- With oral use Use half normal dose if estimated glomerular filtration rate less than 50 mL/minute/1.73 m² and no suitable alternative available.

● MONITORING REQUIREMENTS

- With oral use Monitor hepatic function before treatment and then every 4–6 weeks during treatment—discontinue if abnormalities in liver function tests.

● EXCEPTIONS TO LEGAL CATEGORY

- With topical use Preparations of terbinafine hydrochloride (maximum 1%) can be sold to the public for use in those over 16 years for external use for the treatment of tinea pedis as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis and cruris as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis, cruris, and corporis as a spray in a pack containing maximum 30 mL spray or as a gel in a pack containing maximum 30 g gel.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Tablet

3 Inflammatory skin conditions

3.1 Eczema and psoriasis

Eczema

Types and management

The main types of eczema (dermatitis) in children are atopic, irritant and allergic contact; different types may co-exist.

Atopic eczema is the most common type and it usually involves dry skin as well as infection and lichenification caused by scratching and rubbing. *Seborrhoeic dermatitis* is also common in infants.

Management of eczema involves the removal or treatment of contributory factors; known or suspected irritants and contact allergens should be avoided. Rarely, ingredients in topical medicinal products may sensitise the skin; *BNF for*

Children lists active ingredients together with excipients that have been associated with skin sensitisation.

Skin dryness and the consequent irritant eczema requires **emollients** applied regularly (at least twice daily) and liberally to the affected area; this can be supplemented with bath or shower emollients. The use of emollients should continue even if the eczema improves or if other treatment is being used.

Topical corticosteroids are also required in the management of eczema; the potency of the corticosteroid should be appropriate to the severity and site of the condition, and the age of the child. Mild corticosteroids are generally used on the face and on flexures; the more potent corticosteroids are generally required for use on lichenified areas of eczema or for severe eczema on the scalp, limbs, and trunk. Treatment should be reviewed regularly, especially if a potent corticosteroid is required. In children with frequent flares (2–3 per month), a topical corticosteroid can be applied on 2 consecutive days each week to prevent further flares.

Bandages (including those containing ichthammol with zinc oxide p. 699) are sometimes applied over topical corticosteroids or emollients to treat eczema of the limbs. Dry-wrap dressings can be used to provide a physical barrier to help prevent scratching and improve retention of emollients. Wet elasticated viscose stockinette is used for 'wet-wrap' bandaging over topical corticosteroids or emollients to cool the skin and relieve itching, but there is an increased risk of infection and excessive absorption of the corticosteroid; 'wet-wrap' bandaging should be used under specialist supervision.

See *Wound management products and elasticated garments* for details of elasticated viscose stockinette tubular bandages and garments, and silk clothing.

See Eczema and psoriasis, drugs affecting the immune response below for the role of topical pimecrolimus p. 701 and tacrolimus p. 702 in atopic eczema.

Infection

Bacterial infection (commonly with *Staphylococcus aureus* and occasionally with *Streptococcus pyogenes*) can exacerbate eczema. A topical antibacterial may be used for small areas of mild infection; treatment should be limited to a short course (typically 1 week) to reduce the risk of drug resistance or skin sensitisation. Associated eczema is treated simultaneously with a topical corticosteroid which can be combined with a topical antimicrobial.

Eczema involving moderate to severe, widespread, or recurrent infection requires the use of a systemic antibacterial that is active against the infecting organism. Preparations that combine an antiseptic with an emollient application and with a bath emollient can also be used; antiseptic shampoos can be used on the scalp.

Intertriginous eczema commonly involves candida and bacteria; it is best treated with a mild or moderately potent topical corticosteroid combined with a suitable antimicrobial drug.

Widespread *herpes simplex infection* may complicate atopic eczema (eczema herpeticum) and treatment under specialist supervision with a systemic antiviral drug is indicated. Secondary bacterial infection often exacerbates eczema herpeticum.

Management of other features of eczema

Lichenification, which results from repeated scratching, is treated initially with a potent corticosteroid. Bandages containing ichthammol p. 699 (to reduce pruritus) and other substances such as **zinc oxide** can be applied over the corticosteroid or emollient. **Coal tar** and ichthammol can be useful in some cases of *chronic eczema*. *Discoid eczema*, with thickened plaques in chronic atopic eczema, is usually treated with a topical antiseptic preparation, a potent topical corticosteroid, and paste bandages containing ichthammol with zinc oxide.

A *non-sedating* antihistamine may be of some value in relieving severe itching or urticaria associated with eczema. A *sedating* antihistamine can be used at night if itching causes sleep disturbance, but a large dose may be needed and drowsiness may persist on the following day.

Exudative ('weeping') eczema requires a potent corticosteroid initially; infection may also be present and require specific treatment. Potassium permanganate solution (1 in 10,000) p. 716 can be used as a soak in exuding eczema for its antiseptic and astringent effects; treatment should be stopped when exudation stops.

Severe refractory eczema is best managed under specialist supervision; it may require phototherapy or drugs that act on the immune system.

Seborrhoeic dermatitis

Seborrhoeic dermatitis (*seborrhoeic eczema*) is associated with species of the yeast *Malassezia*. *Infantile seborrhoeic dermatitis* affects particularly the body folds, nappy area and scalp; it is treated with emollients and mild topical corticosteroids with suitable antimicrobials. *Infantile seborrhoeic dermatitis* affecting the scalp (*cradle cap*) is treated by hydrating the scalp using natural oils and the use of mild shampoo.

In older children, seborrhoeic dermatitis affects the scalp, paranasal areas, and eyebrows. Shampoos active against the yeast (including those containing ketoconazole p. 678 and coal tar) and combinations of mild topical corticosteroids with suitable antimicrobials are used to treat older children.

Medicated bandages

Zinc paste bandages (see *Wound management products and elasticated garments*) are used with **coal tar** or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

Eczema and psoriasis, drugs affecting the immune response

Overview

Drugs affecting the immune response are used for eczema or psoriasis. Pimecrolimus p. 701 by topical application is licensed for *mild to moderate atopic eczema*. Tacrolimus p. 702 is licensed for topical use in *moderate to severe atopic eczema*. Both are drugs whose long-term safety is still being evaluated and they should not usually be considered first-line treatment unless there is a specific reason to avoid or reduce the use of topical corticosteroids. Treatment with topical pimecrolimus or topical tacrolimus should be initiated only by prescribers experienced in treating atopic eczema.

Topical corticosteroids have a role in eczema and a limited role in psoriasis. A systemic corticosteroid such as prednisolone p. 413 may be used in severe refractory eczema.

Systemic drugs acting on the immune system are generally used by **specialists** in a hospital setting.

Ciclosporin p. 486 by mouth can be used for *severe psoriasis* and for *severe eczema*. Azathioprine p. 485 or mycophenolate mofetil p. 492 are also used for severe refractory eczema in children.

Methotrexate p. 506 can be used for *severe resistant psoriasis*; the dose is given **once weekly** and adjusted according to severity of the condition and haematological and biochemical measurements. Folic acid p. 533 should be given to reduce the possibility of methotrexate toxicity [unlicensed indication]. Folic acid can be given once weekly on a different day to the methotrexate; alternative regimens may be used in some settings.

Etanercept p. 600 (a cytokine modulator) is licensed in children over 6 years of age for the treatment of *severe plaque psoriasis* that is inadequately controlled by other systemic treatments and photochemotherapy, or when these other treatments cannot be used because of intolerance or contra-indications.

Adalimumab p. 598 (a cytokine modulator) is licensed in children over 4 years for the treatment of *severe chronic plaque psoriasis* that is inadequately controlled by other topical treatments and phototherapies, or when these treatments are inappropriate.

Psoriasis

Management

Psoriasis is characterised by epidermal thickening and scaling. It commonly affects extensor surfaces and the scalp. For mild psoriasis, reassurance and treatment with an emollient may be all that is necessary. *Guttate psoriasis* is a distinctive form of psoriasis that characteristically occurs in children and young adults, often following a streptococcal throat infection or tonsillitis.

Occasionally psoriasis is provoked or exacerbated by drugs such as lithium, chloroquine and hydroxychloroquine, beta-blockers, non-steroidal anti-inflammatory drugs, and ACE inhibitors. Psoriasis may not occur until the drug has been taken for weeks or months.

Emollients, in addition to their effects on dryness, scaling and cracking, may have an antiproliferative effect in psoriasis. They are particularly useful in *inflammatory psoriasis* and in *chronic stable plaque psoriasis*.

For *chronic stable plaque psoriasis* on extensor surfaces of trunk and limbs preparations containing **coal tar** are moderately effective, but the smell is unacceptable to some children. **Vitamin D** and its analogues are effective and cosmetically acceptable alternatives to preparations containing coal tar or dithranol p. 699. Dithranol is an effective topical antipsoriatic agent but it irritates and stains the skin and it should be used only under specialist supervision. Adverse effects of dithranol are minimised by using a 'short-contact technique' and by starting with low concentration preparations. Tazarotene, a topical retinoid for the treatment of mild to moderate plaque psoriasis, is not recommended for use in children under 18 years. These medications can irritate the skin particularly in the flexures and they are not suitable for the more inflammatory forms of psoriasis; their use should be suspended during an inflammatory phase of psoriasis. The efficacy and the irritancy of each substance varies between patients. If a substance irritates significantly, it should be stopped or the concentration reduced; if it is tolerated, its effects should be assessed after 4 to 6 weeks and treatment continued if it is effective.

Widespread *unstable psoriasis* of erythrodermic or generalised pustular type requires urgent specialist assessment. Initial topical treatment should be limited to using emollients frequently and generously. More localised acute or subacute *inflammatory psoriasis* with hot, spreading or itchy lesions, should be treated topically with emollients or with a corticosteroid of moderate potency.

Scalp psoriasis is usually scaly, and the scale may be thick and adherent. This requires softening with an emollient ointment, cream, or oil and usually combined with salicylic acid as a keratolytic.

Some preparations for psoriasis affecting the scalp combine salicylic acid with coal tar or **sulfur**. The preparation should be applied generously and left on for at least an hour, often more conveniently overnight, before washing it off. If a corticosteroid lotion or gel is required (e.g. for itch), it can be used in the morning.

Flexural psoriasis can be managed with short-term use of a mild potency topical corticosteroid. Calcitriol p. 704 or tacalcitol p. 705 can be used in the longer term; calcipotriol p. 704 is more likely to cause irritation in flexures and should be avoided. Low-strength tar preparations can also be used.

Facial psoriasis can be treated with short-term use of a mild topical corticosteroid; if this is ineffective, calcitriol, tacalcitol, or a low-strength tar preparation can be used.

Calcipotriol and tacalcitol are analogues of vitamin D that affect cell division and differentiation. Calcitriol is an active form of vitamin D. Vitamin D and its analogues are used as first-line treatment for plaque psoriasis; they do not smell or stain and they may be more acceptable than tar or dithranol products. Of the vitamin D analogues, tacalcitol and calcitriol are less likely to irritate.

Coal tar p. 700 has anti-inflammatory properties that are useful in chronic plaque psoriasis; it also has antiscaling properties. Contact of coal tar products with normal skin is not normally harmful and preparations containing coal tar can be used for widespread small lesions; however, irritation, contact allergy, and sterile folliculitis can occur. Leave-on preparations that remain in contact with the skin, such as creams or ointments, containing up to 6% coal tar may be used on children 1 month to 2 years; leave-on preparations containing coal tar 10% may be used on children over 2 years with more severe psoriasis. Tar baths and tar shampoos may also be helpful.

Dithranol is effective for chronic plaque psoriasis. Its major disadvantages are irritation (for which individual susceptibility varies) and staining of skin and of clothing. Dithranol is not generally suitable for widespread small lesions nor should it be used in the flexures or on the face. Proprietary preparations are more suitable for home use; they are usually washed off after 20–30 minutes ('short contact' technique). Specialist nurses may apply intensive treatment with dithranol paste which is covered by stockinette dressings and usually retained overnight. Dithranol should be discontinued if even a low concentration causes acute inflammation; continued use can result in the psoriasis becoming unstable.

A topical **corticosteroid** is not generally suitable for long-term use or as the sole treatment of extensive chronic plaque psoriasis; any early improvement is not usually maintained and there is a risk of the condition deteriorating or of precipitating an unstable form of psoriasis e.g. erythrodermic psoriasis or generalised pustular psoriasis on withdrawal. Topical use of potent corticosteroids on widespread psoriasis can also lead to systemic as well as local side-effects. However, topical corticosteroids used short-term may be appropriate to treat psoriasis in specific sites such as the face or flexures with a mild corticosteroid, and psoriasis of the scalp, palms, and soles with a potent corticosteroid. Very potent topical corticosteroids should only be used under specialist supervision.

Combining the use of a corticosteroid with another specific topical treatment may be beneficial in chronic plaque psoriasis; the drugs may be used separately at different times of the day or used together in a single formulation. *Eczema* co-existing with psoriasis may be treated with a corticosteroid, or coal tar, or both.

Phototherapy

Phototherapy is available in specialist centres under the supervision of a dermatologist. Narrow band ultraviolet B (UVB) radiation is usually effective for *chronic stable psoriasis* and for *guttate psoriasis*. It can be considered for children with moderately severe psoriasis in whom topical treatment has failed, but it may irritate inflammatory psoriasis. The use of phototherapy and photochemotherapy in children is limited by concerns over carcinogenicity and premature ageing.

Photochemotherapy combining long-wave ultraviolet A radiation with a psoralen (PUVA) is available in specialist centres under the supervision of a dermatologist. The psoralen, which enhances the effect of irradiation, is administered either by mouth or topically. PUVA is effective in most forms of psoriasis, including the *localised palmoplantar pustular psoriasis*. Early adverse effects include phototoxicity and pruritus. Higher cumulative doses exaggerate skin ageing, increase the risk of dysplastic and neoplastic skin lesions especially squamous cancer, and pose a theoretical risk of cataracts.

Phototherapy combined with coal tar, dithranol, topical vitamin D or vitamin D analogues, or oral acitretin, allows reduction of the cumulative dose of phototherapy required to treat psoriasis.

Systemic treatment

Systemic treatment is required for severe, resistant, unstable or complicated forms of psoriasis, and it should be initiated only under specialist supervision. Systemic drugs for psoriasis include acitretin and drugs that affect the immune response (see Eczema and psoriasis, drugs affecting the immune response p. 684).

Acitretin p. 703, a metabolite of etretinate, is a retinoid (vitamin A derivative); it is prescribed by specialists. The main indication of acitretin is severe psoriasis resistant to other forms of therapy. It is also used in disorders of keratinisation such as severe *Darier's disease* (keratosis follicularis), and some forms of *ichthyosis*. Although a minority of cases of psoriasis respond well to acitretin alone, it is only moderately effective in many cases; adverse effects are a limiting factor. A therapeutic effect occurs after 2 to 4 weeks and the maximum benefit after 4 months. Consideration should be given to stopping acitretin if the response is inadequate after 4 months at the optimum dose. Continuous treatment for longer than 6 months is not usually necessary in psoriasis. However, some patients, particularly those with severe ichthyosis, may benefit from longer treatment, provided that the lowest effective dose is used, patients are monitored carefully for adverse effects, and the need for treatment is reviewed regularly. Topical preparations containing keratolytics should normally be stopped before administration of acitretin. Liberal use of emollients should be encouraged and topical corticosteroids can be continued if necessary.

Acitretin is teratogenic; in females of child-bearing age, the possibility of pregnancy must be excluded before treatment and effective contraception must be used during treatment and for at least 3 years afterwards (oral progestogen-only contraceptives not considered effective).

Topical treatment

The vitamin D and analogues, calcipotriol p. 704, calcitriol p. 704, and tacalcitol p. 705 are used for the management of plaque psoriasis. They should be avoided by those with calcium metabolism disorders, and used with caution in generalised pustular or erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia).

CORTICOSTEROIDS

Topical corticosteroids

Overview

Topical corticosteroids are used for the treatment of inflammatory conditions of the skin (other than those arising from an infection), particularly eczema, contact dermatitis, insect stings, and eczema of scabies. Corticosteroids suppress the inflammatory reaction during use; they are not curative and on discontinuation a rebound exacerbation of the condition may occur. They are generally used to relieve symptoms and suppress signs of the disorder when other measures such as emollients are ineffective.

Children, especially infants, are particularly susceptible to side-effects. However, concern about the safety of topical corticosteroids in children should not result in the child being undertreated. The aim is to control the condition as well as possible; inadequate treatment will perpetuate the condition. Carers of young children should be advised that treatment should **not** necessarily be reserved to 'treat only the worst areas' and they may need to be advised that patient information leaflets may contain inappropriate advice for the child's condition.

In an acute flare-up of atopic eczema, it may be appropriate to use more potent formulations of topical corticosteroids for a short period to regain control of the condition.

Topical corticosteroids are not recommended in the routine treatment of urticaria; treatment should only be initiated and supervised by a specialist. Topical corticosteroids may worsen ulcerated or secondarily infected lesions. They should not be used indiscriminately in pruritus (where they will only benefit if inflammation is causing the itch) and are **not** recommended for acne vulgaris.

Systemic or very potent topical corticosteroids should be avoided or given only under specialist supervision in psoriasis because, although they may suppress the psoriasis in the short term, relapse or vigorous rebound occurs on withdrawal (sometimes precipitating severe pustular psoriasis). Topical use of potent corticosteroids on widespread psoriasis can lead to systemic as well as to local side-effects. It is reasonable, however, to prescribe a mild topical corticosteroid for a short period (2–4 weeks) for *flexural and facial psoriasis*, and to use a more potent corticosteroid such as betamethasone p. 688 or fluocinonide p. 692 for *psoriasis of the scalp, palms, or soles*.

In general, the most potent topical corticosteroids should be reserved for recalcitrant dermatoses such as *chronic discoid lupus erythematosus*, *lichen simplex chronicus*, *hypertrophic lichen planus*, and *palmoplantar pustulosis*. Potent corticosteroids should generally be avoided on the face and skin flexures, but specialists occasionally prescribe them for use on these areas in certain circumstances.

When topical treatment has failed, intralesional corticosteroid injections may be used. These are more effective than the very potent topical corticosteroid preparations and should be reserved for severe cases where there are localised lesions such as *keloid scars*, *hypertrophic lichen planus*, or *localised alopecia areata*.

Perioral lesions

Hydrocortisone cream 1% p. 692 can be used for up to 7 days to treat uninfected inflammatory lesions on the lips. Hydrocortisone with miconazole cream or ointment p. 698 is useful where infection by susceptible organisms and inflammation co-exist, particularly for initial treatment (up to 7 days) e.g. in angular cheilitis. Organisms susceptible to miconazole include *Candida* spp. and many Gram-positive bacteria including streptococci and staphylococci.

Choice

Water-miscible corticosteroid creams are suitable for moist or weeping lesions whereas ointments are generally chosen for dry, lichenified or scaly lesions or where a more occlusive effect is required. Lotions may be useful when minimal application to a large or hair-bearing area is required or for the treatment of exudative lesions. *Occlusive polythene or hydrocolloid dressings* increase absorption, but also increase the risk of side-effects; they are therefore used only under supervision on a short-term basis for areas of very thick skin (such as the palms and soles). Disposable nappies and tight fitting pants also increase the risk of side-effects by increasing absorption of the corticosteroid. The inclusion of urea or salicylic acid also increases the penetration of the corticosteroid.

In the *BNF for Children*, topical corticosteroids for the skin are categorised as 'mild', 'moderately potent', 'potent' or 'very potent'; the least potent preparation which is effective should be chosen but dilution should be avoided whenever possible.

Topical hydrocortisone is usually used in children under 1 year of age. Moderately potent and potent topical corticosteroids should be used with great care in children and for short periods (1–2 weeks) only. A very potent corticosteroid should be initiated under the supervision of a specialist.

Appropriate topical corticosteroids for specific conditions are:

- *insect bites and stings*—mild corticosteroid such as hydrocortisone 1% cream;
- *inflamed nappy rash causing discomfort* in infant over 1 month—mild corticosteroid such as hydrocortisone 0.5% or 1% for up to 7 days (combined with antimicrobial if infected);
- *mild to moderate eczema, flexural and facial eczema or psoriasis*—mild corticosteroid such as hydrocortisone 1%;
- *severe eczema of the face and neck*—moderately potent corticosteroid for 3–5 days only, if not controlled by a mild corticosteroid;
- *severe eczema on the trunk and limbs*—moderately potent or potent corticosteroid for 1–2 weeks only, switching to a less potent preparation as the condition improves;
- *eczema affecting area with thickened skin (e.g. soles of feet)*—potent topical corticosteroid in combination with urea or salicylic acid (to increase penetration of corticosteroid).

Absorption through the skin

Mild and moderately potent topical corticosteroids are associated with few side-effects but particular care is required when treating neonates and infants, and in the use of *potent and very potent* corticosteroids. Absorption through the skin can rarely cause adrenal suppression and even Cushing's syndrome, depending on the area of the body being treated and the duration of treatment. Absorption of corticosteroid is greatest from severely inflamed skin, thin skin (especially on the face or genital area), from flexural sites (e.g. axillae, groin), and in infants where skin surface area is higher in relation to body-weight; absorption is increased by occlusion.

Compound preparations

The advantages of including other substances (such as antibacterials or antifungals) with corticosteroids in topical preparations are uncertain, but such combinations may have a place where inflammatory skin conditions are associated with bacterial or fungal infection, such as infected eczema. In these cases the antimicrobial drug should be chosen according to the sensitivity of the infecting organism and used regularly for a short period (typically twice daily for 1 week). Longer use increases the likelihood of resistance and of sensitisation.

The keratolytic effect of salicylic acid facilitates the absorption of topical corticosteroids; however, excessive and prolonged use of topical preparations containing salicylic acid may cause salicylism.

Topical corticosteroid preparation potencies

Potency of a topical corticosteroid preparation is a result of the formulation as well as the corticosteroid. Therefore, proprietary names are shown.

Mild

- Hydrocortisone 0.1–2.5%
- Dioderm
- Mildison
- Synalar 1 in 10 dilution

Mild with antimicrobials

- Canesten HC

- Daktacont
- Econacort
- Fucidin H
- Nystaform-HC
- Terra-Cortril
- Timodine

Moderate

- Betnovate-RD
- Eumovate
- Haelan
- Modrasone
- Synalar 1 in 4 Dilution
- Ultralanum Plain

Moderate with antimicrobials

- Trimovate

Moderate with urea:

- Alphaderm

Potent

- Beclometasone dipropionate 0.025%
- Betamethasone valerate 0.1%
- Betacap
- Betesil
- Bettamousse
- Betnovate
- Cutivate
- Diprosone
- Elocon
- Hydrocortisone butyrate
- Locoid
- Locoid Crelo
- Metosyn
- Mometasone furoate 0.1%
- Nerisone
- Synalar

Potent with antimicrobials

- Aureocort
- Betamethasone and clioquinol
- Betamethasone and neomycin
- Fucibet
- Lotriderm
- Synalar C
- Synalar N

Potent with salicylic acid

- Diprosalac

Very potent

- Dermovate
- Nerisone Forte

Very potent with antimicrobials

- Clobetasol propionate 0.05% with neomycin and nystatin

Corticosteroids (topical)

- **CONTRA-INDICATIONS** Acne · perioral dermatitis · potent corticosteroids in widespread plaque psoriasis · untreated bacterial, fungal or viral skin lesions
- **CAUTIONS** Avoid prolonged use (particularly on the face) · cautions applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · dermatoses of infancy, including nappy rash (extreme caution required—treatment should be limited to 5–7 days) · infection · keep away from eyes · use potent or very potent topical corticosteroids under specialist supervision
- **SIDE-EFFECTS**
 - ▶ **Rare** Adrenal suppression · Cushing's syndrome
 - ▶ **Frequency not known** Acne · contact dermatitis · hypertrichosis · irreversible striae atrophicae · irreversible telangiectasia · mild depigmentation (may be reversible) ·

perioral dermatitis · side-effects applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · spread and worsening of untreated infection · thinning of the skin (may be restored over a period after stopping treatment but the original structure may never return) · worsening of acne · worsening of rosacea

SIDE-EFFECTS, FURTHER INFORMATION

In order to minimise the side-effects of a topical corticosteroid, it is important to apply it **thinly** to affected areas **only**, no more frequently than **twice daily**, and to use the least potent formulation which is fully effective.

- **DIRECTIONS FOR ADMINISTRATION** Topical corticosteroid preparations should be applied no more frequently than twice daily; once daily is often sufficient. Topical corticosteroids should be spread thinly on the skin but in sufficient quantity to cover the affected areas. The length of cream or ointment expelled from a tube may be used to specify the quantity to be applied to a given area of skin. This length can be measured in terms of a *finger tip unit* (the distance from the tip of the adult index finger to the first crease). One fingertip unit (approximately 500 mg from a tube with a standard 5 mm diameter nozzle) is sufficient to cover an area that is twice that of the flat adult handprint (palm and fingers). Mixing topical preparations on the skin should be avoided where possible; several minutes should elapse between application of different preparations.

‘Wet-wrap bandaging’ increases absorption into the skin, but should be initiated only by a dermatologist and application supervised by a healthcare professional trained in the technique.

- **PRESCRIBING AND DISPENSING INFORMATION** The potency of each topical corticosteroid should be included on the label with the directions for use. The label should be attached to the container (for example, the tube) rather than the outer packaging.
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer corticosteroid creams and ointments. If a patient is using topical corticosteroids of different potencies, the patient should be told when to use each corticosteroid. Patients and their carers should be reassured that side effects such as skin thinning and systemic effects rarely occur when topical corticosteroids are used appropriately.

687

Alclometasone dipropionate

● INDICATIONS AND DOSE

Inflammatory skin disorders such as eczema

► TO THE SKIN

► Child: Apply 1–2 times a day, to be applied thinly

POTENCY

Alclometasone dipropionate cream 0.05%: moderate

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of alclometasone dipropionate cream.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, propylene glycol

► **Alclometasone dipropionate (Non-proprietary)**

Alclometasone dipropionate 500 microgram per 1 gram Boots
Derma Care Eczema & Dermatitis Flare-Up 0.05% cream |
15 gram [P] no price available

► **Modrasone** (Teva UK Ltd)

Alclometasone dipropionate 500 microgram per 1 gram Modrasone 0.05% cream | 50 gram [PoM] £2.68 DT price = £2.68

687

Beclometasone dipropionate

(Beclomethasone dipropionate)

● INDICATIONS AND DOSE

Severe inflammatory skin disorders such as eczema unresponsive to less potent corticosteroids | Psoriasis

► TO THE SKIN

► Child: Apply 1–2 times a day, thin layer to be applied

POTENCY

Beclometasone dipropionate cream and ointment 0.025%: potent.

- **UNLICENSED USE** Not licensed for use in children under 1 year.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

Cream

F 687

Hydrocortisone● **INDICATIONS AND DOSE**

Mild inflammatory skin disorders such as eczemas

► TO THE SKIN

► Child: Apply 1–2 times a day, to be applied thinly

Nappy rash

► TO THE SKIN

► Child: Apply as required for no more than 1 week, discontinue as soon as the inflammation subsides

POTENCY

Hydrocortisone cream and ointment 0.5 to 2.5%: mild

- **PRESCRIBING AND DISPENSING INFORMATION** When hydrocortisone cream or ointment is prescribed and no strength is stated, the 1% strength should be supplied. Although *Dioderm*® contains only 0.1% hydrocortisone, the formulation is designed to provide a clinical activity comparable to that of Hydrocortisone Cream 1% BP.
- **PATIENT AND CARER ADVICE** Patient counselling is advised for hydrocortisone cream and ointment (application).
- **PROFESSION SPECIFIC INFORMATION**
Dental practitioners' formulary
Hydrocortisone Cream 1% 15 g may be prescribed.
- **EXCEPTIONS TO LEGAL CATEGORY** Skin creams and ointments containing hydrocortisone (alone or with other ingredients) can be sold to the public for the treatment of allergic contact dermatitis, irritant dermatitis, insect bite reactions and mild to moderate eczema in patients over 10 years, to be applied sparingly over the affected area 1–2 times daily for max. 1 week. Over-the-counter hydrocortisone preparations should not be sold without medical advice for children under 10 years or for pregnant women; they should **not** be sold for application to the face, anogenital region, broken or infected skin (including cold sores, acne, and athlete's foot).

Chlortetracycline with triamcinolone

● INDICATIONS AND DOSE

Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (associated with infection) | Psoriasis (associated with infection)

► TO THE SKIN

- Child 1 month–7 years: To be applied thinly (consult product literature)
- Child 8–17 years: To be applied thinly (consult product literature)

POTENCY

Triamcinolone acetonide 0.1%, chlortetracycline hydrochloride 3% ointment: potent.

- **UNLICENSED USE** Not licensed for use in children under 8 years.
- **PATIENT AND CARER ADVICE** Stains clothing. Patients or carers should be counselled on the application of chlortetracycline with triamcinolone products.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Wool fat and related substances including lanolin

► Aureocort (AMCO)

Triamcinolone acetonide 1 mg per 1 gram, Chlortetracycline hydrochloride 30.9 mg per 1 gram Aureocort ointment | 15 gram [PoM](#) £3.51

Clobetasol propionate with neomycin sulfate and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasol propionate p. 690, neomycin sulfate p. 645.

● INDICATIONS AND DOSE

Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis associated with infection

► TO THE SKIN

- Child: (consult product literature)

POTENCY

Clobetasol propionate 0.05% with neomycin sulfate and nystatin cream and ointment: very potent.

- **UNLICENSED USE** Clobetasol with neomycin and nystatin preparations not licensed for use in children under 2 years.
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of clobetasol propionate, neomycin sulfate and nystatin containing preparations.

Hydrocortisone with miconazole

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 692, miconazole p. 679.

INDICATIONS AND DOSE

Mild inflammatory skin disorders such as eczemas associated with infections

▶ **TO THE SKIN**

- ▶ Child: (consult product literature)

POTENCY

Hydrocortisone 1% with miconazole cream and ointment: mild

- **INTERACTIONS** → Appendix 1 (antifungals, imidazole).
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with miconazole preparations.
- **PROFESSION SPECIFIC INFORMATION**
Dental practitioners' formulary
May be prescribed as Miconazole and Hydrocortisone Cream or Ointment for max. 7 days.

Hydrocortisone with oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 692, oxytetracycline p. 334.

INDICATIONS AND DOSE

Mild inflammatory skin disorders such as eczemas

▶ **TO THE SKIN**

- ▶ Child 12-17 years: (consult product literature)

POTENCY

Hydrocortisone 1% with oxytetracycline ointment: mild.

- **CONTRA-INDICATIONS** Children under 12 years
- **PREGNANCY** Tetracyclines should not be given to pregnant women. Effects on skeletal development have been documented when tetracyclines have been used in the first trimester in animal studies. Administration during the second or third trimester may cause discoloration of the child's teeth.
- **BREAST FEEDING** Tetracyclines should not be given to women who are breast-feeding (although absorption and therefore discoloration of teeth in the infant is probably usually prevented by chelation with calcium in milk).
- **PATIENT AND CARER ADVICE** Patients should be given advice on the application of hydrocortisone with oxytetracycline ointment.
- **MEDICINAL FORMS**
There can be variation in the licensing of different medicines containing the same drug.

Pimecrolimus

● INDICATIONS AND DOSE

Short-term treatment of mild to moderate atopic eczema (including flares) when topical corticosteroids cannot be used (initiated by a specialist)

- ▶ TO THE SKIN
- ▶ Child 2–17 years: Apply twice daily until symptoms resolve (stop treatment if eczema worsens or no response after 6 weeks)

● **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · congenital epidermal barrier defects · contact with eyes · contact with mucous membranes · generalised erythroderma · immunodeficiency · infection at treatment site

● **CAUTIONS** Alcohol consumption (risk of facial flushing and skin irritation) · avoid other topical treatments except emollients at treatment site · UV light (avoid excessive exposure to sunlight and sunlamps)

● **INTERACTIONS** Concomitant use with drugs that cause immunosuppression is contra-indicated (may be prescribed in exceptional circumstances by specialists).

• SIDE-EFFECTS

- **Common or very common** Burning sensation · erythema · folliculitis · pruritus · skin infections
- **Uncommon** Herpes simplex · herpes zoster · impetigo · molluscum contagiosum
- **Rare** Dryness · local reactions including pain · oedema · papilloma · paraesthesia · peeling · skin discoloration · worsening of eczema
- **Frequency not known** Skin malignancy
- **PREGNANCY** Manufacturer advises avoid; toxicity in animal studies following systemic administration.
- **BREAST FEEDING** Manufacturer advises caution; ensure infant does not come in contact with treated areas.

• NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

- **Tacrolimus and pimecrolimus for atopic eczema (August 2004)** NICE TA82
Topical pimecrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy).

Topical pimecrolimus is recommended for moderate atopic eczema on the face and neck of children aged 2–16 years. Pimecrolimus should be used within its licensed indications.

100 gram [PoM] £59.07 DT price = £59.07

Tacrolimus

- **DRUG ACTION** Tacrolimus is a calcineurin inhibitor.

• INDICATIONS AND DOSE

Short-term treatment of moderate to severe atopic eczema (including flares) in patients unresponsive to, or intolerant of conventional therapy (initiated by a specialist)

- TO THE SKIN

- Child 2–15 years: Apply twice daily for up to 3 weeks (consider other treatment if eczema worsens or if no improvement after 2 weeks), 0.03% ointment to be applied thinly, then reduced to once daily until lesion clears
- Child 16–17 years: Apply twice daily until lesion clears (consider other treatment if eczema worsens or no improvement after 2 weeks), initially 0.1% ointment to be applied thinly, reduce frequency to once daily or strength of ointment to 0.03% if condition allows

Prevention of flares in patients with moderate to severe atopic eczema and 4 or more flares a year who have responded to initial treatment with topical tacrolimus (initiated by a specialist)

- TO THE SKIN

- Child 2–15 years: Apply twice weekly, 0.03% ointment to be applied thinly, with an interval of 2–3 days between applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year
- Child 16–17 years: Apply twice weekly, 0.1% ointment to be applied thinly, with an interval of 2–3 days between

applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year

- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · avoid contact with eyes · avoid contact with mucous membranes · congenital epidermal barrier defects · generalised erythroderma · immunodeficiency · infection at treatment site

- **CAUTIONS** UV light (avoid excessive exposure to sunlight and sunlamps)

- **INTERACTIONS** Interactions do not generally apply to tacrolimus used topically. Concomitant use with drugs that cause immunosuppression (may be prescribed in exceptional circumstances by specialists). Risk of facial flushing and skin irritation with alcohol consumption (does not apply to tacrolimus taken systemically).

• SIDE-EFFECTS

- **Common or very common** Application-site infections · application-site reactions · herpes simplex infection · irritation (at application-site) · Kaposi's varicelliform eruption · pain at application-site · rash
- **Uncommon** Acne
- **Frequency not known** Cutaneous lymphoma · malignancies · other types of lymphomas · rosacea · skin malignancy

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of hypersensitivity to macrolides.

- **PREGNANCY** Manufacturer advises avoid unless essential; toxicity in animal studies following systemic administration.

- **BREAST FEEDING** Avoid—present in breast milk (following systemic administration).

- **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light including sunlight.

• NATIONAL FUNDING/ACCESS DECISIONS

NICE technology appraisals (TAs)

- **Tacrolimus and pimecrolimus for atopic eczema (August 2004)** NICE TA82

Topical tacrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy). Topical tacrolimus is recommended for moderate to severe atopic eczema in adults and children over 2 years. Tacrolimus should be used within its licensed indications.

www.nice.org.uk/TA82

Scottish Medicines Consortium (SMC) Decisions

The Scottish Medicines Consortium has advised (March 2010) that tacrolimus ointment (*Protopic*®) is accepted for restricted use within NHS Scotland for the prevention of flares in patients aged over 2 years with moderate to severe atopic eczema in accordance with the licensed indications; initiation of treatment is restricted to doctors (including general practitioners) with a specialist interest and experience in treating atopic eczema with immunomodulatory therapy.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Ointment

Tacrolimus (as Tacrolimus monohydrate) 1 mg per 1 gram Protopic 0.1% ointment | 30 gram [PoM] £21.60 DT price = £21.60 | 60 gram [PoM] £39.40 DT price = £39.40

RETINOID AND RELATED DRUGS

Acitretin

- **DRUG ACTION** Acitretin is a metabolite of etretinate.

- **INDICATIONS AND DOSE**

Severe extensive psoriasis resistant to other forms of therapy (under expert supervision) | Palmoplantar pustular psoriasis (under expert supervision) | Severe congenital ichthyosis (under expert supervision)

- ▶ **BY MOUTH**

- ▶ Child 1 month–11 years: 0.5 mg/kg once daily; increased if necessary to 1 mg/kg once daily, to be taken with food or milk, careful monitoring of musculoskeletal development required; maximum 35 mg per day
- ▶ Child 12–17 years: Initially 25–30 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily, increased to up to 75 mg daily, dose only increased to 75 mg daily for short periods in psoriasis

Severe Darier's disease (keratosis follicularis) (under expert supervision)

- ▶ **BY MOUTH**

- ▶ Child 1 month–11 years: 0.5 mg/kg once daily; increased if necessary to 1 mg/kg once daily, to be taken with food or milk, careful monitoring of musculoskeletal development required; maximum 35 mg per day
- ▶ Child 12–17 years: Initially 10 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily

Harlequin ichthyosis (under expert supervision)

- ▶ **BY MOUTH**

- ▶ Neonate: 0.5 mg/kg once daily; increased if necessary to 1 mg/kg once daily, to be taken with food or milk, careful monitoring of musculoskeletal development required.

- **CONTRA-INDICATIONS** Hyperlipidaemia

- **CAUTIONS** Avoid excessive exposure to sunlight and unsupervised use of sunlamps • diabetes (can alter glucose tolerance—initial frequent blood glucose checks) • do not donate blood during and for 2 years after stopping therapy (teratogenic risk) • in children use only in exceptional circumstances and monitor growth parameters and bone development (premature epiphyseal closure reported) • investigate atypical musculoskeletal symptoms

- **INTERACTIONS** → Appendix 1 (retinoids). Avoid concomitant use of keratolytics.

- **SIDE-EFFECTS**

- ▶ **Common or very common** Abdominal pain • abnormal hair texture • alopecia (reversible on withdrawal) • arthralgia • brittle nails • dermatitis • diarrhoea • dryness and inflammation of mucous membranes • dryness of conjunctiva (causing conjunctivitis and decreased tolerance to contact lenses) • epidermal fragility • erythema • headache • myalgia • nausea • paronychia • peripheral oedema • pruritus • reversible increase in serum-cholesterol (with high doses) • reversible increase in serum-triglyceride concentrations (with high doses) • skin exfoliation • sticky skin • vomiting
- ▶ **Uncommon** Dizziness • hepatitis • photosensitivity • visual disturbances
- ▶ **Rare** Peripheral neuropathy
- ▶ **Very rare** Benign intracranial hypertension • bone pain • exostosis • night blindness • ulcerative keratitis
- ▶ **Frequency not known** Drowsiness • dry skin • flushing • granulomatous lesions • impaired hearing • initial worsening of psoriasis • malaise • rectal haemorrhage • sweating • taste disturbance • tinnitus

SIDE-EFFECTS, FURTHER INFORMATION

- ▶ **Exostosis** Skeletal hyperostosis and extra-osseous calcification reported following long-term treatment with etretinate (of which Acitretin is a metabolite) and premature epiphyseal closure in children.
- ▶ **Benign intracranial hypertension** Discontinue if severe headache, nausea, vomiting, or visual disturbances occur.

- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used.

Pregnancy prevention In females of child-bearing potential (including those with a history of infertility), exclude pregnancy up to 3 days before treatment, every month during treatment, and every 1–3 months for 3 years after stopping treatment. Treatment should be started on day 2 or 3 of menstrual cycle. Females of child-bearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 3 years after stopping treatment. Females should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Females should be advised to seek medical attention immediately if they become pregnant during treatment or within 3 years of stopping treatment. They should also be advised to avoid alcohol during treatment and for 2 months after stopping treatment.

- **PREGNANCY** Avoid—teratogenic.

- **BREAST FEEDING** Avoid.

- **HEPATIC IMPAIRMENT** Avoid in severe impairment—risk of further impairment.

- **RENAL IMPAIRMENT** Avoid in severe impairment; increased risk of toxicity.

- **MONITORING REQUIREMENTS**

- ▶ Monitor serum-triglyceride and serum-cholesterol concentrations before treatment, 1 month after starting, then every 3 months.
- ▶ Check liver function at start, at least every 4 weeks for first 2 months and then every 3 months.

- **PRESCRIBING AND DISPENSING INFORMATION**

Prescribing for women of child-bearing potential Each prescription for acitretin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription.

- **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.

Patient advice required around conception and contraception Females of child-bearing potential must be advised on pregnancy prevention.

- **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

SALICYLIC ACID AND DERIVATIVES

Salicylic acid with zinc oxide

● INDICATIONS AND DOSE

Hyperkeratotic skin disorders

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily

- **CAUTIONS** Avoid broken skin · avoid inflamed skin

CAUTIONS, FURTHER INFORMATION

- ▶ Salicylate toxicity Salicylate toxicity may occur particularly if applied on large areas of skin or neonatal skin.
- **SIDE-EFFECTS** Excessive drying · irritation · sensitivity · systemic effects (after widespread use)
- **PRESCRIBING AND DISPENSING INFORMATION** Zinc and Salicylic Acid Paste BP is also referred to as Lassar's Paste. When prepared extemporaneously, the BP states Zinc and Salicylic Acid Paste, BP (Lassar's Paste) consists of zinc oxide 24%, salicylic acid 2%, starch 24%, white soft paraffin 50%.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: paste

VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES

Calcipotriol

● INDICATIONS AND DOSE

Plaque psoriasis

- ▶ TO THE SKIN USING OINTMENT
- ▶ Child 6–11 years: Apply twice daily, when preparations used together maximum total calcipotriol 2.5 mg in any one week (e.g. scalp solution 20 mL with ointment 30 g); maximum 50 g per week
- ▶ Child 12–17 years: Apply twice daily, when preparations used together maximum total calcipotriol 3.75 mg in any one week (e.g. scalp solution 30 mL with ointment 45 g); maximum 75 g per week

Scalp psoriasis

- ▶ TO THE SKIN USING SCALP LOTION
- ▶ Child 6–11 years (specialist use only): Apply twice daily, when preparations used together max. total calcipotriol 2.5 mg in any one week (e.g. scalp solution 20 mL with ointment 30 g); maximum 30 mL per week
- ▶ Child 12–17 years (specialist use only): Apply twice daily, when preparations used together maximum total calcipotriol 3.75 mg in any one week (e.g. scalp solution 30 mL with ointment 45 g); maximum 45 mL per week

- **UNLICENSED USE** Calcipotriol ointment and scalp solution not licensed for use in children.

- **CONTRA-INDICATIONS** Calcium metabolism disorders

- **CAUTIONS** Avoid excessive exposure to sunlight and sunlamps · avoid use on face · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)

● **SIDE-EFFECTS**

- ▶ **Common or very common** Burning · dermatitis · erythema · itching · local skin reactions · paraesthesia
- ▶ **Rare** Facial dermatitis · perioral dermatitis
- ▶ **Frequency not known** Aggravation of psoriasis · dry skin · photosensitivity
- **PREGNANCY** Manufacturers advise avoid unless essential.
- **BREAST FEEDING** No information available.

- **HEPATIC IMPAIRMENT** Manufacturers advise avoid in severe impairment.

- **RENAL IMPAIRMENT** Manufacturers advise avoid in severe impairment.

● **PATIENT AND CARER ADVICE**

Advice on application Patient information leaflet for *Dovonex*® ointment advises liberal application. However, patients should be advised of maximum recommended weekly dose.

Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

Tacalcitol

INDICATIONS AND DOSE

Plaque psoriasis

- ▶ TO THE SKIN
- ▶ Child 12–17 years: Apply once daily, preferably at bedtime, maximum 10 g ointment or 10 mL lotion daily, when lotion and ointment used together, maximum total tacalcitol 280 micrograms in any one week (e.g. lotion 30 mL with ointment 40 g)

- **CONTRA-INDICATIONS** Calcium metabolism disorders

- **CAUTIONS** Avoid eyes · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia) · if used in conjunction with UV treatment

CAUTIONS, FURTHER INFORMATION

- ▶ UV treatment If tacalcitol is used in conjunction with UV treatment, UV radiation should be given in the morning and tacalcitol applied at bedtime.
- **SIDE-EFFECTS**
 - ▶ Common or very common Burning · dermatitis · erythema · itching · local skin reactions · paraesthesia
 - ▶ Frequency not known Aggravation of psoriasis
- **PREGNANCY** Manufacturer advises avoid unless no safer alternative—no information available.
- **BREAST FEEDING** Manufacturer advises avoid application to breast area; no information available on presence in milk.
- **RENAL IMPAIRMENT** Monitor serum calcium concentration.
- **MONITORING REQUIREMENTS** Monitor serum calcium if risk of hypercalcaemia.
- **PATIENT AND CARER ADVICE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Perspiration

Antiperspirants

Overview

Aluminium chloride hexahydrate p. 706 is a potent antiperspirant used in the treatment of axillary, palmar, and plantar hyperhidrosis. Aluminium salts are also incorporated in preparations used for minor fungal skin infections associated with hyperhidrosis.

In more severe cases specialists use tap water or glycopyrronium bromide below (as a 0.05% solution) in the iontophoretic treatment of hyperhidrosis of palms and soles.

Botox® contains botulinum toxin type A complex p. 243 and is available for use intradermally for severe hyperhidrosis of the axillae unresponsive to topical antiperspirant or other antihidrotic treatment; intradermal treatment is unlikely to be tolerated by most children and should be administered under hospital specialist supervision.

4.1 Hyperhidrosis

ANTIMUSCARINICS

Glycopyrronium bromide

(Glycopyrrolate)

INDICATIONS AND DOSE

Iontophoretic treatment of hyperhidrosis

- ▶ TO THE SKIN
- ▶ Child: Only 1 site to be treated at a time, maximum 2 sites treated in any 24 hours, treatment not to be repeated within 7 days (consult product literature)

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CONTRA-INDICATIONS** Infections affecting the treatment site

CONTRA-INDICATIONS, FURTHER INFORMATION

Contra-indications applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

CAUTIONS

CAUTIONS, FURTHER INFORMATION

Cautions applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

- **SIDE-EFFECTS** Tingling at administration site

SIDE-EFFECTS, FURTHER INFORMATION

The possibility of systemic side-effects should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for iontophoresis

- ▶ **Glycopyrronium bromide (Non-proprietary)**
Glycopyrronium bromide 1 mg per 1 mg Glycopyrronium bromide powder for solution for iontophoresis | 3 gram [PoM] £319.92

DERMATOLOGICAL DRUGS > ASTRINGENTS

Aluminium chloride hexahydrate

● INDICATIONS AND DOSE

Hyperhidrosis affecting axillae, hands or feet

► TO THE SKIN

- Child: Apply once daily, apply liquid formulation at night to dry skin, wash off the following morning, reduce frequency as condition improves—do not bathe immediately before use

Hyperhidrosis | Bromidrosis | Intertrigo | Prevention of tinea pedis and related conditions

► TO THE SKIN

- Child: Apply powder to dry skin

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes · avoid use on broken or irritated skin · do not shave axillae or use depilatories within 12 hours of application
- **SIDE-EFFECTS** Skin irritation
- **PATIENT AND CARER ADVICE** Avoid contact with clothing.
- **EXCEPTIONS TO LEGAL CATEGORY** A 30 mL pack of aluminium chloride hexahydrate 20% is on sale to the public.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

5 Photodamage

Photodamage

Actinic keratoses occur very rarely in healthy children; actinic cheilitis may occur on the lips of adolescents following excessive sun exposure.

Diclofenac gel (Solaraze®) and topical preparations of fluorouracil are licensed for the treatment of actinic keratoses but they are not licensed for use in children.

In children with photosensitivity disorders, such as erythropoietic protoporphyria, specialists may use betacarotene below, mepacrine, chloroquine or hydroxychloroquine to reduce skin reactions.

VITAMINS AND TRACE ELEMENTS > VITAMIN A

Betacarotene

- **DRUG ACTION** Betacarotene is a precursor to vitamin A.

● INDICATIONS AND DOSE

Management of photosensitivity reactions in erythropoietic protoporphyria (specialist use only)

► BY MOUTH

- Child 1–4 years: 60–90 mg daily, to be given as a single dose or in divided doses
- Child 5–8 years: 90–120 mg daily, to be given as a single dose or in divided doses
- Child 9–11 years: 120–150 mg daily, to be given as a single dose or in divided doses
- Child 12–15 years: 150–180 mg daily, to be given as a single dose or in divided doses
- Child 16–17 years: 180–300 mg daily, to be given as a single dose or in divided doses

- **UNLICENSED USE** Not licensed.

- **CAUTIONS** Monitor vitamin A intake

CAUTIONS, FURTHER INFORMATION

Protection not total—avoid strong sunlight and use sunscreen preparations; generally 2–6 weeks of treatment (resulting in yellow coloration of palms and soles) necessary before increasing exposure to sunlight; dose should be adjusted according to level of exposure to sunlight.

- **INTERACTIONS** → Appendix 1 (vitamins).

- **SIDE-EFFECTS**

- **Rare** Arthralgia · bruising
- **Frequency not known** Loose stools · yellow discoloration of skin

- **PREGNANCY** Partially converted to vitamin A, but does not give rise to abnormally high serum concentration; manufacturer advises use only if potential benefit outweighs risk.

- **BREAST FEEDING** Use with caution—present in milk.

- **HEPATIC IMPAIRMENT** Avoid.

- **RENAL IMPAIRMENT** Use with caution.

● MEDICINAL FORMS

6 Pruritus

Topical local antipruritics

Overview

Pruritus may be caused by systemic disease (such as obstructive jaundice, endocrine disease, chronic renal disease, iron deficiency, and certain malignant diseases), skin disease (such as eczema, psoriasis, urticaria, and scabies), drug hypersensitivity, or as a side-effect of opioid analgesics. Where possible, the underlying cause should be treated. Local antipruritics have a role in the treatment of pruritus in palliative care. Pruritus caused by cholestasis generally requires a bile acid sequestrant.

An **emollient** may be of value where the pruritus is associated with dry skin. Preparations containing calamine or crotamiton below are sometimes used but are of uncertain value.

A topical preparation containing doxepin 5% below is licensed for the relief of pruritus in eczema in children over 12 years; it can cause drowsiness and there may be a risk of sensitisation.

Topical antihistamines and local anaesthetics are only marginally effective and occasionally cause sensitisation. For *insect stings* and *insect bites*, a short course of a topical corticosteroid is appropriate. Short-term treatment with a **sedating antihistamine** may help in insect stings and in intractable where sedation is desirable. Calamine preparations are of little value for the treatment of insect stings or bites.

In *pruritus ani*, the underlying cause such as faecal soiling, eczema, psoriasis, or helminth infection should be treated.

Drugs used for Pruritus not listed below Alimemazine tartrate, p. 167 · Cetirizine hydrochloride, p. 164 · Chlorphenamine maleate, p. 168 · Hydroxyzine hydrochloride, p. 169 · Levocetirizine hydrochloride, p. 166

ANTIPRURITICS

Calamine with zinc oxide

● INDICATIONS AND DOSE

Pruritus

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)

● **CONTRA-INDICATIONS** Avoid application of preparations containing zinc oxide prior to x-ray (zinc oxide may affect outcome of x-ray)

● **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

▶ Calamine with zinc oxide (Non-proprietary)

Phenoxethanol 5 mg per 1 gram, Zinc oxide 30 mg per 1 gram, Calamine 40 mg per 1 gram, Cetomacrogol emulsifying wax 50 mg per 1 gram, Self-emulsifying glyceryl monostearate 50 mg per 1 gram, Liquid paraffin 200 mg per 1 gram Aqueous calamine cream | 100 gram [GSL] £1.29 DT price = £1.29

▶ Cala Soothe (Ennogen Healthcare Ltd)

Phenoxethanol 5 mg per 1 gram, Zinc oxide 30 mg per 1 gram, Calamine 40 mg per 1 gram, Cetomacrogol emulsifying wax 50 mg per 1 gram, Self-emulsifying glyceryl monostearate 50 mg per 1 gram, Liquid paraffin 200 mg per 1 gram Cala Soothe cream | 100 ml £18.80

Crotamiton

● INDICATIONS AND DOSE

Pruritus (including pruritus after scabies)

▶ TO THE SKIN

- ▶ Child 1 month–2 years (on doctor's advice only): Apply once daily
- ▶ Child 3–17 years: Apply 2–3 times a day

● **CONTRA-INDICATIONS** Acute exudative dermatoses

● **CAUTIONS** Avoid use in buccal mucosa · avoid use near eyes · avoid use on broken skin · avoid use on very inflamed skin · use on doctor's advice for children under 3 years

● **PREGNANCY** Manufacturer advises avoid, especially during the first trimester—no information available.

● **BREAST FEEDING** No information available; avoid application to nipple area.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

EXCIPIENTS: May contain Beeswax, cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, hydroxybenzoates (parabens)

▶ Crotamiton (Non-proprietary)

Crotamiton 100 mg per 1 gram Boots Derma Care Itch Relief cream | 30 gram [GSL] no price available DT price = £2.50

- ▶ Brands may include Eurax

Doxepin

● INDICATIONS AND DOSE

Pruritus in eczema

▶ TO THE SKIN

- ▶ Child 12–17 years: Apply up to 3 g 3–4 times a day, apply thinly; coverage should be less than 10% of body surface area; maximum 12 g per day

● **CAUTIONS** Avoid application to large areas · cardiac arrhythmias · mania · severe heart disease · susceptibility to angle-closure glaucoma · urinary retention

● **INTERACTIONS** → Appendix 1 (antidepressants, tricyclic).

● SIDE-EFFECTS

▶ **Common or very common** Antimuscarinic effects · dizziness · drowsiness · fever · gastro-intestinal disturbances · headache · irritation · local burning · rash · stinging · tingling

● **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.

● **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe liver disease.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

Drowsiness may affect performance of skilled tasks (e.g. driving).

Effects of alcohol enhanced. A patient information leaflet should be provided.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

CAUTIONARY AND ADVISORY LABELS 2, 10

EXCIPIENTS: May contain Benzyl alcohol

► **Xepin** (Cambridge Healthcare Supplies Ltd)

Doxepin hydrochloride 50 mg per 1 gram Xepin 5% cream | 30 gram [PoM] £11.70

7 Rosacea and acne

Rosacea and Acne

Acne vulgaris

Acne vulgaris commonly affects children around puberty and occasionally affects infants. Treatment of acne should be commenced early to prevent scarring; lesions may worsen before improving. The choice of treatment depends on age, severity, and whether the acne is predominantly inflammatory or comedonal.

Mild to moderate acne is generally treated with topical preparations, such as benzoyl peroxide p. 710, azelaic acid p. 711, and retinoids.

For *moderate to severe inflammatory acne* or where topical preparations are not tolerated or are ineffective or where application to the site is difficult, systemic treatment with oral antibacterials may be effective. Co-cyprindiol (cyproterone acetate with ethinylestradiol) p. 709 has anti-androgenic properties and may be useful in young women with acne refractory to other treatments.

Severe acne, acne unresponsive to prolonged courses of oral antibacterials, acne with scarring, or acne associated with psychological problems calls for early referral to a consultant dermatologist who may prescribe oral isotretinoin p. 712.

Neonatal and infantile acne

Inflammatory papules, pustules, and occasionally comedones may develop at birth or within the first month; most neonates with acne do not require treatment. Acne developing at 3–6 months of age may be more severe and persistent; lesions are usually confined to the face. Topical preparations containing benzoyl peroxide (at the lowest strength possible to avoid irritation), adapalene p. 711, or tretinoin p. 514 may be used if treatment for infantile acne is necessary. In infants with inflammatory acne, oral erythromycin p. 310 is used because topical preparations for acne are not well tolerated. In cases of erythromycin-resistant acne, oral isotretinoin can be given on the advice of a consultant dermatologist.

Topical preparations for acne

In mild to moderate acne, comedones and inflamed lesions respond well to benzoyl peroxide or topical retinoids. Alternatively, topical application of an antibacterial such as erythromycin or clindamycin p. 710 may be effective for inflammatory acne. However, topical antibacterials are probably no more effective than benzoyl peroxide and may promote the emergence of resistant organisms. If topical preparations prove inadequate, oral preparations may be needed. The choice of product and formulation (gel, solution, lotion, or cream) is largely determined by skin type, patient preference, and previous usage of acne products.

Benzoyl peroxide and azelaic acid

Benzoyl peroxide is effective in mild to moderate acne. Both comedones and inflamed lesions respond well to benzoyl peroxide. The lower concentrations seem to be as effective as higher concentrations in reducing inflammation. It is usual to start with a lower strength and to increase the concentration of benzoyl peroxide gradually. The usefulness of benzoyl peroxide washes is limited by the short time the products are in contact with the skin. Adverse effects include local skin irritation, particularly when therapy is initiated, but the scaling and redness often subside with a reduction in benzoyl peroxide concentration, frequency, and area of application. If the acne does not respond after 2 months then use of a topical antibacterial should be considered.

Azelaic acid has antimicrobial and anticomedonal properties. It may be used as an alternative to benzoyl peroxide or to a topical retinoid for treating mild to moderate comedonal acne, particularly of the face; azelaic acid is less likely to cause local irritation than benzoyl peroxide.

Topical antibacterials for acne

In the treatment of mild to moderate inflammatory acne, topical antibacterials may be no more effective than topical benzoyl peroxide or tretinoin. Topical antibacterials are probably best reserved for children who wish to avoid oral antibacterials or who cannot tolerate them.

Topical preparations of erythromycin and clindamycin may be used to treat *inflamed lesions* in mild to moderate acne when topical benzoyl peroxide or tretinoin is ineffective or poorly tolerated. Topical benzoyl peroxide, azelaic acid, or retinoids used in combination with an antibacterial (topical or systemic) may be more effective than an antibacterial used alone. Topical antibacterials can produce mild irritation of the skin, and on rare occasions cause sensitisation; gastro-intestinal disturbances have been reported with topical clindamycin.

Antibacterial resistance of *Propionibacterium acnes* is increasing; there is cross-resistance between erythromycin and clindamycin. To avoid development of resistance:

- when possible use non-antibiotic antimicrobials (such as benzoyl peroxide or azelaic acid);
- avoid concomitant treatment with different oral and topical antibacterials;
- if a particular antibacterial is effective, use it for repeat courses if needed (short intervening courses of benzoyl peroxide or azelaic acid may eliminate any resistant *propionibacterium*);
- do not continue treatment for longer than necessary (but treatment with a topical preparation should be continued for at least 6 months).

Topical retinoids and related preparations for acne

Topical tretinoin, its isomer isotretinoin, and adapalene (a retinoid-like drug), are useful for treating comedones and inflammatory lesions in mild to moderate acne. Patients should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop.

Tretinoin can be used under specialist supervision to treat infantile acne; adapalene can also be used.

Other topical preparations for acne

A topical preparation of nicotinamide p. 714 is available for inflammatory acne.

Oral preparations for acne

Oral antibacterials for acne

Oral antibacterials may be used in *moderate to severe inflammatory acne* when topical treatment is not adequately

effective or is inappropriate. Concomitant antimicrobial treatment with topical benzoyl peroxide or azelaic acid may also be required.

Tetracyclines should not be given to children under 12 years. In children over 12 years, either oxytetracycline p. 334 or tetracycline p. 334 is usually given for acne. If there is no improvement after the first 3 months another oral antibacterial should be used. Maximum improvement usually occurs after 4 to 6 months but in more severe cases treatment may need to be continued for 2 years or longer. Doxycycline p. 332 and lymecycline p. 333 are alternatives to tetracycline in children over 12 years.

Although minocycline p. 333 is as effective as other tetracyclines for acne, it is associated with a greater risk of lupus erythematosus-like syndrome. Minocycline sometimes causes irreversible pigmentation.

Erythromycin is an alternative for the management of moderate to severe acne with inflamed lesions, but propionibacteria strains resistant to erythromycin are becoming widespread and this may explain poor response. In cases of erythromycin-resistant *P. acnes* in infants, oral isotretinoin may be used on the advice of a consultant dermatologist.

Concomitant use of different topical and systemic antibacterials is undesirable owing to the increased likelihood of the development of bacterial resistance.

Hormone treatment for acne

Co-cyprindiol (cyproterone acetate with ethinylestradiol) below contains an anti-androgen. It is no more effective than an oral broad-spectrum antibacterial but is useful in females of childbearing age who also wish to receive oral contraception.

Improvement of acne with co-cyprindiol probably occurs because of decreased sebum secretion which is under androgen control. Some females with moderately severe hirsutism may also benefit because hair growth is also androgen-dependent.

Oral retinoid for acne

The retinoid isotretinoin p. 712 reduces sebum secretion. It is used for the systemic treatment of nodulo-cystic and conglobate acne, severe acne, acne with scarring, or for acne which has not responded to an adequate course of a systemic antibacterial. Isotretinoin is used for the treatment of severe infantile acne resistant to erythromycin p. 310.

Isotretinoin is a toxic drug that should be prescribed **only** by, or under the supervision of, a consultant dermatologist. It is given for at least 16 weeks; repeat courses are not normally required. The drug is **teratogenic** and **must not** be given to females of child-bearing age unless they practise effective contraception (oral progestogen-only contraceptives not considered effective) and then only after detailed assessment and explanation by the physician. They must also be registered with a pregnancy prevention programme.

Although a causal link between isotretinoin use and psychiatric changes (including suicidal ideation) has not been established, the possibility should be considered before initiating treatment; if psychiatric changes occur during treatment, isotretinoin should be stopped, the prescriber informed, and specialist psychiatric advice should be sought.

Rosacea

The adult form of rosacea rarely occurs in children. Persistent or repeated use of potent topical corticosteroids may cause periorificial rosacea (steroid acne). The pustules and papules of rosacea may be treated for at least 6 weeks with a topical metronidazole preparation p. 676, or a systemic antibacterial such as erythromycin, or for a child over 12 years, oxytetracycline p. 334. Tetracyclines are **contra-indicated** in children under 12 years of age.

7.1 Acne

ANTI-ANDROGENS

Co-cyprindiol

• INDICATIONS AND DOSE

Moderate to severe acne in females of child-bearing age refractory to topical therapy or oral antibacterials |

Moderately severe hirsutism

► BY MOUTH

- Females of childbearing potential: 1 tablet daily for 21 days, to be started on day 1 of menstrual cycle; subsequent courses repeated after a 7-day interval (during which withdrawal bleeding occurs), time to symptom remission, at least 3 months; review need for treatment regularly

- **CONTRA-INDICATIONS** Acute porphyria · gallstones · heart disease associated with pulmonary hypertension or risk of embolus · history during pregnancy of cholestatic jaundice · history during pregnancy of chorea · history during pregnancy of pemphigoid gestationis · history during pregnancy of pruritus · history of breast cancer but can be used after 5 years if no evidence of disease and non-hormonal methods unacceptable · history of haemolytic uraemic syndrome · migraine with aura · personal history of venous or arterial thrombosis · sclerosing treatment for varicose veins · severe or multiple risk factors for arterial disease or for venous thromboembolism · systemic lupus erythematosus with (or unknown) antiphospholipid antibodies · transient cerebral ischaemic attacks without headaches · undiagnosed vaginal bleeding
- **CAUTIONS** Active trophoblastic disease (until return to normal of urine- and plasma-gonadotrophin concentration)—seek specialist advice · arterial disease · gene mutations associated with breast cancer (e.g. BRCA 1) · history of severe depression especially if induced by hormonal contraceptive · hyperprolactinaemia—seek specialist advice · inflammatory bowel disease including Crohn's disease · migraine · personal or family history of hypertriglyceridaemia (increased risk of pancreatitis) · risk factors for venous thromboembolism · sickle-cell disease · undiagnosed breast mass

CAUTIONS, FURTHER INFORMATION

- Venous thromboembolism There is an increased risk of venous thromboembolism in women taking co-cyprindiol, particularly during the first year of use. The incidence of venous thromboembolism is 1.5–2 times higher in women using co-cyprindiol than in women using combined oral contraceptives containing levonorgestrel, but the risk may be similar to that associated with use of combined oral contraceptives containing third generation progestogens (desogestrel and gestodene) or drospirenone. Women requiring co-cyprindiol may have an inherently increased risk of cardiovascular disease.

- **INTERACTIONS** → Appendix 1 (oestrogens).

• SIDE-EFFECTS

- **Rare** Rarely gallstones · systemic lupus erythematosus
- **Very rare** Photosensitivity
- **Frequency not known** Abdominal cramps · absence of withdrawal bleeding · amenorrhoea after discontinuation · breast enlargement · breast secretion · breast tenderness · cervical erosion · changes in libido · changes in lipid metabolism · changes in vaginal discharge · chloasma · chorea · contact lenses may irritate · depression · fluid retention · headache · hepatic tumours · hypertension · irritability · leg cramps · liver impairment · nausea · nervousness · reduced menstrual loss · skin reactions · thrombosis (more common when factor V Leiden present or

in blood groups A, B, and AB · visual disturbances · vomiting · ‘spotting’ in early cycles

- **PREGNANCY** Avoid—risk of feminisation of male fetus with cyproterone.
- **BREAST FEEDING** Manufacturer advises avoid; possibility of anti-androgen effects in neonate with cyproterone.
- **HEPATIC IMPAIRMENT** Avoid in active liver disease including disorders of hepatic excretion (e.g. Dubin-Johnson or Rotor syndromes), infective hepatitis (until liver function returns to normal), and liver tumours.
- **PRESCRIBING AND DISPENSING INFORMATION** A mixture of cyproterone acetate and ethinylestradiol in the mass proportions 2000 parts to 35 parts, respectively.

Isotretinoin

● INDICATIONS AND DOSE

Topical treatment of mild to moderate acne

► TO THE SKIN

- Child: Apply 1–2 times a day, to be applied thinly

Severe acne (under expert supervision) | Acne which is associated with psychological problems (under expert supervision) | Acne which has not responded to an adequate course of a systemic antibacterial (under expert supervision) | Acne with scarring (under expert supervision) | Systemic treatment of nodulo-cystic and conglobate acne (under expert supervision)

► BY MOUTH

- Child 12–17 years: Initially 500 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily for 16–24 weeks, repeat treatment course after a period of at least 8 weeks if relapse after first course; maximum 150 mg/kg per course

Severe infantile acne (under expert supervision)

► BY MOUTH

- Child 1 month–1 year: Initially 200 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily for 16–24 weeks; maximum 150 mg/kg per course

● UNLICENSED USE

- With oral use Not licensed for use in infantile acne.

● CONTRA-INDICATIONS

- With oral use Hyperlipidaemia · hypervitaminosis A
- With topical use Perioral dermatitis · rosacea

● CAUTIONS

- With oral use Avoid blood donation during treatment and for at least 1 month after treatment · diabetes · dry eye syndrome (associated with risk of keratitis) · history of depression · monitor for depression
- With topical use Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · alternating a preparation that causes peeling with a topical retinoid may give rise to contact dermatitis (reduce frequency of retinoid application) · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid in severe acne involving large areas · avoid use of topical retinoids with abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive

areas such as the neck · personal or familial history of non-melanoma skin cancer

● INTERACTIONS

- With oral use Appendix 1 (retinoids). Avoid keratolytics.

● SIDE-EFFECTS

► Common or very common

- With oral use Anaemia · arthralgia · dryness of eyes (with blepharitis and conjunctivitis) · dryness of lips (sometimes cheilitis) · dryness of nasal mucosa (with epistaxis) · dryness of pharyngeal mucosa (with hoarseness) · dryness of skin (with dermatitis, scaling, thinning, erythema, pruritus) · epidermal fragility (trauma may cause blistering) · haematuria · headache · myalgia · neutropenia · proteinuria · raised blood-glucose concentration · raised plasma-triglyceride concentration · raised serum-cholesterol concentration (with reduced high-density lipoprotein concentration) · raised serum-transaminase concentration · thrombocytopenia · thrombocytosis

► Rare

- With oral use Aggressive behaviour · alopecia · anxiety · depression · mood changes · skin reactions

► Very rare

- With oral use Acne fulminans · allergic vasculitis · arthritis · benign intracranial hypertension · blurred vision · bone changes following long-term administration · calcification of tendons and ligaments following long-term administration · cataracts · colour blindness · convulsions · corneal opacities · decreased night vision · decreased tolerance to contact lenses · diabetes mellitus · dizziness · drowsiness · early epiphyseal closure following long-term administration · exacerbation of acne · gastrointestinal haemorrhage · glomerulonephritis · Gram-positive infections of skin and mucous membranes · granulomatous lesions · haemorrhagic diarrhoea · hepatitis · hirsutism · hyperuricaemia · impaired hearing · increased sweating · inflammatory bowel disease · keratitis · lymphadenopathy · malaise · nail dystrophy · nausea · papilloedema · paronychia · photophobia · photosensitivity · psychosis · raised serum-creatinine kinase concentration · reduced bone density following long-term administration · skeletal hyperostosis following long-term administration · skin hyperpigmentation · suicidal ideation · tendinitis · visual disturbances

► Frequency not known

- With oral use Stevens-Johnson syndrome · toxic epidermal necrolysis
- With topical use Blistering of skin · burning · crusting of skin · dry or peeling skin · erythema · eye irritation · increased sensitivity to UVB light or sunlight · oedema · pruritus · stinging

SIDE-EFFECTS, FURTHER INFORMATION

- Management of side-effects Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

Psychiatric side-effects require expert referral.

Discontinue treatment if skin peeling severe or haemorrhagic diarrhoea develops.

Visual disturbances require expert referral and possible withdrawal.

● CONCEPTION AND CONTRACEPTION

Pregnancy prevention

- With oral use Effective contraception must be used. In women of child-bearing potential, exclude pregnancy up to 3 days before treatment (start treatment on day 2 or 3 of menstrual cycle), every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 5 weeks after stopping treatment—perform pregnancy test in the first 3 days of the menstrual cycle. Women must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. Women should be advised to use at least 1 method of

contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone, but can be used in conjunction with other contraceptive methods. Each prescription for isotretinoin should be limited to a supply of up to 30 days' treatment and dispensed within 7 days of the date stated on the prescription; repeat prescriptions or faxed prescriptions are not acceptable. Women should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- ▶ With topical use Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).

● **PREGNANCY** Contra-indicated in pregnancy (teratogenic).

● **BREAST FEEDING** Avoid.

● **HEPATIC IMPAIRMENT**

- ▶ With oral use Avoid—further impairment may occur.

● **RENAL IMPAIRMENT**

- ▶ With oral use In severe impairment, reduce initial dose and increase gradually, if necessary, up to 1 mg/kg daily as tolerated.

● **MONITORING REQUIREMENTS**

- ▶ With oral use Measure hepatic function and serum lipids before treatment, 1 month after starting and then every 3 months (reduce dose or discontinue if transaminase or serum lipids persistently raised).

● **PRESCRIBING AND DISPENSING INFORMATION** Isotretinoin is an isomer of tretinoin.

● **PATIENT AND CARER ADVICE**

- ▶ With oral use Warn patient to avoid wax epilation (risk of epidermal stripping), dermabrasion, and laser skin treatments (risk of scarring) during treatment and for at least 6 months after stopping; patient should avoid exposure to UV light (including sunlight) and use sunscreen and emollient (including lip balm) preparations from the start of treatment.
- ▶ With oral use Patients and carers should be told how to recognise signs and symptoms of psychiatric disorders such as depression, anxiety, and rarely suicidal thoughts.
- ▶ With topical use Patients should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

Tretinoin with clindamycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, tretinoin p. 514, clindamycin p. 710.

● INDICATIONS AND DOSE

Facial acne

▶ TO THE SKIN

▶ Child 12–17 years: Apply daily, (to be applied thinly at bedtime)

- **CONTRA-INDICATIONS** Perioral dermatitis · personal or familial history of non-melanoma skin cancer · rosacea
- **CAUTIONS** Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · alternating a preparation that causes peeling with a topical retinoid may give rise to contact dermatitis (reduce frequency of retinoid application) · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid in severe acne involving large areas · avoid use of topical retinoids with abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck
- **SIDE-EFFECTS** Blistering of skin · burning · crusting of skin · dry or peeling skin (discontinue if severe) · erythema · eye irritation · increased sensitivity to UVB light or sunlight · oedema · pruritus · stinging · temporary changes of skin pigmentation
- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).
- **PREGNANCY** Contra-indicated in pregnancy.
- **BREAST FEEDING** Amount of drug in milk after topical application probably too small to be harmful; ensure infant does not come in contact with treated areas.
- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used. Patients and carers should be warned that some redness and skin peeling can

occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop.

8 Scalp and hair conditions

Scalp and hair conditions

Overview

The detergent action of shampoo removes grease (sebum) from hair. Prepubertal children produce very little grease and require shampoo less frequently than adults. Shampoos can be used as vehicles for medicinal products, but their usefulness is limited by the short time the product is in contact with the scalp and by their irritant nature.

Oils and ointments are very useful for scaly, dry scalp conditions; if a greasy appearance is cosmetically unacceptable, the preparation may be applied at night and washed out in the morning. Alcohol-based lotions are rarely used in children; alcohol causes painful stinging on broken skin and the fumes may exacerbate asthma.

Itchy, inflammatory, eczematous scalp conditions may be relieved by a simple emollient oil such as **olive oil** or **coconut oil** (arachis oil (ground nut oil, peanut oil) is best avoided in children under 5 years). In more severe cases a topical **corticosteroid** may be required. Preparations containing **coal tar** are used for the common scaly scalp conditions of childhood including seborrhoeic dermatitis, dandruff (a mild form of seborrhoeic dermatitis), and psoriasis; salicylic acid is used as a keratolytic in some scalp preparations.

Shampoos containing antimicrobials such as selenium p. 715 or ketoconazole p. 678 are used for seborrhoeic dermatitis and dandruff in which yeast infection has been implicated, and for tinea capitis (ringworm of the scalp).

Bacterial infection affecting the scalp (usually secondary to eczema, head lice, or ringworm) may be treated with shampoos containing antimicrobials such as **pyrithione zinc**, cetrimide, or povidone-iodine p. 633

In neonates and infants, *cradle cap* (which is also a form of seborrhoeic eczema) can be treated by massaging **coconut oil** or **olive oil** into the scalp; a bland emollient such as **emulsifying ointment** can be rubbed onto the affected area once or twice daily before bathing and a mild shampoo used.

ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

Cetrimide with undecenoic acid

● INDICATIONS AND DOSE

Scalp psoriasis | Seborrhoeic dermatitis | Dandruff

► TO THE SKIN

► Child: Apply 3 times a week for 1 week, then apply twice weekly

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Shampoo

► **Ceanel** (Alliance Pharmaceuticals Ltd)

Undecenoic acid 10 mg per 1 ml, Phenylethyl alcohol 75 mg per 1 ml, Cetrimide 100 mg per 1 ml | Ceanel Concentrate shampoo | 150 ml [P] £3.40 | 500 ml [P] £9.80

ANTISEPTICS AND DISINFECTANTS > OTHER

Benzalkonium chloride

● INDICATIONS AND DOSE

Seborrhoeic scalp conditions associated with dandruff and scaling

► TO THE SKIN

► Child: Apply as required

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Shampoo

► **Dermax** (Dermal Laboratories Ltd)

Benzalkonium chloride 5 mg per 1 ml | Dermax Therapeutic 0.5% shampoo | 250 ml [P] £5.69

VITAMINS AND TRACE ELEMENTS

Selenium

● INDICATIONS AND DOSE

Seborrhoeic dermatitis | Dandruff

► TO THE SKIN USING SHAMPOO

► Child 5–17 years: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

Pityriasis versicolor

► TO THE SKIN USING SHAMPOO

► Child 5–17 years: Apply once daily for 7 days, apply to the affected area and leave on for 10 minutes before rinsing off. The course may be repeated if necessary. Diluting with a small amount of water prior to application can reduce irritation

● **UNLICENSED USE** The use of selenium sulfide shampoo as a lotion for the treatment of pityriasis (tinea) versicolor is an unlicensed indication.

● **PATIENT AND CARER ADVICE** Avoid using 48 hours before or after applying hair colouring, straightening or waving preparations.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

9 Skin cleansers, antiseptics and desloughing agents

Skin cleansers, antiseptics and desloughing agents

Skin cleansers and antiseptics

Soap or detergent is used with water to cleanse intact skin but they can irritate infantile skin; emollient preparations such as aqueous cream or emulsifying ointment can be used in place of soap or detergent for cleansing dry or irritated skin.

An antiseptic is used for skin that is infected or that is susceptible to recurrent infection. Detergent preparations containing chlorhexidine p. 717 or povidone-iodine p. 716, which should be thoroughly rinsed off, are used. Emollients may also contain antiseptics.

Antiseptics such as chlorhexidine or povidone-iodine are used on intact skin before surgical procedures; their antiseptic effect is enhanced by an alcoholic solvent. Antiseptic solutions containing cetrimide can be used if a detergent effect is also required.

Preparations containing alcohol, and regular use of povidone-iodine, should be avoided on neonatal skin.

Hydrogen peroxide p. 718, an oxidising agent, is available as a cream and can be used for superficial bacterial skin infections.

For irrigating ulcers or wounds, lukewarm sterile sodium chloride 0.9% solution p. 718 is used but tap water is often appropriate.

Potassium permanganate p. 716 solution 1 in 10 000, a mild antiseptic with astringent properties, can be used as a soak for exudative eczematous areas; treatment should be stopped when the skin becomes dry.

Desloughing agents

Alginate, hydrogel, and hydrocolloid dressings are effective in wound debridement. Sterile larvae (maggots) (available from BioMonde) are also used for managing sloughing wounds and are prescribable on the NHS.

Desloughing solutions and creams are of little clinical value. Substances applied to an open area are easily absorbed and perilesional skin is easily sensitised.

ANTISEPTICS AND DISINFECTANTS

Potassium permanganate

● INDICATIONS AND DOSE

Cleansing and deodorising suppurating eczematous reactions and wounds

- ▶ TO THE SKIN
- ▶ Child: For wet dressings or baths, use approximately 0.01% (1 in 10 000) solution

- **CAUTIONS** Irritant to mucous membranes

- **DIRECTIONS FOR ADMINISTRATION** Potassium permanganate 0.1% solution to be diluted 1 in 10 to provide a 0.01% (1 in 10 000) solution. With potassium permanganate tablets for solution, 1 tablet dissolved in 4 litres of water provides a 0.01% (1 in 10 000) solution.

- **PATIENT AND CARER ADVICE** Can stain clothing, skin and nails (especially with prolonged use).

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

Tablet for cutaneous solution

ANTISEPTICS AND DISINFECTANTS > ALCOHOL DISINFECTANTS

Alcohol

(Industrial methylated spirit)

● INDICATIONS AND DOSE

Skin preparation before injection

- ▶ TO THE SKIN
- ▶ Child: Apply as required

- **CONTRA-INDICATIONS** Neonates

- **CAUTIONS** Avoid broken skin · flammable · patients have suffered severe burns when diathermy has been preceded by application of alcoholic skin disinfectants

- **INTERACTIONS** For the interactions following the *ingestion* of alcohol, see Appendix 1 (alcohol).

● **SIDE-EFFECTS****Overdose**

Features of acute alcohol intoxication include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis.

For details on the management of poisoning, see Alcohol, under Emergency treatment of poisoning p. 786.

- **PRESCRIBING AND DISPENSING INFORMATION** Industrial methylated spirits defined by the BP as a mixture of 19 volumes of ethyl alcohol of an appropriate strength with 1 volume of approved wood naphtha.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Liquid

- ▶ **Alcohol (Non-proprietary)**

Wood naphtha 50 ml per 1 litre, Ethanol 950 ml per 1 litre Industrial methylated spirit 95% | 600 ml £5.04 | 1000 ml £4.42–£6.02

Industrial methylated spirit 70% | 600 ml £6.00

Chlorhexidine with cetrimide

The properties listed below are those particular to the combination only. For the properties of the components please consider, chlorhexidine p. 717.

● INDICATIONS AND DOSE

Skin disinfection such as wound cleansing and obstetrics

- ▶ TO THE SKIN
- ▶ Child: To be used undiluted

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Liquid

- ▶ **Savlon disinfectant** (Novartis Consumer Health UK Ltd)

Chlorhexidine gluconate 3 mg per 1 ml, Cetrimide 30 mg per 1 ml Savlon disinfectant liquid | 500 ml £1.32

- ▶ **Sterets Tisept** (Molnlycke Health Care Ltd)

Chlorhexidine gluconate 150 microgram per 1 ml, Cetrimide 1.5 mg per 1 ml Sterets Tisept solution 25ml sachets | 25 sachet [P] £5.33
 Sterets Tisept solution 100ml sachets | 10 sachet [P] £6.85

Cream

- ▶ **Chlorhexidine with cetrimide (Non-proprietary)**

Chlorhexidine gluconate 1 mg per 1 gram, Cetrimide 5 mg per 1 gram Savlon antiseptic cream | 15 gram [GSL] £0.86 | 30 gram [GSL] £1.14 | 60 gram [GSL] £1.82 | 100 gram [GSL] £2.65

Irrigation solution

- ▶ **Chlorhexidine with cetrimide (Non-proprietary)**

Chlorhexidine acetate 150 microgram per 1 ml, Cetrimide 1.5 mg per 1 ml Chlorhexidine acetate 0.015% / Cetrimide 0.15% irrigation solution 1litre bottles | 1 bottle [P] no price available

Diethyl phthalate with methyl salicylate

● INDICATIONS AND DOSE

Skin preparation before injection

- ▶ TO THE SKIN
- ▶ Child: Apply to the area to be disinfected

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Liquid

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Diethyl phthalate with methyl salicylate (Non-proprietary)**

Methyl salicylate 5 ml per 1 litre, Diethyl phthalate 20 ml per 1 litre, Castor oil 25 ml per 1 litre, Industrial methylated spirit 950 ml per 1 litre Surgical spirit | 200 ml [GSL] £1.06–£1.11 DT price = £1.11 | 500 ml [GSL] £1.95 | 1000 ml [GSL] £3.29

Hydrogen peroxide

- **DRUG ACTION** Hydrogen peroxide is an oxidising agent.

● INDICATIONS AND DOSE

CRYSTACIDE®

Superficial bacterial skin infection

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day for up to 3 weeks

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Avoid on eyes • avoid on healthy skin • incompatible with products containing iodine or potassium permanganate

- **HANDLING AND STORAGE** Hydrogen peroxide bleaches fabric.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

EXCIPIENTS: May contain Edetic acid (edta), propylene glycol

- ▶ **Crystacide** (Derma UK Ltd)

Hydrogen peroxide 10 mg per 1 gram Crystacide 1% cream | 25 gram [P] £8.07 DT price = £8.07 | 40 gram [P] £11.62

Proflavine

● INDICATIONS AND DOSE

Infected wounds | Infected burns

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)

- **PATIENT AND CARER ADVICE** Stains clothing.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

Irrigation solutions

● IRRIGATION SOLUTIONS

Flowfusor sodium chloride 0.9% irrigation solution 120ml bottles (Fresenius Kabi Ltd)

Sodium chloride 9 mg per 1 ml 1 bottle • NHS indicative price = £1.53 • Drug Tariff (Part IXa)

Irriclen sodium chloride 0.9% irrigation solution aerosol spray (ConvaTec Ltd)

Sodium chloride 9 mg per 1 ml 240 ml • NHS indicative price = £3.50 • Drug Tariff (Part IXa)

Normasol sodium chloride 0.9% irrigation solution 100ml sachets (Molnlycke Health Care Ltd)

Sodium chloride 9 mg per 1 ml 10 unit dose • NHS indicative price = £7.83 • Drug Tariff (Part IXa)

Normasol sodium chloride 0.9% irrigation solution 25ml sachets (Molnlycke Health Care Ltd)

Sodium chloride 9 mg per 1 ml 25 unit dose • NHS indicative price = £6.42 • Drug Tariff (Part IXa)

Sodium chloride 0.9% irrigation solution 20ml Clinipod unit dose (Mayors Healthcare Ltd)

Sodium chloride 9 mg per 1 ml 25 unit dose • NHS indicative price = £4.80 • Drug Tariff (Part IXa)

Sodium chloride 0.9% irrigation solution 20ml ISO-POD unit dose (St Georges Medical Ltd)

Sodium chloride 9 mg per 1 ml 25 unit dose • NHS indicative price = £4.95 • Drug Tariff (Part IXa)

Sodium chloride 0.9% irrigation solution 20ml Irripod unit dose (C D Medical Ltd)

Sodium chloride 9 mg per 1 ml 25 unit dose • NHS indicative price = £5.84 • Drug Tariff (Part IXa)

Sodium chloride 9 mg per 1 ml 25 unit dose • NHS indicative price = £5.50 • Drug Tariff (Part IXa)

Stericlenz sodium chloride 0.9% irrigation solution aerosol spray (C D Medical Ltd)

Sodium chloride 9 mg per 1 ml 100 ml • NHS indicative price = £2.07 • Drug Tariff (Part IXa) **240 ml** • NHS indicative price = £3.15 • Drug Tariff (Part IXa)

9.1 Minor cuts and abrasions

Minor cuts and abrasions

Management

Many preparations traditionally used to manage minor burns, and abrasions have fallen out of favour. Preparations containing camphor and sulfonamides should be avoided. Preparations such as magnesium sulfate paste are now rarely used to treat carbuncles and boils as these are best treated with antibiotics.

