ▶ **Bosentan** decreases the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

- ▶ **Cobicistat** is predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Severe\]](#) Study

- ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to ulipristal. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study

- ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Efavirenz** decreases the efficacy of ulipristal. For FSRH guidance, see Contraceptives, interactions p. 747. [\[Severe\]](#) Anecdotal

- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to ulipristal. Avoid and for 4 weeks after stopping ulipristal. [\[Severe\]](#) Theoretical

- ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **HIV-protease inhibitors (indinavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical
- ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- ▶ **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 747. [Severe] Anecdotal
- Umeclidinium** → see TABLE 10 p. 1266 (antimuscarinics)
- Urokinase** → see TABLE 3 p. 1264 (anticoagulant effects)
- Ursodeoxycholic acid**
  - ▶ **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
  - ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- Ustekinumab** → see monoclonal antibodies
- Valaciclovir** → see TABLE 2 p. 1264 (nephrotoxicity)
  - ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
  - ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- Valganciclovir** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity)
  - ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbapenems (imipenem)**. Avoid. [Severe] Anecdotal
  - ▶ **Valganciclovir** is predicted to increase the exposure to **didanosine**. [Moderate] Study
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1267
- Valproate** → see antiepileptics
- Valsartan** → see angiotensin-II receptor antagonists
- Vancomycin** → see TABLE 2 p. 1264 (nephrotoxicity), TABLE 19 p. 1268 (ototoxicity)
  - ▶ **Vancomycin** increases the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 2 p. 1264 → Also see TABLE 19 p. 1268
- Vandetanib** → see TABLE 9 p. 1266 (QT-interval prolongation)
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- Vardenafil** → see phosphodiesterase type-5 inhibitors
- Varicella-zoster vaccine** → see live vaccines
- Vecuronium** → see neuromuscular blocking drugs, non-depolarising
- Vedolizumab** → see monoclonal antibodies
- Velpatasvir**
  - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
  - ▶ **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
  - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 596. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 596. [Moderate] Study

## Velpatasvir (continued)

- ▶ **Rifampicin** is predicted to moderately decrease the exposure to velpatasvir. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **statins** (**atorvastatin**, **simvastatin**). Monitor side effects and adjust dose. [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose and monitor side effects, p. 197. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to **tenofovir**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
- Vemurafenib** → see TABLE 9 p. 1266 (QT-interval prolongation)
- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to vemurafenib. Avoid. [Severe] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to vemurafenib. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers**, non-selective (**nadolol**). [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to vemurafenib. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1020. [Severe] Theoretical
- ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to vemurafenib. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to vemurafenib. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** is predicted to increase the exposure to vemurafenib. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to vemurafenib. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to vemurafenib. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical

## Venetoclax

**FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- ▶ **Antiarrhythmics** (**amiodarone**) are predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Venetoclax** slightly increases the exposure to **coumarins** (**warfarin**). [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to venetoclax. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**azithromycin**) are predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to venetoclax. Avoid or adjust venetoclax dose, p. 919. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to venetoclax. Avoid. [Severe] Study
- Venlafaxine** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects), TABLE 4 p. 1264 (antiplatelet effects)
- ▶ **Abiraterone** potentially increases the exposure to venlafaxine. [Severe] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to venlafaxine. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Cobicistat** is predicted to increase the exposure to venlafaxine. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to venlafaxine. [Mild] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1266 → Also see TABLE 11 p. 1266
- ▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to venlafaxine. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** is predicted to increase the exposure to venlafaxine. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to venlafaxine. [Moderate] Study → Also see TABLE 9 p. 1266
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with venlafaxine. [Severe] Anecdotal

**Verapamil** → see calcium channel blockers

**Verteporfin**

**GENERAL INFORMATION** Caution on concurrent use with other photosensitising drugs.

**Vigabatrin** → see antiepileptics

**Vilanterol** → see beta<sub>2</sub> agonists

**Vildagliptin** → see TABLE 14 p. 1267 (antidiabetic drugs)

**Vinblastine** → see vinca alkaloids

**Vinca alkaloids** → see TABLE 1 p. 1264 (hepatotoxicity), TABLE 15 p. 1267 (myelosuppression), TABLE 19 p. 1268 (ototoxicity), TABLE 12 p. 1267 (peripheral neuropathy), TABLE 5 p. 1264 (thromboembolism), TABLE 9 p. 1266 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1267
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 12 p. 1267
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1264 → Also see TABLE 9 p. 1266
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266 → Also see TABLE 15 p. 1267
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1266 → Also see TABLE 15 p. 1267

- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1264 → Also see TABLE 15 p. 1267
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- Vincristine** → see vinca alkaloids
- Vindesine** → see vinca alkaloids
- Vinflunine** → see vinca alkaloids
- Vinorelbine** → see vinca alkaloids
- Vismodegib** → see TABLE 15 p. 1267 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

**Vitamin A**

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

**Vitamin D substances**

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotachysterol · ergocalciferol · paricalcitol · tacalcitol

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

**Vitamin E substances**

alpha tocopherol · alpha tocopheryl acetate

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study

**Volatile halogenated anaesthetics** → see TABLE 8 p. 1265 (hypotension), TABLE 11 p. 1266 (CNS depressant effects)

desflurane · isoflurane · sevoflurane

**Voriconazole** → see antifungals, azoles

**Vortioxetine** → see TABLE 13 p. 1267 (serotonin syndrome), TABLE 4 p. 1264 (antiplatelet effects)

## Vortioxetine (continued)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1267
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1267 → Also see TABLE 4 p. 1264
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Warfarin** → see coumarins

## Wasp venom extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Xipamide** → see thiazide diuretics

**Xylometazoline** → see sympathomimetics, vasoconstrictor

**Yellow fever vaccine, live** → see live vaccines

**Zaleplon** → see TABLE 11 p. 1266 (CNS depressant effects)

▶ **Rifampicin** markedly decreases the exposure to **zaleplon**. [Moderate] Study

**Zidovudine** → see TABLE 15 p. 1267 (myelosuppression), TABLE 2 p. 1264 (nephrotoxicity)

- ▶ **Antiepileptics** (**valproate**) slightly increase the exposure to **zidovudine**. [Moderate] Study
- ▶ **Antimalarials** (**pyrimethamine**) are predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1267
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study
- ▶ **HIV-protease inhibitors** (**tipranavir**) slightly decrease the exposure to **zidovudine**. Avoid. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [Severe] Study → Also see TABLE 2 p. 1264
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [Severe] Theoretical

## Zinc

- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates** (**alendronic acid**). **Zinc** should be taken at least 30 minutes before **alendronic acid**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **bisphosphonates** (**ibandronic acid**). Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates** (**risedronate**). Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates** (**sodium clodronate**). Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study
- ▶ **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [Moderate] Study

▶ **Zinc** is predicted to decrease the absorption of **penicillamine**.

[Mild] Theoretical

▶ **Zinc** is predicted to decrease the exposure to **quinolones**.

Separate administration by 2 hours. [Moderate] Study

▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours.

[Moderate] Theoretical

▶ **Trientine** potentially decreases the absorption of **zinc**.

[Moderate] Theoretical

**Zoledronic acid** → see bisphosphonates

**Zolmitriptan** → see TABLE 13 p. 1267 (serotonin syndrome)

▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456.

[Moderate] Theoretical

▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456. [Mild] Study

▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**.

Adjust **zolmitriptan** dose, p. 456. [Moderate] Study → Also see

TABLE 13 p. 1267

▶ **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1267

▶ **Quinolones** (**ciprofloxacin**) are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456.

[Moderate] Theoretical

▶ **SSRIs** (**fluvoxamine**) are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 456. [Severe] Theoretical → Also see TABLE 13 p. 1267

**Zolpidem** → see TABLE 11 p. 1266 (CNS depressant effects)

▶ **Antiepileptics** (**carbamazepine**) moderately decrease the exposure to **zolpidem**. [Moderate] Study

▶ **Rifampicin** moderately decreases the exposure to **zolpidem**. [Moderate] Study

**Zonisamide** → see antiepileptics

**Zopiclone** → see TABLE 11 p. 1266 (CNS depressant effects)

▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1266

▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

▶ **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **HIV-protease inhibitors** (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **saquinavir**, **tipranavir**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

▶ **HIV-protease inhibitors** (**indinavir**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

- **Nilotinib** is predicted to increase the exposure to **zopiclone**.  
Adjust dose. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to **zopiclone**.  
Adjust dose. [Moderate] Study

**Zuclopenthixol** → see TABLE 8 p. 1265 (hypotension), TABLE 9 p. 1266 (QT-interval prolongation), TABLE 11 p. 1266 (CNS depressant effects)

- **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1265 → Also see TABLE 9 p. 1266
- **Zuclopenthixol** is predicted to decrease the effects of **histamine**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1265
- **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1266

# Appendix 2

## Borderline substances

### CONTENTS

<b>Enteral feeds (non-disease specific)</b>	page 1422
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1422
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1424
Enteral feeds (non-disease specific): Child under 12 years	1427
<b>Nutritional supplements (non-disease specific)</b>	1427
Nutritional supplements: less than 5 g protein/100 mL	1427
Nutritional supplements: 5 g (or more) protein/100 mL	1428
<b>Specialised formulas</b>	1432
Specialised formulas: Infant and child	1432
Specialised formulas for specific clinical conditions	1432
<b>Feed supplements</b>	1434
High-energy supplements	1434
Fibre, vitamin, and mineral supplements	1439
<b>Feed additives</b>	1440
Special additives for conditions of intolerance	1440

Feed thickeners and pre-thickened drinks	page 1440
Flavouring preparations	1441
<b>Foods for special diets</b>	1441
Gluten-free foods	1441
Low-protein foods	1445
<b>Nutritional supplements for metabolic diseases</b>	1447
Glutaric aciduria (type 1)	1447
Glycogen storage disease	1447
Homocystinuria or hypermethioninaemia	1447
Hyperlysinaemia	1448
Isovaleric acidemia	1448
Maple syrup urine disease	1448
Methylmalonic or propionic acidemia	1449
Other inborn errors of metabolism	1449
Phenylketonuria	1450
Tyrosinaemia	1452

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

### Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

### Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

**Note** Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

### Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table,

below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin; see *Interactions*: Appendix 1: Enteral feeds.

The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

**Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

### Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

### Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

#### Birthmarks

#### Dermatitis

#### Eczema and Pruritis

*Aveeno*® Bath Oil; *Aveeno*® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream; *E45*® Lotion

#### Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

*Covermark*® classic foundation and finishing powder; *Dermablend*® Ultra corrective foundation; *Dermacolor*® Camouflage cream and fixing powder; *Keromask*® masking cream and finishing powder; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

#### Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for

the treatment of patients, but not for general hygienic purposes.

**Dry mouth (xerostomia)**

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

*AS Saliva Orthana*®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

**Photodermatoses (skin protection in)**

*Anthelios*® XL SPF 50+ Melt-in cream; *Sunsense*® Ultra; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

**Standard ACBS indications:** Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

**Table 1 Enteral feeds (non-disease specific)**

Less than 5 g protein/100 mL

**Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL**

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1421 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £13.52
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1421	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200 ml = £2.18; Fresubin Original tube feed liquid: 1000 ml = £8.41; 500 ml = £4.25; 1500 ml = £12.61
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1421 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 1000 ml = £9.59; 500 ml = £4.80
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 470 mg)	3.47 g	1.76 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 500 ml = £5.20; 1500 ml = £14.14; 1000 ml = £9.46
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421	Nutrison liquid: 500 ml = £5.01; 1500 ml = £13.18; 1000 ml = £8.79; 500 ml = £4.51
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 except bowel fistula	Nutrison Multi Fibre liquid: 1000 ml = £10.18; 1500 ml = £15.25; 500 ml = £5.08; 500 ml = £5.41
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 630 mg)	3.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421	Osmolite liquid: 500 ml = £4.65; 1500 ml = £12.65; 1000 ml = £8.46

SOYA PROTEIN FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Borderline substances standard ACBS indications p. 1421; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 ml = £4.97
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1421; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 ml = £5.40; 1000 ml = £10.82
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 700 mg)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1421 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £18.00
PEPTIDE-BASED FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison Peptisorb® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 1000 ml = £14.20; 500 ml = £7.88; 500 ml = £7.17
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: vanilla 800 ml = £12.14; unflavoured 500 ml = £6.82; 1000 ml = £12.80
Survived® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51 %)	0.1 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1421; also growth failure	Survived OPD: HN liquid 500 ml = £6.82; liquid 500 ml = £7.09; 800 ml = £13.08; 1000 ml = £14.17
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS)									
Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental 028 Extra liquid summer fruits: 250 ml = £3.73
	Standard dilution (20 %) of powder (sip or tube feed) per 100 mL	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental 028 Extra powder: plain, orange, banana 100 gram = £7.24
Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g.									

## Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

**Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL**

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1421	Fresubin 2250 Complete liquid: 1.5 litre = £15.09
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugar content varies with flavour)	5.8 g	Nil	Gluten-free Residual lactose Contains fish gelatin Strawberry flavour may contain traces of wheat starch and egg.	Borderline substances standard ACBS indications p. 1421	Fresubin Energy liquid: unflavoured 200 ml = £1.40; 500 ml = £5.20; banana, blackcurrant, cappuccino, chocolate, lemon, strawberry, tropical fruits, vanilla 200 ml = £1.40
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.4 g)	5.8 g	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1421	Fresubin Energy liquid: 1000 ml = £10.21; 1500 ml = £13.69;
Fresubin® Energy Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugar content varies with flavour)	5.8 g	2 g	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1421	Fresubin Energy Fibre liquid: unflavoured 500 ml = £5.70; 1000 ml = £10.87; banana, caramel, cherry, chocolate, strawberry 200 ml = £2.09
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1421	Fresubin Energy Fibre liquid unflavoured: 1000 ml = £10.87; 500 ml = £5.70
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g cows' milk	17 g (sugars 1 g)	5.8 g (MCT 57%)	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1421; also CAPD and haemodialysis	Fresubin HP Energy liquid: 500 ml = £5.29; 1000 ml = £10.59
Jevity® 1.5 kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates and soy isolate	20.1 g (sugars 1.47 g)	4.9 g	2.2 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 2 years; not recommended for child 2-10 years	Jevity 1.5kcal liquid: 500 ml = £16.41; 1000 ml = £11.36; 1500 ml = £16.97
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.5 g (sugars 1.5 g)	5.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421	Nutrison Energy liquid: 1500 ml = £16.41; 500 ml = £5.83; 1000 ml = £10.97; 500 ml = £5.45
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.5 g (sugars 1.5 g)	5.8 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421	Nutrison Energy Multi Fibre liquid: 1500 ml = £18.80; 500 ml = £6.10; 500 ml = £6.47; 1000 ml = £12.18
Osmolite® 1.5 kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soya protein isolate	20 g (sugars 4.9 g)	5 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421	Osmolite 1.5kcal tube feed liquid: 1000 ml = £10.19; 1500 ml = £15.23; 500 ml = £5.60

Resource® Energy (Nestle Health Science)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	21 g (sugars 5.2 g)	5 g	less than 0.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 Not suitable for use in child under 3 years	Resource Energy liquid: apricot, banana, chocolate, coffee, strawberry & raspberry, vanilla 800 ml = £7.67
Vital 1.5 kcal (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	6.75 g caseinate whey protein hydrolysate	18.4 g (sugars 3.6 g)	5.5 g (MCT 64%)	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; except proven inflammatory bowel disease and following total gastrectomy; not recommended for use in children	Vital 1.5kcal liquid vanilla: 200 ml = £2.98; 1000 ml = £15.20
<b>Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL</b> Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1000 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	5.5 g cows' milk	12.5 g (sugars 1.1 g)	3.1 g	2 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1421	Fresubin 1000 Complete liquid: 1 litre = £10.87
Fresubin® 1200 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	500 kJ (120 kcal)	6 g cows' milk	15 g (sugars 1.22 g)	4.1 g	2 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1421	Fresubin 1200 Complete liquid: 1 litre = £13.84

AYMES <sup>®</sup> Shake (Aymes International Ltd)	Standard dilution of powder (57 g in 200 mL water) (sip feed) per 100 mL	530.5 kJ (126 kcal)	4.5 g cows' milk	17.5 g (sugars 8.4 g)	4.2 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1421. Use with caution in child 1-6 years.	Aymes Shake Sample Pack powder: 285 gram = £4.78; Aymes Shake powder: banana, strawberry 399 gram = £4.27; chocolate, neutral, vanilla 399 gram = £4.27
Powder 57 g reconstituted with 200 mL whole milk provides: protein 15.8 g, carbohydrate 44.1 g, fat 16.4 g, energy 1625 kJ (388 kcal)									
Ensure <sup>®</sup> Plus Juice (Abbott Laboratories Ltd)	Liquid (sip feed) per 100 mL	638 kJ (150 kcal)	4.8 g whey protein isolate	32.7 g (sugars 9.4 g)	Nil	Nil	Gluten-free Residual lactose Non-milk taste	Borderline substances standard ACBS indications p. 1421	Ensure Plus Juice liquid: apple, fruit punch, lemon & lime, orange, peach 220 ml = £1.97
Fortijuce <sup>®</sup> (Nutricia Ltd)	Liquid (sip feed) per 100 mL	640 kJ (150 kcal)	4.0 g cows' milk	33.5 g (sugars 13.1 g)	Nil	Nil	Gluten-free Residual lactose Non-milk taste	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 3 years	Fortijuce Starter Pack liquid: 800 ml = £8.08; Fortijuce liquid: apple, blackcurrant, lemon, orange, strawberry, tropical 200 ml = £2.02; forest fruits 200 ml = £2.02
Fresubin <sup>®</sup> Jucy Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	4 g whey protein	33.5 g (sugars 8 g)	Nil	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis	Fresubin Jucy drink: apple, blackcurrant, cherry, orange, pineapple 800 ml = £7.96
Resource <sup>®</sup> Dessert Energy (Nestle Health Science)	Semi-solid per 100 g	671 kJ (160 kcal)	4.8 g cows' milk	21.2 g (sugars 9.9 g)	6.2 g	Nil	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis.	Resource Dessert Energy semi-solid food: caramel, chocolate, vanilla 125 gram = £1.63
Resource <sup>®</sup> Fruit (Nestle Health Science)	Liquid (sip feed) per 100 mL	520 kJ (125 kcal)	4 g whey protein hydrolysate	27 g (sugars 9.5 g)	less than 0.2 g	less than 0.2 g	Gluten-free Residual lactose Non-milk taste	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 3 years.	Resource Fruit liquid: apple, orange, pear & cherry, raspberry & blackcurrant 800 ml = £7.35

## Nutritional supplements: 5 g (or more) protein/100 mL

**Nutritional supplements: 1.5 kcal/mL and 5 g (or more) protein/100 mL**

Not suitable for use in child under 1 year; use with caution in child 1-5 years unless otherwise stated.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Altralpen® Protein (Nualtra Ltd)	Liquid (sip feed) per 100 mL	632 kJ (150 kcal)	10 g cows' milk soya protein	15 g (sugars 4.6 g)	5.6 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 3 years; use with caution in child 3-6 years	Altralpen Protein liquid: strawberry, vanilla 800 ml = £5.96
Ensure® Plus Advance (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	9.1 g cows' milk soya protein isolate whey protein concentrate	16.8 g (sugars 6.8 g)	4.8 g	0.75 g	Gluten-free Residual lactose	Frail elderly people (this is defined as older than 65 years with BMI less than or equal to 23 kg/m <sup>2</sup> where clinical assessment and nutritional screening show the individual to be at risk of undernutrition). Not suitable as the sole source of nutrition.	Ensure Plus Advance liquid: banana, chocolate, coffee, strawberry, vanilla 820 ml = £2.08
Ensure® Plus Commence (Abbott Laboratories Ltd)	Starter pack (5-10 day's supply), contains <i>Ensure® Plus Commence</i> (various flavours), 1 pack (10 × 200 mL) = £11.20								
Ensure® Plus Fibre (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	652 kJ (155 kcal)	6.25 g cows' milk soya protein isolate	20.2 g (sugars 5.5 g)	4.92 g	2.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis.	Ensure Plus Fibre liquid: banana, chocolate, raspberry, strawberry, vanilla 200 ml = £2.02
Ensure® Plus Milkshake style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soya protein isolate	20.2 g (sugars 6.89 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis	Ensure Plus milkshake style liquid: banana, chocolate, coffee, fruits of the forest, neutral, orange, peach, raspberry, strawberry, vanilla 220 ml = £1.40
Ensure® Plus Savoury (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soy protein isolate	20.2 g (sugars 1.13 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis.	Ensure Plus savoury liquid: chicken, mushroom 220 ml = £1.40
Ensure® Plus Yoghurt style (Abbott Laboratories Ltd)	Liquid (sip feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk	20.2 g (sugars 11.7 g)	4.92 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis	Ensure Plus yoghurt style liquid: orchard peach, strawberry swirl 200 ml = £1.40
Fortisip® Bottle (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.4 g	5.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 3 years; use with caution in child 3-5 years.	Fortisip Bottle: banana, caramel, chocolate, neutral, orange, strawberry, tropical fruit, vanilla 200 ml = £1.40

Fortisip® Range (Nutricia Ltd)	Starter pack contains 4 × Fortisip® Bottle, 4 × Fortijuice® 2 × Fortisip® Yoghurt Style, 1 pack (10 × 200 mL) = £20.20								
Fortisip® Yoghurt Style (Nutricia Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.7 g (sugars 10.8 g)	5.8 g	0.2 g	Gluten-free Contains lactose	Borderline substances standard ACBS indications p. 1421 Not suitable for child under 3 years	Fortisip Yogurt Style liquid vanilla & lemon: 200 ml = £2.06
Fresubin® Protein Energy Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 6.4 g)	6.7 g	Nil	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis.	Fresubin Protein Energy drink: cappuccino, chocolate, tropical fruits, vanilla, wild strawberry 200 ml = £2.08
Fresubin® Thickened (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.2 g (sugars 7.1 g)	6.7 g	0.48 g	Gluten-free Residual lactose	Dysphagia or disease-related malnutrition. Not suitable for child under 3 years; use with caution in child 3-4 years.	Fresubin Thickened Stage 1 syrup: vanilla, wild strawberry 800 ml = £9.40; Fresubin Thickened Stage 2 custard; vanilla, wild strawberry 800 ml = £9.40
Fresubin® YOcrème (Fresenius Kabi Ltd)	Semi-solid per 100 g	630 kJ (150 kcal)	7.5 g whey protein	19.5 g (sugars 16.8 g)	4.7 g	Nil	Gluten-free Contains lactose	Dysphagia, or presence or risk of malnutrition Not suitable for child under 3 years	Fresubin YOcrème dessert: apricot- peach, biscuit, lemon, raspberry 500 gram = £8.16
<b>Nutritional supplements: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL</b> Not suitable for use in child under 1 year; use with caution in child 1-5 years unless otherwise stated.									
<b>Product</b>	<b>Formulation</b>	<b>Energy</b>	<b>Protein</b>	<b>Carbohydrate</b>	<b>Fat</b>	<b>Fibre</b>	<b>Special Characteristics</b>	<b>ACBS Indications</b>	<b>Presentation &amp; Flavour</b>
Ensure® Plus Crème (Abbott Laboratories Ltd)	Semi-solid per 100 g	574 kJ (137 kcal)	5.68 g cow's milk soy protein isolates	18.4 g (sugars 12.4 g)	4.47 g	Nil	Gluten-free Residual lactose Contains soya	Borderline substances standard ACBS indications p. 1421; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Ensure Plus Crème: chocolate, neutral, vanilla 500 gram = £7.51
Nutrilis® Fruit Stage 3 (Nutricia Ltd)	Semi-Solid per 100 g	560 kJ (133 kcal)	7 g whey isolate	16.7 g (sugars 11.3 g)	4 g	2.6 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1421 except bowel fistula; also CAPD, haemodialysis. Not suitable for child under 3 years; use with caution in child 3-5 years.	Nutrilis Fruit Stage 3: apple, strawberry 450 gram = £7.08
Oral Impact® (Nestle Health Science)	Standard dilution of powder (74 g in 250 mL water) (sip feed) per 100 mL	425 kJ (101 kcal)	5.6 g cows' milk	13.4 g (sugars 7.4 g)	2.8 g	1 g	Residual lactose Contains fish oil	Pre-operative nutritional supplement for malnourished patients or patients at risk of malnourishment Not suitable for child under 3 years; use with caution in child 3-5 years.	Oral Impact oral powder 74g sachets: citrus, coffee, tropical 5 sachet = £16.93
Powder provides: protein 16.8 g, carbohydrate 40.2 g, fat 8.3 g, fibre 3 g, energy 1276 kJ (303 kcal)/74 g.