Cetrimide is used to treat minor cuts and abrasions and proflavine p. 718 may be used to treat infected wounds or burns, but its use has now been largely superseded by other antiseptics or suitable antibacterials. The effervescent effect of hydrogen peroxide p. 718 is used to clean minor cuts and abrasions.

Flexible colloidon (see castor oil with collodion and colophony below) may be used to seal minor cuts and wounds that have partially healed; skin tissue adhesives are used similarly, and also for additional suture support.

DERMATOLOGICAL DRUGS > COLLODIONS

Castor oil with collodion and colophony

• INDICATIONS AND DOSE

Used to seal minor cuts and wounds that have partially healed

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if patient has an allergy to colophony in elastic adhesive plasters and tape.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Liquid

- ▶ **Castor oil with collodion and colophony (Non-proprietary)**
Castor oil 25 mg per 1 ml, Collodion methylated 950 microlitre per 1 ml, Colophony 25 mg per 1 ml Flexible collodion methylated | 100 ml £13.54 | 500 ml £27.52

Skin adhesives

• SKIN ADHESIVES

Derma+Flex skin adhesive (Chemence Ltd)

.5 ml • NHS indicative price = £5.36 • Drug Tariff (Part IXa)

Dermabond ProPen skin adhesive (Ethicon Ltd)

.5 ml • NHS indicative price = £19.26 • Drug Tariff (Part IXa)

.5 gram • NHS indicative price = £6.50 • Drug Tariff (Part IXa)

LiquiBand flow control tissue adhesive (MedLogic Global Ltd)

.5 gram • NHS indicative price = £5.50 • Drug Tariff (Part IXa)

LiquiBand tissue adhesive (MedLogic Global Ltd)

.5 gram • NHS indicative price = £5.50 • Drug Tariff (Part IXa)

10 Skin disfigurement

Camouflagers

Overview

Disfigurement of the skin can be very distressing to patients and may have a marked psychological effect. In skilled hands, or with experience, camouflage cosmetics can be very effective in concealing scars and birthmarks. The depigmented patches in vitiligo are also very disfiguring and camouflage creams are of great cosmetic value.

Opaque cover foundation or cream is used to mask skin pigment abnormalities; careful application using a combination of dark- and light-coloured cover creams set with powder helps to minimise the appearance of skin deformities.

Borderline substances

The preparations marked 'ACBS' can be prescribed on the NHS for postoperative scars and other deformities and as adjunctive therapy in the relief of emotional disturbances due to disfiguring skin disease, such as vitiligo.

Camouflages

• CAMOUFLAGES

Covermark classic foundation (Derma UK Ltd)
15 ml (ACBS) • NHS indicative price = £11.86

Covermark finishing powder (Derma UK Ltd)
25 gram (ACBS) • NHS indicative price = £11.86

Dermacolor camouflage creme (Charles H Fox Ltd)

indicative price = £33.3570 gram (ACBS) • NHS indicative price = £42.10

Veil finishing powder (Thomas Blake Cosmetic Creams Ltd)
35 gram (ACBS) • NHS indicative price = £24.58

11 Superficial soft-tissue injuries and superficial thrombophlebitis

Topical circulatory preparations

Overview

These preparations are used to improve circulation in conditions such as bruising and superficial thrombophlebitis but are of little value. First aid measures such as rest, ice, compression, and elevation should be used. Chilblains are best managed by avoidance of exposure to cold; neither systemic nor topical vasodilator therapy is established as being effective.

HEPARINOIDS

Heparinoid

• INDICATIONS AND DOSE

Superficial thrombophlebitis | Bruising | Haematoma
► TO THE SKIN
► Child 5–17 years: Apply up to 4 times a day

• **CONTRA-INDICATIONS** Should not be used on large areas of skin, broken or sensitive skin, or mucous membranes

• **LESS SUITABLE FOR PRESCRIBING** Hirudoid® is less suitable for prescribing.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

► **Hirudoid** (Genus Pharmaceuticals Ltd)
Heparinoid 3 mg per 1 gram Hirudoid 0.3% cream | 50 gram [P]
£3.99 DT price = £3.99

Gel

EXCIPIENTS: May contain Fragrances, propylene glycol

► **Hirudoid** (Genus Pharmaceuticals Ltd)
Heparinoid 3 mg per 1 gram Hirudoid 0.3% gel | 50 gram [P] £3.99
DT price = £3.99

12 Warts and calluses

Warts and calluses

Overview

Warts (*verruca vulgaris*) are common, benign, self-limiting, and usually asymptomatic. They are caused by a human papillomavirus, which most frequently affects the hands, feet (plantar warts), and the anogenital region; treatment usually relies on local tissue destruction and is required only if the warts are painful, unsightly, persistent, or cause distress. In immunocompromised children, warts may be more difficult to eradicate.

Preparations of salicylic acid, formaldehyde p. 721, glutaraldehyde p. 721 or silver nitrate p. 721 are used for the removal of warts on hands and feet. Salicylic acid is a useful keratolytic which may be considered first-line in the treatment of warts; it is also suitable for the removal of *corns* and *calluses*. Preparations of salicylic acid in a collodion basis are available but some patients may develop an allergy to colophony in the formulation; collodion should be avoided in children allergic to elastic adhesive plaster. Cryotherapy causes pain, swelling, and blistering, and may be no more effective than topical salicylic acid in the treatment of warts.

Anogenital warts

Anogenital warts (*condylomata acuminata*) in children are often asymptomatic and require only a simple barrier preparation. If treatment is required it should be supervised by a hospital specialist. Persistent warts on genital skin may require treatment with cryotherapy or other forms of physical ablation under general anaesthesia.

Podophyllotoxin below (the major active ingredient of podophyllum), or imiquimod p. 722 are used to treat external anogenital warts; these preparations can cause considerable irritation of the treated area and are therefore suitable only for children who are able to co-operate with the treatment.

ANTINEOPLASTIC DRUGS > PLANT ALKALOIDS

Podophyllotoxin

• INDICATIONS AND DOSE

CONDYLINE®

Condylomata acuminata affecting the penis or the female external genitalia

► TO THE LESION

► Child 2–17 years (initiated under specialist supervision):
Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of five 3-day treatment courses, direct medical supervision for lesions in the female and for lesions greater than 4 cm² in the male, maximum 50 single applications ('loops') per session (consult product literature)

WARTICON® CREAM

Condylomata acuminata affecting the penis or the female external genitalia

► TO THE LESION

► Child 2–17 years (initiated under specialist supervision):
Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm²

WARTICON® LIQUID**Condylomata acuminata affecting the penis or the female external genitalia**

► TO THE LESION

- Child 2–17 years (initiated under specialist supervision): Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm², maximum 50 single applications ('loops') per session (consult product literature)

- **UNLICENSED USE** Not licensed for use in children.
- **CAUTIONS** Avoid normal skin · avoid open wounds · keep away from face · very irritant to eyes
- **SIDE-EFFECTS** Local irritation
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.

1 Immunoglobulin therapy

IMMUNE SERA AND IMMUNOGLOBULINS > IMMUNOGLOBULINS

Immunoglobulins

Passive immunity

Immunity with immediate protection against certain infective organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought. The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated. Antibodies of human origin are usually termed immunoglobulins. The term antiserum is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antisera, this therapy has been replaced wherever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins but reports of such reactions are very rare.

Two types of human immunoglobulin preparation are available, normal immunoglobulin p. 727 and **disease-specific immunoglobulins**.

Human immunoglobulin is a sterile preparation of concentrated antibodies (immune globulins) recovered from pooled human plasma or serum obtained from outside the UK, tested and found non-reactive for hepatitis B surface antigen and for antibodies against hepatitis C virus and human immunodeficiency virus (types 1 and 2). A global shortage of human immunoglobulin and the rapidly increasing range of clinical indications for treatment with immunoglobulins has resulted in the need for a Demand Management programme in the UK, for further information consult www.ivig.nhs.uk and *Clinical Guidelines for Immunoglobulin Use*, www.gov.uk/dh.

Further information on the use of immunoglobulins is included in Public Health England's *Immunoglobulin Handbook* www.gov.uk/phe, and in the Department of Health's publication, *Immunisation against Infectious Disease*, www.gov.uk/dh.

Availability

Normal immunoglobulin for intramuscular administration is available from some regional Public Health laboratories for protection of contacts and the control of outbreaks of hepatitis A, measles, and rubella only. For other indications, subcutaneous or intravenous normal immunoglobulin should be purchased from the manufacturer.

Disease-specific immunoglobulins are available from some regional Public Health laboratories, with the exception of tetanus immunoglobulin p. 729 which is available from BPL,

hospital pharmacies, or blood transfusion departments. Rabies immunoglobulin p. 729 is available from the Specialist and Reference Microbiology Division, Public Health England, Colindale. Hepatitis B immunoglobulin p. 727 required by transplant centres should be obtained commercially.

In Scotland all immunoglobulins are available from the *Scottish National Blood Transfusion Service* (SNBTS).

In Wales all immunoglobulins are available from the *Welsh Blood Service* (WBS).

In Northern Ireland all immunoglobulins are available from the *Northern Ireland Blood Transfusion Service* (NIBTS).

Normal immunoglobulin

Human normal immunoglobulin ('HNIG') is prepared from pools of at least 1000 donations of human plasma; it contains immunoglobulin G (IgG) and antibodies to hepatitis A, measles, mumps, rubella, varicella, and other viruses that are currently prevalent in the general population.

Uses

Normal immunoglobulin (containing 10–18% protein) is administered by **intramuscular injection** for the protection of susceptible contacts against **hepatitis A virus** (infectious hepatitis), **measles** and, to a lesser extent, **rubella**. Injection of immunoglobulin produces immediate protection lasting for several weeks.

Normal immunoglobulin (containing 3–12% protein) for *intravenous administration* is used as **replacement therapy** for children with congenital agammaglobulinaemia and hypogammaglobulinaemia, and for the short-term treatment of idiopathic thrombocytopenic purpura and Kawasaki disease; it is also used for the prophylaxis of infection following bone-marrow transplantation and in children with symptomatic HIV infection who have recurrent bacterial infections. Normal immunoglobulin for replacement therapy may also be given intramuscularly or subcutaneously, but intravenous formulations are normally preferred. Intravenous immunoglobulin is also used in the treatment of Guillain-Barré syndrome as an alternative to plasma exchange.

The dose of normal immunoglobulin used as replacement therapy in patients with immunodeficiencies is **not the same** as the dose required for treatment of acute conditions. For Kawasaki disease a single dose by intravenous infusion should be given with concomitant aspirin p. 83 within 10 days of onset of symptoms (but children with a delayed diagnosis may also benefit).

For guidance on the use of intravenous normal immunoglobulin and alternative therapies for other conditions, consult *Clinical Guidelines for Immunoglobulin Use* (www.gov.uk/dh).

Hepatitis A

Hepatitis A vaccine p. 749 is preferred for individuals at risk of infection including those visiting areas where the disease is highly endemic (all countries excluding Northern and

Western Europe, North America, Japan, Australia, and New Zealand). In unimmunised individuals, transmission of hepatitis A is reduced by good hygiene. Intramuscular normal immunoglobulin is no longer recommended for routine prophylaxis in travellers, but it may be indicated for immunocompromised patients if their antibody response to the vaccine is unlikely to be adequate.

Intramuscular normal immunoglobulin is recommended for prevention of infection in close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV infection, or who are immunosuppressed; normal immunoglobulin should be given as soon as possible, preferably within 14 days of exposure to the primary case. However, normal immunoglobulin can still be given to contacts at risk of severe disease up to 28 days after exposure to the primary case. Hepatitis A vaccine can be given at the same time, but it should be given at a separate injection site.

Measles

Intravenous or subcutaneous normal immunoglobulin may be given to prevent or attenuate an attack of measles in individuals who do not have adequate immunity. Children with compromised immunity who have come into contact with measles should receive intravenous or subcutaneous normal immunoglobulin as soon as possible after exposure. It is most effective if given within 72 hours but can be effective if given within 6 days.

Subcutaneous or intramuscular normal immunoglobulin should also be considered for the following individuals if they have been in contact with a confirmed case of measles or with a person associated with a local outbreak:

- non-immune pregnant women
- infants under 9 months

Further advice should be sought from the Centre for Infections, Public Health England (tel. (020) 8200 6868).

Individuals with normal immunity who are not in the above categories and who have not been fully immunised against measles, can be given measles, mumps and rubella vaccine, live p. 753 for prophylaxis following exposure to measles.

Rubella

Intramuscular immunoglobulin after exposure to rubella does **not** prevent infection in non-immune contacts and is **not** recommended for protection of pregnant women exposed to rubella. It may, however, reduce the likelihood of a clinical attack which may possibly reduce the risk to the fetus. Risk of intra-uterine transmission is greatest in the first 11 weeks of pregnancy, between 16 and 20 weeks there is minimal risk of deafness only, after 20 weeks there is no increased risk. Intramuscular normal immunoglobulin p. 727 should be used only if termination of pregnancy would be unacceptable to the pregnant woman—it should be given as soon as possible after exposure. Serological follow-up of recipients is essential to determine if the woman has become infected despite receiving immunoglobulin.

For routine prophylaxis against Rubella, see measles, mumps and rubella vaccine, live p. 753.

Disease-specific immunoglobulins

Specific immunoglobulins are prepared by pooling the plasma of selected human donors with high levels of the specific antibody required. For further information, see *Immunoglobulin Handbook* (www.gov.uk/phe).

There are no specific immunoglobulins for hepatitis A, measles, or rubella—normal immunoglobulin is used in certain circumstances. There is no specific immunoglobulin for mumps; neither normal immunoglobulin nor measles, mumps and rubella vaccine, live is effective as postexposure prophylaxis.

Hepatitis B immunoglobulin

Disease-specific hepatitis B immunoglobulin ('HBIG') p. 727 is available for use in association with hepatitis B vaccine

p. 750 for the prevention of infection in infants born to mothers who have become infected with this virus in pregnancy or who are high-risk carriers (see hepatitis B vaccine). Hepatitis B immunoglobulin will not inhibit the antibody response when given at the same time as hepatitis B vaccine but should be given at different sites.

An intravenous and preparation of hepatitis B immunoglobulin is licensed for the prevention of hepatitis B recurrence in HBV-DNA negative patients who have undergone liver transplantation for liver failure caused by the virus.

Rabies immunoglobulin

Following exposure of an unimmunised individual to an animal in or from a country where the risk of rabies is high the site of the bite should be washed with soapy water and specific rabies immunoglobulin p. 729 of human origin administered. All of the dose should be injected around the site of the wound; if this is difficult or the wound has completely healed it can be given in the anterolateral thigh (remote from the site used for vaccination).

Rabies vaccine p. 754 should also be given intramuscularly at a different site (for details see rabies vaccine). If there is delay in giving the rabies immunoglobulin, it should be given within 7 days of starting the course of rabies vaccine.

Tetanus immunoglobulin

For the management of tetanus-prone wounds, tetanus immunoglobulin p. 729 should be used in addition to wound cleansing and, where appropriate, antibacterial prophylaxis and a tetanus-containing vaccine. Tetanus immunoglobulin, together with metronidazole p. 313 and wound cleansing, should also be used for the treatment of established cases of tetanus.

Varicella-zoster immunoglobulin

Varicella-zoster immunoglobulin (VZIG) p. 730 is recommended for individuals who are at increased risk of severe varicella *and* who have no antibodies to varicella-zoster virus *and* who have significant exposure to chickenpox or herpes zoster. Those at increased risk include:

- neonates whose mothers develop chickenpox in the period 7 days before to 7 days after delivery;
- susceptible neonates exposed in the first 7 days of life;
- susceptible neonates or infants exposed whilst requiring intensive or prolonged special care nursing;
- susceptible women exposed at any stage of pregnancy (but when supplies of VZIG are short, may only be issued to those exposed in the first 20 weeks' gestation or to those near term) providing VZIG is given within 10 days of contact;
- immunocompromised individuals including those who have received corticosteroids in the previous 3 months at the following dose equivalents of prednisolone; *children* 2 mg/kg daily (or more than 40 mg) for at least 1 week or 1 mg/kg daily for 1 month.

Important: for full details consult *Immunisation against Infectious Disease*. Varicella-zoster vaccine p. 755 is available.

Anti-D (Rh₀) immunoglobulin

● INDICATIONS AND DOSE

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following birth of rhesus-positive infant

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units, dose to be administered immediately or within 72 hours; for transplacental bleed of over 4 mL fetal red cells, extra 100–125 units per mL fetal red cells, subcutaneous route used for patients with bleeding disorders

continued →

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) up to 20 weeks' gestation

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 250 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) after 20 weeks' gestation

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, antenatal prophylaxis

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units, dose to be given at weeks 28 and 34 of pregnancy, if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, subcutaneous route used for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, antenatal prophylaxis (alternative NICE recommendation)

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 1000–1650 units, dose to be given at weeks 28 and 34 of pregnancy, alternatively 1500 units for 1 dose, dose to be given between 28 and 30 weeks gestation

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following Rh₀(D) incompatible blood transfusion

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 100–125 units per mL of transfused rhesus-positive red cells, subcutaneous route used for patients with bleeding disorders

RHOPHYLAC®

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following birth of rhesus-positive infant

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1000–1500 units, dose to be administered immediately or within 72 hours; for large transplacental bleed, extra 100 units per mL fetal red cells (preferably by intravenous injection), intravenous route recommended for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following any potentially sensitising episode (e.g. abortion, amniocentesis, chorionic villous sampling) up to 12 weeks' gestation

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1000 units per episode, dose to be administered immediately or within 72 hours, intravenous route recommended for patients with bleeding disorders, higher doses may be required after 12 weeks gestation

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, antenatal prophylaxis

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1500 units, dose to be given between weeks 28–30 of pregnancy; if infant rhesus-positive, a further dose is still needed

immediately or within 72 hours of delivery, intravenous route recommended for patients with bleeding disorders

To rhesus-negative woman for prevention of Rh₀(D) sensitisation, following Rh₀(D) incompatible blood transfusion

► BY INTRAVENOUS INJECTION

- Females of childbearing potential: 50 units per mL of transfused rhesus-positive blood, alternatively 100 units per mL of erythrocyte concentrate, intravenous route recommended for patients with bleeding disorders

- **CONTRA-INDICATIONS** Treatment of idiopathic thrombocytopenia purpura in rhesus negative patients · treatment of idiopathic thrombocytopenia purpura in splenectomised patients

- **CAUTIONS** Immunoglobulin A deficiency · possible interference with live virus vaccines

CAUTIONS, FURTHER INFORMATION

MMR vaccine may be given in the postpartum period with anti-D (Rh₀) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

- **INTERACTIONS** → Appendix 1 (immunoglobulins).

● **SIDE-EFFECTS**

GENERAL SIDE-EFFECTS

- **Rare** Anaphylaxis · dyspnoea · hypotension · tachycardia · urticaria
- **Frequency not known** Abdominal pain · arthralgia · asthenia · back pain · diarrhoea · dizziness · drowsiness · fever · headache · hypertension · hypotension · injection site pain · malaise · myalgia · nausea · pruritus · rash · sweating · vomiting

SPECIFIC SIDE-EFFECTS

- With intravenous use Abdominal distension · blood pressure fluctuations · deep vein thrombosis · haemolytic anaemia · injection site reactions · myocardial infarction · pulmonary embolism · stroke · thromboembolic events
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

● **NATIONAL FUNDING/ACCESS DECISIONS**

NICE technology appraisals (TAs)

- Routine antenatal anti-D prophylaxis for rhesus-negative women (August 2008) NICE TA156
Routine antenatal anti-D prophylaxis should be offered to all non-sensitised pregnant women who are rhesus negative.
www.nice.org.uk/TA156

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► **D-Gam** (Bio Products Laboratory Ltd)

Anti-D (RHO) immunoglobulin 250 unit D-Gam Anti-D immunoglobulin 250unit solution for injection vials | 1 vial [PoM](#) £23.75

Anti-D (RHO) immunoglobulin 500 unit D-Gam Anti-D immunoglobulin 500unit solution for injection vials | 1 vial [PoM](#) £33.75

Anti-D (RHO) immunoglobulin 1500 unit D-Gam Anti-D immunoglobulin 1,500unit solution for injection vials | 1 vial [PoM] £58.00

► **Rhophylac** (CSL Behring UK Ltd)

Anti-D (RHO) immunoglobulin 750 unit per 1 ml Rhophylac 1,500units/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £39.52

Hepatitis B immunoglobulin

● INDICATIONS AND DOSE

Prophylaxis against hepatitis B infection

► BY INTRAMUSCULAR INJECTION

- Neonate: 200 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure.
- Child 1 month–4 years: 200 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure
- Child 5–9 years: 300 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure
- Child 10–17 years: 500 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure

Prevention of transmitted infection at birth

► BY INTRAMUSCULAR INJECTION

- Neonate: 200 units, dose to be administered as soon as possible after birth; for full details consult Immunisation against Infectious Disease (www.dh.gov.uk).

► BY INTRAVENOUS INFUSION

- Neonate: (consult product literature).

Prophylaxis against hepatitis B infection, after exposure to hepatitis B virus-contaminated material

► BY INTRAVENOUS INFUSION

- Child: Dose to be administered as soon as possible after exposure, but no later than 72 hours (consult product literature)

Prophylaxis against re-infection of transplanted liver

► BY INTRAVENOUS INFUSION

- Child: (consult product literature)

- **CAUTIONS** IgA deficiency · interference with live virus vaccines

● SIDE-EFFECTS

GENERAL SIDE-EFFECTS

- **Rare** Anaphylaxis · chest tightness · dyspnoea
- **Frequency not known** Arthralgia · buccal ulceration · dizziness · facial oedema · glossitis · pain at injection site · swelling at injection site · tremor

SPECIFIC SIDE-EFFECTS

- With intravenous use Abdominal distension · blood pressure fluctuations · deep vein thrombosis · haemolytic anaemia · injection site reactions · myocardial infarction · pulmonary embolism · stroke · thromboembolic events

- **PRESCRIBING AND DISPENSING INFORMATION** Vials containing 200 units or 500 units (for intramuscular injection), available from selected Public Health England and NHS laboratories (except for Transplant Centres), also available from BPL.

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze.

Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► **Hepatitis B immunoglobulin (Non-proprietary)**

Hepatitis B immunoglobulin human 200 unit Hepatitis B immunoglobulin human 200unit solution for injection vials | 1 vial [PoM] £122.44

Hepatitis B immunoglobulin human 500 unit Hepatitis B immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £266.33

► **Zutectra** (Biotest (UK) Ltd)

Zutectra 500units/1ml solution for injection pre-filled syringes | 5 syringe [PoM] £1,275.00

Solution for infusion

Normal immunoglobulin

● INDICATIONS AND DOSE

To control outbreaks of hepatitis A

► BY DEEP INTRAMUSCULAR INJECTION

- Child 1 month–9 years: 250 mg
- Child 10–17 years: 500 mg

Rubella in pregnancy, prevention of clinical attack

► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 750 mg

Antibody deficiency syndromes

► BY SUBCUTANEOUS INFUSION

- Child: (consult product literature)

Kawasaki disease (with concomitant aspirin)

► BY INTRAVENOUS INFUSION

- Child: 2 g/kg daily for 1 dose, treatment should be given within 10 days of onset of symptom (but children with a delayed diagnosis may also benefit)

SUBGAM[®]

Hepatitis A prophylaxis in outbreaks

► BY INTRAMUSCULAR INJECTION

- Child 1 month–9 years: 500 mg
- Child 10–17 years: 750 mg

● UNLICENSED USE

SUBGAM[®] *Subgam[®]* is not licensed for prophylactic use, but due to difficulty in obtaining suitable immunoglobulin products, Public Health England recommends intramuscular use for prophylaxis against Hepatitis A or rubella.

- **CONTRA-INDICATIONS** Patients with selective IgA deficiency who have known antibody against IgA

PRIVIGEN[®] Hyperprolinaemia (contains -proline)

GAMMAPLEX[®] Hereditary fructose intolerance (contains sorbitol)

HIZENTRA[®] Hyperprolinaemia (contains -proline)

FLEBOGAMMA[®] DIF Hereditary fructose intolerance (contains sorbitol)

CAUTIONS

GENERAL CAUTIONS

Agammaglobulinaemia with or without IgA deficiency · hypogammaglobulinaemia with or without IgA deficiency · interference with live virus vaccines

SPECIFIC CAUTIONS

- ▶ With intravenous use Ensure adequate hydration · obesity · renal insufficiency · risk factors for arterial or venous thromboembolic events · thrombophilic disorders

CAUTIONS, FURTHER INFORMATION

- ▶ Interference with live virus vaccines Normal immunoglobulin may **interfere with the immune response to live virus vaccines** which should therefore only be given at **least 3 weeks before or 3 months after** an injection of normal immunoglobulin (this does not apply to yellow fever vaccine since normal immunoglobulin does not contain antibody to this virus).

OCTAGAM® Falsely elevated results with blood glucose testing systems (contains maltose)

- **INTERACTIONS** → Appendix 1 (immunoglobulins).

SIDE-EFFECTS

GENERAL SIDE-EFFECTS

- ▶ **Rare** Acute renal failure · anaphylaxis · aseptic meningitis · cutaneous skin reactions · hypotension
- ▶ **Frequency not known** Arthralgia · chills · diarrhoea · dizziness · fever · headache · low back pain · muscle spasms · myalgia · nausea

SPECIFIC SIDE-EFFECTS

- ▶ With intravenous use Abdominal distension · abdominal pain · blood pressure fluctuations · deep vein thrombosis · haemolytic anaemia · injection site reactions · myocardial infarction · pulmonary embolism · stroke · thromboembolic events

SIDE-EFFECTS, FURTHER INFORMATION

Adverse reactions are more likely to occur in patients receiving normal immunoglobulin for the first time, or following a prolonged period between treatments, or when a different brand of normal immunoglobulin is administered.

- **MONITORING REQUIREMENTS** Monitor for acute renal failure; consider discontinuation if renal function deteriorates. Intravenous preparations with added sucrose have been associated with cases of renal dysfunction and acute renal failure.

DIRECTIONS FOR ADMINISTRATION

Preparations for subcutaneous use May be administered by intramuscular injection if subcutaneous route not possible; intramuscular route **not** for patients with thrombocytopenia or other bleeding disorders.

GAMUNEX® Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

KIOVIG® Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

- **PRESCRIBING AND DISPENSING INFORMATION** Antibody titres can vary widely between normal immunoglobulin preparations from different manufacturers—formulations are **not interchangeable**; patients should be maintained on the same formulation throughout long-term treatment to avoid adverse effects.

- ▶ With intramuscular use Available from the Centre for Infections and other regional Public Health England offices (for contacts and control of outbreaks only).

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened

multidose vials must be used within the period recommended in the product literature.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Rabies immunoglobulin

• INDICATIONS AND DOSE

Post-exposure prophylaxis against rabies infection

▶ BY LOCAL INFILTRATION, OR BY INTRAMUSCULAR INJECTION

- ▶ Child: 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site)

- **CAUTIONS** IgA deficiency · interference with live virus vaccines

• SIDE-EFFECTS

- ▶ **Rare** Anaphylaxis · arthralgia · buccal ulceration · chest tightness · dizziness · dyspnoea · glossitis · tremor
- ▶ **Frequency not known** Facial oedema · injection site pain · injection site swelling

- **PRESCRIBING AND DISPENSING INFORMATION** The potency of individual batches of rabies immunoglobulin from the manufacturer may vary; potency may also be described differently by different manufacturers. It is therefore critical to know the potency of the batch to be used and the weight of the patient in order to calculate the specific volume required to provide the necessary dose.

Available from Specialist and Reference Microbiology Division, Public Health England (also from BPL).

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

▶ Rabies immunoglobulin (Non-proprietary)

Rabies immunoglobulin human 500 unit Rabies immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £412.13

Tetanus immunoglobulin

• INDICATIONS AND DOSE

Post-exposure prophylaxis

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns

Treatment of tetanus infection

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 150 units/kg, dose may be given over multiple sites

- **CAUTIONS** IgA deficiency · interference with live virus vaccines

• SIDE-EFFECTS

- ▶ **Rare** Anaphylaxis · arthralgia · buccal ulceration · chest tightness · dizziness · dyspnoea · glossitis · tremor
- ▶ **Frequency not known** Facial oedema · injection site swelling · pain at injection site

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need

to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Tetanus immunoglobulin (Non-proprietary)

Tetanus immunoglobulin human 250 unit Tetanus immunoglobulin human 250unit solution for injection vials | 1 vial [PoM] £45.00

Varicella-zoster immunoglobulin

(Antivaricella-zoster Immunoglobulin)

● INDICATIONS AND DOSE

Prophylaxis against varicella infection

► BY DEEP INTRAMUSCULAR INJECTION

- Neonate: 250 mg, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease.
- Child 1 month–5 years: 250 mg, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease
- Child 6–10 years: 500 mg, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease
- Child 11–14 years: 750 mg, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease
- Child 15–17 years: 1 g, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease

● CAUTIONS

IgA deficiency · interference with live virus vaccines

● SIDE-EFFECTS

- **Rare** Anaphylaxis
- **Frequency not known** Injection site pain · injection site swelling
- **DIRECTIONS FOR ADMINISTRATION** Normal immunoglobulin for intravenous use may be used in those unable to receive intramuscular injections.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from selected Public Health England and NHS laboratories (also from BPL).
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

● MEDICINAL FORMS

2 Post-exposure prophylaxis

IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

Botulism antitoxin

- **DRUG ACTION** A preparation containing the specific antitoxic globulins that have the power of neutralising the toxins formed by types A, B, and E of *Clostridium botulinum*.

● INDICATIONS AND DOSE

Post exposure prophylaxis of botulism

► BY INTRAMUSCULAR INJECTION

- Child: (consult product literature)

- **SIDE-EFFECTS** Hypersensitivity reactions
- SIDE-EFFECTS, FURTHER INFORMATION**
- Hypersensitivity reactions It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc.
- **PRE-TREATMENT SCREENING** All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).
- **PRESCRIBING AND DISPENSING INFORMATION** Available from local designated centres, for details see TOXBASE (requires registration) www.toxbase.org. For supplies outside working hours apply to other designated centres or to the Public Health England Colindale duty doctor (Tel (020) 8200 6868). For major incidents, obtain supplies from the local blood bank. The BP title Botulinum Antitoxin is not used because the preparation currently in use may have a different specification.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for infusion

► Botulism-antitoxin (Novartis Vaccines and Diagnostics Ltd)

Botulinum antitoxin type E 50 unit per 1 ml, Botulinum antitoxin type B 500 unit per 1 ml, Botulinum antitoxin type A 750 unit per 1 ml Botulism-Antitoxin Behring 25g/250ml solution for infusion bottles | 1 bottle [PoM] no price available

Diphtheria antitoxin

(Dip/Ser)

● INDICATIONS AND DOSE

Passive immunisation in suspected cases of diphtheria

► BY INTRAVENOUS INFUSION

- Child: Dose should be given without waiting for bacteriological confirmation (consult product literature)

● CAUTIONS**CAUTIONS, FURTHER INFORMATION**

- ▶ **Hypersensitivity** Hypersensitivity is common after administration; resuscitation facilities should be available. Diphtheria antitoxin is no longer used for prophylaxis because of the risk of hypersensitivity; unimmunised contacts should be promptly investigated and given antibacterial prophylaxis and vaccine.

● SIDE-EFFECTS

- ▶ **Common or very common** Hypersensitivity reactions

- ▶ **PRE-TREATMENT SCREENING** Diphtheria antitoxin is derived from horse serum and reactions are common; tests for hypersensitivity should be carried out before use.

- ▶ **PRESCRIBING AND DISPENSING INFORMATION** Available from Centre for Infections (Tel (020) 8200 6868) or in Northern Ireland from Public Health Laboratory, Belfast City Hospital (Tel (028) 9032 9241).

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- ▶ **Diphtheria antitoxin (Non-proprietary)**

Diphtheria antitoxin 1000 unit per 1 ml Antidiphtheria serum 10,000units/10ml solution for injection ampoules | 1 ampoule **[POM]** no price available

3 Tuberculosis diagnostic test

DIAGNOSTIC AGENTS

Tuberculin purified protein derivative (Tuberculin PPD)

● INDICATIONS AND DOSE**Mantoux test**

- ▶ BY INTRADERMAL INJECTION

- ▶ Child: 2 units for one dose

Mantoux test (if first test is negative and a further test is considered appropriate)

- ▶ BY INTRADERMAL INJECTION

- ▶ Child: 10 units for 1 dose

DOSE EQUIVALENCE AND CONVERSION

2 units is equivalent to 0.1 mL of 20 units/mL strength.

10 units is equivalent to 0.1 mL of 100 units/mL strength.

● CAUTIONS**CAUTIONS, FURTHER INFORMATION**

- ▶ **Mantoux test** Response to tuberculin may be suppressed by viral infection, sarcoidosis, corticosteroid therapy, or immunosuppression due to disease or treatment and the MMR vaccine. If a tuberculin skin test has already been initiated, then the MMR should be delayed until the skin test has been read unless protection against measles is required urgently. If a child has had a recent MMR, and requires a tuberculin test, then a 4 week interval should be observed. Apart from tuberculin and MMR, all other live vaccines can be administered at any time before or after tuberculin.

- ▶ **PRESCRIBING AND DISPENSING INFORMATION** Available from ImmForm (SSI brand). The strength of tuberculin PPD in currently available products may be different to the strengths of products used previously for the Mantoux test; care is required to select the correct strength.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Solution for injection

- ▶ **Tuberculin purified protein derivative (Non-proprietary)**

Tuberculin purified protein derivative 20 tuberculin unit per 1 ml Tuberculin PPD RT 23 SSI 20 tuberculin units/ml solution for injection 1.5ml vials | 1 vial no price available

Tuberculin purified protein derivative 100 tuberculin unit per 1 ml Tuberculin PPD RT 23 SSI 100 tuberculin units/ml solution for injection 1.5ml vials | 1 vial no price available

4 Vaccination

Vaccines

Active immunity

Active immunity can be acquired by natural disease or by vaccination. **Vaccines** stimulate production of antibodies and other components of the immune mechanism; they consist of either:

- a *live attenuated* form of a virus (e.g. measles, mumps and rubella vaccine) or bacteria (e.g. BCG vaccine), or
- *inactivated* preparations of the virus (e.g. influenza vaccine) or bacteria, or
- *detoxified exotoxins* produced by a micro-organism (e.g. tetanus vaccine), or
- *extracts* of a micro-organism, which may be derived from the organism (e.g. pneumococcal vaccine) or produced by recombinant DNA technology (e.g. hepatitis B vaccine).

Live attenuated vaccines usually produce a durable immunity, but not always as long-lasting as that resulting from natural infection.

Inactivated vaccines may require a primary series of injections of vaccine to produce an adequate antibody response, and in most cases booster (reinforcing) injections are required; the duration of immunity varies from months to many years. Some inactivated vaccines are adsorbed onto an adjuvant (such as aluminium hydroxide) to enhance the antibody response.

Advice reflects that in the handbook *Immunisation against Infectious Disease*, (2013) which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI).

Chapters from the handbook are available at www.immunisation.dh.gov.uk

The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates.

Children with unknown or incomplete immunisation history

For children born in the UK who present with an inadequate or unknown immunisation history, investigation into immunisations received should be carried out. Outstanding doses should be administered where the routine childhood immunisation schedule has not been completed.

For advice on the immunisation of children coming to the UK, consult the handbook *Immunisation against Infectious Disease* (2006) (available at www.dh.gov.uk).

Immunisation schedule

Vaccines for the childhood immunisation schedule should be obtained from **local health organisations** or from **ImmForm** (www.immform.dh.gov.uk)—not to be prescribed on FP10 (HS21 in Northern Ireland; GP10 in Scotland; WP10 in Wales).

Routine immunisation schedule	
When to immunise (for preterm infants-see note below)	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Neonates at risk only	<ul style="list-style-type: none"> ► <i>Bacillus calmette-guérin</i> vaccine p. 744 ► Hepatitis B vaccine p. 750
2 months	<ul style="list-style-type: none"> ► Diphtheria with <i>haemophilus influenzae</i> type b vaccine, pertussis, poliomyelitis and tetanus p. 743 First dose ► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 746 First dose ► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 747 First dose ► Rotavirus vaccine p. 754 First dose
3 months	<ul style="list-style-type: none"> ► Diphtheria with <i>haemophilus influenzae</i> type b vaccine, pertussis, poliomyelitis and tetanus p. 743 Second dose ► Meningococcal group C vaccine p. 746 First dose ► Rotavirus vaccine p. 754 Second dose
4 months	<ul style="list-style-type: none"> ► Diphtheria with <i>haemophilus influenzae</i> type b vaccine, pertussis, poliomyelitis and tetanus p. 743 Third dose ► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 746 Second dose ► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 747 Second dose
12–13 months	<ul style="list-style-type: none"> ► Measles, mumps and rubella vaccine, live p. 753 First dose ► Meningococcal group B vaccine (rDNA, component, adsorbed) p. 746 Single booster dose ► Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 747 Single booster dose ► <i>Haemophilus influenzae</i> type B with meningococcal group C vaccine p. 745 Single booster dose
2–6 years (including children in school years 1 and 2)	<ul style="list-style-type: none"> ► Influenza vaccine p. 752 Each year from September Note: Flu nasal spray is recommended (<i>Fluenz Tetra</i>®). If contra-indicated and child is in clinical risk group, use inactivated flu vaccine
Between 3 years and 4 months, and 5 years	<ul style="list-style-type: none"> ► Diphtheria with pertussis, poliomyelitis vaccine and tetanus p. 743 Single booster dose. Note: Preferably allow interval of at least 3 years after completing primary course ► Measles, mumps and rubella vaccine, live p. 753 Second dose
11–14 years (females only). First dose of HPV vaccine will be offered to females aged 12–13 years of age in England, Wales, and Northern Ireland, and 11–14 years of age in Scotland.	<ul style="list-style-type: none"> ► Human papillomavirus vaccine 2 doses; second dose 12 months after first dose. If a 3-dose course of HPV vaccine has been started under the 2013/2014 programme, where possible, the course should be completed. The two human papillomavirus vaccines are not interchangeable and, ideally, one vaccine product should be used for the entire course. However, for those females who started the schedule with <i>Cervarix</i>® under the national immunisation programme, but did not complete the vaccination course, the course can be completed with <i>Gardasil</i>®.
13–15 years	<ul style="list-style-type: none"> ► Meningococcal groups A with C and W135 and Y vaccine p. 746 Single booster dose
13–18 years	<ul style="list-style-type: none"> ► Diphtheria with poliomyelitis and tetanus vaccine p. 744 Single booster dose. Note: Can be given at the same time as the booster dose of meningococcal group A with C and W135 and Y vaccine at 13–15 years of age
During adult life, women of child-bearing age susceptible to rubella	<ul style="list-style-type: none"> ► Measles, mumps and rubella vaccine, live p. 753 Women of child-bearing age who have not received 2 doses of a rubella-containing vaccine or who do not have a positive antibody test for rubella should be offered rubella immunisation (using the MMR vaccine)—exclude pregnancy before immunisation.

For the most up to date immunisation schedule consult 'The complete routine immunisation schedule', available at www.gov.uk.

Preterm birth

Babies born preterm should receive all routine immunisations based on their actual date of birth. The risk of apnoea following vaccination is increased in preterm babies, particularly in those born at or before 28 weeks postmenstrual age. If babies at risk of apnoea are in hospital at the time of their first immunisation, they should be monitored for 48 hours after immunisation. If a baby develops apnoea, bradycardia, or desaturation after the first immunisation, the second immunisation should also be given in hospital with similar monitoring. Seroconversion may be unreliable in babies born earlier than 28 weeks' gestation or in babies treated with corticosteroids for chronic lung disease; consideration should be given to testing for antibodies against *Haemophilus influenzae* type b, meningococcal C, and hepatitis B after primary immunisation.

Vaccines and HIV infection

HIV-positive children with or without symptoms can receive the following live vaccines:

- MMR (but avoid if immunity significantly impaired), varicella-zoster vaccine against chickenpox (but avoid if immunity significantly impaired—consult product literature; use of normal immunoglobulin should be considered after exposure to measles and varicella-zoster immunoglobulin considered after exposure to chickenpox or herpes zoster), rotavirus;

and the following inactivated vaccines:

- Anthrax, cholera (oral), diphtheria, *haemophilus influenzae* type b, hepatitis A, hepatitis B, human papillomavirus, influenza (injection), meningococcal, pertussis, pneumococcal, poliomyelitis (inactivated poliomyelitis vaccine is now used instead of oral poliomyelitis vaccine for routine immunisation of children), rabies, tetanus, tick-borne encephalitis, typhoid (injection).

HIV-positive children should **not** receive:

- BCG, influenza nasal spray (unless stable HIV infection and receiving antiretroviral therapy), typhoid (oral), yellow fever (if yellow fever risk is unavoidable, specialist advice should be sought).

The above advice differs from that for other immunocompromised patients; *Immunisation of HIV infected Children* issued by *Children's HIV Association* (CHIVA) are available at www.chiva.org.uk.

Vaccines and asplenia

The following vaccines are recommended for asplenic patients, those with splenic dysfunction or complement disorders, depending on the age at which their condition is diagnosed:

- Haemophilus influenzae type B with meningococcal group C vaccine;
- Influenza vaccine;
- Meningococcal groups A with C and W135 and Y vaccine;
- pneumococcal polysaccharide vaccine.

Children first diagnosed under 2 years of age should be vaccinated according to the Immunisation Schedule, including the 12 month boosters. If meningococcal group C vaccine p. 746 has not yet been given as part of routine schedule, give one dose of meningococcal groups A with C and W135 and Y vaccine p. 746 followed by a second dose at least one month apart. If meningococcal group C vaccine has already been given as part of routine schedule, then give one additional dose of meningococcal groups A with C and W135 and Y vaccine at least one month later. Following routine 12 month booster vaccines, give a dose of meningococcal groups A with C and W135 and Y vaccine and an additional dose of 13-valent pneumococcal polysaccharide vaccine 2 months later. An additional dose of haemophilus influenzae type B with meningococcal group C vaccine p. 745 and 23-valent pneumococcal polysaccharide vaccine should be given after the second birthday. The influenza vaccine should be administered annually in children aged 6 months or older.

Children first diagnosed over 2 years of age should be vaccinated according to the Immunisation schedule, including the 12 month boosters. The child should receive one additional booster dose of haemophilus influenzae type B with meningococcal group C vaccine along with the 23-valent pneumococcal polysaccharide vaccine, followed by one dose of meningococcal groups A with C and W135 and Y vaccine after 2 months. The influenza vaccine should be administered annually.

Passive immunity

Immunity with immediate protection against certain infective organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought (see under Immunoglobulins). The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated.

Antibodies of human origin are usually termed *immunoglobulins*. The term *antiserum* is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antisera, this therapy has been replaced whenever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins, but reports of such reactions are very rare.

Vaccines and antisera availability

Anthrax vaccine and yellow fever vaccine, live p. 756, botulism antitoxin p. 730, diphtheria antitoxin p. 730, and snake and spider venom antitoxins are available from local designated holding centres.

For antivenom, see Emergency Treatment of Poisoning.

Enquiries for vaccines not available commercially can also be made to:

Vaccines and Countermeasures Response Department
Public Health England
Wellington House
133–155 Waterloo Road
London
SE1 8UG
vaccinesupply@phe.gov.uk

In Scotland information about availability of vaccines can be obtained from a Specialist in Pharmaceutical Public Health.

In Wales enquiries for vaccines not available commercially should be directed to:

Welsh Medicines Information Centre
University Hospital of Wales
Cardiff
CF14 4XW
(029) 2074 2979

In Northern Ireland:

Pharmacy and Medicines Management Centre
Northern Health and Social Care Trust
Beech House
Antrim Hospital Site
Bush Road
Antrim
BT41 2RL
rphps.admin@northerntrust.hscni.net

For further details of availability, see under individual vaccines.

Anthrax vaccine

Anthrax vaccine is rarely required for children.

BCG vaccine

BCG (bacillus calmette-guérin vaccine p. 744) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of hypersensitivity to *M. tuberculosis*. Bacillus calmette-guérin vaccine should be given intradermally by operators skilled in the technique.

The expected reaction to successful bacillus calmette-guérin vaccine is induration at the site of injection followed by a local lesion which starts as a papule 2 or more weeks after vaccination; the lesion may ulcerate then subside over several weeks or months, leaving a small flat scar. A dry dressing may be used if the ulcer discharges, but air should not be excluded.

All children of 6 years and over being considered for bacillus calmette-guérin vaccine must first be given a skin test for hypersensitivity to tuberculo-protein (see under Diagnostic agents). A skin test is not necessary for a child under 6 years, provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000 (a list of countries or primary care trusts where the incidence of tuberculosis is greater than 40 cases per 100 000 is available at www.gov.uk/phe), the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

Bacillus calmette-guérin vaccine is recommended for the following groups of children if BCG immunisation has not previously been carried out and they are negative for tuberculo-protein hypersensitivity:

- neonates with a family history of tuberculosis in the last 5 years;
- all neonates and infants (0–12 months) born in areas where the incidence of tuberculosis is greater than 40 per 100 000;
- neonates, infants, and children under 16 years with a parent or grandparent born in a country with an incidence of tuberculosis greater than 40 per 100 000;
- new immigrants aged under 16 years who were born in, or lived for more than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000;

- new immigrants aged 16–18 years from Sub-Saharan Africa or a country with an incidence of tuberculosis greater than 500 per 100 000;
- contacts of those with active respiratory tuberculosis;
- children under 16 years intending to live with local people for more than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000.

Bacillus calmette-guérin vaccine can be given simultaneously with another live vaccine, but if they are not given at the same time, an interval of 4 weeks should normally be allowed between them. When bacillus calmette-guérin vaccine is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

For advice on chemoprophylaxis against tuberculosis; for treatment of infection following vaccination, seek expert advice.

Tuberculosis Diagnostic Agents

The Mantoux test is recommended for tuberculin skin testing, but no licensed preparation is currently available. Guidance for healthcare professionals is available at www.dh.gov.uk/immunisation.

In the Mantoux test, the diagnostic dose is administered by intradermal injection of Tuberculin Purified Protein Derivative (PPD).

The Heaf test (involving the use of multiple-puncture apparatus) is no longer available.

Two interferon gamma release assay (IGRA) tests are also available as an aid in the diagnosis of tuberculosis infection: *QuantiferON® TB Gold* and *T-SPOT®.TB*. Both tests measure T-cell mediated immune response to synthetic antigens. For further information on the use of interferon gamma release assay tests for tuberculosis, see www.gov.uk/phe.

Botulism antitoxin

A polyvalent botulism antitoxin p. 730 is available for the post-exposure prophylaxis of botulism and for the treatment of persons thought to be suffering from botulism. It specifically neutralises the toxins produced by *Clostridium botulinum* types A, B, and E. It is not effective against infantile botulism as the toxin (type A) is seldom, if ever, found in the blood in this type of infection.

Hypersensitivity reactions are a problem. It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc. All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).

Cholera vaccine

Cholera vaccine p. 745 (oral) contains inactivated Inaba (including El-Tor biotype) and Ogawa strains of *Vibrio cholerae*, serotype O1 together with recombinant B-subunit of the cholera toxin produced in Inaba strains of *V. cholerae*, serotype O1.

Oral cholera vaccine is licensed for travellers to endemic or epidemic areas on the basis of current recommendations. Immunisation should be completed at least 1 week before potential exposure. However, there is no requirement for cholera vaccination for international travel.

Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is essential.

Injectable cholera vaccine provides unreliable protection and is no longer available in the UK.

Diphtheria vaccine

Diphtheria vaccines are prepared from the toxin of *Corynebacterium diphtheriae* and adsorption on aluminium hydroxide or aluminium phosphate improves antigenicity. The vaccine stimulates the production of the protective antitoxin. The quantity of diphtheria toxoid in a preparation determines whether the vaccine is defined as 'high dose' or 'low dose'. Vaccines containing the higher dose of diphtheria toxoid are used for primary immunisation of children under 10 years of age. Vaccines containing the lower dose of diphtheria toxoid are used for primary immunisation in adults and children over 10 years. Single-antigen diphtheria vaccine is not available and adsorbed diphtheria vaccine is given as a combination product containing other vaccines.

For primary immunisation of children aged between 2 months and 10 years vaccination is recommended usually in the form of 3 doses (separated by 1-month intervals) of **diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed)** (see Immunisation schedule). In unimmunised individuals aged over 10 years the primary course comprises of 3 doses of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**.

A booster dose should be given 3 years after the primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed). Children under 10 years should receive **either adsorbed diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine or adsorbed diphtheria [low dose], tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine**. Individuals aged over 10 years should receive **adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine**.

A second booster dose, of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, should be given 10 years after the previous booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed). For children who have been vaccinated following a tetanus-prone wound, see tetanus vaccines.

Travel

Those intending to travel to areas with a risk of diphtheria infection should be fully immunised according to the UK schedule. If more than 10 years have lapsed since completion of the UK schedule, a dose of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine** should be administered.

Contacts

Advice on the management of cases of diphtheria, carriers, contacts and outbreaks must be sought from health protection units. The immunisation history of infected children and their contacts should be determined; those who have been incompletely immunised should complete their immunisation and fully immunised individuals should receive a reinforcing dose. Also see advice on antibacterial treatment to prevent a secondary case of diphtheria in a non-immune child.

Haemophilus influenzae type B conjugate vaccine

Haemophilus influenzae type b (Hib) vaccine is made from capsular polysaccharide; it is conjugated with a protein such as tetanus toxoid to increase immunogenicity, especially in young children. Haemophilus influenzae type b vaccine immunisation is given in combination with diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine, as a component of the primary course of childhood immunisation (see Immunisation schedule) (see under Diphtheria-containing Vaccines). For infants under 1 year, the course consists of 3 doses of a vaccine containing *Haemophilus influenzae* type b component with an interval of 1 month between doses. A

booster dose of *Haemophilus influenzae* type b vaccine (combined with meningococcal group C conjugate vaccine) should be given at 12–13 months of age.

Children 1–10 years who have not been immunised against *Haemophilus influenzae* type b need to receive only 1 dose of *Haemophilus influenzae* type b vaccine (combined with meningococcal group C conjugate vaccine). However, if a primary course of immunisation has not been completed, these children should be given 3 doses of diphtheria with *Haemophilus influenzae* type b vaccine, pertussis, poliomyelitis and tetanus p. 743. The risk of infection falls sharply in older children and the vaccine is not normally required for children over 10 years.

Haemophilus influenzae type b vaccine may be given to those over 10 years who are considered to be at increased risk of invasive *H. influenzae* type b disease (such as those with sickle-cell disease or complement deficiency, or those receiving treatment for malignancy).

Invasive *Haemophilus influenzae* type b disease

After recovery from infection, unimmunised and partially immunised index cases under 10 years of age should complete their age-specific course of immunisation. Previously vaccinated cases under 10 years of age should be given an additional dose of *Haemophilus influenzae* type b vaccine (combined with meningococcal group C conjugate vaccine) if Hib antibody concentrations are low or if it is not possible to measure antibody concentrations. Index cases of any age with asplenia or splenic dysfunction should complete their immunisation according to the recommendations below; fully vaccinated cases with asplenia or splenic dysfunction should be given an additional dose of *Haemophilus influenzae* type b vaccine (combined with meningococcal group C conjugate vaccine) if they received their previous dose over 1 year ago.

Also see use of rifampicin p. 342 in the prevention of secondary cases of *Haemophilus influenzae* type b disease.

Hepatitis A vaccine

Hepatitis A vaccine p. 749 is prepared from formaldehyde-inactivated hepatitis A virus grown in human diploid cells.

Immunisation is recommended for:

- residents of homes for those with severe learning difficulties;
- children with haemophilia or other conditions treated with plasma-derived clotting factors;
- children with severe liver disease;
- children travelling to high-risk areas;
- adolescents who are at risk due to their sexual behaviour;
- parenteral drug abusers.

Immunisation should be considered for:

- children with chronic liver disease including chronic hepatitis B or chronic hepatitis C;
- prevention of secondary cases in close contacts of confirmed cases of hepatitis A, within 14 days of exposure to the primary case (within 8 weeks of exposure to the primary case where there is more than 1 contact in the household).

A booster dose of hepatitis A vaccine is usually given 6–12 months after the initial dose. A second booster dose can be given 20 years after the previous booster dose to those who continue to be at risk. Specialist advice should be sought on re-immunisation of immunocompromised individuals.

In children under 16 years, a single dose of the combined vaccine *Ambirix*® can be used to provide rapid protection against hepatitis A. Intramuscular normal immunoglobulin p. 727 is recommended for use in addition to hepatitis A vaccine for close contacts (of confirmed cases of hepatitis A) who have chronic liver disease or HIV infection, or who are immunosuppressed.

Post-exposure prophylaxis is not required for healthy children under 1 year of age, so long as all those involved in

nappy changing are vaccinated against hepatitis A. However, children 2–12 months of age can be given a dose of hepatitis A vaccine if it is not possible to vaccinate their carers, or if the child becomes a source of infection to others [unlicensed use]; in these cases, if the child goes on to require long-term protection against hepatitis A after the first birthday, the full course of 2 doses should be given.

Hepatitis B vaccine

Hepatitis B vaccine p. 750 contains inactivated hepatitis B virus surface antigen (HBsAg) adsorbed on to aluminium hydroxide adjuvant. It is made biosynthetically using recombinant DNA technology. The vaccine is used in individuals at high risk of contracting hepatitis B.

In the UK, high-risk groups include:

- parenteral drug misusers, their sexual partners, and household contacts; other drug misusers who are likely to 'progress' to injecting;
- adolescents who are at risk from their sexual behaviour;
- close family contacts of an individual with chronic hepatitis B infection;
- babies whose mothers have had acute hepatitis B during pregnancy or are positive for hepatitis B surface antigen (regardless of e-antigen markers); hepatitis B vaccination is started immediately on delivery and *hepatitis B immunoglobulin* given at the same time (but at a different site). Babies whose mothers are positive for hepatitis B surface antigen and for e-antigen antibody should receive the vaccine only (but babies weighing 1.5 kg or less should also receive the immunoglobulin regardless of the mother's e-antigen antibody status);
- children with haemophilia, those receiving regular blood transfusions or blood products, and carers responsible for the administration of such products;
- children with chronic renal failure including those on haemodialysis. Children receiving haemodialysis should be monitored for antibodies annually and re-immunised if necessary. Home carers (of dialysis patients) should be vaccinated;
- children with chronic liver disease
- patients of day-care or residential accommodation for those with severe learning difficulties;
- children in custodial institutions;
- children travelling to areas of high or intermediate prevalence who are at increased risk or who plan to remain there for lengthy periods;
- families adopting children from countries with a high or intermediate prevalence of hepatitis B;
- foster carers and their families.

Different immunisation schedules for hepatitis B vaccine are recommended for specific circumstances; an 'accelerated schedule' is recommended for pre-exposure prophylaxis in high-risk groups where rapid protection is required, and for post-exposure prophylaxis. Generally, three or four doses are required for primary immunisation. Immunisation may take up to 6 months to confer adequate protection; the duration of immunity is not known precisely, but a single booster 5 years after the primary course may be sufficient to maintain immunity for those who continue to be at risk.

Immunisation does not eliminate the need for commonsense precautions for avoiding the risk of infection from known carriers by the routes of infection which have been clearly established, consult *Guidance for Clinical Health Care Workers: Protection against Infection with Blood-borne Viruses* (available at www.dh.gov.uk). Accidental inoculation of hepatitis B virus-infected blood into a wound, incision, needle-prick, or abrasion may lead to infection, whereas it is unlikely that indirect exposure to a carrier will do so.

Following significant exposure to hepatitis B, an accelerated schedule, with the second dose given 1 month, and the third dose 2 months after the initial dose, is recommended. For those at continued risk, a fourth dose

should be given 12 months after the first dose. More detailed guidance is given in the *Immunisation against Infectious Disease* handbook.

Specific hepatitis B immunoglobulin ('HBIG') p. 727 is available for use with the vaccine in those accidentally inoculated and in neonates at special risk of infection.

A combined hepatitis A and B vaccine p. 748 is also available.

Human papillomavirus vaccine

Human papillomavirus vaccine is available as a bivalent vaccine (*Cervarix*®) or a quadrivalent vaccine (*Gardasil*®). *Cervarix*® is licensed for use in females for the prevention of cervical cancer and other pre-cancerous lesions caused by human papillomavirus types 16 and 18. *Gardasil*® is licensed for use in females for the prevention of cervical and anal cancers, genital warts and pre-cancerous genital (cervical, vulvar, and vaginal) and anal lesions caused by human papillomavirus types 6, 11, 16, and 18. The vaccines may also provide limited protection against disease caused by other types of human papillomavirus. The two vaccines are not interchangeable and one vaccine product should be used for an entire course.

Human papillomavirus vaccine will be most effective if given before sexual activity starts. From September 2014, a 2-dose schedule is recommended, as long as the first dose is received before the age of 15 years. The first dose is given to females aged 11 to 14 years, and the second dose is given 6–24 months after the first dose (for the purposes of planning the national immunisation programme, it is appropriate to give the second dose 12 months after the first—see Immunisation schedule). If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more. Females aged 15 years or older require a 3-dose schedule (see *Cervarix*® and *Gardasil*®), with the second and third doses given 1 and 4–6 months after the first dose; all 3 doses should be given within a 12-month period. If the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses. If a 3-dose course of vaccination has been started before September 2014, then where possible this should be completed; if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses. Under the national programme in England, females remain eligible to receive the vaccine up to the age of 18 years if they did not receive the vaccine when scheduled. Where appropriate, immunisation with human papillomavirus vaccine should be offered to females coming into the UK as they may not have been offered protection in their country of origin. The duration of protection has not been established, but current studies suggest that protection is maintained for at least 6 years after completion of the primary course.

Influenza vaccine

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccine p. 752 in use contain the H and N components of the prevalent strain or strains recommended each year by the World Health Organization.

Immunisation is recommended for persons at high risk, and to reduce transmission of infection. Annual immunisation is strongly recommended for children (including infants that were preterm or low birth-weight) aged over 6 months with the following conditions:

- chronic respiratory disease (includes asthma treated with continuous or repeated use of inhaled or systemic corticosteroids or asthma with previous exacerbations requiring hospital admission);
- chronic heart disease;
- chronic liver disease;
- chronic renal disease;
- chronic neurological disease;
- complement disorders;
- diabetes mellitus;
- immunosuppression because of disease (including asplenia or splenic dysfunction) or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone: *child under 20 kg*, 1 mg/kg or more daily; *child over 20 kg*, 20 mg or more daily] and chemotherapy);
- HIV infection (regardless of immune status).

Seasonal influenza vaccine is also recommended for all pregnant women, for children living in long-stay facilities, and for carers of children whose welfare may be at risk if the carer falls ill. Influenza immunisation should also be considered for household contacts of immunocompromised individuals.

From September 2015, seasonal influenza vaccine will also be offered to all children aged 2–6 years (including those in school years 1 and 2). Unless contra-indicated, the live influenza vaccine, *Fluenz Tetra*®, is preferred in children aged 2–18 years because it provides a higher level of protection than inactivated influenza vaccine.

Further information on pandemic influenza, avian influenza, and swine influenza may be found at www.dh.gov.uk/pandemicflu and at www.gov.uk/phe.

Japanese encephalitis vaccine

Japanese encephalitis vaccine p. 753 is indicated for travellers to areas in Asia and the Far East where infection is endemic and for laboratory staff at risk of exposure to the virus. The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre (www.nathnac.org).

Management of Measles, Mumps and Rubella

Measles vaccine has been replaced by a combined measles, mumps and rubella vaccine, live (MMR vaccine) p. 753.

A combined measles, mumps and rubella vaccine, live (MMR vaccine) aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children aged 12–13 months. A second dose is given before starting school at 3 years and 4 months–5 years of age (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 3 months later by a second dose.

At school-leaving age or at entry into further education, MMR immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of MMR in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella

vaccine, live are required, the second dose should be given one month after the initial dose.

Measles, mumps and rubella vaccine, live should be used to protect against rubella in *seronegative women of child-bearing age* (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously *unimmunised and seronegative post-partum women* (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged over 6 months who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as those with history of recent severe illness) can be given normal immunoglobulin p. 727 after exposure to measles; routine MMR immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live p. 753 is **not suitable** for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children with impaired immune response should not receive live vaccines (for advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin p. 727.

Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months–5 years should still be given.

Meningococcal vaccine

Almost all childhood meningococcal disease in the UK is caused by *Neisseria meningitidis* serogroups B and C.

Meningococcal group C conjugate vaccine protects only against infection by serogroup C and **meningococcal group B vaccine** protects only against infection by serogroup B. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetavalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the **meningococcal groups A, C, W135, and Y conjugate vaccine** is likely to

provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal [not currently available in the UK].

A meningococcal group B vaccine (rDNA, component, adsorbed) p. 746, *Bexsero*®, is licensed in the UK against infection caused by *Neisseria meningitidis* serogroup B and is recommended in the Immunisation Schedule. *Bexsero*® contains 3 recombinant *Neisseria meningitidis* serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against *Neisseria meningitidis* serogroup B; the proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

Childhood immunisation

Meningococcal group C conjugate vaccine provides long-term protection against infection by serogroup C of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 3 months of age; 2 booster doses are recommended, the first is given at 12–13 months of age (combined with haemophilus influenzae type b vaccine), and the second is given at 13–15 years of age (combined with meningococcal A, W135 and Y vaccine) (see Immunisation Schedule).

Meningococcal group B vaccine provides protection against infection by serogroup B of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 2 months of age, a second dose at 4 months of age, and a booster dose at 12 months of age (see Immunisation Schedule).

Unimmunised children aged under 12 months should be given 1 dose of meningococcal group B and group C conjugate vaccines, followed by a second dose of meningococcal group B vaccine (rDNA, component, adsorbed) two months later. They should then be vaccinated according to the Immunisation Schedule. Unimmunised children aged 12–23 months should be given a single dose of the meningococcal group C vaccine p. 746 and 2 doses of meningococcal group B vaccine (rDNA, component, adsorbed) separated by an interval of two months. Children aged 2–9 years who have not received the meningococcal group C vaccine since 12–13 months should be given a single dose of meningococcal group C vaccine only, followed by a booster dose of meningococcal groups A with C and W135 and Y vaccine p. 746 at 13–15 years of age.

From 2015, unimmunised individuals aged 10–25 years, including those aged under 25 years who are attending university for the first time, should be given a single dose of meningococcal groups A with C and W135 and Y vaccine; a booster dose is not required. All students attending university for the first time who are unvaccinated against meningococcal group C, irrespective of age, should be offered a single dose of meningococcal group C vaccine.

Children with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetravalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of

meningococcal outbreaks and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre (www.nathnac.org).

Proof of vaccination with the tetravalent (meningococcal groups A, C, W135, and Y) vaccine is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

Contacts

For advice on the immunisation of *laboratory workers and close contacts* of cases of meningococcal disease in the UK and on the role of the vaccine in the control of *local outbreaks*, consult Guidelines for Public Health Management of Meningococcal Disease in the UK at www.gov.uk/phe. Also see antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

Pertussis vaccine

Pertussis vaccine is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of *Bordetella pertussis*. Primary immunisation against pertussis (whooping cough) requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed.

Children aged 1–10 years who have not received a *pertussis-containing vaccine* as part of their primary immunisation should be offered 1 dose of a suitable pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

Vaccination of pregnant women against pertussis

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis-specific antibodies that are transferred, through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine; *Boosterix-IPV*[®]) between 28 to 38 weeks of pregnancy; the optimal time for vaccination is between 28–32 weeks of pregnancy. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 28–38 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

Contacts

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially

immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

Side-effects

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

Pneumococcal vaccine

Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 747 protect against infection with *Streptococcus pneumoniae* (pneumococcus); the vaccines contain polysaccharide from capsular pneumococci, **Pneumococcal polysaccharide vaccine** contains purified polysaccharide from 23 capsular types of pneumococci, whereas **pneumococcal polysaccharide conjugate vaccine** (adsorbed) contains polysaccharide from either 10 capsular types (*Synflorix*[®]) or 13 capsular types (*Prevenar 13*[®]) with the polysaccharide being conjugated to protein.

The 13-valent conjugate vaccine is used for childhood immunisation. The recommended schedule consists of 3 doses, the first at 2 months of age, the second at 4 months, and the third at 12–13 months (see Immunisation Schedule).

Pneumococcal vaccination is recommended for individuals at increased risk of pneumococcal infection as follows:

- child under 5 years with a history of invasive pneumococcal disease;
- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac disease which could lead to splenic dysfunction);
- chronic respiratory disease (includes asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- chronic neurological conditions;
- complement disorders;
- diabetes mellitus;
- immune deficiency because of disease (e.g. HIV infection) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *child under 20 kg*, 1 mg/kg or more daily; *child over 20 kg*, 20 mg or more daily);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid could occur.

Where possible, the vaccine should be given at least 2 weeks before splenectomy, cochlear implant surgery, chemotherapy, or radiotherapy; children and carers should be given advice about increased risk of pneumococcal infection. If it is not practical to vaccinate at least 2 weeks before splenectomy, chemotherapy, or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy or, where possible, at least 3 months after completion of chemotherapy or radiotherapy. Prophylactic antibacterial therapy against pneumococcal infection should not be stopped after immunisation. A patient card and information leaflet for patients with asplenia are available from the Department of Health or in Scotland from the Scottish Government, Health Protection Division (Tel (0131) 244 2879).

Choice of vaccine

Children under 2 years at increased risk of pneumococcal infection (see list above) should receive the 13-valent

pneumococcal polysaccharide conjugate vaccine (adsorbed) at the recommended ages, followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday. Children at increased risk of pneumococcal infection presenting late for vaccination should receive 2 doses (separated by at least 1 month) of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) before the age of 12 months, and a third dose at 12–13 months. Children over 12 months and under 5 years (who have not been vaccinated or not completed the primary course) should receive a single dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) (2 doses separated by an interval of 2 months in the immunocompromised or those with asplenia or splenic dysfunction). All children under 5 years at increased risk of pneumococcal infection should receive a single dose of the 23-valent pneumococcal polysaccharide vaccine after their second birthday and at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children over 5 years who are at increased risk of pneumococcal disease should receive a single dose of the 23-valent unconjugated pneumococcal polysaccharide vaccine.

Revaccination

In individuals with higher concentrations of antibodies to pneumococcal polysaccharides, revaccination with the 23-valent pneumococcal polysaccharide vaccine more commonly produces adverse reactions. Revaccination is therefore not recommended, except every 5 years in individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction and nephrotic syndrome). If there is doubt, the need for revaccination should be discussed with a haematologist, immunologist, or microbiologist.

Poliomyelitis vaccine

Two types of poliomyelitis vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated poliomyelitis vaccines (for injection) and live (oral) poliomyelitis vaccines. **Inactivated** poliomyelitis vaccines, only available in combined preparation, is recommended for routine immunisation; it is given by injection and contains inactivated strains of human poliovirus types 1, 2 and 3.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliomyelitis vaccines starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised children; no child should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliomyelitis vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses should be given every 10 years only to individuals at special risk.

Live (oral) poliomyelitis vaccines is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must **not** be used for immunosuppressed individuals or their household contacts. The use of inactivated poliomyelitis vaccines removes the risk of vaccine-associated paralytic polio altogether.

Travel

Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliomyelitis vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of **adsorbed diphtheria [low**

dose], tetanus and poliomyelitis (inactivated) vaccine.

Information about countries with a high incidence of poliomyelitis can be obtained from www.travax.nhs.uk or from the National Travel Health Network and Centre, (www.nathnac.org).

Rabies vaccine

Rabies vaccine p. 754 contains inactivated rabies virus cultivated in either human diploid cells or purified chick embryo cells; vaccines are used for pre- and postexposure prophylaxis.

Pre-exposure prophylaxis

Immunisation should be offered to children at high risk of exposure to rabies—where there is limited access to prompt medical care for those living in areas where rabies is enzootic, for those travelling to such areas for longer than 1 month, and for those on shorter visits who may be exposed to unusual risk. Transmission of rabies by humans has not been recorded but it is advised that those caring for children with the disease should be vaccinated.

Up-to-date country-by-country information on the incidence of rabies can be obtained from the National Travel Health Network and Centre (www.nathnac.org) and, in Scotland, from Health Protection Scotland (www.hps.scot.nhs.uk).

Immunisation against rabies requires 3 doses of rabies vaccine, with further booster doses for those who remain at frequent risk.

Post-exposure management

Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible after exposure. Disinfectant and a simple dressing can be applied, but suturing should be delayed because it may increase the risk of introducing rabies virus into the nerves.

Post-exposure prophylaxis against rabies depends on the level of risk in the country, the nature of exposure, and the individual's immunity. In each case, expert risk assessment and advice on appropriate management should be obtained from the local Public Health England Centre or Public Health England's Virus Reference Department, Colindale (tel. (020) 8200 4400) or the PHE Colindale Duty Doctor (tel. (020) 8200 6868), in Wales from the Public Health Wales local Health Protection Team or Public Health Wales Virus Reference Laboratory (tel. (029) 2074 7747), in Scotland from the local on-call infectious diseases consultant, and in Northern Ireland from the Public Health Agency Duty Room (tel (028) 9055 3997/(028) 9063 2662) or the Regional Virology Service (tel. (028) 9024 0503).

There are no specific contra-indications to the use of rabies vaccine for post-exposure prophylaxis and its use should be considered whenever a child has been attacked by an animal in a country where rabies is enzootic, even if there is no direct evidence of rabies in the attacking animal. Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis.

For post-exposure prophylaxis of **fully immunised** individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine), 2 doses of cell-derived vaccine are likely to be sufficient; the first dose is given on day 0 and the second dose is given between day 3–7. Rabies immunoglobulin p. 729 is not necessary in such cases.

Post-exposure treatment for **unimmunised individuals** (or those whose prophylaxis is possibly incomplete) comprises 5 doses of rabies vaccine given over 1 month (on days 0, 3, 7, 14, and the fifth dose is given between day 28–30); also, depending on the level of risk (determined by factors such as

the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine. The immunisation course can be discontinued if it is proved that the child was not at risk.

Rotavirus vaccine

Rotavirus vaccine p. 754 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection. The recommended schedule consists of 2 doses, the first at 2 months of age, and the second at 3 months of age (see Immunisation schedule). The first dose of rotavirus vaccine must be given between 6–15 weeks of age and the second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal association between vaccination and intussusception; the course must be completed before 24 weeks of age.

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

Smallpox vaccine

Limited supplies of **smallpox vaccine** are held at the Specialist and Reference Microbiology Division, Public Health England Colindale (Tel. (020) 8200 4400) for the exclusive use of workers in laboratories where pox viruses (such as vaccinia) are handled.

If a wider use of the vaccine is being considered, *Guidelines for smallpox response and management in the post-eradication era* should be consulted at www.gov.uk/phe.

Tetanus vaccine

Tetanus vaccine contains a cell-free purified toxin of *Clostridium tetani* adsorbed on aluminium hydroxide or aluminium phosphate to improve antigenicity.

Primary immunisation for children under 10 years consists of 3 doses of a combined preparation containing adsorbed tetanus vaccine, with an interval of 1 month between doses. Following routine childhood vaccination, 2 booster doses of a preparation containing adsorbed tetanus vaccine are recommended, the first before school entry and the second before leaving school (see Immunisation schedule).

The recommended schedule of tetanus vaccination not only gives protection against tetanus in childhood but also gives the basic immunity for subsequent booster doses. In most circumstances, a total of 5 doses of tetanus vaccine is considered sufficient for long term protection.

For primary immunisation of adults and children over 10 years previously unimmunised against tetanus, 3 doses of **adsorbed diphtheria (low dose), tetanus and poliomyelitis (inactivated) vaccine** are given with an interval of 1 month between doses.

When an individual presents for a booster dose but has been vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, the booster should still be given to ensure adequate protection against all antigens in the booster vaccine.

Very rarely, tetanus has developed after abdominal surgery; patients awaiting elective surgery should be asked about tetanus immunisation and immunised if necessary.

Parenteral drug abuse is also associated with tetanus; those abusing drugs by injection should be vaccinated if unimmunised—booster doses should be given if there is any doubt about their immunisation status.

All laboratory staff should be offered a primary course if unimmunised.

Wounds

Wounds are considered to be tetanus-prone if they are sustained more than 6 hours before surgical treatment or at any interval after injury and are puncture-type (particularly if contaminated with soil or manure) or show much devitalised tissue or are septic or are compound fractures or contain foreign bodies. All wounds should receive thorough cleansing.

- For **clean wounds**: fully immunised individuals (those who have received a total of 5 doses of a tetanus-containing vaccine at appropriate intervals) and those whose primary immunisation is complete (with boosters up to date), do not require tetanus vaccine; individuals whose primary immunisation is incomplete or whose boosters are not up to date require a reinforcing dose of a tetanus-containing vaccine (followed by further doses as required to complete the schedule); non-immunised individuals (or those whose immunisation status is not known or who have been fully immunised but are now immunocompromised) should be given a dose of the appropriate tetanus-containing vaccine immediately (followed by completion of the full course of the vaccine if records confirm the need)
- For **tetanus-prone wounds**: management is as for clean wounds with the addition of a dose of tetanus immunoglobulin given at a different site; in fully immunised individuals and those whose primary immunisation is complete (with boosters up to date) the immunoglobulin is needed only if the risk of infection is especially high (e.g. contamination with manure). Antibacterial prophylaxis (with benzylpenicillin, co-amoxiclav, or metronidazole) may also be required for tetanus-prone wounds.

Tick-borne encephalitis vaccine

Tick-borne encephalitis vaccine, inactivated p. 755 contains inactivated tick-borne encephalitis virus cultivated in chick embryo cells. It is recommended for immunisation of those working in, or visiting, high-risk areas (see International Travel). Those working, walking or camping in warm forested areas of Central and Eastern Europe, Scandinavia, Northern and Eastern China, and some parts of Japan, particularly from April to November when ticks are most prevalent, are at greatest risk of tick-borne encephalitis. For full protection, 3 doses of the vaccine are required; booster doses are required every 3–5 years for those still at risk. Ideally, immunisation should be completed at least one month before travel.

Typhoid vaccine

Typhoid vaccine p. 747 is available as Vi capsular polysaccharide (from *Salmonella typhi*) vaccine for injection and as live attenuated *Salmonella typhi* vaccine for oral use.

Typhoid immunisation is advised for children travelling to:

- areas where typhoid is endemic, especially if staying with or visiting local people;
- endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely;

Typhoid vaccination is not a substitute for scrupulous personal hygiene.

Capsular **polysaccharide typhoid vaccine** is usually given by **intramuscular** injection. Children under 2 years may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). Revaccination is needed every 3 years on continued exposure.

Oral typhoid vaccine is a **live attenuated** vaccine contained in an enteric-coated capsule. One capsule taken on alternate days for a total of 3 doses provides protection

7–10 days after the last dose. Protection may persist for up to 3 years in those constantly (or repeatedly) exposed to *Salmonella typhi*, but those who only occasionally travel to endemic areas require further courses at intervals of 1 year.

Varicella-zoster vaccine

Varicella-zoster vaccine (live) p. 755 is licensed for immunisation against varicella (chickenpox) in seronegative individuals. It is not recommended for routine use in children but can be given to seronegative healthy children over 1 year who come into close contact with individuals at high risk of severe varicella infections.

Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant females;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Varicella-zoster immunoglobulin p. 730 is used to protect susceptible children at increased risk of varicella infection.

Yellow fever vaccine

Live yellow fever vaccine, live p. 756 is indicated for those travelling to or living in areas where infection is endemic. Infants under 6 months of age should not be vaccinated because there is a small risk of encephalitis; infants aged 6–9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (seek expert advice). The immunity which probably lasts for life is officially accepted for 10 years starting from 10 days after primary immunisation and for a further 10 years immediately after revaccination.

Very rarely vaccine-associated adverse effects have been reported, such as viscerotropic disease (yellow fever vaccine, live-associated viscerotropic disease, YEL-AVD) p. 756, a syndrome which may include metabolic acidosis, muscle and liver cytotoxicity, and multi-organ failure. Neurological disorders (yellow fever vaccine, live-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These very rare adverse effects have usually occurred after the first dose of yellow fever vaccine, live in those with no previous immunity.

Vaccines for travel

Immunisation

See advice on Malaria, treatment p. 365.

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although all travellers should have immunity to tetanus and poliomyelitis (and childhood immunisations should be up to date); Tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of **poliomyelitis** or **tuberculosis** should be immunised with the appropriate vaccine; in the case of poliomyelitis previously immunised travellers may be given a booster dose of a preparation containing inactivated poliomyelitis vaccine. BCG immunisation is recommended for travellers aged under 16 years proposing to stay for longer than 3 months (or in close contact with the local population) in countries with an incidence of tuberculosis greater than 40 per 100 000 (list of countries where the incidence of tuberculosis is greater than 40 cases per 100 000 is available

from www.gov.uk/phe); it should preferably be given 3 months or more before departure.

Yellow fever immunisation is recommended for travel to the endemic zones of Africa and South America. Many countries require an International Certificate of Vaccination from individuals arriving from, or who have been travelling through, endemic areas; other countries require a certificate from all entering travellers (consult the Department of Health handbook, *Health Information for Overseas Travel*, www.dh.gov.uk).

Immunisation against **meningococcal meningitis** is recommended for a number of areas of the world.

Protection against **hepatitis A** is recommended for travellers to high-risk areas outside Northern and Western Europe, North America, Japan, Australia and New Zealand. Hepatitis A vaccine is preferred and it is likely to be effective even if given shortly before departure; normal immunoglobulin is no longer given routinely but may be indicated in the immunocompromised. Special care must also be taken with food hygiene.

Hepatitis B vaccine is recommended for those travelling to areas of high or intermediate prevalence who intend to seek employment as healthcare workers or who plan to remain there for lengthy periods and who may therefore be at increased risk of acquiring infection as the result of medical or dental procedures carried out in those countries. Short-term tourists or business travellers are not generally at increased risk of infection but may put themselves at risk by their sexual behaviour when abroad.

Prophylactic immunisation against **rabies** is recommended for travellers to enzootic areas on long journeys or to areas out of reach of immediate medical attention.

Travellers who have not had a **tetanus** booster in the last 10 years and are visiting areas where medical attention may not be accessible should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, even if they have received 5 doses of a tetanus-containing vaccine previously.

Typhoid vaccine is indicated for travellers to countries where typhoid is endemic, but the vaccine is no substitute for personal precautions.

There is no requirement for cholera vaccination as a condition for entry into any country, but **oral cholera vaccine** should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on **diphtheria**, on **Japanese encephalitis**, and on **tick-borne encephalitis** is included in *Health Information for Overseas Travel*.

Food hygiene

In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers' diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

Information on health advice for travellers

Health professionals and travellers can find the latest information on immunisation requirements and precautions for avoiding disease while travelling from: www.nathnac.org.

The handbook, *Health Information for Overseas Travel* (2010), which draws together essential information for *healthcare professionals* regarding health advice for travellers, can also be obtained from this website.

Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country or from:

VACCINES

Vaccines

IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (APRIL 2016)

Following reports of death in neonates who received a live attenuated vaccine after exposure to a tumor necrosis factor alpha (TNF- α) inhibitor in utero, the MHRA has issued the following advice:

- any infant who has been exposed to immunosuppressive treatment from the mother either in utero during pregnancy or via breastfeeding should have any live attenuated vaccination deferred for as long as a postnatal influence on the immune status of the infant remains possible;
- in the case of infants who have been exposed to TNF- α inhibitors and other biological medicines in utero, any live attenuated vaccination should be deferred until the infant is age 6 months, after which time vaccination should be considered.

● CONTRA-INDICATIONS

CONTRA-INDICATIONS, FURTHER INFORMATION

- Impaired immune response Severely immunosuppressed patients should not be given live vaccines (including those with severe primary immunodeficiency).

● CAUTIONS

CAUTIONS, FURTHER INFORMATION

Vaccination may be postponed if the individual is suffering from an acute illness; however, it is not necessary to postpone immunisation in patients with minor illnesses without fever or systemic upset.

- Impaired immune response and drugs affecting immune response Immune response to vaccines may be reduced in immunosuppressed patients and there is also a risk of generalised infection with live vaccines.

Specialist advice should be sought for those being treated with high doses of corticosteroids (dose equivalents of prednisolone: **children**, 2 mg/kg (or more than 40 mg) daily for at least 1 week or 1 mg/kg daily for 1 month), or other immunosuppressive drugs, and those being treated for malignant conditions with chemotherapy or generalised radiotherapy. Live vaccines should be postponed until at least 3 months after stopping high-dose systemic corticosteroids and at least 6 months after stopping other immunosuppressive drugs or generalised radiotherapy (at least 12 months after discontinuing immunosuppressants following bone-marrow transplantation).

The Royal College of Paediatrics and Child Health has produced a statement, *Immunisation of the Immunocompromised Child* (2002) (available at www.rcpch.ac.uk).

- Predisposition to neurological problems When there is a personal or family history of *febrile* convulsions, there is an increased risk of these occurring during fever from any cause including immunisation, but this is not a contra-indication to immunisation. In children who have had a seizure associated with fever without neurological deterioration, immunisation is *recommended*; advice on the *management of fever* (see Post-immunisation Pyrexia in Infants) should be given before immunisation. When a child has had a convulsion not associated with fever, and the neurological condition is not deteriorating, immunisation is *recommended*.

Children with stable neurological disorders (e.g. spina bifida, congenital brain abnormality, and peri-natal hypoxic-ischaemic encephalopathy) should be immunised according to the recommended schedule.

When there is a *still evolving neurological problem*, including poorly controlled epilepsy, immunisation should be deferred and the child referred to a specialist. Immunisation is recommended if a cause for the neurological disorder is identified. If a cause is not identified, immunisation should be deferred until the condition is stable.

- **INTERACTIONS** → Appendix 1 (vaccines).

● SIDE-EFFECTS

GENERAL SIDE-EFFECTS

- **Common or very common** Fatigue · fever · gastro-intestinal disturbances · headache · irritability · loss of appetite · lymphangitis · malaise · myalgia
- **Very rare** Anaphylaxis (can be fatal) · angioedema (can be fatal) · bronchospasm (can be fatal) · hypersensitivity reactions (can be fatal) · urticaria (can be fatal)
- **Frequency not known** Arthralgia · asthenia · dizziness · drowsiness · influenza-like symptoms · lymphadenopathy · paraesthesia · rash

SPECIFIC SIDE-EFFECTS

- **Common or very common**
- With intradermal or intramuscular or subcutaneous use Induration may develop at the injection site · inflammation · local reactions · pain · redness · sterile abscess may develop at the injection site

SIDE-EFFECTS, FURTHER INFORMATION

Occasionally serious adverse reactions can occur—these should always be reported to the CHM.

- Post-immunisation pyrexia in infants The parent should be advised that if pyrexia develops after childhood immunisation, and the infant seems distressed, paracetamol can be given. Ibuprofen can be used if paracetamol is unsuitable. The parent should be warned to seek medical advice if the pyrexia persists.

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a confirmed anaphylactic reaction to a preceding dose of a vaccine containing the same antigens

or vaccine component (such as antibacterials in viral vaccines).

- **PREGNANCY** Live vaccines should not be administered routinely to pregnant women because of the theoretical risk of fetal infection but where there is a significant risk of exposure to disease, the need for vaccination usually outweighs any possible risk to the fetus. Termination of pregnancy following inadvertent immunisation is not recommended. There is no evidence of risk from vaccinating pregnant women with inactivated viral or bacterial vaccines or toxoids.
- **BREAST FEEDING** Although there is a theoretical risk of live vaccine being present in breast milk, vaccination is not contra-indicated for women who are breast-feeding when there is significant risk of exposure to disease. There is no evidence of risk from vaccinating women who are breast-feeding, with inactivated viral or bacterial vaccines or toxoids.
- **DIRECTIONS FOR ADMINISTRATION** If alcohol or disinfectant is used for cleansing the skin it should be allowed to evaporate before vaccination to prevent possible inactivation of live vaccines.

When 2 or more live vaccines are required (and are not available as a combined preparation), they can be administered at any time before or after each other at different sites, preferably in a different limb; if more than one injection is to be given in the same limb, they should be administered at least 2.5 cm apart. See also bacillus calmette-guérin vaccine p. 744.

Vaccines should not be given intravenously. Most vaccines are given by the intramuscular route, although some are given by either the intradermal, deep subcutaneous, or oral route. The intramuscular route should not be used in patients with **bleeding disorders** such as haemophilia or thrombocytopenia, vaccines usually given by the intramuscular route should be given by deep subcutaneous injection instead.

The Department of Health has advised *against the use of jet guns* for vaccination owing to the risk of transmitting blood borne infections, such as HIV.

Particular attention must be paid to instructions on the use of diluents. Vaccines which are liquid suspensions or are reconstituted before use should be adequately mixed to ensure uniformity of the material to be injected.

- **HANDLING AND STORAGE** Care must be taken to store all vaccines under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many vaccines need to be stored at 2–8°C and not allowed to freeze. Vaccines should be protected from light. Reconstituted vaccines and opened multidose vials must be used within the period recommended in the product literature. Unused vaccines should be disposed of by incineration at a registered disposal contractor.