## Feed additives

### Special additives for conditions of intolerance

- ▶ **Colief®**
  - ▶ For the relief of symptoms associated with lactose intolerance in infants, provided that lactose intolerance is confirmed by the presence of reducing substances and/or excessive acid in stools, a low concentration of the corresponding disaccharide enzyme on intestinal biopsy or by breath hydrogen test or lactose intolerance test. For dosage and administration details, consult product literature.
  - LIQUID, lactase 50 000 units/g
  - Colief 50,000units/g infant drops** (Forum Health Products Ltd)
  - 7ml (ACBS) • NHS indicative price = £8.40
- ▶ **Fructose**
  - ▶ (Laevulose) For proven glucose/galactose intolerance
- ▶ **Glucose**
  - ▶ (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency
- ▶ **VSL#3®**
  - ▶ Nutritional supplement for use under the supervision of a physician, for the maintenance of remission of ileoanal pouchitis induced by antibacterials in adults. For dosage and administration details, consult product literature.
  - POWDER, containing 8 strains of live, freeze-dried, lactic acid bacteria. Contains traces of soya, gluten, and lactose.
  - VSL#3 Probiotic Food Supplement oral powder 4.4g sachets** (Ferring Pharmaceuticals Ltd)
  - 30 sachet (ACBS) • NHS indicative price = £34.36

### Feed thickeners and pre-thickened drinks

- ▶ **Carobel, Instant®**
  - ▶ For thickening feeds in the treatment of vomiting.
  - POWDER, carob seed flour.
  - Instant Carobel powder** (Cow & Gate Ltd)
  - 135gram (ACBS) • NHS indicative price = £2.84
- ▶ **Multi-thick®**
  - ▶ For thickening of liquids and foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
  - POWDER, modified maize starch, gluten- and lactose-free.
  - Multi-thick powder** (Abbott Laboratories Ltd)
  - 250gram (ACBS) • NHS indicative price = £4.83
- ▶ **Nutilis® Clear**
  - ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.
  - POWDER, maltodextrin, xanthan gum, guar gum, gluten- and lactose-free.
  - Nutilis Clear powder** (Nutricia Ltd)
  - 72gram (ACBS) • NHS indicative price = £11.04 | 175gram (ACBS) • NHS indicative price = £8.46
- ▶ **Nutilis® Powder**
  - ▶ For thickening of foods in dysphagia. Not suitable for child under 3 years.
  - POWDER, carbohydrate 86 g, energy 1520 kJ (358 kcal)/100 g, modified maize starch, gluten- and lactose-free.
  - Nutilis powder** (Nutricia Ltd)
  - 240gram (ACBS) • NHS indicative price = £6.80 | 300gram (ACBS) • NHS indicative price = £5.11
- ▶ **Resource® Thickened Drink**
  - ▶ For dysphagia. Not suitable for children under 1 year.
  - LIQUID, carbohydrate 22 g, energy: orange 382 kJ (90 kcal); apple 376 kJ (89 kcal)/100 mL. Gluten- and lactose-free.
  - Resource Thickened Drink custard apple** (Nestle Health Science)
  - 114ml (ACBS) • NHS indicative price = £0.73
  - Resource Thickened Drink custard orange** (Nestle Health Science)
  - 114ml (ACBS) • NHS indicative price = £0.73
  - Resource Thickened Drink syrup apple** (Nestle Health Science)
  - 114ml (ACBS) • NHS indicative price = £0.73
- ▶ **Resource Thickened Drink syrup orange** (Nestle Health Science)
- 114ml (ACBS) • NHS indicative price = £0.73
- ▶ **Resource® ThickenUp Clear**
  - ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.
  - POWDER, maltodextrin, xanthan gum, gluten- and lactose-free.
  - Resource ThickenUp Clear powder** (Nestle Health Science)
  - 28.8gram (ACBS) • NHS indicative price = £5.28 | 125gram (ACBS) • NHS indicative price = £8.46
- ▶ **Resource® ThickenUp®**
  - ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.
  - POWDER, modified maize starch. Gluten- and lactose-free.
  - Resource ThickenUp powder** (Nestle Health Science)
  - 227gram (ACBS) • NHS indicative price = £4.66 | 337.5gram (ACBS) • NHS indicative price = £17.86
- ▶ **SLO Drinks®**
  - ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.
  - POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.
  - SLO Drink 1 oral powder lemon** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 1 oral powder orange** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 1 oral powder hot chocolate** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 1 oral powder white coffee** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 1 oral powder white tea** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 2 oral powder hot chocolate** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 2 oral powder lemon** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 2 oral powder orange** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 2 oral powder white tea** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
  - SLO Drink 3 oral powder orange** (SLO Drinks Ltd)
  - 25 cup (ACBS) • NHS indicative price = £7.50
- ▶ **SLO Milkshakes+®**
  - ▶ Nutritional supplement in the dietary management of dysphagia. Not suitable for children under 3 years.
  - POWDER, carbohydrate content varies with flavour and chosen consistency (2 consistencies available), see product literature.
  - SLO Milkshake+ 1 oral powder chocolate** (SLO Drinks Ltd)
  - 7 × 50 gram (ACBS) • NHS indicative price = £5.88
  - SLO Milkshake+ 1 oral powder strawberry** (SLO Drinks Ltd)
  - 7 × 50 gram (ACBS) • NHS indicative price = £5.88
  - SLO Milkshake+ 2 oral powder chocolate** (SLO Drinks Ltd)
  - 7 × 50 gram (ACBS) • NHS indicative price = £5.88
  - SLO Milkshake+ 2 oral powder strawberry** (SLO Drinks Ltd)
  - 7 × 50 gram (ACBS) • NHS indicative price = £5.88
- ▶ **Thick and Easy®**
  - ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
  - POWDER, modified maize starch
  - Thick & Easy powder** (Fresenius Kabi Ltd)
  - 225gram (ACBS) • NHS indicative price = £5.21 | 900gram (ACBS) • NHS indicative price = £32.00 | 4540gram (ACBS) • NHS indicative price = £87.18
- ▶ **Thicken Aid®**
  - ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.
  - POWDER, modified maize starch, maltodextrin, gluten- and lactose-free.

**Thicken Aid powder** (M & A Pharmachem Ltd)

225gram (ACBS) • NHS indicative price = £3.71 | 900gram (ACBS) • NHS indicative price = £22.40

**Thixo-D®**

- For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive. POWDER, modified maize starch, gluten-free.

**Thixo-D powder** (Sutherland Health Ltd)

375gram (ACBS) • NHS indicative price = £7.15

**Thixo-D Cal-Free powder** (Sutherland Health Ltd)

30gram • NHS indicative price = £2.85

**Vitaquick®**

- For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive. POWDER. Modified maize starch.

**Vitaquick powder** (Vitaflo International Ltd)

300gram (ACBS) • NHS indicative price = £7.27

## Flavouring preparations

**FlavourPac®**

- For use with Vitaflo's range of unflavoured protein substitutes for metabolic diseases; not suitable for child under 3 years. POWDER

**FlavourPac oral powder 4g sachets blackcurrant** (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £14.05 | 120 sachet (ACBS) • No NHS indicative price available

**FlavourPac oral powder 4g sachets lemon** (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £14.05 | 120 sachet (ACBS) • No NHS indicative price available

**FlavourPac oral powder 4g sachets orange** (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £14.05 | 120 sachet (ACBS) • No NHS indicative price available

**FlavourPac oral powder 4g sachets raspberry** (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £14.05 | 120 sachet (ACBS) • No NHS indicative price available

**FlavourPac oral powder 4g sachets tropical** (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £14.05 | 120 sachet (ACBS) • No NHS indicative price available

## Foods for special diets

### Gluten-free foods

**ACBS indications:** established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

**Bread****LOAVES****Barkat® Loaf****GLUTEN-FREE****Barkat gluten free brown rice bread** (Gluten Free Foods Ltd)

500gram (ACBS) • NHS indicative price = £5.73

**Barkat gluten free par baked white bread sliced** (Gluten Free Foods Ltd)

300gram (ACBS) • NHS indicative price = £4.13

**Barkat gluten free home fresh country loaf** (Gluten Free Foods Ltd)

250gram (ACBS) • NHS indicative price = £4.35

**Barkat gluten free wheat free multigrain bread** (Gluten Free Foods Ltd)

500gram (ACBS) • NHS indicative price = £5.73

**Barkat gluten free wholemeal bread sliced** (Gluten Free Foods Ltd)

500gram (ACBS) • NHS indicative price = £3.98

**Barkat gluten free white rice bread** (Gluten Free Foods Ltd)

500gram (ACBS) • NHS indicative price = £5.73

**Ener-G® Loaves****GLUTEN-FREE****Ener-G gluten free brown rice bread** (General Dietary Ltd)

474gram (ACBS) • NHS indicative price = £5.47

**Ener-G gluten free tapioca bread** (General Dietary Ltd)

480gram (ACBS) • NHS indicative price = £5.47

**Ener-G gluten free rice loaf** (General Dietary Ltd)

612gram (ACBS) • NHS indicative price = £5.47

**Ener-G gluten free Seattle brown loaf** (General Dietary Ltd)

454gram (ACBS) • NHS indicative price = £6.22

**Ener-G gluten free white rice bread** (General Dietary Ltd)

456gram (ACBS) • NHS indicative price = £5.47

**Genius Gluten Free® Loaf****GLUTEN-FREE****Genius gluten free brown bread sliced** (Genius Foods Ltd)

400gram (ACBS) • NHS indicative price = £2.88

**Genius gluten free brown bread unsliced** (Genius Foods Ltd)

400gram (ACBS) • NHS indicative price = £2.77

**Genius gluten free brown sandwich bread sliced** (Genius Foods Ltd)

535gram (ACBS) • NHS indicative price = £3.73

**Genius gluten free white bread sliced** (Genius Foods Ltd)

400gram (ACBS) • NHS indicative price = £2.88

**Genius gluten free white bread unsliced** (Genius Foods Ltd)

400gram (ACBS) • NHS indicative price = £2.77

**Genius gluten free white sandwich bread sliced** (Genius Foods Ltd)

535gram (ACBS) • NHS indicative price = £3.73

**Glutafin® Loaves****GLUTEN-FREE****Glutafin gluten free fibre loaf sliced** (Dr Schar UK Ltd)

300gram (ACBS) • NHS indicative price = £2.89

**Glutafin gluten free white loaf sliced** (Dr Schar UK Ltd)

300gram (ACBS) • NHS indicative price = £2.89

**Glutafin® Select Loaves****GLUTEN-FREE****Glutafin gluten free Select fibre loaf sliced** (Dr Schar UK Ltd)

400gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select fresh brown loaf sliced** (Dr Schar UK Ltd)

400gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select fresh white loaf sliced** (Dr Schar UK Ltd)

400gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select seeded loaf sliced** (Dr Schar UK Ltd)

400gram (ACBS) • NHS indicative price = £3.72

**Glutafin gluten free Select white loaf sliced** (Dr Schar UK Ltd)

400gram (ACBS) • NHS indicative price = £3.43

**Juvela® Loaf****GLUTEN-FREE****Juvela gluten free fresh fibre loaf sliced** (Hero UK Ltd)

400gram (ACBS) • NHS indicative price = £3.39

**Juvela gluten free fresh white loaf sliced** (Hero UK Ltd)

400gram (ACBS) • NHS indicative price = £3.69

**Juvela gluten free fibre loaf sliced** (Hero UK Ltd)

400gram (ACBS) • NHS indicative price = £3.54

**Juvela gluten free part baked loaf** (Hero UK Ltd)

LOW-PROTEIN

**Promin low protein imitation rice pudding apple** (Firstplay Dietary Foods Ltd)

276gram (ACBS) • NHS indicative price = £6.33

**Promin low protein imitation rice pudding banana** (Firstplay Dietary Foods Ltd)

276gram (ACBS) · NHS indicative price = £6.33

**Promin low protein imitation rice pudding original** (Firstplay Dietary Foods Ltd)

276gram (ACBS) · NHS indicative price = £6.33

**Promin low protein imitation rice pudding strawberry** (Firstplay Dietary Foods Ltd)

276gram (ACBS) · NHS indicative price = £6.33

## Flour mixes and egg substitutes

**Ener-G® Egg replacer**

LOW-PROTEIN

**Ener-G low protein egg replacer** (General Dietary Ltd)

454gram (ACBS) · NHS indicative price = £5.17

**Fate® Flour mix**

LOW-PROTEIN

**Fate low protein all purpose mix** (Fate Special Foods)

500gram (ACBS) · NHS indicative price = £6.97

**Fate low protein chocolate cake mix** (Fate Special Foods)

500gram (ACBS) · NHS indicative price = £6.97

**Fate low protein plain cake mix** (Fate Special Foods)

500gram (ACBS) · NHS indicative price = £6.97

**Juvela® Mix**

LOW-PROTEIN

**Juvela low protein mix** (Hero UK Ltd)

500gram (ACBS) · NHS indicative price = £7.79

**Loprofin® Flour mixes and egg substitutes**

LOW-PROTEIN

**Loprofin low protein egg replacer** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £15.72

**Loprofin low protein egg white replacer** (Nutricia Ltd)

100gram (ACBS) · NHS indicative price = £10.12

**Loprofin low protein cake mix chocolate** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £9.06

**Loprofin low protein mix** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £8.43

**PK Foods® Flour mix and egg substitute**

LOW-PROTEIN

**PK Foods low protein egg replacer** (Gluten Free Foods Ltd)

200gram (ACBS) · NHS indicative price = £4.08

**PK Foods low protein flour mix** (Gluten Free Foods Ltd)

750gram (ACBS) · NHS indicative price = £10.71

## Pasta

**Loprofin® Pasta**

LOW-PROTEIN

**Loprofin low protein pasta animal shapes** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £8.61

**Loprofin low protein pasta lasagne** (Nutricia Ltd)

250gram (ACBS) · NHS indicative price = £4.35

**Loprofin low protein pasta penne** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £8.94

**Loprofin low protein pasta tagliatelle** (Nutricia Ltd)

250gram (ACBS) · NHS indicative price = £4.30

**Loprofin low protein pasta macaroni elbows** (Nutricia Ltd)

250gram (ACBS) · NHS indicative price = £4.30

**Loprofin low protein rice** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £8.68

**Loprofin low protein pasta long cut spaghetti** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £8.94

**Promin® Pasta**

LOW-PROTEIN

**Promin low protein pasta alphabets** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin Plus low protein pasta macaroni** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin Plus low protein pasta flat noodles** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein pasta shells** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein pasta short cut spaghetti** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein tricolour pasta spirals** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein pasta spirals** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein imitation rice** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein tricolour pasta alphabets** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein tricolour pasta shells** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein lasagne sheets** (Firstplay Dietary Foods Ltd)

200gram (ACBS) · NHS indicative price = £3.03

## Pizza bases

**Juvela® Pizza base**

LOW-PROTEIN

**Juvela low protein pizza base** (Hero UK Ltd)

360gram (ACBS) · NHS indicative price = £8.61

## Savoury meals and mixes

**Promin® Savoury meals and mixes**

LOW-PROTEIN

**Promin low protein burger mix** (Firstplay Dietary Foods Ltd)

124gram (ACBS) · NHS indicative price = £6.36

**Promin low protein cous cous** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein pasta elbows** (Firstplay Dietary Foods Ltd)

500gram · NHS indicative price = £6.99

**Promin low protein pastameal** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein pasta macaroni** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin Plus low protein pasta spirals** (Firstplay Dietary Foods Ltd)

500gram (ACBS) · NHS indicative price = £6.99

**Promin low protein lamb and mint burger mix** (Firstplay Dietary Foods Ltd)

124gram (ACBS) · NHS indicative price = £6.36

**Promin low protein sausage mix apple and sage** (Firstplay Dietary Foods Ltd)

120gram (ACBS) · NHS indicative price = £7.15

**Promin low protein sausage mix original** (Firstplay Dietary Foods Ltd)

120gram (ACBS) · NHS indicative price = £7.15

**Promin low protein sausage mix tomato and basil** (Firstplay Dietary Foods Ltd)

120gram (ACBS) · NHS indicative price = £7.15

**Promin low protein pasta in cheese and broccoli sauce** (Firstplay Dietary Foods Ltd)

264gram (ACBS) · NHS indicative price = £8.31

**Promin low protein pasta spirals in Moroccan sauce** (Firstplay Dietary Foods Ltd)

288gram (ACBS) · NHS indicative price = £8.31

**Promin low protein pasta in tomato, pepper and herb sauce** (Firstplay Dietary Foods Ltd)

288gram (ACBS) · NHS indicative price = £8.31

**Promin low protein potato pot with croutons onion** (Firstplay Dietary Foods Ltd)

200gram (ACBS) · NHS indicative price = £16.40

**Promin low protein potato pot with croutons cabbage & bacon**

(Firstplay Dietary Foods Ltd)

200gram (ACBS) · NHS indicative price = £16.40

**Promin low protein potato pot with croutons sausage** (Firstplay Dietary Foods Ltd)

200gram (ACBS) · NHS indicative price = £16.40

**Promin low protein X-Pot all day scramble** (Firstplay Dietary Foods Ltd)

240gram (ACBS) · NHS indicative price = £20.94

**Promin low protein X-Pot beef & tomato** (Firstplay Dietary Foods Ltd)

240gram (ACBS) · NHS indicative price = £20.94

**Promin low protein X-Pot chip shop curry** (Firstplay Dietary Foods Ltd)

240gram (ACBS) · NHS indicative price = £20.94

**Promin low protein X-Pot rogan style curry** (Firstplay Dietary Foods Ltd)

240gram (ACBS) · NHS indicative price = £20.94

**Spreads****Taranis® Spread**

LOW-PROTEIN

**Taranis low protein hazelnut spread** (Lactalis Nutrition Sante)

230gram (ACBS) · NHS indicative price = £7.87

**Nutritional supplements for metabolic diseases****Glutaric aciduria (type 1)****GA Gel®**

- ▶ Nutritional supplement for dietary management of type 1 glutaric aciduria in children 6 months–10 years. GEL, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 10 g, carbohydrate 10.3 g, fat trace, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**GA gel oral powder 24g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £216.48

**GA1 Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven glutaric aciduria (type 1) in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**GA1 Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) · NHS indicative price = £39.45

**GA1 Maxamaid®**

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria. POWDER, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**GA1 Maxamaid powder** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £99.61

**XLVS, TRY Glutaridon®**

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria in children and adults; requires additional source of vitamins, minerals, and trace elements. POWDER, protein equivalent (essential and non-essential amino acids except lysine and tryptophan) 79 g, carbohydrate 4 g, energy 1411 kJ (332 kcal)/100 g.

**XLVS TRY Glutaridon powder** (Nutricia Ltd)

500gram (ACBS) · NHS indicative price = £188.69

**Glycogen storage disease****Corn flour and corn starch**

- ▶ For glycogen storage disease

**Glycosade®**

- ▶ A nutritional supplement for use in the dietary management of glycogen storage disease and other metabolic conditions where a constant supply of glucose is essential. Not suitable for use in children under 2 years.

POWDER, protein 200 mg, carbohydrate (maize starch) 47.6 g, fat 100 mg, fibre less than 600 mg, energy 803 kJ (192 kcal)/60 g.

**Glycosade oral powder 60g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £113.77

**Homocystinuria or hypermethioninaemia****HCU Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**HCU Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) · NHS indicative price = £39.45

**HCU cooler® 15**

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 3 years with homocystinuria. LIQUID, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

**HCU orange cooler 15 liquid** (Vitaflo International Ltd)

130mL (ACBS) · NHS indicative price = £11.42

**HCU Express® 15**

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**HCU express 15 oral powder 25g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £336.16

**HCU Express® 20**

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 4.7 g, fat 70 mg, energy 416 kJ (99 kcal)/34 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441

**HCU express 20 oral powder 34g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £434.31

**HCU gel®**

- ▶ A methionine-free protein substitute for use as a nutritional supplement for the dietary management of children 1–10 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 10 g, carbohydrate 10.3 g, fat 20 mg, energy 339 kJ (81 kcal)/24 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**HCU gel oral powder 24g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £216.42

**HCU Lophlex® LQ 20**

- ▶ Nutritional supplement for the dietary management of homocystinuria in children over 3 years.