VACCINES > BACTERIAL AND VIRAL VACCINES, COMBINED

F 742

Diphtheria with haemophilus influenzae type b vaccine, pertussis, poliomyelitis and tetanus

● INDICATIONS AND DOSE

Primary immunisation

- BY INTRAMUSCULAR INJECTION
- Child 2 months–10 years: 0.5 mL every 1 month for 3 doses

- **UNLICENSED USE** *Infanrix-IPV + Hib* ® not licensed for use in children over 36 months; *Pediacel* ® not licensed in children over 4 years. However, the Department of Health recommends that these be used for children up to 10 years.
- **SIDE-EFFECTS** Atopic dermatitis · hypotonia · restlessness · sleep disturbances · unusual crying in infants

SIDE-EFFECTS, FURTHER INFORMATION

- Side effects of vaccines containing pertussis The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- *Pediacel* (sanofi pasteur MSD Ltd)

Pediacel vaccine suspension for injection 0.5ml vials | 1 vial [PoM]
£32.00

Powder and suspension for suspension for injection

- *Infanrix-IPV + Hib* (GlaxoSmithKline UK Ltd)

Infanrix-IPV + Hib vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £27.86

F 742

Diphtheria with pertussis, poliomyelitis vaccine and tetanus

● INDICATIONS AND DOSE

First booster dose

- BY INTRAMUSCULAR INJECTION

- Child 3–9 years: 0.5 mL, to be given 3 years after primary immunisation

Vaccination of pregnant women against pertussis (using low dose vaccines)

- BY INTRAMUSCULAR INJECTION

- Females of childbearing potential: 0.5 mL for 1 dose

- **SIDE-EFFECTS** Restlessness · sleep disturbances · unusual crying in infants

SIDE-EFFECTS, FURTHER INFORMATION

- Side effects of vaccines containing pertussis The incidence of local and systemic effects is generally lower with vaccines containing acellular pertussis components than with the whole-cell pertussis vaccine used previously. However, compared with primary vaccination, booster doses with vaccines containing acellular pertussis are reported to increase the risk of injection-site reactions (some of which affect the entire limb); local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

- **PREGNANCY** Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days

of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological complications following previous immunisation against diphtheria or tetanus.

- **PRESCRIBING AND DISPENSING INFORMATION** Pregnant women should be vaccinated using low dose vaccines (brands may include *Boostrix-IPV*® or *Repevax*®).

Available as part of childhood immunisation schedule from health organisations or ImmForm.

Available for vaccination of pregnant women from ImmForm.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Boostrix-IPV** (GlaxoSmithKline UK Ltd)
Boostrix-IPV suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.74
- ▶ **Infanrix-IPV** (GlaxoSmithKline UK Ltd)
Infanrix-IPV vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £17.56
- ▶ **Repevax** (sanofi pasteur MSD Ltd)
Repevax vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.00

F 742

Diphtheria with poliomyelitis and tetanus vaccine

● INDICATIONS AND DOSE

Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL every 1 month for 3 doses

Booster doses

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

- **SIDE-EFFECTS** Restlessness · sleep disturbances · unusual crying in infants
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Revaxis** (sanofi pasteur MSD Ltd)

VACCINES > BACTERIAL VACCINES

F 742

Bacillus calmette-guérin vaccine (BCG Vaccine)

- **DRUG ACTION** BCG (Bacillus Calmette–Guérin) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of immunity to *M. tuberculosis*.

● INDICATIONS AND DOSE

Immunisation against tuberculosis

▶ BY INTRADERMAL INJECTION

- ▶ Neonate: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**.
- ▶ Child 1–11 months: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- ▶ Child 1–17 years: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**

- **CONTRA-INDICATIONS** Generalised septic skin conditions · neonate in household contact with known or suspected case of active tuberculosis

CONTRA-INDICATIONS, FURTHER INFORMATION

A lesion-free site should be used to administer BCG vaccine to patients with eczema.

● CAUTIONS

CAUTIONS, FURTHER INFORMATION

BCG vaccine can be given simultaneously with another live vaccine, but if they are not given at the same time an interval of 4 weeks should normally be allowed. When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

● SIDE-EFFECTS

- ▶ **Rare** Disseminated complications · osteitis · osteomyelitis
- ▶ **Frequency not known** Prolonged ulceration at the injection site · subcutaneous abscess at the injection site

- **PRE-TREATMENT SCREENING** Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculinoprotein (see tuberculin purified protein derivative p. 731). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

● DIRECTIONS FOR ADMINISTRATION

Intradermal injection technique Skin is stretched between thumb and forefinger and needle (size 25G or 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb showing tips of hair follicles is sign of correct injection; 7 mm bleb \equiv 0.1 mL injection, 3 mm bleb \equiv 0.05 mL injection; if considerable resistance not felt, needle too deep and should be removed and reinserted before giving more vaccine.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from health organisations or direct from ImmForm www.immform.dh.gov.uk (SSI brand, multidose vial with diluent).

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for suspension for injection

- ▶ **Bacillus calmette-guérin vaccine (Non-proprietary)**
Bacillus Calmette-Guérin vaccine powder and solvent for suspension for injection vials | 10 vial [PoM] no price available

742

Cholera vaccine

INDICATIONS AND DOSE

Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)

▶ BY MOUTH

- ▶ Child 2–5 years: 1 dose every 1–6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Child 6–17 years: 1 dose every 1–6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

Booster

▶ BY MOUTH

- ▶ Child 2–5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
- ▶ Child 6–17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

- **CONTRA-INDICATIONS** Acute gastro-intestinal illness

SIDE-EFFECTS

- ▶ **Rare** Cough · respiratory symptoms · rhinitis
- ▶ **Very rare** Insomnia · sore throat
- ▶ **Frequency not known** Abdominal pain and cramps · diarrhoea · nausea · vomiting

- **DIRECTIONS FOR ADMINISTRATION** Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2–5 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.

- **PATIENT AND CARER ADVICE** Counselling on administration advised. Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is **essential**.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Oral suspension

- ▶ **Dukoral** (Valneva UK Ltd)
Dukoral cholera vaccine oral suspension | 2 dose [PoM] £23.42

742

Haemophilus influenzae type B with meningococcal group C vaccine

INDICATIONS AND DOSE

Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 12–13 months: 0.5 mL for 1 dose

Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) | Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1–9 years: 0.5 mL for 1 dose

Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1–17 years: 0.5 mL for 1 dose

Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 12–13 months: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine, followed by 0.5 mL for 1 dose, the second dose should be given after the second birthday

Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at over 2 years of age)

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 2–17 years: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine

- **UNLICENSED USE** Not licensed for use in patients over 2 years.

SIDE-EFFECTS

- ▶ **Rare** Symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)
- ▶ **Frequency not known** Atopic dermatitis · hypotonia
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of the childhood immunisation schedule from ImmForm.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for solution for injection

- ▶ **Menitorix** (GlaxoSmithKline UK Ltd)

Menitorix vaccine powder and solvent for solution for injection 0.5mL vials | 1 vial [PoM] £37.76

F 742

Meningococcal group B vaccine (rDNA, component, adsorbed)

● INDICATIONS AND DOSE

Immunisation against *Neisseria meningitidis*, primary immunisation

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants). Three doses of 60 mg prophylactic paracetamol should be given post primary meningococcal B immunisation, at 2 months and 4 months of age. Further information can be found at www.gov.uk.
- ▶ Child 4 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants). Three doses of 60 mg prophylactic paracetamol should be given post primary meningococcal B immunisation, at 2 months and 4 months of age. Further information can be found at www.gov.uk.

Immunisation against *Neisseria meningitidis*, primary immunisation booster dose

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 12–23 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants)

Immunisation against *Neisseria meningitidis*, primary immunisation (in unimmunised patients)

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 6–11 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given between 1–2 years of age and at least 2 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 12–23 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given 12–24 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 2–10 years: 0.5 mL for 2 doses, separated by an interval of at least 2 months. Injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 11–17 years: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

● SIDE-EFFECTS

- ▶ Rare Kawasaki disease · symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)
- ▶ Frequency not known Unusual crying

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Kanamycin

- ▶ **Bexsero** (GlaxoSmithKline UK Ltd) ▼
Bexsero vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £75.00

F 742

Meningococcal group C vaccine

● INDICATIONS AND DOSE

Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3 months: 0.5 mL for 1 dose, the primary immunisation dose is followed by a booster dose of meningococcal group C conjugate vaccine combined

with haemophilus influenzae type b vaccine at 12–13 months of age

Second booster dose for immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13–15 years: 0.5 mL for 1 dose

Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 4–11 months: 0.5 mL for 1 dose, the primary immunisation dose is followed by a booster dose of meningococcal group C conjugate vaccine combined with haemophilus influenzae type b vaccine at 12–13 months of age, then 0.5 mL for 1 dose, this second booster dose to be given at 13–15 years of age
- ▶ Child 1–9 years: 0.5 mL for 1 dose, then 0.5 mL for 1 dose, this booster dose to be given at 13–15 years of age
- ▶ Child 10–17 years: 0.5 mL for 1 dose, booster dose is not required

Patients with confirmed serogroup C disease (who have previously been immunised)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: 0.5 mL for 1 dose, dose to be given before discharge from hospital

● SIDE-EFFECTS

- ▶ Rare Symptoms of meningitis (but no evidence that vaccine causes meningococcal C meningitis)

- ▶ **DIRECTIONS FOR ADMINISTRATION** *Menjugate Kit*® may be used via subcutaneous route in children with bleeding disorders.

- ▶ **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from www.immform.dh.gov.uk.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for suspension for injection

- ▶ **Menjugate** (Novartis Vaccines and Diagnostics Ltd)
Menjugate vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] no price available | 10 vial [PoM] no price available

Suspension for injection

- ▶ **Meningitec** (Nuron Biotech B.V.)
Meningitec vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £43.30 | 10 pre-filled disposable injection [PoM] £43.30
- ▶ **NeisVac-C** (Pfizer Ltd)
NeisVac-C vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection [PoM] £187.50

F 742

Meningococcal groups A with C and W135 and Y vaccine

● INDICATIONS AND DOSE

MENVEO®

Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13–15 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region

Immunisation against *Neisseria meningitidis* in those at risk of exposure to prevent invasive disease

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–11 months: 0.5 mL every 1 month for 2 doses, dose preferably injected into deltoid region
- ▶ Child 1–17 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region

NIMENRIX®**Primary immunisation against *Neisseria meningitidis***

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13–15 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region

Immunisation against *Neisseria meningitidis* in those at risk of exposure

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region (or anterolateral thigh in child 12–23 months), then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

● **UNLICENSED USE**

MENVEO® Menveo® is not licensed for use in children under 2 years.

● **SIDE-EFFECTS**

- ▶ **Rare** Symptoms of meningitis reported (but no evidence that the vaccine causes meningococcal C meningitis)

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for solution for injection

Pneumococcal polysaccharide vaccine

● **INDICATIONS AND DOSE****Immunisation against pneumococcal infection**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose

Immunisation in patients at increased risk of pneumococcal disease

- ▶ BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Child 2–4 years: 0.5 mL for 1 dose, dose should be administered after the second birthday or at least 2 months after the final dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed)
- ▶ Child 5–17 years: 0.5 mL for 1 dose

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- ▶ **Pneumococcal polysaccharide vaccine (Non-proprietary)**
Pneumococcal polysaccharide vaccine solution for injection 0.5ml vials | 1 vial [PoM] £8.32

F 742

Typhoid vaccine

● **INDICATIONS AND DOSE****Immunisation against typhoid fever in children at high risk of typhoid fever**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12–23 months: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection, response may be suboptimal

Immunisation against typhoid fever

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection

continued →

► BY MOUTH

- Child 6–17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5)

● UNLICENSED USE

- With intramuscular use Not licensed for use in children under 2 years.

● CONTRA-INDICATIONS

- With oral use Acute gastro-intestinal illness

● INTERACTIONS → Appendix 1 (vaccines).

Oral typhoid vaccine is inactivated by concomitant administration of antibacterials or antimalarials:

- antibacterials should be avoided for 3 days before and after oral typhoid vaccination;
- *Mefloquine* should be avoided for at least 12 hours before or after oral typhoid;
- For other antimalarials vaccination with oral typhoid vaccine should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which may be given concomitantly).

● SIDE-EFFECTS

- With oral use Abdominal cramps · abdominal pain · diarrhoea · nausea · vomiting

- DIRECTIONS FOR ADMINISTRATION Capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

● HANDLING AND STORAGE

- With oral use It is important to store capsules in a refrigerator.

● PATIENT AND CARER ADVICE

- With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

VACCINES > VIRAL VACCINES

Hepatitis A and B vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 749, hepatitis B vaccine p. 750.

● INDICATIONS AND DOSE

AMBIRIX®**Immunisation against hepatitis A and hepatitis B infection (primary course)**

- BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months for 1 dose, the deltoid region is the preferred site of injection in older children;

anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

TWINRIX® ADULT**Immunisation against hepatitis A and hepatitis B infection (primary course)**

- BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL every 1 month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

Immunisation against hepatitis A and hepatitis B infection—accelerated schedule for travellers departing within 1 month

- BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

TWINRIX® PAEDIATRIC**Immunisation against hepatitis A and hepatitis B infection (primary course)**

- BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL every 1 month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

IMPORTANT SAFETY INFORMATION

Ambirix® and **Twinrix®** are not recommended for post-exposure prophylaxis following percutaneous (needle-stick), ocular, or mucous membrane exposure to hepatitis B virus.

● PRESCRIBING AND DISPENSING INFORMATION

TWINRIX® PAEDIATRIC Primary course should be completed with **Twinrix®** (single component vaccines given at appropriate intervals may be used for booster dose).

AMBIRIX® Primary course should be completed with **Ambirix®** (single component vaccines given at appropriate intervals may be used for booster dose).

TWINRIX® ADULT Primary course should be completed with **Twinrix®** (single component vaccines given at appropriate intervals may be used for booster dose).

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

Twinrix Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £33.31 | 10 pre-filled disposable injection **[PoM]** £333.13

Hepatitis A vaccine

● INDICATIONS AND DOSE

AVAXIM®

Immunisation against hepatitis A infection

► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

EPAXAL®

Immunisation against hepatitis A infection

► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 4 years if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

Immunisation against hepatitis A infection (splenectomised patients)

► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 1–6 months, dose given as booster; booster dose may be delayed by up to 4 years if not given after recommended interval following primary dose. The deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

HAVRIX MONODOSE®

Immunisation against hepatitis A infection

► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

VAQTA® PAEDIATRIC

Immunisation against hepatitis A infection

► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

- **ALLERGY AND CROSS-SENSITIVITY** *Epaxal*® contains influenza virus haemagglutinin grown in the allantoic cavity of chick embryos, therefore contra-indicated in those hypersensitive to eggs or chicken protein.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Hepatitis A with typhoid vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine above, typhoid vaccine p. 747.

● INDICATIONS AND DOSE

HEPATYRIX®

Immunisation against hepatitis A and typhoid infection (primary course)

► BY INTRAMUSCULAR INJECTION

- Child 15–17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

VIATIM®

Immunisation against hepatitis A and typhoid infection (primary course)

► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Neomycin

► Hepatyrrix (GlaxoSmithKline UK Ltd)

Hepatyrrix vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £37.21 | 10 pre-filled disposable injection [PoM] £372.10

► ViATIM (Sanofi pasteur MSD Ltd)

ViATIM vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £29.80

Hepatitis B vaccine

● INDICATIONS AND DOSE

ENGRIX B®

Immunisation against hepatitis B infection

► BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection (accelerated schedule)

► BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms every 1 month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 10 micrograms every 1 month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 20 micrograms every 1 month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection, alternative accelerated schedule

► BY INTRAMUSCULAR INJECTION

- Child 11–15 years: 20 micrograms for 1 dose, followed by 20 micrograms after 6 months, this schedule is not suitable if high risk of infection between doses or if compliance with second dose uncertain, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection (for neonates born to hepatitis B surface antigen-positive mother)

► BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms once a month for 3 doses, first dose to be given at birth with hepatitis B immunoglobulin injection (separate site), followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced).

Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients)

► BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms every 1 month for 2 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 10 micrograms every 1 month for 2 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 40 micrograms every 1 month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients (accelerated schedule))

► BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms every 1 month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 10 micrograms every 1 month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

FENDRIX®

Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)

► BY INTRAMUSCULAR INJECTION

- Child 15–17 years: 20 micrograms every 1 month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

HBVAXPRO®**Immunisation against hepatitis B infection**

► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

Immunisation against hepatitis B infection (accelerated schedule)

► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every 1 month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month–15 years: 5 micrograms every 1 month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16–17 years: 10 micrograms every 1 month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

Neonate born to hepatitis B surface antigen-positive mother

► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every 1 month for 3 doses, first dose given at birth with hepatitis B immunoglobulin injection (separate site), followed by 5 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced).

Chronic haemodialysis patients

► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: 40 micrograms every 1 month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Thiomersal

► **Engerix B** (GlaxoSmithKline UK Ltd)

Hepatitis B virus surface antigen 20 microgram per 1 ml Engerix B 20micrograms/1ml vaccine suspension for injection vials | 1 vial [PoM] £12.34 | 10 vial [PoM] £123.41

Engerix B 10micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.67

Engerix B 20micrograms/1ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.99 | 10 pre-filled disposable injection [PoM] £129.92

► **Fendrix** (GlaxoSmithKline UK Ltd)

Human papillomavirus vaccines**INDICATIONS AND DOSE****CERVARIX®****Prevention of premalignant genital lesions and cervical cancer**

► BY INTRAMUSCULAR INJECTION

- Child 9–14 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 5–7 months for 1 dose, if second dose administered earlier than 5 months after the first, a third dose should be administered, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.
- Child 15–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, dose to be administered into deltoid region, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

GARDASIL®**Prevention of premalignant genital (cervical, vulvar and vaginal) and anal lesions, cervical and anal cancers, and genital warts**

► BY INTRAMUSCULAR INJECTION

- Child 9–17 years (female): 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, schedule should be completed within 12 months of the first dose, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses.

continued →

Prevention of premalignant genital (cervical, vulvar, and vaginal) and anal lesions, cervical and anal cancers, and genital warts (alternative schedule)

► BY INTRAMUSCULAR INJECTION

- Child 9–13 years (female): 0.5 mL, for 1 dose, followed by 0.5 mL after 6 months for 1 dose, if the second dose is administered earlier than 6 months after the first dose, a third dose should be administered, dose to be administered preferably into deltoid region or higher anterolateral thigh, if the course is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the girl is then aged 15 years or more.

- **PREGNANCY** Not known to be harmful, but vaccination should be postponed until completion of pregnancy.
- **PRESCRIBING AND DISPENSING INFORMATION** To avoid confusion, prescribers should specify the brand to be dispensed.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

- **Cervarix** (GlaxoSmithKline UK Ltd)
Cervarix vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £80.50
- **Gardasil** (sanofi pasteur MSD Ltd)
Gardasil vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £86.50

F 742

Influenza vaccine● **INDICATIONS AND DOSE****Annual immunisation against seasonal influenza (for children who have not received seasonal influenza vaccine previously)**

► BY INTRAMUSCULAR INJECTION

- Child 6 months–9 years: 0.5 mL for 1 dose, followed by 0.5 mL after at least 4 weeks for 1 dose

► BY INTRANASAL ADMINISTRATION

- Child 2–9 years: 0.1 mL for 1 dose, followed by 0.1 mL after at least 4 weeks for 1 dose, 0.1 mL dose to be administered into each nostril

Annual immunisation against seasonal influenza

► BY INTRAMUSCULAR INJECTION

- Child 6 months–17 years: 0.5 mL for 1 dose

► BY INTRANASAL ADMINISTRATION

- Child 2–17 years: 0.1 mL for 1 dose, dose to be administered into each nostril

- **UNLICENSED USE** Some products containing inactivated influenza vaccine (surface antigen) are not licensed for use in children under 4 years—check product literature.

FLUVIRIN® Not licensed for use in children under 4 years.

FLUARIX TETRA® Not licensed for use in children under 3 years of age.

OPTAFLU® Not licensed for use in children and adolescents under 18 years.

- **CONTRA-INDICATIONS** Preparations marketed by Pfizer, or CSL Biotherapies in child under 5 years—increased risk of febrile convulsions

FLUENZ TETRA® Active wheezing · concomitant use with antiviral therapy for influenza · concomitant use with salicylates · severe asthma

CONTRA-INDICATIONS, FURTHER INFORMATION

- Concomitant use with antivirals Avoid antivirals for at least 2 weeks after immunisation; avoid immunisation for at least 48 hours after stopping the antiviral.

ENZIRA® Child under 5 years—increased risk of febrile convulsions

- **CAUTIONS** Increased risk of fever in child 5–9 years with preparations marketed by Pfizer or CSL Biotherapies—use alternative influenza vaccine if available

ENZIRA® Child 5–9 years (increased risk of fever)—use alternative influenza vaccine if available

● **SIDE-EFFECTS****GENERAL SIDE-EFFECTS**

- **Uncommon** Epistaxis
- **Frequency not known** Febrile convulsions · transient thrombocytopenia

SPECIFIC SIDE-EFFECTS

- With intranasal use Rhinorrhoea

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with a history of egg allergy can be immunised with either an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). Vaccines with an ovalbumin content more than 120 nanograms/mL or where content is not stated should not be used in individuals with egg allergy. If an influenza vaccine containing ovalbumin is being considered in those with a history of anaphylaxis to egg or egg allergy with uncontrolled asthma, these individuals should be referred to a specialist in hospital.

- **PREGNANCY** Inactivated vaccines not known to be harmful.

FLUENZ TETRA® Avoid in pregnancy.

- **BREAST FEEDING** Inactivated vaccines not known to be harmful.

FLUENZ TETRA® Avoid in breast-feeding.

- **PRESCRIBING AND DISPENSING INFORMATION**

FLUARIX TETRA® Ovalbumin content less than 100 nanograms/mL.

- **PATIENT AND CARER ADVICE**

FLUENZ TETRA® Avoid close contact with severely immunocompromised patients for 1–2 weeks after vaccination.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Gentamicin, kanamycin, neomycin penicillins, polymyxin b, thiomersal

► **Influenza vaccine (Non-proprietary)**

Influenza vaccine (split virion, inactivated) suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £5.00–£6.59 | 10 pre-filled disposable injection [PoM] £65.90

Influenza vaccine (surface antigen, inactivated) suspension for injection 0.5mL pre-filled syringes | 10 pre-filled disposable injection [PoM] £41.50

► **Agrippal** (Novartis Vaccines and Diagnostics Ltd)

Agrippal vaccine suspension for injection 0.5mL pre-filled syringes | 10 pre-filled disposable injection [PoM] £58.50

► **Enzira** (Pfizer Ltd)

Enzira vaccine suspension for injection 0.5mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £5.25 | 10 pre-filled disposable injection [PoM] £52.50

F 742

Japanese encephalitis vaccine**● INDICATIONS AND DOSE****Immunisation against Japanese encephalitis**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2 months–2 years: 0.25 mL every 28 days for 2 doses, anterolateral thigh is preferred site of injection in infants, the subcutaneous route may be used for patients with bleeding disorders
- ▶ Child 3–17 years: 0.5 mL every 28 days for 2 doses, deltoid muscle is preferred site in older children; anterolateral thigh is preferred in infants, the subcutaneous route may be used for patients with bleeding disorders

● SIDE-EFFECTS

- ▶ **Uncommon** Cough

- **PREGNANCY** Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- ▶ **Japanese encephalitis vaccine (Non-proprietary)**
Japanese encephalitis GVCV vaccine solution for injection 1ml vials | 1 vial no price available
Japanese encephalitis GVCV vaccine solution for injection 20ml vials | 1 vial no price available
Japanese encephalitis GVCV vaccine solution for injection 10ml vials | 1 vial no price available

Suspension for injection

- ▶ **Ixiaro** (Valneva UK Ltd)
Ixiaro vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £59.50

F 742

Measles, mumps and rubella vaccine, live**● INDICATIONS AND DOSE****Primary immunisation against measles, mumps, and rubella (first dose)**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 12–13 months: 0.5 mL for 1 dose

Primary immunisation against measles, mumps, and rubella (second dose)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION

- ▶ Child 40 months–5 years: 0.5 mL for 1 dose

Rubella immunisation (in seronegative women, susceptible to rubella and in unimmunised, seronegative women, post-partum)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Females of childbearing potential: (consult product literature or local protocols)

Children presenting for pre-school booster, who have not received the primary immunisation (first dose) | Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course | Control of measles outbreak | Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6 months–17 years: (consult product literature or local protocols)

- **UNLICENSED USE** Not licensed for use in children under 9 months.

IMPORTANT SAFETY INFORMATION**MMR VACCINATION AND BOWEL DISEASE OR AUTISM**

Reviews undertaken on behalf of the CSM, the Medical Research Council, and the Cochrane Collaboration, have not found any evidence of a link between MMR vaccination and bowel disease or autism. The Chief Medical Officers have advised that the MMR vaccine is the safest and best way to protect children against measles, mumps, and rubella. Information (including fact sheets and a list of references) may be obtained from www.dh.gov.uk/immunisation.

- **CAUTIONS** Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion—leave an interval of at least 3 months before MMR immunisation

CAUTIONS, FURTHER INFORMATION

- ▶ Administration with other vaccines MMR vaccine should not be administered on the same day as yellow fever vaccine; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

MMR and varicella-zoster vaccine can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

● SIDE-EFFECTS

- ▶ **Uncommon** Parotid swelling (usually in the third week) · sleep disturbances · unusual crying in infants
- ▶ **Rare** Arthropathy (2 to 3 weeks after immunisation) · idiopathic thrombocytopenic purpura
- ▶ **Frequency not known** Optic neuritis · peripheral neuritis

SIDE-EFFECTS, FURTHER INFORMATION

Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days. Leaflets are available for parents on advice for reducing fever (including the use of paracetamol).

Febrile seizures—occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection)

- ▶ Idiopathic thrombocytopenic purpura Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose. The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR should undergo serological testing before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. The Specialist and Reference Microbiology Division, Health Protection Agency offers free serological testing for

children who develop idiopathic thrombocytopenic purpura *within 6 weeks* of the first dose of MMR.

- ▶ **Aseptic meningitis** Post-vaccination aseptic meningitis was reported (rarely and with complete recovery) following vaccination with MMR vaccine containing Urabe mumps vaccine, which has now been discontinued; no cases have been confirmed in association with the currently used Jeryl Lynn mumps vaccine. Children with post-vaccination symptoms are not infectious.
- ▶ **Frequency of side effects** Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.
- **ALLERGY AND CROSS-SENSITIVITY** MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg. Dislike of eggs, refusal to eat egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist.
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before immunisation. Avoid pregnancy for at least 1 month after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from health organisations or ImmForm www.immform.dh.gov.uk.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for solution for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Priorix** (GlaxoSmithKline UK Ltd)
Priorix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £7.64

- ▶ **M-M-RVAXPRO** (sanofi pasteur MSD Ltd)
M-M-RVAXPRO vaccine powder and solvent for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £11.00

¶ 742

Rabies vaccine

● INDICATIONS AND DOSE

Pre-exposure prophylaxis

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child: 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region or anterolateral thigh in infants, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

Pre-exposure prophylaxis booster dose (for patients at frequent risk of exposure)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child: 1 mL after 1 year for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region or anterolateral thigh in infants, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies

Pre-exposure prophylaxis booster dose (for patients at infrequent risk of exposure)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child: 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region or anterolateral thigh in infants

Post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, rabies immunoglobulin is not necessary

Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region or anterolateral thigh in infants, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

- **SIDE-EFFECTS** Paresis
- **PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for solution for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Rabipur** (GlaxoSmithKline UK Ltd)
Rabipur vaccine powder and solvent for solution for injection 1ml vials | 1 vial [PoM] £34.56

Powder and solvent for suspension for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Rabies vaccine (Non-proprietary)**
Verorab powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] no price available
Rabies vaccine powder and solvent for suspension for injection 1ml vials | 1 vial [PoM] £33.90

¶ 742

Rotavirus vaccine

- **DRUG ACTION** Rotavirus vaccine is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

● INDICATIONS AND DOSE

Immunisation against gastro-enteritis caused by rotavirus

- ▶ **BY MOUTH**
- ▶ Child 6–23 weeks: 1.5 mL for 2 doses separated by an interval of at least 4 weeks, first dose must be given between 6–14 weeks of age; course should be completed before 24 weeks of age (preferably before 16 weeks)

- **CONTRA-INDICATIONS** History of intussusception · predisposition to intussusception · severe combined immunosuppression

CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Immunosuppression** With the exception of severe combined immunodeficiency, rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from

vaccination is likely to outweigh the risk, if there is any doubt, seek specialist advice.

- **CAUTIONS** Diarrhoea (postpone vaccination) • immunosuppressed close contacts • vomiting (postpone vaccination)

CAUTIONS, FURTHER INFORMATION

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.

- **SIDE-EFFECTS** Abdominal cramps • abdominal pain • diarrhoea • nausea • vomiting
- **PATIENT AND CARER ADVICE** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Oral suspension

- ▶ **Rotarix** (GlaxoSmithKline UK Ltd)
Rotarix vaccine live oral suspension 1.5ml pre-filled syringes | 1 unit dose [PoM] £34.76

742

Tick-borne encephalitis vaccine, inactivated

INDICATIONS AND DOSE

Initial immunisation against tick-borne encephalitis

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-15 years: 0.25 mL for 1 dose, followed by 0.25 mL after 1–3 months for 1 dose, then 0.25 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- ▶ Child 16-17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

Immunisation against tick-borne encephalitis, booster doses

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-17 years: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region or anterolateral thigh in infants (consult product literature)

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Suspension for injection

EXCIPIENTS: May contain Gentamicin, neomycin

▶ TicoVac (Masta Ltd)

TicoVac Junior vaccine suspension for injection 0.25ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £28.00

TicoVac vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £32.00

742

Varicella-zoster vaccine

INDICATIONS AND DOSE

VARILRIX®

Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Child 1-17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered preferably into the deltoid region

VARIVAX®

Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1-12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)
- ▶ Child 13-17 years: 0.5 mL every 4–8 weeks for 2 doses, to be administered preferably into the deltoid region

Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1-12 years: 0.5 mL every 12 weeks for 2 doses, to be administered into the deltoid region (or higher anterolateral thigh in young children)

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

CAUTIONS, FURTHER INFORMATION

Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

- ▶ Administration with MMR vaccine Varicella-zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

SIDE-EFFECTS

- ▶ **Rare** Thrombocytopenia
- ▶ **Frequency not known** Conjunctivitis • varicella-like rash
- **CONCEPTION AND CONTRACEPTION** Avoid pregnancy for 3 months after vaccination.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

742

Yellow fever vaccine, live

INDICATIONS AND DOSE

Immunisation against yellow fever

► BY DEEP SUBCUTANEOUS INJECTION

- Child 6-8 months (administered on expert advice): Infants under 9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (consult product literature or local protocols)
- Child 9 months-17 years: 0.5 mL for 1 dose

- **CONTRA-INDICATIONS** Children under 6 months · history of thymus dysfunction

CAUTIONS

CAUTIONS, FURTHER INFORMATION

- Administration with MMR vaccine Yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.
- **SIDE-EFFECTS** Neurotropic disease · viscerotropic disease
- SIDE-EFFECTS, FURTHER INFORMATION**
- Vaccine-associated adverse effects *Very rare* adverse effects, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These *very rare* adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity.
- **ALLERGY AND CROSS-SENSITIVITY** Yellow fever vaccine should only be considered under the guidance of a specialist in individuals with evidence of previous anaphylactic reaction to egg.
- **PREGNANCY** Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.
- **BREAST FEEDING** Avoid; seek specialist advice if exposure to virus cannot be avoided.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder and solvent for suspension for injection

General anaesthesia

General anaesthesia

Overview

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated children and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using 'rapid sequence induction').

Total intravenous anaesthesia

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to predicted plasma-drug concentrations; specific models with paediatric pharmacokinetic data should be used for children.

Drugs used for intravenous anaesthesia

Propofol p. 759, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures.

Thiopental sodium p. 209 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect particularly in neonates and recovery is much slower.

Etomidate p. 758 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 773 causes less hypotension than thiopental sodium and propofol during induction. It is sometimes used in children requiring repeat anaesthesia (such as for serial burns dressings), however recovery is relatively slow and there is a high incidence of extraneous muscle movements. Ketamine can cause hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 207 or midazolam p. 210.

Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. *Gaseous anaesthetics* require suitable equipment for storage and administration. *Volatile liquid anaesthetics* are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 762 is being administered.

Volatile liquid anaesthetics

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isoflurane p. 761 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isoflurane anaesthesia, but heart-rate can rise. Systemic arterial pressure and cardiac

output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isoflurane is not recommended for induction of anaesthesia in infants and children of all ages because of the occurrence of cough, breath-holding, desaturation, increased secretions, and laryngospasm. Isoflurane is the preferred inhalational anaesthetic for use in obstetrics.

Desflurane p. 761 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isoflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract.

Sevoflurane p. 762 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia.

Nitrous oxide

Nitrous oxide is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For anaesthesia, it is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox[®], Equanox[®]) is used. Self-administration using a demand valve may be used in children who are able to self-regulate their intake (usually over 5 years of age) for painful dressing changes, as an aid to postoperative physiotherapy, for wound debridement and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in children with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

Malignant hyperthermia

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride p. 766 has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in children at high risk of malignant hyperthermia.

Dantrolene sodium p. 775 is used in the treatment of malignant hyperthermia.

Sedation, anaesthesia, and resuscitation in dental practice

Overview

Sedation for dental procedures should be limited to conscious sedation whenever possible. Nitrous oxide p. 762 alone and midazolam p. 210 are effective for many children.

For details of anaesthesia, sedation, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated

documents. Further details can also be found in *Standards for Conscious Sedation in the Provision of Dental Care*; report of an Intercollegiate Advisory Committee for Sedation in Dentistry, 2015 www.rcseng.ac.uk/fds/Documents/dental-sedation-report-2015-web-v2.pdf.

Surgery and long-term medication

Overview

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about **all** drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids).

Other drugs that should normally not be stopped before surgery include drugs for epilepsy, asthma, immunosuppression, and metabolic, endocrine and cardiovascular disorders (but see potassium sparing diuretics). Expert advice is required for children receiving antivirals for HIV infection. See general advice on surgery in children with diabetes in *Insulins and anti-diabetic drugs* p. 417, *Diabetes and surgery*.

Children taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) p. 87 or low molecular weight heparin therapy.

Drugs that should be stopped before surgery include combined oral contraceptives, see *Contraceptives, hormonal* p. 461. If antidepressants need to be stopped, they should be withdrawn gradually to avoid withdrawal symptoms. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or if there is tissue damage. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

ANAESTHETICS, GENERAL > INTRAVENOUS ANAESTHETICS

Etomidate

• INDICATIONS AND DOSE

Induction of anaesthesia

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Child 1 month–14 years: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds for children in whom hypotension might be hazardous), increased if necessary to 400 micrograms/kg

- ▶ Child 15–17 years: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds for children in whom hypotension might be hazardous)

- **UNLICENSED USE** *Hypnomidate*® licensed for use in children (age range not specified by manufacturer). *Etomidate-Lipuro*® not licensed for children under 6 months except for imperative indications during inpatient treatment. Doses in *BNF for Children* may differ from those in the product literature.

IMPORTANT SAFETY INFORMATION

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) • Acute porphyrias p. 562 (avoid) • adrenal insufficiency • cardiovascular disease • fixed cardiac output • hypovolaemia
- CAUTIONS, FURTHER INFORMATION**
 - ▶ Adrenal insufficiency Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.
- **INTERACTIONS** → Appendix 1 (anaesthetics, general).
- **SIDE-EFFECTS**
 - ▶ **Common or very common** Apnoea • hyperventilation • hypotension • nausea • rash • stridor • vomiting
 - ▶ **Uncommon** Arrhythmias • bradycardia • cough • hiccups • hypersalivation • hypertension • phlebitis
 - ▶ **Frequency not known** AV block • cardiac arrest • extraneous muscle movement (high incidence) • pain on injection • respiratory depression • seizures • shivering • Stevens-Johnson syndrome

SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Pain on injection Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.
- ▶ Extraneous muscle movement Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Reduce dose in liver cirrhosis.
- **DIRECTIONS FOR ADMINISTRATION** To be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous).
- **PATIENT AND CARER ADVICE**

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

EXCIPIENTS: May contain Propylene glycol

- ▶ **Hypnomidate** (Janssen-Cilag Ltd)

Etomidate 2 mg per 1 ml Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £6.90

Emulsion for injection

- ▶ **Etomidate-Lipuro** (B.Braun Medical Ltd)

Etomidate 2 mg per 1 ml Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoule [PoM] £15.62

Propofol

INDICATIONS AND DOSE

Induction of anaesthesia using 0.5% or 1% injection

- ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Child 1 month–16 years: Usual dose 2.5–4 mg/kg, dose adjusted according to age, body-weight and response
- ▶ Child 17 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response

Induction of anaesthesia using 2% injection

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child 3–16 years: Usual dose 2.5–4 mg/kg, dose adjusted according to age, body-weight and response
- ▶ Child 17 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response

Maintenance of anaesthesia using 1% injection

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Child 1 month–16 years: Usual dose 9–15 mg/kg/hour, dose adjusted according to age, body-weight and response
- ▶ Child 17 years: Usual dose 4–12 mg/kg/hour, adjusted according to response

Maintenance of anaesthesia using 2% injection

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Child 3–16 years: Usual dose 9–15 mg/kg/hour, dose adjusted according to age, body-weight and response
- ▶ Child 17 years: Usual dose 4–12 mg/kg/hour, adjusted according to response

Sedation of ventilated patients in intensive care using 1% or 2% injection

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Child 16–17 years: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Child 1 month–16 years: Initially 1–2 mg/kg, dose and rate of administration adjusted according to desired level of sedation and response
- ▶ Child 17 years: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

Maintenance of sedation for surgical and diagnostic procedures using 0.5% injection

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Child 17 years: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required)

Maintenance of sedation for surgical and diagnostic procedures using 1% injection

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Child 1 month–16 years: Usual dose 1.5–9 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) up to 1 mg/kg, (if rapid increase in sedation required)
- ▶ Child 17 years: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by continued →

(by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required)

Maintenance of sedation for surgical and diagnostic procedures using 2% injection

► INITIALLY BY INTRAVENOUS INFUSION

- Child 3–16 years: Usual dose 1.5–9 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response
- Child 17 years: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, using 0.5% or 1% injection (if rapid increase in sedation required)

IMPORTANT SAFETY INFORMATION

Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Children under 16 years receiving intensive care

CONTRA-INDICATIONS, FURTHER INFORMATION

Use in intensive care associated with a risk of propofol infusion syndrome (potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure).

- **CAUTIONS** Acute circulatory failure (shock) • cardiac impairment • cardiovascular disease • epilepsy • fixed cardiac output • hypotension • hypovolaemia • raised intracranial pressure • respiratory impairment
- **INTERACTIONS** → Appendix 1 (anaesthetics, general).
- **SIDE-EFFECTS**
 - **Common or very common** Headache • hypotension • tachycardia • transient apnoea
 - **Uncommon** Phlebitis • thrombosis
 - **Rare** Anaphylaxis • arrhythmia • convulsions (onset can be delayed) • delayed recovery from anaesthesia • euphoria
 - **Very rare** Discoloration of urine • pancreatitis • pulmonary oedema • sexual disinhibition
 - **Frequency not known** Bradycardia • pain on intravenous injection • propofol infusion syndrome • significant extraneous muscle movements

SIDE-EFFECTS, FURTHER INFORMATION

- **Bradycardia** Bradycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.
- **Extraneous muscle movement** Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.
- **Pain on injection** Can be reduced by intravenous lidocaine.
- **Propofol infusion syndrome** Prolonged infusion of propofol doses exceeding 4 mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.
- **PREGNANCY** Max. dose for maintenance of anaesthesia 6 mg/kg/hour. May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Use with caution.
- **RENAL IMPAIRMENT** Use with caution.
- **MONITORING REQUIREMENTS** Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.

- **DIRECTIONS FOR ADMINISTRATION** Shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% **emulsion** for injection or intermittent infusion; may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% **emulsion** for injection or infusion; may be administered undiluted, or diluted with Glucose 5% (*Diprivan*®) or (*Propofol-Lipuro*®) or Sodium chloride 0.9% (*Propofol-Lipuro*® only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% **emulsion** for infusion; do not dilute.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Emulsion for injection

► *Diprivan* (AstraZeneca UK Ltd)

Propofol 10 mg per 1 ml *Diprivan* 1% emulsion for injection 20ml ampoules | 5 ampoule [POM] £15.36 (Hospital only)

► *Propofol-Lipuro* (B.Braun Medical Ltd)

Propofol 5 mg per 1 ml *Propofol-Lipuro* 0.5% emulsion for injection 20ml ampoules | 5 ampoule [POM] £14.71

Emulsion for infusion

► *Diprivan* (AstraZeneca UK Ltd)

Propofol 10 mg per 1 ml *Diprivan* 1% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection [POM] £10.68

ANAESTHETICS, GENERAL > VOLATILE LIQUID ANAESTHETICS

Volatile halogenated anaesthetics

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia • neuromuscular disease (inhalational anaesthetics are very rarely associated with hyperkalaemia, resulting in cardiac arrhythmias and death) • raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
 - **Common or very common** Arrhythmias • cardiorespiratory depression • hypotension
 - **Frequency not known** Convulsions • mood changes (that can last several days)
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.
- **DIRECTIONS FOR ADMINISTRATION** Volatile liquid anaesthetics are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the

carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

760

Desflurane

● INDICATIONS AND DOSE

Induction of anaesthesia (but not recommended)

► BY INHALATION

- Child 12–17 years: 4–11 %, to be inhaled through specifically calibrated vaporiser

Maintenance of anaesthesia (in nitrous oxide–oxygen)

► BY INHALATION

- Neonate: 2–6 %, to be inhaled through a specifically calibrated vaporiser.
- Child: 2–6 %, to be inhaled through a specifically calibrated vaporiser

Maintenance of anaesthesia (in oxygen or oxygen-enriched air)

► BY INHALATION

- Neonate: 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser.
- Child: 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser

● INTERACTIONS → Appendix 1 (anaesthetics, general).

● SIDE-EFFECTS Apnoea · breath-holding · cough · increased secretions · laryngospasm

● PREGNANCY May depress neonatal respiration if used during delivery.

● BREAST FEEDING Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Inhalation vapour

► **Suprane** (Baxter Healthcare Ltd)

Desflurane 1 ml per 1 ml Suprane volatile liquid | 240 ml [PoM] no price available (Hospital only)

Isoflurane

● INDICATIONS AND DOSE

Induction of anaesthesia (in oxygen or nitrous oxide–oxygen) (but indication not recommended in infants and children of all ages)

► BY INHALATION

- Neonate: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser.
- Child: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

Maintenance of anaesthesia (in nitrous oxide–oxygen)

► BY INHALATION

- Neonate: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1% may be required when given with oxygen alone.
- Child: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1% may be required when given with oxygen alone

Maintenance of anaesthesia in caesarean section (in nitrous oxide–oxygen)

► BY INHALATION

- Child: 0.5–0.75 %, to be administered using specifically calibrated vaporiser

IMPORTANT SAFETY INFORMATION

Isoflurane is not recommended for induction of anaesthesia in infants and children of all ages because of the occurrence of cough, breath-holding, desaturation, increased secretions, and laryngospasm.

● CAUTIONS Children under 2 years—limited experience

● INTERACTIONS → Appendix 1 (anaesthetics, general).

● SIDE-EFFECTS Breath-holding · cough · irritate mucous membrane · laryngospasm

● PREGNANCY May depress neonatal respiration if used during delivery.

● BREAST FEEDING Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Inhalation vapour

► **Isoflurane (Non-proprietary)**

Isoflurane 1 ml per 1 ml Isoflurane inhalation vapour | 250 ml [PoM] £35.29 (Hospital only)
Isoflurane volatile liquid | 250 ml [P] £47.50 (Hospital only)

► **AErrane** (Baxter Healthcare Ltd)

Isoflurane 1 ml per 1 ml AErrane volatile liquid | 250 ml [P] no price available (Hospital only)

Nitrous oxide

• INDICATIONS AND DOSE

Maintenance of anaesthesia in conjunction with other anaesthetic agents

► BY INHALATION

- Neonate: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen.
- Child: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen

Analgesia

► BY INHALATION

- Neonate: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs.
- Child: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs

IMPORTANT SAFETY INFORMATION

Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Entrapped air following recent underwater dive · pneumothorax · presence of intracranial air after head injury · recent intra-ocular gas injection

CAUTIONS, FURTHER INFORMATION

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

- **INTERACTIONS** → Appendix 1 (anaesthetics, general).
- **SIDE-EFFECTS** Depression of white cell formation · hypoxia · megaloblastic anaemia · neurological toxic effects

SIDE-EFFECTS, FURTHER INFORMATION

- **Hypoxia** Hypoxia can occur immediately following the administration of nitrous oxide; additional oxygen should always be given for several minutes after stopping the flow of nitrous oxide.
- **Prolonged exposure** Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B₁₂; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MONITORING REQUIREMENTS**
 - Assessment of plasma-vitamin B₁₂ concentration should be considered in those at risk of deficiency, including those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
 - Nitrous oxide should **not** be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.
- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), a mixture of nitrous oxide and

oxygen containing 50% of each gas (Entonox[®], Equanox[®]) is used.

- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).

F 760

Sevoflurane

• INDICATIONS AND DOSE

Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

► BY INHALATION

- Neonate: Up to 4 %, adjusted according to response, to be administered using specifically calibrated vaporiser.
- Child: Initially 0.5–1 %, then increased to up to 8 %, increased gradually, according to response, to be administered using specifically calibrated vaporiser

Maintenance of anaesthesia (in oxygen or nitrous oxide-oxygen)

► BY INHALATION

- Neonate: 0.5–2 %, adjusted according to response, to be administered using specifically calibrated vaporiser.
- Child: 0.5–3 %, adjusted according to response, to be administered using specifically calibrated vaporiser

- **CAUTIONS** Susceptibility to QT-interval prolongation

- **INTERACTIONS** → Appendix 1 (anaesthetics, general).

Sevoflurane can interact with carbon dioxide absorbents to form compound A, a potentially nephrotoxic vinyl ether. However, in spite of extensive use, no cases of sevoflurane-induced permanent renal injury have been reported and the carbon dioxide absorbents used in the UK produce very low concentrations of compound A, even in low-flow anaesthetic systems.

- **SIDE-EFFECTS** Agitation · cardiac arrest · dystonia · leucopenia · torsade de pointes · urinary retention

- **PREGNANCY** May depress neonatal respiration if used during delivery.

- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **RENAL IMPAIRMENT** Use with caution.

- **PATIENT AND CARER ADVICE**

Driving and skilled tasks

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks

afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Inhalation vapour

► Sevoflurane (Non-proprietary)

Sevoflurane 1 ml per 1 ml Sevoflurane volatile liquid | 250 ml [PoM]
£123.00 (Hospital only)

1 Anaesthesia adjuvants

Pre-medication and peri-operative drugs

Drugs that affect gastric pH

Regurgitation and aspiration of gastric contents (Mendelson's syndrome) can be a complication of general anaesthesia, particularly in obstetrics and in gastro-oesophageal reflux disease; prophylaxis against acid aspiration is not routinely used in children but may be required in high-risk cases.

An **H₂-receptor antagonist** can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H₂-receptor antagonist can be given 1–2 hours before the procedure.

Antimuscarinic drugs

Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some inhalational anaesthetics. They are also used before or with neostigmine p. 602 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol p. 759 and suxamethonium chloride p. 766.

Atropine sulfate p. 764 is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulfate may have a role in cardiopulmonary resuscitation.

Hyoscine hydrobromide p. 250 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulfate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 765 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulfate. It is widely used with neostigmine for reversal of non-depolarising muscle relaxants.

Glycopyrronium bromide or hyoscine hydrobromide are also used to control excessive secretions in upper airways or hypersalivation in palliative care and in children unable to control posture or with abnormal swallowing reflex; effective dose varies and tolerance may develop. The intramuscular route should be avoided if possible. Hyoscine hydrobromide transdermal patches may also be used.

Sedative drugs

Premedication

Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a **benzodiazepine**. Premedication may also augment the action of anaesthetics and provide some degree of pre-

operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures. Oral administration is preferred if possible; the rectal route should only be used in exceptional circumstances.

Premedicants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

Oral midazolam p. 210 is the most common premedicant for children; temazepam p. 774 may be used in older children. The antihistamine alimemazine tartrate p. 167 is occasionally used orally, but when given alone it may cause postoperative restlessness in the presence of pain.

Benzodiazepines

Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used for sedation prior to clinical procedures and for sedation in intensive care.

Benzodiazepines may occasionally cause marked respiratory depression and facilities for its treatment are essential; flumazenil p. 794 is used to antagonise the effects of benzodiazepines.

Midazolam, a water-soluble benzodiazepine, is the preferred benzodiazepine for premedication and for sedation for clinical procedures in children. It has a fast onset of action, and recovery is faster than for other benzodiazepines. Recovery may be longer in children with a low cardiac output, or after repeated dosing.

Midazolam can be given by mouth [unlicensed], but its bitter acidic taste may need to be disguised. It can also be given buccally [unlicensed indication] or intranasally [unlicensed]. Midazolam is associated with profound sedation when high doses are given or when it is used with certain other drugs. It can cause severe disinhibition and restlessness in some children. Midazolam is not recommended for prolonged sedation in neonates; drug accumulation is likely to occur.

Temazepam is given by mouth for premedication in older children and has a short duration of action. Anxiolytic and sedative effects last about 90 minutes, although there may be residual drowsiness. Temazepam is rarely used for dental procedures in children.

Lorazepam p. 209 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Peri-operative use of diazepam p. 207 is not recommended in children; onset and magnitude of response are unreliable, and paradoxical effects may occur. Diazepam is not used for dental procedures in children.

Antagonists for central and respiratory depression

Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by an opioid antagonist. Naloxone hydrochloride p. 796 given intravenously immediately reverses opioid-induced respiratory depression but the dose may have to be repeated because of its **short duration of action**.

Intramuscular injection of naloxone hydrochloride produces a more gradual and prolonged effect but absorption may be erratic. Care is required in children requiring pain relief because naloxone hydrochloride also antagonises the analgesic effect of opioids.

Flumazenil is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become resedated.

Neonates

Naloxone hydrochloride is used in newborn infants to reverse respiratory depression and sedation resulting from the use of opioids by the mother, usually for pain during labour. In neonates the effects of opioids may persist for up to 48 hours and in such cases naloxone hydrochloride is often given by intramuscular injection for its prolonged effect. In severe respiratory depression after birth, breathing should first be established (using artificial means if necessary) and naloxone hydrochloride administered only if use of opioids by the mother is thought to cause the respiratory depression; the infant should be monitored closely and further doses of naloxone hydrochloride administered as necessary.

ANTIMUSCARINICS

F 457

Atropine sulfate**• INDICATIONS AND DOSE****Bradycardia due to acute massive overdosage of beta-blockers****► BY INTRAVENOUS INJECTION**

- Child: 40 micrograms/kg (max. per dose 3 mg)

Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)**► BY INTRAVENOUS INJECTION**

- Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

Premedication**► BY INTRAVENOUS INJECTION**

- Neonate: 10 micrograms/kg, to be administered immediately before induction of anaesthesia.

- Child 1 month–11 years: 20 micrograms/kg, to be administered immediately before induction of anaesthesia (minimum 100 micrograms, max. 600 micrograms)

- Child 12–17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia

► BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

- Neonate: 10 micrograms/kg, to be administered 30–60 minutes before induction of anaesthesia.

- Child 1 month–11 years: 10–30 micrograms/kg, to be administered 30–60 minutes before induction of anaesthesia (minimum 100 micrograms, max. 600 micrograms)

- Child 12–17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

► BY MOUTH

- Neonate: 20–40 micrograms/kg, to be administered 1–2 hours before induction of anaesthesia.

- Child: 20–40 micrograms/kg (max. per dose 900 micrograms), to be administered 1–2 hours before induction of anaesthesia

Intra-operative bradycardia**► BY INTRAVENOUS INJECTION**

- Neonate: 10–20 micrograms/kg.

- Child 1 month–11 years: 10–20 micrograms/kg

- Child 12–17 years: 300–600 micrograms, larger doses may be used in emergencies

Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block**► BY INTRAVENOUS INJECTION**

- Neonate: 20 micrograms/kg.

- Child 1 month–11 years: 20 micrograms/kg (max. per dose 1.2 mg)
- Child 12–17 years: 0.6–1.2 mg

- UNLICENSED USE** Not licensed for use in children under 12 years for intra-operative bradycardia or by intravenous route for premedication. Not licensed for use by oral route.

IMPORTANT SAFETY INFORMATION

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- PREGNANCY** Not known to be harmful; manufacturer advises caution.

- BREAST FEEDING** May suppress lactation; small amount present in milk—manufacturer advises caution.

• MONITORING REQUIREMENTS

- Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block Since atropine has a shorter duration of action than neostigmine, late unopposed bradycardia may result; close monitoring of the patient is necessary.

- DIRECTIONS FOR ADMINISTRATION** For administration by mouth, injection solution may be given orally.

• EXCEPTIONS TO LEGAL CATEGORY

- With intramuscular use or intravenous use or subcutaneous use Prescription only medicine restriction does not apply where administration is for saving life in emergency.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, solution for infusion

Glycopyrronium bromide (Glycopyrrolate)

● INDICATIONS AND DOSE

Premedication at induction

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

► Neonate: 5 micrograms/kg.

- Child 1 month–11 years: 4–8 micrograms/kg (max. per dose 200 micrograms)
- Child 12–17 years: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms)

Intra-operative bradycardia

► BY INTRAVENOUS INJECTION

► Neonate: 10 micrograms/kg, repeated if necessary.

► Child: 4–8 micrograms/kg (max. per dose 200 micrograms), repeated if necessary

Control of muscarinic side-effects of neostigmine in reversal of non-depolarising neuromuscular block

► BY INTRAVENOUS INJECTION

► Neonate: 10 micrograms/kg.

- Child 1 month–11 years: 10 micrograms/kg (max. per dose 500 micrograms)
- Child 12–17 years: 10–15 micrograms/kg, alternatively, 200 micrograms per 1 mg of neostigmine to be administered

Control of upper airways secretion | Hypersalivation

► BY MOUTH

► Child: 40–100 micrograms/kg 3–4 times a day (max. per dose 2 mg), adjusted according to response

► BY SUBCUTANEOUS INFUSION

► Child 1 month–11 years: 12–40 micrograms/kg (max. per dose 1.2 mg) over 24 hours

► Child 12–17 years: 0.6–1.2 mg/24 hours

► BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

► Child 1 month–11 years: 4–10 micrograms/kg 4 times a day (max. per dose 200 micrograms) as required

► Child 12–17 years: 200 micrograms every 4 hours as required

- **UNLICENSED USE** Not licensed for use in control of upper airways secretion and hypersalivation.

IMPORTANT SAFETY INFORMATION

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- **DIRECTIONS FOR ADMINISTRATION** For administration *by mouth*, injection solution may be given or crushed tablets suspended in water.
- **PRESCRIBING AND DISPENSING INFORMATION** Tablets may be available on a named-patient basis from specialist importing companies.

1.1 Neuromuscular blockade

Neuromuscular blockade

Neuromuscular blocking drugs

Neuromuscular blocking drugs used in anaesthesia are also known as **muscle relaxants**. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in musculoskeletal disorders that act on the spinal cord or brain.

Children who have received a neuromuscular blocking drug should **always** have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

Non-depolarising neuromuscular blocking drugs

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 602. Non-depolarising neuromuscular blocking drugs can be divided into the **aminosteroid** group, comprising pancuronium bromide p. 768, rocuronium bromide p. 769, and vecuronium bromide p. 769, and the **benzylisoquinolinium** group, comprising atracurium besilate p. 767, cisatracurium p. 768, and mivacurium p. 768.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride p. 766. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as atracurium besilate and vecuronium bromide, are more widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzylisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney function, thus allowing its use in children with hepatic or

renal impairment. Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute. Neonates may be more sensitive to the effects of atracurium besilate and lower doses may be required.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects. In children aged 1 month to 12 years, cisatracurium has a shorter duration of action and produces faster spontaneous recovery.

Mivacurium, a benzyliisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection. In children under 12 years mivacurium has a faster onset, shorter duration of action, and produces more rapid spontaneous recovery.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in children receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension. The half-life of pancuronium bromide is prolonged in neonates; neonates should receive postoperative intermittent positive pressure ventilation.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity. In most children, the duration of action of rocuronium bromide may be shorter than in adults; however, in neonates and children under 2 years, usual doses may produce a more prolonged action.

Vecuronium bromide, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects. In most children, the duration of action of vecuronium bromide may be shorter than in adults; however, in neonates and children under 2 years, usual doses may produce a more prolonged action.

Depolarising neuromuscular blocking drugs

Suxamethonium chloride has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required e.g. with tracheal intubation. Neonates and young children are less sensitive to suxamethonium chloride and a higher dose may be required. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. Bradycardia may occur; premedication with atropine sulfate p. 764 reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride use.

Prolonged paralysis may occur in dual block, which occurs with high or repeated doses of suxamethonium chloride and is caused by the development of a non-depolarising block following the initial depolarising block. Children with myasthenia gravis are resistant to suxamethonium chloride but can develop dual block resulting in delayed recovery. Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

NEUROMUSCULAR BLOCKING DRUGS > DEPOLARISING

Suxamethonium chloride

(Succinylcholine chloride)

- **DRUG ACTION** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

● INDICATIONS AND DOSE

Neuromuscular blockade (short duration) during surgery

► BY INTRAVENOUS INJECTION

- Neonate: 2 mg/kg, produces 5–10 minutes neuromuscular blockade.

- Child 1–11 months: 2 mg/kg

- Child 1–17 years: 1 mg/kg

► BY INTRAMUSCULAR INJECTION

- Neonate: Up to 4 mg/kg, produces 10–30 minutes neuromuscular blockade.

- Child 1–11 months: Up to 5 mg/kg

- Child 1–11 years: Up to 4 mg/kg (max. per dose 150 mg)

PHARMACOKINETICS

- With intramuscular use Intramuscular injection has a duration of onset of 2–3 minutes.

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Duchenne muscular dystrophy · family history of malignant hyperthermia · hyperkalaemia · low plasma-cholinesterase activity (including severe liver disease) · major trauma · neurological disease involving acute wasting of major muscle · personal or family history of congenital myotonic disease · prolonged immobilisation (risk of hyperkalaemia) · severe burns

- **CAUTIONS** Cardiac disease · neuromuscular disease · raised intra-ocular pressure (avoid in penetrating eye injury) · respiratory disease · severe sepsis (risk of hyperkalaemia)

- **INTERACTIONS** → Appendix 1 (muscle relaxants).

● SIDE-EFFECTS

- **Common or very common** Flushing · hyperkalaemia · increased gastric pressure · increased intra-ocular pressure · myoglobinaemia · myoglobinuria · postoperative muscle pain · rash
- **Rare** Apnoea · arrhythmias · bronchospasm · cardiac arrest · limited jaw mobility · prolonged respiratory depression
- **Very rare** Anaphylactic reactions · malignant hyperthermia
- **Frequency not known** Bradycardia (may occur with the first dose) · hypertension · hypotension · rhabdomyolysis · tachycardia (occurs with single use)

► SIDE-EFFECTS, FURTHER INFORMATION

- Bradycardia Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium use.
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Mildly prolonged maternal neuromuscular blockade may occur.
- **BREAST FEEDING** Unlikely to be present in breast milk in significant amounts (ionised at physiological pH). Breast-feeding may be resumed once the mother recovered from neuromuscular block.

- **HEPATIC IMPAIRMENT** Prolonged apnoea may occur in severe liver disease because of reduced hepatic synthesis of pseudocholinesterase.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give undiluted or dilute with Glucose 5% or Sodium Chloride 0.9%.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Solution for injection

▶ **Suxamethonium chloride (Non-proprietary)**

Suxamethonium chloride 50 mg per 1 ml Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £28.80–£50.00

▶ **Anectine** (GlaxoSmithKline UK Ltd)

Suxamethonium chloride 50 mg per 1 ml Anectine 100mg/2ml solution for injection ampoules | 5 ampoule **[PoM]** £3.57

NEUROMUSCULAR BLOCKING DRUGS > NON-DEPOLARISING

Non-depolarising neuromuscular blocking drugs

IMPORTANT SAFETY INFORMATION

Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

- **CAUTIONS** Burns (resistance can develop, increased doses may be required) • cardiovascular disease (reduce rate of administration) • electrolyte disturbances (response unpredictable) • fluid disturbances (response unpredictable) • hypothermia (activity prolonged, lower doses required) • myasthenia gravis (activity prolonged, lower doses required) • neuromuscular disorders (response unpredictable)
- **INTERACTIONS** → Appendix 1 (muscle relaxants).
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.
- **BREAST FEEDING** Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

➔ above

Atracurium besilate (Atracurium besylate)

● **INDICATIONS AND DOSE**

Neuromuscular blockade (short to intermediate duration) for surgery

▶ **INITIALLY BY INTRAVENOUS INJECTION**

- ▶ **Neonate:** Initially 300–500 micrograms/kg, followed by (by intravenous injection) 100–200 micrograms/kg, repeated if necessary, alternatively (by intravenous infusion) 300–400 micrograms/kg/hour, adjusted according to response.
- ▶ **Child:** Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg,

repeated if necessary, alternatively (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour, adjusted according to response

Neuromuscular blockade during intensive care

▶ **INITIALLY BY INTRAVENOUS INJECTION**

- ▶ **Neonate:** Initially 300–500 micrograms/kg, followed by (by intravenous injection) 100–200 micrograms/kg, repeated if necessary, alternatively (by intravenous infusion) 300–400 micrograms/kg/hour, adjusted according to response, higher doses may be necessary.
- ▶ **Child:** Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Not licensed for use in neonates.

● **SIDE-EFFECTS**

- **Very rare** Anaphylactoid reactions
- ▶ **Frequency not known** Acute myopathy (after prolonged use in intensive care) • bronchospasm • hypotension • seizures • skin flushing • tachycardia

SIDE-EFFECTS, FURTHER INFORMATION

- ▶ **Cardiovascular effects** Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute. Neonates may be more sensitive to the effects of atracurium and lower doses may be required.
- **DIRECTIONS FOR ADMINISTRATION**
- ▶ **With intravenous use** For *continuous intravenous infusion*, dilute to a concentration of 0.5–5 mg/mL with Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent.
- ▶ **With intravenous use in neonates** *Neonatal intensive care*, dilute 60 mg/kg body-weight to a final volume of 50 mL with Glucose 5% or Sodium Chloride 0.9%; minimum concentration of 500 micrograms/mL, maximum concentration of 5 mg/mL; an intravenous infusion rate of 0.1 mL/hour provides a dose of 120 micrograms/kg/hour.

● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

Cisatracurium

● INDICATIONS AND DOSE

Neuromuscular blockade (intermediate duration) during surgery

► INITIALLY BY INTRAVENOUS INJECTION

- Child 1 month–1 year: Initially 150 micrograms/kg, then (by intravenous injection) 30 micrograms/kg every 20 minutes as required
- Child 2–11 years: Initially 150 micrograms/kg, 80–100 micrograms/kg if not for intubation, then (by intravenous injection) 20 micrograms/kg every 10 minutes as required, alternatively (by intravenous injection) initially 150 micrograms/kg, followed by (by intravenous infusion) 180 micrograms/kg/hour, (by intravenous infusion) reduced to 60–120 micrograms/kg/hour, adjusted according to response
- Child 12–17 years: Initially 150 micrograms/kg, then (by intravenous injection) 30 micrograms/kg every 20 minutes as required, alternatively (by intravenous injection) initially 150 micrograms/kg, followed by (by intravenous infusion) 180 micrograms/kg/hour, (by intravenous infusion) reduced to 60–120 micrograms/kg/hour, adjusted according to response

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) · bradycardia
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of 0.1–2 mg/mL with Glucose 5% or Sodium Chloride 0.9%; solutions of 2 mg/mL and 5 mg/mL may be infused undiluted.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Cisatracurium (Non-proprietary)

Mivacurium

● INDICATIONS AND DOSE

Neuromuscular blockade (short duration) during surgery

► INITIALLY BY INTRAVENOUS INJECTION

- Child 2–5 months: Initially 150 micrograms/kg, then (by intravenous injection) 100 micrograms/kg every 6–9 minutes as required, alternatively (by intravenous infusion) 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 11–14 micrograms/kg/minute
- Child 6 months–11 years: Initially 200 micrograms/kg, then (by intravenous injection) 100 micrograms/kg

every 6–9 minutes as required, alternatively (by intravenous infusion) 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 11–14 micrograms/kg/minute

- Child 12–17 years: Initially 70–250 micrograms/kg, then (by intravenous injection) 100 micrograms/kg every 15 minutes as required, alternatively (by intravenous infusion) 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 6–7 micrograms/kg/minute

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **CAUTIONS** Burns (low plasma cholinesterase activity; dose titration required)
- **SIDE-EFFECTS**
 - **Very rare** Anaphylactoid reactions
 - **Frequency not known** Bronchospasm · hypotension · skin flushing · tachycardia
- **HEPATIC IMPAIRMENT** Reduce dose in severe impairment.
- **RENAL IMPAIRMENT** Clinical effect prolonged in renal failure—reduce dose according to response.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give undiluted or dilute in Glucose 5% or Sodium Chloride 0.9%. Doses up to 150 micrograms/kg may be given over 5–15 seconds, higher doses should be given over 30 seconds. In asthma, cardiovascular disease or in those sensitive to reduced arterial blood pressure, give over 60 seconds.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Mivacron (GlaxoSmithKline UK Ltd)

Mivacurium (as Mivacurium chloride) 2 mg per 1 mL Mivacron 10mg/5mL solution for injection ampoules | 5 ampoule [PoM](#) £13.95
Mivacron 20mg/10mL solution for injection ampoules | 5 ampoule [PoM](#) £22.57

Pancuronium bromide

● INDICATIONS AND DOSE

Neuromuscular blockade (long duration) during surgery

► BY INTRAVENOUS INJECTION

- Neonate: Initially 100 micrograms/kg, then 50 micrograms/kg, repeated if necessary.
- Child: Initially 100 micrograms/kg, then 20 micrograms/kg, repeated if necessary

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **SIDE-EFFECTS** Acute myopathy (after prolonged use in intensive care) · hypertension · tachycardia
- SIDE-EFFECTS, FURTHER INFORMATION** Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.
- **HEPATIC IMPAIRMENT** Possibly slower onset, higher dose requirement, and prolonged recovery time.
- **RENAL IMPAIRMENT** Use with caution; prolonged duration of block.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give undiluted or dilute in Glucose 5% or Sodium Chloride 0.9%.

Pancuronium bromide 2 mg per 1 ml Pancuronium bromide 4mg/2ml solution for injection ampoules | 10 ampoule [PoM] £50.00

767

Rocuronium bromide

INDICATIONS AND DOSE

Neuromuscular blockade (intermediate duration) during surgery

INITIALLY BY INTRAVENOUS INJECTION

- ▶ Neonate: Initially 600 micrograms/kg, then (by intravenous injection) 150 micrograms/kg, repeated if necessary, alternatively (by intravenous infusion) 300–600 micrograms/kg/hour, adjusted according to response.
- ▶ Child: Initially 600 micrograms/kg, then (by intravenous injection) 150 micrograms/kg, repeated if necessary, alternatively (by intravenous infusion) 300–600 micrograms/kg/hour, adjusted according to response

Assisted ventilation in intensive care

INITIALLY BY INTRAVENOUS INJECTION

- ▶ Child: Initially 600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 300–600 micrograms/kg/hour for first hour, then (by intravenous infusion), adjusted according to response

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **UNLICENSED USE** Not licensed for use in children for assisted ventilation in intensive care.

SIDE-EFFECTS

- ▶ **Very rare** Anaphylactoid reactions
- ▶ **Frequency not known** Acute myopathy (after prolonged use in intensive care) · bronchospasm · hypotension · skin flushing · tachycardia

- **HEPATIC IMPAIRMENT** Reduce dose.

- **RENAL IMPAIRMENT** Reduce maintenance dose; prolonged paralysis.

- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion* or via drip tubing, may be diluted with Glucose 5% or Sodium Chloride 0.9%.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

Rocuronium bromide (Non-proprietary)

Rocuronium bromide 10 mg per 1 ml Rocuronium bromide 50mg/5ml solution for injection vials | 10 vial [PoM] £28.00–£30.00
Rocuronium bromide 100mg/10ml solution for injection vials | 10 vial [PoM] £57.00–£60.00

Esmeron (Merck Sharp & Dohme Ltd)

Rocuronium bromide 10 mg per 1 ml Esmeron 50mg/5ml solution for injection vials | 10 vial [PoM] £28.92 (Hospital only)
Esmeron 100mg/10ml solution for injection vials | 10 vial [PoM] £57.85 (Hospital only)

Vecuronium bromide

INDICATIONS AND DOSE

Neuromuscular blockade (intermediate duration) during surgery

INITIALLY BY INTRAVENOUS INJECTION

- ▶ Neonate: Initially 80 micrograms/kg, then (by intravenous injection) 30–50 micrograms/kg, adjusted according to response.
- ▶ Child: Initially 80–100 micrograms/kg, then (by intravenous injection) 20–30 micrograms/kg, repeated if necessary, alternatively (by intravenous infusion) 0.8–1.4 micrograms/kg/minute, adjusted according to response

Assisted ventilation in intensive care

INITIALLY BY INTRAVENOUS INJECTION

- ▶ Neonate: Initially 80 micrograms/kg, then (by intravenous injection) 30–50 micrograms/kg, adjusted according to response, alternatively (by intravenous injection) initially 80 micrograms/kg, then (by intravenous infusion) 0.8–1.4 micrograms/kg/minute, adjusted according to response, risk of accumulation—consider interruption of infusion.
- ▶ Child: Initially 80–100 micrograms/kg, initial dose is optional, then (by intravenous infusion) 0.8–1.4 micrograms/kg/minute, adjusted according to response, (by intravenous infusion) increased if necessary up to 3 micrograms/kg/minute

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal bodyweight.

- **UNLICENSED USE** Not licensed for assisted ventilation in intensive care.

SIDE-EFFECTS

- ▶ **Very rare** Anaphylactoid reactions
- ▶ **Frequency not known** Acute myopathy (after prolonged use in intensive care) · bronchospasm · hypotension · skin flushing · tachycardia

- **HEPATIC IMPAIRMENT** Use with caution in significant impairment.

- **RENAL IMPAIRMENT** Use with caution.

DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use Reconstitute each vial with 5 mL Water for Injections to give 2 mg/mL solution; *alternatively* reconstitute with up to 10 mL Glucose 5% or Sodium Chloride 0.9% or Water for Injections—unsuitable for further dilution if not reconstituted with Water for Injections. For *continuous intravenous infusion*, dilute reconstituted solution to a concentration up to 40 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%; reconstituted solution can also be given via drip tubing.
- ▶ With intravenous use in neonates *Neonatal intensive care*, reconstitute each vial with 5 mL Water for Injections to give a 2 mg/mL solution. Dilute 5 mg/kg body-weight to a final volume of 50 mL with Glucose 5% or Sodium Chloride 0.9%; an intravenous infusion rate of 0.5 mL/hour provides a dose of 50 micrograms/kg/hour; minimum concentration of 40 micrograms/mL.

1.2 Neuromuscular blockade reversal

Drugs for reversal of neuromuscular blockade

Anticholinesterases

Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide but they prolong the action of the depolarising neuromuscular blocking drug suxamethonium chloride.

Neostigmine is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary. Glycopyrronium bromide p. 765 or alternatively atropine sulfate, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

Other drugs for reversal of neuromuscular blockade

Sugammadex below is a modified gamma cyclodextrin that can be used in children for the routine reversal of neuromuscular blockade induced by rocuronium bromide.

ANTICHOLINESTERASES

Neostigmine with glycopyrronium bromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, neostigmine p. 602, glycopyrronium bromide p. 765.

● INDICATIONS AND DOSE

Reversal of non-depolarising neuromuscular blockade

► BY INTRAVENOUS INJECTION

- Child: 0.02 mL/kg, repeated if necessary, alternatively dilute to 1 in 10 solution and give 0.2 mL/kg; maximum 2 mL per course

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, may be diluted with Sodium Chloride 0.9%, give over 10–30 seconds

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- **Neostigmine with glycopyrronium bromide (Non-proprietary)**
Glycopyrronium bromide 500 microgram per 1 mL, Neostigmine methylsulfate 2.5 mg per 1 mL Neostigmine 2.5mg/1mL / Glycopyrronium bromide 500micrograms/1mL solution for injection ampoules | 10 ampoule [PoM] £11.50

ANTIDOTES AND CHELATORS

Sugammadex

● INDICATIONS AND DOSE

Routine reversal of neuromuscular blockade induced by rocuronium

► BY INTRAVENOUS INJECTION

- Child 2–17 years: 2 mg/kg (consult product literature)

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CAUTIONS** Cardiovascular disease (recovery may be delayed) · pre-existing coagulation disorders · recurrence of neuromuscular blockade— monitor respiratory function until fully recovered · use of anticoagulants (unrelated to surgery) · wait 24 hours before re-administering rocuronium
- **INTERACTIONS** → Appendix 1 (sugammadex).
- **SIDE-EFFECTS** Bradycardia · bronchospasm · cardiac arrest · hypersensitivity reactions
- **PREGNANCY** Use with caution—no information available.
- **RENAL IMPAIRMENT** Avoid if estimated glomerular filtration rate less than 30 mL/minute/1.73 m².
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection* dose may be diluted to a concentration of 10 mg/mL with Sodium Chloride 0.9%.
- **NATIONAL FUNDING/ACCESS DECISIONS**
Scottish Medicines Consortium (SMC) Decisions
The *Scottish Medicines Consortium*, has advised (February 2013) that sugammadex (*Bridion*®) is accepted for restricted use within NHS Scotland for the routine reversal of neuromuscular blockade in high-risk patients only, or where prompt reversal of neuromuscular block is required.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

ELECTROLYTES: May contain Sodium

► **Bridion** (Merck Sharp & Dohme Ltd)

Sugammadex (as Sugammadex sodium) 100 mg per 1 mL Bridion 500mg/5mL solution for injection vials | 10 vial [PoM] £1,491.00 (Hospital only)
Bridion 200mg/2mL solution for injection vials | 10 vial [PoM] £596.40 (Hospital only)

1.3 Peri-operative analgesia

Peri-operative analgesia

Non-opioid analgesics

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain. NSAIDs may be inadequate for the relief of severe pain.

Diclofenac sodium p. 605, diclofenac potassium p. 605, ibuprofen p. 608, paracetamol p. 254, and ketorolac trometamol p. 771 are used to relieve postoperative pain in children; diclofenac sodium and paracetamol can be given parenterally and rectally as well as by mouth. Ketorolac trometamol is given by intravenous injection.

Opioid analgesics

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Pre-operative use of opioid analgesics is generally limited to children who require control of existing pain. The main side-effects of opioid analgesics are respiratory depression, cardiovascular depression, nausea, and vomiting; see general notes on opioid analgesics and their use in postoperative pain.

See the management of opioid-induced respiratory depression in Pre-medication and peri-operative drugs p. 763.

Intra-operative analgesia

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia.

Alfentanil p. 772, fentanyl p. 262, and remifentanyl p. 772 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect.

In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanyl should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

Ketorolac trometamol

● INDICATIONS AND DOSE

Short-term management of moderate to severe acute postoperative pain only

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Child 16–17 years (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day
- Child 16–17 years (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
- BY INTRAVENOUS INJECTION
- Child 6 months–15 years: Initially 0.5–1 mg/kg (max. per dose 15 mg), then 500 micrograms/kg every 6 hours (max. per dose 15 mg) as required for maximum duration of treatment 2 days; maximum 60 mg per day

- **UNLICENSED USE** Not licensed for use in children under 16 years.
- **CONTRA-INDICATIONS** Active or history of gastro-intestinal bleeding • active or history of gastro-intestinal ulceration • coagulation disorders • complete or partial syndrome of nasal polyps • confirmed or suspected cerebrovascular bleeding • dehydration • following operations with high risk of haemorrhage or incomplete haemostasis • haemorrhagic diatheses • history of gastro-intestinal perforation • hypovolaemia • severe heart failure
- **CAUTIONS** Allergic disorders • cardiac impairment (NSAIDs may impair renal function) • cerebrovascular disease •

coagulation defects • connective-tissue disorders • Crohn's disease (may be exacerbated) • heart failure • ischaemic heart disease • peripheral arterial disease • risk factors for cardiovascular events • ulcerative colitis (may be exacerbated) • uncontrolled hypertension

- **INTERACTIONS** → Appendix 1 (NSAIDs).

● SIDE-EFFECTS

- **Rare** Alveolitis • aseptic meningitis (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) • hepatic damage • interstitial fibrosis associated with NSAIDs can lead to renal failure • pancreatitis • papillary necrosis associated with NSAIDs can lead to renal failure • pulmonary eosinophilia • Stevens-Johnson syndrome • toxic epidermal necrolysis
- **Frequency not known** Abnormal dreams • angioedema • asthma • blood disorders • bradycardia • bronchospasm • chest pain • colitis (induction of or exacerbation of) • confusion • convulsions • Crohn's disease (induction of or exacerbation of) • depression • diarrhoea • dizziness • drowsiness • dry mouth • dyspnoea • euphoria • fluid retention (rarely precipitating congestive heart failure) • flushing • gastro-intestinal bleeding • gastro-intestinal discomfort • gastro-intestinal disturbances • gastro-intestinal ulceration • haematuria • hallucinations • headache • hearing disturbances • hyperkalaemia • hyperkinesia • hypersensitivity reactions • hypertension • hyponatraemia • insomnia • malaise • myalgia • nausea • nervousness • optic neuritis • pain at injection site • pallor • palpitation • paraesthesia • photosensitivity • psychosis • purpura • raised blood pressure • rashes • renal failure (especially in patients with pre-existing renal impairment) • sweating • taste disturbances • thirst • tinnitus • urinary frequency • vertigo • visual disturbances

SIDE-EFFECTS, FURTHER INFORMATION

- **Serious side-effects** For information about cardiovascular and gastro-intestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 604.
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Use with caution; there is an increased risk of gastro-intestinal bleeding and fluid retention. Avoid in severe liver disease.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if serum creatinine greater than 160 micromol/litre. The lowest effective dose should be used for the shortest possible duration. Max. 60 mg daily by intramuscular injection or intravenous injection. Monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, give over at least 15 seconds.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- **Ketorolac trometamol (Non-proprietary)**

Ketorolac trometamol 30 mg per 1 ml Ketorolac 30mg/1ml solution for injection ampoules | 6 ampoule [PoM] £6.56

ANALGESICS > OPIOIDS

F 256

Alfentanil

● INDICATIONS AND DOSE

Assisted ventilation: analgesia and enhancement of anaesthesia for short procedures

▶ BY INTRAVENOUS INJECTION

- ▶ Neonate: Initially 5–20 micrograms/kg, dose to be administered over 30 seconds; supplemental doses up to 10 micrograms/kg.

- ▶ Child: Initially 10–20 micrograms/kg, dose to be administered over 30 seconds; supplemental doses up to 10 micrograms/kg

Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia for longer procedures

▶ BY INTRAVENOUS INFUSION

- ▶ Neonate: Initially 10–50 micrograms/kg, dose to be administered over 10 minutes, followed by 30–60 micrograms/kg/hour.
- ▶ Child: Initially 50–100 micrograms/kg, dose to be administered over 10 minutes, followed by 30–120 micrograms/kg/hour, usual dose with intravenous anaesthetic, 60 micrograms/kg/hour

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

PHARMACOKINETICS

Half-life is prolonged in neonates and accumulation is likely with prolonged use. Clearance may be increased in children 1 month–12 years and higher infusion doses might be needed.

● CAUTIONS

CAUTIONS, FURTHER INFORMATION

- ▶ Repeated intra-operative doses Repeated intra-operative doses of alfentanil should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive.

● SIDE-EFFECTS

- ▶ Common or very common Hypertension · myoclonic movements
- ▶ Uncommon Arrhythmias · hiccup · laryngospasm
- ▶ Rare Epistaxis
- ▶ Frequency not known Cardiac arrest · convulsions · cough · muscle rigidity · pyrexia

SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Muscle rigidity Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

- BREAST FEEDING Present in milk—withhold breast-feeding for 24 hours.

- RENAL IMPAIRMENT Avoid use or reduce dose; opioid effects increased and prolonged and increased cerebral sensitivity occurs.

- DIRECTIONS FOR ADMINISTRATION 5 mg/mL injection to be diluted before use. For continuous or intermittent intravenous infusion dilute in Glucose 5% or Sodium Chloride 0.9%.

Remifentanil

● INDICATIONS AND DOSE

Analgesia and enhancement of anaesthesia at induction (initial bolus injection)

▶ BY INTRAVENOUS INJECTION

- ▶ Child 12–17 years: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, if child is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

Analgesia and enhancement of anaesthesia at induction with or without initial bolus dose

▶ BY INTRAVENOUS INFUSION

- ▶ Child 12–17 years: 30–60 micrograms/kg/hour, if child is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia (initial bolus injection)

▶ BY INTRAVENOUS INJECTION

- ▶ Child 1 month–11 years: Initially 0.1–1 microgram/kg, dose to be administered over at least 30 seconds (omitted if not required)
- ▶ Child 12–17 years: Initially 0.1–1 microgram/kg, dose to be administered over at least 30 seconds (omitted if not required)

Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia with or without initial bolus dose

▶ BY INTRAVENOUS INFUSION

- ▶ Neonate: 24–60 micrograms/kg/hour, additional doses of 1 microgram/kg can be given by intravenous injection during the intravenous infusion.

- ▶ Child 1 month–11 years: 3–78 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, additional doses can be given by intravenous injection during the intravenous infusion

- ▶ Child 12–17 years: 3–120 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, additional doses can be given by intravenous injection during the intravenous infusion

Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia

► BY INTRAVENOUS INFUSION

- Child 12–17 years: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Not licensed for use in children under 1 year.
- **CONTRA-INDICATIONS** Analgesia in conscious patients
- **SIDE-EFFECTS**
 - **Common or very common** Hypertension
 - **Uncommon** Hypoxia
 - **Rare** Asystole
 - **Frequency not known** AV block · convulsions
- SIDE-EFFECTS, FURTHER INFORMATION**
 - Muscle rigidity Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.
 - Respiratory depression In contrast to other opioids which are metabolised in the liver, remifentanil undergoes rapid metabolism by non-specific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression.
- **PREGNANCY** No information available.
- **BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** No dose adjustment necessary in renal impairment.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, reconstitute to a concentration of 1 mg/mL; for *continuous intravenous infusion*, dilute further with Glucose 5% or Sodium Chloride 0.9% to a concentration of 20–25 micrograms/mL for child 1–12 years or 20–250 micrograms/mL (usually 50 micrograms/mL) for child 12–18 years.
- **PRESCRIBING AND DISPENSING INFORMATION** Remifentanil should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanil.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for injection

► Remifentanil (Non-proprietary)

Remifentanil (as Remifentanyl hydrochloride) 1 mg Remifentanil 1mg powder for concentrate for solution for injection vials | 5 vial [\[PoM\]](#) £25.58–£25.60 (Hospital only) [\[CD2\]](#)

Remifentanil (as Remifentanyl hydrochloride) 2 mg Remifentanil 2mg powder for concentrate for solution for injection vials | 5 vial [\[PoM\]](#) £51.13–£51.15 (Hospital only) [\[CD2\]](#)

Remifentanil (as Remifentanyl hydrochloride) 5 mg Remifentanil 5mg powder for concentrate for solution for injection vials | 5 vial [\[PoM\]](#) £127.00–£127.90 (Hospital only) [\[CD2\]](#)

► Ultiva (GlaxoSmithKline UK Ltd)

Remifentanil (as Remifentanyl hydrochloride) 1 mg Ultiva 1mg powder for solution for injection vials | 5 vial [\[PoM\]](#) £25.58 (Hospital only) [\[CD2\]](#)

Remifentanil (as Remifentanyl hydrochloride) 2 mg Ultiva 2mg powder for solution for injection vials | 5 vial [\[PoM\]](#) £51.15 (Hospital only) [\[CD2\]](#)

Remifentanil (as Remifentanyl hydrochloride) 5 mg Ultiva 5mg powder for solution for injection vials | 5 vial [\[PoM\]](#) £127.88 (Hospital only) [\[CD2\]](#)

1.4 Peri-operative sedation

Conscious sedation for clinical procedures

Overview

Sedation of children during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure and whether the child is cooperative; some procedures are safer and more successful under anaesthesia.

Midazolam p. 210 and chloral hydrate p. 275 are suitable for sedating children for painless procedures, such as imaging. For painful procedures, alternative choices include nitrous oxide p. 762, local anaesthesia, ketamine below, or concomitant use of sedation with **opioid** or **non-opioid analgesia**.

ANAESTHETICS, GENERAL ► NMDA RECEPTOR ANTAGONISTS

Ketamine

● INDICATIONS AND DOSE

Induction and maintenance of anaesthesia for short procedures

► BY INTRAMUSCULAR INJECTION

- Neonate: 4 mg/kg, adjusted according to response, a dose of 4 mg/kg usually produces 15 minutes of surgical anaesthesia.