LIQUID, protein equivalent (essential and non-essential amino acids except methionine) 20 g, carbohydrate 8.8 g, fat 440 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

**HCU Lophlex LQ 20 liquid** (Nutricia Ltd)

125mL (ACBS) • NHS indicative price = £16.27

**HCU LV®**

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or vitamin B6 non-responsive homocystinuria in children over 8 years.

POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 2.5 g, fat 190 mg, energy 390 kJ (92 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

**HCU-LV oral powder 27.8g sachets tropical** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £500.10

**HCU-LV oral powder 27.8g sachets unflavoured** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £500.10

**XMET Homidon®**

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children and adults.

POWDER, protein equivalent (essential and non-essential amino acids, except methionine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XMET Homidon powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £188.69

**HCU Maxamaid®**

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria.

POWDER, protein equivalent (essential and non-essential amino acids except methionine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**HCU Maxamaid powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £99.61

**HCU Maxamum®**

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria.

POWDER, protein equivalent (essential and non-essential amino acids except methionine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

**HCU Maxamum powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £159.66

**Hyperlysinaemia****HYPER LYS Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except lysine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**HYPER LYS Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) • NHS indicative price = £39.45

**HYPER LYS Maxamaid®**

- ▶ Nutritional supplement for the dietary management of hyperlysinaemia.

POWDER, protein equivalent (essential and non-essential amino acids except lysine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g with vitamins, minerals,

and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**HYPER LYS Maxamaid powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £99.61

**Isovaleric acidaemia****IVA Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven isovaleric acidaemia or other proven disorders of leucine metabolism in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except leucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**IVA Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) • NHS indicative price = £39.45

**IVA Maxamaid®**

- ▶ Nutritional supplement for the dietary management of isovaleric acidaemia.

POWDER, protein equivalent (essential and non-essential amino acids except leucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**IVA Maxamaid powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £99.61

**Maple syrup urine disease****MSUD Aid III®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**MSUD Aid 111 powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £188.69

**MSUD Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MSUD Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) • NHS indicative price = £39.45

**MSUD Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 474 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**MSUD Anamix Junior oral powder 36g sachets** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £210.90

**MSUD Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**MSUD Anamix Junior LQ liquid** (Nutricia Ltd)  
125ml (ACBS) • NHS indicative price = £9.15

**MSUD cooler® 15**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/150-mL pouch, with vitamins, minerals, and trace elements.

**MSUD orange cooler 15 liquid** (VitaFlo International Ltd)  
130ml (ACBS) • NHS indicative price = £11.42

Maxamum products are generally intended for use in children over 8 years.

**MSUD Maxamum powder orange** (Nutricia Ltd)  
500gram (ACBS) • NHS indicative price = £159.66

**MSUD Maxamum powder unflavoured** (Nutricia Ltd)  
500gram (ACBS) • NHS indicative price = £159.66

## Methylmalonic or propionic acidemia

**MMA/PA Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven methylmalonic acidemia or propionic acidemia in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MMA / PA Anamix Infant powder** (Nutricia Ltd)  
400gram (ACBS) • NHS indicative price = £39.45

**XMTVI Asadon®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia in children and adults. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XMTVI Asadon powder** (Nutricia Ltd)  
200gram (ACBS) • NHS indicative price = £75.47

**MMA/PA Maxamaid®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**MMA/PA Maxamaid powder** (Nutricia Ltd)  
500gram (ACBS) • NHS indicative price = £99.61

**MMA/PA Maxamum®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

**MMA/PA Maxamum powder** (Nutricia Ltd)  
500gram (ACBS) • NHS indicative price = £159.66

## Other inborn errors of metabolism

**Cystine500®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth. POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Cystine500 oral powder 4g sachets** (VitaFlo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £55.00

**DocOmega®**

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth. POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

**DocOmega oral powder 4g sachets** (VitaFlo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £39.80

**EAA® Supplement**

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.

POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

**EAA Supplement oral powder 12.5g sachets** (Vitafo International Ltd)  
50 sachet (ACBS) • NHS indicative price = £207.51

**Isoleucine50®**

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Isoleucine50 oral powder 4g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £55.00

**KeyOmega®**

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism.

POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

**KeyOmega oral powder 4g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £40.70

**Leucine100®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Leucine100 oral powder sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £55.00

**Low protein drink**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Termed *Milupa® lp-drink* by manufacturer.

**Milupa LP drink** (Nutricia Ltd)  
400gram (ACBS) • NHS indicative price = £9.36

**Phenylalanine50®**

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.

POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Phenylalanine50 oral powder sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £53.40

**ProZero®**

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.

LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

**ProZero liquid** (Vitafo International Ltd)  
250ml (ACBS) • NHS indicative price = £1.46 | 1000ml (ACBS) • NHS indicative price = £5.86

**Tyrosine1000®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

**Tyrosine1000 oral powder 4g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £5.04

**Valine50®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Valine50 oral powder 4g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £55.00

**Phenylketonuria****Add-Ins®**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 4 years.

POWDER, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate nil, fat 5.1 g, energy 359 kJ (86 kcal)/18.2-g sachet, with vitamins, minerals, and trace elements.

**Add Ins oral powder 18.2g sachets** (Nutricia Ltd)  
60 sachet (ACBS) • NHS indicative price = £381.00

**Easiphen®**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years.

LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

**Easiphen liquid** (Nutricia Ltd)  
250ml (ACBS) • NHS indicative price = £9.79

**L-Tyrosine**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

**L-Tyrosine powder** (Nutricia Ltd)  
100gram (ACBS) • NHS indicative price = £22.22

**Lophlex®**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

**Lophlex powder 27.8g sachets berry** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £294.00

**Lophlex powder 27.8g sachets orange** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £294.00

**Lophlex powder 27.8g sachets unflavoured** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £294.00

**Loprofin® PKU Drink**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults.

LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

**Loprofin PKU drink** (Nutricia Ltd)  
200ml (ACBS) • NHS indicative price = £0.76

**Loprofin® Sno-Pro**

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 273 kJ (65 kcal)/100 mL. Contains lactose.

**Loprofin SNO-PRO drink** (Nutricia Ltd)  
200ml (ACBS) • NHS indicative price = £1.27

**Phlexy-10® Exchange System**

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

**Phlexy-10 500mg capsules** (Nutricia Ltd)

200 capsule (ACBS) • NHS indicative price = £44.00

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

**Phlexy-10 tablets** (Nutricia Ltd)

75 tablet (ACBS) • NHS indicative price = £28.50

DRINK MIX, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

**Phlexy-10 drink mix apple & blackcurrant** (Nutricia Ltd)

600gram (ACBS) • NHS indicative price = £130.20

**Phlexy-10 drink mix citrus burst** (Nutricia Ltd)

600gram (ACBS) • NHS indicative price = £130.20

**Phlexy-10 drink mix tropical surprise** (Nutricia Ltd)

600gram (ACBS) • NHS indicative price = £130.20

**Phlexy-Vits®**

- ▶ For use as a vitamin and mineral component of restricted therapeutic diets in children over 11 years and adults with phenylketonuria and similar amino acid abnormalities.

POWDER, vitamins, minerals, and trace elements

**Phlexy-Vits powder** (Nutricia Ltd)

210gram (ACBS) • NHS indicative price = £72.30

TABLETS, vitamins, minerals, and trace elements

**Phlexy-Vits tablets** (Nutricia Ltd)

180 tablet (ACBS) • NHS indicative price = £82.80

**PK Aid 4®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children and adults.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 79 g, carbohydrate 4.5 g, fat nil, energy 1420 kJ (334 kcal)/100 g.

**PK Aid 4 powder** (Nutricia Ltd)

500gram (ACBS) • NHS indicative price = £145.04

**PKU Anamix Junior LQ®**

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**PKU Anamix Junior LQ liquid berry** (Nutricia Ltd)

125ml (ACBS) • NHS indicative price = £5.69

**PKU Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children from birth to 3 years.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL

**PKU Anamix Infant powder** (Nutricia Ltd)

400gram (ACBS) • NHS indicative price = £35.86

**PKU Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.
- POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.4 g, carbohydrate 9.9 g, fat 3.9 g, energy 455 kJ (108 kcal)/29-g sachet, with vitamins, minerals, and trace elements

**PKU Anamix Junior powder chocolate** (Nutricia Ltd)

1080gram (ACBS) • NHS indicative price = £128.10

**PKU Anamix Junior powder neutral** (Nutricia Ltd)

1080gram (ACBS) • NHS indicative price = £128.10

**PKU Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**PKU Anamix Junior LQ liquid berry** (Nutricia Ltd)

125ml (ACBS) • NHS indicative price = £5.69

**PKU Anamix Junior LQ liquid orange** (Nutricia Ltd)

125ml (ACBS) • NHS indicative price = £5.69

**PKU cooler10®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 3 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 5.1 g, energy 258 kJ (62 kcal)/87-mL pouch, with vitamins, minerals, and trace elements.

**PKU orange cooler 10 liquid** (Vitaflor International Ltd)

87ml (ACBS) • NHS indicative price = £4.65

**PKU purple cooler 10 liquid** (Vitaflor International Ltd)

87ml (ACBS) • NHS indicative price = £4.65

**PKU red cooler 10 liquid** (Vitaflor International Ltd)

87ml (ACBS) • NHS indicative price = £4.65

**PKU white cooler 10 liquid** (Vitaflor International Ltd)

87ml (ACBS) • NHS indicative price = £4.65

**PKU cooler15®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 3 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 7.8 g, energy 386 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

**PKU orange cooler 15 liquid** (Vitaflor International Ltd)

130ml (ACBS) • NHS indicative price = £6.92

**PKU purple cooler 15 liquid** (Vitaflor International Ltd)

**PKU Maxamum powder unflavoured** (Nutricia Ltd)  
500gram (ACBS) • NHS indicative price = £91.14

## Tyrosinaemia

**Methionine-free TYR Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years.  
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix infant methionine free powder** (Nutricia Ltd)  
400gram (ACBS) • NHS indicative price = £39.45

**TYR Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix infant methionine free powder** (Nutricia Ltd)  
400gram (ACBS) • NHS indicative price = £39.45

**TYR Anamix infant powder** (Nutricia Ltd)  
400gram (ACBS) • NHS indicative price = £39.45

**TYR Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**TYR Anamix Junior oral powder 29g sachets** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £206.40

**TYR Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 977), type II, and type III, in children over 1 year.  
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

**TYR Anamix Junior LQ liquid** (Nutricia Ltd)  
125 mL (ACBS) • NHS indicative price = £9.15

**TYR cooler® 45**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.  
LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

**TYR orange cooler 15 liquid** (Vitafo International Ltd)  
130 mL (ACBS) • NHS indicative price = £11.42

**TYR red cooler 10 liquid** (Vitafo International Ltd)  
87 mL (ACBS) • NHS indicative price = £7.32

**TYR red cooler 15 liquid** (Vitafo International Ltd)  
130 mL (ACBS) • NHS indicative price = £11.42

**TYR red cooler 20 liquid** (Vitafo International Ltd)  
174 mL (ACBS) • NHS indicative price = £15.29

**TYR express15®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults.  
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**TYR express 15 oral powder 25g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £336.16

**TYR express20®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years.  
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**TYR express 20 oral powder 34g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £434.31

**TYR Gel®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years.  
GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1441.

**TYR gel oral powder 24g sachets** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £216.42

**TYR Lophlex® LQ 20**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.  
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate

8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

**TYR Lophlex LQ 20 liquid** (Nutricia Ltd)  
125 mL (ACBS) • NHS indicative price = £16.27

**TYR Maxamaid®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–8 years.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

**TYR Maxamaid powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £99.61

**XPHEN TYR Tyrosidon®**

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.  
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XPHEN TYR Tyrosidon Free AA Mix powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £188.69

**XPTM Tyrosidon®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.  
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XPTM Tyrosidon powder** (Nutricia Ltd)  
500 gram • NHS indicative price = £91.31

## Appendix 3

# Cautionary and advisory labels for dispensed medicines

### Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

### Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

### Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

### Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

### Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label. These appear directly under the English label.

### Labels

#### 1 Warning: This medicine may make you sleepy

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

#### 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysglyd. Peidiwch â gysgu, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking

the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning:** This medicine may make you sleepy. If this happens, do not drive or use tools or machines

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysgld. Peidiwch â grru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning:** Do not drink alcohol

**Rhybudd:** Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl ymryd y feddyginiaeth hon**

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for

absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning:** Do not stop taking this medicine unless your doctor tells you to stop

**Rhybudd:** Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthydd am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**  
**Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio**  
To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning:** Read the additional information given with this medicine

**Rhybudd:** Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

**Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymlog. Peidiwch â defnyddio gwely haul**

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Many drugs other than those listed in Appendix 3 (e.g. phenothiazines and sulfonamides) may, on rare occasions, cause reactions in susceptible patients. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

**Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

**Gadewch i ddatodi mewn dŵr cyn ei gymryd**

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14** This medicine may colour your urine. This is harmless  
 Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg  
 To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine  
 Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau  
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening  
 Rhowch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar  
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17** Do not take more than... in 24 hours  
 Peidiwch â chymryd mwy na... mewn 24 awr  
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.  
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week  
 Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos  
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol  
 Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriau. Peidiwch ag yfed alcohol  
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.  
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21** Take with or just after food, or a meal  
 Cymerwch gyda neu ar ôl bwyd  
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.  
 Patients should be advised that a *small amount of food is sufficient*.
- 22** Take 30 to 60 minutes before food  
 Cymerwch 30 i 60 munud cyn bwyd  
 To be used on some preparations whose absorption is thereby improved.  
 Most oral antibacterials require label 23 instead (see below).
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food  
 Cymerwch y feddyginiaeth hon ar stomog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd  
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24** Suck or chew this medicine  
 Bydd angen cnoi neu sugno'r feddyginiaeth hon  
 To be used on *preparations that should be sucked or chewed*.  
 The pharmacist should use discretion as to which of these words is appropriate.
- 25** Swallow this medicine whole. Do not chew or crush  
 Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân  
 To be used on *preparations that are enteric-coated or designed for modified-release*.  
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.  
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26** Dissolve this medicine under your tongue  
 Gadewch i'r feddyginiaeth hon doddî o dan y tafod  
 To be used on *preparations designed for sublingual use*.  
 Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27** Take with a full glass of water  
 Cymerwch gyda llond gwydr o ddŵr  
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose)*. The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28** Spread thinly on the affected skin only  
 Tanwch yn denau ar y croen sydd wedi'i effeithio yn unig  
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, diethanol).
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours  
 Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr  
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.  
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well  
 Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn  
 To be used on all containers of dispensed *preparations containing paracetamol*.
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine  
 Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon  
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

#### Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings.

**Wound contact material for different types of wounds****Wound PINK (epithelialising)**

Low Exudate	Moderate Exudate
Low adherence p. 1457 Vapour-permeable film p. 1461 Soft polymer p. 1463 Hydrocolloid p. 1464	Soft ploymer p. 1463 Foam, low absorbent p. 1465 Alginate p. 1467

**Wound RED (granulating)**

Symptoms or signs of infection, see Wounds with signs of infection

Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1457 Soft polymer p. 1463 Hydrocolloid p. 1464 Foam, low absorbent p. 1465	Hydrocolloid-fibrous p. 1464 Foam p. 1465 Alginate p. 1467	Foam with extra absorbency p. 1466 Hydrocolloid-fibrous p. 1464 Alginate p. 1467

**Wound YELLOW (Sloughy) (granulating)**

Symptoms or signs of infection, see Wounds with signs of infection

Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1460 Hydrocolloid p. 1464	Hydrocolloid-fibrous p. 1464 Alginate p. 1467	Hydrocolloid-fibrous p. 1464 Alginate p. 1467 Capillary-action p. 1468

**Wound BLACK (Necrotic/ Eschar)**

Consider mechanical debridement alongside autolytic debridement

Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1464 Hydrocolloid p. 1464	Hydrocolloid p. 1464 Hydrocolloid-fibrous p. 1464 Foam p. 1465	Seek advice from wound care specialist

**Wounds with signs of infection**

Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodorous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement

Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence with honey p. 1468 Low adherence with iodine p. 1469 Low adherence with silver p. 1471 Hydrocolloid with silver p. 1470 Honey-topical p. 1468	Hydrocolloid-fibrous with silver p. 1470 Foam with silver p. 1470 Alginate with silver p. 1470 Honey-topical p. 1468 Cadexomer-iodine p. 1469	Hydrocolloid-fibrous with silver p. 1470 Foam extra absorbent, with silver p. 1470 Alginate with honey p. 1469 Alginate with silver p. 1470

**Note** In each section of this table the dressings are listed in order of increasing absorbency.  
Some wound contact (primary) dressings require a secondary dressing

Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet<sup>®</sup>) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

**Knitted polyester primary dressing****Atrauman**

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.63, 20cm × 30cm= £1.74, 5cm × 5cm= £0.27, 7.5cm × 10cm= £0.28

**Knitted viscose primary dressing****N-A Dressing**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

**N-A Ultra**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A Ultra dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.63, 9.5cm × 9.5cm= £0.33

**Profore**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Profore** (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.32

**Tricotex**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Tricotex dressing** (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.34

**Paraffin Gauze Dressing****Cuticell**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Cuticell** (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.29

**Jelonet**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Jelonet dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.41

**Neotulle**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Neotulle** (Neomedic Ltd) dressing 10cm × 10cm= £0.29

**Paragauze**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Paragauze** (C D Medical Ltd) dressing 10cm × 10cm= £0.28

**Paranet**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Paranet** (Synergy Health Plc) dressing 10cm × 10cm= £0.25

**Absorbent dressings**

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

*Absorbent cellulose dressing***CelluDress**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**CelluDress dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cosmopore E dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.56, 10cm × 35cm= £0.78, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.28

**Cutiplast Steril**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cutiplast Steril dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.31, 10cm × 25cm= £0.32, 10cm × 30cm= £0.43, 8cm × 10cm= £0.11, 8cm × 15cm= £0.25

**Leukomed**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Leukomed dressing** (BSN Medical Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.49, 10cm × 30cm= £0.63, 10cm × 35cm= £0.73, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.19, 8cm × 15cm= £0.33

**Medipore + Pad**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medipore + Pads dressing** (3M Health Care Ltd) 10cm × 10cm= £0.15, 10cm × 15cm= £0.25, 10cm × 20cm= £0.37, 10cm × 25cm= £0.46, 10cm × 35cm= £0.64, 5cm × 7.2cm= £0.07

**Medisafe**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medisafe dressing** (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

**Mepore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Mepore dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.36, 7cm × 8cm= £0.11, 9cm × 20cm= £0.44, 9cm × 25cm= £0.61, 9cm × 30cm= £0.70, 9cm × 35cm= £0.76

**PremierPore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**PremierPore dressing** (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

**Primapore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Primapore dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.50, 10cm × 30cm= £0.63, 10cm × 35cm= £0.97, 6cm × 8.3cm= £0.18, 8cm × 10cm= £0.19, 8cm × 15cm= £0.34

**Softpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Softpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

**Sterifix**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Telfa Island**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Telfa Island dressing** (Aria Medical Ltd) 10cm × 12.5cm= £0.27, 10cm × 20cm= £0.35, 10cm × 25.5cm= £0.45, 10cm × 35cm= £0.62, 5cm × 10cm= £0.08

*Absorbent perforated plastic film faced dressing***Absopad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Absopad dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

**Askina Pad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Askina** (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.21

**Cutisorb LA**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Interpose**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.28, 20cm × 10cm= £0.54, 5cm × 5cm= £0.17

**Skintact**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Skintact dressing** (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

**Solvaline N**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Solvaline N dressing** (Lohmann & Rauscher (UK) Ltd) 10cm × 10cm= £0.18, 20cm × 10cm= £0.36, 5cm × 5cm= £0.10

**Telfa**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Telfa dressing** (Aria Medical Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

*Super absorbent cellulose and polymer primary dressing*

**Curea P1**

Super absorbent cellulose and polymer primary dressing.