- Child: 4–13 mg/kg, adjusted according to response, a dose of 4 mg/kg sufficient for some diagnostic procedures, a dose of 10 mg/kg usually produces 12–25 minutes of surgical anaesthesia

► BY INTRAVENOUS INJECTION

- Neonate: 1–2 mg/kg, adjusted according to response, to be given over at least 60 seconds, a dose of 1–2 mg/kg produces 5–10 minutes of surgical anaesthesia.

- Child 1 month–11 years: 1–2 mg/kg, adjusted according to response, to be given over at least 60 seconds, a dose of 1–2 mg/kg produces 5–10 minutes of surgical anaesthesia

- Child 12–17 years: 1–4.5 mg/kg, adjusted according to response, to be given over at least 60 seconds, a dose of 2 mg/kg usually produces 5–10 minutes of surgical anaesthesia

Induction and maintenance of anaesthesia for long procedures

► INITIALLY BY INTRAVENOUS INJECTION

- Neonate: Initially 0.5–2 mg/kg, followed by (by continuous intravenous infusion) 8 micrograms/kg/minute, adjusted according to response, doses up to 320 micrograms/kg/minute may be used to produce deep anaesthesia.

- Child: Initially 0.5–2 mg/kg, followed by (by continuous intravenous infusion) 10–45 micrograms/kg/minute, adjusted according to response

Sedation prior to invasive or painful procedures

► BY INTRAVENOUS INJECTION

- Child: 1–2 mg/kg for 1 dose

IMPORTANT SAFETY INFORMATION

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 562 · eclampsia · head trauma · hypertension · pre-eclampsia · raised intracranial pressure · severe cardiac disease · stroke
- **CAUTIONS** Acute circulatory failure (shock) · cardiovascular disease · dehydration · fixed cardiac output · hallucinations · head injury · hypertension · hypovolaemia · increased cerebrospinal fluid pressure · intracranial mass lesions · nightmares · predisposition to seizures · psychotic disorders · raised intra-ocular pressure · respiratory tract infection · thyroid dysfunction
- **INTERACTIONS** → Appendix 1 (anaesthetics, general).
- **SIDE-EFFECTS**
 - ▶ **Common or very common** Diplopia · hallucinations · hypertension · nausea · nightmares · nystagmus · rash · tachycardia · transient psychotic effects · vomiting
 - ▶ **Uncommon** Arrhythmias · bradycardia · hypotension · laryngospasm · respiratory depression
 - ▶ **Rare** Apnoea · cystitis · haemorrhagic cystitis · hypersalivation · insomnia
 - ▶ **Frequency not known** Raised intra-ocular pressure
- **SIDE-EFFECTS, FURTHER INFORMATION**
 - ▶ Transient psychotic effects Incidence of hallucinations, nightmares, and other transient psychotic effects can be reduced by a benzodiazepine such as diazepam or midazolam.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Avoid for at least 12 hours after last dose.
- **HEPATIC IMPAIRMENT** Consider dose reduction.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9%. For *continuous intravenous infusion*, dilute to a concentration of 1 mg/mL with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia.
- **PATIENT AND CARER ADVICE**
 - ▶ **Driving and skilled tasks**
Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.
For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

● **MEDICAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection,

Solution for injection▶ **Ketamine (Non-proprietary)**

HYPNOTICS, SEDATIVES AND ANXIOLYTICS > BENZODIAZEPINES

205

Temazepam● **INDICATIONS AND DOSE****Premedication before surgery or investigatory procedures**▶ **BY MOUTH**

- ▶ **Child 12–17 years:** 10–20 mg, to be taken 1 hour before procedure

- **UNLICENSED USE** Tablets not licensed for use in children.
- **CONTRA-INDICATIONS** CNS depression · compromised airway · hyperkinesia · obsessional state · phobic states · respiratory depression
- **CAUTIONS** Hypoalbuminaemia · muscle weakness · organic brain changes · personality disorder (within the fearful group—dependent, avoidant, obsessive-compulsive)—may increase risk of dependence
- **CAUTIONS, FURTHER INFORMATION**
 - ▶ **Paradoxical effects** A paradoxical increase in hostility and aggression may be reported by patients taking benzodiazepines. The effects range from talkativeness and excitement to aggressive and antisocial acts. Adjustment of the dose (up or down) sometimes attenuates the impulses. Increased anxiety and perceptual disorders are other paradoxical effects.
- **SIDE-EFFECTS**
 - ▶ **Common or very common** Amnesia · ataxia · confusion · dependence · drowsiness the next day · lightheadedness the next day · muscle weakness · paradoxical increase in aggression
 - ▶ **Uncommon** Dizziness · dysarthria · gastro-intestinal disturbances · gynaecomastia · incontinence · salivation changes · tremor · visual disturbances
 - ▶ **Rare** Apnoea · blood disorders · changes in libido · headache · hypotension · jaundice · skin reactions · urinary retention · vertigo
 - ▶ **Frequency not known** Delusions · excitement · hallucinations · irritability · psychosis · respiratory depression (may be marked when used for sedation; facilities for its treatment are essential) · restlessness
- **BREAST FEEDING** Benzodiazepines are present in milk, and should be avoided if possible during breast-feeding.
- **HEPATIC IMPAIRMENT** Start with smaller initial doses or reduce dose. Can precipitate coma. Avoid in severe impairment.
- **RENAL IMPAIRMENT** Start with small doses in severe impairment.

● **PATIENT AND CARER ADVICE****Driving and skilled tasks**

May impair judgement and increase reaction time, and so affect ability to drive or operate machinery; they increase the effects of alcohol. Moreover the hangover effects of a night dose may impair driving on the following day.

Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of undertaking skilled tasks (e.g. driving) afterwards. Responsible persons should be available to

take patients home afterwards. The dangers of taking alcohol should be emphasised.

● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary

Temazepam Tablets may be prescribed. Temazepam Oral Solution may be prescribed.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

Tablet

CAUTIONARY AND ADVISORY LABELS 19

2 Malignant hyperthermia

MUSCLE RELAXANTS > DIRECTLY ACTING

Dantrolene sodium

- **DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

● INDICATIONS AND DOSE

Malignant hyperthermia

► BY RAPID INTRAVENOUS INJECTION

- Child: Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg/kg per course

Chronic severe spasticity of voluntary muscle

► BY MOUTH

- Child 5–11 years: Initially 500 micrograms/kg once daily for 7 days, then increased to 500 micrograms/kg/dose 3 times a day, then increased in steps of 500 micrograms/kg/dose every 7 days (max. per dose 2 mg/kg 3–4 times a day) until satisfactory response; maximum 400 mg per day
- Child 12–17 years: Initially 25 mg once daily for 7 days, then increased to 25 mg 3 times a day, then increased in steps of 500 micrograms/kg/dose every 7 days (max. per dose 2 mg/kg 3–4 times a day) until satisfactory response; maximum 400 mg per day

- **UNLICENSED USE** Not licensed for use in children.

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in the use of dantrolene when used for malignant hyperthermia.

● CONTRA-INDICATIONS

- With oral use Acute muscle spasm · avoid when spasticity is useful, for example, locomotion

● CAUTIONS

- With intravenous use Avoid extravasation (risk of tissue necrosis)
- With oral use Females (hepatotoxicity) · history of liver disorders (hepatotoxicity) · if doses greater than 400 mg daily (hepatotoxicity) · impaired cardiac function · impaired pulmonary function · therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

- **INTERACTIONS** → Appendix 1 (muscle relaxants).

- With oral use Caution if concomitant use of hepatotoxic drugs.

● SIDE-EFFECTS

► Common or very common

- With oral use Abdominal pain · anorexia · asthenia · chills · diarrhoea (withdraw if severe, discontinue treatment if recurs on re-introduction) · dizziness · drowsiness · fatigue · fever · headache · hepatotoxicity · nausea · pericarditis · pleural effusion · rash · respiratory depression · seizures · speech disturbances · visual disturbances · vomiting

► Uncommon

- With oral use Confusion · constipation · crystalluria · depression · dysphagia · dyspnoea · erratic blood pressure · exacerbation of cardiac insufficiency · haematuria · increased sweating · increased urinary frequency · insomnia · nervousness · tachycardia · urinary incontinence · urinary retention

► Frequency not known

- With intravenous use Dizziness · erythema · hepatotoxicity · injection-site reactions · pulmonary oedema · rash · swelling · thrombophlebitis · weakness

SIDE-EFFECTS, FURTHER INFORMATION

- Hepatotoxicity Potentially life-threatening hepatotoxicity reported—discontinue if abnormal liver function tests or symptoms of liver disorder; re-introduce only if complete reversal of hepatotoxicity.

● PREGNANCY

- With intravenous use Use only if potential benefit outweighs risk.
- With oral use Avoid use in chronic spasticity—embryotoxic in animal studies.

● BREAST FEEDING

- With intravenous use Present in milk—use only if potential benefit outweighs risk.
- With oral use Present in milk—manufacturer advises avoid use in chronic spasticity.

- **HEPATIC IMPAIRMENT** Avoid—may cause severe liver damage (injection may be used in an emergency for malignant hyperthermia).

● MONITORING REQUIREMENTS

- With oral use Test liver function before and at intervals during therapy.

● PATIENT AND CARER ADVICE

Driving and skilled tasks

- With oral use Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced. Hepatotoxicity
- With oral use Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.

Local anaesthesia

Local anaesthesia

Local anaesthetic drugs

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 778 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Levobupivacaine p. 779, an isomer of bupivacaine hydrochloride, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 780 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should **not** usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 128) is about 90 minutes.

Application of a mixture of lidocaine and prilocaine (EMLA[®]) under an occlusive dressing provides surface anaesthesia for 1–2 hours. EMLA[®] does not appear to be effective in providing local anaesthesia for heel lancing in neonates.

Prilocaine hydrochloride p. 783 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride.

Ropivacaine hydrochloride p. 784 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 785, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. Tetracaine is effective for 4–6 hours after a single application in most children. It is not recommended prior to neonatal heel lancing.

Tetracaine is rapidly absorbed from mucous membranes and should never be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

Administration

The dose of local anaesthetic depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The child's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity. Great care must be taken to avoid accidental intravascular

injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is combined with general anaesthesia for certain surgical procedures in children.

Use of vasoconstrictors

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is not advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In children with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these children an anaesthetic without adrenaline/epinephrine should be used.

Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine. The amide-type local anaesthetics articaine and mepivacaine hydrochloride p. 782 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine, and articaine is available with adrenaline/epinephrine. In children with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin can cause coronary vasoconstriction when used at high doses; limit dose in children with coronary artery disease.

Toxicity

For management of toxicity see Severe local anaesthetic-induced cardiovascular toxicity below.

Severe local anaesthetic-induced cardiovascular toxicity

Overview

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as *Intralipid*® [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at www.toxbase.org or can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic Toxicity and Management of Severe Local Anaesthetic Toxicity - Accompanying notes.

ANAESTHETICS, LOCAL

Adrenaline with articaine hydrochloride

(Carticaine hydrochloride with epinephrine)

● INDICATIONS AND DOSE

Infiltration anaesthesia in dentistry

► BY REGIONAL ADMINISTRATION

- Child 4-17 years: Consult expert dental sources

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 5 micrograms/kg (1 mL/kg of a 1 in 200 000 solution) and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

- **CONTRA-INDICATIONS** Application to damaged skin - application to the middle ear (may cause ototoxicity) - complete heart block - injection into infected tissues - injection into inflamed tissues - preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block)

CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Arrhythmias - cardiovascular disease - cerebrovascular disease - children (consider dose reduction) - cor pulmonale - debilitated patients (consider dose reduction) - diabetes mellitus - epilepsy -

hypercalcaemia - hyperreflexia - hypertension - hyperthyroidism - hypokalaemia - hypovolaemia - impaired cardiac conduction - impaired respiratory function - ischaemic heart disease - myasthenia gravis - obstructive cardiomyopathy - occlusive vascular disease - organic brain damage - pheochromocytoma - prostate disorders - psychoneurosis - severe angina - shock - susceptibility to angle-closure glaucoma

CAUTIONS, FURTHER INFORMATION

- Use of vasoconstrictors In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1 (sympathomimetics).

- **SIDE-EFFECTS** Angina - angle-closure glaucoma - anorexia - anxiety - arrhythmias - blurred vision - cardiac arrest - cold extremities - confusion - convulsions - difficulty in micturition - dizziness - drowsiness - dry mouth - dyspnoea - feeling of inebriation - headache - hyperglycaemia - hypersalivation - hypertension (risk of cerebral haemorrhage) - hypokalaemia - insomnia - lightheadedness - metabolic acidosis - methaemoglobinaemia - muscle twitching - mydriasis - myocardial depression (resulting in hypotension and bradycardia) - myocardial infarction - nausea - numbness of the tongue and perioral region - pallor - palpitation - paraesthesia (including sensations of hot and cold) - peripheral vasodilatation (resulting in hypotension and bradycardia) - psychosis - pulmonary oedema (on excessive dosage or extreme sensitivity) - restlessness - sweating - tachycardia - tinnitus - tissue necrosis at injection site and of extremities, bowel, liver and kidneys - transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) - tremor - urinary retention - vomiting - weakness

SIDE-EFFECTS, FURTHER INFORMATION

- Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

● **ALLERGY AND CROSS-SENSITIVITY**

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Avoid breast-feeding for 48 hours after administration.

- **HEPATIC IMPAIRMENT** Use with caution; increased risk of side-effects in severe impairment.

- **RENAL IMPAIRMENT** Manufacturers advise use with caution in severe impairment.

- **MONITORING REQUIREMENTS** Consider monitoring blood pressure and ECG (advised with systemic adrenaline/epinephrine).

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

EXCIPIENTS: May contain Sulfites

► **Septanest** (Septodont Ltd)

Adrenaline (as Adrenaline acid tartrate) 10 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml Septanest 1 in 100,000 solution for injection cartridges | 50 cartridge [PoM](#) no price available

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml Septanest 1 in 200,000 solution for injection cartridges | 50 cartridge [PoM](#) no price available

Bupivacaine hydrochloride

● INDICATIONS AND DOSE

Surgical anaesthesia | Acute pain

► BY REGIONAL ADMINISTRATION

- **Child:** Doses adjusted according to child's physical status and nature of procedure, seek expert advice (consult product literature or local protocols)

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

CONTRA-INDICATIONS, FURTHER INFORMATION

- **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · cerebral atheroma · children (consider dose reduction) · debilitated patients (consider dose reduction) · epilepsy · hypertension · hypotension · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · myocardial depression may be more severe and more resistant to treatment · shock
- **INTERACTIONS** → Appendix 1 (bupivacaine).
- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

SIDE-EFFECTS, FURTHER INFORMATION

- **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

● ALLERGY AND CROSS-SENSITIVITY

- **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Use with caution in severe impairment.

- **RENAL IMPAIRMENT** Use with caution in severe impairment.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

Solution for injection

► **Bupivacaine hydrochloride (Non-proprietary)**

Bupivacaine hydrochloride 2.5 mg per 1 ml Bupivacaine 0.25% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £17.50

Bupivacaine hydrochloride 5 mg per 1 ml Bupivacaine 0.5% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £18.30

Bupivacaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM](#) no price available

► **Marcain** (AstraZeneca UK Ltd)

Bupivacaine hydrochloride 2.5 mg per 1 ml Marcain 0.25% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) £7.92

Bupivacaine hydrochloride 5 mg per 1 ml Marcain 0.5% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) £9.25

Infusion

► **Bupivacaine hydrochloride (Non-proprietary)**

Bupivacaine hydrochloride 1 mg per 1 ml Bupivacaine 100mg/100ml (0.1%) infusion bags | 20 bag [PoM](#) no price available
Bupivacaine 250mg/250ml (0.1%) infusion bags | 20 bag [PoM](#) no price available

Bupivacaine hydrochloride 1.25 mg per 1 ml Bupivacaine 312.5mg/250ml (0.125%) infusion bags | 20 bag [PoM](#) no price available

Bupivacaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 778, adrenaline/epinephrine p. 128.

● INDICATIONS AND DOSE

Surgical anaesthesia

- BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION, OR BY CAUDAL EPIDURAL
- Child 12–17 years: (consult product literature)

Acute pain management

- BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION
- Child 1–17 years: (consult product literature)

IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 5 micrograms/kg (1 mL/kg of a 1 in 200 000 solution) and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

● CAUTIONS

CAUTIONS, FURTHER INFORMATION

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Bupivacaine with adrenaline (Non-proprietary)

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Bupivacaine hydrochloride 2.5 mg per 1 mL Bupivacaine 25mg/10mL (0.25%) / Adrenaline (base) 50micrograms/10mL (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM](#) £40.00

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Bupivacaine hydrochloride anhydrous 2.5 mg per 1 mL Carbostesin-adrenaline 0.25% / 100micrograms/20mL (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM](#) no price available

Carbostesin-adrenaline 0.25% / 25micrograms/5mL (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM](#) no price available

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Bupivacaine hydrochloride 5 mg per 1 mL Bupivacaine 50mg/10mL (0.5%) / Adrenaline (base) 50micrograms/10mL (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM](#) £45.00

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Bupivacaine hydrochloride anhydrous 5 mg per 1 mL Carbostesin-adrenaline 0.5% / 25micrograms/5mL (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM](#) no price available
Carbostesin-adrenaline 0.5% / 100micrograms/20mL (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM](#) no price available

Levobupivacaine

● INDICATIONS AND DOSE

Surgical anaesthesia | Acute pain

- BY REGIONAL ADMINISTRATION
- Child: Doses adjusted according to child's physical status and nature of procedure, seek expert advice (consult product literature or local protocols)

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Not licensed for use in children except for analgesia by ilioinguinal or iliohypogastric block.

IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock

- **INTERACTIONS** → Appendix 1 (levobupivacaine).

- **SIDE-EFFECTS** Anaemia · arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · pyrexia · restlessness · sweating · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

SIDE-EFFECTS, FURTHER INFORMATION

- Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

● ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—toxicity in *animal studies*. May cause fetal distress syndrome. Do not use for paracervical block in obstetrics. Do not use 7.5 mg/mL strength in obstetrics.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Use with caution.
- **DIRECTIONS FOR ADMINISTRATION** For 1.25 mg/mL concentration dilute standard solutions with sodium chloride 0.9%.
- **PRESCRIBING AND DISPENSING INFORMATION** Levobupivacaine is an isomer of bupivacaine.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- **Chirocaine** (AbbVie Ltd)
Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 mL Chirocaine 25mg/10mL solution for injection ampoules | 10 ampoule [PoM] £14.11 (Hospital only)
- **Levobupivacaine** (as Levobupivacaine hydrochloride) 5 mg per 1 mL Chirocaine 50mg/10mL solution for injection ampoules | 10 ampoule [PoM] £16.15 (Hospital only)
- **Levobupivacaine** (as Levobupivacaine hydrochloride) 7.5 mg per 1 mL Chirocaine 75mg/10mL solution for injection ampoules | 10 ampoule [PoM] £24.23 (Hospital only)

Infusion

- **Chirocaine** (AbbVie Ltd)
Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 mL Chirocaine 125mg/100mL infusion bags | 24 bag [PoM] £174.22
Chirocaine 250mg/200mL infusion bags | 12 bag [PoM] no price available

Lidocaine hydrochloride

(Lignocaine hydrochloride)

INDICATIONS AND DOSE

Infiltration anaesthesia

BY LOCAL INFILTRATION

- ▶ Neonate: Up to 3 mg/kg, dose to be given according to patient's weight and nature of procedure, dose may be repeated not more often than every 4 hours, 3 mg/kg equivalent to 0.3 mL/kg of 1% solution.
- ▶ Child 1 month–11 years: Up to 3 mg/kg, dose to be given according to patient's weight and nature of procedure, dose may be repeated not more often than every 4 hours, 3 mg/kg equivalent to 0.3 mL/kg of 1% solution
- ▶ Child 12–17 years: (max. per dose 200 mg), dose to be given according to child's weight and nature of procedure, dose may be repeated not more often than every 4 hours

DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ When used by local infiltration To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal body-weight.

Intravenous regional anaesthesia and nerve block

BY REGIONAL ADMINISTRATION

- ▶ Child: Seek expert advice

Dental anaesthesia

BY REGIONAL ADMINISTRATION

- ▶ Child: Seek expert advice

Pain relief (in anal fissures, haemorrhoids, pruritus ani, pruritus vulvae, herpes zoster, or herpes labialis) | Lubricant in cystoscopy | Lubricant in proctoscopy

TO THE SKIN USING OINTMENT

- ▶ Child: Apply 1–2 mL as required, avoid long-term use

LMX 4®

Anaesthesia before venous cannulation or venepuncture

TO THE SKIN

- ▶ Child 1–2 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 60 minutes, remove cream with gauze and perform procedure after approximately 5 minutes

- ▶ Child 3–11 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 4 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Child 1–17 years: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

IMPORTANT SAFETY INFORMATION

When used by local infiltration

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

CONTRA-INDICATIONS

- ▶ When used by regional administration All grades of atrioventricular block · application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · severe myocardial depression · should not be applied to damaged skin · sino-atrial disorders

CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ When used by regional administration Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

CAUTIONS

- ▶ When used by regional administration Acute porphyria (consider infusion with glucose for its anti-porphyrinogenic effects) · children (consider dose reduction) · congestive cardiac failure (consider lower dose) · debilitated patients (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · post cardiac surgery (consider lower dose) · shock

INTERACTIONS → Appendix 1 (lidocaine).

Interactions less likely when lidocaine used topically.

SIDE-EFFECTS

Common or very common

- ▶ When used by regional administration Bradycardia (may lead to cardiac arrest) · confusion · convulsions · hypotension (may lead to cardiac arrest) · respiratory depression

Rare

- ▶ When used by regional administration Anaphylaxis

Frequency not known

- ▶ When used by regional administration Transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · arrhythmias · blurred vision · cardiac arrest · feeling of inebriation · headache · hypoglycaemia (following intrathecal or extradural administration) · methaemoglobinemia · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · nystagmus · peripheral vasodilatation (resulting in hypotension and bradycardia) · rash · restlessness · tinnitus · tremors · vomiting

SIDE-EFFECTS, FURTHER INFORMATION

- ▶ **Topical application** A single application of a topical lidocaine preparation does not generally cause systemic side-effects.
- ▶ **Toxic effects**
- ▶ **When used by regional administration** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.
- ▶ **Methaemoglobinaemia**
- ▶ **When used by regional administration** Methaemoglobinaemia can be treated with an intravenous injection of methylthionium chloride; neonates and infants under 6 months are particularly susceptible to methaemoglobinaemia.

● ALLERGY AND CROSS-SENSITIVITY

- ▶ **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.

- **BREAST FEEDING** Present in milk but amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Caution—increased risk of side-effects.

- **RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.

● MONITORING REQUIREMENTS

- ▶ **With systemic use** Monitor ECG and have resuscitation facilities available.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, dilute with Glucose 5% or Sodium Chloride 0.9%.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection▶ **Lidocaine hydrochloride (Non-proprietary)**

- Lidocaine hydrochloride 5 mg per 1 mL Lidocaine 50mg/10mL (0.5%) solution for injection ampoules | 10 ampoule [PoM] £7.00
- Lidocaine hydrochloride 10 mg per 1 mL Lidocaine 100mg/10mL (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £10.89

Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

▶ **LMX 4** (Ferndale Pharmaceuticals Ltd)

- Lidocaine 40 mg per 1 gram LMX 4 cream | 5 gram [P] £2.98 DT price = £2.98 | 30 gram [P] £14.90

Ointment▶ **Lidocaine hydrochloride (Non-proprietary)**

- Lidocaine hydrochloride 50 mg per 1 gram Lidocaine 5% ointment | 15 gram [P] £6.50 DT price = £6.18

Lidocaine with adrenaline

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 780, adrenaline/epinephrine p. 128.

● INDICATIONS AND DOSE**Local anaesthesia**▶ **BY LOCAL INFILTRATION**

- ▶ Child 12–17 years: Dosed according to the type of nerve block required (consult product literature)

IMPORTANT SAFETY INFORMATION

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. The total dose of adrenaline should not exceed 5 micrograms/kg (1 mL/kg of a 1 in 200 000 solution) and it is essential not to exceed a concentration of 1 in 200 000 (5 micrograms/mL) if more than 50 mL of the mixture is to be injected.

● PROFESSION SPECIFIC INFORMATION**Dental information**

A variety of lidocaine injections with adrenaline is available in dental cartridges.

Consult expert dental sources for specific advice in relation to dose of lidocaine for dental anaesthesia.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Solution for injection

EXCIPIENTS: May contain Sulfites

▶ **Lignospan Special** (Kent Pharmaceuticals Ltd)

- Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Lignospan Special 2% injection 2.2mL cartridges | 50 cartridge [PoM] £18.11

▶ **Rexocaine** (Henry Schein Ltd)

- Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Rexocaine 2% injection 2.2mL cartridges | 50 cartridge [PoM] no price available

▶ **Xylocaine with Adrenaline** (AstraZeneca UK Ltd)

- Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Lidocaine hydrochloride 10 mg per 1 mL Xylocaine 1% with Adrenaline 100micrograms/20mL (1 in 200,000) solution for injection vials | 5 vial [PoM] £9.66 DT price = £9.66
- Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 mL, Lidocaine hydrochloride 20 mg per 1 mL Xylocaine 2% with Adrenaline 100micrograms/20mL (1 in 200,000) solution for injection vials | 5 vial [PoM] £8.85 DT price = £8.85

Lidocaine with phenylephrine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 780, phenylephrine hydrochloride p. 116.

● INDICATIONS AND DOSE

Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose

- BY INTRANASAL ADMINISTRATION
- Child 12-17 years: Up to 8 sprays

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Spray

- **Lidocaine with phenylephrine (Non-proprietary)**
Phenylephrine hydrochloride 5 mg per 1 mL, Lidocaine hydrochloride 50 mg per 1 mL Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 mL (PoM) £11.48 DT price = £11.48

Lidocaine with prilocaine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 780, prilocaine hydrochloride p. 783.

● INDICATIONS AND DOSE

Anaesthesia before minor skin procedures including venepuncture

- TO THE SKIN

- Neonate: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day.
- Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day
- Child 3-11 months: Apply up to 2 g for maximum 4 hours before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- Child 1-11 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- Child 12-17 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)

- **CONTRA-INDICATIONS** Use in child less than 37 weeks corrected gestational age

● PATIENT AND CARER ADVICE

Medicines for Children leaflet: EMLA cream for local anaesthesia www.medicinesforchildren.org.uk/emla-cream-for-local-anaesthesia

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Cream

- **Lidocaine with prilocaine (Non-proprietary)**

- **Denela** (Auden McKenzie (Pharma Division) Ltd)
Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Denela 5% cream | 5 gram (P) £2.84–£3.29 | 25 gram (P) £12.99 | 30 gram (P) £14.75 DT price = £12.30
- **Emla** (AstraZeneca UK Ltd)
Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Emla 5% cream | 5 gram (P) £2.25–£2.99 | 25 gram (P) £11.70 | 30 gram (P) £12.30 DT price = £12.30

Mepivacaine hydrochloride

● INDICATIONS AND DOSE

Infiltration anaesthesia and nerve block in dentistry

- Child 3-17 years: Consult expert dental sources

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · lightheadedness · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting

SIDE-EFFECTS, FURTHER INFORMATION

- Toxic effects Toxic effects after administration of local anaesthetics are a result of excessively high plasma

concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

● ALLERGY AND CROSS-SENSITIVITY

- ▶ **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use with caution in early pregnancy.

- **BREAST FEEDING** Use with caution.

- **HEPATIC IMPAIRMENT** Use with caution; increased risk of side-effects in severe impairment.

- **RENAL IMPAIRMENT** Use with caution; increased risk of side-effects.

● INDICATIONS AND DOSE

CITANEST 1%®

Infiltration anaesthesia | Nerve block

- ▶ **BY REGIONAL ADMINISTRATION**

- ▶ **Child 6 months–11 years:** Up to 5 mg/kg, dose adjusted according to site of administration and response; maximum 400 mg per course
- ▶ **Child 12–17 years:** 100–200 mg/minute, alternatively, may be given in incremental doses; dose adjusted according to site of administration and response; maximum 400 mg per course

DOSES AT EXTREMES OF BODY-WEIGHT

To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acquired methaemoglobinaemia · anaemia · application to the middle ear (can cause ototoxicity) · avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · congenital methaemoglobinaemia · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block) · should not be applied to damaged skin

CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Injection site** Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 562 · cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · neonates and infants under 6 months are particularly susceptible to methaemoglobinaemia · severe or untreated hypertension · shock
- **INTERACTIONS** → Appendix 1 (prilocaine). Caution with concomitant use of drugs that cause methaemoglobinaemia.
- **SIDE-EFFECTS** Arrhythmias · blurred vision · cardiac arrest · convulsions · dizziness · drowsiness · feeling of inebriation · headache · hypertension · lightheadedness · methaemoglobinaemia (with high doses) · muscle twitching · myocardial depression (resulting in hypotension and bradycardia) · nausea · numbness of the tongue and perioral region · paraesthesia (including sensations of hot and cold) · peripheral vasodilatation (resulting in hypotension and bradycardia) · restlessness · tinnitus · transient excitation (followed by depression with drowsiness, respiratory failure, unconsciousness, and coma) · tremors · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION**
 - ▶ **Toxic effects** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from

inadvertent intravascular injection or too rapid injection.

Following most regional anaesthetic procedures, maximum arterial plasma concentration of anaesthetic develops within about 10 to 25 minutes, so careful surveillance for toxic effects is necessary during the first 30 minutes after injection.

The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

- ▶ **Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of **methylthioninium chloride**.
- **ALLERGY AND CROSS-SENSITIVITY**
 - ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Use lower doses for intrathecal use during late pregnancy. Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or pudendal block in obstetrics (neonatal methaemoglobinaemia reported).
- **BREAST FEEDING** Present in milk but not known to be harmful.
- **HEPATIC IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.
- **RENAL IMPAIRMENT** Lower doses may be required for intrathecal anaesthesia. Use with caution.

• MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- ▶ **Citanest** (AstraZeneca UK Ltd)

Prilocaine hydrochloride 10 mg per 1 ml Citanest 1% solution for injection 50ml vials | 1 vial [PoM] £5.06

Prilocaine with felypressin

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 783.

16 Emergency treatment of poisoning

Overview

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either **TOXBASE** or the **UK National Poisons Information Service** be consulted when there is doubt about the degree of risk or about management.

Most childhood poisoning is accidental. Other causes include intentional overdose, drug abuse, iatrogenic and deliberate poisoning. The drugs most commonly involved in childhood poisoning are paracetamol p. 254, ibuprofen p. 608, orally ingested creams, aspirin p. 83, iron preparations, cough medicines, and the contraceptive pill.

Hospital admission

Children who have features of poisoning should generally be admitted to hospital. Children who have taken poisons with delayed actions should also be admitted, even if they appear well. Delayed-action poisons include aspirin, iron, paracetamol, tricyclic antidepressants, and co-phenotrope (diphenoxylate with atropine, *Lomotil*®) p. 44; the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

Further information

TOXBASE, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at www.toxbase.org (a backup site is available at www.toxbasebackup.org if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the **UK National Poisons Information Service** on the following number: Tel: 0344 892 0111.

Advice on laboratory analytical services can be obtained from TOXBASE or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

General care

It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol, and iron) have specific antidotes; few patients require active removal of the poison. In most patients,

treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual and from carers or parents. However, such information should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The **National Poisons Information Service** should be consulted when there is doubt about any aspect of suspected poisoning.

Respiration

Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

The potential for pulmonary aspiration of gastric contents should be considered.

Blood pressure

Hypotension is common in severe poisoning with central nervous system depressants; if severe, this may lead to irreversible brain damage or renal tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 547 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service or a paediatric intensive care unit.

Fluid depletion without hypotension is common after prolonged coma and after aspirin poisoning due to vomiting, sweating, and hyperpnoea.

Hyperpnoea, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amfetamines, phencyclidine, and cocaine.

Heart

Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias often respond to correction of underlying hypoxia, acidosis, or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

Body temperature

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate rewarming as clinically indicated.

Hyperthermia can develop in patients taking CNS stimulants; children are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with **tepid** water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require **urgent** hospitalisation for assessment and supportive treatment.

Convulsions

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 209 or diazepam p. 207 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzodiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 210 can be given by the buccal route or diazepam can be administered as a rectal solution.

Methaemoglobinaemia

Drug- or chemical-induced methaemoglobinaemia should be treated with **methylthioninium chloride** p. 798 if the methaemoglobin concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthioninium chloride p. 798 reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthioninium chloride can itself cause methaemoglobinaemia.

Removal and elimination

Prevention of absorption

Given by mouth, **charcoal, activated** p. 793 can adsorb many poisons in the gastro-intestinal system, thereby reducing their absorption. The **sooner** it is given the **more effective** it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

A second dose may occasionally be required when blood-drug concentration continues to rise suggesting delayed drug release or delayed gastric emptying.

Active elimination techniques

Repeated doses of **charcoal, activated** by mouth may *enhance the elimination* of some drugs after they have been absorbed; repeated doses are given after overdose with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing, it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Charcoal, activated should **not** be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalinisation of the urine for salicylates.

Removal from the gastro-intestinal tract

Gastric lavage is rarely required as benefit rarely outweighs risk; advice should be sought from the National Poisons Information Service if a significant quantity of iron or lithium has been ingested within the previous hour.

Whole bowel irrigation (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with lithium salts, and if illicit drugs are carried in the gastro-intestinal tract ('body-packing'). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

The administration of **laxatives** alone has no role in the management of the poisoned child and is not a recommended method of gut decontamination. The routine use of a laxative in combination with charcoal, activated has mostly been abandoned. Laxatives should not be administered to young children because of the likelihood of fluid and electrolyte imbalance.

Alcohol

Acute intoxication with **alcohol** (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

Aspirin

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young, and clinical and biochemical assessment is necessary. Generally, the clinical

severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5).

Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis, convulsions, respiratory failure, pulmonary oedema or persistently high plasma-salicylate concentrations unresponsive to urinary alkalisation.

Opioids

Opioids (narcotic analgesics) cause varying degrees of coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 796 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. All children should be observed for at least 6 hours after the last dose of naloxone. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone. Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene. The long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required. Norpropoxyphene, a metabolite of dextropropoxyphene, also has cardiotoxic effects which may require treatment with sodium bicarbonate p. 544 or magnesium sulfate p. 556, or both. Arrhythmias may occur for up to 12 hours.

Paracetamol

In cases of intravenous paracetamol poisoning contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol may cause severe hepatocellular necrosis and, much less frequently, renal tubular necrosis. Nausea and vomiting, the only early features of poisoning, usually settle within 24 hours. Persistence beyond this time, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol overdose and may lead to encephalopathy, haemorrhage, hypoglycaemia, cerebral oedema, and death. Therefore, despite a lack of significant early symptoms, children who have taken an overdose of paracetamol should be transferred to hospital urgently.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese children who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 797 protects the liver if infused up to, and possibly beyond, 24 hours of ingesting paracetamol. It is most effective if given within 8 hours of ingestion, after which effectiveness declines. Very rarely, giving acetylcysteine by mouth [unlicensed route] is an alternative

if intravenous access is not possible—contact the National Poisons Information Service for advice.

Neonates less than 45 weeks corrected gestational age may be more susceptible to paracetamol-induced liver toxicity, therefore, treatment with acetylcysteine should be considered in all paracetamol overdoses, and advice should be sought from the National Poisons Information Service.

Acute overdose

Hepatotoxicity may occur after a single ingestion of more than 150 mg/kg paracetamol taken in less than 1 hour. Rarely, hepatotoxicity may develop with single ingestions as low as 75 mg/kg of paracetamol taken in less than 1 hour.

Children who have ingested 75 mg/kg or more of paracetamol in less than 1 hour should be referred to hospital. Administration of charcoal, activated p. 793 should be considered if paracetamol in excess of 150 mg/kg is thought to have been ingested within the previous hour.

Children at risk of liver damage and, therefore, requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration, related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples may be misleading. The concentration is plotted on a paracetamol treatment graph, with a reference line ('treatment line') joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours. Acetylcysteine treatment should commence immediately in children:

- whose plasma-paracetamol concentration falls on or above the *treatment line* on the paracetamol treatment graph;
- who present 8–24 hours after taking an acute overdose of more than 150 mg/kg of paracetamol, even if the plasma-paracetamol concentration is not yet available; acetylcysteine can be discontinued if the plasma-paracetamol concentration is later reported to be below the *treatment line* on the paracetamol treatment graph, provided that the child is asymptomatic and liver function tests, serum creatinine and INR are normal.

The prognostic accuracy of a plasma-paracetamol concentration taken after 15 hours is uncertain, but a concentration on or above the *treatment line* on the paracetamol treatment graph should be regarded as carrying a serious risk of liver damage. If more than 15 hours have elapsed since ingestion, or there is doubt about appropriate management, advice should be sought from the National Poisons Information Service.

'Staggered' overdose, uncertain time of overdose, or therapeutic excess

A 'staggered' overdose involves ingestion of a potentially toxic dose of paracetamol over more than one hour, with the possible intention of causing self-harm. Therapeutic excess is the inadvertent ingestion of a potentially toxic dose of paracetamol during its clinical use. The paracetamol treatment graph is unreliable if a 'staggered' overdose is taken, if there is uncertainty about the time of the overdose, or if there is therapeutic excess. In these cases, children who have taken more than 150 mg/kg of paracetamol in any 24-hour period are at risk of toxicity and should be commenced on acetylcysteine immediately, unless it is more than 24 hours since the last ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal.

Rarely, toxicity can occur with paracetamol doses between 75–150 mg/kg in any 24-hour period; for some children this may be within the licensed dose, but ingestion of a licensed dose of paracetamol is not considered an overdose. Clinical judgement of the individual case is necessary to determine whether to treat those who have ingested this amount of paracetamol.

Paracetamol overdose treatment graph

Patients whose plasma-paracetamol concentrations are on or above the **treatment line** should be treated with acetylcysteine by intravenous infusion.

The prognostic accuracy after 15 hours is uncertain, but a plasma-paracetamol concentration on or above the treatment line should be regarded as carrying a serious risk of liver damage.

Graph reproduced courtesy of Medicines and Healthcare products Regulatory Agency

Although there is some evidence suggesting that factors such as the use of liver enzyme-inducing drugs (e.g. carbamazepine p. 184, efavirenz p. 388, nevirapine p. 389, phenobarbital p. 203, phenytoin p. 193, primidone p. 204, rifabutin p. 341, rifampicin p. 342, St John's wort), chronic alcoholism, and starvation may increase the risk of hepatotoxicity, the CHM has advised that these should no longer be used in the assessment of paracetamol toxicity.

Significant toxicity is unlikely if, 24 hours or longer after the last paracetamol ingestion, the patient is asymptomatic, the plasma-paracetamol concentration is undetectable, and liver function tests, serum creatinine and INR are normal. Children with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. If there is uncertainty about a patient's risk of toxicity after paracetamol overdose, treatment with acetylcysteine should be commenced. Advice should be sought from the National Poisons Information Service whenever necessary.

Antidepressants

Tricyclic and related antidepressants

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis. The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam p. 207 given by mouth is usually adequate to sedate delirious patients but large doses may be required.

Selective serotonin re-uptake inhibitors (SSRIs)

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSRI poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam p. 209, diazepam p. 207, or buccal midazolam p. 210 (see *Convulsions*). Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

Antimalarials

Overdosage with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

Antipsychotics

Phenothiazines and related drugs

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hypothermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 241 or diazepam (emulsion preferred).

Second-generation antipsychotic drugs

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 793 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

Benzodiazepines

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 794 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in children with a reduced level of consciousness.

Beta blockers

Therapeutic overdoses with beta-blockers may cause lightheadedness, dizziness, and possibly syncope as a result of bradycardia and hypotension; heart failure may be precipitated or exacerbated. These complications are most likely in children with conduction system disorders or impaired myocardial function. Bradycardia is the most common arrhythmia caused by beta-blockers, but sotalol may induce ventricular tachyarrhythmias (sometimes of the torsade de pointes type). The effects of massive overdosage can vary from one beta-blocker to another; propranolol overdosage in particular may cause coma and convulsions.

Acute massive overdosage must be managed in hospital and expert advice should be obtained. Maintenance of a clear airway and adequate ventilation is mandatory. An intravenous injection of atropine sulfate p. 764 is required to treat bradycardia. Cardiogenic shock unresponsive to atropine sulfate is probably best treated with an intravenous injection of glucagon p. 433 [unlicensed] in glucose 5% (with precautions to protect the airway in case of vomiting) followed by an intravenous infusion. If glucagon is not available, intravenous isoprenaline (available from 'special-

order' manufacturers or specialist importing companies) is an alternative. A cardiac pacemaker can be used to increase the heart rate.

Calcium-channel blockers

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated should be considered if the patient presents within 1 hour of overdosage with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In patients with significant features of poisoning, calcium chloride p. 553 or calcium gluconate p. 553 is given by injection; atropine sulfate is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

Iron salts

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepatocellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour.

Mortality is reduced by intensive and specific therapy with desferrioxamine mesilate p. 536, which chelates iron. The serum-iron concentration is measured as an emergency and intravenous desferrioxamine mesilate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesilate should be given immediately without waiting for the result of the serum-iron measurement.

Lithium

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the child's depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually

necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

Stimulants

Amfetamines

Amfetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam p. 207 or lorazepam p. 209; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

Cocaine

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves cooling measures for hyperthermia (see *Body temperature*); agitation, hypertension and cardiac effects require specific treatment and expert advice should be sought.

Ecstasy

Ecstasy (methylenedioxymethamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use and syndrome of inappropriate antidiuretic hormone secretion (SIADH) can occur.

Treatment of methylenedioxymethamphetamine poisoning is supportive, with diazepam to control persistent convulsions and close monitoring including ECG. For the management of agitation, seek specialist advice. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

'Liquid ecstasy' is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

Theophylline

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of charcoal, activated p. 793 can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 248 may be effective for severe vomiting that is resistant to other antiemetics. Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 561 and may be so severe as to require high doses under ECG monitoring. Convulsions should be controlled by intravenous administration of lorazepam or diazepam (see Convulsions). For the management of agitation associated with theophylline overdosage, seek specialist advice.

Provided the child does **not** suffer from asthma, a short-acting beta-blocker can be administered intravenously to

reverse severe tachycardia, hypokalaemia, and hyperglycaemia.

Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE, see under the National Poisons Information Service.

Cyanides

Oxygen should be administered to children with cyanide poisoning. The choice of antidote depends on the severity of poisoning, certainty of diagnosis, and the cause. Dicobalt edetate p. 793 is the antidote of choice when there is a strong clinical suspicion of severe cyanide poisoning, but it should **not** be used as a precautionary measure. Dicobalt edetate itself is toxic, associated with anaphylactoid reactions, and is potentially fatal if administered in the absence of cyanide poisoning. A regimen of sodium nitrite p. 793 followed by sodium thiosulfate p. 793 is an alternative if dicobalt edetate is not available.

Hydroxocobalamin p. 534 (*Cyanokit*®—no other preparation of hydroxocobalamin is suitable) can be considered for use in victims of smoke inhalation who show signs of significant cyanide poisoning.

Ethylene glycol and methanol

Fomepizole (available from 'special-order' manufacturers or specialist importing companies) is the treatment of choice for ethylene glycol and methanol (methyl alcohol) poisoning. If necessary, **ethanol** (by mouth or by intravenous infusion) can be used, but with caution. Advice on the treatment of ethylene glycol and methanol poisoning should be obtained from the National Poisons Information Service. It is important to start antidote treatment promptly in cases of suspected poisoning with these agents.

Heavy metals

Heavy metal antidotes include succimer (DMSA) [unlicensed], unithiol (DMPS) [unlicensed], sodium calcium edetate [unlicensed], and dimercaprol. Dimercaprol in the management of heavy metal poisoning has been superseded by other chelating agents. In all cases of heavy metal poisoning, the advice of the National Poisons Information Service should be sought.

Noxious gases

Carbon monoxide

Carbon monoxide poisoning is usually due to inhalation of smoke, car exhaust, or fumes caused by blocked flues or incomplete combustion of fuel gases in confined spaces.

Immediate treatment of carbon monoxide poisoning is essential. The patient should be moved to fresh air, the airway cleared, and high-flow **oxygen** 100% administered as soon as available. Artificial respiration should be given as necessary and continued until adequate spontaneous breathing starts, or stopped only after persistent and efficient treatment of cardiac arrest has failed. The child should be admitted to hospital because complications may arise after a delay of hours or days. Cerebral oedema may occur in severe poisoning and is treated with an intravenous infusion of mannitol p. 133. Referral for hyperbaric oxygen treatment should be discussed with the National Poisons Information Service if the patient is pregnant or in cases of severe poisoning such as if the patient is or has been unconscious, or has psychiatric or neurological features other than a headache or has myocardial ischaemia or an arrhythmia, or has a blood carboxyhaemoglobin concentration of more than 20%.

Sulfur dioxide, chlorine, phosgene, ammonia

All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to

36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

CS spray

CS spray, which is used for riot control, irritates the eyes (hence 'tear gas') and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

Nerve agents

Treatment of nerve agent poisoning is similar to organophosphorus insecticide poisoning, but advice must be sought from the National Poisons Information Service. The risk of cross-contamination is significant; adequate decontamination and protective clothing for healthcare personnel are essential. In emergencies involving the release of **nerve agents**, kits ('NAAS pods') containing **pralidoxime chloride** p. 794 can be obtained through the Ambulance Service from the National Blood Service (or the Welsh Blood Service in South Wales or designated hospital pharmacies in Northern Ireland and Scotland—see TOXBASE for list of designated centres).

Pesticides

Organophosphorus insecticides

Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure.

Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the child to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulfate p. 764 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride, a cholinesterase reactivator, is used as an adjunct to atropine sulfate in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is continued until the patient has not required atropine sulfate for 12 hours. Pralidoxime chloride can be obtained from designated centres, the names of which are held by the National Poisons Information Service.

Snake bites and animal stings

Snake bites

Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegally, but the only indigenous venomous snake is the adder (*Vipera berus*). The bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with adrenaline/epinephrine p. 128. Indications for european viper snake venom antiserum treatment p. 798 include **systemic envenoming**, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within 4 hours of the bite. For those children who present with clinical features of **severe envenoming** (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the european viper snake venom antiserum is recommended; if symptoms of **systemic envenoming** persist contact the National Poisons Information Service.

Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the european viper snake venom antiserum.

European viper snake venom antiserum is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and for supply in an emergency, telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

Insect stings

Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible.

Anaphylactic reactions require immediate treatment with intramuscular **adrenaline/epinephrine**; self-administered (or administered by a carer) intramuscular adrenaline/epinephrine (e.g. *EpiPen*®) is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator should be used for asthmatic reactions, see also the management of anaphylaxis. A short course of an **oral antihistamine** or a **topical corticosteroid** may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

Marine stings

The severe pain of weeverfish (*Trachinus vipera*) and Portuguese man-o'-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45°C). People stung by jellyfish and Portuguese man-o'-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing

gloves or using tweezers) or washed off with seawater. Alcoholic solutions, including suntan lotions, should not be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE.

The **National Poisons Information Service** (Tel: 0344 892 0111) will provide specialist advice on all aspects of poisoning day and night.

1 Active elimination from the gastro-intestinal tract

ANTIDOTES AND CHELATORS > INTESTINAL ADSORBENTS

Charcoal, activated

● INDICATIONS AND DOSE

Reduction of absorption of poisons in the gastro-intestinal system

► BY MOUTH

- Neonate: 1 g/kg.
- Child 1 month–11 years: 1 g/kg (max. per dose 50 g)
- Child 12–17 years: 50 g

Active elimination of poisons

► BY MOUTH

- Neonate: 1 g/kg every 4 hours, dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy.
- Child 1 month–11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy
- Child 12–17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy

- **CAUTIONS** Comatose patient (risk of aspiration—ensure airway is protected) · drowsy patient (risk of aspiration—ensure airway protected) · reduced gastrointestinal motility (risk of obstruction)

- **SIDE-EFFECTS** Black stools

- **DIRECTIONS FOR ADMINISTRATION** Suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Granules

- **Carbomix** (Beacon Pharmaceuticals Ltd)

Activated charcoal 813 mg per 1 gram Carbomix 81.3% granules sugar-free | 50 gram **P** £11.90

Oral suspension

- **Actidose-Aqua Advance** (Alliance Pharmaceuticals Ltd)

Activated charcoal 208 mg per 1 ml Actidose-Aqua Advance 1.04g/5ml oral suspension | 240 ml **P** £12.89

- **Charcodote** (Teva UK Ltd)

Activated charcoal 200 mg per 1 ml Charcodote 200mg/ml oral suspension sugar-free | 250 ml **P** £11.88

2 Chemical toxicity

2.1 Cyanide toxicity

ANTIDOTES AND CHELATORS

Dicobalt edetate

● INDICATIONS AND DOSE

Severe poisoning with cyanides

► BY INTRAVENOUS INJECTION

- Child: Consult the National Poisons Information Service

- **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness

- **SIDE-EFFECTS** Anaphylactoid reactions · cardiac abnormalities · facial oedema · hypotension · laryngeal oedema · tachycardia · vomiting

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

- **Dicobalt edetate (Non-proprietary)**

Dicobalt edetate 15 mg per 1 ml Dicobalt edetate 300mg/20ml solution for injection ampoules | 6 ampoule **PoM** £117.20

Sodium nitrite

● INDICATIONS AND DOSE

Poisoning with cyanides (used in conjunction with sodium thiosulfate)

► BY INTRAVENOUS INJECTION

- Child: 4–10 mg/kg (max. per dose 300 mg), to be given over 5–20 minutes followed by sodium thiosulphate injection

DOSE EQUIVALENCE AND CONVERSION

4–10 mg/kg equates to 0.13–0.33 mL/kg of a 3% solution. Dose max. of 300 mg equates to 10 mL of a 3% solution.

- **SIDE-EFFECTS** Flushing (due to vasodilatation) · headache (due to vasodilatation)

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Sodium thiosulfate

● INDICATIONS AND DOSE

Poisoning with cyanides (used in conjunction with sodium nitrite)

► BY INTRAVENOUS INJECTION

- Child: 400 mg/kg (max. per dose 12.5 g), to be given over 10 minutes, dose may be repeated in severe cyanide poisoning if dicobalt edetate not available

DOSE EQUIVALENCE AND CONVERSION

400 mg/kg equates to 0.8 mL/kg of a 50% solution. 12.5 g equates to 25 mL of a 50% solution.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

2.2 Organophosphorus toxicity

Drugs used for organophosphorus toxicity not listed below; Atropine sulfate p. 764

ANTIDOTES AND CHELATORS

Pralidoxime chloride

INDICATIONS AND DOSE

Adjunct to atropine in the treatment of poisoning by organophosphorus insecticide or nerve agent

BY INTRAVENOUS INFUSION

- ▶ Child: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

- **UNLICENSED USE** Pralidoxime chloride doses may differ from those in product literature. Licensed for use in children (age range not specified by manufacturer).

- **CONTRA-INDICATIONS** Poisoning with carbamates • poisoning with organophosphorus compounds without anticholinesterase activity

- **CAUTIONS** Myasthenia gravis

- **SIDE-EFFECTS** Disturbances of vision • dizziness • drowsiness • headache • hyperventilation • muscular weakness • nausea • tachycardia

- **RENAL IMPAIRMENT** Use with caution.

- **DIRECTIONS FOR ADMINISTRATION** The loading dose may be administered by intravenous injection (diluted to a concentration of 50 mg/mL with water for injections) over at least 5 minutes if pulmonary oedema is present or if it is not practical to administer an intravenous infusion.

- ▶ With intravenous use For *intravenous infusion*, reconstitute each vial with 20 mL Water for Injections, then dilute to a concentration of 10–20 mg/mL with Sodium Chloride 0.9%.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres for organophosphorus insecticide poisoning or from the National Blood Service (or Welsh Ambulance Services for Mid West and South East Wales)—see TOXBASE for list of designated centres.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for injection

Pralidoxime chloride (Non-proprietary)

Pralidoxime chloride 1 gram Protapam Chloride 1g powder for solution for injection vials | 6 vial (POM) no price available

3 Drug toxicity

3.1 Benzodiazepine toxicity

ANTIDOTES AND CHELATORS > BENZODIAZEPINE ANTAGONISTS

Flumazenil

INDICATIONS AND DOSE

Reversal of sedative effects of benzodiazepines

BY INTRAVENOUS INJECTION

- ▶ Neonate: 10 micrograms/kg every 1 minute if required, dose to be administered over 15 seconds.

- ▶ Child: 10 micrograms/kg every 1 minute (max. per dose 200 micrograms) if required, dose to be administered over 15 seconds; maximum 1 mg per course; maximum 50 micrograms/kg per course

Reversal of sedative effects of benzodiazepines (if drowsiness recurs after injection)

BY INTRAVENOUS INFUSION

- ▶ Neonate: 2–10 micrograms/kg/hour, adjusted according to response.

- ▶ Child: 2–10 micrograms/kg/hour (max. per dose 400 micrograms/hour), adjusted according to response

Reversal of sedative effects of benzodiazepines in intensive care

BY INTRAVENOUS INJECTION

- ▶ Child: 10 micrograms/kg every 1 minute (max. per dose 200 micrograms) if required, dose to be administered over 15 seconds; maximum 2 mg per course; maximum 50 micrograms/kg per course

- **UNLICENSED USE** Not licensed for use in children under 1 year. Not licensed for use by intravenous infusion in children. Not licensed for use in children in intensive care.

IMPORTANT SAFETY INFORMATION

Flumazenil should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines

- **CAUTIONS** Avoid rapid injection following major surgery • avoid rapid injection in high-risk or anxious patients • benzodiazepine dependence (may precipitate withdrawal symptoms) • children • ensure neuromuscular blockade cleared before giving • head injury (rapid reversal of benzodiazepine sedation may cause convulsions) • history of panic disorders (risk of recurrence) • prolonged benzodiazepine therapy for epilepsy (risk of convulsions) • short-acting (repeat doses may be necessary—benzodiazepine effects may persist for at least 24 hours)

SIDE-EFFECTS

- ▶ **Common or very common** Nausea • vomiting
- ▶ **Uncommon** Anxiety • fear • palpitation
- ▶ **Frequency not known** Agitation • chills • convulsions (particularly in those with epilepsy) • dizziness • flushing • sensory disturbance • sweating • tachycardia • transient hypertension

- **PREGNANCY** Not known to be harmful.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours.

- **HEPATIC IMPAIRMENT** Carefully titrate dose.

DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use For *continuous intravenous infusion*, dilute with Glucose 5% or Sodium Chloride 0.9%.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Flumazenil (Non-proprietary)

Flumazenil 100 microgram per 1 ml Flumazenil
500micrograms/5ml solution for injection ampoules |
5 ampoule [PoM] £65.50–£72.46

3.2 Digoxin toxicity

ANTIDOTES AND CHELATORS > ANTIBODIES

Digoxin-specific antibody

● INDICATIONS AND DOSE

Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradyarrhythmias unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary

► BY INTRAVENOUS INFUSION

- Child: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Powder for solution for infusion

► DigiFab (BTG International Ltd)

Digoxin-specific antibody fragments 40 mg DigiFab 40mg powder
for solution for infusion vials | 1 vial [PoM] £750.00 (Hospital only)

3.3 Heparin toxicity

ANTIDOTES AND CHELATORS

Protamine sulfate

● INDICATIONS AND DOSE

Overdosage with intravenous injection or intravenous infusion of unfractionated heparin (less than 30 minutes lapsed since overdose)

► BY INTRAVENOUS INJECTION

- Child: 1 mg (max. per dose 50 mg), to be administered at a rate not exceeding 5 mg/minute, to neutralise each 100 units of unfractionated heparin

Overdosage with intravenous injection or intravenous infusion of unfractionated heparin (if 30–60 minutes lapsed since overdose)

► BY INTRAVENOUS INJECTION

- Child: 500–750 micrograms (max. per dose 50 mg), to be administered at a rate not exceeding 5 mg/minute, to neutralise each 100 units of unfractionated heparin

Overdosage with intravenous injection or intravenous infusion of unfractionated heparin (if 60–120 minutes lapsed since overdose)

► BY INTRAVENOUS INJECTION

- Child: 375–500 micrograms (max. per dose 50 mg), to be administered at a rate not exceeding 5 mg/minute, to neutralise each 100 units of unfractionated heparin

Overdosage with intravenous injection or intravenous infusion of unfractionated heparin (if over 120 minutes lapsed since overdose)

► BY INTRAVENOUS INJECTION

- Child: 250–375 micrograms (max. per dose 50 mg), to be administered at a rate not exceeding 5 mg/minute, to neutralise each 100 units of unfractionated heparin

Overdosage with subcutaneous injection of unfractionated heparin

► BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Child: (max. per dose 50 mg), 50–100% of the total dose to be given by intravenous injection (rate not exceeding 5 mg/minute), then give any remainder of dose by intravenous infusion over 8–16 hours, 1 mg neutralises approx. 100 units of unfractionated heparin

Overdosage with subcutaneous injection of low molecular weight heparin

► BY INTRAVENOUS INJECTION, OR BY CONTINUOUS INTRAVENOUS INFUSION

- Child: (max. per dose 50 mg), to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute or by continuous intravenous infusion, 1 mg neutralises approx. 100 units of low molecular weight heparin, consult product literature of low molecular weight heparin for details

- **CAUTIONS** Excessive doses can have an anticoagulant effect

- **SIDE-EFFECTS** Anaphylaxis · angioedema · back pain · bradycardia · dyspnoea · flushing · hypersensitivity reactions · hypertension · hypotension · lassitude · nausea · pulmonary oedema · rebound bleeding · vomiting

- **ALLERGY AND CROSS-SENSITIVITY** Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile or who have had a vasectomy and who may have antibodies to protamine).

- **MONITORING REQUIREMENTS** Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.

- **DIRECTIONS FOR ADMINISTRATION**

- With intravenous use May be diluted if necessary with Sodium Chloride 0.9%.

- **PRESCRIBING AND DISPENSING INFORMATION** The long half-life of low molecular weight heparins should be taken into consideration when determining the dose of protamine sulfate; the effects of low molecular weight heparins can persist for up to 24 hours after administration.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► Protamine sulfate (Non-proprietary)

Protamine sulfate 10 mg per 1 ml Protamine sulfate 100mg/10ml
solution for injection ampoules | 5 ampoule [PoM] no price available
Protamine sulfate 50mg/5ml solution for injection ampoules |
10 ampoule [PoM] £49.55

3.4 Opioid toxicity

OPIOID RECEPTOR ANTAGONISTS

Naloxone hydrochloride

● INDICATIONS AND DOSE

Overdosage with opioids

- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Neonate: Initially 100 micrograms/kg, if no response, repeat at intervals of 1 minute to a total max. 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates.
- ▶ Child 1 month–11 years: Initially 100 micrograms/kg, if no response, repeat at intervals of 1 minute to a total max. 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates
- ▶ Child 12–17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates
- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Neonate: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes.
- ▶ Child: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes

Reversal of postoperative respiratory depression

- ▶ BY INTRAVENOUS INJECTION
- ▶ Neonate: 1 microgram/kg, repeated every 2–3 minutes if required.
- ▶ Child 1 month–11 years: 1 microgram/kg, repeated every 2–3 minutes if required
- ▶ Child 12–17 years: Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours

Reversal of respiratory and CNS depression resulting from opioid administration to mother during labour

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Neonate: 200 micrograms, alternatively 60 micrograms/kg, to be given as a single dose at birth.
- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Neonate: 10 micrograms/kg, repeated every 2–3 minutes if required.

PHARMACOKINETICS

Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

Important: Only give by subcutaneous or intramuscular routes if intravenous route is not feasible; intravenous administration has more rapid onset of action.

- **UNLICENSED USE** Naloxone doses in BNF may differ from those in product literature.

IMPORTANT SAFETY INFORMATION

SAFE PRACTICE

Doses used in acute opioid overdosage may not be appropriate for the management of opioid-induced respiratory depression and sedation in those receiving palliative care and in chronic opioid use.

- **CAUTIONS** Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects reported) · maternal physical dependence on opioids (may precipitate withdrawal in newborn) · pain · physical dependence on opioids (precipitates withdrawal)

CAUTIONS, FURTHER INFORMATION

- ▶ Titration of dose In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia.
- **SIDE-EFFECTS**
- ▶ **Common or very common** Cardiac arrest · dizziness · dyspnoea · headache · hypertension · hyperventilation · hypotension · nausea · pulmonary oedema · tachycardia · ventricular fibrillation · vomiting
- ▶ **Uncommon** Agitation · diarrhoea · dry mouth · excitement · paraesthesia · sweating · tremor
- ▶ **Very rare** Erythema multiforme · seizures
- **PREGNANCY** Use only if potential benefit outweighs risk.
- **BREAST FEEDING** Not orally bioavailable.
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of up to 200 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

▶ Naloxone hydrochloride (Non-proprietary)

- Naloxone hydrochloride 20 microgram per 1 ml** Naloxone 40micrograms/2ml solution for injection ampoules | 10 ampoule [PoM] £55.00
- Naloxone hydrochloride 400 microgram per 1 ml** Naloxone 400micrograms/1ml solution for injection Minijet pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.40
- Naloxone 2mg/5ml solution for injection Minijet pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.40
- Naloxone 400micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £41.00–£53.70
- Naloxone 800micrograms/2ml solution for injection Minijet pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.40
- Naloxone hydrochloride 1 mg per 1 ml** Naloxone 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.80
- ▶ **Prenoxad** (Martindale Pharmaceuticals Ltd)
- Naloxone hydrochloride 1 mg per 1 ml** Prenoxad 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £15.30

3.5 Paracetamol toxicity

ANTIDOTES AND CHELATORS > ANTIDOTES AND CHELATORS, OTHER

Acetylcysteine

● INDICATIONS AND DOSE

Paracetamol overdose

► BY INTRAVENOUS INFUSION

- Neonate: Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%.
- Child (body-weight up to 20 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%
- Child (body-weight 20–39 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL Glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- Child (body-weight 40 kg and above): 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%

Meconium ileus

► BY MOUTH

- Neonate: 200–400 mg up to 3 times a day if required.

Treatment of distal intestinal obstructive syndrome

► BY MOUTH

- Child 1 month–1 year: 0.4–3 g as a single dose
- Child 2–6 years: 2–3 g as a single dose
- Child 7–17 years: 4–6 g as a single dose

Prevention of distal intestinal obstruction syndrome

► BY MOUTH

- Child 1 month–1 year: 100–200 mg 3 times a day
- Child 2–11 years: 200 mg 3 times a day
- Child 12–17 years: 200–400 mg 3 times a day

● UNLICENSED USE

- With oral use Not licensed for use in meconium ileus or for distal intestinal obstructive syndrome in children with cystic fibrosis.

● CAUTIONS

- With intravenous use Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) · atopy · may slightly increase INR · may slightly increase prothrombin time
- With oral use Asthma · history of peptic ulceration

● SIDE-EFFECTS

- With intravenous use Hypersensitivity-like reactions · rashes · slight increase in INR and prothrombin time
- With oral use Anaphylaxis · hypersensitivity-like reactions · rashes

SIDE-EFFECTS, FURTHER INFORMATION

- Hypersensitivity-like reactions
- With intravenous use Hypersensitivity-like reactions managed by reducing infusion rate or suspending until reaction settled (rash also managed by giving antihistamine; acute asthma managed by giving nebulised short-acting beta₂ agonist)—contact the National Poisons Information Service if reaction severe.

● DIRECTIONS FOR ADMINISTRATION

- With oral use For oral administration, use oral granules, or dilute injection solution (200 mg/mL) to a concentration of 50 mg/mL; orange or blackcurrant juice or cola drink may be used as a diluent to mask the bitter taste.
- With intravenous use Glucose 5% is preferred fluid; Sodium Chloride 0.9% is an alternative if Glucose 5% unsuitable.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, effervescent tablet, capsule, granules, oral solution

Tablet

► Acetylcysteine (Non-proprietary)

Acetylcysteine 600 mg Acetylcysteine 600mg tablets | 30 tablet £39.95 | 100 tablet no price available

Effervescent tablet

► Acetylcysteine (Non-proprietary)

Acetylcysteine 600 mg Acetylcysteine 600mg effervescent tablets | 10 tablet no price available
 Flumucil 600 effervescent tablets | 10 tablet **[PoM]** no price available
 ACC-600 effervescent tablets | 10 tablet **[PoM]** no price available

Orodispersible tablet

► Acetylcysteine (Non-proprietary)

Acetylcysteine 200 mg Flumucil 200mg orodispersible tablets | 20 tablet **[PoM]** no price available

Capsule

► Acetylcysteine (Non-proprietary)

Acetylcysteine 600 mg Acetylcysteine 600mg capsules | 30 capsule £39.95 | 60 capsule no price available

Granules

CAUTIONARY AND ADVISORY LABELS 13

► Acetylcysteine (Non-proprietary)

Acetylcysteine 100 mg Flumucil N 100mg granules sachets | 20 sachet **[PoM]** no price available | 50 sachet **[PoM]** no price available

Acetylcysteine 200 mg Flumucil N 200mg granules sachets | 20 sachet **[PoM]** no price available | 50 sachet **[PoM]** no price available | 100 sachet **[PoM]** no price available

Oral solution

► Acetylcysteine (Non-proprietary)

Acetylcysteine 20 mg per 1 mL Solmucol 100mg/5ml syrup | 180 mL **[PoM]** no price available

Solution for infusion

ELECTROLYTES: May contain Sodium

► Acetylcysteine (Non-proprietary)

Acetylcysteine 200 mg per 1 mL Acetylcysteine 2g/10ml solution for infusion ampoules | 10 ampoule **[PoM]** £21.26–£24.99

► Parvolex (Phoenix Labs Ltd)

Acetylcysteine 200 mg per 1 mL Parvolex 2g/10ml concentrate for solution for infusion ampoules | 10 ampoule **[PoM]** £22.50

4 Methaemoglobinaemia

ANTIDOTES AND CHELATORS

Methylthioninium chloride

(Methylene blue)

● INDICATIONS AND DOSE

Drug- or chemical-induced methaemoglobinaemia

► BY SLOW INTRAVENOUS INJECTION

► Neonate: Seek advice from National Poisons Information Service.

- Child 1–2 months: Seek advice from National Poisons Information Service
- Child 3 months–17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course

Aniline- or dapsone-induced methaemoglobinaemia

► BY SLOW INTRAVENOUS INJECTION

- Child 3 months–17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- **CAUTIONS** Children under 3 months (more susceptible to methaemoglobinaemia from high doses of methylthioninium) · chlorate poisoning (reduces efficacy of methylthioninium) · G6PD deficiency (seek advice from National Poisons Information Service) · methaemoglobinaemia due to treatment of cyanide poisoning with sodium nitrite (seek advice from National Poisons Information Service) · pulse oximetry may give false estimation of oxygen saturation

- **INTERACTIONS** → Appendix 1 (methylthioninium).

- **SIDE-EFFECTS** Abdominal pain · agitation · anxiety · arrhythmia · blue-green discoloration of faeces · blue-green discoloration of skin · blue-green discoloration of urine · chest pain · confusion · dizziness · dyspnoea · fever · haemolytic anaemia · headache · hyperbilirubinaemia (in infants) · hypertension · hypotension · methaemoglobinaemia · mydriasis · nausea · sweating · tachypnoea · tremor · vomiting

- **PREGNANCY** No information available, but risk to fetus of untreated methaemoglobinaemia likely to be significantly higher than risk of treatment.

- **BREAST FEEDING** Manufacturer advises avoid breastfeeding for up to 6 days after administration—no information available.

- **RENAL IMPAIRMENT** Use with caution in severe impairment; dose reduction may be required.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, may be diluted with Glucose 5% to minimise injection-site pain; not compatible with Sodium Chloride 0.9%.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

Solution for injection

► **Methylthioninium chloride (Non-proprietary)**

Methylthioninium chloride 5 mg per 1 ml Methylthioninium chloride Proveblue 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £167.36

5 Snake bites

IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

European viper snake venom antiserum

● INDICATIONS AND DOSE

Systemic envenoming from snake bites | Marked local envenoming

- BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- Child: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

Severe systemic envenoming from snake bites in patients presenting with clinical features

- BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- Child: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- **DIRECTIONS FOR ADMINISTRATION** By *intravenous injection* given over 10–15 minutes or by *intravenous infusion* over 30 minutes after diluting in sodium chloride 0.9% (use 5 mL diluent/kg body-weight).

- **PRESCRIBING AND DISPENSING INFORMATION** To order, email immform@dh.gsi.gov.uk.

● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug.

Solution for injection

► **European viper snake venom antiserum (Non-proprietary)**

European viper snake venom antiserum 100 mg per 1 ml Viper venom antiserum, European (equine) 1g/10ml solution for injection vials | 1 vial [PoM] no price available

Appendix 1

Interactions

Two or more drugs given at the same time may exert their effects independently or may interact. The interaction may be potentiation or antagonism of one drug by another, or occasionally some other effect. Adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse Reactions to Drugs), as for other adverse drug reactions.

Drug interactions may be **pharmacodynamic** or **pharmacokinetic**.

Pharmacodynamic interactions

These are interactions between drugs which have similar or antagonistic pharmacological effects or side-effects. They may be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs. They occur to a greater or lesser extent in most patients who receive the interacting drugs.

Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or reducing the amount of drug available to produce its pharmacological effects. They are not easily predicted and many of them affect only a small proportion of patients taking the combination of drugs. Pharmacokinetic interactions occurring with one drug cannot be assumed to occur with related drugs unless their pharmacokinetic properties are known to be similar.

Pharmacokinetic interactions are of several types:

Affecting absorption The rate of absorption or the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless high peak plasma concentrations are required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, may result in ineffective therapy.

Due to changes in protein binding To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing its proportion free to diffuse from plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces more than transient potentiation because this increased concentration of free drug results in an increased rate of elimination.

Displacement from protein binding plays a part in the potentiation of warfarin by sulfonamides and tolbutamide but the importance of these interactions is due mainly to the fact that warfarin metabolism is also inhibited.

Affecting metabolism Many drugs are metabolised in the liver. Induction of the hepatic microsomal enzyme system by one drug can gradually increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducer plasma concentrations increase and toxicity may occur. Barbiturates, griseofulvin, many antiepileptics, and rifampicin are the most important enzyme inducers. Drugs affected include warfarin and the oral contraceptives.

Conversely when one drug inhibits the metabolism of another higher plasma concentrations are produced, rapidly resulting in an increased effect with risk of toxicity. Some drugs which potentiate warfarin and phenytoin do so by this mechanism.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. Drugs may be substrates, inducers or inhibitors of the different isoenzymes. A great deal of *in-vitro* information is available on the effect of drugs on the isoenzymes; however, since drugs are eliminated by a number of different metabolic routes as well as renal excretion, the clinical effects of interactions cannot be predicted accurately from laboratory data on the cytochrome P450 isoenzymes. Except where a combination of drugs is specifically contra-indicated, the BNF presents only interactions that have been reported in clinical practice. In all cases the possibility of an interaction must be considered if toxic effects occur or if the activity of a drug diminishes.

Affecting renal excretion Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible.

Relative importance of interactions

Many drug interactions are harmless and many of those which are potentially harmful only occur in a small proportion of patients; moreover, the severity of an interaction varies from one patient to another. Drugs with a small therapeutic ratio (e.g. phenytoin) and those which require careful control of dosage (e.g. anticoagulants, antihypertensives, and antidiabetics) are most often involved.

Patients at increased risk from drug interactions include those with impaired renal or liver function.

Serious interactions The symbol • has been placed against interactions that are **potentially serious** and where concomitant administration of the drugs involved should be **avoided** (or only undertaken with caution and appropriate monitoring).

Interactions that have no symbol do not usually have serious consequences.

List of drug interactions

The following is an alphabetical list of drugs and their interactions; to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

Abacavir

- Analgesics: abacavir possibly reduces plasma concentration of **METHADONE**
- Antibacterials: plasma concentration of abacavir possibly reduced by **RIFAMPICIN**
- Antiepileptics: plasma concentration of abacavir possibly reduced by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antivirals: abacavir possibly reduces effects of ● **RIBAVIRIN**; plasma concentration of abacavir reduced by ● **TIPRANAVIR**
- Orlistat: absorption of abacavir possibly reduced by ● **ORLISTAT**

Abatacept

- Cytotoxics: increased risk of side-effects when abatacept given with **ADALIMUMAB**; avoid concomitant use of abatacept with ● **CERTOLIZUMAB PEGOL**, ● **GOLIMUMAB** or ● **INFLIXIMAB**
- Etanercept: avoid concomitant use of abatacept with ● **ETANERCEPT**
- Vaccines: risk of generalised infections when abatacept given with live ● **VACCINES**—avoid concomitant use

Abiraterone

- Analgesics: abiraterone increases plasma concentration of **DEXTRAMETHORPHAN**
- Antibacterials: plasma concentration of abiraterone possibly reduced by ● **RIFABUTIN**—manufacturer of abiraterone advises avoid concomitant use; plasma concentration of abiraterone reduced by ● **RIFAMPICIN**—manufacturer of abiraterone advises avoid concomitant use
- Antidepressants: plasma concentration of abiraterone possibly reduced by ● **ST JOHN'S WORT**—manufacturer of abiraterone advises avoid concomitant use
- Antiepileptics: plasma concentration of abiraterone possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of abiraterone advises avoid concomitant use
- Diuretics: manufacturer of abiraterone advises avoid concomitant use with **SPIRONOLACTONE**

Acarbose see Antidiabetics

ACE Inhibitors

- Alcohol: enhanced hypotensive effect when ACE inhibitors given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when ACE inhibitors given with **ALDESLEUKIN**
- Aliskiren: increased risk of hyperkalaemia, hypotension, and impaired renal function when ACE inhibitors given with ● **ALISKIREN**—avoid concomitant use
- Allopurinol: manufacturers state possible increased risk of leucopenia and hypersensitivity reactions when ACE inhibitors given with **ALLOPURINOL** especially in renal impairment
- Alpha-blockers: enhanced hypotensive effect when ACE inhibitors given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when ACE inhibitors given with **GENERAL ANAESTHETICS**
- Analgesics: increased risk of renal impairment when ACE inhibitors given with **NSAIDs**, also hypotensive effect antagonised
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia, hypotension, and impaired renal function when ACE inhibitors given with ● **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**—avoid concomitant use
- Antacids: absorption of ACE inhibitors possibly reduced by **ANTACIDS**; absorption of captopril, enalapril and fosinopril reduced by **ANTACIDS**
- Antibacterials: plasma concentration of active metabolite of imidapril reduced by **RIFAMPICIN** (reduced antihypertensive effect); quinapril tablets reduce absorption of **TETRACYCLINES** (quinapril tablets contain magnesium carbonate); possible increased risk of hyperkalaemia when ACE inhibitors given with **TRIMETHOPRIM**

ACE Inhibitors (continued)

- Anticoagulants: increased risk of hyperkalaemia when ACE inhibitors given with **HEPARINS**
- Antidepressants: hypotensive effect of ACE inhibitors possibly enhanced by **MAOIs**
- Antidiabetics: ACE inhibitors possibly enhance hypoglycaemic effect of **INSULIN**, **METFORMIN** and **SULFONYLUREAS**
- Antipsychotics: enhanced hypotensive effect when ACE inhibitors given with **ANTIPSYCHOTICS**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when ACE inhibitors given with **ANXIOLYTICS** and **HYPNOTICS**
- Avanafil: hypotensive effect of enalapril possibly enhanced by **AVANAFIL**
- Azathioprine: increased risk of anaemia or leucopenia when captopril given with **AZATHIOPRINE** especially in renal impairment; increased risk of anaemia when enalapril given with **AZATHIOPRINE** especially in renal impairment
- Bee Venom Extracts: possible severe anaphylactoid reaction when ACE inhibitors given with ● **BEE VENOM EXTRACTS**
- Beta-blockers: enhanced hypotensive effect when ACE inhibitors given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when ACE inhibitors given with **CALCIUM-CHANNEL BLOCKERS**
- Cardiac Glycosides: captopril possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: increased risk of hyperkalaemia when ACE inhibitors given with ● **CICLOSPORIN**
- Clonidine: enhanced hypotensive effect when ACE inhibitors given with **CLONIDINE**; antihypertensive effect of captopril possibly delayed by previous treatment with **CLONIDINE**
- Corticosteroids: hypotensive effect of ACE inhibitors antagonised by **CORTICOSTEROIDS**
- Cytotoxics: increased risk of angioedema when ACE inhibitors given with ● **EVEROLIMUS**
- Diazoxide: enhanced hypotensive effect when ACE inhibitors given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when ACE inhibitors given with ● **DIURETICS**; increased risk of severe hyperkalaemia when ACE inhibitors given with ● **AMILORIDE**, ● **POTASSIUM CANRENOATE** or ● **TRIAMTERENE**; increased risk of severe hyperkalaemia when ACE inhibitors given with ● **EPLERENONE** and ● **SPIRONOLACTONE**—avoid concurrent use or use lowest possible doses of both drugs
- Dopaminergics: enhanced hypotensive effect when ACE inhibitors given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- Lithium: ACE inhibitors reduce excretion of ● **LITHIUM** (increased plasma concentration)
- Methyldopa: enhanced hypotensive effect when ACE inhibitors given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when ACE inhibitors given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when ACE inhibitors given with **MOXONIDINE**
- Muscle Relaxants: enhanced hypotensive effect when ACE inhibitors given with **BACLOFEN** or **TIZANIDINE**
- Nitrates: enhanced hypotensive effect when ACE inhibitors given with **NITRATES**
- Oestrogens: hypotensive effect of ACE inhibitors antagonised by **OESTROGENS**
- Potassium Salts: increased risk of severe hyperkalaemia when ACE inhibitors given with ● **POTASSIUM SALTS**
- Prostaglandins: enhanced hypotensive effect when ACE inhibitors given with **ALPROSTADIL**
- Sacubitril: manufacturer of sacubitril advises avoid ACE inhibitors for 36 hours before or after ● **SACUBITRIL**
- Sodium Aurothiomalate: flushing and hypotension reported when ACE inhibitors given with ● **SODIUM AUROTHIOMALATE**
- Vasodilator Antihypertensives: enhanced hypotensive effect when ACE inhibitors given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**
- Wasp Venom Extracts: possible severe anaphylactoid reaction when ACE inhibitors given with ● **WASP VENOM EXTRACTS**

Acebutolol see Beta-blockers

Acetofenac see NSAIDs

Acemetacin see NSAIDs

Acenocoumarol see Coumarins

Acetazolamide see Diuretics

Aciclovir

- NOTE** Interactions do not apply to topical aciclovir preparations
- Aminophylline: aciclovir possibly increases plasma concentration of **AMINOPHYLLINE**
 - Cidofovir: increased risk of nephrotoxicity when aciclovir given with **CICLOSPORIN**
 - Mycophenolate: plasma concentration of aciclovir increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate increased
 - Tacrolimus: possible increased risk of nephrotoxicity when aciclovir given with **TACROLIMUS**
 - Theophylline: aciclovir possibly increases plasma concentration of **THEOPHYLLINE**

Actitrein see Retinoids

Acidiniium see Antimuscarinics

Acrivastine see Antihistamines

Adalimumab

- Abatacept: increased risk of side-effects when adalimumab given with **ABATACEPT**
- Anakinra: avoid concomitant use of adalimumab with
 - **ANAKINRA**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Adefovir

- Antivirals: avoidance of adefovir advised by manufacturer of **TENOFOVIR**
- Interferons: manufacturer of adefovir advises caution with **PEGINTERFERON ALFA**

Adenosine

- NOTE** Possibility of interaction with drugs tending to impair myocardial conduction
- Aminophylline: anti-arrhythmic effect of adenosine antagonised by **AMINOPHYLLINE**—manufacturer of adenosine advises avoid aminophylline for 24 hours before adenosine
 - Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILOCAINE** or **ROPIVACAINE**
 - Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other • **ANTI-ARRHYTHMICS**
 - Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with
 - **ANTIPSYCHOTICS** that prolong the QT interval
 - Beta-blockers: increased myocardial depression when anti-arrhythmics given with • **BETA-BLOCKERS**
 - Caffeine citrate: anti-arrhythmic effect of adenosine antagonised by **CAFFEINE CITRATE**—manufacturer of adenosine advises avoid caffeine citrate for at least 12 hours before adenosine
 - Dipyridamole: effect of adenosine enhanced and extended by
 - **DIPYRIDAMOLE** (important risk of toxicity)—reduce dose of adenosine, see p. 73
 - Nicotine: effects of adenosine possibly enhanced by **NICOTINE**
 - Theophylline: anti-arrhythmic effect of adenosine antagonised by **THEOPHYLLINE**—manufacturer of adenosine advises avoid theophylline for 24 hours before adenosine

Adrenaline (epinephrine) see Sympathomimetics

Adrenergic Neuron Blockers

- Alcohol: enhanced hypotensive effect when adrenergic neuron blockers given with **ALCOHOL**
- Alpha-blockers: enhanced hypotensive effect when adrenergic neuron blockers given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when adrenergic neuron blockers given with • **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of adrenergic neuron blockers antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when adrenergic neuron blockers given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**

Adrenergic Neuron Blockers (continued)

- Antidepressants: enhanced hypotensive effect when adrenergic neuron blockers given with **MAOIS**; hypotensive effect of adrenergic neuron blockers antagonised by **TRICYCLICS**
- Antipsychotics: hypotensive effect of adrenergic neuron blockers antagonised by **HALOPERIDOL**; hypotensive effect of adrenergic neuron blockers antagonised by higher doses of **CHLORPROMAZINE**; enhanced hypotensive effect when adrenergic neuron blockers given with **PHENOTHIAZINES**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when adrenergic neuron blockers given with **ANXIOLYTICS AND HYPNOTICS**
- Beta-blockers: enhanced hypotensive effect when adrenergic neuron blockers given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when adrenergic neuron blockers given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when adrenergic neuron blockers given with **CLONIDINE**
- Corticosteroids: hypotensive effect of adrenergic neuron blockers antagonised by **CORTICOSTEROIDS**
- Diazoxide: enhanced hypotensive effect when adrenergic neuron blockers given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when adrenergic neuron blockers given with **DIURETICS**
- Dopaminergics: enhanced hypotensive effect when adrenergic neuron blockers given with **CO-BENEDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- Methylidopa: enhanced hypotensive effect when adrenergic neuron blockers given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when adrenergic neuron blockers given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when adrenergic neuron blockers given with **MOXONIDINE**
- Muscle Relaxants: enhanced hypotensive effect when adrenergic neuron blockers given with **BACLOFEN** or **TIZANIDINE**
- Nitrates: enhanced hypotensive effect when adrenergic neuron blockers given with **NITRATES**
- Oestrogens: hypotensive effect of adrenergic neuron blockers antagonised by **OESTROGENS**
- Pizotifen: hypotensive effect of adrenergic neuron blockers antagonised by **PIZOTIFEN**
- Prostaglandins: enhanced hypotensive effect when adrenergic neuron blockers given with **ALPROSTADIL**
- Sympathomimetics: increased risk of hypertension when guanethidine given with • **ADRENALINE (EPINEPHRINE)**; hypotensive effect of guanethidine antagonised by
 - **DEXAMFETAMINE** and • **LISDEXAMFETAMINE**; hypotensive effect of adrenergic neuron blockers antagonised by • **EPHEDRINE**, • **ISOMETHEPTENE**, • **METARAMINOL**, • **METHYLPHENIDATE**, • **NORADRENALINE (NOREPINEPHRINE)**, • **OXYMETAZOLINE**, • **PHENYLEPHRINE**, • **PSEUDOEPHEDRINE** and • **XYLOMETAZOLINE**; avoidance of guanethidine advised by manufacturer of **MIDDODINE**
- Vasodilator Antihypertensives: enhanced hypotensive effect when adrenergic neuron blockers given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Adsorbents see Kaolin

Afatinib

- Anti-arrhythmics: plasma concentration of afatinib possibly increased by **AMIODARONE**—manufacturer of afatinib advises separating administration of amiodarone by 6 to 12 hours
- Antibacterials: plasma concentration of afatinib possibly increased by **ERYTHROMYCIN**—manufacturer of afatinib advises separating administration of erythromycin by 6 to 12 hours; plasma concentration of afatinib reduced by **RIFAMPICIN**
- Antifungals: plasma concentration of afatinib possibly increased by **ITRACONAZOLE** and **KETOCONAZOLE**—manufacturer of afatinib advises separating administration of itraconazole and ketoconazole by 6 to 12 hours
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of afatinib increased by **RITONAVIR**—manufacturer of afatinib advises separating administration of ritonavir by 6 to 12 hours; plasma

Afatinib

Antivirals (continued)

concentration of afatinib possibly increased by **SAQUINAVIR**—manufacturer of afatinib advises separating administration of saquinavir by 6 to 12 hours

- ▶ Calcium-channel Blockers: plasma concentration of afatinib possibly increased by **VERAPAMIL**—manufacturer of afatinib advises separating administration of verapamil by 6 to 12 hours
- ▶ Ciclosporin: plasma concentration of afatinib possibly increased by **CICLOSPORIN**—manufacturer of afatinib advises separating administration of ciclosporin by 6 to 12 hours
- ▶ Tacrolimus: plasma concentration of afatinib possibly increased by **TACROLIMUS**—manufacturer of afatinib advises separating administration of tacrolimus by 6 to 12 hours