**Curea P1 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.15, 10cm × 20cm rectangular= £3.64, 10cm × 30cm rectangular= £5.20, 12cm × 12cm square= £2.65, 20cm × 20cm square= £6.89, 20cm × 30cm rectangular= £10.03, 7.5cm × 7.5cm square= £1.72

**Curea P2**

Super absorbent cellulose and polymer primary dressing (non-adherent)

**Curea P2 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 20cm rectangular= £4.49, 11cm × 11cm square= £2.47, 20cm × 20cm square= £7.82, 20cm × 30cm rectangular= £10.60

**Cutisorb Ultra**

Super absorbent cellulose and polymer primary dressing

**Cutisorb Ultra dressing** (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

**DryMax Extra**

Super absorbent cellulose and polymer primary dressing

**DryMax Extra dressing** (Aspen Medical Europe Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

**ELECT Superabsorber**

Super absorbent cellulose and polymer primary dressing

**ELECT Superabsorber dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £0.96, 10cm × 20cm rectangular= £1.13, 20cm × 20cm square= £2.01, 20cm × 30cm rectangular= £2.54

**Zetuvit Plus**

Super absorbent cellulose primary dressing

**Zetuvit Plus dressing** (Paul Hartmann Ltd) 10cm × 10cm= £0.64, 10cm × 20cm= £0.88, 15cm × 20cm= £1.01, 20cm × 25cm= £1.38, 20cm × 40cm= £2.13

*Super absorbent hydroconductive dressing*

**Drawtex**

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton

**Drawtex dressing** (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

**Advanced wound dressings**

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

**Hydrogel dressings**

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

*Hydrogel application (amorphous)*

**ActivHeal Hydrogel**

Hydrogel containing guar gum and propylene glycol

**ActivHeal** (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

**Aquaform**

Hydrogel containing modified starch copolymer

**AquaForm** (Aspen Medical Europe Ltd) Hydrogel dressing= £2.02

**Askina Gel**

Hydrogel containing modified starch and glycerol

**Askina** (B.Braun Medical Ltd) Gel dressing= £2.03

**Cutimed**

Hydrogel

**Cutimed** (BSN medical Ltd) Gel dressing= £3.05

**Flexigran**

Hydrogel containing modified starch and glycerol

**Flexigran** (A1 Pharmaceuticals) Gel dressing= £1.90

**GranuGel**

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

**GranuGEL** (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.35

**Intrasite Gel**

Hydrogel containing modified carmellose polymer and propylene glycol

**IntraSite** (Smith & Nephew Healthcare Ltd) Gel dressing= £3.63

**Nu-Gel**

Hydrogel containing alginate and propylene glycol

**Nu-Gel** (Systagenix Wound Management Ltd) dressing= £2.09

**Purilon Gel**

Hydrogel containing carboxymethylcellulose and calcium alginate

**Purilon** (Coloplast Ltd) Gel dressing= £2.30

*Hydrogel sheet dressings*

**ActiFormCool**

Hydrogel dressing

**ActiFormCool sheet** (Activa Healthcare Ltd) 10cm × 10cm square= £2.66, 10cm × 15cm rectangular= £3.83, 20cm × 20cm square= £8.01, 5cm × 6.5cm rectangular= £1.81

**Aquafluo**

Hydrogel dressing

**Aquafluo** (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

**Coolie**

Hydrogel dressing (without adhesive border)

**Coolie** (Zeroderma Ltd) sheet 7cm discs= £1.96

**Gel FX**

Hydrogel dressing (without adhesive border)

**Gel FX sheet** (Synergy Health Plc) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

**Geliperm**

Hydrogel sheets

**Geliperm** (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

**Hydrosorb**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film  
**Hydrosorb sheet** (Paul Hartmann Ltd) 10cm × 10cm square= £2.26, 20cm × 20cm square= £6.77, 5cm × 7.5cm rectangular= £1.58

**Hydrosorb Comfort**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

**Hydrosorb Comfort sheet** (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.61, 4.5cm × 6.5cm rectangular= £1.87, 7.5cm × 10cm rectangular= £2.48

**Intrasite Conformable**

Soft non-woven dressing impregnated with Intrasite® gel  
**IntraSite Conformable dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.82, 10cm × 20cm rectangular= £2.46, 10cm × 40cm rectangular= £4.40

**Novogel**

Glycerol-based hydrogel sheets (standard or thin)

**Novogel sheet** (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £2.89

**SanoSkin NET**

Hydrogel sheet (without adhesive border)

**SanoSkin** (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

**Vacunet**

Non-adherent, hydrogel coated polyester net dressing  
**Vacunet dressing** (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

**Sodium hyaluronate dressings**

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

**Hiodine®** should be used with caution in thyroid disorders.

**Hiodine**

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

**Hiodine** (H & R Healthcare Ltd) dressing= £35.00

**Vapour-permeable films and membranes**

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to

protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

*Non-woven fabric dressing with viscose-rayon pad.*

**Niko Fix**

For intravenous and subcutaneous catheter sites

**Niko** (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.19

**Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

**Askina Derm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Askina Derm dressing** (B.Braun Medical Ltd) 10cm × 12cm= £1.10, 10cm × 20cm= £2.08, 15cm × 20cm= £2.52, 20cm × 30cm= £4.51, 6cm × 7cm= £0.38

**C-View**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**C-View dressing** (Aspen Medical Europe Ltd) 10cm × 12cm= £1.02, 12cm × 12cm= £1.09, 15cm × 20cm= £2.36, 6cm × 7cm= £0.38

**Dressfilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Dressfilm** (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

**Hydrofilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hydrofilm dressing** (Paul Hartmann Ltd) 10cm × 12.5cm= £0.42, 10cm × 15cm= £0.53, 10cm × 25cm= £0.82, 12cm × 25cm= £0.87, 15cm × 20cm= £0.97, 20cm × 30cm= £1.61, 6cm × 7cm= £0.23

**Hypafix Transparent**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hypafix Transparent** (BSN medical Ltd) dressing 10cm × 2m= £8.88

**Leukomed T**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Leukomed T dressing** (BSN medical Ltd) 10cm × 12.5cm= £1.04, 11cm × 14cm= £1.25, 15cm × 20cm= £2.40, 15cm × 25cm= £2.56, 7.2cm × 5cm= £0.38, 8cm × 10cm= £0.71

**Mepitel Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepitel Film dressing** (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.31, 10.5cm × 25cm= £2.55, 15.5cm × 20cm= £3.24, 6.5cm × 7cm= £0.49

**Mepore Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepore Film dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £1.23, 10cm × 25cm= £2.39, 15cm × 20cm= £3.04, 6cm × 7cm= £0.46

**OpSite Flexifix**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexifix dressing** (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.67, 5cm × 1m= £3.95

**OpSite Flexigrid**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexigrid dressing** (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.14, 15cm × 20cm= £2.88, 6cm × 7cm= £0.40

**Polyskin II**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Kendall Film dressing** (Aria Medical Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

**ProtectFilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**ProtectFilm dressing** (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

**Suprasorb F**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Suprasorb F dressing** (Lohmann & Rauscher (UK) Ltd) 10cm × 12cm= £0.81, 15cm × 20cm= £2.52, 5cm × 7cm= £0.34

**Tegaderm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Film dressing** (3M Health Care Ltd) 12cm × 12cm= £1.11, 15cm × 20cm= £2.41, 6cm × 7cm= £0.39

**Tegaderm diamond**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Diamond dressing** (3M Health Care Ltd) 10cm × 12cm= £1.21, 6cm × 7cm= £0.45

**Vellafilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Vellafilm dressing** (Advancis Medical) 12cm × 12cm= £1.10, 12cm × 35cm= £2.75, 15cm × 20cm= £2.10

*Vapour-permeable Adhesive Film Dressing with adsorbent pad*

**Adpore Ultra**

Film dressing with adsorbent pad

**Adpore Ultra dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

**Leukomed T Plus**

Film dressing with adsorbent pad

**Leukomed T plus dressing** (BSN medical Ltd) 10cm × 20cm= £1.36, 10cm × 25cm= £1.53, 10cm × 30cm= £2.56, 10cm × 35cm= £3.11, 7.2cm × 5cm= £0.27, 8cm × 10cm= £0.54, 8cm × 15cm= £0.82

**Mepore Film & Pad**

Film dressing with adsorbent pad

**Mepore Film & Pad dressing** (Molnlycke Health Care Ltd) 4cm × 5cm= £0.24, 5cm × 7cm= £0.24, 9cm × 10cm= £0.62, 9cm × 15cm= £0.92, 9cm × 20cm= £1.36, 9cm × 25cm= £1.50, 9cm × 30cm= £2.01, 9cm × 35cm= £2.50

**Mepore Ultra**

Film dressing with adsorbent pad

**Mepore Ultra dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.80, 11cm × 15cm= £1.18, 7cm × 8cm= £0.40, 9cm × 20cm= £1.51, 9cm × 25cm= £1.67, 9cm × 30cm= £2.75

**OpSite Plus**

Film dressing with adsorbent pad

**OpSite Plus dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.21, 10cm × 20cm= £2.04, 10cm × 35cm= £3.38, 6.5cm × 5cm= £0.33, 8.5cm × 9.5cm= £0.89

**OpSite Post-op**

Film dressing with adsorbent pad

**OpSite Post-Op dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.19, 10cm × 20cm= £2.00, 10cm × 25cm= £2.52, 10cm × 30cm= £2.98, 10cm × 35cm= £3.32, 8.5cm × 15.5cm= £1.21, 8.5cm × 9.5cm= £0.87

**Pharmapore-PU**

Film dressing with adsorbent pad

**Pharmapore-PU dressing** (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

**PremierPore VP**

Film dressing with adsorbent pad

**PremierPore VP dressing** (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.69, 5cm × 7cm= £0.13

**Tegaderm**

Film dressing with adsorbent pad

**Tegaderm + Pad dressing** (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.95, 9cm × 20cm= £1.40, 9cm × 25cm= £1.57, 9cm × 35cm= £2.60

**Tegaderm Absorbent Clear**

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

**Tegaderm Absorbent Clear Acrylic dressing** (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.11, 14.2cm × 15.8cm oval= £5.78, 14.9cm × 15.2cm rectangular= £8.66, 16.8cm × 19cm sacral= £10.37, 20cm × 20.3cm rectangular= £13.91, 7.6cm × 9.5cm oval= £3.17

*Vapour-permeable transparent film dressing with adhesive foam border.*

**Central Gard**

For intravenous and subcutaneous catheter sites

**Central Gard dressing** (Unomedical Ltd) 16cm × 7cm= £0.96, 16cm × 8.8cm= £1.05

**Easi-V**

For intravenous and subcutaneous catheter sites

**Easi-V** (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

*Vapour-permeable transparent, adhesive film dressing.*

**Hydrofilm I.V. Control**

For intravenous and subcutaneous catheter sites

**Hydrofilm** (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.31

*Vapour-permeable, transparent, adhesive film dressing.*

**IV3000**

For intravenous and subcutaneous catheter sites

**IV3000 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.41, 5cm × 6cm= £0.43, 6cm × 7cm= £0.56, 7cm × 9cm= £0.74, 9cm × 12cm= £1.47

**Mepore IV**

For intravenous and subcutaneous catheter sites

**Mepore IV dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £1.07, 5cm × 5.5cm= £0.31, 8cm × 9cm= £0.40

**Pharmapore-PU IV**

For intravenous and subcutaneous catheter sites

**Pharmapore-PU-IV dressing** (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

**Tegaderm IV**

For intravenous and subcutaneous catheter sites

**Tegaderm IV dressing with securing tapes** (3M Health Care Ltd) 10cm × 15.5cm= £1.67, 7cm × 8.5cm= £0.59, 8.5cm × 10.5cm= £1.16

**Soft polymer dressings**

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

**Cellulose dressings****Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

**Cutimed Sorbion Sachet Border dressing** (BSN medical Ltd) 10cm × 10cm square= £2.98, 15cm × 15cm square= £4.54, 25cm × 15cm rectangular= £7.06

**Sorbion Sachet EXTRA**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Extra dressing** (BSN medical Ltd) 10cm × 10cm= £2.27, 20cm × 10cm= £3.77, 20cm × 20cm= £7.08, 30cm × 20cm= £10.09, 5cm × 5cm= £1.47, 7.5cm × 7.5cm= £1.80

**Sorbion Sachet Multi Star**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Multi Star dressing** (BSN medical Ltd) 14cm × 14cm= £4.94, 8cm × 8cm= £3.02

**Sorbion Sachet S Drainage**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)

**Cutimed** (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm= £2.67

**Suprasorb X**

Biosynthetic cellulose fibre dressing

**Suprasorb X dressing** (Lohmann & Rauscher (UK) Ltd) 14cm × 20cm rectangular= £8.46, 2cm × 21cm rope= £6.58, 5cm × 5cm square= £2.05, 9cm × 9cm square= £4.27

**With absorbant pad****Advazorb Border**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border dressing** (Advancis Medical) 10cm × 10cm= £2.10, 10cm × 20cm= £2.90, 10cm × 30cm= £4.25, 12.5cm × 12.5cm= £2.58, 15cm × 15cm= £3.15, 20cm × 20cm= £5.46, 7.5cm × 7.5cm= £1.19

**Advazorb Border Lite**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border Lite dressing** (Advancis Medical) 10cm × 10cm= £1.89, 10cm × 20cm= £2.61, 10cm × 30cm= £3.83, 12.5cm × 12.5cm= £2.32, 15cm × 15cm= £2.84, 20cm × 20cm= £4.91, 7.5cm × 7.5cm= £1.07

**Advazorb Silfix**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix dressing** (Advancis Medical) 10cm × 10cm= £1.85, 10cm × 20cm= £3.18, 12.5cm × 12.5cm= £2.59, 15cm × 15cm= £3.36, 20cm × 20cm= £4.98, 7.5cm × 7.5cm= £0.99

**Advazorb Silfix Lite**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix Lite dressing** (Advancis Medical) 10cm × 10cm= £1.67, 10cm × 20cm= £2.86, 12.5cm × 12.5cm= £2.33, 15cm × 15cm= £3.02, 20cm × 20cm= £4.48, 7.5cm × 7.5cm= £0.89

**Allewyn Gentle**

Soft gel wound contact dressing, with polyurethane foam film backing

**Allewyn Gentle dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.53, 10cm × 20cm= £4.07, 15cm × 15cm= £4.25, 20cm × 20cm= £6.78, 5cm × 5cm= £1.27

**Allewyn Gentle Border**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allewyn Gentle Border** (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £9.74, dressing 10cm × 10cm= £2.21, 12.5cm × 12.5cm= £2.71, 17.5cm × 17.5cm= £5.34, 7.5cm × 7.5cm= £1.51,

**Allewyn Gentle Border Lite**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allewyn Gentle Border Lite dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.18, 15cm × 15cm= £3.85, 5.5cm × 12cm= £1.86, 5cm × 5cm= £0.91, 8cm × 15cm= £3.47

**Allewyn Life**

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border

**Allewyn Life dressing** (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.71, 12.9cm × 12.9cm= £2.51, 15.4cm × 15.4cm= £3.06, 21cm × 21cm= £6.04

**Cutimed Siltec**

Soft silicone wound contact dressing, with polyurethane foam film backing

**Cutimed Siltec** (BSN medical Ltd) Heel dressing 16cm × 24cm= £7.29, Sacrum dressing 17.5cm × 17.5cm= £4.64, 23cm × 23cm= £7.43, dressing 10cm × 10cm= £2.51, 10cm × 20cm= £4.14, 15cm × 15cm= £4.69, 20cm × 20cm= £7.11, 5cm × 6cm= £1.34,

**Cutimed Siltec B**

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

**Cutimed Siltec B dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £3.30, 15cm × 15cm= £5.08, 17.5cm × 17.5cm= £5.35, 22.5cm × 22.5cm= £8.64, 7.5cm × 7.5cm= £1.56

**Cutimed Siltec L**

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

**Cutimed Siltec L dressing** (BSN medical Ltd) 10cm × 10cm= £2.16, 15cm × 15cm= £3.55, 5cm × 6cm= £1.07

**Eclipse Adherent**

Soft silicone wound contact layer with absorbent pad and film backing

**Eclipse Adherent dressing** (Advancis Medical) 10cm × 10cm= £2.99, 10cm × 20cm= £3.75, 15cm × 15cm= £4.99, 20cm × 30cm= £9.99, 17cm × 19cm sacral= £3.76, 22cm × 23cm sacral= £6.23

**Flivasorb**

Absorbent polymer dressing with non-adherent wound contact layer

**Flivasorb dressing** (Lohmann & Rauscher (UK) Ltd) 10cm × 10cm square= £0.89, 10cm × 20cm rectangular= £1.06, 20cm × 20cm square= £1.88, 20cm × 30cm rectangular= £2.37

**Flivasorb Adhesive**

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

**Flivasorb Adhesive dressing** (Lohmann & Rauscher (UK) Ltd) 12cm × 12cm square= £3.35, 15cm × 15cm square= £4.58

**Mepilex**

Absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex** (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.41, 15cm × 22cm= £6.22, XT dressing 10cm × 11cm= £2.66, 11cm × 20cm= £4.39, 15cm × 16cm= £4.82, 20cm × 21cm= £7.28, dressing 5cm × 5cm= £1.21

**Mepilex Border**

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border** (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm= £6.63, Sacrum dressing 18cm × 18cm= £4.85, 23cm × 23cm= £7.91, dressing 10cm × 12.5cm= £2.72, 10cm × 20cm= £3.69, 10cm × 30cm= £5.55, 15cm × 17.5cm= £4.18, 17cm × 20cm= £6.07

**Mepilex Border Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £1.87, 15cm × 15cm= £3.94, 4cm × 5cm= £0.92, 5cm × 12.5cm= £2.01, 7.5cm × 7.5cm= £1.35

**Mepilex Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £2.17, 15cm × 15cm= £4.22, 20cm × 50cm= £26.66, 6cm × 8.5cm= £1.82

**Mepilex Transfer**

Soft silicone exudate transfer dressing

**Mepilex Transfer dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £3.51, 15cm × 20cm= £10.64, 20cm × 50cm= £27.20, 7.5cm × 8.5cm= £2.23

**Sorbion Sana**

Non-adherent polyethylene wound contact dressing with absorbent core

**Cutimed Sorbion Sana Gentle dressing** (BSN medical Ltd) 12cm × 12cm= £2.52, 12cm × 22cm= £4.54, 22cm × 22cm= £8.07, 8.5cm × 8.5cm= £2.01

**Urgotul Duo**

Non-adherent soft polymer wound contact dressing with absorbent pad

**Urgotul Duo dressing** (Urgo Ltd) 10cm × 12cm= £3.87, 15cm × 20cm= £8.98, 5cm × 10cm= £2.50

*Without absorbant pad*

**Adaptic Touch**

Non-adherent soft silicone wound contact dressing

**Adaptic Touch dressing** (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.65, 20cm × 32cm= £12.50, 5cm × 7.6cm= £1.13, 7.6cm × 11cm= £2.25

**Askina SilNet**

Soft silicone-coated wound contact dressing

**Askina SilNet dressing** (B.Braun Medical Ltd) 10cm × 18cm= £5.03, 20cm × 30cm= £12.32, 5cm × 7.5cm= £1.14, 7.5cm × 10cm= £2.31

**Mepitel**

Soft silicone, semi-transparent wound contact dressing

**Mepitel dressing** (Molnlycke Health Care Ltd) 12cm × 15cm= £5.60, 5cm × 7cm= £1.40, 8cm × 10cm= £2.80

**Mepitel One**

Soft silicone, thin, transparent wound contact dressing

**Mepitel One dressing** (Molnlycke Health Care Ltd) 13cm × 15cm= £4.98, 24cm × 27.5cm= £14.25, 6cm × 7cm= £1.22, 9cm × 10cm= £2.41

**Physiotulle**

Non-adherent soft polymer wound contact dressing

**Physiotulle dressing** (Coloplast Ltd) 10cm × 10cm= £2.28, 15cm × 20cm= £6.96

**Silflex**

Soft silicone-coated polyester wound contact dressing

**Silflex dressing** (Advancis Medical) 12cm × 15cm= £4.58, 20cm × 30cm= £11.79, 35cm × 60cm= £39.54, 5cm × 7cm= £1.11, 8cm × 10cm= £2.27

**Silon-TSR**

Soft silicone polymer wound contact dressing

**Silon-TSR dressing** (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

**Sobion Contact**

Non-adherent soft polymer wound contact dressing

**Cutimed Sorbion Contact dressing** (BSN medical Ltd) 10cm × 10cm= £2.01, 10cm × 20cm= £4.03, 20cm × 20cm= £7.06, 20cm × 30cm= £10.09, 7.5cm × 7.5cm= £1.51

**Tegaderm Contact**

Non-adherent soft polymer wound contact dressing

**Tegaderm Contact dressing** (3M Health Care Ltd) 20cm × 25cm= £10.86, 7.5cm × 10cm= £2.27

**Urgotul**

Non-adherent soft polymer wound contact dressing

**Urgotul dressing** (Urgo Ltd) 10cm × 10cm= £3.11, 10cm × 40cm= £10.44, 15cm × 15cm= £6.60, 15cm × 20cm= £8.79, 20cm × 30cm= £14.13, 5cm × 5cm= £1.55

**Hydrocolloid dressings**

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

**Hydrocolloid-fibrous dressings****Aquacel**

Soft non-woven pad containing hydrocolloid-fibres

**Aquacel** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £1.86, 2cm × 45cm= £2.48, dressing 10cm × 10cm square= £2.45, 15cm × 15cm square= £4.60, 4cm × 10cm rectangular= £1.32, 4cm × 20cm rectangular= £1.94, 4cm × 30cm rectangular= £2.92, 5cm × 5cm square= £1.03

**Aquacel Foam**

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

**Aquacel Foam dressing (adhesive)** (ConvaTec Ltd) 10cm × 10cm= £2.16, 12.5cm × 12.5cm= £2.68, 17.5cm × 17.5cm= £5.36, 19.8cm × 14cm heel= £5.48, 20cm × 16.9cm sacral= £4.92, 21cm × 21cm= £7.84, 25cm × 30cm= £10.15, 8cm × 8cm= £1.41, non-adhesive) 10cm × 10cm= £2.56, 15cm × 15cm= £4.30, 15cm × 20cm= £5.88, 20cm × 20cm= £7.01

**UrgoClean Pad**

Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer

**UrgoClean Pad dressing** (Urgo Ltd) 10cm × 10cm square= £2.14, 20cm × 15cm rectangular= £4.02, 6cm × 6cm square= £0.96

**UrgoClean Rope**

Rope, non-woven rope containing hydrocolloid fibres

**UrgoClean rope dressing** (Urgo Ltd) 2.5cm × 40cm= £2.41, 5cm × 40cm= £3.18

**Polyurethane matrix dressing****Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film

**Cutinova Hydro dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.57, 15cm × 20cm rectangular= £5.44, 5cm × 6cm rectangular= £1.28

*With adhesive border*

#### **Biatain Super**

Semi-permeable hydrocolloid dressing; without adhesive border

**Biatain Super dressing (adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.18, 12.5cm × 12.5cm square= £3.60, 12cm × 20cm rectangular= £3.61, 15cm × 15cm square= £4.35, 20cm × 20cm square= £6.78

#### **Granuflex Bordered**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex Bordered dressing** (ConvaTec Ltd) 10cm × 10cm square= £3.37, 10cm × 13cm triangular= £3.97, 15cm × 15cm square= £6.43, 15cm × 18cm triangular= £6.19, 6cm × 6cm square= £1.78

#### **Hydrocoll Border**

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

**Hydrocoll Border (bevelled edge) dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £2.43, 12cm × 18cm sacral= £3.64, 15cm × 15cm square= £4.57, 5cm × 5cm square= £1.01, 7.5cm × 7.5cm square= £1.67, 8cm × 12cm concave= £2.14

#### **Tegaderm Hydrocolloid**

Hydrocolloid dressing with adhesive border; normal or thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.55, 13cm × 15cm oval= £2.89, dressing 10cm × 12cm oval= £2.33, 13cm × 15cm oval= £4.34, 17.1cm × 16.1cm sacral= £4.85

#### **Ultec Pro**

Semi-permeable hydrocolloid dressing with adhesive border

**Ultec Pro dressing (adhesive)** (Covidien (UK) Commercial Ltd) 15cm × 18cm sacral= £3.30, 19.5cm × 23cm sacral= £4.98, 21cm × 21cm square= £4.67

*Without adhesive border*

#### **ActivHeal Hydrocolloid**

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

**ActivHeal Hydrocolloid** (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.58, 15cm × 15cm square= £3.43, 15cm × 18cm sacral= £3.98, 5cm × 7.5cm rectangular= £0.78, foam backed dressing 10cm × 10cm square= £1.55, 15cm × 15cm square= £2.91, 15cm × 18cm sacral= £3.36, 5cm × 7.5cm rectangular= £0.97