Agalsidase Alfa and Beta

- ▶ Anti-arrhythmics: effects of agalsidase alfa and beta possibly inhibited by **AMIODARONE** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- ▶ Antibacterials: effects of agalsidase alfa and beta possibly inhibited by **GENTAMICIN** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- ▶ Antimalarials: effects of agalsidase alfa and beta possibly inhibited by **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)

Agomelatine

- ▶ Antibacterials: manufacturer of agomelatine advises avoid concomitant use with **CIPROFLOXACIN**
- Antidepressants: metabolism of agomelatine inhibited by **FLUVOXAMINE** (increased plasma concentration)
- Antimalarials: avoidance of antidepressants advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE** and **ARTENIMOL WITH PIPERAQUINE**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**

Albendazole

- ▶ Anthelmintics: plasma concentration of both drugs possibly reduced when albendazole given with **LEVAMISOLE**
- Antiepileptics: plasma concentration of albendazole reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—consider increasing albendazole dose when given for systemic infections
- Antivirals: plasma concentration of active metabolite of albendazole reduced by **RITONAVIR**—consider increasing albendazole dose when given for systemic infections
- ▶ Corticosteroids: plasma concentration of active metabolite of albendazole increased by **DEXAMETHASONE**
- ▶ Grapefruit Juice: plasma concentration of active metabolite of albendazole increased by **GRAPEFRUIT JUICE**
- ▶ Ulcer-healing Drugs: effects of albendazole possibly enhanced by **CIMETIDINE**

Albiglutide see Antidiabetics

Alcohol

- ▶ ACE Inhibitors: enhanced hypotensive effect when alcohol given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when alcohol given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: increased sedative effect when alcohol given with **INDORAMIN**; enhanced hypotensive effect when alcohol given with **ALPHA-BLOCKERS**
- ▶ Analgesics: enhanced hypotensive and sedative effects when alcohol given with **OPIOID ANALGESICS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when alcohol given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Anthelmintics: possibility of disulfiram-like reaction when alcohol given with **LEVAMISOLE**
- Antibacterials: disulfiram-like reaction when alcohol given with **METRONIDAZOLE**; possibility of disulfiram-like reaction when alcohol given with **TINIDAZOLE**; increased risk of convulsions when alcohol given with **CYCLOSERINE**
- Anticoagulants: major changes in consumption of alcohol may affect anticoagulant control with **COUMARINS** or **PHENINDIONE**

Alcohol (continued)

- Antidepressants: some beverages containing alcohol and some dealcoholised beverages contain tyramine which interacts with **MAOIS** (hypertensive crisis)—if no tyramine, enhanced hypotensive effect; sedative effects possibly increased when alcohol given with **SSRIS**; increased sedative effect when alcohol given with **MIRTAZAPINE**, **TRICYCLIC-RELATED ANTIDEPRESSANTS** or **TRICYCLICS**
- ▶ Antidiabetics: alcohol enhances hypoglycaemic effect of **ANTIDIABETICS**; increased risk of lactic acidosis when alcohol given with **METFORMIN**
- ▶ Antiepileptics: alcohol possibly increases CNS side-effects of **CARBAMAZEPINE**; chronic heavy consumption of alcohol possibly reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; increased sedative effect when alcohol given with **PHENOBARBITAL** or **PRIMIDONE**; increased risk of blurred vision when alcohol given with **RETIGABINE**
- ▶ Antifungals: possibility of disulfiram-like reaction when alcohol given with **KETOCONAZOLE**; effects of alcohol possibly enhanced by **GRISEOFULVIN**
- ▶ Antihistamines: increased sedative effect when alcohol given with **ANTIHISTAMINES** (possibly less effect with non-sedating antihistamines)
- ▶ Antimuscarinics: increased sedative effect when alcohol given with **HYOSCINE**
- ▶ Antipsychotics: increased sedative effect when alcohol given with **ANTIPSYCHOTICS**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when alcohol given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ Avanafil: possible enhanced hypotensive effect when alcohol given with **AVANAFIL**
- ▶ Beta-blockers: enhanced hypotensive effect when alcohol given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when alcohol given with **CALCIUM-CHANNEL BLOCKERS**; plasma concentration of alcohol possibly increased by **VERAPAMIL**
- ▶ Clonidine: enhanced hypotensive effect when alcohol given with **CLONIDINE**
- Cytotoxics: disulfiram-like reaction when alcohol given with **PROCARBAZINE**; avoidance of alcohol advised by manufacturer of **TRABECTEDIN**
- Dapoxetine: increased sedative effect when alcohol given with **DAPOXETINE**
- ▶ Diazoxide: enhanced hypotensive effect when alcohol given with **DIAZOXIDE**
- ▶ Disulfiram: disulfiram reaction when alcohol given with **DISULFIRAM**
- ▶ Diuretics: enhanced hypotensive effect when alcohol given with **DIURETICS**
- ▶ Dopaminergics: alcohol reduces tolerance to **BROMOCRIPTINE**
- ▶ Guanfacine: sedative effects possibly increased when alcohol given with **GUANFACINE**
- ▶ Lipid-regulating Drugs: avoidance of alcohol advised by manufacturer of **LOMITAPIDE**
- ▶ Lofexidine: increased sedative effect when alcohol given with **LOFEXIDINE**
- ▶ Methyldopa: enhanced hypotensive effect when alcohol given with **METHYLDOPA**
- ▶ Metoclopramide: absorption of alcohol possibly increased by **METOCLOPRAMIDE**
- ▶ Moxonidine: enhanced hypotensive effect when alcohol given with **MOXONIDINE**
- ▶ Muscle Relaxants: increased sedative effect when alcohol given with **BACLOFEN**, **METHOCARBAMOL** or **TIZANIDINE**
- ▶ Nicorandil: alcohol possibly enhances hypotensive effect of **NICORANDIL**
- ▶ Nitrates: enhanced hypotensive effect when alcohol given with **NITRATES**
- Paraldehyde: increased sedative effect when alcohol given with **PARALDEHYDE**
- Retinoids: presence of alcohol causes etretinate to be formed from **ACITRETIN** (increased risk of teratogenicity in women of child-bearing potential)
- ▶ Sympathomimetics: alcohol possibly enhances effects of **METHYLPHENIDATE**

Alcohol (continued)

- Vasodilator Antihypertensives: enhanced hypotensive effect when alcohol given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Aldesleukin

- ACE Inhibitors: enhanced hypotensive effect when aldesleukin given with **ACE INHIBITORS**
- Alpha-blockers: enhanced hypotensive effect when aldesleukin given with **ALPHA-BLOCKERS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when aldesleukin given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antivirals: aldesleukin possibly increases plasma concentration of **INDINAVIR**
- Beta-blockers: enhanced hypotensive effect when aldesleukin given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when aldesleukin given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when aldesleukin given with **CLONIDINE**
- Corticosteroids: manufacturer of aldesleukin advises avoid concomitant use with ● **CORTICOSTEROIDS**
- Cytotoxics: manufacturer of aldesleukin advises avoid concomitant use with ● **CISPLATIN**, ● **DACARBAZINE** and ● **VINBLASTINE**
- Diazoxide: enhanced hypotensive effect when aldesleukin given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when aldesleukin given with **DIURETICS**
- Methyldopa: enhanced hypotensive effect when aldesleukin given with **METHYLDOPA**
- Moxonidine: enhanced hypotensive effect when aldesleukin given with **MOXONIDINE**
- Nitrates: enhanced hypotensive effect when aldesleukin given with **NITRATES**
- Vasodilator Antihypertensives: enhanced hypotensive effect when aldesleukin given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Alemtuzumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Alendronic Acid see Bisphosphonates

Alfacalcidol see Vitamins

Alfentanil see Opioid Analgesics

Alfuzosin see Alpha-blockers

Alimemazine see Antihistamines

Aliskiren

- ACE Inhibitors: increased risk of hyperkalaemia, hypotension, and impaired renal function when aliskiren given with ● **ACE INHIBITORS**—avoid concomitant use
- Analgesics: hypotensive effect of aliskiren possibly antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia, hypotension, and impaired renal function when aliskiren given with ● **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**—avoid concomitant use; plasma concentration of aliskiren possibly reduced by **IRBESARTAN**
- Antibacterials: plasma concentration of aliskiren reduced by **RIFAMPICIN**
- Anticoagulants: increased risk of hyperkalaemia when aliskiren given with **HEPARINS**
- Antifungals: plasma concentration of aliskiren increased by **KETOCONAZOLE**; plasma concentration of aliskiren increased by ● **ITRACONAZOLE**—avoid concomitant use
- Calcium-channel Blockers: plasma concentration of aliskiren increased by **VERAPAMIL**
- Ciclosporin: plasma concentration of aliskiren increased by ● **CICLOSPORIN**—avoid concomitant use
- Diuretics: aliskiren reduces plasma concentration of **FUROSEMIDE**; increased risk of hyperkalaemia when aliskiren given with **POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS**
- Grapefruit Juice: plasma concentration of aliskiren reduced by ● **GRAPEFRUIT JUICE**—avoid concomitant use

Aliskiren (continued)

- Potassium Salts: increased risk of hyperkalaemia when aliskiren given with **POTASSIUM SALTS**

Altretretinoin see Retinoids

Alkylating Drugs see Bendamustine, Busulfan, Carmustine, Cyclophosphamide, Estramustine, Ifosfamide, Lomustine, Melphalan, and Thiotepa

Allopurinol

- ACE Inhibitors: manufacturers state possible increased risk of leucopenia and hypersensitivity reactions when allopurinol given with **ACE INHIBITORS** especially in renal impairment
- Aminophylline: allopurinol possibly increases plasma concentration of **AMINOPHYLLINE**
- Antibacterials: increased risk of rash when allopurinol given with **AMOXICILLIN**, **AMPICILLIN** or **CO-AMOXICLAV**
- Anticoagulants: allopurinol possibly enhances anticoagulant effect of **COUMARINS**
- Antivirals: allopurinol increases plasma concentration of ● **DIDANOSINE** (risk of toxicity)—avoid concomitant use
- Azathioprine: allopurinol enhances effects and increases toxicity of ● **AZATHIOPRINE** (reduce dose of azathioprine to one quarter of usual dose)
- Ciclosporin: allopurinol possibly increases plasma concentration of **CICLOSPORIN** (risk of nephrotoxicity)
- Cytotoxics: avoidance of allopurinol advised by manufacturer of ● **CAPECITABINE**; allopurinol enhances effects and increases toxicity of ● **MERCAPTOPYRINE** (reduce dose of mercaptopurine to one quarter of usual dose)
- Diuretics: increased risk of hypersensitivity when allopurinol given with **THIAZIDES AND RELATED DIURETICS** especially in renal impairment
- Theophylline: allopurinol possibly increases plasma concentration of **THEOPHYLLINE**

Almotriptan see 5HT₁-receptor Agonists (under HT)

Allogliptin see Antidiabetics

Alpha₂-adrenoceptor Stimulants see Apraclonidine, Brimonidine, Clonidine, and Methyldopa

Alpha-blockers

- ACE Inhibitors: enhanced hypotensive effect when alpha-blockers given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when alpha-blockers given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: enhanced hypotensive effect when alpha-blockers given with **ALCOHOL**; increased sedative effect when indoramin given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when alpha-blockers given with **ALDESLEUKIN**
- Anaesthetics, General: enhanced hypotensive effect when alpha-blockers given with ● **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of alpha-blockers antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when alpha-blockers given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antidepressants: manufacturer of indoramin advises avoid concomitant use with ● **MAOIS**; enhanced hypotensive effect when alpha-blockers given with **MAOIS**
- Antifungals: plasma concentration of alfuzosin possibly increased by **KETOCONAZOLE**; plasma concentration of tamsulosin increased by ● **KETOCONAZOLE**
- Antipsychotics: enhanced hypotensive effect when alpha-blockers given with **ANTIPSYCHOTICS**
- Antivirals: plasma concentration of doxazosin and tamsulosin possibly increased by **BOCEPREVIR**—manufacturer of boceprevir advises avoid concomitant use; plasma concentration of alfuzosin possibly increased by ● **BITONAVIR**—avoid concomitant use; avoidance of alfuzosin advised by manufacturer of ● **TELAPREVIR**
- Anxiolytics and Hypnotics: enhanced hypotensive and sedative effects when alpha-blockers given with **ANXIOLYTICS AND HYPNOTICS**
- Avanafil: enhanced hypotensive effect when alpha-blockers given with ● **AVANAFIL**—when patient is stable on the alpha blocker initiate avanafil at the lowest possible dose

Alpha-blockers (continued)

- Beta-blockers: enhanced hypotensive effect when alpha-blockers given with **BETA-BLOCKERS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
- Calcium-channel Blockers: enhanced hypotensive effect when alpha-blockers given with **CALCIUM-CHANNEL BLOCKERS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin; plasma concentration of tamsulosin increased by **VERAPAMIL**
- ▶ Cardiac Glycosides: prazosin increases plasma concentration of **DIGOXIN**
- ▶ Clonidine: enhanced hypotensive effect when alpha-blockers given with **CLONIDINE**
- Cobicistat: plasma concentration of alfuzosin possibly increased by **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- ▶ Corticosteroids: hypotensive effect of alpha-blockers antagonised by **CORTICOSTEROIDS**
- ▶ Cytotoxics: avoidance of alfuzosin advised by manufacturer of **IDELALISIB**
- ▶ Diazoxide: enhanced hypotensive effect when alpha-blockers given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when alpha-blockers given with **DIURETICS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
- ▶ Dopaminergics: enhanced hypotensive effect when alpha-blockers given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- ▶ Methyldopa: enhanced hypotensive effect when alpha-blockers given with **METHYLDOPA**
- Moxisylyte: possible severe postural hypotension when alpha-blockers given with **MOXISYLYTE**
- ▶ Moxonidine: enhanced hypotensive effect when alpha-blockers given with **MOXONIDINE**
- ▶ Muscle Relaxants: enhanced hypotensive effect when alpha-blockers given with **BACLOFEN** or **TIZANIDINE**
- ▶ Nitrates: enhanced hypotensive effect when alpha-blockers given with **NITRATES**
- ▶ Oestrogens: hypotensive effect of alpha-blockers antagonised by **OESTROGENS**
- ▶ Prostaglandins: enhanced hypotensive effect when alpha-blockers given with **ALPROSTADIL**
- Sildenafil: enhanced hypotensive effect when alpha-blockers given with **SILDENAFIL** (avoid alpha-blockers for 4 hours after sildenafil)—when patient is stable on the alpha blocker initiate sildenafil at the lowest possible dose
- Sympathomimetics: avoid concomitant use of tolazoline with **ADRENALINE (EPINEPHRINE)** or **DOPAMINE**; alpha-blockers possibly antagonise effects of **MIDODRINE**
- Tadalafil: enhanced hypotensive effect when alpha-blockers given with **TADALAFIL**—when patient is stable on the alpha blocker initiate tadalafil at the lowest possible dose; enhanced hypotensive effect when doxazosin given with **TADALAFIL**—manufacturer of tadalafil advises avoid concomitant use
- Ulcer-healing Drugs: effects of tolazoline antagonised by **CIMETIDINE** and **RANITIDINE**
- Vardenafil: enhanced hypotensive effect when alpha-blockers given with **VARDENAFIL**—when patient is stable on the alpha blocker initiate vardenafil at the lowest possible dose—separate doses by 6 hours (except with tamsulosin)
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when alpha-blockers given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Alpha-blockers (post-synaptic) see Alpha-blockers

Alprazolam see Anxiolytics and Hypnotics

Alprostadil see Prostaglandins

Aluminium Hydroxide see Antacids

Amantadine

- ▶ Antimalarials: plasma concentration of amantadine possibly increased by **QUININE**
- ▶ Antipsychotics: increased risk of extrapyramidal side-effects when amantadine given with **ANTIPSYCHOTICS**
- ▶ Bupropion: increased risk of side-effects when amantadine given with **BUPROPION**

Amantadine (continued)

- Memantine: increased risk of CNS toxicity when amantadine given with **MEMANTINE** (manufacturer of memantine advises avoid concomitant use); effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: increased risk of extrapyramidal side-effects when amantadine given with **METHYLDOPA**; antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Tetrabenazine: increased risk of extrapyramidal side-effects when amantadine given with **TETRABENAZINE**

Ambrisentan

- ▶ Antibacterials: plasma concentration of ambrisentan possibly increased by **RIFAMPICIN**
- Ciclosporin: plasma concentration of ambrisentan increased by **CICLOSPORIN** (see under Ambrisentan, in BNF)

Amikacin see Aminoglycosides

Amiloride see Diuretics

Aminoglycosides

- ▶ Agalsidase Alfa and Beta: gentamicin possibly inhibits effects of **AGALSIDASE ALFA AND BETA** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- ▶ Analgesics: plasma concentration of amikacin and gentamicin in neonates possibly increased by **INDOMETACIN**
- Antibacterials: neomycin reduces absorption of **PHENOXYMETHYLPENICILLIN**; increased risk of nephrotoxicity when aminoglycosides given with **COLISTIMETHATE SODIUM** or **POLYMYXINS**; increased risk of nephrotoxicity and ototoxicity when aminoglycosides given with **CAPREOMYCIN** or **VANCOMYCIN**; possible increased risk of nephrotoxicity when aminoglycosides given with **CEPHALOSPORINS**
- Anticoagulants: experience in anticoagulant clinics suggests that INR possibly altered when neomycin (given for local action on gut) is given with **COUMARINS** or **PHENINDIONE**
- ▶ Antidiabetics: neomycin possibly enhances hypoglycaemic effect of **ACARBOSE**, also severity of gastro-intestinal effects increased
- ▶ Antifungals: increased risk of nephrotoxicity when aminoglycosides given with **AMPHOTERICIN**
- ▶ Bisphosphonates: increased risk of hypocalcaemia when aminoglycosides given with **BISPHOSPHONATES**
- ▶ Cardiac Glycosides: gentamicin possibly increases plasma concentration of **DIGOXIN**; neomycin reduces absorption of **DIGOXIN**
- Ciclosporin: increased risk of nephrotoxicity when aminoglycosides given with **CICLOSPORIN**
- Cytotoxics: neomycin possibly reduces absorption of **METHOTREXATE**; neomycin reduces bioavailability of **SORAFENIB**; increased risk of nephrotoxicity and possibly of ototoxicity when aminoglycosides given with **PLATINUM COMPOUNDS**
- Diuretics: increased risk of ototoxicity when aminoglycosides given with **LOOP DIURETICS**
- ▶ Mannitol: manufacturer of tobramycin advises avoid concomitant use with **MANNITOL**
- Muscle Relaxants: aminoglycosides enhance effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**
- Parasympathomimetics: aminoglycosides antagonise effects of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
- Tacrolimus: increased risk of nephrotoxicity when aminoglycosides given with **TACROLIMUS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF
- ▶ Vitamins: neomycin possibly reduces absorption of **VITAMIN A**

Aminophylline

- ▶ Allopurinol: plasma concentration of aminophylline possibly increased by **ALLOPURINOL**
- ▶ Anaesthetics, General: increased risk of convulsions when aminophylline given with **KETAMINE**
- ▶ Anti-arrhythmics: aminophylline antagonises anti-arrhythmic effect of **ADENOSINE**—manufacturer of adenosine advises avoid aminophylline for 24 hours before adenosine; plasma concentration of aminophylline increased by **PROPAFENONE**
- Antibacterials: plasma concentration of aminophylline possibly increased by **CLARITHROMYCIN** and **ISONIAZID**; plasma concentration of aminophylline increased by **ERYTHROMYCIN** (also aminophylline may reduce absorption of oral

Aminophylline

- **Antibacterials** (continued)
 - erythromycin); plasma concentration of aminophylline increased by ● **CIPROFLOXACIN** and ● **NORFLOXACIN**; metabolism of aminophylline accelerated by **RIFAMPICIN** (reduced plasma concentration); possible increased risk of convulsions when aminophylline given with ● **QUINOLONES**
- **Antidepressants**: plasma concentration of aminophylline increased by ● **FLUVOXAMINE** (concomitant use should usually be avoided, but where not possible halve aminophylline dose and monitor plasma-aminophylline concentration); plasma concentration of aminophylline possibly reduced by **ST JOHN'S WORT**
- **Antiepileptics**: metabolism of aminophylline accelerated by **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE** (reduced effect); plasma concentration of both drugs reduced when aminophylline given with ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- **Antifungals**: plasma concentration of aminophylline possibly increased by ● **FLUCONAZOLE** and ● **KETOCONAZOLE**
- **Antivirals**: plasma concentration of aminophylline possibly increased by **ACICLOVIR** and **VALACICLOVIR**; metabolism of aminophylline accelerated by ● **RITONAVIR** (reduced plasma concentration)
- **Anxiolytics and Hypnotics**: aminophylline possibly reduces effects of **BENZODIAZEPINES**
- **Caffeine citrate**: avoidance of aminophylline advised by manufacturer of **CAFFEINE CITRATE**
- **Calcium-channel Blockers**: plasma concentration of aminophylline possibly increased by ● **CALCIUM-CHANNEL BLOCKERS** (enhanced effect); plasma concentration of aminophylline increased by ● **DILTIAZEM**; plasma concentration of aminophylline increased by ● **VERAPAMIL** (enhanced effect)
- **Corticosteroids**: increased risk of hypokalaemia when aminophylline given with **CORTICOSTEROIDS**
- **Cytotoxics**: plasma concentration of aminophylline possibly increased by **METHOTREXATE**
- **Deferasirox**: plasma concentration of aminophylline increased by ● **DEFERASIROX** (consider reducing dose of aminophylline)
- **Disulfiram**: metabolism of aminophylline inhibited by **DISULFIRAM** (increased risk of toxicity)
- **Diuretics**: increased risk of hypokalaemia when aminophylline given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- **Doxapram**: increased CNS stimulation when aminophylline given with **DOXAPRAM**
- **Interferons**: metabolism of aminophylline inhibited by ● **INTERFERON ALFA** and ● **PEGINTERFERON ALFA** (consider reducing dose of aminophylline)
- **Leukotriene Receptor Antagonists**: plasma concentration of aminophylline possibly increased by **ZAFIRLUKAST**, also plasma concentration of zafirlukast reduced
- **Lithium**: aminophylline increases excretion of **LITHIUM** (reduced plasma concentration)
- **Oestrogens**: plasma concentration of aminophylline increased by ● **OESTROGENS** (consider reducing dose of aminophylline)
- **Pentoxifylline**: plasma concentration of aminophylline increased by **PENTOXIFYLLINE**
- **Roflumilast**: avoidance of aminophylline advised by manufacturer of **ROFLUMILAST**
- **Sulfinpyrazone**: plasma concentration of aminophylline reduced by **SULFINPYRAZONE**
- **Sympathomimetics**: manufacturer of aminophylline advises avoid concomitant use with **EPHEDRINE** in children
- **Sympathomimetics, Beta₂**: increased risk of hypokalaemia when aminophylline given with high doses of **BETA₂ SYMPATHOMIMETICS**
- **Ulcer-healing Drugs**: metabolism of aminophylline inhibited by ● **CIMETIDINE** (increased plasma concentration); absorption of aminophylline possibly reduced by **SUCRALFATE** (give at least 2 hours apart)
- **Vaccines**: plasma concentration of aminophylline possibly increased by **INFLUENZA VACCINE**

Aminosalicylates see individual drugs

Amiodarone

- NOTE** Amiodarone has a long half-life; there is a potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped
- **Agalsidase Alfa and Beta**: amiodarone possibly inhibits effects of **AGALSIDASE ALFA AND BETA** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
 - **Anaesthetics, Local**: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILOCAINE** or **ROPIVACAINE**
 - **Anti-arrhythmics**: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**; increased risk of ventricular arrhythmias when amiodarone given with ● **DISOPYRAMIDE** or ● **DRONEDARONE**—avoid concomitant use; amiodarone increases plasma concentration of ● **FLECAINIDE** (halve dose of flecainide)
 - **Antibacterials**: increased risk of ventricular arrhythmias when amiodarone given with **parenteral** ● **ERYTHROMYCIN**—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with ● **LEVOFLOXACIN** or ● **MOXIFLOXACIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when amiodarone given with **SULFAMETHOXAZOLE** and **TRIMETHOPRIM** (as co-trimoxazole)—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole; increased risk of ventricular arrhythmias when amiodarone given with ● **DELAMANID**; avoidance of amiodarone advised by manufacturer of **FIDAXOMICIN**; possible increased risk of ventricular arrhythmias when amiodarone given with ● **TELITROMYCIN**
 - **Anticoagulants**: amiodarone inhibits metabolism of ● **COUMARINS** and ● **PHENINDIONE** (enhanced anticoagulant effect); amiodarone increases plasma concentration of ● **DABIGATRAM** (see under Dabigatran Etxelate, in BNF)
 - **Antidepressants**: avoidance of amiodarone advised by manufacturer of ● **CITALOPRAM**, ● **ESCITALOPRAM** and ● **VENLAFAXINE** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when amiodarone given with ● **TRICYCLICS**—avoid concomitant use
 - **Antiepileptics**: amiodarone inhibits metabolism of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (increased plasma concentration)
 - **Antihistamines**: increased risk of ventricular arrhythmias when amiodarone given with ● **MIZOLASTINE**—avoid concomitant use
 - **Antimalarials**: avoidance of amiodarone advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** (risk of ventricular arrhythmias); avoidance of amiodarone advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when amiodarone given with ● **CHLOROQUINE**, ● **HYDROXYCHLOROQUINE**, ● **MEFLOQUINE** or ● **QUININE**—avoid concomitant use
 - **Antimuscarinics**: increased risk of ventricular arrhythmias when amiodarone given with ● **TOLTERODINE**
 - **Antipsychotics**: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ● **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of ventricular arrhythmias when amiodarone given with ● **BENPERIDOL**—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with ● **AMISULPRIDE**, ● **DROPERIDOL**, ● **HALOPERIDOL**, ● **PHENOTHIAZINES**, ● **PIMOZIDE** or ● **ZUCLOPENTHIXOL**—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with ● **SULPİRIDE**
 - **Antivirals**: plasma concentration of amiodarone possibly increased by ● **ATAZANAVIR**; possible increased risk of bradycardia when amiodarone given with ● **DACLATASVIR**, ● **LEDIPASVIR** and ● **SIMEPREVIR** (with sofosbuvir)—see under Amiodarone, in BNF; plasma concentration of amiodarone possibly increased by ● **FOSAMPRENAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of amiodarone possibly increased by ● **INDINAVIR**—avoid concomitant use; plasma concentration of amiodarone increased by ● **RITONAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when amiodarone given with

Amiodarone

- **Antivirals** (continued)
 - **SAQUINAVIR**—avoid concomitant use; possible increased risk of bradycardia when amiodarone given with • **SOFOBUVIR**—see under Amiodarone, in BNFC; avoidance of amiodarone advised by manufacturer of • **TELAPREVIR** (risk of ventricular arrhythmias)
- **Atomoxetine**: increased risk of ventricular arrhythmias when amiodarone given with • **ATOMOXETINE**
- **Beta-blockers**: increased risk of bradycardia, AV block and myocardial depression when amiodarone given with • **BETA-BLOCKERS**; increased myocardial depression when anti-arrhythmics given with • **BETA-BLOCKERS**; increased risk of ventricular arrhythmias when amiodarone given with • **SOTALOL**—avoid concomitant use
- **Calcium-channel Blockers**: increased risk of bradycardia, AV block and myocardial depression when amiodarone given with • **DILTIAZEM** or • **VERAPAMIL**
- **Cardiac Glycosides**: amiodarone increases plasma concentration of • **DIGOXIN** (halve dose of digoxin)
- **Ciclosporin**: amiodarone possibly increases plasma concentration of **CICLOSPORIN**
- **Cobicistat**: plasma concentration of amiodarone possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Colchicine**: amiodarone possibly increases risk of • **COLCHICINE** toxicity
- **Cytotoxics**: amiodarone possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of amiodarone by 6 to 12 hours; possible increased risk of ventricular arrhythmias when amiodarone given with • **BOSUTINIB**; amiodarone possibly increases the plasma concentration of • **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNFC); avoidance of amiodarone advised by manufacturer of **IDELALISIB**; possible increased risk of ventricular arrhythmias when amiodarone given with • **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when amiodarone given with • **ARSENIC TRIOXIDE**
- **Diuretics**: increased cardiac toxicity with amiodarone if hypokalaemia occurs with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**; amiodarone increases plasma concentration of **EPLERENONE** (reduce dose of eplerenone)
- **Fingolimod**: possible increased risk of bradycardia when amiodarone given with • **FINGOLIMOD**
- **Grapefruit Juice**: plasma concentration of amiodarone increased by **GRAPEFRUIT JUICE**
- **Ivabradine**: increased risk of ventricular arrhythmias when amiodarone given with • **IVABRADINE**
- **Lipid-regulating Drugs**: increased risk of myopathy when amiodarone given with • **SIMVASTATIN** (see under Simvastatin, p. 125); separating administration from amiodarone by 12 hours advised by manufacturer of **LOMITAPIDE**
- **Lithium**: manufacturer of amiodarone advises avoid concomitant use with • **LITHIUM** (risk of ventricular arrhythmias)
- **Orlistat**: plasma concentration of amiodarone possibly reduced by **ORLISTAT**
- **Pentamidine Isetionate**: increased risk of ventricular arrhythmias when amiodarone given with • **PENTAMIDINE ISETIONATE**—avoid concomitant use
- **Tacrolimus**: amiodarone possibly increases plasma concentration of **TACROLIMUS**
- **Thyroid Hormones**: amiodarone can affect serum concentrations of **THYROID HORMONES**—monitor thyroid function closely
- **Ulcer-healing Drugs**: plasma concentration of amiodarone increased by **CIMETIDINE**

Amisulpride see Antipsychotics

Amiprityline see Antidepressants, Tricyclic

Amiodipine see Calcium-channel Blockers

Amoxicillin see Penicillins

Amphotericin

NOTE Close monitoring required with concomitant administration of nephrotoxic drugs or cytotoxics

Amphotericin (continued)

- **Antibacterials**: increased risk of nephrotoxicity when amphotericin given with **AMINOGLYCOSIDES** or **POLYMYXINS**; possible increased risk of nephrotoxicity when amphotericin given with **VANCOMYCIN**
- **Antifungals**: amphotericin reduces renal excretion and increases cellular uptake of **FLUCYTOSINE** (toxicity possibly increased); effects of amphotericin possibly antagonised by **IMIDAZOLES** and **TRIAZOLES**; plasma concentration of amphotericin possibly increased by **MICAFUNGIN**
- **Cardiac Glycosides**: hypokalaemia caused by amphotericin increases cardiac toxicity with • **CARDIAC GLYCOSIDES**
- **Ciclosporin**: increased risk of nephrotoxicity when amphotericin given with • **CICLOSPORIN**
- **Corticosteroids**: increased risk of hypokalaemia when amphotericin given with • **CORTICOSTEROIDS**—avoid concomitant use unless corticosteroids needed to control reactions
- **Cytotoxics**: increased risk of ventricular arrhythmias when amphotericin given with • **ARSENIC TRIOXIDE**
- **Diuretics**: increased risk of hypokalaemia when amphotericin given with **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- **Pentamidine Isetionate**: possible increased risk of nephrotoxicity when amphotericin given with **PENTAMIDINE ISETIONATE**
- **Sodium Stibogluconate**: possible increased risk of arrhythmias when amphotericin given after • **SODIUM STIBOGLUCONATE**—manufacturer of sodium stibogluconate advises giving 14 days apart
- **Tacrolimus**: increased risk of nephrotoxicity when amphotericin given with • **TACROLIMUS**

Ampicillin see Penicillins

Anabolic Steroids

- **Anticoagulants**: anabolic steroids enhance anticoagulant effect of • **COUMARINS** and • **PHENINDIONE**
- **Antidiabetics**: anabolic steroids possibly enhance hypoglycaemic effect of **ANTI-DIABETICS**

Anaesthetics, General

NOTE See also Surgery and Long-term Medication, under General Anaesthesia in BNFC

- **ACE Inhibitors**: enhanced hypotensive effect when general anaesthetics given with **ACE INHIBITORS**
- **Adrenergic Neurone Blockers**: enhanced hypotensive effect when general anaesthetics given with • **ADRENERGIC NEURONE BLOCKERS**
- **Alpha-blockers**: enhanced hypotensive effect when general anaesthetics given with • **ALPHA-BLOCKERS**
- **Aminophylline**: increased risk of convulsions when ketamine given with **AMINOPHYLLINE**
- **Analgesics**: metabolism of etomidate inhibited by **FENTANYL** (consider reducing dose of etomidate); effects of thiopental possibly enhanced by **ASPIRIN**; effects of intravenous general anaesthetics and volatile liquid general anaesthetics possibly enhanced by **OPIOID ANALGESICS**
- **Angiotensin-II Receptor Antagonists**: enhanced hypotensive effect when general anaesthetics given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- **Antibacterials**: increased risk of hepatotoxicity when isoflurane given with **ISONIAZID**; effects of thiopental enhanced by **SULFONAMIDES**; hypersensitivity-like reactions can occur when general anaesthetics given with **INTRAVENOUS VANCOMYCIN**
- **Antidepressants**: increased risk of arrhythmias and hypotension when general anaesthetics given with **TRICYCLICS**
- **Antipsychotics**: enhanced hypotensive effect when general anaesthetics given with • **ANTI-PSYCHOTICS**; effects of thiopental enhanced by **PROPERIDOL**
- **Anxiolytics and Hypnotics**: increased sedative effect when general anaesthetics given with **ANXIOLYTICS AND HYPNOTICS**
- **Beta-blockers**: enhanced hypotensive effect when general anaesthetics given with **BETA-BLOCKERS**
- **Calcium-channel Blockers**: enhanced hypotensive effect when general anaesthetics or isoflurane given with **CALCIUM-CHANNEL BLOCKERS**; general anaesthetics enhance hypotensive effect of • **VERAPAMIL** (also AV delay)
- **Clonidine**: enhanced hypotensive effect when general anaesthetics given with **CLONIDINE**

Anaesthetics, General (continued)

- Cytotoxics: nitrous oxide increases antifolate effect of
 - **METHOTREXATE**—avoid concomitant use
- ▶ Diazoxide: enhanced hypotensive effect when general anaesthetics given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when general anaesthetics given with **DIURETICS**
- Dopaminergics: increased risk of arrhythmias when volatile liquid general anaesthetics given with ● **CO-BENELDOPA**, ● **CO-CARELDOPA** or ● **LEVODOPA**
- Doxapram: increased risk of arrhythmias when volatile liquid general anaesthetics given with ● **DOXAPRAM** (avoid doxapram for at least 10 minutes after volatile liquid general anaesthetics)
- Memantine: increased risk of CNS toxicity when ketamine given with ● **MEMANTINE** (manufacturer of memantine advises avoid concomitant use)
- ▶ Methyldopa: enhanced hypotensive effect when general anaesthetics given with **METHYLDOPA**
- ▶ Metoclopramide: effects of thiopental enhanced by **METOCLOPRAMIDE**
- ▶ Moxonidine: enhanced hypotensive effect when general anaesthetics given with **MOXONIDINE**
- Muscle Relaxants: increased risk of myocardial depression and bradycardia when propofol given with ● **SUXAMETHONIUM**; volatile liquid general anaesthetics enhance effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**; ketamine enhances effects of **ATRACURIUM**
- ▶ Nitrates: enhanced hypotensive effect when general anaesthetics given with **NITRATES**
- ▶ Oxytocin: oxytocic effect possibly reduced, also enhanced hypotensive effect and risk of arrhythmias when volatile liquid general anaesthetics given with **OXYTOCIN**
- Sympathomimetics: manufacturer of isoflurane advises avoid concomitant use with ● **SYMPATHOMIMETICS** (risk of ventricular arrhythmias); increased risk of arrhythmias when volatile liquid general anaesthetics given with ● **ADRENALINE** (**EPINEPHRINE**) or ● **NORADRENALINE** (**NOREPINEPHRINE**); increased risk of hypertension when volatile liquid general anaesthetics given with ● **METHYLPHENIDATE**
- ▶ Theophylline: increased risk of convulsions when ketamine given with **THEOPHYLLINE**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when general anaesthetics given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Anaesthetics, General (intravenous) see Anaesthetics, General
Anaesthetics, General (volatile liquids) see Anaesthetics, General

Anaesthetics, Local see Bupivacaine, Chloroprocaine, Levobupivacaine, Lidocaine, Prilocaine, and Ropivacaine

Anagrelide

- Cilostazol: manufacturer of anagrelide advises avoid concomitant use with ● **CILOSTAZOL**
- Phosphodiesterase Type-3 Inhibitors: manufacturer of anagrelide advises avoid concomitant use with ● **ENOXIMONE** and ● **MILRINONE**

Anakinra

- Cytotoxics: avoid concomitant use of anakinra with
 - **ADALIMUMAB**, ● **CERTOLIZUMAB PEGOL**, ● **GOLIMUMAB** or ● **INFLIXIMAB**
- Etanercept: avoid concomitant use of anakinra with ● **ETANERCEPT**
- Vaccines: risk of generalised infections when anakinra given with live ● **VACCINES**—avoid concomitant use

Analgesics see Aspirin, Nefopam, NSAIDs, Opioid Analgesics, and Paracetamol

Angiotensin-II Receptor Antagonists

- ACE Inhibitors: increased risk of hyperkalaemia, hypotension, and impaired renal function when angiotensin-II receptor antagonists given with ● **ACE INHIBITORS**—avoid concomitant use
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ALCOHOL**

Angiotensin-II Receptor Antagonists (continued)

- ▶ Aldesleukin: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ALDESLEUKIN**
- Aliskiren: increased risk of hyperkalaemia, hypotension, and impaired renal function when angiotensin-II receptor antagonists given with ● **ALISKIREN**—avoid concomitant use; irbesartan possibly reduces plasma concentration of **ALISKIREN**
- ▶ Alpha-blockers: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ALPHA-BLOCKERS**
- ▶ Anaesthetics, General: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **GENERAL ANAESTHETICS**
- ▶ Analgesics: increased risk of renal impairment when angiotensin-II receptor antagonists given with **NSAIDS**, also hypotensive effect antagonised
- ▶ Antibacterials: plasma concentration of losartan and its active metabolite reduced by **RIFAMPICIN**; possible increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with **TRIMETHOPRIM**
- ▶ Anticoagulants: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with **HEPARINS**
- ▶ Antidepressants: hypotensive effect of angiotensin-II receptor antagonists possibly enhanced by **MAOIS**
- ▶ Antipsychotics: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ANTIPSYCHOTICS**
- ▶ Antivirals: when given with valsartan manufacturer of **PARITAPREVIR** advises reduce dose of paritaprevir
- ▶ Anxiolytics and Hypnotics: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ Beta-blockers: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **CALCIUM-CHANNEL BLOCKERS**
- Ciclesporin: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with ● **CICLOSPORIN**
- ▶ Clonidine: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **CLONIDINE**
- ▶ Corticosteroids: hypotensive effect of angiotensin-II receptor antagonists antagonised by **CORTICOSTEROIDS**
- ▶ Diazoxide: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when angiotensin-II receptor antagonists given with ● **DIURETICS**; valsartan reduces plasma concentration of **FUROSEMIDE**; increased risk of severe hyperkalaemia when angiotensin-II receptor antagonists given with ● **AMILORIDE**, ● **POTASSIUM CANRENOATE** or ● **TRIAMTERENE**; increased risk of severe hyperkalaemia when angiotensin-II receptor antagonists given with ● **EPLERENONE** and ● **SPIRONOLACTONE**—avoid concurrent use or use lowest possible doses of both drugs
- ▶ Dopaminergics: enhanced hypotensive effect when angiotensin-II receptor antagonists given with ● **CO-BENELDOPA**, ● **CO-CARELDOPA** or ● **LEVODOPA**
- Lithium: angiotensin-II receptor antagonists reduce excretion of ● **LITHIUM** (increased plasma concentration)
- ▶ Methyldopa: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **METHYLDOPA**
- ▶ Moxisylyte: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **MOXISYLYTE**
- ▶ Moxonidine: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **MOXONIDINE**
- ▶ Muscle Relaxants: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **BACLOFEN** or **TIZANIDINE**
- ▶ Nitrates: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **NITRATES**
- ▶ Oestrogens: hypotensive effect of angiotensin-II receptor antagonists antagonised by **OESTROGENS**
- Potassium Salts: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with ● **POTASSIUM SALTS**
- ▶ Prostaglandins: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **ALPROSTADIL**

Angiotensin-II Receptor Antagonists (continued)

- Tacrolimus: increased risk of hyperkalaemia when angiotensin-II receptor antagonists given with **TACROLIMUS**
- Vasodilator Antihypertensives: enhanced hypotensive effect when angiotensin-II receptor antagonists given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Antacids

- NOTE** Antacids should preferably not be taken at the same time as other drugs since they may impair absorption
- **ACE Inhibitors:** antacids possibly reduce absorption of **ACE INHIBITORS**; antacids reduce absorption of **CAPTROPIL**, **ENALAPRIL** and **FOSINOPRIL**
 - **Analgesics:** antacids possibly reduce absorption of **ACEMETACIN**; alkaline urine due to some antacids increases excretion of **ASPIRIN**
 - **Anthelmintics:** sodium bicarbonate reduces excretion of **DIETHYLCARBAMAZINE**
 - **Antibacterials:** antacids reduce absorption of **CEFAZOLIN**, **ISONIAZID**, **NORFLOXACIN** and **RIFAMPICIN**; antacids reduce absorption of **AZITHROMYCIN** (give at least 2 hours before or 1 hour after antacids); antacids reduce absorption of **CIPROFLOXACIN** and **LEVOFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin and levofloxacin); antacids reduce absorption of **MOXIFLOXACIN** (give at least 6 hours apart); antacids reduce absorption of **OFLOXACIN** (give at least 2 hours apart); avoid concomitant use of antacids with **METHENAMINE**; oral magnesium salts (as magnesium trisilicate) reduce absorption of **NITROFURANTOIN**; antacids possibly reduce absorption of **TETRACYCLINES** (give at least 2 to 3 hours apart)
 - **Antiepileptics:** antacids reduce absorption of **FOSPHENYTOIN**, **GABAPENTIN** and **PHENYTOIN**
 - **Antifungals:** antacids reduce absorption of **ITRACONAZOLE** and **KETOCONAZOLE**
 - **Antihistamines:** antacids reduce absorption of **FEXOFENADINE**
 - **Antimalarials:** antacids reduce absorption of **CHLOROQUINE** and **HYDROXYCHLOROQUINE**; oral magnesium salts (as magnesium trisilicate) reduce absorption of **PROGUANIL**
 - **Antipsychotics:** antacids reduce absorption of **PHENOTHIAZINES** and **SULPIRIDE**
 - **Antivirals:** antacids reduce absorption of **ATAZANAVIR** (give at least 2 hours before or 1 hour after antacids); aluminium hydroxide reduces absorption of **DOLUTEGRAVIR**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after aluminium hydroxide; oral magnesium salts reduce absorption of **DOLUTEGRAVIR**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after oral magnesium salts; aluminium hydroxide reduces absorption of **ELVITEGRAVIR** (give at least 4 hours apart); oral magnesium salts reduce absorption of **ELVITEGRAVIR** (give at least 4 hours apart); separating administration from antacids by 4 hours advised by manufacturer of **LEDIPASVIR**; oral magnesium salts reduce plasma concentration of **RALTEGRAVIR**—manufacturer of raltegravir advises avoid concomitant use; aluminium hydroxide reduces plasma concentration of **RALTEGRAVIR**—manufacturer of raltegravir advises avoid concomitant use; manufacturer of rilpivirine advises give antacids 2 hours before or 4 hours after **RILPIVIRINE**; antacids reduce absorption of **TIPRANAVIR** (give at least 2 hours apart)
 - **Bile Acids:** antacids possibly reduce absorption of **BILE ACIDS**; aluminium hydroxide probably reduces effects of **CHOLIC ACID** (manufacturer of cholic acid advises give at least 5 hours apart)
 - **Bisphosphonates:** antacids reduce absorption of **BISPHOSPHONATES**
 - **Cardiac Glycosides:** antacids possibly reduce absorption of **DIGOXIN**
 - **Corticosteroids:** antacids reduce absorption of **DEFLAZACORT**
 - **Cytotoxics:** aluminium hydroxide and oral magnesium salts possibly reduce absorption of **ESTRAMUSTINE**—manufacturer of estramustine advises avoid concomitant administration; separating administration with antacids by about 12 hours advised by manufacturer of **BOSUTINIB**; antacids possibly reduce plasma concentration of **ERLOTINIB**—give antacids at least 4 hours before or 2 hours after erlotinib

Antacids (continued)

- **Deferasirox:** antacids containing aluminium possibly reduce absorption of **DEFERASIROX** (manufacturer of deferasirox advises avoid concomitant use)
- **Deferiprone:** antacids containing aluminium possibly reduce absorption of **DEFERIPRONE** (manufacturer of deferiprone advises avoid concomitant use)
- **Dipyridamole:** antacids possibly reduce absorption of **DIPYRIDAMOLE**
- **Eltrombopag:** antacids reduce absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- **Folates:** antacids possibly reduce absorption of **FOLIC ACID** (manufacturer of folic acid advises give at least 2 hours apart)
- **Iron Salts:** oral magnesium salts (as magnesium trisilicate) reduce absorption of oral **IRON SALTS**
- **Lipid-regulating Drugs:** antacids reduce absorption of **ROSUVASTATIN**
- **Lithium:** sodium bicarbonate increases excretion of **LITHIUM** (reduced plasma concentration)
- **Misoprostol:** antacids possibly reduce absorption of **MISOPROSTOL**
- **Mycophenolate:** antacids reduce absorption of **MYCOPHENOLATE**
- **Penicillamine:** antacids reduce absorption of **PENICILLAMINE**
- **Polystyrene Sulfonate Resins:** risk of intestinal obstruction when aluminium hydroxide given with **POLYSTYRENE SULFONATE RESINS**; risk of metabolic alkalosis when oral magnesium salts given with **POLYSTYRENE SULFONATE RESINS**
- **Riociguat:** antacids reduce absorption of **RIOCIQUAT** (give at least 2 hours before or 1 hour after riociguat)
- **Sympathomimetics:** aluminium hydroxide possibly increases absorption of **PSEUDOEPHEDRINE**
- **Thyroid Hormones:** antacids possibly reduce absorption of **LEVOTHYROXINE**
- **Ulcer-healing Drugs:** antacids possibly reduce absorption of **LANSOPRAZOLE**

Antazoline see Antihistamines**Anthelmintics** see individual drugs**Anthrax Vaccine** see Vaccines**Anti-D Immunoglobulins** see Immunoglobulins**Anti-arrhythmics** see Adenosine, Amiodarone, Disopyramide, Dronedarone, Flecainide, Lidocaine, and Propafenone**Antibacterials** see individual drugs**Antibiotics (cytotoxic)** see Bleomycin, Daunorubicin, Doxorubicin, Epirubicin, Idarubicin, Mitomycin, Mitoxantrone, and Pixantrone**Anticoagulants** see Apixaban, Argatroban, Bivalirudin, Coumarins, Dabigatran, Danaparoid, Edoxaban, Fondaparinux, Heparins, Phenindione, and Rivaroxaban**Antidepressants** see Agomelatine; Antidepressants, SSRI; Antidepressants, Tricyclic; Antidepressants, Tricyclic (related); MAOIs; Mirtazapine; Moclobemide; Reboxetine; St John's Wort; Venlafaxine; Vortioxetine**Antidepressants, Noradrenaline Re-uptake Inhibitors** see Reboxetine**Antidepressants, SSRI****NOTE** see also Dapoxetine

- **Alcohol:** sedative effects possibly increased when SSRIs given with **ALCOHOL**
- **Aminophylline:** fluvoxamine increases plasma concentration of **AMINOPHYLLINE** (concomitant use should usually be avoided, but where not possible halve aminophylline dose and monitor plasma-aminophylline concentration)
- **Anaesthetics, Local:** fluvoxamine inhibits metabolism of **ROPIVACAINE**—avoid prolonged administration of ropivacaine
- **Analgesics:** increased risk of bleeding when SSRIs given with **NSAIDs** or **ASPIRIN**; possible increased serotonergic effects when SSRIs given with **FENTANYL**; fluoxetine, fluvoxamine, paroxetine and sertraline possibly increase plasma concentration of **METHADONE**; increased risk of CNS toxicity when SSRIs given with **TRAMADOL**
- **Anti-arrhythmics:** manufacturer of citalopram and escitalopram advises avoid concomitant use with **AMIODARONE** (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with **DISOPYRAMIDE** (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid

Antidepressants, SSRI

- Anti-arrhythmics (continued)
 - concomitant use with ● **DRONEDARONE** (risk of ventricular arrhythmias); fluoxetine increases plasma concentration of **FLECAINIDE**; fluoxetine and paroxetine possibly inhibit metabolism of **PROPAFENONE**
- Antibacterials: manufacturer of citalopram and escitalopram advises avoid concomitant use with **intravenous**
 - **ERYTHROMYCIN** (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **MOXIFLOXACIN** (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when citalopram given with ● **TELITHROMYCIN**
- Anticoagulants: SSRIs possibly enhance anticoagulant effect of
 - **COUMARINS**; possible increased risk of bleeding when SSRIs given with ● **DABIGATRAN**
- Antidepressants: avoidance of fluvoxamine advised by manufacturer of ● **REBOXETINE**; possible increased serotonergic effects when SSRIs given with **DULOXETINE**; fluvoxamine inhibits metabolism of ● **DULOXETINE**—avoid concomitant use; citalopram, escitalopram, fluvoxamine, paroxetine or sertraline should not be started until 2 weeks after stopping ● **MAOIs**, also MAOIs should not be started until at least 1 week after stopping citalopram, escitalopram, fluvoxamine, paroxetine or sertraline; fluoxetine should not be started until 2 weeks after stopping ● **MAOIs**, also MAOIs should not be started until at least 5 weeks after stopping fluoxetine; CNS effects of SSRIs increased by ● **MAOIs** (risk of serious toxicity); increased risk of CNS toxicity when escitalopram given with ● **MOCCLOBEMIDE**, preferably avoid concomitant use; after stopping citalopram, fluvoxamine, paroxetine or sertraline do not start ● **MOCCLOBEMIDE** for at least 1 week; after stopping fluoxetine do not start ● **MOCCLOBEMIDE** for 5 weeks; increased serotonergic effects when SSRIs given with ● **ST JOHN'S WORT**—avoid concomitant use; fluvoxamine inhibits metabolism of ● **AGOMELATINE** (increased plasma concentration); possible increased serotonergic effects when fluoxetine or fluvoxamine given with **MIRTAZAPINE**; SSRIs increase plasma concentration of some ● **TRICYCLICS**; manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **TRICYCLICS** (risk of ventricular arrhythmias); possible increased risk of convulsions when SSRIs given with ● **VORTIOXETINE**; fluoxetine and paroxetine possibly increase plasma concentration of **VORTIOXETINE** (consider reducing dose of vortioxetine)
- Antiepileptics: SSRIs antagonise anticonvulsant effect of
 - **ANTIEPILEPTICS** (convulsive threshold lowered); fluoxetine and fluvoxamine increase plasma concentration of ● **CARBAMAZEPINE**; fluoxetine and fluvoxamine increase plasma concentration of ● **FOSPHENYTOIN**; plasma concentration of sertraline possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma concentration of paroxetine reduced by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**; fluoxetine and fluvoxamine increase plasma concentration of ● **PHENYTOIN**
- Antifungals: plasma concentration of paroxetine possibly increased by **TERBINAFINE**
- Antihistamines: manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **MIZOLASTINE** (risk of ventricular arrhythmias); antidepressant effect of SSRIs possibly antagonised by **CYPROHEPTADINE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with ● **ARTEMETHER WITH LUMEFANTRINE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with ● **ARTENIMOL WITH PIPERAQUINE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when citalopram and escitalopram given with ● **CHLOROQUINE**; possible increased risk of ventricular arrhythmias when citalopram or escitalopram given with ● **QUININE**—avoid concomitant use

Antidepressants, SSRI (continued)

- Antimuscarinics: paroxetine increases plasma concentration of **DARIFENACIN** and **PROCYCLIDINE**
- Antipsychotics: avoidance of fluoxetine, fluvoxamine and sertraline advised by manufacturer of ● **DROPERIDOL** (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **HALOPERIDOL** (risk of ventricular arrhythmias); fluoxetine increases plasma concentration of ● **CLOZAPINE**, ● **HALOPERIDOL** and **RISPERIDONE**; fluvoxamine possibly increases plasma concentration of **ASENAPINE** and **HALOPERIDOL**; paroxetine inhibits metabolism of **PERPHENAZINE** (reduce dose of perphenazine); fluoxetine and paroxetine possibly increase plasma concentration of ● **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of paroxetine possibly increased by **ASENAPINE**; fluvoxamine, paroxetine and sertraline increase plasma concentration of ● **CLOZAPINE**; citalopram possibly increases plasma concentration of **CLOZAPINE** (increased risk of toxicity); fluvoxamine increases plasma concentration of **OLANZAPINE**; manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **PHENOTHIAZINES** (risk of ventricular arrhythmias); manufacturer of citalopram and escitalopram advises avoid concomitant use with ● **PIMOZIDE** (risk of ventricular arrhythmias); SSRIs possibly increase plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); paroxetine possibly increases plasma concentration of **RISPERIDONE** (increased risk of toxicity)
- Antivirals: plasma concentration of paroxetine and sertraline possibly reduced by **DARUNAVIR**; plasma concentration of SSRIs possibly increased by ● **RITONAVIR**; plasma concentration of paroxetine possibly reduced by **RITONAVIR**
- Anxiolytics and Hypnotics: fluoxetine increases plasma concentration of **ALPRAZOLAM**; fluvoxamine increases plasma concentration of some **BENZODIAZEPINES**; fluvoxamine increases plasma concentration of ● **MELATONIN**—avoid concomitant use; sedative effects possibly increased when sertraline given with **ZOLPIDEM**
- Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**; fluoxetine and paroxetine possibly inhibit metabolism of **ATOMOXETINE**
- Beta-blockers: citalopram and escitalopram increase plasma concentration of **METOPROLOL**; paroxetine possibly increases the plasma concentration of ● **METOPROLOL**—increased risk of AV block (manufacturer of paroxetine advises avoid concomitant use in cardiac insufficiency); fluvoxamine increases plasma concentration of **PROPRANOLOL**; increased risk of ventricular arrhythmias when citalopram given with ● **SOTALOL**—avoid concomitant use; manufacturer of escitalopram advises avoid concomitant use with ● **SOTALOL** (risk of ventricular arrhythmias)
- Bupropion: plasma concentration of citalopram possibly increased by **BUPROPION**
- Calcium-channel Blockers: fluoxetine possibly inhibits metabolism of **NIFEDIPINE** (increased plasma concentration)
- Clopidogrel: fluoxetine and fluvoxamine possibly reduce antiplatelet effect of ● **CLOPIDOGREL**
- Dapoxetine: possible increased risk of serotonergic effects when SSRIs given with ● **DAPOXETINE** (manufacturer of dapoxetine advises SSRIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SSRIs)
- Dopaminergics: increased risk of CNS toxicity when SSRIs given with ● **RASAGILINE**; fluvoxamine should not be started until 2 weeks after stopping ● **RASAGILINE**; fluoxetine should not be started until 2 weeks after stopping ● **RASAGILINE**, also rasagiline should not be started until at least 5 weeks after stopping fluoxetine; avoidance of citalopram and escitalopram advised by manufacturer of **SELEGILINE**; increased risk of hypertension and CNS excitation when fluvoxamine or sertraline given with ● **SELEGILINE** (selegiline should not be started until 1 week after stopping fluvoxamine or sertraline, avoid fluvoxamine or sertraline for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when paroxetine given with ● **SELEGILINE** (selegiline

Antidepressants, SSRI● **Dopaminergics (continued)**

should not be started until 2 weeks after stopping paroxetine, avoid paroxetine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when fluoxetine given with ● **SELEGILINE** (selegiline should not be started until 5 weeks after stopping fluoxetine, avoid fluoxetine for 2 weeks after stopping selegiline)

▶ **Grapefruit Juice**: plasma concentration of sertraline possibly increased by **GRAPEFRUIT JUICE**

● **Hormone Antagonists**: fluoxetine and paroxetine possibly inhibit metabolism of ● **TAMOXIFEN** to active metabolite (avoid concomitant use)

● **5HT₂-receptor Agonists**: increased risk of CNS toxicity when citalopram given with ● **5HT₂ AGONISTS** (manufacturer of citalopram advises avoid concomitant use); fluvoxamine inhibits the metabolism of **FROVATRIPTAN**; possible increased serotonergic effects when SSRIs given with **NARATRIPTAN**; CNS toxicity reported when sertraline given with **SUMATRIPTAN**; increased risk of CNS toxicity when citalopram, escitalopram, fluoxetine, fluvoxamine or paroxetine given with ● **SUMATRIPTAN**; fluvoxamine possibly inhibits metabolism of **ZOLMITRIPTAN** (reduce dose of zolmitriptan)

▶ **5HT₂-receptor Antagonists**: possible increased serotonergic effects when SSRIs given with **5HT₂ ANTAGONISTS**

▶ **Lipid-regulating Drugs**: separating administration from fluoxetine and fluvoxamine by 12 hours advised by manufacturer of **LOMITAPIDE**

● **Lithium**: Increased risk of CNS effects when SSRIs given with ● **LITHIUM** (lithium toxicity reported)

● **Methylthioninium**: risk of CNS toxicity when SSRIs given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

▶ **Metoclopramide**: CNS toxicity reported when SSRIs given with **METOCLOPRAMIDE**

● **Muscle Relaxants**: fluvoxamine increases plasma concentration of ● **TIZANIDINE** (increased risk of toxicity)—avoid concomitant use

▶ **Parasympathomimetics**: paroxetine increases plasma concentration of **GALANTAMINE**

● **Pentamidine Isetionate**: manufacturer of citalopram and escitalopram advises avoid concomitant use with

● **PENTAMIDINE ISETIONATE** (risk of ventricular arrhythmias)

● **Pirfenidone**: fluvoxamine increases plasma concentration of ● **PIRFENIDONE**—manufacturer of pirfenidone advises avoid concomitant use

● **Pomalidomide**: fluvoxamine increases plasma concentration of ● **POMALIDOMIDE**

▶ **Ranolazine**: paroxetine increases plasma concentration of **RANOLAZINE**

▶ **Roflumilast**: fluvoxamine inhibits the metabolism of **ROFLUMILAST**

▶ **Sympathomimetics**: metabolism of SSRIs possibly inhibited by **METHYLPHENIDATE**

● **Theophylline**: fluvoxamine increases plasma concentration of ● **THEOPHYLLINE** (concomitant use should usually be avoided, but where not possible halve theophylline dose and monitor plasma-theophylline concentration)

▶ **Ticagrelor**: possible increased risk of bleeding when citalopram, paroxetine or sertraline given with **TICAGRELOR**

▶ **Ulcer-healing Drugs**: plasma concentration of citalopram, escitalopram and sertraline increased by **CIMETIDINE**; fluvoxamine possibly increases plasma concentration of **LANSOPRAZOLE**; plasma concentration of escitalopram increased by **OMEPRAZOLE**

Antidepressants, SSRI (related) see Duloxetine and Venlafaxine

Antidepressants, Tricyclic

● **Adrenergic Neurone Blockers**: tricyclics antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**

● **Alcohol**: increased sedative effect when tricyclics given with ● **ALCOHOL**

● **Alpha₂-adrenoceptor Stimulants**: avoidance of tricyclics advised by manufacturer of **APRACLOINIDINE** and **BRIMONIDINE**

▶ **Anaesthetics, General**: increased risk of arrhythmias and hypotension when tricyclics given with **GENERAL ANAESTHETICS**

Antidepressants, Tricyclic (continued)

● **Analgesics**: increased risk of CNS toxicity when tricyclics given with ● **TRAMADOL**; side-effects possibly increased when tricyclics given with **NEFOPAM**; sedative effects possibly increased when tricyclics given with **OPIOID ANALGESICS**

● **Anti-arrhythmics**: increased risk of ventricular arrhythmias when tricyclics given with ● **AMIODARONE**—avoid concomitant use; increased risk of ventricular arrhythmias when tricyclics given with ● **DISOPYRAMIDE** or ● **FLECAINIDE**; avoidance of tricyclics advised by manufacturer of ● **DRONEDARONE** (risk of ventricular arrhythmias); increased risk of arrhythmias when tricyclics given with ● **PROPAFENONE**

● **Antibacterials**: increased risk of ventricular arrhythmias when tricyclics given with ● **MOXIFLOXACIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when tricyclics that prolong the QT interval given with

● **DELAMANID**; possible increased risk of ventricular

arrhythmias when tricyclics given with ● **TELITHROMYCIN**

● **Anticoagulants**: tricyclics may enhance or reduce anticoagulant effect of ● **COUMARINS**

● **Antidepressants**: avoidance of tricyclics advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); possible increased serotonergic effects when amitriptyline or clomipramine given with **DULOXETINE**; increased risk of hypertension and CNS

excitation when tricyclics given with ● **MAOIS**, tricyclics should not be started until 2 weeks after stopping MAOIs (3 weeks if starting clomipramine or imipramine), also MAOIs should not be started for at least 1–2 weeks after stopping tricyclics (3 weeks in the case of clomipramine or imipramine); after stopping tricyclics do not start ● **MOCLOBEMIDE** for at least 1 week; plasma concentration of some tricyclics increased by ● **SSRIs**; plasma concentration of amitriptyline reduced by **ST JOHN'S WORT**; possible increased risk of convulsions when tricyclics given with ● **VORTIOXETINE**

● **Antiepileptics**: tricyclics antagonise anticonvulsant effect of ● **ANTIEPILEPTICS** (convulsive threshold lowered); metabolism of tricyclics accelerated by ● **CARBAMAZEPINE** (reduced plasma concentration and reduced effect); plasma concentration of tricyclics possibly reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**; metabolism of tricyclics possibly accelerated by ● **PHENOBARBITAL** and ● **PRIMIDONE** (reduced plasma concentration)

▶ **Antifungals**: plasma concentration of amitriptyline and nortriptyline possibly increased by **FLUCONAZOLE**; plasma concentration of tricyclics possibly increased by **TERBINAFINE**

▶ **Antihistamines**: increased antimuscarinic and sedative effects when tricyclics given with **ANTIHISTAMINES**

● **Antimalarials**: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and

● **ARTENIMOL WITH PIPERAQUINE**

▶ **Antimuscarinics**: increased risk of antimuscarinic side-effects when tricyclics given with **ANTIMUSCARINICS**

● **Antipsychotics**: avoidance of tricyclics advised by manufacturer of ● **DROPERIDOL**, ● **FLUPHENAZINE**, ● **HALOPERIDOL**, ● **SULPIRIDE** and ● **ZUCLOPENTHIXOL** (risk of ventricular arrhythmias); possible increased antimuscarinic side-effects when tricyclics given with **CLOZAPINE**; increased risk of antimuscarinic side-effects when tricyclics given with **PHENOTHIAZINES**; possible increased risk of ventricular arrhythmias when tricyclics given with ● **RISPERIDONE**

● **Antivirals**: plasma concentration of tricyclics possibly increased by ● **RITONAVIR**; increased risk of ventricular arrhythmias when tricyclics given with ● **SAQUINAVIR**—avoid concomitant use

▶ **Anxiolytics and Hypnotics**: increased sedative effect when tricyclics given with **ANXIOLYTICS AND HYPNOTICS**

● **Atomoxetine**: increased risk of ventricular arrhythmias when tricyclics given with ● **ATOMOXETINE**; possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**

● **Beta-blockers**: plasma concentration of imipramine increased by **LABETALOL** and **PROPRANOLOL**; increased risk of ventricular arrhythmias when tricyclics given with ● **SOTALOL**

▶ **Bupropion**: plasma concentration of tricyclics possibly increased by **BUPROPION** (possible increased risk of convulsions)

Antidepressants, Tricyclic (continued)

- Calcium-channel Blockers: plasma concentration of imipramine increased by **DILTIAZEM** and **VERAPAMIL**; plasma concentration of tricyclics possibly increased by **DILTIAZEM** and **VERAPAMIL**
- Cannabis Extract: possible increased risk of hypertension and tachycardia when tricyclics given with **CANNABIS EXTRACT**
- Clonidine: tricyclics antagonise hypotensive effect of
 - **CLONIDINE**, also increased risk of hypertension on clonidine withdrawal
- Cytotoxics: increased risk of ventricular arrhythmias when amitriptyline or clomipramine given with ● **ARSENIC TRIOXIDE**
- Dapoxetine: possible increased risk of serotonergic effects when tricyclics given with ● **DAPOXETINE** (manufacturer of dapoxetine advises tricyclics should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tricyclics)
- Disulfiram: metabolism of tricyclics inhibited by **DISULFIRAM** (increased plasma concentration); concomitant amitriptyline reported to increase **DISULFIRAM** reaction with alcohol
- Diuretics: increased risk of postural hypotension when tricyclics given with **DIURETICS**
- Dopaminergics: caution with tricyclics advised by manufacturer of **ENTACAPONE**; increased risk of CNS toxicity when tricyclics given with ● **RASAGILINE**; CNS toxicity reported when tricyclics given with ● **SELEGILINE**
- Histamine: tricyclics theoretically antagonise effects of **HISTAMINE**—manufacturer of histamine advises avoid concomitant use
- Lithium: risk of toxicity when tricyclics given with **LITHIUM**
- Methylthionium: risk of CNS toxicity when clomipramine given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthionium and observe patient for up to 4 hours after administration)
- Moxonidine: tricyclics possibly antagonise hypotensive effect of **MOXONIDINE** (manufacturer of moxonidine advises avoid concomitant use)
- Muscle Relaxants: tricyclics enhance muscle relaxant effect of **BACLOFEN**
- Nicorandil: tricyclics possibly enhance hypotensive effect of **NICORANDIL**
- Nitrates: tricyclics reduce effects of sublingual tablets of **NITRATES** (failure to dissolve under tongue owing to dry mouth)
- Oestrogens: antidepressant effect of tricyclics antagonised by **OESTROGENS** (but side-effects of tricyclics possibly increased due to increased plasma concentration)
- Pentamidine Isetionate: increased risk of ventricular arrhythmias when tricyclics given with ● **PENTAMIDINE ISETIONATE**
- Sodium Oxybate: increased risk of side-effects when tricyclics given with **SODIUM OXYBATE**
- Sympathomimetics: increased risk of hypertension and arrhythmias when tricyclics given with ● **ADRENALINE (EPINEPHRINE)** (but local anaesthetics with adrenaline appear to be safe); metabolism of tricyclics possibly inhibited by **METHYLPHENIDATE**; avoidance of tricyclics advised by manufacturer of **MIDODRINE**; increased risk of hypertension and arrhythmias when tricyclics given with ● **NORADRENALINE (NOREPINEPHRINE)** or **PHENYLEPHRINE**
- Thyroid Hormones: effects of tricyclics possibly enhanced by **THYROID HORMONES**; effects of amitriptyline and imipramine enhanced by **THYROID HORMONES**
- Ulcer-healing Drugs: plasma concentration of tricyclics possibly increased by **CIMETIDINE**; metabolism of amitriptyline, doxepin, imipramine and nortriptyline inhibited by **CIMETIDINE** (increased plasma concentration)

Antidepressants, Tricyclic (related)

- Alcohol: increased sedative effect when tricyclic-related antidepressants given with ● **ALCOHOL**
- Alpha₂-adrenoceptor Stimulants: avoidance of tricyclic-related antidepressants advised by manufacturer of **APRACLONIDINE** and **BRIMONIDINE**
- Antibacterials: plasma concentration of trazodone possibly increased by **CLARITHROMYCIN**

Antidepressants, Tricyclic (related) (continued)

- Anticoagulants: trazodone may enhance or reduce anticoagulant effect of **WARFARIN**
- Antidepressants: tricyclic-related antidepressants should not be started until 2 weeks after stopping ● **MAOIS**, also MAOIs should not be started until at least 1–2 weeks after stopping tricyclic-related antidepressants; after stopping tricyclic-related antidepressants do not start ● **MOCLOBEMIDE** for at least 1 week
- Antiepileptics: tricyclic-related antidepressants possibly antagonise anticonvulsant effect of ● **ANTIEPILEPTICS** (convulsive threshold lowered); plasma concentration of mianserin and trazodone reduced by ● **CARBAMAZEPINE**; plasma concentration of mianserin reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**; metabolism of mianserin accelerated by ● **PHENOBARBITAL** and ● **PRIMIDONE** (reduced plasma concentration)
- Antihistamines: possible increased antimuscarinic and sedative effects when tricyclic-related antidepressants given with **ANTIHISTAMINES**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- Antimuscarinics: possible increased antimuscarinic side-effects when tricyclic-related antidepressants given with **ANTIMUSCARINICS**
- Antivirals: plasma concentration of trazodone increased by ● **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when trazodone given with ● **SAQUINAVIR**—avoid concomitant use; plasma concentration of trazodone possibly increased by **TELAPREVIR**
- Anxiolytics and Hypnotics: increased sedative effect when tricyclic-related antidepressants given with **ANXIOLYTICS AND HYPNOTICS**
- Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Diazoxide: enhanced hypotensive effect when tricyclic-related antidepressants given with **DIAZOXIDE**
- Nitrates: tricyclic-related antidepressants possibly reduce effects of sublingual tablets of **NITRATES** (failure to dissolve under tongue owing to dry mouth)
- Vasodilator Antihypertensives: enhanced hypotensive effect when tricyclic-related antidepressants given with **HYDRALAZINE** or **SODIUM NITROPRUSSIDE**

Antidiabetics

NOTE Other drugs administered orally may need to be taken at least 1 hour before or 4 hours after lixisenatide injection, or taken with a meal when lixisenatide is not administered, to minimise possible interference with absorption

NOTE Other drugs administered orally may need to be taken at least 1 hour before or 4 hours after exenatide injection, or taken with a meal when exenatide is not administered, to minimise possible interference with absorption

ACE Inhibitors: hypoglycaemic effect of insulin, metformin and sulfonylureas possibly enhanced by **ACE INHIBITORS**

Alcohol: hypoglycaemic effect of antidiabetics enhanced by **ALCOHOL**; increased risk of lactic acidosis when metformin given with **ALCOHOL**

Anabolic Steroids: hypoglycaemic effect of antidiabetics possibly enhanced by **ANABOLIC STEROIDS**

Analgesics: effects of sulfonylureas possibly enhanced by ● **NSAIDS**; lixisenatide possibly reduces the absorption of **PARACETAMOL** when given 1 to 4 hours before paracetamol

Anti-arrhythmics: hypoglycaemic effect of gliclazide, insulin and metformin possibly enhanced by **DISOPYRAMIDE**

Antibacterials: hypoglycaemic effect of acarbose possibly enhanced by **NEOMYCIN**, also severity of gastro-intestinal effects increased; effects of repaglinide enhanced by **CLARITHROMYCIN**; effects of glibenclamide possibly enhanced by **NORFLOXACIN**; plasma concentration of canagliflozin and nateglinide reduced by ● **RIFAMPICIN**; effects of linagliptin possibly reduced by **RIFAMPICIN**; hypoglycaemic effect of repaglinide possibly antagonised by **RIFAMPICIN**; effects of sulfonylureas enhanced by ● **CHLORAMPHENICOL**; metabolism of sulfonylureas possibly accelerated by ● **RIFAMYCINS** (reduced effect); metabolism of tolbutamide accelerated by

Antidiabetics

- **Antibacterials** (continued)
 - **RIFAMYCINS** (reduced effect); effects of sulfonylureas rarely enhanced by **SULFONAMIDES** and **TRIMETHOPRIM**; hypoglycaemic effect of sulfonylureas possibly enhanced by **TETRACYCLINES**; hypoglycaemic effect of repaglinide possibly enhanced by **TRIMETHOPRIM**—manufacturer advises avoid concomitant use
- **Anticoagulants**: exenatide possibly enhances anticoagulant effect of **WARFARIN**; hypoglycaemic effect of sulfonylureas possibly enhanced by • **COUMARINS**, also possible changes to anticoagulant effect
 - ▶ **Antidepressants**: hypoglycaemic effect of antidepressants possibly enhanced by **MAOIs**; hypoglycaemic effect of insulin, metformin and sulfonylureas enhanced by **MAOIs**
 - ▶ **Antidiabetics**: manufacturer of dapagliflozin advises avoid concomitant use with **PIOGLITAZONE**; plasma concentration of dulaglutide increased by **SITAGLIPTIN**
 - ▶ **Antiepileptics**: tolbutamide transiently increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN** (possibility of toxicity); plasma concentration of glibenclamide possibly reduced by **TOPIRAMATE**; plasma concentration of metformin possibly increased by **TOPIRAMATE**
- **Antifungals**: plasma concentration of pioglitazone, saxagliptin and tolbutamide increased by **KETOCONAZOLE**; plasma concentration of sulfonylureas increased by • **FLUCONAZOLE** and • **MICONAZOLE**; hypoglycaemic effect of glimepiride and glipizide enhanced by • **MICONAZOLE**—avoid concomitant use; hypoglycaemic effect of nateglinide possibly enhanced by **FLUCONAZOLE**; hypoglycaemic effect of repaglinide possibly enhanced by **ITRACONAZOLE**; hypoglycaemic effect of glipizide possibly enhanced by **POSACONAZOLE**; plasma concentration of sulfonylureas possibly increased by **VORICONAZOLE**
 - ▶ **Antihistamines**: thrombocyte count depressed when metformin given with **KETOTIFEN** (manufacturer of ketotifen advises avoid concomitant use)
 - ▶ **Antipsychotics**: hypoglycaemic effect of sulfonylureas possibly antagonised by **PHENOTHIAZINES**
 - ▶ **Antivirals**: plasma concentration of metformin increased by **DOLUTEGRAVIR**—consider reducing dose of metformin; plasma concentration of tolbutamide possibly increased by **RITONAVIR**; plasma concentration of metformin increased by **TELAPREVIR** (consider reducing dose of metformin)
 - ▶ **Appetisers**: plasma concentration of tolbutamide reduced by **APREPITANT**
 - ▶ **Beta-blockers**: warning signs of hypoglycaemia (such as tremor) with antidiabetics may be masked when given with **BETA-BLOCKERS**; hypoglycaemic effect of insulin enhanced by **BETA-BLOCKERS**
 - **Bosentan**: increased risk of hepatotoxicity when glibenclamide given with • **BOSENTAN**—avoid concomitant use
 - ▶ **Calcium-channel Blockers**: glucose tolerance occasionally impaired when insulin given with **NIFEDIPINE**
 - ▶ **Cardiac Glycosides**: canagliflozin and sitagliptin increase plasma concentration of **DIGOXIN**; acarbose possibly reduces plasma concentration of **DIGOXIN**
 - ▶ **Ciclosporin**: hypoglycaemic effect of repaglinide possibly enhanced by **CICLOSPORIN**
 - ▶ **Corticosteroids**: hypoglycaemic effect of antidiabetics antagonised by **CORTICOSTEROIDS**
 - **Cytotoxics**: avoidance of repaglinide advised by manufacturer of • **LAPATINIB**; plasma concentration of metformin possibly increased by **VANDETANIB** (consider reducing dose of metformin)
 - ▶ **Deferasirox**: plasma concentration of repaglinide increased by **DEFERASIROX**
 - ▶ **Diazoxide**: hypoglycaemic effect of antidiabetics antagonised by **DIAZOXIDE**
 - ▶ **Diuretics**: canagliflozin possibly enhances diuretic effect of **DIURETICS**; hypoglycaemic effect of antidiabetics antagonised by **LOOP DIURETICS** and **THIAZIDES AND RELATED DIURETICS**; dapagliflozin possibly enhances diuretic effect of **LOOP DIURETICS** and **THIAZIDES AND RELATED DIURETICS**; manufacturer of canagliflozin advises avoid concomitant use with **LOOP DIURETICS**

Antidiabetics (continued)

- ▶ **Fosaprepitant**: plasma concentration of tolbutamide reduced by **FOSAPREPITANT**
 - ▶ **Hormone Antagonists**: requirements for antidiabetics possibly reduced by **LANREOTIDE**, **OCTREOTIDE** and **PASIREOTIDE**
 - ▶ **Leflunomide**: hypoglycaemic effect of tolbutamide possibly enhanced by **LEFLUNOMIDE**
 - **Lipid-regulating Drugs**: absorption of glibenclamide and glipizide reduced by **COLESEVELAM**; absorption of glimepiride reduced by **COLESEVELAM**—manufacturer of glimepiride advises give at least 4 hours before colessevelam; hypoglycaemic effect of acarbose possibly enhanced by **COLESTYRAMINE**; hypoglycaemic effect of nateglinide possibly enhanced by **GEMFIBROZIL**; increased risk of severe hypoglycaemia when repaglinide given with • **GEMFIBROZIL**—avoid concomitant use; plasma concentration of glibenclamide possibly increased by **FLUVASTATIN**; manufacturer of canagliflozin advises give at least 1 hour before or 4–6 hours after **BILE ACID SEQUESTRANTS**; may be improved glucose tolerance and an additive effect when insulin or sulfonylureas given with **FIBRATES**; separating administration from linagliptin by 12 hours advised by manufacturer of **LOMITAPIDE**
 - **Oestrogens**: hypoglycaemic effect of antidiabetics antagonised by **OESTROGENS**
 - ▶ **Orlistat**: avoidance of acarbose advised by manufacturer of **ORLISTAT**
 - ▶ **Pancreatin**: hypoglycaemic effect of acarbose antagonised by **PANCREATIN**
 - ▶ **Progestogens**: hypoglycaemic effect of antidiabetics antagonised by **PROGESTOGENS**
 - **Sulfinpyrazone**: effects of sulfonylureas enhanced by • **SULFINPYRAZONE**
 - ▶ **Teriflunomide**: plasma concentration of repaglinide increased by **TERIFLUNOMIDE**
 - ▶ **Testosterone**: hypoglycaemic effect of antidiabetics possibly enhanced by **TESTOSTERONE**
 - ▶ **Ulcer-healing Drugs**: excretion of metformin reduced by **CIMETIDINE** (increased plasma concentration); hypoglycaemic effect of sulfonylureas enhanced by **CIMETIDINE**
- Antiepileptics** see Carbamazepine, Eslicarbazepine, Ethosuximide, Fosphenytoin, Gabapentin, Lacosamide, Lamotrigine, Levetiracetam, Oxcarbazepine, Perampanel, Phenobarbital, Phenytoin, Pregabalin, Primidone, Retigabine, Rufinamide, Sodium valproate, Stiripentol, Tiagabine, Topiramate, Valproic acid, Vigabatrin, and Zonisamide
- Antifungals** see Amphotericin; Antifungals, Imidazole; Antifungals, Triazole; Caspofungin; Flucytosine; Griseofulvin; Miconazole; Terbinafine
- Antifungals, Imidazole**
- ▶ **Alcohol**: possibility of disulfiram-like reaction when ketoconazole given with **ALCOHOL**
 - ▶ **Aliskiren**: ketoconazole increases plasma concentration of **ALISKIREN**
 - **Alpha-blockers**: ketoconazole possibly increases plasma concentration of **ALFUZOSIN**; ketoconazole increases plasma concentration of • **TAMSULOSIN**
 - **Aminophylline**: ketoconazole possibly increases plasma concentration of • **AMINOPHYLLINE**
 - **Analgesics**: ketoconazole inhibits metabolism of • **BUPRENORPHINE** (reduce dose of buprenorphine); possible increased risk of ventricular arrhythmias when ketoconazole given with • **METHADONE**—manufacturer of ketoconazole advises avoid concomitant use; ketoconazole increases plasma concentration of **OXYCODONE**; manufacturer of ketoconazole advises avoid concomitant use with **PARACETAMOL**
 - ▶ **Antacids**: absorption of ketoconazole reduced by **ANTACIDS**
 - ▶ **Anthelmintics**: ketoconazole increases plasma concentration of **PRAZIQUANTEL**
 - **Anti-arrhythmics**: increased risk of ventricular arrhythmias when ketoconazole given with • **DISOPYRAMIDE**—avoid concomitant use; ketoconazole increases plasma concentration of • **DRONEDARONE**—avoid concomitant use
 - **Antibacterials**: manufacturer of ketoconazole advises avoid concomitant • **CLARITHROMYCIN** in severe renal impairment;

Antifungals, Imidazole

- **Antibacterials** (continued)
 - metabolism of ketoconazole accelerated by ● **RIFAMPICIN** (reduced plasma concentration), also plasma concentration of rifampicin may be reduced by ketoconazole; ketoconazole increases plasma concentration of ● **BEDAQUILINE**—avoid concomitant use if ketoconazole given for more than 14 days; avoidance of ketoconazole advised by manufacturer of ● **FIDAXOMICIN**; plasma concentration of ketoconazole possibly reduced by ● **ISONIAZID**; ketoconazole increases the plasma concentration of ● **TELITHROMYCIN**—avoid in severe renal and hepatic impairment
- **Anticoagulants**: ketoconazole increases plasma concentration of ● **APIXABAN**—manufacturer of apixaban advises avoid concomitant use; miconazole (including oral gel and possibly vaginal and topical formulations) greatly enhances the anticoagulant effect of ● **COUMARINS**—avoid concomitant use if possible; ketoconazole enhances anticoagulant effect of ● **COUMARINS**; ketoconazole increases plasma concentration of ● **DABIGATRAN** and ● **RIVAROXABAN**—avoid concomitant use; ketoconazole increases plasma concentration of ● **EDOXABAN** (reduce dose of edoxaban—see under Edoxaban, in BNF)
- **Antidepressants**: avoidance of imidazoles advised by manufacturer of ● **REBOXETINE**; ketoconazole increases plasma concentration of ● **MIRTAZAPINE**
- **Antidiabetics**: miconazole enhances hypoglycaemic effect of ● **GLICLAZIDE** and ● **GLIPIZIDE**—avoid concomitant use; ketoconazole increases plasma concentration of ● **PIOGLITAZONE**, ● **SAXAGLIPITIN** and ● **TOLBUTAMIDE**; miconazole increases plasma concentration of ● **SULFONYLUREAS**
- **Antiepileptics**: miconazole possibly increases plasma concentration of ● **CARBAMAZEPINE**; plasma concentration of ketoconazole possibly reduced by ● **CARBAMAZEPINE**, also plasma concentration of carbamazepine possibly increased; plasma concentration of ketoconazole reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**; miconazole enhances anticonvulsant effect of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (plasma concentration of fosphenytoin and phenytoin increased); ketoconazole increases plasma concentration of ● **PERAMPANEL**
- **Antifungals**: imidazoles possibly antagonise effects of ● **AMPHOTERICIN**
- **Antihistamines**: imidazoles possibly inhibit metabolism of ● **MIZOLASTINE** (avoid concomitant use)
- **Antimalarials**: avoidance of imidazoles advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of imidazoles advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); ketoconazole increases plasma concentration of ● **MEFLOQUINE**
- **Antimuscarinics**: absorption of ketoconazole reduced by ● **ANTIMUSCARINICS**; ketoconazole increases plasma concentration of ● **DARIFENACIN**—avoid concomitant use; manufacturer of fesoterodine advises dose reduction when ketoconazole given with ● **FESOTERODINE**—consult fesoterodine product literature; ketoconazole increases plasma concentration of ● **OXYBUTYNYN**; ketoconazole increases plasma concentration of ● **SOLIFENACIN**—see under Solifenacin, in BNF; avoidance of ketoconazole advised by manufacturer of ● **TOLTERODINE**
- **Antipsychotics**: ketoconazole inhibits metabolism of ● **ARIPRAZOLE** (reduce dose of aripiprazole); ketoconazole increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; increased risk of ventricular arrhythmias when imidazoles given with ● **PIMOZIDE**—avoid concomitant use; imidazoles possibly increase plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- **Antivirals**: ketoconazole increases plasma concentration of ● **BOCEPREVIR**; ketoconazole increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); plasma concentration of both drugs increased when ketoconazole given with ● **DARUNAVIR**; plasma concentration of both drugs increased when ketoconazole given with ● **DASABUVIR** and ● **PARITAPREVIR**—avoid concomitant use; plasma concentration of ketoconazole reduced by ● **EFAVIRENZ**; plasma concentration of

Antifungals, Imidazole

- **Antivirals** (continued)
 - ketoconazole increased by ● **FOSAMPRENAVIR** (also plasma concentration of fosamprenavir possibly increased); ketoconazole increases plasma concentration of ● **INDINAVIR** and ● **MARAVIROC** (consider reducing dose of indinavir and maraviroc); plasma concentration of ketoconazole reduced by ● **NEVIRAPINE**—avoid concomitant use; avoidance of ketoconazole advised by manufacturer of ● **OMBITASVIR** and ● **SIMEPREVIR**; plasma concentration of ketoconazole increased by ● **RITONAVIR** (reduce dose of ketoconazole); imidazoles possibly increase plasma concentration of ● **SAQUINAVIR**; ketoconazole increases plasma concentration of ● **SAQUINAVIR**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of both drugs possibly increased when ketoconazole given with ● **TELAPREVIR** (increased risk of ventricular arrhythmias)—reduce dose of ketoconazole
- **Anxiolytics and Hypnotics**: ketoconazole increases plasma concentration of ● **ALPRAZOLAM**—manufacturer of ketoconazole advises avoid concomitant use; ketoconazole increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of oral midazolam); ketoconazole increases plasma concentration of ● **ZOLPIDEM**
- **Aprepitant**: ketoconazole increases plasma concentration of ● **APREPITANT**
- **Avanafil**: ketoconazole increases plasma concentration of ● **AVANAFIL**—avoid concomitant use
- **Beta-blockers**: ketoconazole possibly increases plasma concentration of ● **NADOLOL**
- **Bosentan**: ketoconazole increases plasma concentration of ● **BOSENTAN**
- **Calcium-channel Blockers**: ketoconazole inhibits metabolism of ● **FELODIPINE** (increased plasma concentration)—manufacturer of ketoconazole advises avoid concomitant use; avoidance of ketoconazole advised by manufacturer of ● **LERCANIDIPINE**; ketoconazole possibly inhibits metabolism of ● **DIHYDROPYRIDINES** (increased plasma concentration)
- **Cannabis Extract**: ketoconazole increases plasma concentration of ● **CANNABIS EXTRACT**
- **Ciclosporin**: ketoconazole inhibits metabolism of ● **CICLOSPORIN** (increased plasma concentration); miconazole possibly inhibits metabolism of ● **CICLOSPORIN** (increased plasma concentration)
- **Cilostazol**: ketoconazole increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, in BNF)
- **Cinacalcet**: ketoconazole inhibits metabolism of ● **CINACALCET** (increased plasma concentration)
- **Clopidogrel**: ketoconazole possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- **Cobicistat**: plasma concentration of ketoconazole possibly increased by ● **COBICISTAT**—manufacturer of cobicistat advises reduce dose of ketoconazole
- **Colchicine**: ketoconazole possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- **Corticosteroids**: ketoconazole possibly inhibits metabolism of ● **CORTICOSTEROIDS**; ketoconazole increases the plasma concentration of ● **inhaled** and ● **oral** (and possibly also **intranasal** and **rectal**) ● **BUDESONIDE**; ketoconazole increases plasma concentration of active metabolite of ● **CICLESONIDE**; ketoconazole possibly increases plasma concentration of ● **inhaled FLUTICASON**; ketoconazole inhibits the metabolism of ● **METHYLPREDNISOLONE**; ketoconazole increases plasma concentration of ● **inhaled MOMETASONE**
- **Cytotoxics**: ketoconazole inhibits the metabolism of ● **IFOSFAMIDE**; possible increased risk of neutropenia when ketoconazole given with ● **BRENTUXIMAB VEDOTIN**; ketoconazole possibly increases the plasma concentration of ● **AFATINIB**—manufacturer of afatinib advises separating administration of ketoconazole by 6 to 12 hours; ketoconazole increases plasma concentration of ● **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); ketoconazole increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or

Antifungals, Imidazole

- Cytotoxics (continued)
 - consider reducing dose of bosutinib; ketoconazole increases plasma concentration of **BORTEZOMIB**, **CABOZANTINIB**, **DABRAFINIB**, **ETOPOSIDE**, **IDELALISIB**, **IMATINIB**, **NINTEDANIB** and **PONATINIB**; ketoconazole increases plasma concentration of **CRIZOTINIB**, **LAPATINIB**, **NILOTINIB** and **REGORAFENIB**—avoid concomitant use; ketoconazole possibly increases plasma concentration of **DASATINIB**; ketoconazole inhibits metabolism of **ERLOTINIB** and **SUNITINIB** (increased plasma concentration); ketoconazole increases plasma concentration of **EVEROLIMUS**—manufacturer of ketoconazole advises avoid concomitant use; ketoconazole increases plasma concentration of **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); ketoconazole increases plasma concentration of **PAZOPANIB** (reduce dose of pazopanib); manufacturer of ruxolitinib advises dose reduction when ketoconazole given with **RUXOLITINIB**—consult ruxolitinib product literature; ketoconazole increases plasma concentration of active metabolite of **TEMSIROLIMUS**—avoid concomitant use; avoidance of ketoconazole advised by manufacturer of **CABAZITAXEL**; *in vitro* studies suggest a possible interaction between ketoconazole and **DOCETAXEL** (consult docetaxel product literature); ketoconazole reduces plasma concentration of **IRINOTECAN** (but concentration of active metabolite of irinotecan increased)—avoid concomitant use; ketoconazole increases plasma concentration of **VINFLUNINE**—manufacturer of vinflunine advises avoid concomitant use
- Dapoxetine: ketoconazole increases plasma concentration of **DAPOXETINE**—manufacturer of dapoxetine advises avoid concomitant use
- Diuretics: ketoconazole increases plasma concentration of **EPLERENONE**—avoid concomitant use
- Domperidone: manufacturer of ketoconazole advises avoid concomitant use with **DOMPERIDONE** (risk of ventricular arrhythmias)
- Ergot Alkaloids: manufacturer of ketoconazole advises avoid concomitant use with **ERGOT ALKALOIDS**; increased risk of ergotism when imidazoles given with **ERGOTAMINE**—avoid concomitant use
- Fingolimod: ketoconazole increases plasma concentration of **FINGOLIMOD**
 - ▶ Fosaprepitant: ketoconazole increases plasma concentration of **FOSAPREPITANT**
- Guanfacine: ketoconazole increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- ▶ Hormone Antagonists: manufacturer of ketoconazole advises avoid concomitant use with **PASIREOTIDE**
- 5HT₂-receptor Agonists: ketoconazole increases plasma concentration of **ALMOTRIPTAN** (increased risk of toxicity); ketoconazole increases plasma concentration of **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
- Ivabradine: ketoconazole increases plasma concentration of **IVABRADINE**—avoid concomitant use
- Ivacaftor: ketoconazole increases plasma concentration of **IVACAFTOR** (see under Ivacaftor, p. 175)
- ▶ Lanthanum: absorption of ketoconazole possibly reduced by **LANTHANUM** (give at least 2 hours apart)
- Lenalidomide: ketoconazole possibly increases plasma concentration of **LENALIDOMIDE** (increased risk of toxicity)
- Lipid-regulating Drugs: possible increased risk of myopathy when imidazoles given with **ATORVASTATIN**; possible increased risk of myopathy when ketoconazole given with **ATORVASTATIN**—manufacturer of ketoconazole advises avoid concomitant use; increased risk of myopathy when ketoconazole given with **SIMVASTATIN** (avoid concomitant use); possible increased risk of myopathy when miconazole given with **SIMVASTATIN**; ketoconazole increases plasma concentration of **LOMITAPIDE**—avoid concomitant use
- ▶ Macitentan: ketoconazole increases plasma concentration of **MACITENTAN**
- ▶ Mirabegron: when given with ketoconazole avoid or reduce dose of **MIRABEGRON** in hepatic or renal impairment—see Mirabegron, in BNF

Antifungals, Imidazole (continued)

- ▶ Netupitant: ketoconazole possibly increases plasma concentration of **NETUPITANT**
- ▶ Oestrogens: anecdotal reports of contraceptive failure when imidazoles given with **OESTROGENS**; ketoconazole increases plasma concentration of **ETHINYLESTRADIOL**
- ▶ Parasympathomimetics: ketoconazole increases plasma concentration of **GALANTAMINE**
- ▶ Progestogens: ketoconazole increases plasma concentration of **DROSPIRENONE**
- Ranolazine: ketoconazole increases plasma concentration of **RANOLAZINE**—avoid concomitant use
- Retinoids: ketoconazole increases plasma concentration of **ALITRETINOIN**; ketoconazole possibly increases risk of **TRETINOIN** toxicity
- ▶ Riociguat: avoidance of ketoconazole advised by manufacturer of **RIOCIGUAT**
- Sildenafil: ketoconazole increases plasma concentration of **SILDENAFIL**—reduce initial dose of sildenafil for erectile dysfunction and avoid concomitant use of sildenafil for pulmonary hypertension
- Sirolimus: ketoconazole increases plasma concentration of **SIROLIMUS**—avoid concomitant use; miconazole increases plasma concentration of **SIROLIMUS**
- Sympathomimetics, Beta₂: ketoconazole increases plasma concentration of **ODODATEROL**; ketoconazole inhibits metabolism of **SALMETEROL** (increased plasma concentration)
- Tacrolimus: ketoconazole increases plasma concentration of **TACROLIMUS** (consider reducing dose of tacrolimus); miconazole *oral gel* possibly increases plasma concentration of **TACROLIMUS**
- Tadalafil: ketoconazole increases plasma concentration of **TADALAFIL**—avoid concomitant use of tadalafil for pulmonary hypertension
- Theophylline: ketoconazole possibly increases plasma concentration of **THEOPHYLLINE**
- Ticagrelor: ketoconazole increases plasma concentration of **TICAGRELOR**—manufacturer of ticagrelor advises avoid concomitant use
- ▶ Tolvaptan: ketoconazole increases plasma concentration of **TOLVAPTAN**—manufacturer of ketoconazole advises avoid concomitant use
- ▶ Ulcer-healing Drugs: absorption of ketoconazole reduced by **HISTAMINE H₂-ANTAGONISTS**, **PROTON PUMP INHIBITORS** and **SUCRALFATE**
- ▶ Ulipristal: ketoconazole increases plasma concentration of *low-dose* **ULIPRISTAL**—manufacturer of *low-dose* ulipristal advises avoid concomitant use
- Vardenafil: ketoconazole increases plasma concentration of **VARDENAFIL**—avoid concomitant use
- ▶ Vitamins: miconazole possibly reduces effects of **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** and **VITAMIN D**; ketoconazole possibly increases plasma concentration of **PARICALCITOL**

Antifungals, Polyene see Amphotericin**Antifungals, Triazole**

NOTE In general, fluconazole interactions relate to multiple-dose treatment

- Aliskiren: itraconazole increases plasma concentration of **ALISKIREN**—avoid concomitant use
- Aminophylline: fluconazole possibly increases plasma concentration of **AMINOPHYLLINE**
- Analgesics: fluconazole increases plasma concentration of **CELECOXIB** (halve dose of celecoxib); voriconazole increases plasma concentration of **DICLOFENAC**, **IBUPROFEN** and **OXYCODONE**; fluconazole increases plasma concentration of **FLURBIPROFEN**, **IBUPROFEN** and **METHADONE**; fluconazole increases plasma concentration of **PARCOXIB** (reduce dose of parecoxib); voriconazole increases plasma concentration of **ALFENTANIL** and **METHADONE** (consider reducing dose of alfentanil and methadone); fluconazole inhibits metabolism of **ALFENTANIL** (risk of prolonged or delayed respiratory depression); itraconazole possibly inhibits metabolism of **ALFENTANIL**; triazoles possibly increase plasma concentration of **FENTANYL**; itraconazole possibly increases plasma

Antifungals, Triazole

- Analgesics (continued)
 - concentration of ● **METHADONE** (increased risk of ventricular arrhythmias); itraconazole increases plasma concentration of **OXYCODONE**
- Antacids: absorption of itraconazole reduced by **ANTACIDS**
- Anti-arrhythmics: manufacturer of itraconazole advises avoid concomitant use with ● **DISOPYRAMIDE**; avoidance of itraconazole, posaconazole and voriconazole advised by manufacturer of ● **DRONEDARONE**
- Antibacterials: plasma concentration of itraconazole increased by **CLARITHROMYCIN**; manufacturer of fluconazole advises avoid concomitant use with **ERYTHROMYCIN**; triazoles possibly increase plasma concentration of ● **RIFABUTIN** (increased risk of uveitis—reduce rifabutin dose); posaconazole increases plasma concentration of ● **RIFABUTIN** (also plasma concentration of posaconazole reduced); voriconazole increases plasma concentration of ● **RIFABUTIN**, also rifabutin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for rifabutin toxicity); fluconazole increases plasma concentration of ● **RIFABUTIN** (increased risk of uveitis—reduce rifabutin dose); plasma concentration of itraconazole reduced by ● **RIFABUTIN** and ● **RIFAMPICIN**—manufacturer of itraconazole advises avoid concomitant use; plasma concentration of posaconazole reduced by ● **RIFAMPICIN**; plasma concentration of voriconazole reduced by ● **RIFAMPICIN**—avoid concomitant use; metabolism of fluconazole accelerated by ● **RIFAMPICIN** (reduced plasma concentration); fluconazole possibly increases plasma concentration of **BEDAQUILINE**—avoid concomitant use if fluconazole given for more than 14 days
- Anticoagulants: avoidance of itraconazole, posaconazole and voriconazole advised by manufacturer of **APIXABAN**; fluconazole, itraconazole and voriconazole enhance anticoagulant effect of ● **COUMARINS**; avoidance of itraconazole advised by manufacturer of **DABIGATRAN** and **RIVAROXABAN**; avoidance of posaconazole and voriconazole advised by manufacturer of **RIVAROXABAN**
- Antidepressants: avoidance of triazoles advised by manufacturer of ● **REBOXETINE**; fluconazole possibly increases plasma concentration of **AMITRIPTYLINE** and **NORTRIPTYLINE**; plasma concentration of voriconazole reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antidiabetics: posaconazole possibly enhances hypoglycaemic effect of **GLIPIZIDE**; fluconazole possibly enhances hypoglycaemic effect of **NATEGLINIDE**; itraconazole possibly enhances hypoglycaemic effect of **REPAGLINIDE**; voriconazole possibly increases plasma concentration of **SULFONYLUREAS**; fluconazole increases plasma concentration of ● **SULFONYLUREAS**
- Antiepileptics: plasma concentration of itraconazole and posaconazole possibly reduced by ● **CARBAMAZEPINE**; fluconazole possibly increases plasma concentration of **CARBAMAZEPINE**; plasma concentration of voriconazole possibly reduced by ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE**—avoid concomitant use; plasma concentration of itraconazole reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**—avoid concomitant use; fluconazole increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (consider reducing dose of fosphenytoin and phenytoin); voriconazole increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN**, also fosphenytoin and phenytoin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for fosphenytoin and phenytoin toxicity); plasma concentration of posaconazole reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**; plasma concentration of itraconazole and posaconazole possibly reduced by ● **PHENOBARBITAL**; plasma concentration of itraconazole and posaconazole possibly reduced by ● **PRIMIDONE**
- Antifungals: triazoles possibly antagonise effects of **AMPHOTERICIN**; monitoring for increased voriconazole side effects advised by manufacturer of **FLUCONAZOLE** if voriconazole given after fluconazole; plasma concentration of itraconazole increased by **MICAFUNGIN** (consider reducing dose of itraconazole); plasma concentration of fluconazole increased by **TERBINAFINE**

Antifungals, Triazole (continued)

- Antihistamines: itraconazole inhibits metabolism of ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: avoidance of triazoles advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of triazoles advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- Antimuscarinics: avoidance of itraconazole advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when itraconazole given with **FESOTERODINE**—consult fesoterodine product literature; itraconazole possibly increases plasma concentration of ● **SOLIFENACIN**—see under Solifenacin, in BNF
- Antipsychotics: itraconazole possibly increases plasma concentration of **HALOPERIDOL**; itraconazole possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); itraconazole, posaconazole and voriconazole possibly increase plasma concentration of ● **LURASIDONE**—avoid concomitant use; fluconazole possibly increases the plasma concentration of ● **LURASIDONE** (see under Lurasidone, in BNF); increased risk of ventricular arrhythmias when triazoles given with ● **PIMOZIDE**—avoid concomitant use; triazoles possibly increase plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use; itraconazole possibly increases side-effects of **RISPERIDONE**
- Antivirals: posaconazole increases plasma concentration of ● **ATAZANAVIR**; plasma concentration of voriconazole increased or decreased by ● **ATAZANAVIR** and plasma concentration of atazanavir also reduced; itraconazole, posaconazole and voriconazole possibly increase the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); plasma concentration of voriconazole possibly affected by **DARUNAVIR**; plasma concentration of both drugs possibly increased when itraconazole and posaconazole given with ● **DASABUVIR**—avoid concomitant use; plasma concentration of voriconazole reduced by ● **EFAVIRENZ**, also plasma concentration of efavirenz increased (increase voriconazole dose and reduce efavirenz dose); plasma concentration of itraconazole and posaconazole reduced by ● **EFAVIRENZ**; plasma concentration of both drugs may increase when itraconazole given with **FOSAMPRENAVIR**; plasma concentration of posaconazole possibly reduced by **FOSAMPRENAVIR**; itraconazole increases plasma concentration of ● **INDINAVIR** (consider reducing dose of indinavir); fluconazole increases plasma concentration of ● **NEVIRAPINE**, **RITONAVIR** and **TIPIRANAVIR**; plasma concentration of itraconazole possibly reduced by **NEVIRAPINE**—consider increasing dose of itraconazole; plasma concentration of both drugs possibly increased when itraconazole and posaconazole given with ● **PARITAPREVIR**—avoid concomitant use; plasma concentration of voriconazole reduced by ● **RITONAVIR**—avoid concomitant use; combination of itraconazole with ● **RITONAVIR** may increase plasma concentration of either drug (or both); triazoles possibly increase plasma concentration of **SAQUINAVIR**; fluconazole, itraconazole, posaconazole and voriconazole possibly increase plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of voriconazole possibly affected by ● **TELAPREVIR** (possible increased risk of ventricular arrhythmias); plasma concentration of posaconazole possibly increased by ● **TELAPREVIR** (increased risk of ventricular arrhythmias); plasma concentration of itraconazole possibly increased by **TELAPREVIR**; fluconazole increases plasma concentration of ● **ZIDOVUDINE** (increased risk of toxicity)
- Anxiolytics and Hypnotics: itraconazole increases plasma concentration of **ALPRAZOLAM**; fluconazole and voriconazole increase plasma concentration of ● **DIAZEPAM** (risk of prolonged sedation); fluconazole, itraconazole, posaconazole and voriconazole increase plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation); itraconazole increases plasma concentration of **BUSPIRONE** (reduce dose of buspirone)
- Avanafil: itraconazole and voriconazole possibly increase plasma concentration of ● **AVANAFIL**—manufacturer of avanafil

Antifungals, Triazole

- **Avanafil** (continued)
advises avoid concomitant use; fluconazole possibly increases plasma concentration of ● **AVANAFIL**—see under Avanafil, in BNF
- **Bosentan**: fluconazole possibly increases plasma concentration of ● **BOSENTAN**—avoid concomitant use; itraconazole possibly increases plasma concentration of **BOSENTAN**
- **Calcium-channel Blockers**: negative inotropic effect possibly increased when itraconazole given with **CALCIUM-CHANNEL BLOCKERS**; itraconazole inhibits metabolism of ● **FELODIPINE** (increased plasma concentration); avoidance of itraconazole advised by manufacturer of **LERCANIDIPINE**; itraconazole possibly inhibits metabolism of **DIHYDROPYRIDINES** (increased plasma concentration)
- **Cardiac Glycosides**: itraconazole increases plasma concentration of ● **DIGOXIN**
- **Ciclosporin**: fluconazole, itraconazole, posaconazole and voriconazole inhibit metabolism of ● **CICLOSPORIN** (increased plasma concentration)
- **Cilostazol**: itraconazole possibly increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, in BNF)
- **Clopidogrel**: fluconazole, itraconazole and voriconazole possibly reduce antiplatelet effect of ● **CLOPIDOGREL**
- ▶ **Cobicistat**: plasma concentration of itraconazole possibly increased by **COBICISTAT**—manufacturer of cobicistat advises reduce dose of itraconazole
- **Colchicine**: itraconazole possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- **Corticosteroids**: itraconazole possibly inhibits metabolism of **CORTICOSTEROIDS** and **METHYLPREDNISOLONE**; itraconazole increases the plasma concentration of *inhaled and oral* (and possibly also *intranasal and rectal*) ● **BUDESONIDE**; itraconazole increases plasma concentration of *inhaled* **FLUTICASONE**
- **Cytotoxics**: itraconazole inhibits metabolism of **BUSULFAN** (increased risk of toxicity); fluconazole and itraconazole possibly increase side-effects of **CYCLOPHOSPHAMIDE**; itraconazole possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of itraconazole by 6 to 12 hours; itraconazole possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); fluconazole, itraconazole, posaconazole and voriconazole possibly increase the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; itraconazole possibly increases plasma concentration of **CABOZANTINIB**; itraconazole and voriconazole possibly increase plasma concentration of ● **CRIZOTINIB**—manufacturer of crizotinib advises avoid concomitant use; avoidance of itraconazole advised by manufacturer of **DASATINIB** and ● **TEMSIROLIMUS** (plasma concentration of dasatinib and temsirolimus possibly increased); itraconazole, posaconazole and voriconazole possibly increase plasma concentration of ● **EVEROLIMUS**—manufacturer of everolimus advises avoid concomitant use; itraconazole increases plasma concentration of **GEFITINIB**; fluconazole, itraconazole and voriconazole possibly increase the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); avoidance of itraconazole, posaconazole and voriconazole advised by manufacturer of ● **LAPATINIB**; avoidance of itraconazole and voriconazole advised by manufacturer of ● **NILOTINIB**; itraconazole and voriconazole possibly increase plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); itraconazole and voriconazole possibly increase plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF); manufacturer of ruxolitinib advises dose reduction when fluconazole, itraconazole, posaconazole and voriconazole given with ● **RUXOLITINIB**—consult ruxolitinib product literature; itraconazole and voriconazole possibly increase the plasma concentration of ● **CABAZITAXEL**—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel; itraconazole and voriconazole possibly increase plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or

Antifungals, Triazole

- **Cytotoxics** (continued)
consider reducing docetaxel dose; increased risk of toxicity when itraconazole given with ● **IRINOTECAN**—avoid concomitant use; avoidance of itraconazole advised by manufacturer of ● **OLAPARIB**; posaconazole possibly inhibits metabolism of ● **VINBLASTINE** and ● **VINCRISTINE** (increased risk of neurotoxicity); itraconazole possibly increases risk of ● **VINBLASTINE**, ● **VINDESINE**, ● **VINFLUNINE** and ● **VINORELBINE** toxicity; itraconazole increases risk of ● **VINCRISTINE** toxicity
- **Dapoxetine**: manufacturer of dapoxetine advises dose reduction when fluconazole given with **DAPOXETINE** (see under Dapoxetine, in BNF); avoidance of itraconazole advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
- **Diuretics**: fluconazole increases plasma concentration of **EPLERENONE** (reduce dose of eplerenone); itraconazole increases plasma concentration of ● **EPLERENONE**—avoid concomitant use; plasma concentration of fluconazole increased by **HYDROCHLOROTHIAZIDE**
- **Domperidone**: possible increased risk of ventricular arrhythmias when itraconazole or voriconazole given with ● **DOMPERIDONE**—avoid concomitant use
- **Ergot Alkaloids**: increased risk of ergotism when voriconazole given with ● **ERGOMETRINE**—avoid concomitant use; manufacturer of itraconazole advises avoid concomitant use with ● **ERGOMETRINE** (increased risk of ergotism); increased risk of ergotism when triazoles given with ● **ERGOTAMINE**—avoid concomitant use
- **Guanfacine**: fluconazole, itraconazole and posaconazole possibly increase the plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- **5HT₂-receptor Agonists**: itraconazole increases plasma concentration of ● **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
- **Ivabradine**: fluconazole increases plasma concentration of **IVABRADINE**—reduce initial dose of ivabradine; itraconazole possibly increases plasma concentration of ● **IVABRADINE**—avoid concomitant use
- **Ivacaftor**: itraconazole, posaconazole and voriconazole possibly increase plasma concentration of ● **IVACFTOR** (see under Ivacaftor, p. 175); fluconazole increases plasma concentration of ● **IVACFTOR** (see under Ivacaftor, p. 175)
- **Lenalidomide**: itraconazole possibly increases plasma concentration of ● **LENALIDOMIDE** (increased risk of toxicity)
- ▶ **Leukotriene Receptor Antagonists**: fluconazole increases plasma concentration of **ZAFIRLUKAST**
- **Lipid-regulating Drugs**: increased risk of myopathy when itraconazole, posaconazole or voriconazole given with ● **ATORVASTATIN**; possible increased risk of myopathy when fluconazole given with ● **ATORVASTATIN** or ● **SIMVASTATIN**; fluconazole increases plasma concentration of **FLUVASTATIN**—possible increased risk of myopathy; itraconazole increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when itraconazole or posaconazole given with ● **SIMVASTATIN** (avoid concomitant use); increased risk of myopathy when voriconazole given with ● **SIMVASTATIN**; avoidance of triazoles advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- ▶ **Mirabegron**: when given with itraconazole avoid or reduce dose of **MIRABEGRON** in hepatic or renal impairment—see Mirabegron, in BNF
- ▶ **Oestrogens**: plasma concentration of voriconazole increased by **OESTROGENS**
- ▶ **Progestogens**: plasma concentration of voriconazole possibly increased by **PROGESTOGENS**
- **Ranolazine**: itraconazole, posaconazole and voriconazole possibly increase plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- **Retinoids**: fluconazole and voriconazole possibly increase risk of ● **TRETINOIN** toxicity
- ▶ **Riociguat**: avoidance of itraconazole and voriconazole advised by manufacturer of **RIOCIGUAT**
- ▶ **Sildenafil**: itraconazole increases plasma concentration of **SILDENAFIL**—reduce initial dose of sildenafil

Antifungals, Triazole (continued)

- **Sirolimus**: fluconazole and posaconazole possibly increase plasma concentration of **SIROLIMUS**; itraconazole and voriconazole increase plasma concentration of **SIROLIMUS**—avoid concomitant use
- **Tacrolimus**: fluconazole, itraconazole, posaconazole and voriconazole increase plasma concentration of **TACROLIMUS** (consider reducing dose of tacrolimus)
- ▶ **Tadalafil**: itraconazole possibly increases plasma concentration of **TADALAFIL**
- **Theophylline**: fluconazole possibly increases plasma concentration of **THEOPHYLLINE**
- **Ulcer-healing Drugs**: plasma concentration of posaconazole reduced by **CIMETIDINE** and **ESOMEPRAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; plasma concentration of posaconazole possibly reduced by **FAMOTIDINE**, **LANSOPRAZOLE**, **NIZATIDINE**, **OMEPRAZOLE**, **PANTOPRAZOLE**, **RABEPRAZOLE** and **RANITIDINE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; voriconazole possibly increases plasma concentration of **ESOMEPRAZOLE**; voriconazole increases plasma concentration of **OMEPRAZOLE** (consider reducing dose of omeprazole); absorption of itraconazole reduced by **HISTAMINE H₂-ANTAGONISTS** and **PROTON PUMP INHIBITORS**
- ▶ **Ulipristal**: avoidance of itraconazole advised by manufacturer of **ULIPRISTAL**
- **Vardenafil**: itraconazole possibly increases plasma concentration of **VARDENAFIL**—avoid concomitant use

Antihistamines

NOTE Sedative interactions apply to a lesser extent to the non-sedating antihistamines. Interactions do not generally apply to antihistamines used for topical action (including inhalation)

- ▶ **Alcohol**: increased sedative effect when antihistamines given with **ALCOHOL** (possibly less effect with non-sedating antihistamines)
- **Analgesics**: sedative effects possibly increased when sedating antihistamines given with **OPIOID ANALGESICS**
- ▶ **Antacids**: absorption of fexofenadine reduced by **ANTACIDS**
- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when mizolastine given with **AMIODARONE**, **DISOPYRAMIDE** or **FLECAINIDE**—avoid concomitant use; manufacturer of mizolastine advises avoid concomitant use with **PROPAFENONE** (possible risk of ventricular arrhythmias)
- **Antibacterials**: manufacturer of loratadine advises plasma concentration possibly increased by **ERYTHROMYCIN**; metabolism of mizolastine inhibited by **ERYTHROMYCIN**—avoid concomitant use; increased risk of ventricular arrhythmias when mizolastine given with **MOXIFLOXACIN**—avoid concomitant use; effects of fexofenadine possibly reduced by **RIFAMPICIN**; metabolism of mizolastine possibly inhibited by **MACROLIDES** (avoid concomitant use)
- **Antidepressants**: avoidance of mizolastine advised by manufacturer of **CITALOPRAM** and **ESCITALOPRAM** (risk of ventricular arrhythmias); increased antimuscarinic and sedative effects when antihistamines given with **MAOIS** or **TRICYCLICS**; manufacturer of promethazine advises avoid for 2 weeks after stopping **MAOIS**; manufacturer of hydroxyzine advises avoid concomitant use with **MAOIS**; cyproheptadine possibly antagonises antidepressant effect of **SSRIS**; possible increased antimuscarinic and sedative effects when antihistamines given with **TRICYCLIC-RELATED ANTIDEPRESSANTS**
- ▶ **Antidiabetics**: thrombocyte count depressed when ketotifen given with **METFORMIN** (manufacturer of ketotifen advises avoid concomitant use)
- **Antifungals**: metabolism of mizolastine inhibited by **ITRACONAZOLE**—avoid concomitant use; metabolism of mizolastine possibly inhibited by **IMIDAZOLES** (avoid concomitant use)
- **Antimalarials**: avoidance of mizolastine advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- ▶ **Antimuscarinics**: increased risk of antimuscarinic side-effects when antihistamines given with **ANTIMUSCARINICS**
- **Antivirals**: plasma concentration of chlorphenamine possibly increased by **LOPINAVIR**; plasma concentration of non-

Antihistamines

- **Antivirals** (continued)
- sedating antihistamines possibly increased by **RITONAVIR**; increased risk of ventricular arrhythmias when mizolastine given with **SAQUINAVIR**—avoid concomitant use
- ▶ **Anxiolytics and Hypnotics**: increased sedative effect when antihistamines given with **ANXIOLYTICS AND HYPNOTICS**
- **Beta-blockers**: increased risk of ventricular arrhythmias when mizolastine given with **SOTALOL**—avoid concomitant use
- ▶ **Betahistine**: antihistamines theoretically antagonise effect of **BETAHISTINE**
- **Cytotoxics**: possible increased risk of ventricular arrhythmias when mizolastine given with **VANDETANIB**—avoid concomitant use
- ▶ **Grapefruit Juice**: plasma concentration of bilastine reduced by **GRAPEFRUIT JUICE**
- ▶ **Histamine**: antihistamines theoretically antagonise effects of **HISTAMINE**—manufacturer of histamine advises avoid concomitant use
- ▶ **Sympathomimetics**: avoidance of antihistamines advised by manufacturer of **MIDODRINE**
- ▶ **Ulcer-healing Drugs**: manufacturer of loratadine advises plasma concentration possibly increased by **CIMETIDINE**; plasma concentration of hydroxyzine increased by **CIMETIDINE**
- ▶ **Ulipristal**: manufacturer of ulipristal advises give fexofenadine at least 1.5 hours before or after **ULIPRISTAL**

Antihistamines, Non-sedating see Antihistamines

Antihistamines, Sedating see Antihistamines

Antimalarials see Artemether with Lumefantrine, Artesimol with Piperaquine, Chloroquine, Hydroxychloroquine, Mefloquine, Primaquine, Proguanil, Pyrimethamine, and Quinine

Antimetabolites see Capecitabine, Cladribine, Cytarabine, Decitabine, Fludarabine, Fluorouracil, Gemcitabine, Mercaptopurine, Methotrexate, Pemetrexed, Raltitrexed, Tegafur, and Tioguanine

Antimuscarinics

NOTE Many drugs have antimuscarinic effects; concomitant use of two or more such drugs can increase side-effects such as dry mouth, urine retention, and constipation; concomitant use can also lead to confusion in the elderly. Interactions do not generally apply to antimuscarinics used by inhalation

- ▶ **Alcohol**: increased sedative effect when hyoscine given with **ALCOHOL**
- ▶ **Analgesics**: possible increased risk of antimuscarinic side-effects when antimuscarinics given with **CODEINE**; increased risk of antimuscarinic side-effects when antimuscarinics given with **NEFOPAM**
- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when tolterodine given with **AMIODARONE**, **DISOPYRAMIDE** or **FLECAINIDE**; increased risk of antimuscarinic side-effects when antimuscarinics given with **DISOPYRAMIDE**
- **Antibacterials**: manufacturer of fesoterodine advises dose reduction when fesoterodine given with **CLARITHROMYCIN** and **TELITHROMYCIN**—consult fesoterodine product literature; manufacturer of tolterodine advises avoid concomitant use with **CLARITHROMYCIN** and **ERYTHROMYCIN**; plasma concentration of darifenacin possibly increased by **ERYTHROMYCIN**; plasma concentration of active metabolite of fesoterodine reduced by **RIFAMPICIN**—avoid concomitant use
- **Antidepressants**: plasma concentration of darifenacin and procyclidine increased by **PAROXETINE**; increased risk of antimuscarinic side-effects when antimuscarinics given with **MAOIS** or **TRICYCLICS**; plasma concentration of active metabolite of fesoterodine possibly reduced by **ST JOHN'S WORT**—manufacturer of fesoterodine advises avoid concomitant use; possible increased antimuscarinic side-effects when antimuscarinics given with **TRICYCLIC-RELATED ANTIDEPRESSANTS**
- **Antiepileptics**: plasma concentration of active metabolite of fesoterodine possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PHENYTOIN**—manufacturer of fesoterodine advises avoid concomitant use
- **Antifungals**: antimuscarinics reduce absorption of **KETOCONAZOLE**; manufacturer of fesoterodine advises dose reduction when fesoterodine given with **ITRACONAZOLE** and

Antimuscarinics● **Antifungals** (continued)

- KETOCONAZOLE**—consult fesoterodine product literature; plasma concentration of darifenacin increased by **KETOCONAZOLE**—avoid concomitant use; plasma concentration of solifenacin increased by ● **KETOCONAZOLE**—see under Solifenacin, in BNF; plasma concentration of oxybutynin increased by **KETOCONAZOLE**; manufacturer of tolterodine advises avoid concomitant use with **ITRACONAZOLE** and ● **KETOCONAZOLE**; manufacturer of darifenacin advises avoid concomitant use with **ITRACONAZOLE**; plasma concentration of solifenacin possibly increased by ● **ITRACONAZOLE**—see under Solifenacin, in BNF
- ▶ **Antihistamines**: increased risk of antimuscarinic side-effects when antimuscarinics given with **ANTIHISTAMINES**
- ▶ **Antipsychotics**: antimuscarinics possibly reduce effects of **HALOPERIDOL**; increased risk of antimuscarinic side-effects when antimuscarinics given with **CLOZAPINE**; antimuscarinics reduce plasma concentration of **PHENOTHIAZINES**, but risk of antimuscarinic side-effects increased
- **Antivirals**: manufacturer of darifenacin advises avoid concomitant use with **ATAZANAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR**, **RITONAVIR**, **SAQUINAVIR** and **TIPRANAVIR**; manufacturer of fesoterodine advises dose reduction when fesoterodine given with **ATAZANAVIR**, **INDINAVIR**, **RITONAVIR** and **SAQUINAVIR**—consult fesoterodine product literature; manufacturer of tolterodine advises avoid concomitant use with **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR**, **RITONAVIR** and **SAQUINAVIR**; plasma concentration of solifenacin possibly increased by ● **RITONAVIR**—see under Solifenacin, in BNF
- **Beta-blockers**: increased risk of ventricular arrhythmias when tolterodine given with ● **SOTALOL**
- ▶ **Calcium-channel Blockers**: plasma concentration of solifenacin increased by **VERAPAMIL**; manufacturer of darifenacin advises avoid concomitant use with **VERAPAMIL**
- ▶ **Cardiac Glycosides**: darifenacin possibly increases plasma concentration of **DIGOXIN**
- ▶ **Ciclosporin**: manufacturer of darifenacin advises avoid concomitant use with **CICLOSPORIN**
- ▶ **Domperidone**: antimuscarinics antagonise effects of **DOMPERIDONE** on gastro-intestinal activity
- ▶ **Dopaminergics**: antimuscarinics possibly reduce absorption of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- ▶ **Hormone Antagonists**: possible increased risk of bradycardia when ipratropium or oxybutynin given with **PASIREOTIDE**
- ▶ **Memantine**: effects of antimuscarinics possibly enhanced by **MEMANTINE**
- ▶ **Metoclopramide**: antimuscarinics antagonise effects of **METOCLOPRAMIDE** on gastro-intestinal activity
- ▶ **Nitrates**: antimuscarinics possibly reduce effects of sublingual tablets of **NITRATES** (failure to dissolve under tongue owing to dry mouth)
- ▶ **Parasympathomimetics**: antimuscarinics antagonise effects of **PARASYMPATHOMIMETICS**

Antipsychotics

- NOTE** Increased risk of toxicity with myelosuppressive drugs
- NOTE** Avoid concomitant use of clozapine with drugs that have a substantial potential for causing agranulocytosis
- ▶ **ACE Inhibitors**: enhanced hypotensive effect when antipsychotics given with **ACE INHIBITORS**
- ▶ **Adrenergic Neurone Blockers**: enhanced hypotensive effect when phenothiazines given with **ADRENERGIC NEURONE BLOCKERS**; higher doses of chlorpromazine antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**; haloperidol antagonises hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**
- ▶ **Adsorbents**: absorption of phenothiazines possibly reduced by **KALOLIN**
- ▶ **Alcohol**: increased sedative effect when antipsychotics given with **ALCOHOL**
- ▶ **Alpha-blockers**: enhanced hypotensive effect when antipsychotics given with **ALPHA-BLOCKERS**
- **Anaesthetics, General**: droperidol enhances effects of **THIOPENTAL**; enhanced hypotensive effect when antipsychotics given with ● **GENERAL ANAESTHETICS**

Antipsychotics (continued)

- **Analgesics**: possible severe drowsiness when haloperidol given with **ACEMETACIN** or **INDOMETACIN**; increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with ● **METHADONE**; increased risk of ventricular arrhythmias when amisulpride given with ● **METHADONE**—avoid concomitant use; increased risk of convulsions when antipsychotics given with **TRAMADOL**; enhanced hypotensive and sedative effects when antipsychotics given with **OPIOID ANALGESICS**
- ▶ **Angiotensin-II Receptor Antagonists**: enhanced hypotensive effect when antipsychotics given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ **Antacids**: absorption of phenothiazines and sulpiride reduced by **ANTACIDS**
- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with ● **ANTI-ARRHYTHMICS** that prolong the QT interval; increased risk of ventricular arrhythmias when amisulpride, droperidol, haloperidol, phenothiazines, pimozide or zuclopentixol given with ● **AMIODARONE**—avoid concomitant use; increased risk of ventricular arrhythmias when benperidol given with ● **AMIODARONE**—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when sulpiride given with ● **AMIODARONE** or ● **DISOPYRAMIDE**; increased risk of ventricular arrhythmias when amisulpride, droperidol, pimozide or zuclopentixol given with ● **DISOPYRAMIDE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when haloperidol given with ● **DISOPYRAMIDE**—avoid concomitant use; increased risk of ventricular arrhythmias when phenothiazines given with ● **DISOPYRAMIDE**; avoidance of phenothiazines advised by manufacturer of ● **DRONEDARONE** (risk of ventricular arrhythmias); increased risk of arrhythmias when clozapine given with ● **FLECAINIDE**
- **Antibacterials**: plasma concentration of lurasidone possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—avoid concomitant use; increased risk of ventricular arrhythmias when pimozide given with ● **CLARITHROMYCIN**, ● **MOXIFLOXACIN** or ● **TELITHROMYCIN**—avoid concomitant use; plasma concentration of quetiapine possibly increased by ● **CLARITHROMYCIN**—manufacturer of quetiapine advises avoid concomitant use; plasma concentration of lurasidone possibly increased by ● **ERYTHROMYCIN** (see under Lurasidone, in BNF); increased risk of ventricular arrhythmias when amisulpride given with ● **ERYTHROMYCIN**—avoid concomitant use; plasma concentration of clozapine possibly increased by ● **ERYTHROMYCIN** (possible increased risk of convulsions); possible increased risk of ventricular arrhythmias when pimozide given with ● **ERYTHROMYCIN**—avoid concomitant use; plasma concentration of quetiapine increased by ● **ERYTHROMYCIN**—manufacturer of quetiapine advises avoid concomitant use; increased risk of ventricular arrhythmias when sulpiride given with *parenteral* ● **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when zuclopentixol given with *parenteral* ● **ERYTHROMYCIN**—avoid concomitant use; plasma concentration of clozapine increased by **CIPROFLOXACIN**; plasma concentration of olanzapine possibly increased by **CIPROFLOXACIN**; increased risk of ventricular arrhythmias when droperidol, haloperidol, phenothiazines or zuclopentixol given with ● **MOXIFLOXACIN**—avoid concomitant use; increased risk of ventricular arrhythmias when benperidol given with ● **MOXIFLOXACIN**—manufacturer of benperidol advises avoid concomitant use; plasma concentration of aripiprazole possibly reduced by ● **RIFABUTIN** and ● **RIFAMPICIN** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); plasma concentration of lurasidone reduced by ● **RIFAMPICIN**—avoid concomitant use; plasma concentration of clozapine possibly reduced by **RIFAMPICIN**; metabolism of haloperidol accelerated by ● **RIFAMPICIN** (reduced plasma concentration); avoid concomitant use of clozapine with ● **CHLORAMPHENICOL** or ● **SULFONAMIDES** (increased risk of agranulocytosis); increased risk of ventricular arrhythmias when droperidol, haloperidol or pimozide given with ● **DELANANID**; increased risk of

Antipsychotics

- **Antibacterials** (continued)
 - ventricular arrhythmias when phenothiazines that prolong the QT interval given with ● **DELAMANID**; manufacturer of droperidol advises avoid concomitant use with ● **MACROLIDES** (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when chlorpromazine given with ● **TELITHROMYCIN**; plasma concentration of quetiapine possibly increased by **TELITHROMYCIN**
- **Antidepressants**: plasma concentration of clozapine possibly increased by **CITALOPRAM** (increased risk of toxicity); avoidance of haloperidol, phenothiazines and pimoizide advised by manufacturer of ● **CITALOPRAM** (risk of ventricular arrhythmias); avoidance of haloperidol, phenothiazines and pimoizide advised by manufacturer of ● **ESCITALOPRAM** (risk of ventricular arrhythmias); plasma concentration of aripiprazole possibly increased by ● **FLUOXETINE** and ● **PAROXETINE** (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of clozapine, haloperidol and risperidone increased by ● **FLUOXETINE**; manufacturer of droperidol advises avoid concomitant use with ● **FLUOXETINE**, ● **FLUVOXAMINE**, ● **SERTRALINE** and ● **TRICYCLICS** (risk of ventricular arrhythmias); plasma concentration of asenapine and haloperidol possibly increased by **FLUVOXAMINE**; plasma concentration of clozapine and olanzapine increased by ● **FLUVOXAMINE**; asenapine possibly increases plasma concentration of **PAROXETINE**; plasma concentration of clozapine increased by ● **PAROXETINE** and ● **SERTRALINE**; plasma concentration of risperidone possibly increased by **PAROXETINE** (increased risk of toxicity); metabolism of perphenazine inhibited by **PAROXETINE** (reduce dose of perphenazine); plasma concentration of haloperidol increased by **VENLAFAXINE**; clozapine possibly increases CNS effects of ● **MAOIS**; plasma concentration of pimoizide possibly increased by ● **SSRIS** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of lurasidone possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; plasma concentration of aripiprazole possibly reduced by ● **ST JOHN'S WORT** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); manufacturer of fluphenazine, haloperidol, sulpiride and zuclopenthixol advises avoid concomitant use with ● **TRICYCLICS** (risk of ventricular arrhythmias); increased risk of antimuscarinic side-effects when phenothiazines given with **TRICYCLICS**; possible increased risk of ventricular arrhythmias when risperidone given with ● **TRICYCLICS**; possible increased antimuscarinic side-effects when clozapine given with **TRICYCLICS**; possible increased risk of convulsions when butyrophenones, phenothiazines or thioxanthenes given with ● **VORTIOXETINE**
- **Antidiabetics**: phenothiazines possibly antagonise hypoglycaemic effect of **SULFONYLUREAS**
- **Antiepileptics**: antipsychotics antagonise anticonvulsant effect of ● **ANTIEPILEPTICS** (convulsive threshold lowered); metabolism of haloperidol, olanzapine, quetiapine and risperidone accelerated by **CARBAMAZEPINE** (reduced plasma concentration); metabolism of clozapine accelerated by ● **CARBAMAZEPINE** (reduced plasma concentration), also avoid concomitant use of drugs with substantial potential for causing agranulocytosis; plasma concentration of aripiprazole reduced by ● **CARBAMAZEPINE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); plasma concentration of paliperidone reduced by **CARBAMAZEPINE**; plasma concentration of lurasidone possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use; chlorpromazine possibly increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of clozapine and quetiapine accelerated by **FOSPHENYTOIN** (reduced plasma concentration); plasma concentration of olanzapine possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (avoid concomitant use or consider increasing the dose of

Antipsychotics

- **Antiepileptics** (continued)
 - aripiprazole—consult aripiprazole product literature); plasma concentration of haloperidol reduced by **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of haloperidol accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration); plasma concentration of both drugs reduced when chlorpromazine given with **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of clozapine possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**; metabolism of clozapine and quetiapine accelerated by **PHENYTOIN** (reduced plasma concentration); increased risk of side-effects including neutropenia when olanzapine given with ● **SODIUM VALPROATE** and ● **VALPROIC ACID**; plasma concentration of clozapine possibly increased or decreased by **SODIUM VALPROATE** and **VALPROIC ACID**
- **Antifungals**: plasma concentration of lurasidone increased by ● **KETOCONAZOLE**—avoid concomitant use; metabolism of aripiprazole inhibited by ● **KETOCONAZOLE** (reduce dose of aripiprazole); plasma concentration of lurasidone possibly increased by ● **FLUCONAZOLE** (see under Lurasidone, in BNF); plasma concentration of lurasidone possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—avoid concomitant use; plasma concentration of aripiprazole possibly increased by ● **ITRACONAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); side-effects of risperidone possibly increased by **ITRACONAZOLE**; plasma concentration of haloperidol possibly increased by **ITRACONAZOLE**; increased risk of ventricular arrhythmias when pimoizide given with ● **IMIDAZOLES** or ● **TRIAZOLES**—avoid concomitant use; plasma concentration of quetiapine possibly increased by ● **IMIDAZOLES** and ● **TRIAZOLES**—manufacturer of quetiapine advises avoid concomitant use
- **Antimalarials**: avoidance of antipsychotics advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of droperidol, haloperidol, phenothiazines and pimoizide advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when droperidol given with ● **CHLOROQUINE**, ● **HYDROXYCHLOROQUINE** or ● **QUININE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when haloperidol given with ● **MEFLOQUINE** or ● **QUININE**—avoid concomitant use; manufacturer of risperidone advises possible risk of ventricular arrhythmias when risperidone given with ● **MEFLOQUINE**; increased risk of ventricular arrhythmias when pimoizide given with ● **MEFLOQUINE** or ● **QUININE**—avoid concomitant use; manufacturer of amisulpride advises avoid concomitant use with **MEFLOQUINE**; possible increased risk of ventricular arrhythmias when risperidone given with ● **QUININE**
- **Antimuscarinics**: increased risk of antimuscarinic side-effects when clozapine given with **ANTIMUSCARINICS**; plasma concentration of phenothiazines reduced by **ANTIMUSCARINICS**, but risk of antimuscarinic side-effects increased; effects of haloperidol possibly reduced by **ANTIMUSCARINICS**
- **Antipsychotics**: increased risk of ventricular arrhythmias when amisulpride, pimoizide or sulpiride given with ● **DROPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when phenothiazines that prolong the QT interval given with ● **DROPERIDOL**—avoid concomitant use; avoid concomitant use of clozapine with depot formulation of ● **FLUPENTIXOL**, ● **FLUPHENAZINE**, ● **HALOPERIDOL**, ● **RISPERIDONE** or ● **ZUCLOPENTHIXOL** as cannot be withdrawn quickly if neutropenia occurs; increased risk of ventricular arrhythmias when sulpiride given with ● **HALOPERIDOL**; chlorpromazine possibly increases plasma concentration of **HALOPERIDOL**; increased risk of ventricular arrhythmias when droperidol given with ● **HALOPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when pimoizide given with ● **PHENOTHIAZINES**—avoid concomitant use; lurasidone possibly increases plasma concentration of **PIMOZIDE** (increased risk of toxicity); possible increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with ● **RISPERIDONE**; increased risk of ventricular arrhythmias when pimoizide given with ● **SULPIRIDE**

Antipsychotics (continued)

- Antivirals: plasma concentration of aripiprazole possibly increased by • **ATAZANAVIR**, • **DARUNAVIR**, • **FOSAMPRENNAVIR**, • **INDINAVIR**, • **LOPINAVIR**, • **RITONAVIR**, • **SAQUINAVIR** and • **TIPRANAVIR** (reduce dose of aripiprazole—consult aripiprazole product literature); plasma concentration of quetiapine possibly increased by • **ATAZANAVIR**, • **BOCEPREVIR**, • **DARUNAVIR**, • **FOSAMPRENNAVIR**, • **INDINAVIR**, • **LOPINAVIR**, • **RITONAVIR**, • **SAQUINAVIR**, • **TELAPREVIR** and • **TIPRANAVIR**—manufacturer of quetiapine advises avoid concomitant use; plasma concentration of pimozide possibly increased by • **ATAZANAVIR**—avoid concomitant use; avoidance of pimozide advised by manufacturer of • **BOCEPREVIR** and • **TELAPREVIR**; plasma concentration of lurasidone possibly increased by • **BOCEPREVIR**, • **INDINAVIR**, • **RITONAVIR**, • **SAQUINAVIR** and • **TELAPREVIR**—avoid concomitant use; plasma concentration of aripiprazole possibly reduced by • **EFAVIRENZ** and • **NEVIRAPINE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); plasma concentration of pimozide possibly increased by • **EFAVIRENZ**, • **INDINAVIR** and • **SAQUINAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of pimozide increased by • **FOSAMPRENNAVIR** and • **RITONAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of antipsychotics possibly increased by • **RITONAVIR**; plasma concentration of olanzapine reduced by • **RITONAVIR**—consider increasing dose of olanzapine; avoidance of clozapine advised by manufacturer of • **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when clozapine, haloperidol or phenothiazines given with • **SAQUINAVIR**—avoid concomitant use
- Anxiolytics and Hypnotics: increased sedative effect when antipsychotics given with • **ANXIOLYTICS AND HYPNOTICS**; plasma concentration of haloperidol possibly increased by • **ALPRAZOLAM**; lurasidone increases plasma concentration of • **MIDAZOLAM**; serious adverse events reported with concomitant use of clozapine and • **BENZODIAZEPINES** (causality not established); increased risk of hypotension, bradycardia and respiratory depression when intramuscular olanzapine given with parenteral • **BENZODIAZEPINES**; plasma concentration of haloperidol increased by • **BUSPIRONE**
- Aprepitant: avoidance of pimozide advised by manufacturer of • **APREPITANT**
- Atomoxetine: increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with • **ATOMOXETINE**
- Beta-blockers: enhanced hypotensive effect when phenothiazines given with • **BETA-BLOCKERS**; plasma concentration of both drugs may increase when chlorpromazine given with • **PROPRANOLOL**; increased risk of ventricular arrhythmias when droperidol or zuclopenthixol given with • **SOTALOL**—avoid concomitant use; increased risk of ventricular arrhythmias when amisulpride, phenothiazines, pimozide or sulpiride given with • **SOTALOL**; possible increased risk of ventricular arrhythmias when risperidone given with • **SOTALOL**; possible increased risk of ventricular arrhythmias when haloperidol given with • **SOTALOL**—avoid concomitant use
- Calcium-channel Blockers: enhanced hypotensive effect when antipsychotics given with • **CALCIUM-CHANNEL BLOCKERS**; plasma concentration of lurasidone increased by • **DILTIAZEM** (see under Lurasidone, in BNF); plasma concentration of lurasidone possibly increased by • **VERAPAMIL** (see under Lurasidone, in BNF)
 - ▶ Clonidine: enhanced hypotensive effect when phenothiazines given with • **CLONIDINE**
- Cobicistat: plasma concentration of lurasidone possibly increased by • **COBICISTAT**—avoid concomitant use; plasma concentration of pimozide possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Cytotoxics: avoid concomitant use of clozapine with • **CYTOTOXICS** (increased risk of agranulocytosis); possible increased risk of ventricular arrhythmias when haloperidol given with • **BOSUTINIB**; caution with pimozide advised by

Antipsychotics

- Cytotoxics (continued)
 - manufacturer of • **CIZOTINIB**; avoidance of pimozide and quetiapine advised by manufacturer of • **IDELALISIB**; avoidance of pimozide advised by manufacturer of • **LAPATINIB**; possible increased risk of ventricular arrhythmias when amisulpride, chlorpromazine, haloperidol, pimozide, sulpiride or zuclopenthixol given with • **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when antipsychotics that prolong the QT interval given with • **ARSENIC TRIOXIDE**; increased risk of ventricular arrhythmias when haloperidol given with • **ARSENIC TRIOXIDE**
- ▶ Deferasirox: avoidance of clozapine advised by manufacturer of • **DEFERASIROX**
- ▶ Desferrioxamine: manufacturer of levomepromazine advises avoid concomitant use with • **DESFERRIOXAMINE**; avoidance of prochlorperazine advised by manufacturer of • **DESFERRIOXAMINE**
- ▶ Diazoxide: enhanced hypotensive effect when phenothiazines given with • **DIAZOXIDE**
- Diuretics: risk of ventricular arrhythmias with amisulpride increased by hypokalaemia caused by • **DIURETICS**; risk of ventricular arrhythmias with pimozide increased by hypokalaemia caused by • **DIURETICS** (avoid concomitant use); enhanced hypotensive effect when phenothiazines given with • **DIURETICS**
- ▶ Dopaminergics: increased risk of extrapyramidal side-effects when antipsychotics given with • **AMANTADINE**; antipsychotics antagonise effects of • **APOMORPHINE**, • **CO-BENELDOPA**, • **CO-CARELDOPA**, • **LEVODOPA** and • **PERGOLIDE**; antipsychotics antagonise hypoprolactinaemic and antiparkinsonian effects of • **BROMOCRIPTINE** and • **CABERGOLINE**; manufacturer of amisulpride advises avoid concomitant use of • **CO-BENELDOPA**, • **CO-CARELDOPA** and • **LEVODOPA** (antagonism of effect); avoidance of antipsychotics advised by manufacturer of • **PRAMIPEXOLE**, • **ROPINIROLE** and • **ROTIGOTINE** (antagonism of effect)
- ▶ Ergot Alkaloids: lurasidone possibly increases plasma concentration of • **ERGOT ALKALOIDS** (increased risk of toxicity)
- Fosaprepitant: avoidance of pimozide advised by manufacturer of • **FOSAPREPITANT**
- Grapefruit Juice: manufacturer of lurasidone and pimozide advises avoid concomitant use with • **GRAPEFRUIT JUICE**; plasma concentration of quetiapine possibly increased by • **GRAPEFRUIT JUICE**—manufacturer of quetiapine advises avoid concomitant use
- ▶ Guanfacine: sedative effects possibly increased when antipsychotics given with • **GUANFACINE**
- ▶ Histamine: antipsychotics theoretically antagonise effects of • **HISTAMINE**—manufacturer of histamine advises avoid concomitant use
- Hormone Antagonists: manufacturer of droperidol advises avoid concomitant use with • **TAMOXIFEN** (risk of ventricular arrhythmias)
- Ivabradine: increased risk of ventricular arrhythmias when pimozide given with • **IVABRADINE**
- Lithium: increased risk of extrapyramidal side-effects and possibly neurotoxicity when clozapine, flupentixol, haloperidol, phenothiazines, risperidone or zuclopenthixol given with • **LITHIUM**; possible risk of toxicity when olanzapine given with • **LITHIUM**; extrapyramidal side-effects of quetiapine possibly increased by • **LITHIUM**; increased risk of extrapyramidal side-effects when sulpiride given with • **LITHIUM**
- ▶ Memantine: effects of antipsychotics possibly reduced by • **MEMANTINE**
- ▶ Methyldopa: enhanced hypotensive effect when antipsychotics given with • **METHYLDOPA** (also increased risk of extrapyramidal effects)
- ▶ Metoclopramide: increased risk of extrapyramidal side-effects when antipsychotics given with • **METOCLOPRAMIDE**
- ▶ Moxonidine: enhanced hypotensive effect when phenothiazines given with • **MOXONIDINE**
- Muscle Relaxants: promazine possibly enhances effects of • **SUXAMETHONIUM**
- ▶ Nitrates: enhanced hypotensive effect when phenothiazines given with • **NITRATES**

Antipsychotics (continued)

- **Penicillamine**: increased risk of haematological toxicity when clozapine given with ● **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- **Pentamidine Isetionate**: increased risk of ventricular arrhythmias when amisulpride or droperidol given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use; increased risk of ventricular arrhythmias when phenothiazines given with ● **PENTAMIDINE ISETIONATE**
- **Sodium Benzoate**: haloperidol possibly reduces effects of **SODIUM BENZOATE**
- **Sodium Oxybate**: antipsychotics possibly enhance effects of **SODIUM OXYBATE**
- **Sodium Phenylbutyrate**: haloperidol possibly reduces effects of **SODIUM PHENYLBUTYRATE**
- **Sympathomimetics**: antipsychotics antagonise hypertensive effect of **SYMPATHOMIMETICS**; antipsychotic effects of chlorpromazine possibly antagonised by **DEXAMFETAMINE**; chlorpromazine possibly reduces effects of **LISDEXAMFETAMINE**; side-effects of risperidone possibly increased by **METHYLPHENIDATE**
- **Tacrolimus**: manufacturer of droperidol advises avoid concomitant use with ● **TACROLIMUS** (risk of ventricular arrhythmias)
- **Tetrabenazine**: increased risk of extrapyramidal side-effects when antipsychotics given with **TETRABENAZINE**
- **Ulcer-healing Drugs**: effects of antipsychotics, chlorpromazine and clozapine possibly enhanced by **CIMETIDINE**; plasma concentration of clozapine possibly reduced by **OMEPRazole**; absorption of sulpiride reduced by **SUCRALFATE**
- **Vasodilator Antihypertensives**: enhanced hypotensive effect when phenothiazines given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Antivirals see individual drugs**Anxiolytics and Hypnotics**

- **ACE Inhibitors**: enhanced hypotensive effect when anxiolytics and hypnotics given with **ACE INHIBITORS**
 - **Adrenergic Neurone Blockers**: enhanced hypotensive effect when anxiolytics and hypnotics given with **ADRENERGIC NEURONE BLOCKERS**
 - **Alcohol**: increased sedative effect when anxiolytics and hypnotics given with **ALCOHOL**
 - **Alpha-blockers**: enhanced hypotensive and sedative effects when anxiolytics and hypnotics given with **ALPHA-BLOCKERS**
 - **Aminophylline**: effects of benzodiazepines possibly reduced by **AMINOPHYLLINE**
 - **Anaesthetics, General**: increased sedative effect when anxiolytics and hypnotics given with **GENERAL ANAESTHETICS**
 - **Analgesics**: metabolism of midazolam possibly inhibited by **FENTANYL**; increased sedative effect when anxiolytics and hypnotics given with **OPIOID ANALGESICS**
 - **Angiotensin-II Receptor Antagonists**: enhanced hypotensive effect when anxiolytics and hypnotics given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
 - **Antibacterials**: metabolism of midazolam inhibited by ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN** (increased plasma concentration with increased sedation); plasma concentration of buspirone increased by **ERYTHROMYCIN** (reduce dose of buspirone); metabolism of zopiclone inhibited by **ERYTHROMYCIN**; manufacturer of zolpidem advises avoid concomitant use with **CIPROFLOXACIN**; metabolism of benzodiazepines possibly accelerated by **RIFAMPICIN** (reduced plasma concentration); metabolism of diazepam and zaleplon accelerated by **RIFAMPICIN** (reduced plasma concentration); metabolism of buspirone possibly accelerated by **RIFAMPICIN**; metabolism of zolpidem accelerated by **RIFAMPICIN** (reduced plasma concentration and reduced effect); plasma concentration of zopiclone significantly reduced by **RIFAMPICIN**; metabolism of diazepam inhibited by **ISONIAZID**
 - **Anticoagulants**: chloral may transiently enhance anticoagulant effect of **COUMARINS**
 - **Antidepressants**: plasma concentration of alprazolam increased by **FLUOXETINE**; plasma concentration of melatonin increased by ● **FLUVOXAMINE**—avoid concomitant use; plasma concentration of some benzodiazepines increased by
- Anxiolytics and Hypnotics**
- **Antidepressants** (continued)
 - **FLUVOXAMINE**; sedative effects possibly increased when zolpidem given with **SERTRALINE**; manufacturer of buspirone advises avoid concomitant use with **MAOIs**; avoidance of buspirone for 14 days after stopping ● **TRANLYCYPROMINE** advised by manufacturer of translycypromine; plasma concentration of *oral* midazolam possibly reduced by **ST JOHN'S WORT**; increased sedative effect when anxiolytics and hypnotics given with **MIRTAPAZINE**, **TRICYCLIC-RELATED ANTIDEPRESSANTS** or **TRICYCLICS**
 - **Antiepileptics**: plasma concentration of midazolam reduced by **CARBAMAZEPINE** and **PERAMPANEL**; plasma concentration of clonazepam often reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**; benzodiazepines possibly increase or decrease plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; diazepam increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; increased sedative effect when anxiolytics and hypnotics given with **PHENOBARBITAL** or **PRIMIDONE**; increased risk of side-effects when clonazepam given with **SODIUM VALPROATE** or **VALPROIC ACID**; clobazam possibly increases plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**; plasma concentration of diazepam and lorazepam possibly increased by **SODIUM VALPROATE**; plasma concentration of clobazam increased by **STIRIPENTOL**; plasma concentration of diazepam and lorazepam possibly increased by **VALPROIC ACID**
 - **Antifungals**: plasma concentration of alprazolam increased by ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of midazolam increased by ● **KETOCONAZOLE** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam); plasma concentration of zolpidem increased by **KETOCONAZOLE**; plasma concentration of diazepam and midazolam increased by ● **FLUCONAZOLE** (risk of prolonged sedation); plasma concentration of alprazolam increased by **ITRACONAZOLE**; plasma concentration of midazolam increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE** (risk of prolonged sedation); plasma concentration of buspirone increased by **ITRACONAZOLE** (reduce dose of buspirone); plasma concentration of diazepam increased by ● **VORICONAZOLE** (risk of prolonged sedation)
 - **Antihistamines**: increased sedative effect when anxiolytics and hypnotics given with **ANTIHISTAMINES**
 - **Antipsychotics**: increased sedative effect when anxiolytics and hypnotics given with **ANTIPSYCHOTICS**; alprazolam possibly increases plasma concentration of **HALOPERIDOL**; buspirone increases plasma concentration of **HALOPERIDOL**; serious adverse events reported with concomitant use of benzodiazepines and ● **CLOZAPINE** (causality not established); plasma concentration of midazolam increased by **LURASIDONE**; increased risk of hypotension, bradycardia and respiratory depression when *parenteral* benzodiazepines given with *intramuscular* ● **OLANZAPINE**
 - **Antivirals**: plasma concentration of midazolam possibly increased by ● **ATAZANAVIR**—avoid concomitant use of *oral* midazolam; plasma concentration of *oral* midazolam increased by ● **BOCEPREVIR**—manufacturer of boceprevir advises avoid concomitant use; increased risk of prolonged sedation when midazolam given with ● **EFAVIRENZA**—avoid concomitant use; plasma concentration of midazolam possibly increased by ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **TELAPREVIR** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam); increased risk of prolonged sedation when alprazolam given with ● **INDINAVIR**—avoid concomitant use; plasma concentration of alprazolam, diazepam, flurazepam and zolpidem possibly increased by ● **RITONAVIR** (risk of extreme sedation and respiratory depression—avoid concomitant use); plasma concentration of anxiolytics and hypnotics possibly increased by ● **RITONAVIR**; plasma concentration of buspirone increased by **RITONAVIR** (increased risk of toxicity); plasma concentration of midazolam increased by ● **SAQUINAVIR** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam); plasma concentration of *oral* midazolam increased by **SIMEPREVIR**

Anxiolytics and Hypnotics (continued)

- ▶ **Aprepitant**: plasma concentration of midazolam increased by **APREPITANT** (risk of prolonged sedation)
- ▶ **Beta-blockers**: enhanced hypotensive effect when anxiolytics and hypnotics given with **BETA-BLOCKERS**
- ▶ **Calcium-channel Blockers**: enhanced hypotensive effect when anxiolytics and hypnotics given with **CALCIUM-CHANNEL BLOCKERS**; midazolam increases absorption of **LERCANIDIPINE**; metabolism of midazolam inhibited by **DILTIAZEM** and **VERAPAMIL** (increased plasma concentration with increased sedation); plasma concentration of buspirone increased by **DILTIAZEM** and **VERAPAMIL** (reduce dose of buspirone)
- ▶ **Cardiac Glycosides**: alprazolam increases plasma concentration of **DIGOXIN** (increased risk of toxicity)
- ▶ **Clonidine**: enhanced hypotensive effect when anxiolytics and hypnotics given with **CLONIDINE**
- **Cobicistat**: avoidance of *oral* midazolam advised by manufacturer of ● **COBICISTAT**
- **Cytotoxics**: plasma concentration of midazolam increased by ● **CRIZOTINIB** and **NILOTINIB**; avoidance of *oral* midazolam advised by manufacturer of **IDELALISIB**
- ▶ **Deferasirox**: plasma concentration of midazolam possibly reduced by **DEFERASIROX**
- ▶ **Diazoxide**: enhanced hypotensive effect when anxiolytics and hypnotics given with **DIAZOXIDE**
- ▶ **Disulfiram**: metabolism of benzodiazepines inhibited by **DISULFIRAM** (increased sedative effects); increased risk of temazepam toxicity when given with **DISULFIRAM**
- ▶ **Diuretics**: enhanced hypotensive effect when anxiolytics and hypnotics given with **DIURETICS**; administration of chloral with *parenteral* **FUROSEMIDE** may displace thyroid hormone from binding sites
- ▶ **Dopaminergics**: benzodiazepines possibly antagonise effects of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- ▶ **Fosaprepitant**: plasma concentration of midazolam increased by **FOSAPREPITANT** (risk of prolonged sedation)
- ▶ **Grapefruit Juice**: plasma concentration of *oral* midazolam possibly increased by **GRAPEFRUIT JUICE**; plasma concentration of buspirone increased by **GRAPEFRUIT JUICE**
- ▶ **Guanfacine**: sedative effects possibly increased when anxiolytics and hypnotics given with **GUANFACINE**
- **Hormone Antagonists**: plasma concentration of midazolam reduced by ● **ENZALUTAMIDE**
- ▶ **Ivacaftor**: plasma concentration of midazolam increased by **IVACAFTOR**
- ▶ **Lipid-regulating Drugs**: plasma concentration of *intravenous* midazolam increased by **ATORVASTATIN**; separating administration from alprazolam by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ **Lithium**: increased risk of neurotoxicity when clonazepam given with **LITHIUM**
- ▶ **Lofexidine**: increased sedative effect when anxiolytics and hypnotics given with **LOFEXIDINE**
- ▶ **Methylodopa**: enhanced hypotensive effect when anxiolytics and hypnotics given with **METHYLDOPA**
- **Methylthioninium**: possible risk of CNS toxicity when buspirone given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)
- ▶ **Moxonidine**: enhanced hypotensive effect when anxiolytics and hypnotics given with **MOXONIDINE**; sedative effects possibly increased when benzodiazepines given with **MOXONIDINE**
- ▶ **Muscle Relaxants**: increased sedative effect when anxiolytics and hypnotics given with **BACLOFEN** or **TIZANIDINE**
- ▶ **Netupitant**: plasma concentration of midazolam increased by **NETUPITANT**
- ▶ **Nitrates**: enhanced hypotensive effect when anxiolytics and hypnotics given with **NITRATES**
- ▶ **Oestrogens**: plasma concentration of melatonin increased by **OESTROGENS**; plasma concentration of chlordiazepoxide, diazepam and nitrazepam possibly increased by **OESTROGENS**; plasma concentration of lorazepam, oxazepam and temazepam possibly reduced by **OESTROGENS**
- ▶ **Progestogens**: plasma concentration of chlordiazepoxide, diazepam and nitrazepam possibly increased by

Anxiolytics and Hypnotics**Progestogens** (continued)

- ▶ **PROGESTOGENS**: plasma concentration of lorazepam, oxazepam and temazepam possibly reduced by **PROGESTOGENS**
- **Sodium Oxybate**: benzodiazepines enhance effects of ● **SODIUM OXYBATE** (avoid concomitant use)
- ▶ **Theophylline**: effects of benzodiazepines possibly reduced by **THEOPHYLLINE**
- ▶ **Ulcer-healing Drugs**: plasma concentration of melatonin increased by **CIMETIDINE**; metabolism of benzodiazepines, clomethiazole and zaleplon inhibited by **CIMETIDINE** (increased plasma concentration); metabolism of diazepam possibly inhibited by **ESOMEPRAZOLE** and **OMEPRAZOLE** (increased plasma concentration)
- ▶ **Vasodilator Antihypertensives**: enhanced hypotensive effect when anxiolytics and hypnotics given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Apixaban

- **Analgesics**: increased risk of haemorrhage when anticoagulants given with *intravenous* ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- **Antibacterials**: manufacturer of apixaban advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of apixaban possibly reduced by ● **RIFAMPICIN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism
- **Anticoagulants**: increased risk of haemorrhage when apixaban given with other ● **ANTICOAGULANTS** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- **Antidepressants**: plasma concentration of apixaban possibly reduced by ● **ST JOHN'S WORT**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism
- **Antiepileptics**: plasma concentration of apixaban possibly reduced by ● **CARBAMAZEPINE**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; plasma concentration of apixaban possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- **Antifungals**: plasma concentration of apixaban increased by ● **KETOCONAZOLE**—manufacturer of apixaban advises avoid concomitant use; manufacturer of apixaban advises avoid concomitant use with **ITRACONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE**
- ▶ **Antivirals**: manufacturer of apixaban advises avoid concomitant use with **ATAZANAVIR**, **BOCEPREVIR**, **DARUNAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR**, **RITONAVIR**, **SAQUINAVIR**, **TELAPREVIR** and **TIPRANAVIR**
- ▶ **Cobicistat**: manufacturer of apixaban advises avoid concomitant use with **COBICISTAT**
- ▶ **Sulfinpyrazone**: increased risk of bleeding when apixaban given with **SULFINPYRAZONE**

Apomorphine

- ▶ **Antipsychotics**: effects of apomorphine antagonised by **ANTIPSYCHOTICS**
- **Dopaminergics**: possible increased risk of ventricular arrhythmias when apomorphine given with ● **DOMPERIDONE**
- ▶ **Dopaminergics**: effects of apomorphine possibly enhanced by **ENTACAPONE**
- **5HT₃-receptor Antagonists**: possible increased hypotensive effect when apomorphine given with ● **ONDANSETRON**—avoid concomitant use
- ▶ **Memantine**: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ **Methyldopa**: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**

Apraclonidine

- Antidepressants: manufacturer of apraclonidine advises avoid concomitant use with **MAOIs, TRICYCLIC-RELATED ANTIDEPRESSANTS** and **TRICYCLICS**
- Sympathomimetics: manufacturer of apraclonidine advises avoid concomitant use with **SYMPATHOMIMETICS**

Apremilast

- Antibacterials: plasma concentration of apremilast reduced by **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of apremilast possibly reduced by **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of apremilast possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PHENYTOIN**—avoid concomitant use

Aprepitant

- Antibacterials: plasma concentration of aprepitant possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of aprepitant reduced by **RIFAMPICIN**
- Anticoagulants: aprepitant possibly reduces anticoagulant effect of **WARFARIN**
- Antidepressants: manufacturer of aprepitant advises avoid concomitant use with **ST JOHN'S WORT**
- Antidiabetics: aprepitant reduces plasma concentration of **TOLBUTAMIDE**
- Antiepileptics: plasma concentration of aprepitant possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of aprepitant increased by **KETOCONAZOLE**
- Antipsychotics: manufacturer of aprepitant advises avoid concomitant use with **PIMOZIDE**
- Antivirals: plasma concentration of aprepitant possibly increased by **RITONAVIR**
- Anxiolytics and Hypnotics: aprepitant increases plasma concentration of **MIDAZOLAM** (risk of prolonged sedation)
- Avanafil: aprepitant possibly increases plasma concentration of **AVANAFIL**—see under Avanafil, in BNF
- Calcium-channel Blockers: plasma concentration of both drugs may increase when aprepitant given with **DILTIAZEM**
- Corticosteroids: aprepitant inhibits metabolism of **DEXAMETHASONE** and **METHYLPREDNISOLONE** (reduce dose of dexamethasone and methylprednisolone)
- Cytotoxics: aprepitant possibly increases the plasma concentration of **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; aprepitant possibly increases the plasma concentration of **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Dapoxetine: manufacturer of dapoxetine advises dose reduction when aprepitant given with **DAPOXETINE** (see under Dapoxetine, in BNF)
- Guanfacine: aprepitant possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- Oestrogens: aprepitant possibly causes contraceptive failure of hormonal contraceptives containing **OESTROGENS** (alternative contraception recommended)
- Progestogens: aprepitant possibly causes contraceptive failure of hormonal contraceptives containing **PROGESTOGENS** (alternative contraception recommended)

Argatroban

- Analgesics: increased risk of haemorrhage when anticoagulants given with **intravenous DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with **APIXABAN**, **DABIGATRAN**, **EDOXABAN** and **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Aripiprazole *see* Antipsychotics**Arsenic Trioxide**

- Anti-arrhythmics: increased risk of ventricular arrhythmias when arsenic trioxide given with **AMIODARONE** or **DISOPYRAMIDE**

Arsenic Trioxide (continued)

- Antibacterials: increased risk of ventricular arrhythmias when arsenic trioxide given with **DELAMANID**, **ERYTHROMYCIN**, **LEVOFLOXACIN** or **MOXIFLOXACIN**
- Antidepressants: increased risk of ventricular arrhythmias when arsenic trioxide given with **AMITRIPTYLINE** or **CLOMIPRAMINE**
- Antifungals: increased risk of ventricular arrhythmias when arsenic trioxide given with **AMPHOTERICIN**
- Antimalarials: avoidance of arsenic trioxide advised by manufacturer of **ARTEMNOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- Antipsychotics: increased risk of ventricular arrhythmias when arsenic trioxide given with **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of ventricular arrhythmias when arsenic trioxide given with **HALOPERIDOL**; avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- Beta-blockers: increased risk of ventricular arrhythmias when arsenic trioxide given with **SOTALOL**
- Cytotoxics: possible increased risk of ventricular arrhythmias when arsenic trioxide given with **VANDETANIB**—avoid concomitant use
- Diuretics: risk of ventricular arrhythmias with arsenic trioxide increased by hypokalaemia caused by **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- Lithium: increased risk of ventricular arrhythmias when arsenic trioxide given with **LITHIUM**

Artemether with Lumefantrine

- Anti-arrhythmics: manufacturer of artemether with lumefantrine advises avoid concomitant use with **AMIODARONE**, **DISOPYRAMIDE** and **FLECAINIDE** (risk of ventricular arrhythmias)
- Antibacterials: manufacturer of artemether with lumefantrine advises avoid concomitant use with **MACROLIDES** and **QUINOLONES**
- Antidepressants: possible increased risk of ventricular arrhythmias when artemether with lumefantrine given with **CITALOPRAM** or **ESCITALOPRAM**—avoid concomitant use; manufacturer of artemether with lumefantrine advises avoid concomitant use with **ANTIDEPRESSANTS**
- Antifungals: manufacturer of artemether with lumefantrine advises avoid concomitant use with **IMIDAZOLES** and **TRIAZOLES**
- Antimalarials: manufacturer of artemether with lumefantrine advises avoid concomitant use with **ANTIMALARIALS**; increased risk of ventricular arrhythmias when artemether with lumefantrine given with **QUININE**
- Antipsychotics: manufacturer of artemether with lumefantrine advises avoid concomitant use with **ANTIPSYCHOTICS**
- Antivirals: manufacturer of artemether with lumefantrine advises caution with **ATAZANAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR**, **RITONAVIR**, **SAQUINAVIR** and **TIPIRANAVIR**; avoidance of artemether with lumefantrine advised by manufacturer of **BOCEPREVIR**; plasma concentration of lumefantrine increased when artemether with lumefantrine given with **DARUNAVIR**; plasma concentration of artemether with lumefantrine reduced by **EFAVIRENZ** and **ETRAVIRINE**
- Beta-blockers: manufacturer of artemether with lumefantrine advises avoid concomitant use with **METOPROLOL** and **SOTALOL**
- Cytotoxics: possible increased risk of ventricular arrhythmias when artemether with lumefantrine given with **VANDETANIB**—avoid concomitant use
- Grapefruit Juice: plasma concentration of artemether with lumefantrine possibly increased by **GRAPEFRUIT JUICE**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Ulcer-healing Drugs: manufacturer of artemether with lumefantrine advises avoid concomitant use with **CIMETIDINE**
- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF

Arteminol with Piperazine

NOTE Piperazine has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped

- Analgesics: manufacturer of arteminol with piperazine advises avoid concomitant use with **METHADONE** (possible risk of ventricular arrhythmias)
- Anti-arrhythmics: manufacturer of arteminol with piperazine advises avoid concomitant use with **AMIODARONE** and **DISOPYRAMIDE** (possible risk of ventricular arrhythmias)
- Antibacterials: manufacturer of arteminol with piperazine advises avoid concomitant use with **MACROLIDES** and **MOXIFLOXACIN** (possible risk of ventricular arrhythmias); manufacturer of arteminol with piperazine advises avoid concomitant use with **RIFAMPICIN**
- Antidepressants: possible increased risk of ventricular arrhythmias when arteminol with piperazine given with **CITALOPRAM** or **ESCITALOPRAM**—avoid concomitant use; manufacturer of arteminol with piperazine advises avoid concomitant use with **ANTIDEPRESSANTS**
- Antiepileptics: manufacturer of arteminol with piperazine advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: manufacturer of arteminol with piperazine advises avoid concomitant use with **IMIDAZOLES** and **TRIAZOLES** (possible risk of ventricular arrhythmias)
- Antihistamines: manufacturer of arteminol with piperazine advises avoid concomitant use with **MIZOLASTINE** (possible risk of ventricular arrhythmias)
- Antimalarials: avoidance of antimalarials advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**
- Antipsychotics: manufacturer of arteminol with piperazine advises avoid concomitant use with **DROPERIDOL**, **HALOPERIDOL**, **PHENOTHIAZINES** and **PIMOZIDE** (possible risk of ventricular arrhythmias)
- Antivirals: manufacturer of arteminol with piperazine advises avoid concomitant use with **SAQUINAVIR** (possible risk of ventricular arrhythmias)
- Beta-blockers: manufacturer of arteminol with piperazine advises avoid concomitant use with **SOTALOL** (possible risk of ventricular arrhythmias)
- Cytotoxics: manufacturer of arteminol with piperazine advises avoid concomitant use with **ARSENIC TRIOXIDE** (possible risk of ventricular arrhythmias); manufacturer of arteminol with piperazine advises avoid concomitant use with **VINBLASTINE**, **VINCISTINE**, **VINFLUNINE** and **VINORELBINE**
- Domperidone: manufacturer of arteminol with piperazine advises avoid concomitant use with **DOMPERIDONE** (possible risk of ventricular arrhythmias)
- Grapefruit Juice: manufacturer of arteminol with piperazine advises avoid concomitant use with **GRAPEFRUIT JUICE**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Pentamidine Isetionate: manufacturer of arteminol with piperazine advises avoid concomitant use with **PENTAMIDINE ISETIONATE** (possible risk of ventricular arrhythmias)
- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Antimalarial Vaccine in BNFC

Ascorbic acid see Vitamins

Asenapine see Antipsychotics

Aspirin

- Adsorbents: absorption of aspirin possibly reduced by **KAOLIN**
- Anaesthetics, General: aspirin possibly enhances effects of **THIOPENTAL**
- Analgesics: avoid concomitant use of aspirin with **NSAIDS** (increased side-effects); antiplatelet effect of aspirin possibly reduced by **IBUPROFEN**
- Antacids: excretion of aspirin increased by alkaline urine due to some **ANTACIDS**
- Anticoagulants: increased risk of bleeding when aspirin given with **COUMARINS** or **PHENINDIONE** (due to antiplatelet

Aspirin

- Anticoagulants (continued)
 - effect); increased risk of bleeding when high-dose aspirin given with **EDOXABAN** (avoid concomitant use); aspirin enhances anticoagulant effect of **HEPARINS**
- Antidepressants: increased risk of bleeding when aspirin given with **SSRIS** or **VENLAFAXINE**
- Antiepileptics: aspirin enhances effects of **FOSPHENYTOIN**, **PHENYTOIN**, **SODIUM VALPROATE** and **VALPROIC ACID**
- Clopidogrel: increased risk of bleeding when aspirin given with **CLOPIDOGREL**
- Corticosteroids: increased risk of gastro-intestinal bleeding and ulceration when aspirin given with **CORTICOSTEROIDS**, also corticosteroids reduce plasma concentration of salicylate
- Cytotoxics: aspirin reduces excretion of **METHOTREXATE** (increased risk of toxicity); aspirin possibly reduces renal excretion of **POMETREXED**—consult product literature
- Diuretics: increased risk of toxicity when high-dose aspirin given with **ACETAZOLAMIDE**; aspirin antagonises diuretic effect of **SPIRONOLACTONE**; possible increased risk of toxicity when high-dose aspirin given with **LOOP DIURETICS** (also possible reduced effect of loop diuretics)
- Iloprost: increased risk of bleeding when aspirin given with **ILOPROST**
- Leukotriene Receptor Antagonists: aspirin increases plasma concentration of **ZAFILUKAST**
- Metoclopramide: rate of absorption of aspirin increased by **METOCLOPRAMIDE** (enhanced effect)
- Nicorandil: increased risk of gastro-intestinal bleeding and ulceration when aspirin given with **NICORANDIL**
- Sulfapyrazole: aspirin antagonises effects of **SULFINPYRAZONE**

Atazanavir

- Analgesics: atazanavir increases plasma concentration of **BUPRENORPHINE**
- Antacids: absorption of atazanavir reduced by **ANTACIDS** (give at least 2 hours before or 1 hour after antacids)
- Anti-arrhythmics: atazanavir possibly increases plasma concentration of **AMIODARONE** and **LIDOCAINE**
- Antibacterials: plasma concentration of both drugs increased when atazanavir given with **CLARITHROMYCIN**; atazanavir increases plasma concentration of **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of atazanavir reduced by **RIFAMPICIN**—avoid concomitant use; avoidance of concomitant atazanavir in severe renal and hepatic impairment advised by manufacturer of **TELITHROMYCIN**
- Anticoagulants: atazanavir may enhance or reduce anticoagulant effect of **WARFARIN**; avoidance of atazanavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**
- Antidepressants: plasma concentration of atazanavir reduced by **ST JOHN'S WORT**—avoid concomitant use
- Antifungals: plasma concentration of atazanavir increased by **POSACONAZOLE**; atazanavir increases or decreases the plasma concentration of **VORICONAZOLE** and plasma concentration of atazanavir also reduced
- Antimalarials: caution with atazanavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; atazanavir possibly increases plasma concentration of **QUININE** (increased risk of toxicity)
- Antimuscarinics: avoidance of atazanavir advised by manufacturer of **DARIFENACIN**; manufacturer of fesoterodine advises dose reduction when atazanavir given with **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: atazanavir possibly increases plasma concentration of **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); atazanavir possibly increases plasma concentration of **PIMOZIDE**—avoid concomitant use; atazanavir possibly increases plasma concentration of **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: plasma concentration of atazanavir reduced by **BOCEPREVIR**; atazanavir increases the plasma concentration of **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNFC); absorption of atazanavir reduced by **DIDANOSINE tablets** (give at least 2 hours before or 1 hour after didanosine tablets); manufacturer of atazanavir advises avoid concomitant use with **EFAVIRENZ** (plasma concentration of

Atazanavir

- **Antivirals** (continued)
 - atazanavir reduced); atazanavir boosted with ritonavir increases plasma concentration of ● **ELVITEGRAVIR** (reduce dose of elvitegravir); avoid concomitant use of atazanavir with ● **INDINAVIR**; atazanavir increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); plasma concentration of atazanavir possibly reduced by ● **NEVIRAPINE**—avoid concomitant use; atazanavir increases plasma concentration of ● **PARITAPREVR**; increased risk of ventricular arrhythmias when atazanavir given with ● **SAQUINAVIR**—avoid concomitant use; atazanavir possibly reduces plasma concentration of ● **TELAPREVR**, also plasma concentration of atazanavir possibly increased; plasma concentration of atazanavir reduced by ● **TENOFOVIR**, also plasma concentration of tenofovir possibly increased; atazanavir increases plasma concentration of ● **TIPRANAVIR** (also plasma concentration of atazanavir reduced)
 - **Anxiolytics and Hypnotics**: atazanavir possibly increases plasma concentration of ● **MIDAZOLAM**—avoid concomitant use of oral midazolam
 - **Calcium-channel Blockers**: atazanavir increases plasma concentration of ● **DILTIAZEM** (reduce dose of diltiazem); atazanavir possibly increases plasma concentration of ● **VERAPAMIL**
 - **Ciclosporin**: atazanavir possibly increases plasma concentration of ● **CICLOSPORIN**
 - **Colchicine**: atazanavir possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
 - **Cytotoxics**: atazanavir possibly increases plasma concentration of ● **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); atazanavir possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; atazanavir possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; atazanavir possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); atazanavir possibly increases plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); avoidance of atazanavir advised by manufacturer of ● **CABAZITAXEL**; atazanavir possibly inhibits metabolism of ● **IRINOTECAN** (increased risk of toxicity)
 - **Dapoxetine**: avoidance of atazanavir advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
 - **Ergot Alkaloids**: atazanavir possibly increases plasma concentration of ● **ERGOT ALKALOIDS**—avoid concomitant use
 - **Guanfacine**: atazanavir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
 - **Lipid-regulating Drugs**: possible increased risk of myopathy when atazanavir given with ● **ATORVASTATIN** or ● **PRAVASTATIN**; atazanavir increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when atazanavir given with ● **SIMVASTATIN** (avoid concomitant use)
 - **Oestrogens**: atazanavir increases plasma concentration of ● **ETHINYLESTRADIOL**
 - **Orlistat**: absorption of atazanavir possibly reduced by ● **ORLISTAT**
 - **Progestogens**: atazanavir increases plasma concentration of ● **NORETHISTERONE**
 - **Ranolazine**: atazanavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
 - **Sirolimus**: atazanavir possibly increases plasma concentration of ● **SIROLIMUS**
 - **Sympathomimetics, Beta₂**: atazanavir possibly increases plasma concentration of ● **SALMETEROL**—manufacturer of atazanavir advises avoid concomitant use
 - **Tacrolimus**: atazanavir possibly increases plasma concentration of ● **TACROLIMUS**
 - **Ticagrelor**: atazanavir possibly increases plasma concentration of ● **TICAGRELOR**—manufacturer of ticagrelor advises avoid concomitant use