#### **Askina Biofilm Transparent**

Semi-permeable, polyurethane film dressing with hydrocolloid adhesive

**Askina Biofilm Transparent dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £1.08, 20cm × 20cm square= £3.20

#### **Biatain Super**

Semi-permeable, hydrocolloid film dressing without adhesive border

**Biatain Super dressing (non-adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.18, 12.5cm × 12.5cm square= £3.60, 12cm × 20cm rectangular= £3.61, 15cm × 15cm square= £4.35, 20cm × 20cm square= £6.78

#### **Comfeel Plus Contour**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Contour dressing** (Coloplast Ltd) 6cm × 8cm= £2.23, 9cm × 11cm= £3.87

#### **Comfeel Plus Pressure Relieving**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Pressure Relieving dressing** (Coloplast Ltd) 10cm diameter circular= £4.66, 15cm diameter circular= £7.01, 7cm diameter circular= £3.48

#### **Comfeel Plus Transparent**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Transparent dressing** (Coloplast Ltd) 10cm × 10cm square= £1.28, 15cm × 15cm square= £3.35, 15cm × 20cm rectangular= £3.40, 20cm × 20cm square= £3.42, 5cm × 15cm rectangular= £1.59, 5cm × 25cm rectangular= £2.59, 5cm × 7cm rectangular= £0.67, 9cm × 14cm rectangular= £2.44, 9cm × 25cm rectangular= £3.47

#### **Comfeel Plus Ulcer**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Ulcer (bevelled edge) dressing** (Coloplast Ltd) 10cm × 10cm square= £2.46, 18cm × 20cm triangular= £5.73, 20cm × 20cm square= £7.59, 4cm × 6cm rectangular= £0.96

#### **DuoDERM Extra Thin**

Semi-permeable hydrocolloid dressing

**DuoDERM Extra Thin dressing** (ConvaTec Ltd) 10cm × 10cm square= £1.33, 15cm × 15cm square= £2.88, 5cm × 10cm rectangular= £0.77, 7.5cm × 7.5cm square= £0.81, 9cm × 15cm rectangular= £1.78, 9cm × 25cm rectangular= £2.85, 9cm × 35cm rectangular= £3.98

#### **DuoDERM Signal**

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

**DuoDERM Signal dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.14, 11cm × 19cm oval= £3.28, 14cm × 14cm square= £3.75, 18.5cm × 19.5cm heel= £5.25, 20cm × 20cm square= £7.46, 22.5cm × 20cm sacral= £6.13

#### **Flexigran**

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

**Flexigran** (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

#### **Granuflex**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex (modified) dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.83, 15cm × 15cm square= £5.36, 15cm × 20cm rectangular= £5.81, 20cm × 20cm square= £8.07

#### **Hydrocoll Basic**

Hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll** (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.47

#### **Hydrocoll Thin Film**

Thin hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Thin Film dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £1.16, 15cm × 15cm square= £2.61, 7.5cm × 7.5cm square= £0.70

#### **Nu-Derm**

Semi-permeable hydrocolloid dressing (normal and thin)

**Nu-Derm dressing** (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.56, 15cm × 15cm square= £3.18, 15cm × 18cm sacral= £4.45, 20cm × 20cm square= £6.36, 5cm × 5cm square= £0.85, 8cm × 12cm heel/elbow= £3.18, thin 10cm × 10cm square= £1.06

#### **Tegaderm Hydrocolloid**

Hydrocolloid dressing without adhesive border; normal and thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.55, dressing 10cm × 10cm square= £2.37

#### **Ultec Pro**

Semi-permeable hydrocolloid dressing; without adhesive border

**Ultec Pro dressing** (Covidien (UK) Commercial Ltd) 10cm × 10cm square= £2.28, 15cm × 15cm square= £4.44, 20cm × 20cm square= £6.69

#### **Foam dressings**

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant

on the level of exudate Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

#### Cavi-Care

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

#### Polyurethane Foam Dressing

##### Cutimed Cavity

**Cutimed Cavity dressing** (BSN Medical Ltd) 10cm × 10cm = £3.15, 15cm × 15cm = £4.73, 5cm × 6cm = £1.90

##### Kendall

**Kendall Foam dressing** (Aria Medical Ltd) 10cm × 10cm square = £1.06, 10cm × 20cm rectangular = £2.05, 12.5cm × 12.5cm square = £1.80, 15cm × 15cm square = £2.60, 20cm × 20cm square = £3.01, 5cm × 5cm square = £0.71, 7.5cm × 7.5cm square = £1.21, 8.5cm × 7.5cm rectangular (fenestrated) = £0.91

#### Polyurethane Foam Film Dressing with Adhesive Border

##### ActivHeal Foam Adhesive

**ActivHeal Foam Adhesive dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square = £1.63, 12.5cm × 12.5cm square = £1.68, 15cm × 15cm square = £2.15, 20cm × 20cm square = £4.50, 7.5cm × 7.5cm square = £1.18

##### Allewyn Adhesive

**Allewyn Adhesive dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £2.21, 12.5cm × 12.5cm square = £2.70, 12.5cm × 22.5cm rectangular = £4.20, 17.5cm × 17.5cm square = £5.32, 17cm × 17cm anatomically shaped sacral = £4.00, 22.5cm × 22.5cm square = £7.75, 22cm × 22cm anatomically shaped sacral = £5.76, 7.5cm × 7.5cm square = £1.50

##### Biatain Adhesive

**Biatain Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square = £1.77, 12.5cm × 12.5cm square = £2.58, 17cm diameter contour = £5.01, 18cm × 18cm square = £5.21, 18cm × 28cm rectangular = £7.71, 19cm × 20cm heel = £5.21, 23cm × 23cm sacral = £4.46

##### Biatain Silicone

**Biatain Silicone dressing** (Coloplast Ltd) 7.5cm × 7.5cm = £1.47, 10cm × 10cm = £2.16, 12.5cm × 12.5cm = £2.65, 15cm × 15cm = £3.93, 17.5cm × 17.5cm = £5.22

##### Kendall Island

**Kendall Foam Island dressing** (Aria Medical Ltd) 10cm × 10cm square = £1.54, 15cm × 15cm square = £2.90, 20cm × 20cm square = £5.46

##### PermaFoam

**PermaFoam dressing (adhesive)** (Paul Hartmann Ltd) 16.5cm × 18cm concave = £4.06, 18cm × 18cm sacral = £3.34, 22cm × 22cm sacral = £3.84

##### PermaFoam Comfort

**PermaFoam Comfort dressing** (Paul Hartmann Ltd) 10cm × 20cm rectangular = £3.38, 11cm × 11cm square = £2.14, 15cm × 15cm square = £3.50, 20cm × 20cm square = £5.08, 8cm × 8cm square = £1.13

##### PolyMem

**PolyMem dressing** (Aspen Medical Europe Ltd) (adhesive) 10cm × 13cm rectangular = £2.18, 15cm × 15cm square = £2.93, 16.5cm × 20.9cm oval = £6.74, 18.4cm × 20cm sacral = £4.53, 5cm × 7.6cm oval = £1.15, 8.8cm × 12.7cm oval = £2.05

##### Polymem

**Polymem** (Aspen Medical Europe Ltd) dressing (adhesive) 5cm × 5cm square = £0.52

#### Tegaderm Foam Adhesive

**Tegaderm Foam dressing (adhesive)** (3M Health Care Ltd) 10cm × 11cm oval = £2.39, 13.9cm × 13.9cm circular (heel) = £4.22, 14.3cm × 14.3cm square = £3.54, 14.3cm × 15.6cm oval = £4.24, 19cm × 22.2cm oval = £6.96, 6.9cm × 6.9cm soft cloth border = £1.71, 6.9cm × 7.6cm oval = £1.46

##### Tielle

**Tielle** (Systagenix Wound Management Ltd) Lite dressing 11cm × 11cm square = £2.28, dressing 15cm × 15cm square = £3.89, 15cm × 20cm rectangular = £4.87, 18cm × 18cm square = £4.95, 7cm × 9cm rectangular = £1.28

##### Tielle Lite

**Tielle Lite dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square = £2.28, 7cm × 9cm rectangular = £1.21, 8cm × 15cm rectangular = £2.81, 8cm × 20cm rectangular = £2.97

##### Tielle Plus

**Tielle Plus dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square = £2.63, 15cm × 15cm sacrum = £3.13, square = £4.30, 15cm × 20cm rectangular = £5.39, 20cm × 26.5cm heel = £4.45

#### Polyurethane Foam Film Dressing without Adhesive Border

##### ActivHeal Foam Non-Adhesive

**ActivHeal Non-Adhesive Foam polyurethane dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square = £1.13, 10cm × 20cm rectangular = £2.34, 20cm × 20cm square = £3.92, 5cm × 5cm square = £0.75

##### Advazorb

**Advazorb** (Advancis Medical) Heel dressing 17cm × 21cm = £4.75, dressing 10cm × 10cm square = £1.08, 10cm × 20cm rectangular = £3.35, 12.5cm × 12.5cm square = £1.59, 15cm × 15cm square = £2.10, 20cm × 20cm square = £3.75, 5cm × 5cm square = £0.65, 7.5cm × 7.5cm square = £0.78

##### Advazorb Lite

**Advazorb Lite dressing** (Advancis Medical) 10cm × 10cm square = £0.97, 10cm × 20cm rectangular = £3.02, 12.5cm × 12.5cm square = £1.43, 15cm × 15cm square = £1.89, 20cm × 20cm square = £3.38, 7.5cm × 7.5cm square = £0.70

##### Allewyn Non-Adhesive

**Allewyn dressing (non-adhesive)** (Smith & Nephew Healthcare Ltd) 10.5cm × 13.5cm heel (cup shaped) = £5.16, 10cm × 10cm square = £2.52, 10cm × 20cm rectangular = £4.05, 20cm × 20cm square = £6.76, 5cm × 5cm square = £1.27

##### Askina Foam

**Askina** (B.Braun Medical Ltd) Foam Cavity dressing 2.4cm × 40cm = £2.47, Foam dressing 10cm × 10cm square = £2.21, 10cm × 20cm rectangular = £3.49, 20cm × 20cm square = £5.83, Heel dressing 12cm × 20cm = £4.73

##### Biatain -ibu Non-Adhesive

**Biatain-ibu Non-Adhesive dressing** (Coloplast Ltd) 10cm × 12cm rectangular = £3.34, 10cm × 22.5cm rectangular = £5.26, 15cm × 15cm square = £5.26, 20cm × 20cm square = £8.95, 5cm × 7cm rectangular = £1.73

##### Biatain -ibu Soft-Hold

**Biatain-ibu Soft-Hold dressing** (Coloplast Ltd) 10cm × 12cm rectangular = £3.34, 10cm × 22.5cm rectangular = £5.26, 15cm × 15cm square = £5.26

##### Biatain Non-Adhesive

**Biatain Non-Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square = £2.40, 10cm × 20cm rectangular = £3.96, 15cm × 15cm square = £4.43, 20cm × 20cm square = £6.57, 5cm × 7cm rectangular = £1.32

##### Biatain Soft-Hold

**Biatain Soft-Hold dressing** (Coloplast Ltd) 10cm × 10cm square = £2.61, 10cm × 20cm rectangular = £3.96, 15cm × 15cm square = £4.34, 5cm × 7cm rectangular = £1.32

##### Kendall Plus

**Kendall Foam Plus dressing** (Aria Medical Ltd) 10cm × 10cm square = £1.47, 10cm × 20cm rectangular = £2.69, 15cm × 15cm square = £3.38, 20cm × 20cm square = £4.04, 5cm × 5cm square = £0.82, 7.5cm × 7.5cm square = £1.42, 8.5cm × 7.5cm rectangular (fenestrated) = £1.24

**Kerraheel**

**Kerraheel** (Crawford Healthcare Ltd) dressing 12cm × 20cm heel= £4.65

**Lyofom Max**

**Lyofom Max dressing** (Molnlycke Health Care Ltd) 10cm × 10cm square= £1.14, 10cm × 20cm rectangular= £2.01, 15cm × 15cm square= £2.15, 15cm × 20cm rectangular= £2.71, 20cm × 20cm square= £3.99, 7.5cm × 8.5cm rectangular= £1.09

**PermaFoam**

**PermaFoam** (Paul Hartmann Ltd) Cavity dressing 10cm × 10cm= £2.03, dressing (non-adhesive) 10cm × 10cm square= £2.14, 10cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.06, 20cm × 20cm square= £6.20, 6cm diameter circular= £1.11, 8cm × 8cm square (fenestrated)= £1.26

**PolyMem**

**PolyMem dressing** (Aspen Medical Europe Ltd) 7cm × 7cm tube= £1.72, 9cm × 9cm tube= £2.17, finger/toe size 1= £2.50, 2= £2.50, 3= £2.50

**PolyMem**

**PolyMem dressing (non-adhesive)** (Aspen Medical Europe Ltd) 10cm × 10cm square= £2.47, 10cm × 20cm rectangular= £13.10, 13cm × 13cm square= £4.12, 17cm × 19cm rectangular= £6.08, 20cm × 60cm rectangular= £30.90, 8cm × 8cm square= £1.59

**PolyMem Max**

**PolyMem Max dressing** (Aspen Medical Europe Ltd) 11cm × 11cm square= £2.97, 20cm × 20cm square= £11.68

**PolyMem WIC**

**PolyMem** (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £3.69

**Tegaderm Foam**

**Tegaderm Foam dressing** (3M Health Care Ltd) 10cm × 10cm square= £2.19, 10cm × 20cm rectangular= £3.71, 10cm × 60cm rectangular= £12.54, 20cm × 20cm square= £5.92, 8.8cm × 8.8cm square (fenestrated)= £2.23

**Tielle Xtra**

**Tielle Xtra dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square= £2.24, 15cm × 15cm square= £3.37, 15cm × 20cm rectangular= £5.51

**Transorbent**

**Transorbent dressing (adhesive)** (B.Braun Medical Ltd) 10cm × 10cm square= £1.98, 15cm × 15cm square= £3.65, 20cm × 20cm square= £5.83, 5cm × 7cm rectangular= £1.05

**UrgoCell TLC**

**UrgoTul Absorb dressing** (Urgo Ltd) 10cm × 10cm= £2.38, 15cm × 20cm= £4.20, 6cm × 6cm= £1.21, 12cm × 19cm heel= £4.80,

**Alginate dressings**

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

**ActivHeal Alginate**

Calcium sodium alginate dressing

**ActivHeal Alginate dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

**ActivHeal Aquafiber**

Non-woven, calcium sodium alginate dressing

**ActivHeal Aquafiber** (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.80, 15cm × 15cm= £3.40, 5cm × 5cm= £0.76

**Algisite M**

Calcium alginate fibre, non-woven dressing

**Algisite M** (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.50, dressing 10cm × 10cm= £1.93, 15cm × 20cm= £5.19, 5cm × 5cm= £0.93

**Algosteril**

Calcium alginate dressing

**Algosteril** (Smith & Nephew Healthcare Ltd) Rope dressing 2g= £3.83, dressing 10cm × 10cm= £2.12, 10cm × 20cm= £3.58, 5cm × 5cm= £0.93

**Biatain Alginate**

Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing

**Biatain Alginate dressing** (Coloplast Ltd) 10cm × 10cm= £2.33, 15cm × 15cm= £4.43, 44cm= £2.75, 5cm × 5cm= £0.98

**Cutimed Alginate**

Calcium sodium alginate dressing

**Cutimed Alginate dressing** (BSN medical Ltd) 10cm × 10cm= £1.58, 10cm × 20cm= £2.97, 5cm × 5cm= £0.75

**Kaltostat**

Calcium alginate fibre, non-woven

**Kaltostat dressing** (ConvaTec Ltd) 10cm × 20cm= £4.12, 15cm × 25cm= £7.08, 2g= £3.86, 5cm × 5cm= £0.96, 7.5cm × 12cm= £2.10

**Kendall**

Calcium alginate dressing

**Kendall Calcium Alginate** (Aria Medical Ltd) Rope dressing 30cm= £2.89, 61cm= £5.07, 91cm= £5.46, dressing 10cm × 10cm= £1.52, 10cm × 14cm= £2.45, 10cm × 20cm= £2.98, 15cm × 25cm= £5.25, 30cm × 61cm= £27.56, 5cm × 5cm= £0.72

**Kendall Plus**

Calcium alginate dressing

**Kendall** (Aria Medical Ltd) Foam Plus dressing 10cm × 10cm square= £1.47

**Melgisorb**

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

**Melgisorb** (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

**Sorbalgon**

Calcium alginate dressing

**Sorbalgon** (Paul Hartmann Ltd) T dressing 2g= £3.51, dressing 10cm × 10cm= £1.72, 5cm × 5cm= £0.82

**Sorbsan Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads

**Sorbsan Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £1.71, 10cm × 20cm= £3.20, 5cm × 5cm= £0.81

**Sorbsan Plus**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £3.10, 10cm × 20cm= £3.96, 15cm × 20cm= £5.49, 7.5cm × 10cm= £1.76

**Sorbsan Ribbon**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.04

**Sorbsan Surgical Packing**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Packing dressing 2g= £3.47

**Suprasorb A**

Calcium alginate dressing

**Suprasorb A** (Lohmann & Rauscher (UK) Ltd) alginate dressing 10cm × 10cm= £1.23, 5cm × 5cm= £0.63, cavity dressing 2g= £2.28

**Tegaderm Alginate**

Calcium alginate dressing

**Tegaderm Alginate dressing** (3M Health Care Ltd) 10cm × 10cm= £1.72, 2cm × 30.4cm= £2.87, 5cm × 5cm= £0.81

**Urgosorb**

Alginate and carboxymethylcellulose dressing without adhesive border

**Urgosorb** (Urgo Ltd) Pad dressing 10cm × 10cm= £2.13, 10cm × 20cm= £3.91, 5cm × 5cm= £0.89, Rope dressing 30cm= £2.79

**Capillary-acting dressings****Advadraw**

Non-adherent dressing consisting of a soft viscose and polyester absorbent pad with central wicking layer between two perforated permeable wound contact layers

**Advadraw dressing** (Advancis Medical) 10cm × 10cm= £0.88, 10cm × 15cm= £1.19, 15cm × 20cm= £1.57, 5cm × 7.5cm= £0.57

**Advadraw Spiral**

**Advadraw** (Advancis Medical) Spiral dressing 0.5cm × 40cm= £0.82

**Cerdak Aerocloth**

Non-adhesive wound contact sachet containing ceramic spheres, with non-woven fabric adhesive backing

**Cerdak Aerocloth dressing** (Apollo Medical Products Ltd) 5cm × 10cm= £1.94, 5cm × 5cm= £1.37

**Cerdak Aerofilm**

Non-adhesive wound contact sachet containing ceramic spheres, with waterproof transparent adhesive film backing

**Cerdak Aerofilm dressing** (Apollo Medical Products Ltd) 5cm × 10cm= £2.07, 5cm × 5cm= £1.51

**Cerdak Basic**

Non-adhesive wound contact sachet containing ceramic spheres

**Cerdak Basic dressing** (Apollo Medical Products Ltd) 10cm × 10cm= £1.56, 10cm × 15cm= £2.08, 5cm × 5cm= £0.70

**Sumar Lite**

**Sumar Lite dressing** (Lantor (UK) Ltd) 10cm × 10cm= £1.59, 10cm × 15cm= £2.12, 5cm × 5cm= £0.93

**Sumar Max**

**Sumar Max dressing** (Lantor (UK) Ltd) 10cm × 10cm= £1.61, 10cm × 15cm= £2.15, 5cm × 5cm= £0.95

**Sumar Spiral**

**Sumar** (Lantor (UK) Ltd) Spiral dressing 0.5cm × 40cm= £1.57

**Vacutex**

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

**Vacutex dressing** (Haddenham Healthcare Ltd) 10cm × 10cm= £1.68, 10cm × 15cm= £2.25, 10cm × 20cm= £2.70, 5cm × 5cm= £0.95

**Odour absorbent dressings**

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

**Askina Carbosorb**

Activated charcoal and non-woven viscose rayon dressing

**Askina Carbosorb dressing** (B.Braun Medical Ltd) 10cm × 10cm= £2.92, 10cm × 20cm= £5.64

**CarboFLEX**

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second

layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

**CarboFlex dressing** (ConvaTec Ltd) 10cm × 10cm= £3.24, 15cm × 20cm= £7.38, 8cm × 15cm oval= £3.89

**Carbopad VC**

Activated charcoal non-absorbent dressing

**Carbopad VC dressing** (Synergy Health Plc) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

**CliniSorb Odour Control Dressings**

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

**CliniSorb dressing** (CliniMed Ltd) 10cm × 10cm= £1.91, 10cm × 20cm= £2.54, 15cm × 25cm= £4.09

**Antimicrobial dressings**

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

**Honey**

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Activon Tulle*®, where no size is stated by the prescriber the 5 cm size is to be supplied.

*Medihoney*® *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

**Honey-based topical application****Activon Honey**

Medical grade manuka honey

**L-Mesitran SOFT ointment dressing**

Honey (medical grade) 40%

**L-Mesitran** (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.59

**MANUKApli Honey**

Medical grade manuka honey

**MANUKApli** (Manuka Medical Ltd) dressing= £5.90

**Medihoney Antibacterial Medical Honey**

Medical grade, Leptospermum sp.