Atazanavir (continued)

- **Ulcer-healing Drugs**: manufacturer of atazanavir advises adjust doses of both drugs when atazanavir given with ● **CIMETIDINE** and ● **NIZATIDINE**—consult atazanavir product literature; plasma concentration of atazanavir reduced by ● **FAMOTIDINE** and ● **RANITIDINE** (adjust doses of both drugs—consult atazanavir product literature); plasma concentration of atazanavir reduced by ● **PROTON PUMP INHIBITORS**—avoid or adjust dose of both drugs (consult product literature)

Atenolol see Beta-blockers

Atomoxetine

- **Analgesics**: increased risk of ventricular arrhythmias when atomoxetine given with ● **METHADONE**; possible increased risk of convulsions when atomoxetine given with ● **TRAMADOL**
- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when atomoxetine given with ● **AMIODARONE** or ● **DISOPYRAMIDE**
- **Antibacterials**: increased risk of ventricular arrhythmias when atomoxetine given with parenteral ● **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when atomoxetine given with ● **MOXIFLOXACIN**
- **Antidepressants**: metabolism of atomoxetine possibly inhibited by ● **FLUOXETINE** and ● **PAROXETINE**; possible increased risk of convulsions when atomoxetine given with ● **ANTIDEPRESSANTS**; atomoxetine should not be started until 2 weeks after stopping ● **MAOIS**, also MAOIs should not be started until at least 2 weeks after stopping atomoxetine; increased risk of ventricular arrhythmias when atomoxetine given with ● **TRICYCLICS**
- **Antimalarials**: increased risk of ventricular arrhythmias when atomoxetine given with ● **MEFLOQUINE**
- **Antipsychotics**: increased risk of ventricular arrhythmias when atomoxetine given with ● **ANTI-PSYCHOTICS** that prolong the QT interval
- **Beta-blockers**: increased risk of ventricular arrhythmias when atomoxetine given with ● **SOTALOL**
 - **Bupropion**: possible increased risk of convulsions when atomoxetine given with ● **BUPROPION**
- **Diuretics**: risk of ventricular arrhythmias with atomoxetine increased by hypokalaemia caused by ● **DIURETICS**
- **Sympathomimetics, Beta₁**: increased risk of cardiovascular side-effects when atomoxetine given with parenteral ● **SALBUTAMOL**

Atorvastatin see Statins

Atovaquone

- **Antibacterials**: manufacturer of atovaquone advises avoid concomitant use with ● **RIFABUTIN** (plasma concentration of both drugs reduced); plasma concentration of atovaquone reduced by ● **RIFAMPICIN** (and concentration of rifampicin increased)—avoid concomitant use; plasma concentration of atovaquone reduced by ● **TETRACYCLINE**
- **Antivirals**: plasma concentration of atovaquone reduced by ● **EFAVIRENZ**—avoid concomitant use; atovaquone possibly reduces plasma concentration of ● **INDINAVIR**; plasma concentration of atovaquone possibly reduced by ● **TRITONAVIR**—manufacturer of atovaquone advises avoid concomitant use; atovaquone increases plasma concentration of ● **ZIDOVUDINE** (increased risk of toxicity)
- **Cytotoxics**: atovaquone possibly increases plasma concentration of ● **ETOPOSIDE**
- **Histamine**: avoidance of atovaquone advised by manufacturer of ● **HISTAMINE**
- **Metoclopramide**: plasma concentration of atovaquone reduced by ● **METOCLOPRAMIDE**—avoid concomitant use

Atracurium see Muscle Relaxants

Atropine see Antimuscarinics

Avanafil

- **ACE Inhibitors**: avanafil possibly enhances hypotensive effect of ● **ENALAPRIL**
- **Alcohol**: possible enhanced hypotensive effect when avanafil given with ● **ALCOHOL**
- **Alpha-blockers**: enhanced hypotensive effect when avanafil given with ● **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate avanafil at the lowest possible dose
- **Antibacterials**: plasma concentration of avanafil possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of avanafil advises avoid concomitant use;

Avanaflil

- **Antibacterials** (continued)
 - plasma concentration of avanaflil increased by
 - **ERYTHROMYCIN**—see under Avanaflil, in BNF; plasma concentration of avanaflil possibly reduced by **RIFAMPICIN**—manufacturer of avanaflil advises avoid concomitant use
 - ▶ **Antiepileptics**: plasma concentration of avanaflil possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE**—manufacturer of avanaflil advises avoid concomitant use
 - **Antifungals**: plasma concentration of avanaflil increased by
 - **KETOCONAZOLE**—avoid concomitant use; plasma concentration of avanaflil possibly increased by
 - **FLUCONAZOLE**—see under Avanaflil, in BNF; plasma concentration of avanaflil possibly increased by
 - **ITRACONAZOLE** and • **VORICONAZOLE**—manufacturer of avanaflil advises avoid concomitant use
 - **Antivirals**: plasma concentration of avanaflil possibly reduced by **EFAVIRENZ**—manufacturer of avanaflil advises avoid concomitant use; plasma concentration of avanaflil possibly increased by • **FOSAMPRENAVIR**—see under Avanaflil, in BNF; plasma concentration of avanaflil possibly increased by
 - **INDINAVIR** and • **SAQUINAVIR**—manufacturer of avanaflil advises avoid concomitant use; plasma concentration of avanaflil significantly increased by • **RITONAVIR**—avoid concomitant use
 - **Aprepitant**: plasma concentration of avanaflil possibly increased by • **APREPITANT**—see under Avanaflil, in BNF
 - ▶ **Bosentan**: plasma concentration of avanaflil possibly reduced by **BOSENTAN**—manufacturer of avanaflil advises avoid concomitant use
 - **Calcium-channel Blockers**: plasma concentration of avanaflil possibly increased by • **DILTIAZEM** and • **VERAPAMIL**—see under Avanaflil, in BNF
 - **Cobicistat**: plasma concentration of avanaflil possibly increased by • **COBICISTAT**—avoid concomitant use
 - ▶ **Fosaprepitant**: plasma concentration of avanaflil possibly increased by **FOSAPREPITANT**
 - ▶ **Grapefruit Juice**: plasma concentration of avanaflil possibly increased by **GRAPEFRUIT JUICE**—manufacturer of avanaflil advises avoid grapefruit juice for 24 hours before avanaflil
 - **Nicorandil**: avanaflil significantly enhances hypotensive effect of • **NICORANDIL** (avoid concomitant use)
 - **Nitrates**: avanaflil significantly enhances hypotensive effect of • **NITRATES** (avoid concomitant use)
 - **Riociguat**: possible enhanced hypotensive effect when avanaflil given with • **RIOCIGUAT**—avoid concomitant use

Axitinib

- ▶ **Antibacterials**: plasma concentration of axitinib possibly increased by **CLARITHROMYCIN**, **ERYTHROMYCIN** and **TELITHROMYCIN** (reduce dose of axitinib—consult axitinib product literature); plasma concentration of axitinib possibly decreased by **RIFABUTIN** (increase dose of axitinib—consult axitinib product literature); plasma concentration of axitinib decreased by **RIFAMPICIN** (increase dose of axitinib—consult axitinib product literature)
- ▶ **Antidepressants**: plasma concentration of axitinib possibly reduced by **ST JOHN'S WORT**—consider increasing dose of axitinib
- ▶ **Antiepileptics**: plasma concentration of axitinib possibly decreased by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (increase dose of axitinib—consult axitinib product literature)
- ▶ **Antifungals**: plasma concentration of axitinib increased by **KETOCONAZOLE** (reduce dose of axitinib—consult axitinib product literature); plasma concentration of axitinib possibly increased by **ITRACONAZOLE** (reduce dose of axitinib—consult axitinib product literature)
- **Antipsychotics**: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ **Antivirals**: plasma concentration of axitinib possibly increased by **ATAZANAVIR**, **INDINAVIR**, **RITONAVIR** and **SAQUINAVIR** (reduce dose of axitinib—consult axitinib product literature)
- ▶ **Corticosteroids**: plasma concentration of axitinib possibly decreased by **DEXAMETHASONE** (increase dose of axitinib—consult axitinib product literature)

Axitinib (continued)

- ▶ **Grapefruit Juice**: plasma concentration of axitinib possibly increased by **GRAPEFRUIT JUICE**

Azathioprine

- ▶ **ACE Inhibitors**: increased risk of anaemia or leucopenia when azathioprine given with **CAPTROPIL** especially in renal impairment; increased risk of anaemia when azathioprine given with **ENALAPRIL** especially in renal impairment
- **Allopurinol**: enhanced effects and increased toxicity of azathioprine when given with • **ALLOPURINOL** (reduce dose of azathioprine to one quarter of usual dose)
- ▶ **Analgesics**: manufacturer of azathioprine advises possible increased risk of myelosuppression when azathioprine given with **INDOMETACIN**
- **Antibacterials**: increased risk of haematological toxicity when azathioprine given with • **SULFAMETHOXAZOLE** (as co-trimoxazole); increased risk of haematological toxicity when azathioprine given with • **TRIMETHOPRIM** (also with co-trimoxazole)
- **Anticoagulants**: azathioprine possibly reduces anticoagulant effect of • **ACENOCOUMAROL**; azathioprine reduces anticoagulant effect of • **WARFARIN**
- **Antivirals**: myelosuppressive effects of azathioprine possibly enhanced by • **RIBAVIRIN**
- **Febuxostat**: avoidance of azathioprine advised by manufacturer of • **FEBUXOSTAT**
- ▶ **Ulcer-healing Drugs**: manufacturer of azathioprine advises possible increased risk of myelosuppression when azathioprine given with **CIMETIDINE**
- **Vaccines**: risk of generalised infections when azathioprine given with live • **VACCINES**—avoid concomitant use

Azelastine see Antihistamines**Azilsartan** see Angiotensin-II Receptor Antagonists**Azithromycin** see Macrolides**Aztreonam**

- **Anticoagulants**: aztreonam possibly enhances anticoagulant effect of • **COUMARINS**
- ▶ **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF

Baclofen see Muscle Relaxants**Bambuterol** see Sympathomimetics, Beta₂**Basiliximab**

- **Antipsychotics**: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

BCG Vaccine see Vaccines**Beclomethasone** see Corticosteroids**Bedaquiline**

- **Antibacterials**: plasma concentration of bedaquiline possibly increased by **CIPROFLOXACIN**, **CLARITHROMYCIN** and **ERYTHROMYCIN**—avoid concomitant use if ciprofloxacin, clarithromycin and erythromycin given for more than 14 days; manufacturer of bedaquiline advises avoid concomitant use with **MOXIFLOXACIN**; plasma concentration of bedaquiline possibly reduced by **RIFABUTIN**—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of bedaquiline reduced by • **RIFAMPICIN**—manufacturer of bedaquiline advises avoid concomitant use; possible increased risk of ventricular arrhythmias when bedaquiline given with • **CLOFAZIMINE**
- ▶ **Antidepressants**: plasma concentration of bedaquiline possibly reduced by **ST JOHN'S WORT**—manufacturer of bedaquiline advises avoid concomitant use
- **Antiepileptics**: plasma concentration of bedaquiline possibly reduced by • **CARBAMAZEPINE**, • **FOSPHENYTOIN** and • **PHENYTOIN**—manufacturer of bedaquiline advises avoid concomitant use
- ▶ **Antifungals**: plasma concentration of bedaquiline increased by **KETOCONAZOLE**—avoid concomitant use if ketoconazole given for more than 14 days; plasma concentration of bedaquiline possibly increased by **FLUCONAZOLE**—avoid concomitant use if fluconazole given for more than 14 days
- ▶ **Antivirals**: plasma concentration of bedaquiline possibly reduced by **EFVIRENZ** and **ETRAVIRINE**—manufacturer of bedaquiline advises avoid concomitant use; plasma

Bedaquiline

- Antivirals (continued)
- concentration of bedaquiline possibly increased by **RITONAVIR**—manufacturer of ritonavir advises avoid concomitant use
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Bee Venom Extracts

- ACE Inhibitors: possible severe anaphylactoid reaction when bee venom extracts given with ● **ACE INHIBITORS**

Belimumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Benadamustine

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Benidrolumethiazide see Diuretics

Benperidol see Antipsychotics

Ben zodiazepines see Anxiolytics and Hypnotics

Benzhiazide see Diuretics

Benzyllenicillin see Penicillins

Beta-Blockers

NOTE Since systemic absorption may follow topical application of beta-blockers to the eye the possibility of interactions, in particular, with drugs such as verapamil should be borne in mind

- ACE Inhibitors: enhanced hypotensive effect when beta-blockers given with ● **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when beta-blockers given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: enhanced hypotensive effect when beta-blockers given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when beta-blockers given with **ALDESLEUKIN**
- Alpha-blockers: enhanced hypotensive effect when beta-blockers given with ● **ALPHA-BLOCKERS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
- Anaesthetics, General: enhanced hypotensive effect when beta-blockers given with **GENERAL ANAESTHETICS**
- Anaesthetics, Local: propranolol increases risk of ● **BUPIVACAINE** toxicity
- Analgesics: hypotensive effect of beta-blockers antagonised by **NSAIDS**; plasma concentration of esmolol possibly increased by **MORPHINE**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when beta-blockers given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Anti-arrhythmics: increased myocardial depression when beta-blockers given with ● **ANTI-ARRHYTHMICS**; increased risk of ventricular arrhythmias when sotalol given with ● **AMIODARONE**, ● **DISOPYRAMIDE** or ● **DRONEDARONE**—avoid concomitant use; increased risk of bradycardia, AV block and myocardial depression when beta-blockers given with ● **AMIODARONE**; plasma concentration of metoprolol and propranolol possibly increased by **DRONEDARONE**; increased risk of myocardial depression and bradycardia when beta-blockers given with ● **FLECAINIDE**; nadolol possibly increases risk of **LIDOCAINE** toxicity; propranolol increases risk of ● **LIDOCAINE** toxicity; plasma concentration of metoprolol and propranolol increased by **PROPAFENONE**
- Antibacterials: increased risk of ventricular arrhythmias when sotalol given with ● **MOXIFLOXACIN**—avoid concomitant use; metabolism of bisoprolol and propranolol accelerated by **RIFAMPICIN** (plasma concentration significantly reduced); plasma concentration of carvedilol, celiprolol and metoprolol reduced by **RIFAMPICIN**; plasma concentration of oral timolol possibly reduced by **RIFAMPICIN**; increased risk of ventricular arrhythmias when sotalol given with ● **DELAMANID**
- Antidepressants: plasma concentration of metoprolol increased by **CITALOPRAM** and **ESCITALOPRAM**; increased risk of ventricular arrhythmias when sotalol given with ● **CITALOPRAM**—avoid concomitant use; avoidance of sotalol advised by manufacturer of ● **ESCITALOPRAM** and ● **VENLAFAXINE** (risk of

Beta-blockers

- Antidepressants (continued)
- ventricular arrhythmias); plasma concentration of propranolol increased by **FLUVOXAMINE**; plasma concentration of metoprolol possibly increased by ● **PAROXETINE**—increased risk of AV block (manufacturer of paroxetine advises avoid concomitant use in cardiac insufficiency); labetalol and propranolol increase plasma concentration of **IMIPRAMINE**; enhanced hypotensive effect when beta-blockers given with ● **MAOIs**; increased risk of ventricular arrhythmias when sotalol given with ● **TRICYCLICS**
- Antidiabetics: beta-blockers may mask warning signs of hypoglycaemia (such as tremor) with **ANTIIDIABETICS**; beta-blockers enhance hypoglycaemic effect of **INSULIN**
- Antiepileptics: plasma concentration of propranolol possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**
- Antifungals: plasma concentration of nadolol possibly increased by **KETOCONAZOLE**
- Antihistamines: increased risk of ventricular arrhythmias when sotalol given with ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: avoidance of metoprolol and sotalol advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of sotalol advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of bradycardia when beta-blockers given with **MEFLOQUINE**
- Antimuscarinics: increased risk of ventricular arrhythmias when sotalol given with ● **TOLTERODINE**
- Antipsychotics: increased risk of ventricular arrhythmias when sotalol given with ● **PROPERIDOL** or ● **ZUCLOPENTHIXOL**—avoid concomitant use; possible increased risk of ventricular arrhythmias when sotalol given with ● **HALOPERIDOL**—avoid concomitant use; plasma concentration of both drugs may increase when propranolol given with ● **CHLOROPROMAZINE**; increased risk of ventricular arrhythmias when sotalol given with ● **AMISULPRIDE**, ● **PHENOTHIAZINES**, ● **PIMOZIDE** or ● **SULPRIDE**; enhanced hypotensive effect when beta-blockers given with **PHENOTHIAZINES**; possible increased risk of ventricular arrhythmias when sotalol given with ● **RISPERIDONE**
- Antivirals: increased risk of ventricular arrhythmias when sotalol given with ● **SAQUINAVIR**—avoid concomitant use; avoidance of sotalol advised by manufacturer of ● **TELAPREVIR** (risk of ventricular arrhythmias); avoidance of metoprolol for heart failure advised by manufacturer of ● **TIPRANAVIR**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when beta-blockers given with **ANXIOLYTICS AND HYPNOTICS**
- Atomoxetine: increased risk of ventricular arrhythmias when sotalol given with ● **ATOMOXETINE**
- Calcium-channel Blockers: enhanced hypotensive effect when beta-blockers given with **CALCIUM-CHANNEL BLOCKERS**; possible severe hypotension and heart failure when beta-blockers given with ● **NIFEDIPINE**; increased risk of AV block and bradycardia when beta-blockers given with ● **DILTIAZEM**; asystole, severe hypotension and heart failure when beta-blockers given with ● **VERAPAMIL** (see under Verapamil, p. 101)
- Cardiac Glycosides: increased risk of AV block and bradycardia when beta-blockers given with **CARDIAC GLYCOSIDES**
- Ciclosporin: carvedilol increases plasma concentration of ● **CICLOSPORIN**
- Clonidine: increased risk of withdrawal hypertension when beta-blockers given with ● **CLONIDINE** (withdraw beta-blockers several days before slowly withdrawing clonidine)
- Corticosteroids: hypotensive effect of beta-blockers antagonised by **CORTICOSTEROIDS**
- Cytotoxics: possible increased risk of ventricular arrhythmias when sotalol given with ● **BOSUTINIB**; possible increased risk of bradycardia when beta-blockers given with **CRIZOTINIB**; possible increased risk of ventricular arrhythmias when sotalol given with ● **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when sotalol given with ● **ARSENIC TRIOXIDE**
- Diazoxide: enhanced hypotensive effect when beta-blockers given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when beta-blockers given with **DIURETICS**; risk of ventricular arrhythmias with

Beta-blockers

- Diuretics (continued)
 - sotalol increased by hypokalaemia caused by ● **LOOP DIURETICS** or ● **THIAZIDES AND RELATED DIURETICS**
- ▶ Dopaminergics: enhanced hypotensive effect when beta-blockers given with ● **CO-BENELDOPA**, ● **CO-CARELDOPA** or ● **LEVODOPA**
- ▶ Ergot Alkaloids: increased peripheral vasoconstriction when beta-blockers given with ● **ERGOT ALKALOIDS**
- Fingolimod: possible increased risk of bradycardia when beta-blockers given with ● **FINGOLIMOD**
- ▶ Hormone Antagonists: possible increased risk of bradycardia when carteolol, metoprolol, propranolol or sotalol given with ● **PASIREOTIDE**
- ▶ 5HT₁-receptor Agonists: propranolol increases plasma concentration of ● **RIZATRIPTAN** (manufacturer of rizatriptan advises halve dose and avoid within 2 hours of propranolol)
- Ivabradine: increased risk of ventricular arrhythmias when sotalol given with ● **IVABRADINE**
- ▶ Methyldopa: enhanced hypotensive effect when beta-blockers given with ● **METHYLDOPA**
- ▶ Mirabegron: plasma concentration of metoprolol increased by ● **MIRABEGRON**
- Moxisylyte: possible severe postural hypotension when beta-blockers given with ● **MOXISYLYTE**
- ▶ Moxonidine: enhanced hypotensive effect when beta-blockers given with ● **MOXONIDINE**
- ▶ Muscle Relaxants: propranolol enhances effects of ● **MUSCLE RELAXANTS**; enhanced hypotensive effect when beta-blockers given with ● **BACLOFEN**; possible enhanced hypotensive effect and bradycardia when beta-blockers given with ● **TIZANIDINE**
- ▶ Nitrates: enhanced hypotensive effect when beta-blockers given with ● **NITRATES**
- ▶ Oestrogens: hypotensive effect of beta-blockers antagonised by ● **OESTROGENS**
- ▶ Parasympathomimetics: propranolol antagonises effects of ● **NEOSTIGMINE** and ● **PYRIDOSTIGMINE**; increased risk of arrhythmias when beta-blockers given with ● **PILOCARPINE**
- ▶ Prostaglandins: enhanced hypotensive effect when beta-blockers given with ● **ALPROSTADIL**
- Ranolazine: avoidance of sotalol advised by manufacturer of ● **RANOLAZINE**
- Sympathomimetics: increased risk of severe hypertension and bradycardia when non-cardioselective beta-blockers given with ● **ADRENALINE (EPINEPHRINE)**, also reponse to adrenaline (epinephrine) may be reduced; increased risk of severe hypertension and bradycardia when non-cardioselective beta-blockers given with ● **DOBUTAMINE**; possible increased risk of severe hypertension and bradycardia when non-cardioselective beta-blockers given with ● **NORADRENALINE (NOREPINEPHRINE)**
- ▶ Thyroid Hormones: metabolism of propranolol accelerated by ● **LEVOTHYROXINE**
- ▶ Ulcer-healing Drugs: plasma concentration of labetalol, metoprolol and propranolol increased by ● **CIMETIDINE**; plasma concentration of *oral* timolol possibly increased by ● **CIMETIDINE**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when beta-blockers given with ● **HYDRALAZINE**, ● **MINOXIDIL** or ● **SODIUM NITROPRUSSIDE**

Bethahistine

- ▶ Antihistamines: effect of bethahistine theoretically antagonised by ● **ANTIHISTAMINES**

Betamethasone see Corticosteroids**Betaxolol** see Beta-blockers**Bethanechol** see Parasympathomimetics**Bevacizumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: avoidance of bevacizumab advised by manufacturer of ● **PANITUMUMAB**
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Bexarotene

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Lipid-regulating Drugs: plasma concentration of bexarotene increased by ● **GEMFIBROZIL**—avoid concomitant use

Bezafibrate see Fibrates**Bicalutamide**

- ▶ Anticoagulants: bicalutamide possibly enhances anticoagulant effect of ● **COUMARINS**
- ▶ Lipid-regulating Drugs: separating administration from bicalutamide by 12 hours advised by manufacturer of ● **LOMITAPIDE**

Biguanides see Antidiabetics**Bilastine** see Antihistamines**Bile Acid Sequestrants** see Colesevelam, Colestipol, and Colestyramine**Bile Acids**

- ▶ Antacids: absorption of bile acids possibly reduced by ● **ANTACIDS**; effects of cholic acid probably reduced by ● **ALUMINIUM HYDROXIDE** (manufacturer of cholic acid advises give at least 5 hours apart)
- Antiepileptics: manufacturer of cholic acid advises avoid concomitant use with ● **PHENOBARBITAL**
- Ciclosporin: manufacturer of cholic acid advises avoid concomitant use with ● **CICLOSPORIN**; ursodeoxycholic acid increases absorption of ● **CICLOSPORIN**
- ▶ Lipid-regulating Drugs: effects of cholic acid probably reduced by ● **COLESEVELAM**, ● **COLESTIPOL** and ● **COLESTYRAMINE** (manufacturer of cholic acid advises give at least 5 hours apart); absorption of bile acids possibly reduced by ● **COLESTIPOL** and ● **COLESTYRAMINE**

Bisoprolol see Beta-blockers**Bisphosphonates**

- ▶ Antacids: absorption of bisphosphonates reduced by ● **ANTACIDS**
- ▶ Antibacterials: increased risk of hypocalcaemia when bisphosphonates given with ● **AMINOGLYCOSIDES**
- ▶ Calcium Salts: absorption of bisphosphonates reduced by ● **CALCIUM SALTS**
- Cytotoxics: sodium clodronate increases plasma concentration of ● **ESTRAMUSTINE**
- ▶ Iron Salts: absorption of bisphosphonates reduced by *oral* ● **IRON SALTS**

Bivalirudin

- Analgesics: increased risk of haemorrhage when anticoagulants given with *intravenous* ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Bleomycin

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cardiac Glycosides: bleomycin possibly reduces absorption of ● **DIGOXIN tablets**
- Cytotoxics: increased risk of pulmonary toxicity when bleomycin given with ● **BRENTUXIMAB VEDOTIN**—avoid concomitant use; increased pulmonary toxicity when bleomycin given with ● **CISPLATIN**
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Boceprevir

- ▶ Alpha-blockers: boceprevir possibly increases plasma concentration of ● **DOXAZOSIN** and ● **TAMSULOSIN**—manufacturer of boceprevir advises avoid concomitant use
- ▶ Analgesics: possible increased risk of prolonged sedation and respiratory depression when boceprevir given with ● **BUPRENORPHINE**; boceprevir possibly affects plasma concentration of ● **METHADONE**
- Antibacterials: manufacturer of boceprevir advises avoid concomitant use with ● **RIFAMPICIN** (plasma concentration of boceprevir possibly reduced)
- ▶ Anticoagulants: avoidance of boceprevir advised by manufacturer of ● **APIXABAN**
- Antiepileptics: manufacturer of boceprevir advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (plasma concentration of boceprevir possibly reduced)

Boceprevir (continued)

- Antifungals: plasma concentration of boceprevir increased by
 - **KETOCONAZOLE**
- Antimalarials: manufacturer of boceprevir advises avoid concomitant use with ● **ARTEMETHER WITH LUMEFANTRINE**
- Antipsychotics: boceprevir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; manufacturer of boceprevir advises avoid concomitant use with ● **PIMOZIDE**; boceprevir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: boceprevir reduces plasma concentration of
 - **ATAZANAVIR**; boceprevir possibly increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); avoid concomitant use of boceprevir with ● **DARUNAVIR**; effects of both drugs possibly reduced when boceprevir given with **ETRAVIRINE**; avoidance of boceprevir advised by manufacturer of ● **FOSAMPRENAVIR**, **NEVIRAPINE** and **TIPRANAVIR**; manufacturers advise avoid concomitant use of boceprevir with ● **LOPINAVIR**; boceprevir increases plasma concentration of **MARAVIROC** (consider reducing dose of maraviroc); plasma concentration of both drugs reduced when boceprevir given with ● **RITONAVIR**
- Anxiolytics and Hypnotics: boceprevir increases plasma concentration of oral ● **MIDAZOLAM**—manufacturer of boceprevir advises avoid concomitant use
- Cardiac Glycosides: boceprevir possibly increases side-effects of **DIGOXIN**
- Ciclosporin: boceprevir increases plasma concentration of ● **CYCLOSPORIN**
- Cilostazol: boceprevir possibly increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, in BNF)
- Cobicistat: avoidance of boceprevir advised by manufacturer of **COBICISTAT**
- Cytotoxics: boceprevir possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; manufacturer of boceprevir advises avoid concomitant use with ● **DASATINIB**, ● **ERLOTINIB**, ● **GEFITINIB**, ● **IMATINIB**, ● **LAPATINIB**, ● **NILOTINIB**, ● **PAZOPANIB**, ● **SORAFENIB** and ● **SUNITINIB**; manufacturer of ruxitinib advises dose reduction when boceprevir given with ● **RUXOLITINIB**—consult ruxitinib product literature; avoidance of boceprevir advised by manufacturer of ● **OLAPARIB**
- Domperidone: possible increased risk of ventricular arrhythmias when boceprevir given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: manufacturer of boceprevir advises avoid concomitant use with ● **ERGOT ALKALOIDS**
- Guanfacine: boceprevir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- Lipid-regulating Drugs: boceprevir increases plasma concentration of **ATORVASTATIN** (reduce dose of atorvastatin); boceprevir increases plasma concentration of **PRAVASTATIN**; manufacturers advise avoid concomitant use of boceprevir with ● **SIMVASTATIN**
- Progestogens: boceprevir increases plasma concentration of **DROSPIRENONE** (increased risk of toxicity)
- Sirolimus: boceprevir increases plasma concentration of ● **SIROLIMUS** (increased risk of toxicity—reduce sirolimus dose)
- Tacrolimus: boceprevir increases plasma concentration of ● **TACROLIMUS** (reduce dose of tacrolimus)

Bortezomib

- Antibacterials: plasma concentration of bortezomib reduced by
 - **RIFAMPICIN**—manufacturer of bortezomib advises avoid concomitant use
- Antidepressants: plasma concentration of bortezomib possibly reduced by **ST JOHN'S WORT**—manufacturer of bortezomib advises avoid concomitant use
- Antiepileptics: plasma concentration of bortezomib possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—manufacturer of bortezomib advises avoid concomitant use
- Antifungals: plasma concentration of bortezomib increased by **KETOCONAZOLE**

Bortezomib (continued)

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Bosentan**
- Antibacterials: plasma concentration of bosentan reduced by
 - **RIFAMPICIN**—avoid concomitant use
- Anticoagulants: manufacturer of bosentan recommends monitoring anticoagulant effect of **COUMARINS**
- Antidiabetics: increased risk of hepatotoxicity when bosentan given with ● **GLIBENCLAMIDE**—avoid concomitant use
- Antifungals: plasma concentration of bosentan increased by **KETOCONAZOLE**; plasma concentration of bosentan possibly increased by ● **FLUCONAZOLE**—avoid concomitant use; plasma concentration of bosentan possibly increased by **ITRACONAZOLE**
- Antivirals: avoidance of bosentan advised by manufacturer of **ELVITEGRAVIR** and **TIPRANAVIR**; bosentan possibly reduces plasma concentration of **INDINAVIR**; plasma concentration of bosentan increased by ● **LOPINAVIR** and ● **RITONAVIR** (consider reducing dose of bosentan); bosentan possibly reduces plasma concentration of **TELAPREVIR**, also plasma concentration of bosentan possibly increased
- Avanafil: bosentan possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- Ciclosporin: plasma concentration of bosentan increased by ● **CYCLOSPORIN** (also plasma concentration of ciclosporin reduced—avoid concomitant use)
- Cobicistat: avoidance of bosentan advised by manufacturer of **COBICISTAT**
- Cytotoxics: bosentan possibly reduces plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid concomitant use
- Guanfacine: bosentan possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Lipid-regulating Drugs: bosentan reduces plasma concentration of **SIMVASTATIN**
- Oestrogens: bosentan possibly causes contraceptive failure of hormonal contraceptives containing ● **OESTROGENS** (alternative contraception recommended)
- Progestogens: bosentan possibly causes contraceptive failure of hormonal contraceptives containing ● **PROGESTOGENS** (alternative contraception recommended)
- Riociguat: bosentan reduces plasma concentration of **RIOCIGUAT**
- Sildenafil: bosentan reduces plasma concentration of **SILDENAFIL**, also plasma concentration of bosentan increased
- Tadalafil: bosentan reduces plasma concentration of **TADALAFIL**
- Bosutinib**
- Analgesics: possible increased risk of ventricular arrhythmias when bosutinib given with ● **METHADONE**
- Antacids: manufacturer of bosutinib advises separating administration with **ANTACIDS** by about 12 hours
- Anti-arrhythmics: possible increased risk of ventricular arrhythmias when bosutinib given with ● **AMIODARONE** and ● **DISOPYRAMIDE**; plasma concentration of bosutinib possibly increased by ● **DRONEDARONE**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- Antibacterials: plasma concentration of bosutinib possibly increased by ● **CIPROFLOXACIN**, ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; possible increased risk of ventricular arrhythmias when bosutinib given with ● **MOXIFLOXACIN**; plasma concentration of bosutinib possibly reduced by ● **RIFABUTIN**—manufacturer of bosutinib advises avoid concomitant use; plasma concentration of bosutinib reduced by ● **RIFAMPICIN**—manufacturer of bosutinib advises avoid concomitant use
- Antidepressants: plasma concentration of bosutinib possibly reduced by ● **ST JOHN'S WORT**—manufacturer of bosutinib advises avoid concomitant use
- Antiepileptics: plasma concentration of bosutinib possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of bosutinib advises avoid concomitant use
- Antifungals: plasma concentration of bosutinib increased by ● **KETOCONAZOLE**—manufacturer of bosutinib advises avoid or

Bosutinib

- **Antifungals** (continued)
 - consider reducing dose of bosutinib; plasma concentration of bosutinib possibly increased by ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Antimalarials**: possible increased risk of ventricular arrhythmias when bosutinib given with ● **CHLOROQUINE** and ● **HYDROXYCHLOROQUINE**
- **Antipsychotics**: possible increased risk of ventricular arrhythmias when bosutinib given with ● **HALOPERIDOL**; avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals**: plasma concentration of bosutinib possibly increased by ● **ATAZANAVIR**, ● **BOCEPREVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** and ● **TELAPREVIR**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; plasma concentration of bosutinib possibly reduced by ● **EFAVIRENZ** and ● **ETRAVIRINE**—manufacturer of bosutinib advises avoid concomitant use
- **Aprepitant**: plasma concentration of bosutinib possibly increased by ● **APREPITANT**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Beta-blockers**: possible increased risk of ventricular arrhythmias when bosutinib given with ● **SOTALOL**
- **Bosentan**: plasma concentration of bosutinib possibly reduced by ● **BOSENTAN**—manufacturer of bosutinib advises avoid concomitant use
- **Calcium-channel Blockers**: plasma concentration of bosutinib possibly increased by ● **DILTIAZEM** and ● **VERAPAMIL**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Cytotoxics**: plasma concentration of bosutinib possibly increased by ● **IMATINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Domperidone**: manufacturer of bosutinib advises avoid concomitant use with ● **DOMPERIDONE** (risk of ventricular arrhythmias)
- **Fosaprepitant**: plasma concentration of bosutinib possibly increased by ● **FOSAPREPITANT**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Grapefruit Juice**: plasma concentration of bosutinib possibly increased by ● **GRAPEFRUIT JUICE**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib
- **Modafinil**: plasma concentration of bosutinib possibly reduced by ● **MODAFINIL**—manufacturer of bosutinib advises avoid concomitant use
- ▶ **Ulcer-healing Drugs**: plasma concentration of bosutinib reduced by **LANSOPRAZOLE**

Brentuximab vedotin

- ▶ **Antibacterials**: effects of brentuximab vedotin possibly reduced by **RIFAMPICIN**
- **Antifungals**: possible increased risk of neutropenia when brentuximab vedotin given with ● **KETOCONAZOLE**
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Cytotoxics**: increased risk of pulmonary toxicity when brentuximab vedotin given with ● **BLEOMYCIN**—avoid concomitant use
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Brimonidine

- **Antidepressants**: manufacturer of brimonidine advises avoid concomitant use with **MAOIS**, **TRICYCLIC-RELATED ANTIDEPRESSANTS** and **TRICYCLICS**

Brinzolamide see Diuretics**Bromocriptine**

- **Alcohol**: tolerance of bromocriptine reduced by **ALCOHOL**
- ▶ **Antibacterials**: plasma concentration of bromocriptine increased by **ERYTHROMYCIN** (increased risk of toxicity); plasma concentration of bromocriptine possibly increased by **MACROLIDES** (increased risk of toxicity)
- ▶ **Antipsychotics**: hypoprolactinaemic and antiparkinsonian effects of bromocriptine antagonised by **ANTIPSYCHOTICS**

Bromocriptine (continued)

- ▶ **Domperidone**: hypoprolactinaemic effect of bromocriptine possibly antagonised by **DOMPERIDONE**
- ▶ **Hormone Antagonists**: plasma concentration of bromocriptine increased by **OCTREOTIDE**
- ▶ **Memantine**: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ **Methyldopa**: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ **Metoclopramide**: hypoprolactinaemic effect of bromocriptine antagonised by **METOCLOPRAMIDE**
- **Sympathomimetics**: risk of toxicity when bromocriptine given with ● **ISOMETHEPTENE**

Bucilazine see Antihistamines**Budesonide** see Corticosteroids**Bumetanide** see Diuretics**Bupivacaine**

- **Anti-arrhythmics**: increased myocardial depression when bupivacaine given with **ANTI-ARRHYTHMICS**
- **Beta-blockers**: increased risk of bupivacaine toxicity when given with ● **PROPRANOLOL**

Buprenorphine see Opioid Analgesics**Bupropion**

- **Antidepressants**: bupropion possibly increases plasma concentration of **CITALOPRAM**; manufacturer of bupropion advises avoid for 2 weeks after stopping ● **MAOIS**; manufacturer of bupropion advises avoid concomitant use with ● **MOCLOBEMIDE**; bupropion possibly increases plasma concentration of **TRICYCLICS** (possible increased risk of convulsions); bupropion increases plasma concentration of **VORTIOXETINE** (consider reducing dose of vortioxetine)
- ▶ **Antiepileptics**: plasma concentration of bupropion reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of bupropion inhibited by **SODIUM VALPROATE** and **VALPROIC ACID**
- ▶ **Antivirals**: metabolism of bupropion accelerated by **EFAVIRENZ** (reduced plasma concentration); plasma concentration of bupropion reduced by **RITONAVIR**
- ▶ **Atomoxetine**: possible increased risk of convulsions when bupropion given with **ATOMOXETINE**
- ▶ **Dopaminergics**: increased risk of side-effects when bupropion given with **AMANTADINE**, **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- **Hormone Antagonists**: bupropion possibly inhibits metabolism of ● **TAMOXIFEN** to active metabolite (avoid concomitant use)
- **Methylthionium**: possible risk of CNS toxicity when bupropion given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthionium and observe patient for up to 4 hours after administration)

Buspiron see Anxiolytics and Hypnotics**Busulfan**

- **Analgesics**: metabolism of *intravenous* busulfan possibly inhibited by **PARACETAMOL** (manufacturer of *intravenous* busulfan advises caution within 72 hours of paracetamol)
- **Antibacterials**: plasma concentration of busulfan increased by ● **METRONIDAZOLE** (increased risk of toxicity)
- ▶ **Antiepileptics**: plasma concentration of busulfan possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**
- ▶ **Antifungals**: metabolism of busulfan inhibited by **ITRACONAZOLE** (increased risk of toxicity)
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ **Cytotoxics**: increased risk of hepatotoxicity when busulfan given with **TIOGUANINE**

Butyrophenones see Antipsychotics**Cabazitaxel**

- **Antibacterials**: plasma concentration of cabazitaxel possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel; manufacturer of cabazitaxel advises avoid concomitant use with ● **RIFABUTIN**; plasma concentration of cabazitaxel reduced by ● **RIFAMPICIN**—manufacturer of cabazitaxel advises avoid concomitant use
- **Antidepressants**: manufacturer of cabazitaxel advises avoid concomitant use with ● **ST JOHN'S WORT**

Cabazitaxel (continued)

- Antiepileptics: manufacturer of cabazitaxel advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- Antifungals: manufacturer of cabazitaxel advises avoid concomitant use with ● **KETOCONAZOLE**; plasma concentration of cabazitaxel possibly increased by ● **ITRACONAZOLE** and ● **VORICONAZOLE**—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: manufacturer of cabazitaxel advises avoid concomitant use with ● **ATAZANAVIR**; plasma concentration of cabazitaxel possibly increased by ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel

Cabergoline

- Antibacterials: plasma concentration of cabergoline increased by **ERYTHROMYCIN** (increased risk of toxicity); plasma concentration of cabergoline possibly increased by **MACROLIDES** (increased risk of toxicity)
- Antipsychotics: hypoprolactinaemic and antiparkinsonian effects of cabergoline antagonised by **ANTIPSYCHOTICS**
- Domperidone: hypoprolactinaemic effect of cabergoline possibly antagonised by **DOMPERIDONE**
- Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- Metoclopramide: hypoprolactinaemic effect of cabergoline antagonised by **METOCLOPRAMIDE**

Cabozantinib

- Antibacterials: plasma concentration of cabozantinib possibly increased by **CLARITHROMYCIN** and **ERYTHROMYCIN**; plasma concentration of cabozantinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of cabozantinib possibly reduced by **ST JOHN'S WORT**—manufacturer of cabozantinib advises avoid concomitant use
- Antiepileptics: plasma concentration of cabozantinib possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- Antifungals: plasma concentration of cabozantinib increased by **KETOCONAZOLE**; plasma concentration of cabozantinib possibly increased by **ITRACONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of cabozantinib possibly increased by **RITONAVIR**
- Corticosteroids: plasma concentration of cabozantinib possibly reduced by **DEXAMETHASONE**—manufacturer of cabozantinib advises avoid concomitant use
- Grapefruit Juice: plasma concentration of cabozantinib possibly increased by **GRAPEFRUIT JUICE**

Caffeine citrate

- Aminophylline: manufacturer of caffeine citrate advises avoid concomitant use with **AMINOPHYLLINE**
- Anti-arrhythmics: caffeine citrate antagonises anti-arrhythmic effect of **ADENOSINE**—manufacturer of adenosine advises avoid caffeine citrate for at least 12 hours before adenosine
- Antiepileptics: plasma concentration of caffeine citrate reduced by **FOSPHENYTOIN** and **PHENYTOIN**; caffeine citrate possibly antagonises effects of **PHENOBARBITAL** and **PRIMIDONE**
- Theophylline: manufacturer of caffeine citrate advises avoid concomitant use with **THEOPHYLLINE**
- Ulcer-healing Drugs: plasma concentration of caffeine citrate increased by **CIMETIDINE**

Calcitriol see Vitamins

Calcium Salts

NOTE see also Antacids

- Antibacterials: calcium salts reduce absorption of **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin); calcium salts possibly reduce absorption of **TETRACYCLINES** (give at least 2 to 3 hours apart)

Calcium Salts (continued)

- Antivirals: calcium salts reduce absorption of **DOLUTEGRAVIR**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after calcium salts; separating administration from calcium salts by 4 hours advised by manufacturer of **LEDIPASVIR**; manufacturer of rilpivirine advises give calcium salts 2 hours before or 4 hours after **RILPIVIRINE**
- Bisphosphonates: calcium salts reduce absorption of **BISPHOSPHONATES**
- Cardiac Glycosides: large *intravenous* doses of calcium salts can precipitate arrhythmias when given with **CARDIAC GLYCOSIDES**
- Corticosteroids: absorption of calcium salts reduced by **CORTICOSTEROIDS**
- Cytotoxics: calcium salts reduce absorption of **ESTRAMUSTINE** (manufacturer of estramustine advises avoid concomitant administration)
- Diuretics: increased risk of hypercalcaemia when calcium salts given with **THIAZIDES AND RELATED DIURETICS**
- Eltrombopag: calcium salts possibly reduce absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- Fluorides: calcium salts reduce absorption of **FLUORIDES**
- Iron Salts: calcium salts reduce absorption of **oral IRON SALTS**
- Thyroid Hormones: calcium salts reduce absorption of **LEVOTHYROXINE**
- Zinc: calcium salts reduce absorption of **ZINC**

Calcium-channel Blockers

- NOTE** Dihydropyridine calcium-channel blockers include amlodipine, felodipine, isradipine, lacidipine, lercanidipine, nifedipine, nifedipine, and nimodipine
- ACE Inhibitors: enhanced hypotensive effect when calcium-channel blockers given with **ACE INHIBITORS**
 - Adrenergic Neurone Blockers: enhanced hypotensive effect when calcium-channel blockers given with **ADRENERGIC NEURONE BLOCKERS**
 - Alcohol: enhanced hypotensive effect when calcium-channel blockers given with **ALCOHOL**; verapamil possibly increases plasma concentration of **ALCOHOL**
 - Aldesleukin: enhanced hypotensive effect when calcium-channel blockers given with **ALDESLEUKIN**
 - Aliskiren: verapamil increases plasma concentration of **ALISKIREN**
 - Alpha-blockers: verapamil increases plasma concentration of **TAMSULOSIN**; enhanced hypotensive effect when calcium-channel blockers given with ● **ALPHA-BLOCKERS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
 - Aminophylline: calcium-channel blockers possibly increase plasma concentration of ● **AMINOPHYLLINE** (enhanced effect); diltiazem increases plasma concentration of **AMINOPHYLLINE**; verapamil increases plasma concentration of ● **AMINOPHYLLINE** (enhanced effect)
 - Anaesthetics, General: enhanced hypotensive effect when calcium-channel blockers given with **GENERAL ANAESTHETICS** or **ISOFLURANE**; hypotensive effect of verapamil enhanced by ● **GENERAL ANAESTHETICS** (also AV delay)
 - Analgesics: hypotensive effect of calcium-channel blockers antagonised by **NSAIDS**; diltiazem inhibits metabolism of **ALFENTANIL** (risk of prolonged or delayed respiratory depression)
 - Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when calcium-channel blockers given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
 - Anti-arrhythmics: increased risk of bradycardia, AV block and myocardial depression when diltiazem or verapamil given with ● **AMIODARONE**; increased risk of myocardial depression and asystole when verapamil given with ● **DISOPYRAMIDE** or ● **FLECAINIDE**; nifedipine increases plasma concentration of ● **DRONEDARONE**; increased risk of bradycardia and myocardial depression when diltiazem and verapamil given with ● **DRONEDARONE**
 - Antibacterials: metabolism of calcium-channel blockers possibly inhibited by ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN** (increased risk of side-effects); manufacturer of lercanidipine advises avoid concomitant use with **ERYTHROMYCIN**; metabolism of diltiazem, nifedipine,

Calcium-channel Blockers

- **Antibacterials** (continued)
 - nimodipine and verapamil accelerated by **● RIFAMPICIN** (plasma concentration significantly reduced); metabolism of isradipine and nicardipine possibly accelerated by **● RIFAMPICIN** (possible significantly reduced plasma concentration); plasma concentration of felodipine possibly reduced by **● RIFAMPICIN**; avoidance of verapamil advised by manufacturer of **FIDAXOMICIN**
- **Anticoagulants**: verapamil possibly increases plasma concentration of **● DABIGATRAN** (see under Dabigatran Etxelate, in BNF); verapamil increases plasma concentration of **EDOXABAN**
- **Antidepressants**: metabolism of nifedipine possibly inhibited by **FLUOXETINE** (increased plasma concentration); diltiazem and verapamil increase plasma concentration of **● IMIPRAMINE**; enhanced hypotensive effect when calcium-channel blockers given with **MAOIs**; plasma concentration of amlodipine and felodipine possibly reduced by **ST JOHN'S WORT**; plasma concentration of verapamil significantly reduced by **● ST JOHN'S WORT**; plasma concentration of nifedipine reduced by **ST JOHN'S WORT**; diltiazem and verapamil possibly increase plasma concentration of **TRICYCLICS**
- ▶ **Antidiabetics**: glucose tolerance occasionally impaired when nifedipine given with **INSULIN**
- **Antiepileptics**: effects of felodipine and isradipine reduced by **CARBAMAZEPINE**; effects of dihydropyridines, nicardipine and nifedipine probably reduced by **CARBAMAZEPINE**; diltiazem and verapamil enhance effects of **● CARBAMAZEPINE**; manufacturer of nimodipine advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN** (plasma concentration of nimodipine possibly reduced); effects of felodipine and verapamil reduced by **FOSPHENYTOIN**; diltiazem increases plasma concentration of **● FOSPHENYTOIN** and **● PHENYTOIN** but also effect of diltiazem reduced; manufacturer of isradipine advises avoid concomitant use with **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**; effects of calcium-channel blockers probably reduced by **● PHENOBARBITAL** and **● PRIMIDONE**; manufacturer of nimodipine advises avoid concomitant use with **● PHENOBARBITAL** and **● PRIMIDONE** (plasma concentration of nimodipine reduced); effects of felodipine and verapamil reduced by **PHENYTOIN**
- **Antifungals**: metabolism of dihydropyridines possibly inhibited by **ITRACONAZOLE** and **KETOCONAZOLE** (increased plasma concentration); metabolism of felodipine is inhibited by **● KETOCONAZOLE** (increased plasma concentration)—manufacturer of ketoconazole advises avoid concomitant use; manufacturer of nifedipine advises avoid concomitant use with **ITRACONAZOLE** and **KETOCONAZOLE**; negative inotropic effect possibly increased when calcium-channel blockers given with **ITRACONAZOLE**; metabolism of felodipine inhibited by **● ITRACONAZOLE** (increased plasma concentration); plasma concentration of nifedipine increased by **MICAFUNGIN**
- ▶ **Antimalarials**: possible increased risk of bradycardia when calcium-channel blockers given with **MEFLOQUINE**
- ▶ **Antimuscarinics**: avoidance of verapamil advised by manufacturer of **DARIFENACIN**; verapamil increases plasma concentration of **SOLIFENACIN**
- **Antipsychotics**: enhanced hypotensive effect when calcium-channel blockers given with **ANTIPSYCHOTICS**; verapamil possibly increases the plasma concentration of **● LURASIDONE** (see under Lurasidone, in BNF); diltiazem increases the plasma concentration of **● LURASIDONE** (see under Lurasidone, in BNF)
- **Antivirals**: plasma concentration of verapamil possibly increased by **ATAZANAVIR**; plasma concentration of diltiazem increased by **● ATAZANAVIR** (reduce dose of diltiazem); plasma concentration of diltiazem reduced by **EFAVIRENZ**; manufacturer of lercanidipine advises avoid concomitant use with **RITONAVIR**; plasma concentration of amlodipine increased by **● RITONAVIR** (reduce dose of amlodipine); plasma concentration of calcium-channel blockers possibly increased by **● RITONAVIR**; caution with diltiazem, felodipine, nicardipine, nifedipine and verapamil advised by manufacturer of **TELAPREVIR**; plasma concentration of

Calcium-channel Blockers

- **Antivirals** (continued)
 - amlodipine increased by **TELAPREVIR** (consider reducing dose of amlodipine)
- ▶ **Anxiolytics and Hypnotics**: enhanced hypotensive effect when calcium-channel blockers given with **ANXIOLYTICS AND HYPNOTICS**; diltiazem and verapamil inhibit metabolism of **MIDAZOLAM** (increased plasma concentration with increased sedation); absorption of lercanidipine increased by **MIDAZOLAM**; diltiazem and verapamil increase plasma concentration of **BUSPIRONE** (reduce dose of buspirone)
- ▶ **Appetant**: plasma concentration of both drugs may increase when diltiazem given with **APREPITANT**
- **Avanafil**: diltiazem and verapamil possibly increase plasma concentration of **● AVANAFIL**—see under Avanafil, in BNF
- **Beta-blockers**: enhanced hypotensive effect when calcium-channel blockers given with **BETA-BLOCKERS**; increased risk of AV block and bradycardia when diltiazem given with **● BETA-BLOCKERS**; asystole, severe hypotension and heart failure when verapamil given with **● BETA-BLOCKERS** (see under Verapamil, p. 101); possible severe hypotension and heart failure when nifedipine given with **● BETA-BLOCKERS**
- ▶ **Calcium-channel Blockers**: plasma concentration of both drugs may increase when diltiazem given with **NIFEDIPINE**
- **Cardiac Glycosides**: verapamil increases plasma concentration of **● DIGOXIN**, also increased risk of AV block and bradycardia; diltiazem, lercanidipine and nicardipine increase plasma concentration of **● DIGOXIN**; nifedipine possibly increases plasma concentration of **● DIGOXIN**
- **Ciclosporin**: diltiazem, nicardipine and verapamil increase plasma concentration of **● CICLOSPORIN**; combination of lercanidipine with **● CICLOSPORIN** may increase plasma concentration of either drug (or both)—avoid concomitant use; plasma concentration of nifedipine possibly increased by **CICLOSPORIN** (increased risk of toxicity including gingival hyperplasia)
- ▶ **Cilostazol**: diltiazem increases plasma concentration of **CILOSTAZOL** (consider reducing dose of cilostazol)
- ▶ **Clonidine**: enhanced hypotensive effect when calcium-channel blockers given with **CLONIDINE**
- **Colchicine**: diltiazem and verapamil possibly increase risk of **● COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- **Corticosteroids**: hypotensive effect of calcium-channel blockers antagonised by **CORTICOSTEROIDS**; diltiazem increases plasma concentration of **METHYLPREDNISOLONE**
- **Cytotoxics**: verapamil possibly increases plasma concentration of **DOXORUBICIN**; verapamil possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of verapamil by 6 to 12 hours; diltiazem and verapamil possibly increase the plasma concentration of **● BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; possible increased risk of bradycardia when diltiazem or verapamil given with **CRIZOTINIB**; plasma concentration of both drugs may increase when verapamil given with **● EVEROLIMUS** (consider reducing the dose of everolimus—consult everolimus product literature); diltiazem and verapamil possibly increase the plasma concentration of **● IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); nifedipine possibly inhibits metabolism of **VINCISTINE**
- ▶ **Dapoxetine**: manufacturer of dapoxetine advises dose reduction when diltiazem and verapamil given with **DAPOXETINE** (see under Dapoxetine, in BNF)
- ▶ **Diazoxide**: enhanced hypotensive effect when calcium-channel blockers given with **DIAZOXIDE**
- ▶ **Diuretics**: enhanced hypotensive effect when calcium-channel blockers given with **DIURETICS**; diltiazem and verapamil increase plasma concentration of **EPLERENONE** (reduce dose of eplerenone)
- ▶ **Dopaminergics**: enhanced hypotensive effect when calcium-channel blockers given with **CO-BENEDOPA**, **CO-CARELDOA** or **LEVODOPA**
- **Fingolimod**: possible increased risk of bradycardia when diltiazem or verapamil given with **● FINGOLIMOD**

Calcium-channel Blockers (continued)

- Fosaprepitant: plasma concentration of both drugs may increase when diltiazem given with **FOSAPREPITANT**
- Grapefruit Juice: plasma concentration of felodipine, isradipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine and verapamil increased by **GRAPEFRUIT JUICE**; plasma concentration of amlodipine possibly increased by **GRAPEFRUIT JUICE**
- Guanfacine: diltiazem and verapamil possibly increase the plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- Hormone Antagonists: diltiazem and verapamil increase plasma concentration of **DUTASTERIDE**; possible increased risk of bradycardia when diltiazem or verapamil given with **PASIREOTIDE**
- Ivabradine: diltiazem and verapamil increase plasma concentration of ● **IVABRADINE**—avoid concomitant use
- Lenalidomide: verapamil possibly increases plasma concentration of ● **LENALIDOMIDE** (increased risk of toxicity)
- Lipid-regulating Drugs: diltiazem increases plasma concentration of **ATORVASTATIN**—possible increased risk of myopathy; plasma concentration of verapamil increased by ● **ATORVASTATIN**, also possible increased risk of myopathy (consider reducing dose of atorvastatin); possible increased risk of myopathy when amlodipine and diltiazem given with ● **SIMVASTATIN** (see under Simvastatin, p. 125); increased risk of myopathy when verapamil given with ● **SIMVASTATIN** (see under Simvastatin, p. 125); separating administration from amlodipine and lacidipine by 12 hours advised by manufacturer of **LOMITAPIDE**; avoidance of diltiazem and verapamil advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Lithium: neurotoxicity may occur when diltiazem or verapamil given with **LITHIUM** without increased plasma concentration of lithium
- Magnesium (parenteral): profound hypotension reported with concomitant use of nifedipine and ● **PARENTERAL MAGNESIUM** in pre-eclampsia
- Methyldopa: enhanced hypotensive effect when calcium-channel blockers given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when calcium-channel blockers given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when calcium-channel blockers given with **MOXONIDINE**
- Muscle Relaxants: verapamil enhances effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**; enhanced hypotensive effect when calcium-channel blockers given with **BACLOFEN** or **TIZANIDINE**; manufacturer of verapamil advises avoid concomitant use of *intravenous* **DANTROLENE**; possible increased risk of ventricular arrhythmias when diltiazem given with *intravenous* **DANTROLENE**—manufacturer of diltiazem advises avoid concomitant use; calcium-channel blockers possibly enhance effects of **NON-DEPOLARISING MUSCLE RELAXANTS**
- Nitrates: enhanced hypotensive effect when calcium-channel blockers given with **NITRATES**
- Oestrogens: hypotensive effect of calcium-channel blockers antagonised by **OESTROGENS**
- Prostaglandins: enhanced hypotensive effect when calcium-channel blockers given with **ALPROSTADIL**
- Ranolazine: diltiazem and verapamil increase plasma concentration of **RANOLAZINE** (consider reducing dose of ranolazine)
- Sildenafil: enhanced hypotensive effect when amlodipine given with **SILDENAFIL**
- Sirolimus: diltiazem increases plasma concentration of ● **SIROLIMUS**; plasma concentration of both drugs increased when verapamil given with ● **SIROLIMUS**; nicardipine possibly increases plasma concentration of **SIROLIMUS**
- Sulfapyrazone: plasma concentration of verapamil reduced by **SULFINPYRAZONE**
- Tacrolimus: diltiazem, nicardipine and nifedipine increase plasma concentration of ● **TACROLIMUS**; felodipine and verapamil possibly increase plasma concentration of **TACROLIMUS**

Calcium-channel Blockers (continued)

- Theophylline: calcium-channel blockers possibly increase plasma concentration of ● **THEOPHYLLINE** (enhanced effect); diltiazem increases plasma concentration of **THEOPHYLLINE**; verapamil increases plasma concentration of ● **THEOPHYLLINE** (enhanced effect)
- Ticagrelor: diltiazem increases plasma concentration of **TICAGRELOR**
- Ulcer-healing Drugs: metabolism of calcium-channel blockers possibly inhibited by **CIMETIDINE** (increased plasma concentration); plasma concentration of isradipine increased by **CIMETIDINE** (halve dose of isradipine)
- Ulipristal: avoidance of verapamil advised by manufacturer of *low-dose* **ULIPRISTAL**
- Vardenafil: enhanced hypotensive effect when nifedipine given with **VARDENAFIL**
- Vasodilator Antihypertensives: enhanced hypotensive effect when calcium-channel blockers given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Calcium-channel Blockers (dihydropyridines) see Calcium-channel Blockers

Canagliflozin see Antidiabetics

Canakinumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Candesartan see Angiotensin-II Receptor Antagonists

Cannabis Extract

- Antibacterials: plasma concentration of cannabis extract reduced by ● **RIFAMPICIN**—manufacturer of cannabis extract advises avoid concomitant use
- Antidepressants: plasma concentration of cannabis extract possibly reduced by ● **ST JOHN'S WORT**—manufacturer of cannabis extract advises avoid concomitant use; possible increased risk of hypertension and tachycardia when cannabis extract given with **TRICYCLICS**
- Antiepileptics: plasma concentration of cannabis extract possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENITOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of cannabis extract advises avoid concomitant use
- Antifungals: plasma concentration of cannabis extract increased by **KETOCONAZOLE**

Capecitabine

- Allopurinol: manufacturer of capecitabine advises avoid concomitant use with ● **ALLOPURINOL**
- Antibacterials: metabolism of capecitabine inhibited by **METRONIDAZOLE** (increased toxicity)
- Anticoagulants: capecitabine enhances anticoagulant effect of ● **COUMARINS**
- Antiepileptics: capecitabine possibly inhibits metabolism of **FOSPHENITOIN** and **PHENYTOIN** (increased risk of toxicity)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: capecitabine possibly increases plasma concentration of **ERLOTINIB**
- Filgrastim: neutropenia possibly exacerbated when capecitabine given with **FILGRASTIM**
- Folate: toxicity of capecitabine increased by ● **FOLIC ACID**—avoid concomitant use
- Lipegfilgrastim: neutropenia possibly exacerbated when capecitabine given with **LIPEGFILGRASTIM**
- Pegfilgrastim: neutropenia possibly exacerbated when capecitabine given with **PEGFILGRASTIM**
- Ulcer-healing Drugs: metabolism of capecitabine inhibited by **CIMETIDINE** (increased plasma concentration)

Capreomycin

- Antibacterials: increased risk of nephrotoxicity when capreomycin given with **COLISTIMETHATE SODIUM** or **POLYMYXINS**; increased risk of nephrotoxicity and ototoxicity when capreomycin given with **AMINOGLYCOSIDES** or **VANCOMYCIN**
- Cytotoxics: increased risk of nephrotoxicity and ototoxicity when capreomycin given with **PLATINUM COMPOUNDS**

Capreomycin (continued)

- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Captopril see ACE Inhibitors**Carbamazepine**

- ▶ Alcohol: CNS side-effects of carbamazepine possibly increased by **ALCOHOL**
- ▶ Aminophylline: carbamazepine accelerates metabolism of **AMINOPHYLLINE** (reduced effect)
- Analgesics: effects of carbamazepine enhanced by
 - **DEXTROPROPOXYPHENE**; carbamazepine possibly accelerates metabolism of **FENTANYL** (reduced effect); carbamazepine reduces plasma concentration of **METHADONE**; carbamazepine reduces effects of **TRAMADOL**; carbamazepine possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- Anthelmintics: carbamazepine reduces plasma concentration of
 - **ALBENDAZOLE** and **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: carbamazepine possibly reduces plasma concentration of
 - **DRONEDARONE**—avoid concomitant use
- Antibacterials: plasma concentration of carbamazepine increased by
 - **CLARITHROMYCIN** (consider reducing dose of carbamazepine); plasma concentration of carbamazepine increased by **ERYTHROMYCIN**; plasma concentration of carbamazepine reduced by **RIFABUTIN**; carbamazepine accelerates metabolism of **DOXYCYCLINE** (reduced effect); carbamazepine possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; avoidance of carbamazepine advised by manufacturer of **DELAMANID**; plasma concentration of carbamazepine increased by **ISONIAZID** (also possibly increased isoniazid hepatotoxicity); carbamazepine reduces plasma concentration of **TELITHROMYCIN** (avoid during and for 2 weeks after carbamazepine)
- Anticoagulants: carbamazepine possibly reduces plasma concentration of
 - **APIXABAN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; carbamazepine accelerates metabolism of **COUMARINS** (reduced anticoagulant effect); carbamazepine possibly reduces plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; carbamazepine possibly reduces plasma concentration of **EDOXABAN**; carbamazepine possibly reduces plasma concentration of **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: carbamazepine possibly reduces plasma concentration of **REBOXETINE**; plasma concentration of carbamazepine increased by **FLUOXETINE** and **FLUVOXAMINE**; carbamazepine reduces plasma concentration of **MIANSERIN**, **MIRTAZAPINE** and **TRAZODONE**; anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); manufacturer of carbamazepine advises avoid for 2 weeks after stopping **MAOIS**, also antagonism of anticonvulsant effect; anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered); plasma concentration of carbamazepine possibly reduced by **ST JOHN'S WORT**; carbamazepine accelerates metabolism of **TRICYCLICS** (reduced plasma concentration and reduced effect); carbamazepine possibly reduces plasma concentration of **VORTIOXETINE**—consider increasing dose of vortioxetine
- Antiepileptics: carbamazepine possibly reduces plasma concentration of **ESLICARBAZEPINE** but risk of side-effects increased; carbamazepine possibly reduces plasma concentration of **ETHOSUXIMIDE** and **RETIGABINE**; plasma concentration of both drugs often reduced when carbamazepine given with **FOSPHENYTOIN** or **PHENYTOIN**, also plasma concentration of fosphenytoin or phenytoin may be increased; carbamazepine often reduces plasma concentration of **LAMOTRIGINE**, also plasma concentration of an active metabolite of carbamazepine sometimes raised (but evidence is conflicting); possible increased risk of carbamazepine toxicity when given with **LEVETIRACETAM**;

Carbamazepine

- Antiepileptics (continued)
 - plasma concentration of carbamazepine sometimes reduced by **OXCARBAZEPINE** (but concentration of an active metabolite of carbamazepine may be increased), also plasma concentration of an active metabolite of oxcabazepine often reduced; carbamazepine reduces plasma concentration of **PERAMPANEL** (see under Perampanel, p. 193); carbamazepine possibly increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of both drugs possibly reduced when carbamazepine given with **RUFINAMIDE**; carbamazepine reduces plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**, also plasma concentration of active metabolite of carbamazepine increased; plasma concentration of carbamazepine increased by **STIRIPENTOL**; carbamazepine reduces plasma concentration of **TIAGABINE** and **ZONISAMIDE**; carbamazepine often reduces plasma concentration of **TOPIRAMATE**
- Antifungals: plasma concentration of carbamazepine possibly increased by **KETOCONAZOLE**, also plasma concentration of ketoconazole possibly reduced; plasma concentration of carbamazepine possibly increased by **FLUCONAZOLE** and **MICONAZOLE**; carbamazepine possibly reduces plasma concentration of **ITRACONAZOLE** and **POSACONAZOLE**; carbamazepine possibly reduces plasma concentration of **VORICONAZOLE**—avoid concomitant use; carbamazepine possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin
- Antimalarials: avoidance of carbamazepine advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
- Antimuscarinics: carbamazepine possibly reduces plasma concentration of active metabolite of **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered); carbamazepine accelerates metabolism of **HALOPERIDOL**, **OLANZAPINE**, **QUETIAPINE** and **RISPERIDONE** (reduced plasma concentration); carbamazepine reduces plasma concentration of **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); carbamazepine accelerates metabolism of **CLOZAPINE** (reduced plasma concentration), also avoid concomitant use of drugs with substantial potential for causing agranulocytosis; carbamazepine possibly reduces plasma concentration of **LURASIDONE**—avoid concomitant use; carbamazepine reduces plasma concentration of **PALIPERIDONE**
- Antivirals: avoidance of carbamazepine advised by manufacturer of **BOCEPREVIR** and **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); carbamazepine possibly reduces plasma concentration of **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; carbamazepine possibly reduces plasma concentration of **DARUNAVIR**, **FOSAMPRENAVIR**, **LOPINAVIR**, **SAQUINAVIR** and **TIPRANAVIR**; carbamazepine reduces plasma concentration of **DASABUVIR**, **OMBITASVIR** and **PARITAPREVIR**—avoid concomitant use; carbamazepine reduces the plasma concentration of **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); plasma concentration of both drugs reduced when carbamazepine given with **EFAVIRENZ**; avoidance of carbamazepine advised by manufacturer of **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and **TELAPREVIR**; carbamazepine possibly reduces plasma concentration of **INDINAVIR**, also plasma concentration of carbamazepine possibly increased; carbamazepine reduces plasma concentration of **NEVIRAPINE**; plasma concentration of carbamazepine possibly increased by **RITONAVIR**
- ▶ Anxiolytics and Hypnotics: carbamazepine often reduces plasma concentration of **CLONAZEPAM**; carbamazepine reduces plasma concentration of **MIDAZOLAM**
- Apremilast: carbamazepine possibly reduces plasma concentration of **APREMILAST**—avoid concomitant use
- ▶ Aprepitant: carbamazepine possibly reduces plasma concentration of **APREPITANT**

Carbamazepine (continued)

- **Avanafil:** carbamazepine possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- **Bupropion:** carbamazepine reduces plasma concentration of **BUPROPION**
- **Calcium-channel Blockers:** carbamazepine reduces effects of **FELODIPINE** and **ISRADIPINE**; carbamazepine probably reduces effects of **DIHYDROPYRIDINES**, **NICARDIPINE** and **NIFEDIPINE**; avoidance of carbamazepine advised by manufacturer of **NIMODIPINE** (plasma concentration of nimodipine possibly reduced); effects of carbamazepine enhanced by ● **DILTIAZEM** and ● **VERAPAMIL**
- **Cannabis Extract:** carbamazepine possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- **Ciclosporin:** carbamazepine accelerates metabolism of ● **CICLOSPORIN** (reduced plasma concentration)
- **Clopidogrel:** carbamazepine possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- **Cobicistat:** carbamazepine possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Corticosteroids:** carbamazepine accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- **Cytotoxics:** carbamazepine possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); carbamazepine possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB**, ● **IBRUTINIB**, ● **IDELALISIB** and **PONATINIB**—manufacturer of borteomib, bosutinib, crizotinib, ibrutinib, idelalisib and ponatinib advises avoid concomitant use; carbamazepine possibly reduces plasma concentration of ● **CABOZANTINIB**—avoid concomitant use; avoidance of carbamazepine advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB**, ● **OLAPARIB** and **VEMURAFENIB**; avoidance of carbamazepine advised by manufacturer of **DASATINIB**, **VANDETANIB** and ● **VISMODEGIB** (plasma concentration of dasatinib, vandetanib and vismodegib possibly reduced); carbamazepine reduces plasma concentration of ● **IMATINIB** and ● **LAPATINIB**—avoid concomitant use; carbamazepine possibly reduces plasma concentration of **ERIBULIN**; carbamazepine reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when carbamazepine given with **PROCARBAZINE**
- **Diuretics:** increased risk of hyponatraemia when carbamazepine given with **DIURETICS**; plasma concentration of carbamazepine increased by ● **ACETAZOLAMIDE**; carbamazepine reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use
- **Fingolimod:** carbamazepine reduces plasma concentration of **FINGOLIMOD**
- **Fosaprepitant:** carbamazepine possibly reduces plasma concentration of **FOSAPREPITANT**
- **Guanfacine:** carbamazepine possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Hormone Antagonists:** carbamazepine possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; metabolism of carbamazepine inhibited by ● **DANAZOL** (increased risk of toxicity); carbamazepine possibly accelerates metabolism of **TOREMIFENE** (reduced plasma concentration)
- **5HT₂-receptor Antagonists:** carbamazepine accelerates metabolism of **ONDANSETRON** (reduced effect)
- **Ivacaftor:** carbamazepine possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- **Lipid-regulating Drugs:** carbamazepine reduces plasma concentration of ● **SIMVASTATIN**—consider increasing dose of simvastatin
- **Lithium:** neurotoxicity may occur when carbamazepine given with **LITHIUM** without increased plasma concentration of lithium
- **Macitentan:** avoidance of carbamazepine advised by manufacturer of **MACITENTAN**

Carbamazepine (continued)

- **Muscle Relaxants:** carbamazepine antagonises muscle relaxant effect of **NON-DEPOLARISING MUSCLE RELAXANTS** (accelerated recovery from neuromuscular blockade)
 - **Oestrogens:** carbamazepine accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
 - **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
 - **Progestogens:** carbamazepine accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
 - **Retinoids:** plasma concentration of carbamazepine possibly reduced by **ISOTRETINOIN**
 - **Roflumilast:** carbamazepine possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
 - **Theophylline:** carbamazepine accelerates metabolism of **THEOPHYLLINE** (reduced effect)
 - **Thyroid Hormones:** carbamazepine accelerates metabolism of **THYROID HORMONES** (may increase requirements for thyroid hormones in hypothyroidism)
 - **Tibolone:** carbamazepine accelerates metabolism of **TIBOLONE** (reduced plasma concentration)
 - **Ticagrelor:** carbamazepine possibly reduces plasma concentration of **TICAGRELOL**
 - **Ulcer-healing Drugs:** metabolism of carbamazepine inhibited by ● **CIMETIDINE** (increased plasma concentration)
 - **Ulipristal:** avoidance of carbamazepine advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
 - **Vitamins:** carbamazepine possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**
- Carbapenems** see Ertapenem, Imipenem with Cilastatin, and Meropenem
- Carbimazole**
- **Anticoagulants:** carbimazole possibly enhances anticoagulant effect of **COUMARINS**
- Carbonic Anhydrase Inhibitors** see Diuretics
- Carboplatin** see Platinum Compounds
- Carboprost** see Prostaglandins
- Cardiac Glycosides**
- **ACE Inhibitors:** plasma concentration of digoxin possibly increased by **CAPTOPRIL**
 - **Alpha-blockers:** plasma concentration of digoxin increased by **PAZOSIN**
 - **Aminosaliclates:** absorption of digoxin possibly reduced by **SULFASALAZINE**
 - **Analgesics:** plasma concentration of cardiac glycosides possibly increased by **NSAIDS**, also possible exacerbation of heart failure and reduction of renal function
 - **Antacids:** absorption of digoxin possibly reduced by **ANTACIDS**
 - **Anti-arrhythmics:** plasma concentration of digoxin increased by ● **AMIODARONE**, ● **DRONEDARONE** and ● **PROPAFENONE** (halve dose of digoxin)
 - **Antibacterials:** plasma concentration of digoxin possibly increased by **GENTAMICIN**, **TELITHROMYCIN** and **TRIMETHOPRIM**; absorption of digoxin reduced by **NEOMYCIN**; plasma concentration of digoxin possibly reduced by **RIFAMPICIN**; plasma concentration of digoxin increased by **MACROLIDES** (increased risk of toxicity)
 - **Antidepressants:** plasma concentration of digoxin reduced by ● **ST JOHN'S WORT**—avoid concomitant use
 - **Antidiabetics:** plasma concentration of digoxin possibly reduced by **ACARBOSE**; plasma concentration of digoxin increased by **CANAGLIFLOZIN** and **SITAGLIPTIN**
 - **Antiepileptics:** plasma concentration of digoxin possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**

Cardiac Glycosides (continued)

- Antifungals: increased cardiac toxicity with cardiac glycosides if hypokalaemia occurs with • **AMPHOTERICIN**; plasma concentration of digoxin increased by • **ITRACONAZOLE**
- Antimalarials: plasma concentration of digoxin possibly increased by • **CHLOROQUINE** and • **HYDROXYCHLOROQUINE**; possible increased risk of bradycardia when digoxin given with **MEFLOQUINE**; plasma concentration of digoxin increased by • **QUININE**
- ▶ Antimuscarinics: plasma concentration of digoxin possibly increased by **DARIFENACIN**
- Antivirals: side-effects of digoxin possibly increased by **BOCEPREVIR**; plasma concentration of digoxin increased by • **DACLATASVIR**, **ETRAVIRINE**, **SIMEPREVIR** and **TELAPREVIR**; plasma concentration of digoxin possibly increased by **PARITAPREVIR** (consider reducing dose of digoxin); plasma concentration of digoxin possibly increased by **RITONAVIR**
- ▶ Anxiolytics and Hypnotics: plasma concentration of digoxin increased by **ALPRAZOLAM** (increased risk of toxicity)
- ▶ Beta-blockers: increased risk of AV block and bradycardia when cardiac glycosides given with **BETA-BLOCKERS**
- ▶ Calcium Salts: arrhythmias can be precipitated when cardiac glycosides given with large *intravenous* doses of **CALCIUM SALTS**
- Calcium-channel Blockers: plasma concentration of digoxin increased by • **DILTIAZEM**, • **LERCANIDIPINE** and • **NICARDIPINE**; plasma concentration of digoxin possibly increased by • **NIFEDIPINE**; plasma concentration of digoxin increased by • **VERAPAMIL**, also increased risk of AV block and bradycardia
- Ciclosporin: plasma concentration of digoxin increased by • **CICLOSPORIN** (increased risk of toxicity)
- ▶ Cobicistat: plasma concentration of digoxin possibly increased by **COBICISTAT**—reduce initial dose of digoxin
- Colchicine: possible increased risk of myopathy when digoxin given with • **COLCHICINE**
- ▶ Corticosteroids: increased risk of hypokalaemia when cardiac glycosides given with **CORTICOSTEROIDS**
- ▶ Cytotoxics: absorption of digoxin *tablets* possibly reduced by **BLEOMYCIN**, **CARMUSTINE**, **CYCLOPHOSPHAMIDE**, **CYTARABINE**, **DOXORUBICIN**, **MELPHALAN**, **METHOTREXATE**, **PROCARBAZINE** and **VINCISTINE**; possible increased risk of bradycardia when digoxin given with **CRIZOTINIB**; manufacturer of digoxin advises give **IBRUTINIB** at least 6 hours before or after ibrutinib; plasma concentration of digoxin increased by **VANDETANIB**—possible increased risk of bradycardia
- Diuretics: increased cardiac toxicity with cardiac glycosides if hypokalaemia occurs with • **ACETAZOLAMIDE**, • **LOOP DIURETICS** or • **THIAZIDES AND RELATED DIURETICS**; plasma concentration of digoxin possibly increased by **POTASSIUM CANRENOATE**; plasma concentration of digoxin increased by • **SPIRONOLACTONE**
- ▶ Ivacaftor: plasma concentration of digoxin increased by **IVACAFTOR**
- ▶ Lenalidomide: plasma concentration of digoxin possibly increased by **LENALIDOMIDE**
- ▶ Lipid-regulating Drugs: absorption of cardiac glycosides possibly reduced by **COLESTIPOL** and **COLESTYRAMINE**; plasma concentration of digoxin possibly increased by **ATORVASTATIN**
- ▶ Mirabegron: plasma concentration of digoxin increased by **MIRABEGRON**—reduce initial dose of digoxin
- ▶ Muscle Relaxants: risk of ventricular arrhythmias when cardiac glycosides given with **SUXAMETHONIUM**; possible increased risk of bradycardia when cardiac glycosides given with **TIZANIDINE**
- ▶ Penicillamine: plasma concentration of digoxin possibly reduced by **PENICILLAMINE**
- ▶ Ranolazine: plasma concentration of digoxin increased by **RANOLAZINE**
- ▶ Sympathomimetics: avoidance of digoxin advised by manufacturer of **MIDODRINE**
- ▶ Sympathomimetics, Beta: plasma concentration of digoxin possibly reduced by **SALBUTAMOL**
- Ticagrelor: plasma concentration of digoxin increased by • **TICAGRELOR**
- ▶ Tolvaptan: plasma concentration of digoxin increased by **TOLVAPTAN** (increased risk of toxicity)
- ▶ Ulcer-healing Drugs: plasma concentration of digoxin possibly slightly increased by **PROTON PUMP INHIBITORS**; absorption of cardiac glycosides possibly reduced by **SUCRALFATE**

Cardiac Glycosides (continued)

- ▶ Ulipristal: manufacturer of ulipristal advises give digoxin at least 1.5 hours before or after **ULIPRISTAL**

Carmustine

- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cardiac Glycosides: carmustine possibly reduces absorption of **DIGOXIN tablets**
- ▶ Ulcer-healing Drugs: myelosuppressive effects of carmustine possibly enhanced by **CIMETIDINE**

Carteolol see Beta-blockers

Carvedilol see Beta-blockers

Caspofungin

- ▶ Antibacterials: plasma concentration of caspofungin initially increased and then reduced by **RIFAMPICIN** (consider increasing dose of caspofungin)
- ▶ Antiepileptics: plasma concentration of caspofungin possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**—consider increasing dose of caspofungin
- ▶ Antivirals: plasma concentration of caspofungin possibly reduced by **EFAVIRENZ** and **NEVIRAPINE**—consider increasing dose of caspofungin
- Ciclosporin: plasma concentration of caspofungin increased by • **CICLOSPORIN** (manufacturer of caspofungin recommends monitoring liver enzymes)
- ▶ Corticosteroids: plasma concentration of caspofungin possibly reduced by **DEXAMETHASONE**—consider increasing dose of caspofungin
- Tacrolimus: caspofungin reduces plasma concentration of • **TACROLIMUS**

Catumaxomab

- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Cefaclor see Cephalosporins

Cefadroxil see Cephalosporins

Cefalexin see Cephalosporins

Cefixime see Cephalosporins

Cefotaxime see Cephalosporins

Cefradine see Cephalosporins

Ceftaroline see Cephalosporins

Ceftazidime see Cephalosporins

Ceftibiprole see Cephalosporins

Ceftioxaxone see Cephalosporins

Cefuroxime see Cephalosporins

Celecoxib see NSAIDs

Celiprolol see Beta-blockers

Cephalosporins

- ▶ Antacids: absorption of cefaclor reduced by **ANTACIDS**
- ▶ Antibacterials: possible increased risk of nephrotoxicity when cephalosporins given with **AMINOGLYCOSIDES**
- Anticoagulants: cephalosporins possibly enhance anticoagulant effect of • **COUMARINS**
- ▶ Teriflunomide: plasma concentration of cefaclor increased by **TERIFLUNOMIDE**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Certolizumab pegol

- Abatacept: avoid concomitant use of certolizumab pegol with • **ABATACEPT**
- Anakinra: avoid concomitant use of certolizumab pegol with • **ANAKINRA**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Cetirizine see Antihistamines

Cetuximab

- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Chenodeoxycholic Acid see Bile Acids

Chloral see Anxiolytics and Hypnotics

Chloramphenicol

- Antibacterials: metabolism of chloramphenicol accelerated by **RIFAMPICIN** (reduced plasma concentration)
- Anticoagulants: chloramphenicol enhances anticoagulant effect of **COUMARINS**
- Antidiabetics: chloramphenicol enhances effects of
 - **SULFONYLUREAS**
- Antiepileptics: chloramphenicol increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity); metabolism of chloramphenicol possibly accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration)
- Antipsychotics: avoid concomitant use of chloramphenicol with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Ciclosporin: chloramphenicol possibly increases plasma concentration of **CICLOSPORIN**
- Clopidogrel: chloramphenicol possibly reduces antiplatelet effect of **CLOPIDOGREL**
- Guanfacine: when given with chloramphenicol manufacturer of **GUANFACINE** advises halve dose
- Hydroxocobalamin: chloramphenicol reduces response to **HYDROXOCOBALAMIN**
- Iron Salts: chloramphenicol possibly inhibits effects of **IRON SALTS**
- Tacrolimus: chloramphenicol possibly increases plasma concentration of **TACROLIMUS**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Chloridiazepoxide see Anxiolytics and Hypnotics

Chloroprocaine

- Antibacterials: chloroprocaine possibly inhibits effects of
 - **SULFONAMIDES** (manufacturer of chloroprocaine advises avoid concomitant use)

Chloroquine

- Adsorbents: absorption of chloroquine reduced by **KAOLIN**
- Agalsidase Alfa and Beta: chloroquine possibly inhibits effects of **AGALSIDASE ALFA AND BETA** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- Antacids: absorption of chloroquine reduced by **ANTACIDS**
- Anthelmintics: chloroquine reduces plasma concentration of
 - **PRAZIQUANTEL**—consider increasing praziquanTEL dose when given for systemic infections
- Anti-arrhythmics: increased risk of ventricular arrhythmias when chloroquine given with **AMIODARONE**—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when chloroquine given with **MOXIFLOXACIN**—avoid concomitant use
- Antidepressants: possible increased risk of ventricular arrhythmias when chloroquine given with **CITALOPRAM** and **ESCITALOPRAM**
- Antimalarials: avoidance of antimalarials advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; increased risk of convulsions when chloroquine given with **MEFLOQUINE**
- Antipsychotics: increased risk of ventricular arrhythmias when chloroquine given with **DROPERIDOL**—avoid concomitant use
- Cardiac Glycosides: chloroquine possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: chloroquine increases plasma concentration of **CICLOSPORIN** (increased risk of toxicity)
- Cytotoxics: possible increased risk of ventricular arrhythmias when chloroquine given with **BOSUTINIB**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Lanthanum: absorption of chloroquine possibly reduced by **LANTHANUM** (give at least 2 hours apart)
- Laronidase: chloroquine possibly inhibits effects of **LARONIDASE** (manufacturer of laronidase advises avoid concomitant use)
- Parasympathomimetics: chloroquine has potential to increase symptoms of myasthenia gravis and thus diminish effect of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Ulcer-healing Drugs: metabolism of chloroquine inhibited by **CIMETIDINE** (increased plasma concentration)

Chloroquine (continued)

- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Chlorothiazide see Diuretics