**Medihoney** (Derma Sciences Europe, Ltd) Antibacterial Medical Honey dressing= £9.90

**Medihoney Antibacterial Wound Gel**

Medical grade, Leptospermum sp. 80% in natural waxes and oils

**Medihoney** (Derma Sciences Europe, Ltd) Antibacterial Wound Gel dressing= £4.02

**Mesitran Ointment**

Honey (medical grade) 47%

**Excipients** include lanolin

**Mesitran** (Aspen Medical Europe Ltd) ointment dressing= £9.90

**Sheet dressing****Actilite**

Knitted viscose impregnated with medical grade manuka honey and manuka oil

**Actilite gauze dressing** (Advancis Medical) 10cm × 10cm= £0.98, 10cm × 20cm= £1.90, 5cm × 5cm= £0.57

**Activon Tulle**

Knitted viscose impregnated with medical grade manuka honey

**Activon Tulle gauze dressing** (Advancis Medical) 10cm × 10cm= £2.97, 5cm × 5cm= £1.80

**Algivon**

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey

**Algivon dressing** (Advancis Medical) 10cm × 10cm= £3.40, 5cm × 5cm= £1.98

**Algivon Plus**

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

**Algivon Plus** (Advancis Medical) Ribbon dressing 2.5cm × 20cm= £3.36, dressing 10cm × 10cm= £3.36, 5cm × 5cm= £1.96

**L-Mesitran Border**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border

**L-Mesitran** (Aspen Medical Europe Ltd) Border sheet 10cm × 10cm square= £2.74

**L-Mesitran Hydro**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border

**L-Mesitran Hydro sheet** (Aspen Medical Europe Ltd) 10cm × 10cm square= £2.63, 15cm × 20cm rectangular= £5.48

**L-Mesitran Net**

Hydrogel, non-adherent wound contact layer, without adhesive border

**L-Mesitran** (Aspen Medical Europe Ltd) Net sheet 10cm × 10cm square= £2.53

**Medihoney Antibacterial Honey Apinate**

Non-adherent calcium alginate dressing, impregnated with medical grade honey

**Medihoney Antibacterial Honey Apinate** (Derma Sciences Europe, Ltd) dressing 10cm × 10cm square= £3.40, 5cm × 5cm square= £2.00, rope dressing 1.9cm × 30cm= £4.20

**Medihoney Antibacterial Honey Tulle**

Woven fabric impregnated with medical grade manuka honey

**Medihoney** (Derma Sciences Europe, Ltd) Tulle dressing 10cm x10cm= £2.98

**Medihoney Gel sheet**

Sodium alginate dressing impregnated with medical grade honey

**Medihoney Gel Sheet dressing** (Derma Sciences Europe, Ltd) 10cm × 10cm= £4.20, 5cm × 5cm= £1.75

**MelMax**

Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis

**MelMax dressing** (CliniMed Ltd) 5cm × 6cm rectangular= £4.82, 8cm × 10cm rectangular= £9.90, 8cm × 20cm rectangular= £19.79

**Melladerm Plus Tulle**

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

**Melladerm** (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10

**Iodine**

Cadexomer-iodine, like povidone-iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone-iodine fabric dressing is a knitted viscose dressing with povidone-iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

**Iodoflex**® and **Iodosorb**® are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

**Iodozyme**® is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

**Oxyzyme**® is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

**Povidone-iodine Fabric Dressing** is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

**Iodoflex Paste**

Iodine 0.9% as cadexomer-iodine in a paste basis with gauze backing

**Iodosorb Ointment**

Iodine 0.9% as cadexomer-iodine in an ointment basis

**Iodosorb** (Smith & Nephew Healthcare Ltd) ointment dressing= £9.12

**Iodosorb Powder**

Iodine 0.9% as cadexomer-iodine microbeads, 3-g sachet

**Iodosorb** (Smith & Nephew Healthcare Ltd) powder dressing sachets= £1.95

**Iodozyme Hydrogel**

Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

**Iodozyme dressing** (Crawford Healthcare Ltd) 10cm × 10cm square= £12.62, 6.5cm × 5cm rectangular= £7.57

**Oxyzyme Hydrogel**

Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

**Oxyzyme dressing** (Crawford Healthcare Ltd) 10cm × 10cm square= £10.10, 6.5cm × 5cm rectangular= £6.06

**Povidone-iodine fabric dressing****Inadine**

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone-iodine ointment 10% **Inadine dressing** (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

**Silver**

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the

volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

#### *Alginate dressings*

##### **Algisite Ag**

Calcium alginate dressing, with silver

**Algisite Ag dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.20, 10cm × 20cm= £7.73, 2g= £5.80, 5cm × 5cm= £1.68

##### **Askina Calgitrol Ag**

Calcium alginate and silver alginate dressing with polyurethane foam backing

**Askina Calgitrol Ag dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £3.24, 15cm × 15cm square= £6.27, 20cm × 20cm square= £14.62

##### **Askina Calgitrol Thin**

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

**Askina Calgitrol Thin dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £4.13, 15cm × 15cm square= £9.25, 20cm × 20cm square= £16.35, 5cm × 5cm square= £1.99

##### **Melgisorb Ag**

Alginate and carboxymethylcellulose dressing, with ionic silver

**Melgisorb Ag** (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.54, dressing 10cm × 10cm= £3.64, 15cm × 15cm= £7.71, 5cm × 5cm= £1.82

##### **Silvercel**

Alginate and carboxymethylcellulose dressing impregnated with silver

**Silvercel dressing** (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.68, 11cm × 11cm square= £4.14, 2.5cm × 30.5cm rectangular= £4.45, 5cm × 5cm square= £1.68

##### **Silvercel Non-adherent**

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

**Silvercel Non-Adherent** (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.94, dressing 10cm × 20cm rectangular= £7.25, 11cm × 11cm square= £3.89, 5cm × 5cm square= £1.62,

##### **Sorbsan Silver Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

**Sorbsan Silver Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £3.97, 10cm × 20cm= £7.26, 5cm × 5cm= £1.57

##### **Sorbsan Silver Plus**

Calcium alginate dressing with absorbent backing, with silver

**Sorbsan Silver Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £5.56, 10cm × 20cm= £6.77, 15cm × 20cm= £9.08, 7.5cm × 10cm= £3.35

##### **Sorbsan Silver Ribbon**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.15

##### **Sorbsan Silver Surgical Packing**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.76

##### **Suprasorb A + Ag**

Calcium alginate dressing, with silver

**Suprasorb A + Ag** (Lohmann & Rauscher (UK) Ltd) dressing 10cm × 10cm= £4.11, 10cm × 20cm= £7.59, 5cm × 5cm= £1.63, rope dressing 2g= £6.08,

##### **Tegaderm Alginate Ag**

Calcium alginate and carboxymethylcellulose dressing, with silver

**Tegaderm Alginate Ag dressing** (3M Health Care Ltd) 10cm × 10cm= £3.24, 3cm × 30cm= £3.70, 5cm × 5cm= £1.39

##### **Urgosorb Silver**

Alginate and carboxymethylcellulose dressing, impregnated with silver

**Urgosorb Silver** (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.71, dressing 10cm × 10cm= £3.68, 10cm × 20cm= £6.95, 5cm × 5cm= £1.54

#### *Foam dressings*

##### **Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

**Acticoat Moisture Control dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £16.95, 10cm × 20cm rectangular= £33.04, 5cm × 5cm square= £7.25

##### **Allevyn Ag**

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

**Allevyn Ag** (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm × 10cm square= £5.55, 12.5cm × 12.5cm square= £7.30, 17.5cm × 17.5cm square= £14.04, 17cm × 17cm sacral= £10.96, 22cm × 22cm sacral= £14.69, 7.5cm × 7.5cm square= £3.53, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £10.87, Non-Adhesive dressing 10cm × 10cm square= £6.20, 15cm × 15cm square= £11.76, 20cm × 20cm square= £17.22, 5cm × 5cm square= £3.29

##### **Biatain Ag**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**Biatain Ag** (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.07, dressing 10cm × 10cm square= £8.16, 10cm × 20cm rectangular= £15.00, 12.5cm × 12.5cm square= £9.34, 15cm × 15cm square= £16.38, 18cm × 18cm square= £18.73, 19cm × 20cm heel= £18.47, 20cm × 20cm square= £23.11, 23cm × 23cm sacral= £19.63, 5cm × 7cm rectangular= £3.35

##### **PolyMem Silver**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**PolyMem Silver** (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £7.05, dressing 10.8cm × 10.8cm square= £8.86, 12.7cm × 8.8cm oval= £5.60, 17cm × 19cm rectangular= £17.76, 5cm × 7.6cm oval= £2.27

##### **UrgoCell Silver**

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

**UrgoCell Silver dressing** (Urgo Ltd) 10cm × 10cm= £5.95, 15cm × 20cm= £10.90, 6cm × 6cm= £4.33

#### *Hydrocolloid dressings*

##### **Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

**Aquacel Ag** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.12, 2cm × 45cm= £4.76, dressing 10cm × 10cm square= £4.74, 15cm × 15cm square= £8.92, 20cm × 30cm rectangular= £22.12, 4cm × 10cm rectangular= £2.88, 4cm × 20cm rectangular= £3.76, 4cm × 30cm rectangular= £5.63

##### **Physiotulle Ag**

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

**Physiotulle** (Coloplast Ltd) dressing 10cm × 10cm= £2.28

*Low adherence dressing***Acticoat**

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.65, 10cm × 20cm rectangular= £13.53, 20cm × 40cm rectangular= £46.28, 5cm × 5cm square= £3.54

**Acticoat 7**

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.34, 15cm × 15cm square= £32.97, 5cm × 5cm square= £6.16

**Acticoat Flex 3**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat Flex 3 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.73, 10cm × 20cm rectangular= £13.64, 20cm × 40cm rectangular= £46.69, 5cm × 5cm square= £3.57

**Acticoat Flex 7**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat Flex 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.50, 15cm × 15cm square= £33.27, 5cm × 5cm square= £6.21

**Atrauman Ag**

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

**Atrauman Ag dressing** (Paul Hartmann Ltd) 10cm × 10cm= £1.26, 10cm × 20cm= £2.47, 5cm × 5cm= £0.52

*Soft polymer dressings***Allevyn Ag Gentle**

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

**Allevyn Ag Gentle** (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.43, 12.5cm × 12.5cm= £8.26, 17.5cm × 17.5cm= £15.75, 7.5cm × 7.5cm= £4.28, dressing 10cm × 10cm= £6.24, 10cm × 20cm= £10.31, 15cm × 15cm= £11.61, 20cm × 20cm= £17.19, 5cm × 5cm= £3.35

**Mepilex Ag**

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

**Mepilex** (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.12, 10cm × 20cm= £10.09, 15cm × 15cm= £11.36, 20cm × 20cm= £16.84, 20cm × 50cm= £63.20, Border Ag dressing 10cm × 12.5cm= £6.16, 10cm × 20cm= £8.97, 10cm × 30cm= £13.46, 15cm × 17.5cm= £11.31, 17cm × 20cm= £14.66, 7cm × 7.5cm= £3.41, Border Sacrum Ag dressing 18cm × 18cm= £11.83, 20cm × 20cm= £14.38, 23cm × 23cm= £18.89, Heel Ag dressing 13cm × 20cm= £12.78, 15cm × 22cm= £14.32

**Urgotul Silver**

Non-adherent soft polymer wound contact dressing, with silver

**Urgotul Silver dressing** (Urgo Ltd) 10cm × 12cm= £3.58, 15cm × 20cm= £9.75

**UrgotulDuo Silver**

Non-adherent soft polymer wound contact dressing, with silver

*With charcoal***Actisorb Silver 220**

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

**Actisorb Silver 220 dressing** (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.58, 10.5cm × 19cm= £4.70, 6.5cm × 9.5cm= £1.64

**Other antimicrobials****Cutimed Siltec Sorbact**

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Siltec Sorbact dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £6.51, 15cm × 15cm= £8.07, 17.5cm × 17.5cm= £11.29, 22.5cm × 22.5cm= £17.17, 7.5cm × 7.5cm= £2.54, 17.5cm × 17.5cm sacral= £8.16, 23cm × 23cm sacral= £12.26

**Cutimed Sorbact**

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

**Cutimed Sorbact** (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.08, 5cm × 200cm= £8.03, Round swab 3cm= £3.33, dressing pad 10cm × 10cm= £5.55, 10cm × 20cm= £8.67, 7cm × 9cm= £3.56, swab 4cm × 6cm= £1.67, 7cm × 9cm= £2.78

**Cutimed Sorbact Gel**

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

**Cutimed Sorbact Gel dressing** (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.52, 7.5cm × 7.5cm square= £2.68

**Cutimed Sorbact Hydroactive**

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

**Cutimed Sorbact Hydroactive dressing** (BSN medical Ltd) 14cm × 14cm= £5.42, 14cm × 24cm= £8.69, 19cm × 19cm= £10.21, 24cm × 24cm= £15.47, 7cm × 8.5cm= £3.71

**Cutimed Sorbact Hydroactive B**

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Sorbact Hydroactive B dressing** (BSN medical Ltd) 10cm × 10cm= £7.16, 10cm × 20cm= £11.47, 15cm × 15cm= £13.48, 5cm × 6.5cm= £4.02

**Flaminal Forte gel**

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

**Flaminal Forte gel dressing** (Flen Health UK Ltd) 15g= £7.73, 50g= £25.60

**Flaminal Hydro gel**

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

**Flaminal Hydro gel dressing** (Flen Health UK Ltd) 15g= £7.73, 50g= £25.60

**Kendall AMD**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial foam dressing** (Aria Medical Ltd) 10cm × 10cm square= £4.71, 10cm × 20cm rectangular= £8.92, 15cm × 15cm square= £8.92, 20cm × 20cm square= £13.07, 5cm × 5cm square= £2.50, 8.8cm × 7.5cm rectangular (fenestrated)= £4.23

**Kendall AMD Plus**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial Plus foam dressing** (Aria Medical Ltd) 10cm × 10cm square= £4.94, 8.8cm × 7.5cm rectangular (fenestrated)= £4.43

**Octenilin Wound gel**

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

**Octenilin Wound gel dressing** (Schulke & Mayr Ltd) 20ml= £4.78

**Prontosan Wound Gel**

Hydrogel containing betaine surfactant and polyhexanide

**Prontosan Wound Gel dressing** (B. Braun Medical Ltd) 30ml= £6.44

**Suprasorb X + PHMB**

Biosynthetic cellulose fibre dressing with polyhexanide

**Suprasorb X + PHMB dressing** (Lohmann & Rauscher (UK) Ltd) 14cm × 20cm rectangular= £11.64, 2cm × 21cm rope= £7.25, 5cm × 5cm square= £2.57, 9cm × 9cm square= £5.12

**Telfa AMD**

Low adherence absorbent perforated plastic film faced dressing with polyhexanide

**Telfa AMD dressing** (Aria Medical Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

**Telfa AMD Island**

Low adherence dressing with adhesive border and absorbent pad, with polyhexanide

**Telfa AMD Island dressing** (Aria Medical Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

**Chlorhexidine gauze dressing****Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

**Bactigras gauze dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm=no price available, 5cm × 5cm=no price available

**Irrigation fluids****Octenilin Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

**Octenilin irrigation solution** (Schulke & Mayr Ltd) 350mL= £4.60

**Prontosan Wound Irrigation Solution**

Aqueous solution containing betaine surfactant and polyhexanide

**Prontosan irrigation solution** (B.Braun Medical Ltd) 350ml bottles= £4.83, 40ml unit dose= £14.33

**Specialised dressings****Protease-modulating matrix dressings****Cadesorb Ointment**

**Cadesorb** (Smith & Nephew Healthcare Ltd) ointment= £9.32

**Catrix**

**Catrix dressing** (Cranage Healthcare Ltd) sachets= £3.80

**Promogran**

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran dressing** (Systagenix Wound Management Ltd) 123 square cm= £15.62, 28 square cm= £5.19

**Promogran Prisma Matrix**

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran Prisma dressing** (Systagenix Wound Management Ltd) 123 square cm= £17.98, 28 square cm= £6.31

**UrgoStart**

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

**UrgoStart dressing** (Urgo Ltd) 10cm × 10cm= £6.16, 15cm × 20cm= £11.08, 6cm × 6cm= £4.45, 12cm × 19cm heel= £8.49

**UrgoStart Contact**

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

**UrgoStart** (Urgo Ltd) Contact dressing 5cm × 7cm= £3.00

**Silicone keloid dressings**

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

**Silicone gel****Bapscarcare**

Silicone gel

**Bapscarcare** (BAP Medical UK Ltd) gel= £17.00

**Ciltech**

Silicone gel

**Ciltech** (Su-Med International (UK) Ltd) gel= £50.00

**Dermatix**

Silicone gel

**Dermatix gel** (Meda Pharmaceuticals Ltd) = £60.53

**Kelo-cote UV**

Silicone gel with SPF 30 UV protection

**Kelo-cote** (Sinclair IS Pharma Plc) UV gel= £17.88

**Kelo-cote gel**

Silicone gel

**Kelo-cote** (Sinclair IS Pharma Plc) gel= £51.00

**Kelo-cote spray**

Silicone spray

**Kelo-cote** (Sinclair IS Pharma Plc) spray= £51.00

**NewGel+E**

Silicone gel with vitamin E

**NewGel+E** (Advantech Surgical Ltd) gel= £17.70

**ScarSil**

Silicone gel

**ScarSil** (Jobskin Ltd) gel= £15.19

**Silgel STC-SE**

Silicone gel

**Silgel** (Nagor Ltd) STC-SE gel= £19.00

**Silicone sheets****Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Advasil Conform sheet** (Advancis Medical) 10cm × 10cm square= £5.20, 15cm × 10cm rectangular= £9.17

**Bapscarcare T**

Self-adhesive silicone gel sheet

**Bapscarcare T sheet** (BAP Medical UK Ltd) 10cm × 15cm

rectangular= £9.00, 5cm × 30cm rectangular= £9.00, 5cm × 7cm rectangular= £3.15

**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

**Cica-Care sheet** (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £28.82, 6cm × 12cm rectangular= £14.79

**Ciltech**

Silicone gel sheet

**Ciltech sheet** (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

**Dermatix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

**Dermatix** (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

**Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Mepiform sheet** (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.02, 5cm × 7cm rectangular= £3.49, 9cm × 18cm rectangular= £13.64

**Scar FX**

Self-adhesive, transparent, silicone gel sheet

**Scar FX sheet** (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

**Silgel**

Silicone gel sheet

**Silgel sheet** (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

**Adjunct dressings and appliances****Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound,

shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

#### Cotton

##### Absorbent Cotton, BP

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

##### Absorbent Cotton, Hospital Quality

As for absorbent cotton but lower quality materials, shorter staple length etc.

**Absorbent** (Robert Bailey & Son Plc) cotton hospital quality

#### Gauze and cotton tissue

##### Gamgee Tissue (blue)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue blue label

##### Gamgee Tissue (pink)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue pink label DT

#### Gauze and tissue

##### Absorbent Cotton Gauze, BP 1988

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988

**Vernaid** (Synergy Health Plc) absorbent cotton BP 1988

##### Absorbent Cotton and Viscose Ribbon Gauze, BP 1988

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

**Vernaid Fast Edge ribbon gauze sterile** (Synergy Health Plc) 1.25cm, 2.5cm

#### Lint

##### Absorbent Lint, BPC

Cotton cloth of plain weave with nap raised on one side from warp yarns

**Absorbent** (Robinson Healthcare) lint

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

**Clini** (CliniSupplies Ltd) absorbent lint BPC

#### Pads

##### Drisorb

Absorbent Dressing Pads, Sterile

**Drisorb** (Synergy Health Plc) dressing pad 10cm × 20cm= £0.17

##### PremierPad

Absorbent Dressing Pads, Sterile

**PremierPad dressing pad** (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

##### XuPad

Absorbent Dressing Pads, Sterile

**Xupad dressing pad** (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

#### Wound drainage pouches

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

#### Biotrol Draina S

Wound drainage pouch

**Biotrol Draina S wound drainage bag** (B.Braun Medical Ltd) large (Transparent)= £96.45, medium (Transparent)= £78.43, mini (Transparent)= £78.66

#### Biotrol Draina S Vision

Wound drainage pouch

**Draina S Vision** (B.Braun Medical Ltd) 100 wound drainage bag= £125.24, 50 wound drainage bag= £102.17, 75 wound drainage bag= £107.94

#### Eakin Access window

For use with Eakin® pouches

**Eakin** (Pelican Healthcare Ltd) access window large= £38.14

#### Eakin Wound pouch, bung closure

Wound pouch, bung closure

**Eakin wound drainage bag with bung closure** (Pelican Healthcare Ltd) large= £103.52, medium= £76.28, small= £54.49, and access window for horizontal wounds, extra large= £103.52, for horizontal wounds, extra large= £92.63, for vertical incision wounds, extra large= £92.63, wounds, extra large= £92.63

#### Eakin Wound pouch, fold and tuck closure

Wound pouch, fold and tuck closure

**Eakin wound drainage bag with fold and tuck closure** (Pelican Healthcare Ltd) large= £92.63, medium= £70.83, small= £49.04, extra large= £81.73

#### Option Wound Manager

Wound drainage bag

**Option wound manager bag** (Oakmed Ltd) large= £160.22, medium= £134.42, small= £131.50, square= £140.27, extra small= £118.23

#### Option Wound Manager with access port

Wound drainage bag, with access port

**Option wound manager bag with access port** (Oakmed Ltd) large= £171.27, medium= £140.27, small= £137.34, square= £146.11, extra small= £129.28

#### Option Wound Manager, cut to fit

Wound drainage bag, cut to fit

**Option wound manager bag** (Oakmed Ltd) large= £84.23, medium= £80.42, small= £72.59

#### Welland Fistula bag

Wound drainage bag, cut-to-fit

**Welland** (Welland Medical Ltd) Fistula wound drainage bag= £82.93

#### Physical debridement pads

Debrisoft® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. Debrisoft® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

#### Debrisoft Pad

Polyester fibres with bound edges and knitted outer surface coated with polyacrylate

**Debrisoft** (Lohmann & Rauscher (UK) Ltd) pad 10cm × 10cm= £6.45

#### Complex adjunct therapies

##### Topical negative pressure therapy

###### Accessories

##### Renasys

Soft port and connector

**Renasys** (Smith & Nephew Healthcare Ltd) Soft Port= £11.21, connector for use with soft port= £3.29

##### V.A.C.

Drape, gel for canister, Sensa T.R.A.C. Pad

**Sensa T.R.A.C.** (KCI Medical Ltd) pad= £10.95

**T.R.A.C.** (KCI Medical Ltd) connector= £3.13

**V.A.C.** (KCI Medical Ltd) drape= £9.39, gel strips= £3.76

##### Venturi

Gel patches, adhesive, and connector

**Venturi** (Talley Group Ltd) adhesive gel patch= £15.00, connector= £15.00

##### WoundASSIST gel strip

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

**Multiple Pack Dressing No. 1**

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wave bandages (banded)

**Vernaid** (Synergy Health Plc) multiple pack dressing*Non-drug tariff specification sterile dressing packs***Dressit**

Vitrex gloves, large apron, disposable bag, paper towel, softwabs, adsorbent pad, sterile field

**Dressit sterile dressing pack** (Richardson Healthcare Ltd)

with medium/large gloves= £0.60, small/medium gloves= £0.60

**Nurse It**

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

**Nurse It sterile dressing pack** (Medicareplus International Ltd)

with medium/large gloves= £0.55, small/medium gloves= £0.55

**Polyfield Nitrile Patient Pack**

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron

**Polyfield Nitrile Patient Pack** (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52*Sterile Dressing Pack with Non-Woven Pads***Vernaid**

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health Plc) sterile dressing pack with non-woven pads*Sterile dressing packs***Vernaid**

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health Plc) sterile dressing pack**Woven and fabric swabs****Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

**Alvita gauze swab 8ply** (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**CS** (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm**Clini gauze swab 8ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**Gauze** (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm**MeCoBo gauze swab 8ply** (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**Propax gauze** (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm**Sovereign** (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm**Steraid** (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm**Vernaid gauze swab 8ply** (Synergy Health Plc) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**Non-woven Fabric Swab**

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

**CS** (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm**Clini non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**CliniMed** (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm**MeCoBo** (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm**Multisorb** (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm**Sofisorb non-woven fabric swab 4ply** (Synergy Health Plc) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**Softswab non-woven fabric swab 4ply** (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm**Topper 8 non-woven fabric swab 4ply** (Systagenix Wound Management Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

*Filmated non-woven Fabric Swab***Regal**

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile **Regal** (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

**Surgical adhesive tapes**

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

*Occlusive adhesive tapes***Blenderm**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

**Blenderm tape** (3M Health Care Ltd) 2.5cm= £1.77, 5cm= £3.37

**Sleek**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

**Leukoplast Sleek tape** (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

*Permeable adhesive tapes***3m Kind Removal Silicone Tape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**3m Micropore Silicone tape** (3M Health Care Ltd) 2.5cm= £3.58, 5cm= £6.48

**Chemifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Chemifix tape** (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

**Chemipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Chemipore tape** (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

**Clinipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Clinipore tape** (CliniSupplies Ltd) 1.25cm= £0.35, 2.5cm= £0.73, 5cm= £0.99

**Elastoplast**

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

**Tensoplast** (BSN medical Ltd) elastic adhesive tape 2.5cm

**Hypafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Hypafix tape** (BSN medical Ltd) 10cm= £4.72, 15cm= £6.99, 2.5cm= £1.70, 20cm= £9.28, 30cm= £13.41, 5cm= £2.71

**Insil**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Insil tape** (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

**Leukofix**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukofix tape** (BSN medical Ltd) 1.25cm= £0.56, 2.5cm= £0.91, 5cm= £1.58

**Leukopor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukopor tape** (BSN medical Ltd) 1.25cm= £0.50, 2.5cm= £0.78, 5cm= £1.37

**Medioplast**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Medioplast tape** (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

**Medioplast**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Medioplast Zinc Oxide plaster** (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

**Mefix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Mefix tape** (Molnlycke Health Care Ltd) 10cm= £2.90, 15cm= £3.95, 2.5cm= £1.03, 20cm= £5.07, 30cm= £7.27, 5cm= £1.81

**Mepitac**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Mepitac tape** (Molnlycke Health Care Ltd) 2cm= £6.96, 4cm= £6.96

**Micropore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Micropore tape** (3M Health Care Ltd) 1.25cm= £0.62, 2.5cm= £0.92, 5cm= £1.62

**Omnifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Omnifix tape** (Paul Hartmann Ltd) 10cm= £4.08, 15cm= £6.02, 5cm= £2.42

**OpSite Flexifix Gentle**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**OpSite Flexifix Gentle tape** (Smith & Nephew Healthcare Ltd) 2.5cm= £10.41, 5cm= £19.51

**Primafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Primafix tape** (Smith & Nephew Healthcare Ltd) 10cm= £2.36, 15cm= £3.48, 20cm= £4.29, 5cm= £1.61

**Scanpor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Scanpor tape** (Bio-Diagnostics Ltd) 1.25cm= £0.55, 2.5cm= £0.92, 5cm= £1.75, 7.5cm= £2.56

**Siltape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Siltape** (Advancis Medical) 2cm= £5.60, 4cm= £5.60

**Strappal**

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

**Strappal adhesive tape** (BSN medical Ltd) 2.5cm= £1.40, 5cm= £2.37, 7.5cm= £3.56

**Transpore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Transpore tape** (3M Health Care Ltd) 2.5cm= £0.84, 5cm= £1.48

**Zinc Oxide Adhesive Tape, BP 1988**

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

**Fast Aid zinc oxide adhesive tape** (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

**Skin closure dressings**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive (section 13.10.5) can be used for closure of minor skin wounds and for additional suture support.

*Skin closure strips, sterile*

**Leukostrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Leukostrip** (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.38

**Omni-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Omni-strip** (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £24.34

**Steri-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Steri-strip** (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.77

**Bandages****Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

**Open-weave Bandage, Type 1 BP 1988**

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

**Clini open weave bandage Type 1 BP 1988** (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Vernaid white open weave bandage** (Synergy Health Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**White open weave bandage** (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Triangular Calico Bandage, BP 1980**

Unbleached calico right-angled triangle

**Clini** (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

**Triangular** (BSN medical Ltd) calico bandage 90cm × 127cm

**Light-weight conforming bandages**

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

**Acti-Wrap**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Acti-Wrap (cohesive/latex free) bandage** (Activa Healthcare Ltd) 10cm × 4m= £0.81, 6cm × 4m= £0.47, 8cm × 4m= £0.69

**Cotton Conforming Bandage, BP 1988**

Cotton fabric, plain weave, treated to impart some elasticity to warp and weft

**Easifix Crinx bandage** (BSN medical Ltd) 10cm × 3.5m= £1.04, 15cm × 3.5m= £1.42, 5cm × 3.5m= £0.69, 7.5cm × 3.5m= £0.84

**Easifix**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Easifix bandage** (BSN medical Ltd) 10cm × 4m= £0.51, 15cm × 4m= £0.87, 5cm × 4m= £0.36, 7.5cm × 4m= £0.43

**Easifix K**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Easifix K bandage** (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.33, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.16

**Hospiform**

Fabric, plain weave, warp of polyamide, weft of viscose

## Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

*Elasticated Surgical Tubular Stockinette, Foam padded* is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

*Non-elasticated Cotton Stockinette, Bleached, BP 1988* 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

### Elasticated

#### Acti-Fast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

**Acti-Fast 2-way stretch stockinette** (Activa Healthcare Ltd) 10.75cm = £6.04, 17.5cm = £1.83, 20cm = £3.20, 3.5cm = £0.56, 5cm = £0.58, 7.5cm = £0.77

#### Clinifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Clinifast stockinette** (CliniSupplies Ltd) 10.75cm = £6.04, 17.5cm = £1.83, 3.5cm = £0.56, 5cm = £0.58, 7.5cm = £0.77, clava 5-14 years = £6.75, 6 months-5 years = £5.85, cycle shorts large adult = £16.25, medium adult = £14.25, small adult = £12.50, gloves large adult = £4.99, child/small adult = £4.99, gloves medium adult = £4.99, child = £4.99, gloves small child = £4.99, leggings (Blue, Pink, White) 11-14 years = £11.88, 2-5 years = £9.50, 5-8 years = £10.69, 8-11 years = £11.88, mittens 2-8 years = £2.97, 8-14 years = £2.97, up to 24 months = £2.97, socks 8-14 years = £2.97, up to 8 years = £2.97, tights (Blue, Pink, White) 6-24 months = £7.13, vest long sleeve (Blue, Pink, White) 11-14 years = £11.88, 2-5 years = £9.50, 5-8 years = £10.69, 6-24 months = £7.13, 8-11 years = £11.88, vest short sleeve large adult = £16.25, medium adult = £14.25, small adult = £12.50

#### Comfast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Comfast stockinette** (Synergy Health Plc) 10.75cm = £6.04, 17.5cm = £1.83, 3.5cm = £0.56, 5cm = £0.58, 7.5cm = £0.77

#### Comfast Easywrap

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Comfast Easywrap stockinette** (Synergy Health Plc) clava 5-14 years = £6.75, 6 months-5 years = £5.85, leggings 11-14 years = £11.88, 2-5 years = £9.50, 5-8 years = £10.69, 8-11 years = £11.88, mittens 2-8 years = £2.97, 8-14 years = £2.97, up to 24 months = £2.97, socks 8-14 years = £2.97, up to 8 years = £2.97, tights 6-24 months = £7.13, vest long sleeve 11-14 years = £11.88, 2-5 years = £9.50, 5-8 years = £10.69, 6-24 months = £7.13, 8-11 years = £11.88

### Comfast Multistretch

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Comfast MultiStretch 2-way stretch stockinette** (Synergy Health Plc) 10.75cm = £6.45, 17.5cm = £2.49, 3.5cm = £0.61, 5cm = £0.63, 7.5cm = £0.83

### Coverflex

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Coverflex stockinette** (Paul Hartmann Ltd) 10.75cm = £9.59, 17.5cm = £2.53, 3.5cm = £0.83, 5cm = £0.86, 7.5cm = £0.68

### Easifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **Easifast stockinette** (Easigrip Ltd) 10.75cm = £7.23, 17.5cm = £1.91, 3.5cm = £0.65, 5cm = £0.69, 7.5cm = £0.94

### Elasticated Surgical Tubular Stockinette, Foam padded or Tupipad

(Drug Tariff specification 25). Fabric as for Elasticated Tubular Bandage with polyurethane foam lining.

### Elasticated Tubular Bandage, BP 1993

(Drug Tariff specification 25). Fabric as for Elasticated Tubular Bandage with polyurethane foam lining; lengths 50 cm and 1 m

**CLINigrip bandage** (CliniSupplies Ltd) 10cm size F = £0.74, 12cm size G = £0.77, 6.25cm size B = £0.61, 6.75cm size C = £0.65, 7.5cm size D = £0.66, 8.75cm size E = £0.74

**Support bandages**

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

**CliniLite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniLite bandage** (CliniSupplies Ltd) 10cm × 4.5m = £0.80, 15cm × 4.5m = £1.16, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.61

**CliniPlus**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniPlus** (CliniSupplies Ltd) bandage 10cm × 8.7m = £1.80

**Cotton Crepe Bandage**

Light support bandage, 4.5 m stretched (all)

**Hospicrepe 239 bandage** (Paul Hartmann Ltd) 10cm × 4.5m = £0.81, 15cm × 4.5m = £1.18, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.63

**Cotton Crepe Bandage, BP 1988**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

**Elastocrepe bandage** (BSN medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Flexocrepe bandage** (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

**Sterocrepe bandage** (Steroplast Healthcare Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Cotton Suspensory Bandage**

(Drug Tariff). Type 1: cotton net bag with draw tapes and webbing waistband; small, medium, and large (all)

**Crepe Bandage, BP 1988**

Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Elset** (Molnlycke Health Care Ltd) S bandage 15cm × 12m= £5.60, bandage 10cm × 6m= £2.61, 10cm × 8m= £3.34, 15cm × 6m= £2.80,

**Hospicrepe 233**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**Hospicrepe 233 bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.96, 15cm × 4.5m= £1.36, 5cm × 4.5m= £0.52, 7.5cm × 4.5m= £0.72

**Hospilite**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Hospilite bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.62, 15cm × 4.5m= £0.91, 5cm × 4.5m= £0.37, 7.5cm × 4.5m= £0.51

**K-Lite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Lite** (Urgo Ltd) Long bandage 10cm × 5.25m= £1.16, bandage 10cm × 4.5m= £1.01, 15cm × 4.5m= £1.46, 5cm × 4.5m= £0.55, 7cm × 4.5m= £0.77

**K-Plus**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Plus** (Urgo Ltd) Long bandage 10cm × 10.25m= £2.65, bandage 10cm × 8.7m= £2.29

**Knit-Firm**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Knit-Firm bandage** (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

**L3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**L3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.22

**Neosport**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Neosport bandage** (Neomedical Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

**PremierBand**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**PremierBand bandage** (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

**Profore #2**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Profore #2** (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.36, latex free bandage 10cm × 4.5m= £1.44

**Profore #3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Profore #3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £3.96, latex free bandage 10cm × 8.7m= £4.31

**Setocrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Setocrepe** (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.20

**Soffcrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Soffcrepe bandage** (BSN medical Ltd) 10cm × 4.5m= £1.25, 15cm × 4.5m= £1.82, 5cm × 4.5m= £0.70, 7.5cm × 4.5m= £0.99

**Adhesive bandages**

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of

injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

**Elastic Adhesive Bandage, BP 1993**

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

**Tensoplast bandage** (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Cohesive bandages**

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

*Cohesive extensible bandages***Coban**

Bandage

**Coban** (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.93

**K Press**

Bandage

**K Press bandage** (Urgo Ltd) 10cm × 6.5m= £2.93, 10cm × 7.5m= £3.42, 12cm × 7.5m= £4.31, 8cm × 7.5cm= £3.22

**Profore #4**

Bandage

**Profore #4** (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.28, latex free bandage 10cm × 2.5m= £3.56

**Ultra Fast**

Bandage

**Ultra** (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.59

**Compression bandages**

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 227 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

*High compression bandages***High Compression Bandage**

Cotton, viscose, nylon, and Lycra® extensible bandage, 3 m (unstretched)

**K-ThreeC** (Urgo Ltd) bandage 10cm × 3m= £2.85

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.65

**PEC High Compression Bandages**

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

**Setopress** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.55

**VEC High Compression Bandages**

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

**Tensopress bandage** (BSN medical Ltd) 10cm × 3m= £3.49, 7.5cm × 3m= £2.71

Padding

**Softex** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

**SurePres**

Padding

**SurePres** (ConvaTec Ltd) bandage 10cm × 3m= £3.65

**Ultra Soft**

Padding

**Ultra** (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

**Velband**

Padding

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.73

**Multi-layer compression bandaging**

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the

combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

**Four layer systems****K-Four**

Padding

**K-Four**

Multi-layer compression bandaging kit, four layer system  
**K-Four** (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference= £4.51, multi-layer compression bandage kit 18cm-25cm ankle circumference= £6.90, 25cm-30cm ankle circumference= £6.90, greater than 30cm ankle circumference= £9.50, less than 18cm ankle circumference= £7.21

**Profore**

Wound contact layer

**Profore**

Multi-layer compression bandaging kit, four layer system  
**Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.00, multi-layer compression bandage kit= £5.52, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.22, multi-layer compression bandage kit 18cm-25cm ankle circumference= £9.57, 25cm-30cm ankle circumference= £7.94, above 30cm ankle circumference= £11.89, up to 18cm ankle circumference= £10.26

**Ultra Four**

Wound contact layer

**Ultra Four**

Multi-layer compression bandaging kit, four layer system  
**Ultra Four** (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.14, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.67, up to 18cm ankle circumference= £6.41

**Two layer systems****Coban 2**

Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

**Coban 2** (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.24, multi-layer compression bandage kit= £8.24

**K Two**

Multi-layer compression bandaging kit, two layer system  
**UrgoKTwo** (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.68, 25cm-32cm ankle circumference= £9.48, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.18, 25cm-32cm ankle circumference= £8.93, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.68, 25cm-32cm ankle circumference= £9.48, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.17, 25cm-32cm ankle circumference= £8.93, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.30, 25cm-32cm ankle circumference= £11.26, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.71, 25cm-32cm ankle circumference= £8.39, multi-layer compression bandage kit size 0 short 18cm-25cm ankle circumference= £6.90, with UrgoStart multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.19, 25cm-32cm ankle circumference= £10.86

**Medicated bandages**

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

*Zipzoc*® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

#### **Zinc Paste Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol, hydroxybenzoates

*Viscopaste* (Smith & Nephew Healthcare Ltd) PB7 bandage 7.5cm × 6m= £3.69

#### **Zinc Paste and Ichthammol Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

*Excipients: may include* cetostearyl alcohol

*Ichthopaste* (Smith & Nephew Healthcare Ltd) bandage 7.5cm × 6m= £3.72

### **Medicated stocking**

#### **Zipzoc**

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

*Zipzoc* (Smith & Nephew Healthcare Ltd) stockings= £31.26

### **Compression hosiery and garments**

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

*Graduated Compression hosiery, Class 1 Light Support* is used for superficial or early varices, varicosis during pregnancy.

*Graduated Compression hosiery, Class 2 Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

*Graduated Compression hosiery, Class 3 Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

#### **Compression values for hosiery and lymphoedema**

**garments**  
*Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

#### **Graduated compression hosiery**

##### **Class 1 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

##### **Class 2 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

#### **Accessories**

##### **Suspender**

Suspender, for thigh stockings

#### **Anklets**

##### **Class 2 Medium Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### **Class 3 Strong Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### **Knee caps**

##### **Class 2 Medium Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### **Class 3 Strong Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### **Lymphoedema garments**

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note There are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

# Dental Practitioners' Formulary

## List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred.

Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP  
 Aciclovir Oral Suspension, BP, 200 mg/5 mL  
 Aciclovir Tablets, BP, 200 mg  
 Aciclovir Tablets, BP, 800 mg  
 Amoxicillin Capsules, BP  
 Amoxicillin Oral Powder, DPF  
 Amoxicillin Oral Suspension, BP  
 Artificial Saliva Gel, DPF  
 Artificial Saliva Oral Spray, DPF  
 Artificial Saliva Pastilles, DPF  
 Artificial Saliva Protective Spray, DPF  
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):  
*BioXtra*® Gel Mouthspray  
*BioXtra*® Moisturising Gel  
*Glandosane*®  
*Saliveze*®  
 Artificial Saliva Substitute Spray, DPF  
 Aspirin Tablets, Dispersible, BP  
 Azithromycin Capsules, 250 mg, DPF  
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF  
 Azithromycin Tablets, 250 mg, DPF  
 Azithromycin Tablets, 500 mg, DPF  
 Beclometasone Pressurised Inhalation, BP,  
 50 micrograms/metered inhalation, CFC-free, as:  
*Clenil Modulite*®  
 Benzydamine Mouthwash, BP 0.15%  
 Benzydamine Oromucosal Spray, BP 0.15%  
 Betamethasone Soluble Tablets, 500 micrograms, DPF  
 Carbamazepine Tablets, BP  
 Cefalexin Capsules, BP  
 Cefalexin Oral Suspension, BP  
 Cefalexin Tablets, BP  
 Cefradine Capsules, BP  
 Cetirizine Oral Solution, BP, 5 mg/5 mL  
 Cetirizine Tablets, BP, 10 mg  
 Chlorhexidine Gluconate Gel, BP  
 Chlorhexidine Mouthwash, BP  
 Chlorhexidine Oral Spray, DPF  
 Chlorphenamine Oral Solution, BP  
 Chlorphenamine Tablets, BP  
 Choline Salicylate Dental Gel, BP  
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF  
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF  
 Clarithromycin Tablets, BP  
 Clindamycin Capsules, BP  
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)  
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL  
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL  
 Diazepam Oral Solution, BP, 2 mg/5 mL

Diazepam Tablets, BP  
 Diclofenac Sodium Tablets, Gastro-resistant, BP  
 Dihydrocodeine Tablets, BP, 30 mg  
 Doxycycline Tablets, Dispersible, BP  
 Doxycycline Capsules, BP, 100 mg  
 Doxycycline Tablets, 20 mg, DPF  
 Ephedrine Nasal Drops, BP  
 Erythromycin Ethyl Succinate Oral Suspension, BP  
 Erythromycin Ethyl Succinate Tablets, BP  
 Erythromycin Stearate Tablets, BP  
 Erythromycin Tablets, Gastro-resistant, BP  
 Fluconazole Capsules, 50 mg, DPF  
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF  
 Hydrocortisone Cream, BP, 1%  
 Hydrocortisone Oromucosal Tablets, BP  
 Hydrogen Peroxide Mouthwash, BP, 6%  
 Ibuprofen Oral Suspension, BP, sugar-free  
 Ibuprofen Tablets, BP  
 Lansoprazole Capsules, Gastro-resistant, BP  
 Lidocaine Ointment, BP, 5%  
 Lidocaine Spray 10%, DPF  
 Loratadine Syrup, 5 mg/5 mL, DPF  
 Loratadine Tablets, BP, 10 mg  
 Menthol and Eucalyptus Inhalation, BP 1980  
 Metronidazole Oral Suspension, BP  
 Metronidazole Tablets, BP  
 Miconazole Cream, BP  
 Miconazole Oromucosal Gel, BP  
 Miconazole and Hydrocortisone Cream, BP  
 Miconazole and Hydrocortisone Ointment, BP  
 Nystatin Oral Suspension, BP  
 Omeprazole Capsules, Gastro-resistant, BP  
 Oxytetracycline Tablets, BP  
 Paracetamol Oral Suspension, BP  
 Paracetamol Tablets, BP  
 Paracetamol Tablets, Soluble, BP  
 Phenoxymethylpenicillin Oral Solution, BP  
 Phenoxymethylpenicillin Tablets, BP  
 Promethazine Hydrochloride Tablets, BP  
 Promethazine Oral Solution, BP  
 Saliva Stimulating Tablets, DPF  
 Sodium Chloride Mouthwash, Compound, BP  
 Sodium Fluoride Mouthwash, BP  
 Sodium Fluoride Oral Drops, BP  
 Sodium Fluoride Tablets, BP  
 Sodium Fluoride Toothpaste 0.619%, DPF  
 Sodium Fluoride Toothpaste 1.1%, DPF  
 Sodium Fusidate Ointment, BP  
 Temazepam Oral Solution, BP  
 Temazepam Tablets, BP  
 Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

## Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

### Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

**Artificial Saliva Gel**

(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

**Artificial Saliva Oral Spray**

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

**Artificial Saliva Pastilles**

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

**Artificial Saliva Protective Spray**

(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

**Artificial Saliva Substitute Spray**

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

**Azithromycin Capsules**

azithromycin 250 mg

**Azithromycin Oral Suspension 200 mg/5 mL**

azithromycin 200 mg/5 mL when reconstituted with water

**Azithromycin Tablets**

azithromycin 250 mg and 500 mg

**Betamethasone Soluble Tablets 500 micrograms**

betamethasone (as sodium phosphate) 500 micrograms

**Chlorhexidine Oral Spray**

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

**Clarithromycin Oral Suspension 125 mg/5 mL**

clarithromycin 125 mg/5 mL when reconstituted with water

**Clarithromycin Oral Suspension 250 mg/5 mL**

clarithromycin 250 mg/5 mL when reconstituted with water

**Doxycycline Tablets 20 mg**

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

**Fluconazole Capsules 50 mg**

fluconazole 50 mg

**Fluconazole Oral Suspension 50 mg/5 mL**

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

**Lidocaine Spray 10%**

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

**Loratadine Syrup 5 mg/5 mL**

loratadine 5 mg/5 mL

**Saliva Stimulating Tablets**

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

**Sodium Fluoride Toothpaste 0.619%**

(proprietary product: *Duraphat* '2800 ppm' Toothpaste), sodium fluoride 0.619%

**Sodium Fluoride Toothpaste 1.1%**

(proprietary product: *Duraphat* '5000 ppm' Toothpaste), sodium fluoride 1.1%

# Nurse Prescribers' Formulary

## Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

## Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP  
 Arachis Oil Enema, NPF  
 Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)  
 Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)  
 Bisacodyl Tablets, BP  
 Catheter Maintenance Solution, Sodium Chloride, NPF  
 Catheter Maintenance Solution, 'Solution G', NPF  
 Catheter Maintenance Solution, 'Solution R', NPF  
 Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%  
 Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%  
 Choline Salicylate Dental Gel, BP  
 Clotrimazole Cream 1%, BP  
 Co-danthramer Capsules, NPF  
 Co-danthramer Capsules, Strong, NPF  
 Co-danthramer Oral Suspension, NPF  
 Co-danthramer Oral Suspension, Strong, NPF  
 Co-danthrusate Capsules, BP  
 Co-danthrusate Oral Suspension, NPF  
 Crotamiton Cream, BP  
 Crotamiton Lotion, BP  
 Dimeticone barrier creams containing at least 10%  
 Dimeticone Lotion, NPF  
 Docusate Capsules, BP  
 Docusate Enema, NPF  
 Docusate Oral Solution, BP  
 Docusate Oral Solution, Paediatric, BP  
 Econazole Cream 1%, BP  
 Emollients as listed below:  
   Aquadrate® 10% w/w Cream  
   Arachis Oil, BP  
   Balneum® Plus Cream  
   Cetaben® Emollient Cream  
   Dermamist®  
   Diprobace® Cream  
   Diprobace® Ointment  
   Doublebase®  
   Doublebase® Dayleve Gel

 Zinc Paste and Ichthammol Bandage, BP 1993

## Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

**Appliances** (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:  
 National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)  
 Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)  
 Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

## Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

### Arachis Oil Enema

arachis oil 100%

### Catheter Maintenance Solution, Sodium Chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

### Catheter Maintenance Solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

### Catheter Maintenance Solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solution R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

### Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

### Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

### Co-danthramer Capsules [PoM] co-danthramer 25/200

(dantron 25 mg, poloxamer '188' 200 mg)

### Co-danthramer Capsules, Strong [PoM] co-danthramer

37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

### Co-danthramer Oral Suspension [PoM] (proprietary

product: *Codalax*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

### Co-danthramer Oral Suspension, Strong [PoM] (proprietary

product: *Codalax Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

### Co-danthrusate Oral Suspension [PoM] (proprietary

product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

### Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Stoppel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

### Dimeticone Lotion

(proprietary product: *Hedrin*), dimeticone 4%

### Docusate Enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

### Liquid and White Soft Paraffin Ointment

liquid paraffin 50%, white soft paraffin 50%

### Macrogol Oral Liquid, Compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

### Macrogol Oral Powder, Compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K<sup>+</sup> 5.4 mmol/litre)

### Macrogol Oral Powder, Compound, Half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

### Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

**Mebendazole Oral Suspension [PoM]** (proprietary product: *Vermox*), mebendazole 100 mg/5 mL

**Mebendazole Tablets [PoM]** (proprietary products: *Oxev*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show

a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

#### **Mouthwash Solution-tablets**

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

#### **Nicotine Inhalation Cartridge for Oromucosal Use**

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

#### **Nicotine Lozenge**

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

#### **Nicotine Medicated Chewing Gum**

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

#### **Nicotine Nasal Spray**

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

#### **Nicotine Oral Spray**

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

#### **Nicotine Sublingual Tablets**

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

#### **Nicotine Transdermal Patches**

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

#### **Permethrin Cream**

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

#### **Senna Oral Solution**

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

#### **Senna and Ispaghula Granules**

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

#### **Sodium Citrate Compound Enema**

(proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

#### **Sodium Picosulfate Capsules**

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

#### **Sodium Picosulfate Elixir**

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

#### **Sterculia Granules**

(proprietary product: *Normacol Granules*), sterculia 62%

#### **Sterculia and Frangula Granules**

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

#### **Zinc Oxide and Dimeticone Spray**

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

#### **Zinc Oxide Impregnated Medicated Bandage**

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

#### **Zinc Oxide Impregnated Medicated Stocking**

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

# Non-medical prescribing

## Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at [www.dh.gov.uk/health/2012/04/prescribing-change](http://www.dh.gov.uk/health/2012/04/prescribing-change).

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice—responding to legislative changes*, National Prescribing Centre, May 2010 (available at [www.webarchive.org.uk/wayback/archive/20140627111725/http://www.npc.nhs.uk/improving\\_safety/mixing\\_meds/resources/mixing\\_of\\_medicines.pdf](http://www.webarchive.org.uk/wayback/archive/20140627111725/http://www.npc.nhs.uk/improving_safety/mixing_meds/resources/mixing_of_medicines.pdf)).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

Independent Prescribers must work within their own level of professional competence and expertise.

## Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary p. 1484 for Community Practitioners provides information on prescribing.

## Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

## Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist

# Index of proprietary manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

# Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at [tinyurl.com/cdslike](http://tinyurl.com/cdslike).

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; [www.pro-file.nhs.uk](http://www.pro-file.nhs.uk)) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies ([www.apsm-uk.com](http://www.apsm-uk.com)).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

## England

### London

#### Barts and the London NHS Trust

Mr J. A. Rickard, Head of Barts Health Pharmaceuticals  
Barts Health NHS Trust  
The Royal London Hospital  
Pathology and Pharmacy Building  
80 Newark St

## A

- A2A Spacer, 265
- Abacavir, **610**
- ▶ With dolutegravir and lamivudine, **611**
  - ▶ With lamivudine, **611**
  - ▶ With lamivudine and zidovudine, **611**
- Abasaglar preparations, 672
- Abatacept, **1007**
- Abciximab, **203**
- Abelcet, 562
- Abilify preparations, 377
- Abiraterone acetate, **873**
- Able Spacer, 265
- Abraxane, 856
- Absence seizures, 294
- Absopad, 1459
- Absorbent cotton products, 1473
- Absorbent dressings, 1459
- Absorbent Lint, 1473
- Abstral, 437
- Abtard, 443
- Acamprosate calcium, 469, **471**
- Acarbose, **651**
- Accofil, 943
- Accolate, 259
- Accrete D3, 994
- Accupro, 167
- Accuretic, 168
- Acea, 1128
- Acebutolol, **146**
- Aceclofenac, **1030**
- Acemetacin, **1030**
- Acenocoumarol, **134**
- Acetaminophen, *see* Paracetamol
- Acetazolamide, **1080**
- Acetylcholine chloride, **1074**
- Acetylcholine-release enhancers, 1023
- Acetylcholinesterase inhibitors and memantine, 288
- Acetylcysteine
- ▶ Eye, **1065**
  - ▶ Paracetamol toxicity, 1251, **1260**
- Acetylsalicylic Acid, *see* Aspirin
- Aciclovir
- ▶ Viral eye infection, **1073**
  - ▶ Viral infection, **599**
  - ▶ Viral skin infection, **1135**
- Acidex preparations, 68
- Acipimox, **194**
- Acitretin, **1156**
- Aclasta, 689
- Acidinium bromide, **238**
- ▶ With formoterol, **238**
- Acnamino MR, 535
- Acne, 1162
- Acnecide, 1164
- Acondro, 752
- Acrivastine, **267**
- Actelsar HCT, 174
- Actico, 1480
- Acticoat products, 1470
- Actidose-Aqua Advance, 1256
- Acti-Fast, 1477
- ActiFormCool, 1460
- Actikerall, 1178
- Actilite, 1469
- Actilyse preparations, 211
- Actiq, 438
- Actisorb Silver 220, 1471
- Acti V.A.C., 1474
- Activated dimeticone, *see* Simeticone
- Active, 676
- Active elimination techniques, 1250
- Active immunity, 1190
- ActivHeal preparations, 1460, 1465
- Activon, 1469
- Acti-Wrap, 1476
- Actonel preparations, 687
- Actos, 668
- Actrapid preparations, 673
- Acular, 1077
- Acumor XL, 289
- Acute alcohol withdrawal, 468
- Acute angle-closure glaucoma, 1078
- Acute gout, 1019
- Acute coronary syndromes, 206
- ▶ Initial management, 207
  - ▶ Long-term management, 207
  - ▶ STEMI, 207
  - ▶ NSTEMI, 206
  - ▶ Unstable angina, 206
- Acute diarrhoea, 64
- Acute erythematous candidiasis, 1115
- Acute otitis media, 1093
- Acute porphyrias, 969
- Acute urinary retention, 736
- Acyclovir, *see* Aciclovir
- Adalat preparations, 158
- Adalimumab, **1008**
- Adapalene, **1165**
- ▶ With benzoyl peroxide, **1166**
- Adaptic Touch, 1464
- Adartrel, 405
- Adasuve, 370
- Adcal preparations, 958, 994
- Adcetris, 810
- Adcirca, 768
- Add Ins, 1450
- Additrac, 985
- Adefovir dipivoxil, **589**
- Adempas, 181
- Adenocor, 105
- Adenoscan, 105
- Adenosine, **104**
- Adenuric, 1022
- Adepend, 473
- Adhesive bandages, 1479
- Adipine preparations, 158
- Adizem preparations, 153
- Adjunct dressings and appliances, 1472
- Adoport, 794
- Adopre products, 1459, 1462
- Adrenaline/epinephrine
- ▶ CPR and Anaphylaxis, **216**
  - ▶ Priapism, **771**
  - ▶ With articaine hydrochloride, **1238**
  - ▶ With bupivacaine, *see* Bupivacaine with adrenaline
  - ▶ With lidocaine, *see* Lidocaine with adrenaline
- Adrenal insufficiency, 30
- Adrenergic neurone blocking drugs, 138
- Adrenoceptor agonists (sympathomimetics), 233
- Adrenocortical function testing, 700
- Adsorbents and bulk-forming drugs, 64
- Advadraw products, 1468
- Advagraf, 794
- Advanced wound dressings, 1460
- Advasil Conform, 1472
- Advate, 109
- Advazorb preparations, 1463, 1466
- Adverse reactions to drugs, 12
- Adverse reactions to medical devices, 13
- Advocate Redi-Code+, 766
- AeroChamber Plus, 265
- AErrane, 1222
- Afatinib, **892**
- Afinitor, 901
- Aflibercept
- ▶ Malignancy, **921**
  - ▶ Eye, **1087**
- Agalsidase alfa, **972**
- Agalsidase beta, **972**
- Aggrastat, 204
- Agomelatine, **344**
- Agrippal, 1213
- Aidulan, 753
- Aindeem, 742
- AirFluSal Forspiro, 255
- Airomir preparations, 246
- AirSalb, 246
- Airways disease, use of corticosteroids, 248
- AirZone, 264
- Aizea, 759
- Aknemin, 535
- Aknemycin Plus, 1168
- Akynzeo, 416
- Alateris, 1001
- Albendazole, **571**
- Albiglutide, **657**
- Albumin solution, **960**
- Albunorm, 960
- Alburex, 960
- Albustix, 680
- Albuterol, *see* Salbutamol
- Alclometasone dipropionate, **1140**
- Alcohol, 460, 643, **1172**, 1250
- Alcohol dependence, 468
- Alcohol disinfectants, 1172
- Aldactide, 184
- Aldactone, 186
- Aldara, 1182
- Aldehyde dehydrogenase inhibitors, 471
- Aldesleukin, **883**
- Aldomet, 140
- Aldosterone antagonists, 219
- Aldurazyme, 975
- Alentuzumab, **804**
- Alendronate, *see* Alendronic acid
- Alendronic acid, **683**
- ▶ With colecalciferol, **684**

- Alenini, 752  
 Alenvona, 752  
 Alfacalcidol, **991**  
 Alfentanil, **1232**  
 Alfuzosin hydrochloride, **737**  
 Alginate acid, **67**  
*Alginate products*, 1467, 1470  
*Algonon preparations*, 1469  
 Alglucosidase alfa, **976**  
*Algonon products*, 1467  
 Alicalm, 1432  
 Alimemazine tartrate, **271**  
*Alimta*, 848  
 Alirocumab, 189, **199**  
 Aliskiren, **175**  
 Alitretinoin, **1157**  
 Alkalising drugs, 742  
 Alkylating drugs, 827  
*Alldress*, 1462  
 Allergen immunotherapy, 266  
 Allergic and inflammatory eye conditions, 1058  
 Allergic conditions, 265  
*Allerief*, 273  
*Allevyn preparations*, 1463  
 Allopurinol, **1021**  
*Almogran*, 453  
 Almond oil, **1097**  
 Almotriptan, **453**  
 Alogliptin, **653**
  - With metformin, **654**
 Alomide, 1060  
 Alopecia, 826, 1171  
*Aloxi*, 415  
*Alphaderm*, 1146  
*Alphagan*, 1087  
*AlphaNine*, 109  
 Alpha tocopherol, **995**  
 Alpha tocopheryl acetate, **996**  
 Alprazolam, **326**  
 Alprostadil, **769**  
*Altacite Plus*, 69  
*Altargo*, 1129  
 Alteplase, **210**  
*Alu-Cap*, 964  
 Aluminium acetate, **1097**  
 Aluminium chloride hexahydrate, **1160**  
 Aluminium hydroxide, **964**
  - With dicycloverine hydrochloride, magnesium oxide and simeticone, see Dicycloverine hydrochloride with aluminium hydroxide, magnesium oxide and simeticone
  - With magnesium hydroxide and simeticone, see Simeticone with aluminium hydroxide and magnesium hydroxide
  - With magnesium hydroxide, see Co-magaldrox
 Aluminium oxide, **1165**  
*Avedon*, 423  
*Alventa XL*, 352  
 Alverine citrate, **84**  
*Alvesco*, 253  
*Alvita products*, 1473  
 Alzain, 310  
 Alzest, 291  
 Amantadine hydrochloride, **397**  
*Amaryl*, 666  
 Ambirix, 1209  
*AmBisome*, 562  
 Ambrisentan, **179**  
 Amethocaine, see Tetracaine  
*Ametop*, 1248  
 Amfebutamone hydrochloride, see Bupropion hydrochloride  
*Amfexa*, 334

# YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:

[www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

## REPORT OF SUSPECTED ADVERSE DRUG REACTIONS

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard) for guidance. Do not be put off reporting because some details are not known.

### PATIENT DETAILS

Patient Initials: \_\_\_\_\_ Sex: M / F Is the patient pregnant? Y / N Ethnicity: \_\_\_\_\_

Age (at time of reaction): \_\_\_\_\_ Weight (kg): \_\_\_\_\_ Identification number (e.g. Practice or Hospital Ref): \_\_\_\_\_

### SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

### SUSPECTED REACTION(S)

Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):

#### Outcome

Recovered ☐  
 Recovering ☐  
 Continuing ☐  
 Other ☐

Date reaction(s) started: \_\_\_\_\_ Date reaction(s) stopped: \_\_\_\_\_

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

☐ Patient died due to reaction ☐ Involved or prolonged inpatient hospitalisation  
☐ Life threatening ☐ Involved persistent or significant disability or incapacity  
☐ Congenital abnormality ☐ Medically significant; please give details: \_\_\_\_\_

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

☐ Mild ☐ Unpleasant, but did not affect everyday activities ☐ Bad enough to affect everyday activities

It's easy to report online: [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

**OTHER DRUG(S) (including self-medication and complementary remedies)**

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No  
If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

**Additional relevant information** e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

# Adult Advanced Life Support Algorithm

Resuscitation Council (UK)

Adult Advanced Life Support

## During CPR

- Ensure high quality chest compressions
- Minimise interruptions to compressions
- Give oxygen
- Use waveform capnography
- Continuous compressions when advanced airway in place
- Vascular access (intravenous or intraosseous)
- Give adrenaline every 3-5 min
- Give amiodarone after 3 shocks

## Treat Reversible Causes

- Hypoxia
- Hypovolaemia
- Hypo-/hyperkalaemia/metabolic
- Hypothermia
- Thrombosis - coronary or pulmonary
- Tension pneumothorax
- Tamponade - cardiac
- Toxins

## Consider

- Ultrasound imaging
- Mechanical chest compressions to facilitate transfer/treatment
- Coronary angiography and percutaneous coronary intervention
- Extracorporeal CPR

# Medical emergencies in the community

## Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

## Acute coronary syndromes

### ▶ **ANGINA: UNSTABLE**

**Aspirin dispersible tablets p. 117** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

### ▶ **PLUS**

▶ **EITHER** **Glyceryl trinitrate aerosol spray p. 212**  
(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

### ▶ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

### ▶ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

**Aspirin dispersible tablets** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

**Glyceryl trinitrate aerosol spray** (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

**Metoclopramide hydrochloride injection p. 411** (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

**Diamorphine hydrochloride injection p. 433** (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients: reduce dose by half

▶ **OR** **Morphine sulfate injection** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

**Oxygen**, if appropriate

## Airways disease, obstructive

### ▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

### ▶ **EITHER** **Salbutamol aerosol inhaler p. 244**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and Child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

### ▶ **OR** **Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

### ▶ **OR** **Terbutaline sulfate nebuliser solution p. 246** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

### ▶ **PLUS (in all cases)**

### ▶ **EITHER** **Prednisolone tablets p. 639 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

### ▶ **OR** **Hydrocortisone p. 637 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta<sub>2</sub> agonist** (as above) and give with

### **Ipratropium bromide nebuliser solution p. 239**

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

### ▶ **CROUP**

#### **Dexamethasone oral solution p. 635** (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

---

## **Anaphylaxis**

### ▶ **ANAPHYLAXIS**

#### **Adrenaline/epinephrine injection p. 216** (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

#### **Chlorphenamine maleate injection p. 272**

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

#### **Hydrocortisone (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

---

## **Bacterial infection**

### ▶ **MENINGOCOCCAL DISEASE**

#### **Benzylpenicillin sodium injection p. 517** (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

**NOTE** A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

### ▶ **OR if history of allergy to penicillin**

#### **Cefotaxime injection p. 500** (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

#### **Chloramphenicol injection p. 537** (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, bacterial p. 485.

---

## **Hypoglycaemia**

### ▶ **DIABETIC HYPOGLYCAEMIA**

#### **Glucose or sucrose**

BY MOUTH

- ▶ Adult and Child over 2 years: approx. 10–20 g (55–110 mL *Lucozade® Energy Original* or 100–200 mL *Coca-Cola®*—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

#### **Glucagon injection p. 681** (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

#### **Glucose intravenous infusion p. 955** (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)

#### **Glucose intravenous infusion** (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 50 mL

---

## **Seizures**

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 327** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 323**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

# Approximate Conversions and Units

## Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

## Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

## Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

## Length

1 metre (m) = 1000 millimetres (mm)  
1 centimetre (cm) = 10 mm  
1 inch (in) = 25.4 mm  
1 foot (ft) = 12 inches  
12 inches = 304.8 mm

## Mass

1 kilogram (kg) = 1000 grams (g)  
1 gram (g) = 1000 milligrams (mg)  
1 milligram (mg) = 1000 micrograms  
1 microgram = 1000 nanograms  
1 nanogram = 1000 picograms

## Volume

1 litre = 1000 millilitres (mL)  
1 millilitre (1 mL) = 1000 microlitres  
1 pint ≈ 568 mL

## Other units

1 kilocalorie (kcal) = 4186.8 joules (J)  
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)  
1 megajoule (MJ) = 238.8 kilocalories (kcal)  
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)  
1 kilopascal (kPa) = 7.5 mmHg (pressure)

## Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

## Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK- WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

# Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1454

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

EEG	electro-encephalogram
eGFR	estimated glomerular filtration rate, <i>see</i> Prescribing in renal impairment p. 19
f/c	film-coated
G6PD	glucose 6-phosphate dehydrogenase
HIV	Human immunodeficiency virus
HRT	Hormone replacement therapy
i/m	intramuscular
i/v	intravenous
INR	international normalised ratio
MAOI	Monoamine-oxidase inhibitor
max.	maximum
MHRA	Medicines and Healthcare products Regulatory Agency
m/r	modified-release
NCL	no cautionary labels (prescription endorsement made by prescriber when recommended cautionary labels are not required)
NHS	National Health Service
NICE	National Institute for Health and Care Excellence
NPF	Nurse Prescribers' Formulary
NSAID	Non-steroidal anti-inflammatory drug
NSTEMI	non-ST-segment elevation myocardial infarction
PARP	poly (ADP-ribose) polymerase
PGD	patient group direction
PHE	Public Health England (formerly Health Protection Agency (HPA))
PoM	prescription-only medicine, <i>see</i> Fig. 1 <i>How to use BNF publications</i>
®	trade mark
rINN	Recommended International Non-proprietary Name
RSV	respiratory syncytial virus
s/c	sugar-coated
SLS	Selected List Scheme

SMC	Scottish Medicines Consortium
SPC	Summary of Product Characteristics
spp.	species
SSRI	Selective serotonin reuptake inhibitor
STEMI	ST-segment elevation myocardial infarction
UK	United Kingdom
Units	for SI units <i>see</i> Prescription writing p. 5
WHO	World Health Organization
▼	limited experience of the use of this product and the MHRA requests that all suspected adverse reactions should be reported, <i>see</i> Adverse reactions to drugs p. 12
GSL	general sales list
P	pharmacy only medicine
ⓘ	drug-class monograph, <i>see</i> How to use BNF Publications, p. xii
1234	drug monograph has a corresponding drug-class monograph; the page number of the class monograph is indicated within the tab, <i>see</i> How to use BNF Publications, p. xii
EvGr	precedes evidence graded content, <i>see</i> How BNF Publications are constructed p. ix
⚡ to ⚡	symbols will be displayed - grades reflect the strengths of recommendations in evidence graded content, <i>see</i> How BNF Publications are constructed p. ix

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t.i.d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E211	Sodium Benzoate
E104	Quinoline Yellow
E223	Sodium Metabisulfite
E110	Sunset Yellow FCF
E320	Butylated Hydroxyanisole
E123	Amaranth
E321	Butylated Hydroxytoluene
E124	Ponceau 4R
E322	Lecithins
E127	Erythrosine BS
E420	Sorbitol
E132	Indigo Carmine
E421	Mannitol
E142	Green S
E422	Glycerol
E171	Titanium Dioxide
E901	Beeswax (white and yellow)
E172	Iron oxides, iron hydroxides
E1520	Propylene Glycol
E200	Sorbic Acid