Chlorphenamine see Antihistamines

Chlorpromazine see Antipsychotics

Chlorthalidone see Diuretics

Cholera Vaccine see Vaccines

Cholic Acid see Bile Acids

Ciclesonide see Corticosteroids

Ciclosporin

- ACE Inhibitors: increased risk of hyperkalaemia when ciclosporin given with **ACE INHIBITORS**
- Aliskiren: ciclosporin increases plasma concentration of
 - **ALISKIREN**—avoid concomitant use
- Allopurinol: plasma concentration of ciclosporin possibly increased by **ALLOPURINOL** (risk of nephrotoxicity)
- Ambrisentan: ciclosporin increases plasma concentration of
 - **AMBRISENTAN** (see under Ambrisentan, in BNF)
- Analgesics: increased risk of nephrotoxicity when ciclosporin given with **NSAIDS**; ciclosporin increases plasma concentration of **DICLOFENAC** (halve dose of diclofenac)
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when ciclosporin given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Anti-arrhythmics: plasma concentration of ciclosporin possibly increased by **AMIODARONE** and **PROPAFENONE**
- Antibacterials: plasma concentration of ciclosporin increased by
 - **AZITHROMYCIN**; metabolism of ciclosporin inhibited by **CLARITHROMYCIN** and **ERYTHROMYCIN** (increased plasma concentration); metabolism of ciclosporin accelerated by **RIFAMPICIN** (reduced plasma concentration); plasma concentration of ciclosporin possibly reduced by **SULFADIAZINE**; increased risk of nephrotoxicity when ciclosporin given with **AMINOGLYCOSIDES**, **POLYMYXINS**, **QUINOLONES**, **SULFONAMIDES** or **VANCOMYCIN**; plasma concentration of ciclosporin possibly increased by **CHLORAMPHENICOL** and **TELITHROMYCIN**; increased risk of myopathy when ciclosporin given with **DAPTOMYCIN** (preferably avoid concomitant use); avoidance of ciclosporin advised by manufacturer of **FIDAXOMICIN**; metabolism of ciclosporin possibly inhibited by **MACROLIDES** (increased plasma concentration); ciclosporin increases plasma concentration of **RIFAXIMIN**; increased risk of nephrotoxicity when ciclosporin given with **TRIMETHOPRIM**, also plasma concentration of ciclosporin reduced by *intravenous* trimethoprim
- Anticoagulants: ciclosporin possibly increases plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; ciclosporin increases plasma concentration of **EDOXABAN** (reduce dose of edoxaban—see under Edoxaban, in BNF)
- Antidepressants: plasma concentration of ciclosporin reduced by **ST JOHN'S WORT**—avoid concomitant use
- Antidiabetics: ciclosporin possibly enhances hypoglycaemic effect of **REPAGLINIDE**
- Antiepileptics: metabolism of ciclosporin accelerated by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (reduced plasma concentration); plasma concentration of ciclosporin possibly reduced by **OXCARBAZEPINE**
- Antifungals: metabolism of ciclosporin inhibited by **FLUCONAZOLE**, **ITRACONAZOLE**, **KETOCONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE** (increased plasma concentration); metabolism of ciclosporin possibly inhibited by **MICONAZOLE** (increased plasma concentration); increased risk of nephrotoxicity when ciclosporin given with **AMPHOTERICIN**; ciclosporin increases plasma concentration of **CASPOFUNGIN** (manufacturer of caspofungin recommends monitoring liver enzymes); plasma concentration of ciclosporin possibly reduced by **GRISEOFULVIN** and **TERBINAFINE**; plasma concentration of ciclosporin possibly increased by **MICAFUNGIN**
- Antimalarials: plasma concentration of ciclosporin increased by **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (increased risk of toxicity)

Cyclosporin (continued)

- ▶ Antimuscarinics: avoidance of cyclosporin advised by manufacturer of **DARIFENACIN**
- Antivirals: increased risk of nephrotoxicity when cyclosporin given with **ACICLOVIR** or **VALACICLOVIR**; plasma concentration of cyclosporin possibly increased by **ATAZANAVIR** and **RITONAVIR**; plasma concentration of cyclosporin increased by **BOCEPREVIR**, **FOSAMPRENAVIR** and **INDINAVIR**; plasma concentration of cyclosporin possibly reduced by **EFAVIRENZ**; plasma concentration of both drugs increased when cyclosporin given with **SAQUINAVIR**; plasma concentration of both drugs increased when cyclosporin given with **TELAPREVIR** (reduce dose of cyclosporin)
- Beta-blockers: plasma concentration of cyclosporin increased by **CARVEDILOL**
- Bile Acids: avoidance of cyclosporin advised by manufacturer of **CHOLIC ACID**; absorption of cyclosporin increased by **URSODEOXYCHOLIC ACID**
- Bosentan: cyclosporin increases plasma concentration of **BOSENTAN** (also plasma concentration of cyclosporin reduced—avoid concomitant use)
- Calcium-channel Blockers: combination of cyclosporin with **LERCANIDIPINE** may increase plasma concentration of either drug (or both)—avoid concomitant use; plasma concentration of cyclosporin increased by **DILTIAZEM**, **NICARDIPINE** and **VERAPAMIL**; cyclosporin possibly increases plasma concentration of **NIFEDIPINE** (increased risk of toxicity including gingival hyperplasia)
- Cardiac Glycosides: cyclosporin increases plasma concentration of **DIGOXIN** (increased risk of toxicity)
- Colchicine: possible increased risk of nephrotoxicity and myotoxicity when cyclosporin given with **COLCHICINE**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Corticosteroids: plasma concentration of cyclosporin increased by high-dose **METHYLPREDNISOLONE** (risk of convulsions); cyclosporin increases plasma concentration of **PREDNISOLONE**
- Cytotoxics: increased risk of nephrotoxicity when cyclosporin given with **MELPHALAN**; increased risk of neurotoxicity when cyclosporin given with **DOXORUBICIN**; cyclosporin increases plasma concentration of **EPIRUBICIN** and **IDARUBICIN**; cyclosporin reduces excretion of **MITOXANTHONE** (increased plasma concentration); risk of toxicity when cyclosporin given with **METHOTREXATE**; cyclosporin possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of cyclosporin by 6 to 12 hours; caution with cyclosporin advised by manufacturer of **CRIZOTINIB**; cyclosporin increases plasma concentration of **EVEROLIMUS** (consider reducing the dose of everolimus—consult everolimus product literature); plasma concentration of cyclosporin possibly increased by **IMATINIB**; *in vitro* studies suggest a possible interaction between cyclosporin and **DOCETAXEL** (consult docetaxel product literature); cyclosporin possibly increases plasma concentration of **ETOPOSIDE** (increased risk of toxicity)
- ▶ Dexamazone: increased risk of immunosuppression with cyclosporin advised by manufacturer of **DEXRAZOXANE**
- Diuretics: plasma concentration of cyclosporin possibly increased by **ACETAZOLAMIDE**; increased risk of hyperkalaemia when cyclosporin given with **POTASSIUM-SPARING DIURETICS** AND **ALDOSTERONE ANTAGONISTS**; increased risk of nephrotoxicity and possibly hypermagnesaemia when cyclosporin given with **THIAZIDES AND RELATED DIURETICS**
- Grapefruit Juice: plasma concentration of cyclosporin increased by **GRAPEFRUIT JUICE** (increased risk of toxicity)
- Hormone Antagonists: metabolism of cyclosporin inhibited by **DANAZOL** (increased plasma concentration); plasma concentration of cyclosporin reduced by **LANREOTIDE** and **OCTREOTIDE**; plasma concentration of cyclosporin possibly reduced by **PASIREOTIDE**
- Lenalidomide: cyclosporin possibly increases plasma concentration of **LENALIDOMIDE** (increased risk of toxicity)
- Lipid-regulating Drugs: absorption of cyclosporin reduced by **COLESEVELAM**; increased risk of renal impairment when cyclosporin given with **BEZAFIBRATE** or **FENOFIBRATE**; increased risk of myopathy when cyclosporin given with

Cyclosporin

- Lipid-regulating Drugs (continued)
 - **ATORVASTATIN** (see under Atorvastatin, p. 123); increased risk of myopathy when cyclosporin given with **FLUVASTATIN** or **PRAVASTATIN**; increased risk of myopathy when cyclosporin given with **ROSUVASTATIN** or **SIMVASTATIN** (avoid concomitant use); plasma concentration of both drugs may increase when cyclosporin given with **EZETIMIBE**; separating administration from cyclosporin by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ Mannitol: possible increased risk of nephrotoxicity when cyclosporin given with **MANNITOL**
- Metoclopramide: plasma concentration of cyclosporin increased by **METOCLOPRAMIDE**
- ▶ Mifamurtide: avoidance of cyclosporin advised by manufacturer of **MIFAMURTIDE**
- Modafinil: plasma concentration of cyclosporin reduced by **MODAFINIL**
- ▶ Oestrogens: plasma concentration of cyclosporin possibly increased by **OESTROGENS**
- Orlistat: absorption of cyclosporin possibly reduced by **ORLISTAT**
- Potassium Salts: increased risk of hyperkalaemia when cyclosporin given with **POTASSIUM SALTS**
- ▶ Progestogens: plasma concentration of cyclosporin possibly increased by **PROGESTOGENS**
- Ranolazine: plasma concentration of both drugs may increase when cyclosporin given with **RANOLAZINE**
- ▶ Sevelamer: plasma concentration of cyclosporin possibly reduced by **SEVELAMER**
- ▶ Sirolimus: cyclosporin increases plasma concentration of **SIROLIMUS**
- Sulfapyrazole: plasma concentration of cyclosporin reduced by **SULFINPYRAZONE**
- Tacrolimus: plasma concentration of cyclosporin increased by **TACROLIMUS** (increased risk of nephrotoxicity)—avoid concomitant use
- ▶ Ticagrelor: cyclosporin increases plasma concentration of **TICAGRELOR**
- Ulcer-healing Drugs: plasma concentration of cyclosporin possibly increased by **CIMETIDINE**; plasma concentration of cyclosporin possibly affected by **OMEPRAZOLE**
- ▶ Vitamins: plasma concentration of cyclosporin possibly affected by **VITAMIN E**

Cilostazol

- Anagrelide: avoidance of cilostazol advised by manufacturer of **ANAGRELIDE**
- Antibacterials: plasma concentration of cilostazol possibly increased by **CLARITHROMYCIN** (see under Cilostazol, in BNF); plasma concentration of cilostazol increased by **ERYTHROMYCIN** (see under Cilostazol, in BNF)
- Antifungals: plasma concentration of cilostazol increased by **KETOCONAZOLE** (see under Cilostazol, in BNF); plasma concentration of cilostazol possibly increased by **ITRACONAZOLE** (see under Cilostazol, in BNF)
- Antivirals: plasma concentration of cilostazol possibly increased by **BOCEPREVIR**, **RITONAVIR** and **TELAPREVIR** (see under Cilostazol, in BNF)
- ▶ Calcium-channel Blockers: plasma concentration of cilostazol increased by **DILTIAZEM** (consider reducing dose of cilostazol)
- ▶ Lipid-regulating Drugs: separating administration from cilostazol by 12 hours advised by manufacturer of **LOMITAPIDE**
- Ulcer-healing Drugs: plasma concentration of cilostazol increased by **OMEPRAZOLE** (see under Cilostazol, in BNF)

Cimetidine see Histamine H₂-antagonists

Cinacalcet

- ▶ Antifungals: metabolism of cinacalcet inhibited by **KETOCONAZOLE** (increased plasma concentration)
- Hormone Antagonists: cinacalcet possibly inhibits metabolism of **TAMOXIFEN** to active metabolite (avoid concomitant use)

Cinnarizine see Antihistamines

Ciprofibrate see Fibrates

Ciprofloxacin see Quinolones

Cisatracurium see Muscle Relaxants

Cisplatin see Platinum Compounds

Citalopram see Antidepressants, SSRI

Cladribine

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of cladribine advised by manufacturer of
 - **LAMIVUDINE**

Clarithromycin see Macrolides**Clemastine** see Antihistamines**Clindamycin**

- Muscle Relaxants: clindamycin enhances effects of ● **NON-DEPOLARISING MUSCLE RELAXANTS** and ● **SUXAMETHONIUM**
- Parasympathomimetics: clindamycin antagonises effects of ● **NEOSTIGMINE** and ● **PYRIDOSTIGMINE**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Clobazam see Anxiolytics and Hypnotics**Clofazimine**

- Antibacterials: possible increased risk of ventricular arrhythmias when clofazimine given with ● **BEDAQUILINE**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Clomethiazole see Anxiolytics and Hypnotics**Clomipramine** see Antidepressants, Tricyclic**Clonazepam** see Anxiolytics and Hypnotics**Clonidine**

- ACE Inhibitors: enhanced hypotensive effect when clonidine given with **ACE INHIBITORS**; previous treatment with clonidine possibly delays antihypertensive effect of **CAPTROPIL**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when clonidine given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: enhanced hypotensive effect when clonidine given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when clonidine given with **ALDESLEUKIN**
- Alpha-blockers: enhanced hypotensive effect when clonidine given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when clonidine given with **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of clonidine antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when clonidine given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antidepressants: enhanced hypotensive effect when clonidine given with **MAOIS**; hypotensive effect of clonidine possibly antagonised by **MIRTAZAPINE**; hypotensive effect of clonidine antagonised by ● **TRICYCLICS**, also increased risk of hypertension on clonidine withdrawal
- Antipsychotics: enhanced hypotensive effect when clonidine given with **PHENOTHIAZINES**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when clonidine given with **ANXIOLYTICS AND HYPNOTICS**
- Beta-blockers: increased risk of withdrawal hypertension when clonidine given with ● **BETA-BLOCKERS** (withdraw beta-blockers several days before slowly withdrawing clonidine)
- Calcium-channel Blockers: enhanced hypotensive effect when clonidine given with **CALCIUM-CHANNEL BLOCKERS**
- Corticosteroids: hypotensive effect of clonidine antagonised by **CORTICOSTEROIDS**
- Cytotoxics: possible increased risk of bradycardia when clonidine given with **CRIZOTINIB**
- Diazoxide: enhanced hypotensive effect when clonidine given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when clonidine given with **DIURETICS**
- Dopaminergics: enhanced hypotensive effect when clonidine given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- Histamine: avoidance of clonidine advised by manufacturer of **HISTAMINE**
- Methylodopa: enhanced hypotensive effect when clonidine given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when clonidine given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when clonidine given with **MOXONIDINE**
- Muscle Relaxants: enhanced hypotensive effect when clonidine given with **BACLOFEN** or **TIZANIDINE**

Clonidine (continued)

- Nitrates: enhanced hypotensive effect when clonidine given with **NITRATES**
- Oestrogens: hypotensive effect of clonidine antagonised by **OESTROGENS**
- Prostaglandins: enhanced hypotensive effect when clonidine given with **ALPROSTADIL**
- Sympathomimetics: possible risk of hypertension when clonidine given with **ADRENALINE (EPINEPHRINE)** or **NORADRENALINE (NOREPINEPHRINE)**; serious adverse events reported with concomitant use of clonidine and ● **METHYLPHENIDATE** (causality not established)
- Vasodilator Antihypertensives: enhanced hypotensive effect when clonidine given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Clopidamide see Diuretics**Clopidogrel**

- Analgesics: increased risk of bleeding when clopidogrel given with **NSAIDS** or **ASPIRIN**
- Antibacterials: antiplatelet effect of clopidogrel possibly reduced by ● **CHLORAMPHENICOL**, ● **CIPROFLOXACIN** and ● **ERYTHROMYCIN**
- Anticoagulants: manufacturer of clopidogrel advises avoid concomitant use with ● **WARFARIN**; antiplatelet action of clopidogrel enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; increased risk of bleeding when clopidogrel given with **HEPARINS**
- Antidepressants: antiplatelet effect of clopidogrel possibly reduced by ● **FLUOXETINE**, ● **FLUVOXAMINE** and ● **MOCLOBEMIDE**
- Antiepileptics: antiplatelet effect of clopidogrel possibly reduced by ● **CARBAMAZEPINE** and ● **OXCARBAZEPINE**
- Antifungals: antiplatelet effect of clopidogrel possibly reduced by ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **KETOCONAZOLE** and ● **VORICONAZOLE**
- Antivirals: antiplatelet effect of clopidogrel possibly reduced by ● **ETRAVIRINE**
- Dipyridamole: increased risk of bleeding when clopidogrel given with **DIPYRIDAMOLE**
- Iloprost: increased risk of bleeding when clopidogrel given with **ILOPROST**
- Lipid-regulating Drugs: clopidogrel increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature)
- Prasugrel: possible increased risk of bleeding when clopidogrel given with **PRASUGREL**
- Ulcer-healing Drugs: antiplatelet effect of clopidogrel possibly reduced by ● **CIMETIDINE**, **LANSOPRAZOLE**, **PANTOPRAZOLE** and **RABEPRAZOLE**; antiplatelet effect of clopidogrel reduced by ● **ESOMEPRAZOLE** and ● **OMEPRAZOLE**

Clotrimazole see Antifungals, Imidazole**Clozapine** see Antipsychotics**Co-amoxiclav** see Penicillins**Co-beneldopa**

- ACE Inhibitors: enhanced hypotensive effect when co-beneldopa given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when co-beneldopa given with **ADRENERGIC NEURONE BLOCKERS**
- Alpha-blockers: enhanced hypotensive effect when co-beneldopa given with **ALPHA-BLOCKERS**
- Anaesthetics, General: increased risk of arrhythmias when co-beneldopa given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when co-beneldopa given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antibacterials: effects of co-beneldopa possibly reduced by **ISONIAZID**
- Antidepressants: risk of hypertensive crisis when co-beneldopa given with ● **MAOIS**, avoid co-beneldopa for at least 2 weeks after stopping MAOIs; increased risk of side-effects when co-beneldopa given with **MOCLOBEMIDE**
- Antiepileptics: effects of co-beneldopa possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**
- Antimuscarinics: absorption of co-beneldopa possibly reduced by **ANTIMUSCARINICS**

Co-beneldopa (continued)

- ▶ Antipsychotics: effects of co-beneldopa antagonised by **ANTIPSYCHOTICS**; avoidance of co-beneldopa advised by manufacturer of **AMISULPRIDE** (antagonism of effect)
- ▶ Anxiolytics and Hypnotics: effects of co-beneldopa possibly antagonised by **BENZODIAZEPINES**
- ▶ Beta-blockers: enhanced hypotensive effect when co-beneldopa given with **BETA-BLOCKERS**
- ▶ Bupropion: increased risk of side-effects when co-beneldopa given with **BUPROPION**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when co-beneldopa given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when co-beneldopa given with **CLONIDINE**
- ▶ Diazoxide: enhanced hypotensive effect when co-beneldopa given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when co-beneldopa given with **DIURETICS**
- ▶ Dopaminergics: enhanced effects and increased toxicity of co-beneldopa when given with **SELEGILINE** (reduce dose of co-beneldopa)
- ▶ Iron Salts: absorption of co-beneldopa possibly reduced by **oral IRON SALTS**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: enhanced hypotensive effect when co-beneldopa given with **METHYLDOPA**; antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Moxonidine: enhanced hypotensive effect when co-beneldopa given with **MOXONIDINE**
- ▶ Muscle Relaxants: possible agitation, confusion and hallucinations when co-beneldopa given with **BACLOFEN**
- ▶ Nitrates: enhanced hypotensive effect when co-beneldopa given with **NITRATES**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when co-beneldopa given with **HYDRALAZINE, MINOXIDIL or SODIUM NITROPRUSSIDE**

Cobicistat

- Alpha-blockers: cobicistat possibly increases plasma concentration of ● **ALFUZOSIN**—manufacturer of cobicistat advises avoid concomitant use
- Anti-arrhythmics: cobicistat possibly increases plasma concentration of ● **AMIODARONE**—manufacturer of cobicistat advises avoid concomitant use
- Antifibratics: plasma concentration of cobicistat reduced by ● **RIFABUTIN** (adjust dose—consult product literature); plasma concentration of cobicistat possibly reduced by ● **RIFAMPICIN**—manufacturer of cobicistat advises avoid concomitant use
- Anticoagulants: avoidance of cobicistat advised by manufacturer of **APIXABAN**; cobicistat possibly enhances anticoagulant effect of ● **RIVAROXABAN**—avoid concomitant use
- Antidepressants: plasma concentration of cobicistat possibly reduced by ● **ST JOHN'S WORT**—manufacturer of cobicistat advises avoid concomitant use
- Antiepileptics: plasma concentration of cobicistat possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of cobicistat advises avoid concomitant use
- ▶ Antifungals: cobicistat possibly increases plasma concentration of **ITRACONAZOLE** and **KETOCONAZOLE**—manufacturer of cobicistat advises reduce dose of itraconazole and ketoconazole
- Antipsychotics: cobicistat possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; cobicistat possibly increases plasma concentration of ● **PIMOZIDE**—manufacturer of cobicistat advises avoid concomitant use
- Antivirals: manufacturer of cobicistat advises avoid concomitant use with **BOCEPREVIR** and **RITONAVIR**; cobicistat possibly increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); avoidance of cobicistat advised by manufacturer of **DASABUVIR**, **NEVIRAPINE**, **OMBITASVIR** and **PARITAPREVIR**; cobicistat possibly increases plasma concentration of ● **MARAVIROC** (reduce dose of maraviroc);

Cobicistat

- Antivirals (continued)
cobicistat possibly increases plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs reduced when cobicistat given with ● **TIPRANAVIR** (avoid concomitant use)
- Anxiolytics and Hypnotics: manufacturer of cobicistat advises avoid concomitant use with **oral** ● **MIDAZOLAM**
- Avanafil: cobicistat possibly increases plasma concentration of ● **AVANAFIL**—avoid concomitant use
- ▶ Bosentan: manufacturer of cobicistat advises avoid concomitant use with **BOSENTAN**
- ▶ Cardiac Glycosides: cobicistat possibly increases plasma concentration of **DIGOXIN**—reduce initial dose of digoxin
- Cytotoxics: cobicistat possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Domperidone: possible increased risk of ventricular arrhythmias when cobicistat given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: cobicistat possibly increases plasma concentration of ● **ERGOT ALKALOIDS**—manufacturer of cobicistat advises avoid concomitant use
- Lipid-regulating Drugs: cobicistat possibly increases plasma concentration of **ATORVASTATIN**—manufacturer of cobicistat advises reduce dose of atorvastatin; manufacturer of cobicistat advises avoid concomitant use with ● **SIMVASTATIN**
- Oestrogens: cobicistat accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- ▶ Progestogens: cobicistat increases plasma concentration of **NORGESTIMATE**
- Sildenafil: cobicistat possibly increases plasma concentration of ● **SILDENAFIL**—manufacturer of cobicistat advises avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction—consult cobicistat product literature
- ▶ Sympathomimetics, Beta₂: manufacturer of cobicistat advises avoid concomitant use with **SALMETEROL**
- Tadalafil: cobicistat possibly increases plasma concentration of ● **TADALAFIL**—manufacturer of cobicistat advises reduce dose of tadalafil (consult cobicistat product literature)
- Vardenafil: cobicistat possibly increases plasma concentration of ● **VARDENAFIL**—manufacturer of cobicistat advises reduce dose of vardenafil (consult cobicistat product literature)

Co-careldopa

- ▶ ACE Inhibitors: enhanced hypotensive effect when co-careldopa given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when co-careldopa given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: enhanced hypotensive effect when co-careldopa given with **ALPHA-BLOCKERS**
- Anaesthetics, General: increased risk of arrhythmias when co-careldopa given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when co-careldopa given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Antibacterials: effects of co-careldopa possibly reduced by **ISONIAZID**
- Antidepressants: risk of hypertensive crisis when co-careldopa given with ● **MAOIS**, avoid co-careldopa for at least 2 weeks after stopping MAOIs; increased risk of side-effects when co-careldopa given with **MOCLOBEMIDE**
- ▶ Antiepileptics: effects of co-careldopa possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**
- ▶ Antimuscarinics: absorption of co-careldopa possibly reduced by **ANTIMUSCARINICS**
- ▶ Antipsychotics: effects of co-careldopa antagonised by **ANTIPSYCHOTICS**; avoidance of co-careldopa advised by manufacturer of **AMISULPRIDE** (antagonism of effect)
- ▶ Anxiolytics and Hypnotics: effects of co-careldopa possibly antagonised by **BENZODIAZEPINES**
- ▶ Beta-blockers: enhanced hypotensive effect when co-careldopa given with **BETA-BLOCKERS**

Co-careldopa (continued)

- ▶ Bupropion: increased risk of side-effects when co-careldopa given with **BUPROPION**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when co-careldopa given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when co-careldopa given with **CLONIDINE**
- ▶ Diazoxide: enhanced hypotensive effect when co-careldopa given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when co-careldopa given with **DIURETICS**
- ▶ Dopaminergics: enhanced effects and increased toxicity of co-careldopa when given with **SELEGILINE** (reduce dose of co-careldopa)
- ▶ Iron Salts: absorption of co-careldopa possibly reduced by **oral IRON SALTS**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methylodopa: enhanced hypotensive effect when co-careldopa given with **METHYLDOPA**; antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Moxonidine: enhanced hypotensive effect when co-careldopa given with **MOXONIDINE**
- ▶ Muscle Relaxants: possible agitation, confusion and hallucinations when co-careldopa given with **BACLOFEN**
- ▶ Nitrates: enhanced hypotensive effect when co-careldopa given with **NITRATES**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when co-careldopa given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Cocaine see Opioid Analgesics

Co-fluampicil see Penicillins

Colchicine

- Anti-arrhythmics: possible increased risk of colchicine toxicity when given with ● **AMIODARONE**
- Antibacterials: possible increased risk of colchicine toxicity when given with ● **AZITHROMYCIN**, ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Antifungals: possible increased risk of colchicine toxicity when given with ● **ITRACONAZOLE** and ● **KETOCONAZOLE**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Antivirals: possible increased risk of colchicine toxicity when given with ● **ATAZANAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **TELAPREVIR**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Calcium-channel Blockers: possible increased risk of colchicine toxicity when given with ● **DILTIAZEM** and ● **VERAPAMIL**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Cardiac Glycosides: possible increased risk of myopathy when colchicine given with ● **DIGOXIN**
- Ciclosporin: possible increased risk of nephrotoxicity and myotoxicity when colchicine given with ● **CICLOSPORIN**—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Grapefruit Juice: possible increased risk of colchicine toxicity when given with ● **GRAPEFRUIT JUICE**
- Lipid-regulating Drugs: possible increased risk of myopathy when colchicine given with ● **FIBRATES** or ● **STATINS**
- Netupitant: caution with colchicine advised by manufacturer of **NETUPITANT**

Colecalciferol see Vitamins

Colesevelam

- NOTE** Other drugs should be taken at least 4 hours before or after colesvelam to reduce possible interference with absorption
- ▶ Antidiabetics: colesvelam reduces absorption of **GLIBENCLAMIDE** and **GLIPIZIDE**; colesvelam reduces absorption of **GLIMEPIRIDE**—manufacturer of glimepiride advises give at least 4 hours before colesvelam; manufacturer of canagliflozin advises give bile acid sequestrants at least 1 hour after or 4–6 before **CANAGLIFLOZIN**

Colesevelam (continued)

- ▶ Antiepileptics: colesvelam possibly reduces absorption of **FOSPHENYTOIN** and **PHENYTOIN**
- ▶ Bile Acids: colesvelam probably reduces effects of **CHOLIC ACID** (manufacturer of cholic acid advises give at least 5 hours apart)
- Ciclosporin: colesvelam reduces absorption of ● **CICLOSPORIN**
- ▶ Lipid-regulating Drugs: bile acid sequestrants possibly reduce absorption of **LOMITAPIDE** (give at least 4 hours apart)
- ▶ Oestrogens: colesvelam reduces absorption of **ETHINYLESTRADIOL**
- ▶ Thyroid Hormones: colesvelam reduces absorption of **LEVOTHYROXINE**

Colestipol

- NOTE** Other drugs should be taken at least 1 hour before or 4–6 hours after colestipol to reduce possible interference with absorption
- ▶ Antibacterials: colestipol possibly reduces absorption of **TETRACYCLINE**
 - ▶ Antidiabetics: manufacturer of canagliflozin advises give bile acid sequestrants at least 1 hour after or 4–6 before **CANAGLIFLOZIN**
 - ▶ Bile Acids: colestipol possibly reduces absorption of **BILE ACIDS**; colestipol probably reduces effects of **CHOLIC ACID** (manufacturer of cholic acid advises give at least 5 hours apart)
 - ▶ Cardiac Glycosides: colestipol possibly reduces absorption of **CARDIAC GLYCOSIDES**
 - ▶ Diuretics: colestipol reduces absorption of **THIAZIDES** and **RELATED DIURETICS** (give at least 2 hours apart)
 - ▶ Lipid-regulating Drugs: bile acid sequestrants possibly reduce absorption of **LOMITAPIDE** (give at least 4 hours apart)
 - ▶ Thyroid Hormones: colestipol reduces absorption of **THYROID HORMONES**

Colestyramine

- NOTE** Other drugs should be taken at least 1 hour before or 4–6 hours after colestyramine to reduce possible interference with absorption
- ▶ Analgesics: colestyramine increases the excretion of **MELOXICAM**; colestyramine reduces absorption of **PARACETAMOL**
 - ▶ Antibacterials: colestyramine possibly reduces absorption of **TETRACYCLINE**; colestyramine antagonises effects of **oral VANCOMYCIN**
 - Anticoagulants: colestyramine may enhance or reduce anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
 - ▶ Antidiabetics: colestyramine possibly enhances hypoglycaemic effect of **ACARBOSE**; manufacturer of canagliflozin advises give bile acid sequestrants at least 1 hour after or 4–6 before **CANAGLIFLOZIN**
 - ▶ Antiepileptics: colestyramine possibly reduces absorption of **SODIUM VALPROATE** and **VALPROIC ACID**
 - ▶ Bile Acids: colestyramine possibly reduces absorption of **BILE ACIDS**; colestyramine probably reduces effects of **CHOLIC ACID** (manufacturer of cholic acid advises give at least 5 hours apart)
 - ▶ Cardiac Glycosides: colestyramine possibly reduces absorption of **CARDIAC GLYCOSIDES**
 - ▶ Diuretics: colestyramine reduces absorption of **THIAZIDES** and **RELATED DIURETICS** (give at least 2 hours apart)
 - ▶ Leflunomide: colestyramine significantly decreases effect of **LEFLUNOMIDE** (enhanced elimination)—avoid unless drug elimination desired
 - ▶ Lipid-regulating Drugs: bile acid sequestrants possibly reduce absorption of **LOMITAPIDE** (give at least 4 hours apart)
 - ▶ Mycophenolate: colestyramine reduces absorption of **MYCOPHENOLATE**
 - ▶ Raloxifene: colestyramine reduces absorption of **RALOXIFENE** (manufacturer of raloxifene advises avoid concomitant administration)
 - ▶ Teriflunomide: colestyramine significantly decreases effect of **TERIFLUNOMIDE** (enhanced elimination)—avoid unless drug elimination desired
 - ▶ Thyroid Hormones: colestyramine reduces absorption of **THYROID HORMONES**
 - ▶ Vitamins: colestyramine possibly reduces absorption of **CALCITRIOL** (give at least 1 hour before or 4 to 6 hours after colestyramine)

Colistimethate Sodium see Polymyxins

Contraceptives, oral see Oestrogens and Progestogens

Corticosteroids

NOTE Interactions do not generally apply to corticosteroids used for topical action (including inhalation) unless specified

▶ **ACE Inhibitors:** corticosteroids antagonise hypotensive effect of **ACE INHIBITORS**

▶ **Adrenergic Neurone Blockers:** corticosteroids antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**

● **Aldesleukin:** avoidance of corticosteroids advised by manufacturer of ● **ALDESLEUKIN**

▶ **Alpha-blockers:** corticosteroids antagonise hypotensive effect of **ALPHA-BLOCKERS**

▶ **Aminophylline:** increased risk of hypokalaemia when corticosteroids given with **AMINOPHYLLINE**

▶ **Analgesics:** increased risk of gastro-intestinal bleeding and ulceration when corticosteroids given with **NSAIDS**; increased risk of gastro-intestinal bleeding and ulceration when corticosteroids given with **ASPIRIN**, also corticosteroids reduce plasma concentration of salicylate

▶ **Angiotensin-II Receptor Antagonists:** corticosteroids antagonise hypotensive effect of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**

▶ **Antacids:** absorption of deflazacort reduced by **ANTACIDS**

▶ **Anthelmintics:** dexamethasone increases plasma concentration of active metabolite of **ALBENDAZOLE**; continuous use of dexamethasone possibly reduces plasma concentration of **PRAZIQUANTEL**

● **Antibacterials:** plasma concentration of methylprednisolone possibly increased by **CLARITHROMYCIN**; metabolism of corticosteroids possibly inhibited by **ERYTHROMYCIN**; metabolism of methylprednisolone inhibited by **ERYTHROMYCIN**; corticosteroids possibly reduce plasma concentration of **ISONIAZID**; metabolism of corticosteroids accelerated by ● **RIFAMYCINS** (reduced effect)

● **Anticoagulants:** corticosteroids may enhance or reduce anticoagulant effect of ● **COUMARINS** (high-dose corticosteroids enhance anticoagulant effect); corticosteroids may enhance or reduce anticoagulant effect of **PHENINDIONE**

▶ **Antidiabetics:** corticosteroids antagonise hypoglycaemic effect of **ANTI-DIABETICS**

● **Antiepileptics:** metabolism of corticosteroids accelerated by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (reduced effect)

● **Antifungals:** metabolism of corticosteroids possibly inhibited by **ITRACONAZOLE** and **KETOCONAZOLE**; plasma concentration of active metabolite of ciclosporin increased by ● **KETOCONAZOLE**; plasma concentration of *inhaled* mometasone increased by **KETOCONAZOLE**; plasma concentration of *inhaled* and *oral* (and possibly also *intranasal* and *rectal*) budesonide increased by ● **ITRACONAZOLE** and ● **KETOCONAZOLE**; *inhaled* fluticasone plasma concentration is possibly increased by **KETOCONAZOLE**; metabolism of methylprednisolone inhibited by **KETOCONAZOLE**; increased risk of hypokalaemia when corticosteroids given with ● **AMPHOTERICIN**—avoid concomitant use unless corticosteroids needed to control reactions; plasma concentration of *inhaled* fluticasone increased by **ITRACONAZOLE**; metabolism of methylprednisolone possibly inhibited by **ITRACONAZOLE**; dexamethasone possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin

● **Antivirals:** dexamethasone possibly reduces plasma concentration of **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; dexamethasone possibly reduces plasma concentration of **INDINAVIR**, **LOPINAVIR**, **SAQUINAVIR** and **TELAPEVIR**; avoidance of dexamethasone (except when given as a single dose) advised by manufacturer of ● **RILPIVIRINE**; plasma concentration of *inhaled* and *intranasal* fluticasone increased by ● **RITONAVIR**—increased risk of adrenal suppression; plasma concentration of budesonide (including *inhaled*, *intranasal*, and *rectal* budesonide) possibly increased by ● **RITONAVIR**—increased risk of adrenal suppression; plasma concentration of corticosteroids possibly increased by ● **RITONAVIR**—increased risk of adrenal suppression; plasma concentration of triamcinolone *injection* increased by ● **RITONAVIR**—increased risk of adrenal suppression; plasma concentration of *inhaled*

Corticosteroids

- **Antivirals** (continued) and *intranasal* budesonide and fluticasone possibly increased by **TELAPEVIR**
- ▶ **Aprepitant:** metabolism of dexamethasone and methylprednisolone inhibited by **APREPITANT** (reduce dose of dexamethasone and methylprednisolone)
- ▶ **Beta-blockers:** corticosteroids antagonise hypotensive effect of **BETA-BLOCKERS**
- ▶ **Calcium Salts:** corticosteroids reduce absorption of **CALCIUM SALTS**
- ▶ **Calcium-channel Blockers:** corticosteroids antagonise hypotensive effect of **CALCIUM-CHANNEL BLOCKERS**; plasma concentration of methylprednisolone increased by **DILTIAZEM**
- ▶ **Cardiac Glycosides:** increased risk of hypokalaemia when corticosteroids given with **CARDIAC GLYCOSIDES**
- **Ciclosporin:** high-dose methylprednisolone increases plasma concentration of ● **CICLOSPORIN** (risk of convulsions); plasma concentration of prednisolone increased by **CICLOSPORIN**
- ▶ **Clonidine:** corticosteroids antagonise hypotensive effect of **CLONIDINE**
- ▶ **Cytotoxics:** possible increased risk of hepatotoxicity when dexamethasone given with *high-dose* **METHOTREXATE**; dexamethasone possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); dexamethasone possibly reduces plasma concentration of **CABOZANTINIB**—manufacturer of cabozantinib advises avoid concomitant use
- ▶ **Diazoxide:** corticosteroids antagonise hypotensive effect of **DIAZOXIDE**
- ▶ **Diuretics:** corticosteroids antagonise diuretic effect of **DIURETICS**; increased risk of hypokalaemia when corticosteroids given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- ▶ **Fosaprepitant:** metabolism of dexamethasone and methylprednisolone inhibited by **FOSAPREPITANT** (reduce dose of dexamethasone and methylprednisolone)
- **Grapefruit Juice:** plasma concentration of *oral* budesonide increased by ● **GRAPEFRUIT JUICE**—avoid concurrent use or separate administration by as much as possible and consider reducing *oral* budesonide dose
- ▶ **Histamine:** avoidance of corticosteroids advised by manufacturer of **HISTAMINE**
- ▶ **Methyldopa:** corticosteroids antagonise hypotensive effect of **METHYLDOPA**
- ▶ **Mifamurtide:** avoidance of corticosteroids advised by manufacturer of **MIFAMURTIDE**
- ▶ **Mifepristone:** effect of corticosteroids (including *inhaled* corticosteroids) may be reduced for 3–4 days after **MIFEPRISTONE**
- ▶ **Moxonidine:** corticosteroids antagonise hypotensive effect of **MOXONIDINE**
- ▶ **Muscle Relaxants:** corticosteroids possibly antagonise effects of **PANCURONIUM** and **VECURONIUM**
- **Netupitant:** plasma concentration of dexamethasone increased by ● **NETUPITANT** (halve dose of dexamethasone)
- ▶ **Nicorandil:** increased risk of gastro-intestinal bleeding and ulceration when corticosteroids given with **NICORANDIL**
- ▶ **Nitrates:** corticosteroids antagonise hypotensive effect of **NITRATES**
- ▶ **Oestrogens:** plasma concentration of corticosteroids increased by oral contraceptives containing **OESTROGENS**
- ▶ **Sodium Benzoate:** corticosteroids possibly reduce effects of **SODIUM BENZOATE**
- ▶ **Sodium Phenylbutyrate:** corticosteroids possibly reduce effects of **SODIUM PHENYLBUTYRATE**
- ▶ **Somatropin:** corticosteroids may inhibit growth-promoting effect of **SOMATROPIN**
- ▶ **Sympathomimetics:** metabolism of dexamethasone accelerated by **EPHEDRINE**; possible risk of hypertension when corticosteroids given with **MIDODRINE**
- ▶ **Sympathomimetics, Beta₂:** increased risk of hypokalaemia when corticosteroids given with high doses of **BETA₂ SYMPATHOMIMETICS**
- ▶ **Theophylline:** increased risk of hypokalaemia when corticosteroids given with **THEOPHYLLINE**

Corticosteroids (continued)

- **Vaccines**: high doses of corticosteroids impair immune response to ● **VACCINES**—avoid concomitant use with live vaccines
- **Vasodilator Antihypertensives**: corticosteroids antagonise hypotensive effect of **HYDRALAZINE**, **MINOXIDIL** and **SODIUM NITROPRUSSIDE**

Co-trimoxazole see Trimethoprim and Sulfamethoxazole

Coumarins

NOTE Change in patient's clinical condition, particularly associated with liver disease, intercurrent illness, or drug administration, necessitates more frequent testing. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption may also affect anticoagulant control

- **Alcohol**: anticoagulant control with coumarins may be affected by major changes in consumption of ● **ALCOHOL**
- **Allopurinol**: anticoagulant effect of coumarins possibly enhanced by **ALLOPURINOL**
- **Anabolic Steroids**: anticoagulant effect of coumarins enhanced by ● **ANABOLIC STEROIDS**
- **Analgesics**: anticoagulant effect of coumarins possibly enhanced by ● **NSAIDS**; increased risk of haemorrhage when anticoagulants given with **intravenous** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins); anticoagulant effect of coumarins enhanced by ● **TRAMADOL**; increased risk of bleeding when coumarins given with ● **ASPIRIN** (due to antiplatelet effect); anticoagulant effect of coumarins possibly enhanced by prolonged regular use of **PARACETAMOL**
- **Anthemelmintics**: anticoagulant effect of coumarins possibly enhanced by **IVERMECTIN**; anticoagulant effect of warfarin possibly enhanced by ● **LEVAMISOLE**
- **Anti-arrhythmics**: metabolism of coumarins inhibited by ● **AMIODARONE** (enhanced anticoagulant effect); anticoagulant effect of warfarin may be enhanced or reduced by **DISOPYRAMIDE**; anticoagulant effect of coumarins possibly enhanced by ● **DRONEDARONE**; anticoagulant effect of coumarins enhanced by ● **PROPAFENONE**
- **Antibacterials**: experience in anticoagulant clinics suggests that INR possibly altered when coumarins are given with ● **NEOMYCIN** (given for local action on gut); anticoagulant effect of coumarins possibly enhanced by ● **AZITHROMYCIN**, ● **AZTREONAM**, ● **CEPHALOSPORINS**, **CIPROFLOXACIN**, **LEVOFLOXACIN**, ● **TETRACYCLINES**, **TIGECYCLINE** and **TRIMETHOPRIM**; anticoagulant effect of coumarins enhanced by ● **CHLORAMPHENICOL**, ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN**, ● **METRONIDAZOLE**, ● **NALIDIXIC ACID**, ● **NORFLOXACIN**, ● **OFLOXACIN** and ● **SULFONAMIDES**; plasma concentration of warfarin possibly increased by **ORITAVANCIN**; an interaction between coumarins and broad-spectrum **PENICILLINS** has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered; metabolism of coumarins accelerated by ● **RIFAMYCINS** (reduced anticoagulant effect); anticoagulant effect of warfarin possibly reduced by **RIFAXIMIN**
- **Anticoagulants**: increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- **Antidepressants**: anticoagulant effect of warfarin possibly enhanced by ● **VENLAFAXINE**; anticoagulant effect of warfarin may be enhanced or reduced by **TRAZODONE**; anticoagulant effect of coumarins possibly enhanced by ● **SSRIS**; anticoagulant effect of coumarins reduced by ● **ST JOHN'S WORT** (avoid concomitant use); anticoagulant effect of warfarin enhanced by **MIRTAZAPINE**; anticoagulant effect of coumarins may be enhanced or reduced by ● **TRICYCLICS**
- **Antidiabetics**: anticoagulant effect of warfarin possibly enhanced by **EXENATIDE**; coumarins possibly enhance hypoglycaemic effect of ● **SULFONYLUREAS**, also possible changes to anticoagulant effect

Coumarins (continued)

- **Antiepileptics**: metabolism of coumarins accelerated by ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE** (reduced anticoagulant effect); plasma concentration of warfarin reduced by **ESLICARBAPAZEPINE**; metabolism of coumarins accelerated by ● **FOSPHENYTOIN** and ● **PHENYTOIN** (possibility of reduced anticoagulant effect, but enhancement also reported); anticoagulant effect of coumarins possibly enhanced by **SODIUM VALPROATE** and **VALPROIC ACID**
- **Antifungals**: anticoagulant effect of coumarins enhanced by ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **KETOCONAZOLE** and ● **VORICONAZOLE**; anticoagulant effect of coumarins greatly enhanced by ● **MICONAZOLE** (including oral gel and possibly vaginal and topical formulations)—avoid concomitant use if possible; anticoagulant effect of coumarins reduced by ● **GRISEOFULVIN**
- **Antimalarials**: isolated reports that anticoagulant effect of warfarin may be enhanced by **PROGUANIL**; plasma concentration of both drugs increased when warfarin given with **QUININE**
- **Antivirals**: anticoagulant effect of warfarin may be enhanced or reduced by **ATAZANAVIR**, ● **NEVIRAPINE** and ● **RITONAVIR**; plasma concentration of coumarins possibly affected by ● **EFAVIRENZ**; anticoagulant effect of coumarins may be enhanced or reduced by **FOSAMPRENAVIR**; anticoagulant effect of coumarins possibly enhanced by ● **RITONAVIR**; anticoagulant effect of warfarin possibly enhanced by **SAQUINAVIR**; plasma concentration of warfarin possibly affected by ● **TELAPREVIR**
- **Anxiolytics and Hypnotics**: anticoagulant effect of coumarins may transiently be enhanced by **CHLORAL**
- **Aprepitant**: anticoagulant effect of warfarin possibly reduced by **APREPITANT**
- **Azathioprine**: anticoagulant effect of acenocoumarol possibly reduced by ● **AZATHIOPRINE**; anticoagulant effect of warfarin reduced by ● **AZATHIOPRINE**
- **Bosentan**: monitoring anticoagulant effect of coumarins recommended by manufacturer of **BOSENTAN**
- **Carbimazole**: anticoagulant effect of coumarins possibly enhanced by **CARBIMAZOLE**
- **Clopidogrel**: anticoagulant effect of coumarins enhanced due to antiplatelet action of ● **CLOPIDOGREL**; avoidance of warfarin advised by manufacturer of ● **CLOPIDOGREL**
- **Corticosteroids**: anticoagulant effect of coumarins may be enhanced or reduced by ● **CORTICOSTEROIDS** (high-dose corticosteroids enhance anticoagulant effect)
- **Cranberry Juice**: anticoagulant effect of coumarins possibly enhanced by ● **CRANBERRY JUICE**—avoid concomitant use
- **Cytotoxics**: anticoagulant effect of coumarins possibly enhanced by ● **ETOPOSIDE**, ● **IFOSFAMIDE** and ● **SORAFENIB**; anticoagulant effect of coumarins enhanced by ● **CAPECITABINE**, ● **FLUOROURACIL** and ● **TEGAFUR**; anticoagulant effect of warfarin possibly enhanced by ● **GEFITINIB**, **GEMCITABINE** and ● **VEMURAFENIB**; anticoagulant effect of coumarins possibly reduced by ● **MERCAPTOPURINE** and ● **MITOTANE**; plasma concentration of warfarin reduced by **DABRAFENIB**; increased risk of bleeding when coumarins given with ● **ERLOTINIB**; avoidance of coumarins advised by manufacturer of **IBRUTINIB**; replacement of warfarin with a heparin advised by manufacturer of **IMATINIB** (possibility of enhanced warfarin effect); increased risk of bleeding when warfarin given with ● **REGORAFENIB**
- **Dipyridamole**: anticoagulant effect of coumarins enhanced due to antiplatelet action of ● **DIPYRIDAMOLE**
- **Disulfiram**: anticoagulant effect of coumarins enhanced by ● **DISULFIRAM**
- **Dopaminergics**: anticoagulant effect of warfarin enhanced by ● **ENTACAPONE**
- **Enteral Feeds**: anticoagulant effect of coumarins antagonised by vitamin K (present in some ● **ENTERAL FEEDS**)
- **Fosaprepitant**: anticoagulant effect of warfarin possibly reduced by **FOSAPREPITANT**
- **Glucosamine**: anticoagulant effect of warfarin enhanced by ● **GLUCOSAMINE** (avoid concomitant use)
- **Hormone Antagonists**: anticoagulant effect of coumarins possibly enhanced by **BICALUTAMIDE** and ● **TOREMIFENE**; metabolism of coumarins inhibited by ● **DANAZOL** (enhanced

Coumarins

- **Hormone Antagonists** (continued)
 - anticoagulant effect; plasma concentration of coumarins possibly reduced by • **ENZALUTAMIDE**; anticoagulant effect of coumarins enhanced by • **FLUTAMIDE** and • **TAMOXIFEN**
- ▶ **Iloprost**: anticoagulant effect of coumarins possibly enhanced by **ILOPROST**
- ▶ **Lactulose**: anticoagulant effect of coumarins possibly enhanced by **LACTULOSE**
- ▶ **Leflunomide**: anticoagulant effect of warfarin possibly enhanced by **LEFLUNOMIDE**
- ▶ **Leukotriene Receptor Antagonists**: anticoagulant effect of warfarin enhanced by **ZAFILUKAST**
- ▶ **Levodarnitine**: anticoagulant effect of coumarins possibly enhanced by **LEVOCARNITINE**
- **Lipid-regulating Drugs**: anticoagulant effect of coumarins may be enhanced or reduced by • **COLESTYRAMINE**; anticoagulant effect of warfarin may be transiently reduced by **ATORVASTATIN**; anticoagulant effect of coumarins enhanced by • **FIBRATES** and • **FLUVASTATIN**; anticoagulant effect of coumarins possibly enhanced by **EZETIMIBE** and • **ROSUVASTATIN**; anticoagulant effect of coumarins can be enhanced by **SIMVASTATIN**; anticoagulant effect of warfarin possibly enhanced by **LOMITAPIDE**
- ▶ **Memantine**: anticoagulant effect of warfarin possibly enhanced by **MEMANTINE**
- ▶ **Oestrogens**: anticoagulant effect of coumarins may be enhanced or reduced by **OESTROGENS**
- ▶ **Orlistat**: monitoring anticoagulant effect of coumarins recommended by manufacturer of **ORLISTAT**
- ▶ **Prasugrel**: possible increased risk of bleeding when coumarins given with **PRASUGREL**
- ▶ **Progestogens**: anticoagulant effect of coumarins may be enhanced or reduced by **PROGESTOGENS**
- ▶ **Raloxifene**: anticoagulant effect of coumarins antagonised by **RALOXIFENE**
- **Retinoids**: anticoagulant effect of coumarins possibly reduced by • **ACITRETIN**
- **Sulfinpyrazone**: anticoagulant effect of coumarins enhanced by • **SULFINPYRAZONE**
- **Symptathomimetics**: anticoagulant effect of coumarins possibly enhanced by • **METHYLPHENIDATE**
- **Testolactone**: anticoagulant effect of coumarins enhanced by • **TESTOLACTONE**
- **Testosterone**: anticoagulant effect of coumarins enhanced by • **TESTOSTERONE**
- **Thyroid Hormones**: anticoagulant effect of coumarins enhanced by • **THYROID HORMONES**
- ▶ **Ubidecarenone**: anticoagulant effect of warfarin may be enhanced or reduced by **UBIDECARENONE**
- **Ulcer-healing Drugs**: metabolism of coumarins inhibited by • **CIMETIDINE** (enhanced anticoagulant effect); anticoagulant effect of coumarins possibly enhanced by • **ESOMEPRAZOLE** and • **OMEPRAZOLE**; anticoagulant effect of coumarins might be enhanced by **PANTOPRAZOLE**; absorption of coumarins possibly reduced by • **SUCRALFATE** (reduced anticoagulant effect)
- ▶ **Vaccines**: anticoagulant effect of warfarin possibly enhanced by **INFLUENZA VACCINE**
- **Vitamins**: anticoagulant effect of coumarins possibly enhanced by • **VITAMIN E**; anticoagulant effect of coumarins antagonised by • **VITAMIN K**

Cranberry Juice

- **Anticoagulants**: cranberry juice possibly enhances anticoagulant effect of • **COUMARINS**—avoid concomitant use

Crizotinib

- **Analgesics**: manufacturer of crizotinib advises caution with • **ALFENTANIL** and • **FENTANYL**
- **Antibacterials**: plasma concentration of crizotinib possibly increased by • **CLARITHROMYCIN** and • **TELITHROMYCIN**—manufacturer of crizotinib advises avoid concomitant use; plasma concentration of crizotinib possibly reduced by **RIFABUTIN**—manufacturer of crizotinib advises avoid concomitant use; plasma concentration of crizotinib reduced by • **RIFAMPICIN**—manufacturer of crizotinib advises avoid concomitant use

Crizotinib (continued)

- ▶ **Antidepressants**: plasma concentration of crizotinib possibly reduced by **ST JOHN'S WORT**—manufacturer of crizotinib advises avoid concomitant use
- ▶ **Antiepileptics**: plasma concentration of crizotinib possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—manufacturer of crizotinib advises avoid concomitant use
- **Antifungals**: plasma concentration of crizotinib increased by • **KETOCONAZOLE**—avoid concomitant use; plasma concentration of crizotinib possibly increased by • **ITRACONAZOLE** and • **VORICONAZOLE**—manufacturer of crizotinib advises avoid concomitant use
- ▶ **Antimalarials**: possible increased risk of bradycardia when crizotinib given with **MEFLOQUINE**
- **Antipsychotics**: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis); manufacturer of crizotinib advises caution with • **PIMOZIDE**
- **Antivirals**: plasma concentration of crizotinib possibly increased by • **ATAZANAVIR**, • **INDINAVIR**, • **RITONAVIR** and • **SAQUINAVIR**—manufacturer of crizotinib advises avoid concomitant use
- **Anxiolytics and Hypnotics**: crizotinib increases plasma concentration of • **MIDAZOLAM**
- ▶ **Beta-blockers**: possible increased risk of bradycardia when crizotinib given with **BETA-BLOCKERS**
- ▶ **Calcium-channel Blockers**: possible increased risk of bradycardia when crizotinib given with **DILTIAZEM** or **VERAPAMIL**
- ▶ **Cardiac Glycosides**: possible increased risk of bradycardia when crizotinib given with **DIGOXIN**
- **Ciclosporin**: manufacturer of crizotinib advises caution with • **CICLOSPORIN**
- ▶ **Clonidine**: possible increased risk of bradycardia when crizotinib given with **CLONIDINE**
- **Cytotoxics**: crizotinib possibly increases the plasma concentration of • **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- **Ergot Alkaloids**: manufacturer of crizotinib advises caution with • **ERGOT ALKALOIDS**
- **Grapefruit Juice**: plasma concentration of crizotinib possibly increased by • **GRAPEFRUIT JUICE**—manufacturer of crizotinib advises avoid concomitant use
- ▶ **Guanfacine**: crizotinib possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- **Oestrogens**: manufacturer of crizotinib advises contraceptive effect of • **OESTROGENS** possibly reduced
- ▶ **Parasympathomimetics**: possible increased risk of bradycardia when crizotinib given with **PILOCARPINE**
- **Progestogens**: manufacturer of crizotinib advises contraceptive effect of • **PROGESTOGENS** possibly reduced
- **Sirolimus**: manufacturer of crizotinib advises caution with • **SIROLIMUS**
- **Tacrolimus**: manufacturer of crizotinib advises caution with • **TACROLIMUS**

Cyclizine see Antihistamines**Cyclophentiazide** see Diuretics**Cyclopentolate** see Antimuscarinics**Cyclophosphamide**

- ▶ **Antifungals**: side-effects of cyclophosphamide possibly increased by **FLUCONAZOLE** and **ITRACONAZOLE**
- **Antipsychotics**: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ **Cardiac Glycosides**: cyclophosphamide possibly reduces absorption of **DIGOXIN tablets**
- **Cytotoxics**: increased toxicity when high-dose cyclophosphamide given with • **PENTOSTATIN**—avoid concomitant use
- ▶ **Muscle Relaxants**: cyclophosphamide enhances effects of **SUXAMETHONIUM**

Cycloserine

- **Alcohol**: increased risk of convulsions when cycloserine given with • **ALCOHOL**
- ▶ **Antibacterials**: increased risk of CNS toxicity when cycloserine given with **ISONIAZID**
- ▶ **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF

Cyproheptadine see Antihistamines**Cytarabine**

- Antifungals: cytarabine possibly reduces plasma concentration of **FLUCYTOSINE**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cardiac Glycosides: cytarabine possibly reduces absorption of **DIGOXIN tablets**
- Cytotoxics: intracellular concentration of cytarabine increased by **FLUDARABINE**

Cytotoxics see individual drugs**Dabigatran**

- Analguesics: possible increased risk of bleeding when dabigatran given with ● **NSAIDS**; increased risk of haemorrhage when anticoagulants given with **intravenous** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- Anti-arrhythmics: plasma concentration of dabigatran increased by ● **AMIODARONE** (see under Dabigatran Etexilate, in BNF); plasma concentration of dabigatran increased by ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: possible increased risk of bleeding when dabigatran given with **CLARITHROMYCIN**; plasma concentration of dabigatran reduced by ● **RIFAMPICIN**—manufacturer of dabigatran advises avoid concomitant use
- Anticoagulants: increased risk of haemorrhage when dabigatran given with other ● **ANTICOAGULANTS** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: possible increased risk of bleeding when dabigatran given with ● **SSRI-RELATED ANTIDEPRESSANTS** or ● **SSRIs**; plasma concentration of dabigatran possibly reduced by **ST JOHN'S WORT**—manufacturer of dabigatran advises avoid concomitant use
- Antiepileptics: plasma concentration of dabigatran possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**—manufacturer of dabigatran advises avoid concomitant use
- Antifungals: plasma concentration of dabigatran increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of dabigatran advises avoid concomitant use with **ITRACONAZOLE**
- Antivirals: manufacturers advise avoid concomitant use of dabigatran with **DARUNAVIR**; plasma concentration of dabigatran possibly increased by **RILPIVIRINE** and **TELAPREVIR**
- Calcium-channel Blockers: plasma concentration of dabigatran possibly increased by ● **VERAPAMIL** (see under Dabigatran Etexilate, in BNF)
- Ciclosporin: plasma concentration of dabigatran possibly increased by ● **CICLOSPORIN**—manufacturer of dabigatran advises avoid concomitant use
- Netupitant: caution with dabigatran advised by manufacturer of **NETUPITANT**
- Sulfinpyrazone: possible increased risk of bleeding when dabigatran given with ● **SULFINPYRAZONE**
- Tacrolimus: plasma concentration of dabigatran possibly increased by ● **TACROLIMUS**—manufacturer of dabigatran advises avoid concomitant use
- Ticagrelor: plasma concentration of dabigatran increased by ● **TICAGRELOL**
- Ulipristal: manufacturer of ulipristal advises give dabigatran at least 1.5 hours before or after **ULIPRISTAL**

Dabrafenib

- Antibacterials: manufacturer of dabrafenib advises avoid concomitant use with **RIFAMPICIN**
- Anticoagulants: dabrafenib reduces plasma concentration of **WARFARIN**
- Antidepressants: manufacturer of dabrafenib advises avoid concomitant use with **ST JOHN'S WORT**
- Antiepileptics: manufacturer of dabrafenib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**

Dabrafenib (continued)

- Antifungals: plasma concentration of dabrafenib increased by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Lipid-regulating Drugs: plasma concentration of dabrafenib increased by **GEMFIBROZIL**
- Oestrogens: manufacturer of dabrafenib advises contraceptive effect of hormonal contraceptives containing ● **OESTROGENS** possibly reduced (alternative contraceptive recommended)
- Progestogens: manufacturer of dabrafenib advises contraceptive effect of hormonal contraceptives containing ● **PROGESTOGENS** possibly reduced (alternative contraceptive recommended)
- Ulcer-healing Drugs: manufacturer of dabrafenib advises avoid concomitant use with **PROTON PUMP INHIBITORS** (plasma concentration of dabrafenib possibly reduced)

Dacarbazine

- Aldesleukin: avoidance of dacarbazine advised by manufacturer of ● **ALDESLEUKIN**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)

Daclatasvir

- Anti-arrhythmics: possible increased risk of bradycardia when daclatasvir (with sofosbuvir) given with ● **AMIODARONE**—see under Amiodarone, in BNF
- Antibacterials: plasma concentration of daclatasvir possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); plasma concentration of daclatasvir possibly reduced by ● **RIFABUTIN**—manufacturer of daclatasvir advises avoid concomitant use; plasma concentration of daclatasvir reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of daclatasvir possibly reduced by **ST JOHN'S WORT**—manufacturer of daclatasvir advises avoid concomitant use
- Antiepileptics: plasma concentration of daclatasvir possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of daclatasvir advises avoid concomitant use
- Antifungals: plasma concentration of daclatasvir increased by ● **KETOCONAZOLE**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); plasma concentration of daclatasvir possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—reduce dose of daclatasvir (see under Daclatasvir, in BNF)
- Antivirals: plasma concentration of daclatasvir increased by ● **ATAZANAVIR** and ● **TELAPREVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); plasma concentration of daclatasvir possibly increased by ● **BOCEPREVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); manufacturer of daclatasvir advises avoid concomitant use with **DARUNAVIR** (plasma concentration of daclatasvir possibly increased); plasma concentration of daclatasvir reduced by ● **EFAVIRENZ**—increase dose of daclatasvir (see under Daclatasvir, in BNF); manufacturer of daclatasvir advises avoid concomitant use with **ETRAVIRINE** and **NEVIRAPINE** (plasma concentration of daclatasvir possibly reduced)
- Cardiac Glycosides: daclatasvir increases plasma concentration of ● **DIGOXIN**
- Cobicistat: plasma concentration of daclatasvir possibly increased by ● **COBICISTAT**—reduce dose of daclatasvir (see under Daclatasvir, in BNF)
- Corticosteroids: plasma concentration of daclatasvir possibly reduced by **DEXAMETHASONE**—manufacturer of daclatasvir advises avoid concomitant use
- Lipid-regulating Drugs: daclatasvir increases plasma concentration of **ROSUVASTATIN**

Dactinomycin

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased risk of hepatotoxicity when dactinomycin given with ● **VINCISTINE**
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Dactinomycin (continued)

- ▶ Vitamins: dactinomycin possibly reduces effects of **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** and **VITAMIN D**

Dairy Products

- ▶ Antibacterials: dairy products reduce absorption of **CIPROFLOXACIN** (give at least 2 hours apart); dairy products reduce absorption of **NORFLOXACIN**; dairy products reduce absorption of **TETRACYCLINES** (except doxycycline and minocycline)
- ▶ Cytotoxics: dairy products possibly reduce plasma concentration of **MERCAPTOPURINE**—manufacturer of mercaptopurine advises give at least 1 hour before or 3 hours after dairy products
- ▶ Eltrombopag: dairy products possibly reduce absorption of **ELTROMBOPAG** (give at least 4 hours apart)

Dalteparin see Heparins**Danaparoid**

- Analgesics: increased risk of haemorrhage when anticoagulants given with **INTRAVENOUS** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Danazol

- Anticoagulants: danazol inhibits metabolism of ● **COUMARINS** (enhanced anticoagulant effect)
- Antiepileptics: danazol inhibits metabolism of ● **CARBAMAZEPINE** (increased risk of toxicity)
- Ciclosporin: danazol inhibits metabolism of ● **CICLOSPORIN** (increased plasma concentration)
- Lipid-regulating Drugs: possible increased risk of myopathy when danazol given with ● **SIMVASTATIN**—avoid concomitant use
- ▶ Tacrolimus: danazol possibly increases plasma concentration of **TACROLIMUS**

Dantrolene see Muscle Relaxants**Dapagliflozin** see Antidiabetics**Dapoxetine**

- Alcohol: increased sedative effect when dapoxetine given with ● **ALCOHOL**
- Analgesics: possible increased risk of serotonergic effects when dapoxetine given with ● **TRAMADOL** (manufacturer of dapoxetine advises tramadol should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tramadol)
- Antibacterials: manufacturer of dapoxetine advises dose reduction when dapoxetine given with **CLARITHROMYCIN** and **ERYTHROMYCIN** (see under Dapoxetine, in BNF); manufacturer of dapoxetine advises avoid concomitant use with ● **TELITHROMYCIN** (increased risk of toxicity)
- Antidepressants: possible increased risk of serotonergic effects when dapoxetine given with ● **SSRIs**, ● **ST JOHN'S WORT**, ● **DULOXETINE**, ● **TRICYCLICS** and ● **VENLAFAXINE** (manufacturer of dapoxetine advises SSRIs, St John's wort, duloxetine, tricyclics and venlafaxine should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping SSRIs, St John's wort, duloxetine, tricyclics and venlafaxine); increased risk of serotonergic effects when dapoxetine given with ● **MAOIs** (MAOIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping MAOIs)
- Antifungals: plasma concentration of dapoxetine increased by ● **KETOCONAZOLE**—manufacturer of dapoxetine advises avoid concomitant use; manufacturer of dapoxetine advises dose reduction when dapoxetine given with **FLUCONAZOLE** (see under Dapoxetine, in BNF); manufacturer of dapoxetine advises avoid concomitant use with ● **ITRACONAZOLE** (increased risk of toxicity)
- Antivirals: manufacturer of dapoxetine advises avoid concomitant use with ● **ATAZANAVIR**, ● **RITONAVIR** and

Dapoxetine

● Antivirals (continued)

- **SAQUINAVIR** (increased risk of toxicity); manufacturer of dapoxetine advises dose reduction when dapoxetine given with **FOSAMPRENAVIR** (see under Dapoxetine, in BNF)
- ▶ Aprepitant: manufacturer of dapoxetine advises dose reduction when dapoxetine given with **APREPITANT** (see under Dapoxetine, in BNF)
- ▶ Calcium-channel Blockers: manufacturer of dapoxetine advises dose reduction when dapoxetine given with **DILTIAZEM** and **VERAPAMIL** (see under Dapoxetine, in BNF)
- 5HT₂-receptor Agonists: possible increased risk of serotonergic effects when dapoxetine given with ● **5HT₂ AGONISTS** (manufacturer of dapoxetine advises 5HT₂ agonists should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping 5HT₂ agonists)
- Lithium: possible increased risk of serotonergic effects when dapoxetine given with ● **LITHIUM** (manufacturer of dapoxetine advises lithium should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping lithium)
- ▶ Sildenafil: manufacturer of dapoxetine advises avoid concomitant use with **SILDENAFIL**
- ▶ Tadalafil: manufacturer of dapoxetine advises avoid concomitant use with **TADALAFIL**
- ▶ Vardenafil: manufacturer of dapoxetine advises avoid concomitant use with **VARDENAFIL**

Dapsone

- ▶ Antibacterials: plasma concentration of dapsone reduced by **RIFAMYCINS**; plasma concentration of both drugs may increase when dapsone given with **TRIMETHOPRIM**
- Antivirals: increased risk of ventricular arrhythmias when dapsone given with ● **SAQUINAVIR**—avoid concomitant use
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Daptomycin

- Ciclosporin: increased risk of myopathy when daptomycin given with ● **CICLOSPORIN** (preferably avoid concomitant use)
- Lipid-regulating Drugs: increased risk of myopathy when daptomycin given with ● **FIBRATES** or ● **STATINS** (preferably avoid concomitant use)
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Darifenacin see Antimuscarinics**Darunavir**

- ▶ Anti-arrhythmics: darunavir possibly increases plasma concentration of **LIDOCAINE**—avoid concomitant use
- Antibacterials: darunavir increases plasma concentration of ● **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of darunavir significantly reduced by ● **RIFAMPICIN**—avoid concomitant use
- ▶ Anticoagulants: avoidance of darunavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**; manufacturers advise avoid concomitant use of darunavir with **DABIGATRAN**
- Antidepressants: darunavir possibly reduces plasma concentration of **PAROXETINE** and **SERTRALINE**; plasma concentration of darunavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- ▶ Antiepileptics: plasma concentration of darunavir possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- ▶ Antifungals: plasma concentration of both drugs increased when darunavir given with **KETOCONAZOLE**; darunavir possibly affects plasma concentration of **VORICONAZOLE**
- Antimalarials: plasma concentration of lumefantrine increased when darunavir given with **ARTEMETHER WITH LUMEFANTRINE**; darunavir possibly increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- Antipsychotics: darunavir possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); darunavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: avoid concomitant use of darunavir with ● **BOCEPREVIR** or ● **TELAPREVIR**; avoidance of darunavir advised

Darunavir

- **Antivirals** (continued)
 - by manufacturer of **DACLATASVIR** (plasma concentration of daclatasvir possibly increased); manufacturer of darunavir advises take **DIDANOSINE** 1 hour before or 2 hours after darunavir; plasma concentration of darunavir reduced by
 - **EFAVIRENZ** (adjust dose—consult product literature); plasma concentration of both drugs increased when darunavir given with **INDINAVIR**; plasma concentration of darunavir reduced by
 - **LOPINAVIR** and **SAQUINAVIR**—avoid concomitant use; darunavir increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); darunavir increases plasma concentration of ● **PARITAPREVR** and plasma concentration of darunavir decreased; increased risk of rash when darunavir given with **RALTEGRAVIR**; plasma concentration of both drugs increased when darunavir given with ● **SIMEPREVR**—manufacturer of simeprevir advises avoid concomitant use
 - **Cytotoxics**: darunavir possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; darunavir possibly increases plasma concentration of ● **EVEROLIMUS**—manufacturer of everolimus advises avoid concomitant use; darunavir possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
 - **Ergot Alkaloids**: increased risk of ergotism when darunavir given with ● **ERGOT ALKALOIDS**—manufacturer of darunavir advises avoid concomitant use
 - **Lipid-regulating Drugs**: possible increased risk of myopathy when darunavir given with **ATORVASTATIN**; darunavir possibly increases plasma concentration of **PRAVASTATIN** (use lowest possible dose of pravastatin); darunavir increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); avoidance of darunavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
 - **Orlistat**: absorption of darunavir possibly reduced by ● **ORLISTAT**
 - **Ranolazine**: darunavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use

Dasabuvir

- **Antibacterials**: manufacturer of dasabuvir advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of dasabuvir possibly reduced by
- **RIFAMPICIN**—avoid concomitant use
- **Antidepressants**: plasma concentration of dasabuvir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of dasabuvir advises avoid concomitant use
- **Antiepileptics**: plasma concentration of dasabuvir reduced by
- **CARBAMAZEPINE**—avoid concomitant use; plasma concentration of dasabuvir possibly reduced by
- **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- **Antifungals**: plasma concentration of both drugs increased when dasabuvir given with ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of both drugs possibly increased when dasabuvir given with ● **ITRACONAZOLE** and ● **POSACONAZOLE**—avoid concomitant use
- **Antivirals**: manufacturer of dasabuvir advises avoid concomitant use with **EFAVIRENZ**, **ETRAVIRINE** and **NEVIRAPINE**
- **Cobicistat**: manufacturer of dasabuvir advises avoid concomitant use with **COBICISTAT**
- **Cytotoxics**: manufacturer of dasabuvir advises avoid concomitant use with **MITOTANE**
- **Diuretics**: dasabuvir increases plasma concentration of
- **FUROSEMIDE** (reduce dose of furosemide)
- **Hormone Antagonists**: manufacturer of dasabuvir advises avoid concomitant use with **ENZALUTAMIDE**
- **Lipid-regulating Drugs**: manufacturer of dasabuvir advises avoid concomitant use with ● **ATORVASTATIN**, **GEMFIBROZIL** and ● **SIMVASTATIN**; dasabuvir increases plasma concentration of ● **ROSUVASTATIN** (reduce dose of rosuvastatin—see under Rosuvastatin, in BNF)

Dasabuvir (continued)

- **Oestrogens**: manufacturer of dasabuvir advises avoid concomitant use of ● **ETHINYLESTRADIOL**—use alternative form of contraception

Dasatinib

- **Antibacterials**: manufacturer of dasatinib advises avoid concomitant use with **CLARITHROMYCIN**, **ERYTHROMYCIN** and **TELITHROMYCIN** (plasma concentration of dasatinib possibly increased); metabolism of dasatinib accelerated by
- **RIFAMPICIN** (reduced plasma concentration—avoid concomitant use)
- **Antiepileptics**: manufacturer of dasatinib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (plasma concentration of dasatinib possibly reduced)
- **Antifungals**: plasma concentration of dasatinib possibly increased by **KETOCONAZOLE**; manufacturer of dasatinib advises avoid concomitant use with **ITRACONAZOLE** (plasma concentration of dasatinib possibly increased)
- **Antipsychotics**: avoid concomitant use of cytotoxics with
- **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals**: avoidance of dasatinib advised by manufacturer of
- **BOCEPREVR**; manufacturer of dasatinib advises avoid concomitant use with **RITONAVIR** (plasma concentration of dasatinib possibly increased)
- **Grapefruit Juice**: manufacturer of dasatinib advises avoid concomitant use with **GRAPEFRUIT JUICE** (plasma concentration of dasatinib possibly increased)
- **Lipid-regulating Drugs**: dasatinib possibly increases plasma concentration of **SIMVASTATIN**
- **Ulcer-healing Drugs**: plasma concentration of dasatinib possibly reduced by **FAMOTIDINE**

Daunorubicin

- **Antipsychotics**: avoid concomitant use of cytotoxics with
- **CLOZAPINE** (increased risk of agranulocytosis)
- **Cytotoxics**: possible increased risk of cardiotoxicity when daunorubicin given with ● **TRASTUZUMAB**—avoid concomitant use for up to 28 weeks after stopping trastuzumab
- **Vaccines**: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Decitabine

- **Antipsychotics**: avoid concomitant use of cytotoxics with
- **CLOZAPINE** (increased risk of agranulocytosis)

Deferasirox

- **Aminophylline**: deferasirox increases plasma concentration of ● **AMINOPHYLLINE** (consider reducing dose of aminophylline)
- **Antacids**: absorption of deferasirox possibly reduced by **ANTACIDS** containing aluminium (manufacturer of deferasirox advises avoid concomitant use)
- **Antibacterials**: plasma concentration of deferasirox reduced by **RIFAMPICIN**
- **Antidiabetics**: deferasirox increases plasma concentration of **REPAGLINIDE**
- **Antipsychotics**: manufacturer of deferasirox advises avoid concomitant use with **CLOZAPINE**
- **Anxiolytics and Hypnotics**: deferasirox possibly reduces plasma concentration of **MIDAZOLAM**
- **Muscle Relaxants**: manufacturer of deferasirox advises avoid concomitant use with **TIZANIDINE**
- **Theophylline**: deferasirox increases plasma concentration of ● **THEOPHYLLINE** (consider reducing dose of theophylline)

Deferiprone

- **Antacids**: absorption of deferiprone possibly reduced by **ANTACIDS** containing aluminium (manufacturer of deferiprone advises avoid concomitant use)

Deflazacort see Corticosteroids**Delamanid**

- **Analgesics**: increased risk of ventricular arrhythmias when delamanid given with ● **METHADONE**
- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when delamanid given with ● **AMIODARONE** or ● **DISOPYRAMIDE**
- **Antibacterials**: possible increased risk of ventricular arrhythmias when delamanid given with ● **CLARITHROMYCIN** and ● **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when delamanid given with ● **MOXIFLOXACIN**; plasma

Delamanid

- **Antibacterials** (continued)
 - concentration of delamanid reduced by ● **RIFAMPICIN**; delamanid increases plasma concentration of **ETHAMBUTOL**
- **Antidepressants**: possible increased risk of ventricular arrhythmias when delamanid given with ● **TRICYCLICS** that prolong the QT interval
 - ▶ **Antiepileptics**: manufacturer of delamanid advises avoid concomitant use with **CARBAMAZEPINE**
- **Antipsychotics**: increased risk of ventricular arrhythmias when delamanid given with ● **DROPERIDOL**, ● **HALOPERIDOL** or ● **PIMOZIDE**; increased risk of ventricular arrhythmias when delamanid given with ● **PHENOTHIAZINES** that prolong the QT interval
- **Antivirals**: plasma concentration of delamanid increased by **LOPINAVIR** and **RITONAVIR**; increased risk of ventricular arrhythmias when delamanid given with ● **SAQUINAVIR**
- **Beta-blockers**: increased risk of ventricular arrhythmias when delamanid given with ● **SOTALOL**
- **Cytotoxics**: increased risk of ventricular arrhythmias when delamanid given with ● **ARSENIC TRIOXIDE** or ● **VINFUNLINE**; possible increased risk of ventricular arrhythmias when delamanid given with ● **VINBLASTINE**, ● **VINCRISTINE**, ● **VINDESINE** and ● **VINORELBINE**
- **Dopaminergics**: possible increased risk of ventricular arrhythmias when delamanid given with ● **DOMPERIDONE**
- **Pentamidine Isetionate**: increased risk of ventricular arrhythmias when delamanid given with ● **PENTAMIDINE ISETIONATE**
 - ▶ **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Demeclocycline see Tetracyclines

Desferrioxamine

- **Antipsychotics**: avoidance of desferrioxamine advised by manufacturer of **LEVOMEPRAMAZINE**; manufacturer of desferrioxamine advises avoid concomitant use with **PROCHLORPERAZINE**

Desflurane see Anaesthetics, General

Desloratadine see Antihistamines

Desmopressin

- **Analgesics**: effects of desmopressin enhanced by **INDOMETACIN**
- ▶ **Loperamide**: plasma concentration of *oral* desmopressin increased by **LOPERAMIDE**

Desogestrel see Progestogens

Dexamethasone see Corticosteroids

Dexamfetamine see Sympathomimetics

Dexibuprofen see NSAIDs

Dexketoprofen see NSAIDs

Dexrazoxane

- **Antiepileptics**: dexrazoxane possibly reduces absorption of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- ▶ **Ciclosporin**: manufacturer of dexrazoxane advises increased risk of immunosuppression with **CICLOSPORIN**
- ▶ **Tacrolimus**: manufacturer of dexrazoxane advises increased risk of immunosuppression with **TACROLIMUS**
- **Vaccines**: risk of generalised infections when dexrazoxane given with live ● **VACCINES**—avoid concomitant use

Dextromethorphan see Opioid Analgesics

Dextropropoxyphene see Opioid Analgesics

Diamorphine see Opioid Analgesics

Diazepam see Anxiolytics and Hypnotics

Diazoxide

- ▶ **ACE Inhibitors**: enhanced hypotensive effect when diazoxide given with **ACE INHIBITORS**
- ▶ **Adrenergic Neurone Blockers**: enhanced hypotensive effect when diazoxide given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ **Alcohol**: enhanced hypotensive effect when diazoxide given with **ALCOHOL**
- ▶ **Aldesleukin**: enhanced hypotensive effect when diazoxide given with **ALDESLEUKIN**
- ▶ **Alpha-blockers**: enhanced hypotensive effect when diazoxide given with **ALPHA-BLOCKERS**
- ▶ **Anaesthetics, General**: enhanced hypotensive effect when diazoxide given with **GENERAL ANAESTHETICS**
- ▶ **Analgesics**: hypotensive effect of diazoxide antagonised by **NSAIDS**

Diazoxide (continued)

- ▶ **Angiotensin-II Receptor Antagonists**: enhanced hypotensive effect when diazoxide given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ **Antidepressants**: enhanced hypotensive effect when diazoxide given with **MAOIS** or **TRICYCLIC-RELATED ANTIDEPRESSANTS**
- ▶ **Antidiabetics**: diazoxide antagonises hypoglycaemic effect of **ANTIDIABETICS**
- ▶ **Antiepileptics**: diazoxide reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also effect of diazoxide may be reduced
- ▶ **Antipsychotics**: enhanced hypotensive effect when diazoxide given with **PHENOTHIAZINES**
- ▶ **Anxiolytics and Hypnotics**: enhanced hypotensive effect when diazoxide given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ **Beta-blockers**: enhanced hypotensive effect when diazoxide given with **BETA-BLOCKERS**
- ▶ **Calcium-channel Blockers**: enhanced hypotensive effect when diazoxide given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ **Clonidine**: enhanced hypotensive effect when diazoxide given with **CLONIDINE**
- ▶ **Corticosteroids**: hypotensive effect of diazoxide antagonised by **CORTICOSTEROIDS**
- ▶ **Diuretics**: enhanced hypotensive and hyperglycaemic effects when diazoxide given with **DIURETICS**
- ▶ **Dopaminergics**: enhanced hypotensive effect when diazoxide given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- ▶ **Methyldopa**: enhanced hypotensive effect when diazoxide given with **METHYLDOPA**
- ▶ **Moxislylte**: enhanced hypotensive effect when diazoxide given with **MOXISLYLTE**
- ▶ **Moxonidine**: enhanced hypotensive effect when diazoxide given with **MOXONIDINE**
- ▶ **Muscle Relaxants**: enhanced hypotensive effect when diazoxide given with **BACLOFEN** or **TIZANIDINE**
- ▶ **Nitrates**: enhanced hypotensive effect when diazoxide given with **NITRATES**
- ▶ **Prostaglandins**: enhanced hypotensive effect when diazoxide given with **ALPROSTADIL**
- ▶ **Vasodilator Antihypertensives**: enhanced hypotensive effect when diazoxide given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Diclofenac see NSAIDs

Dicycloverine see Antimuscarinics

Didanosine

NOTE Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart

- **Allopurinol**: plasma concentration of didanosine increased by ● **ALLOPURINOL** (risk of toxicity)—avoid concomitant use
- ▶ **Analgesics**: plasma concentration of didanosine possibly reduced by **METHADONE**
- ▶ **Antibacterials**: didanosine *tablets* reduce absorption of **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin); manufacturer of levofloxacin advises give didanosine *tablets* at least 2 hours before or after **LEVOFLOXACIN**; manufacturer of moxifloxacin advises give didanosine *tablets* at least 6 hours before or after **MOXIFLOXACIN**; manufacturer of norfloxacin advises give didanosine at least 2 hours before or after **NORFLOXACIN**
- **Antivirals**: didanosine *tablets* reduce absorption of **ATAZANAVIR** (give at least 2 hours before or 1 hour after didanosine *tablets*); manufacturer of darunavir advises take didanosine 1 hour before or 2 hours after **DARUNAVIR**; plasma concentration of didanosine possibly increased by **GANCICLOVIR** and **VALGANCICLOVIR**; didanosine *tablets* reduce absorption of **INDINAVIR** (give at least 1 hour apart); increased risk of side-effects when didanosine given with ● **RIBAVIRIN**—avoid concomitant use; manufacturer of rilpivirine advises give didanosine 2 hours before or 4 hours after **RILPIVIRINE**; manufacturer of ritonavir advises didanosine and **RITONAVIR** should be taken 2.5 hours apart; increased risk of side-effects when didanosine given with ● **STAVUDINE**; plasma concentration of didanosine increased by ● **TENOFOVIR** (increased risk of toxicity)—avoid concomitant use; plasma concentration of didanosine reduced by **TIPRANAVIR**—

Didanosine

- Antivirals (continued)
 - manufacturer of tipranavir advises tipranavir and didanosine capsules should be taken at least 2 hours apart
- Cytotoxics: increased risk of toxicity when didanosine given with ● **HYDROXYCARBAMIDE**—avoid concomitant use
- Orlistat: absorption of didanosine possibly reduced by
 - **ORLISTAT**

● **Dienogest** see Progestogens

Diethylcarbamazine

- Antacids: excretion of diethylcarbamazine reduced by **SODIUM BICARBONATE**

● **Digoxin** see Cardiac Glycosides

● **Dihydrocodeine** see Opioid Analgesics

● **Dihydrotychsterol** see Vitamins

● **Diltiazem** see Calcium-channel Blockers

Dimethyl sulfoxide

- Analgesics: avoid concomitant use of dimethyl sulfoxide with
 - **SULINDAC**

● **Dinoprostone** see Prostaglandins

● **Diphenoxylate** see Opioid Analgesics

● **Diphtheria Vaccines** see Vaccines

● **Dipipanone** see Opioid Analgesics

Dipyridamole

- Antacids: absorption of dipyridamole possibly reduced by **ANTACIDS**
- Anti-arrhythmics: dipyridamole enhances and extends effect of
 - **ADENOSINE** (important risk of toxicity)—reduce dose of adenosine, see p. 73
- Anticoagulants: antiplatelet action of dipyridamole enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; dipyridamole enhances anticoagulant effect of **HEPARINS**
- Clopidogrel: increased risk of bleeding when dipyridamole given with **CLOPIDOGREL**
- Cytotoxics: dipyridamole possibly reduces effects of **FLUDARABINE**

Disopyramide

- Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILLOCAINE** or **ROPIVACAINE**
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**; increased risk of ventricular arrhythmias when disopyramide given with
 - **AMIODARONE** or ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: plasma concentration of disopyramide possibly increased by ● **AZITHROMYCIN** (increased risk of toxicity); plasma concentration of disopyramide possibly increased by
 - **CLARITHROMYCIN** (increased risk of ventricular arrhythmias); plasma concentration of disopyramide increased by
 - **ERYTHROMYCIN** (increased risk of toxicity); increased risk of ventricular arrhythmias when disopyramide given with
 - **MOXIFLOXACIN**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with
 - **DELANANID**; metabolism of disopyramide accelerated by
 - **RIFAMYCINS** (reduced plasma concentration); possible increased risk of ventricular arrhythmias when disopyramide given with ● **TELITHROMYCIN**
- Anticoagulants: disopyramide may enhance or reduce anticoagulant effect of **WARFARIN**
- Antidepressants: avoidance of disopyramide advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when disopyramide given with ● **TRICYCLICS**
- Antidiabetics: disopyramide possibly enhances hypoglycaemic effect of **GLICLAZIDE**, **INSULIN** and **METFORMIN**
- Antiepileptics: plasma concentration of disopyramide reduced by **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of disopyramide accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration)
- Antifungals: increased risk of ventricular arrhythmias when disopyramide given with ● **KETOCONAZOLE**—avoid concomitant use; avoidance of disopyramide advised by manufacturer of
 - **ITRACONAZOLE**
- Antihistamines: increased risk of ventricular arrhythmias when disopyramide given with ● **MIZOLASTINE**—avoid concomitant use

Disopyramide (continued)

- Antimalarials: avoidance of disopyramide advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** (risk of ventricular arrhythmias); avoidance of disopyramide advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- Antimuscarinics: increased risk of antimuscarinic side-effects when disopyramide given with **ANTIMUSCARINICS**; increased risk of ventricular arrhythmias when disopyramide given with
 - **TOLTERODINE**
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with
 - **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of ventricular arrhythmias when disopyramide given with
 - **AMISULPRIDE**, ● **DROPERIDOL**, ● **PIMOZIDE** or
 - **ZUCLOPENTHIXOL**—avoid concomitant use; possible increased risk of ventricular arrhythmias when disopyramide given with
 - **HALOPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with
 - **PHENOTHIAZINES** or ● **SULPRIDE**
- Antivirals: plasma concentration of disopyramide possibly increased by ● **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when disopyramide given with
 - **SAQUINAVIR**—avoid concomitant use; avoidance of disopyramide advised by manufacturer of ● **TELAPREVIR** (risk of ventricular arrhythmias)
- Atomoxetine: increased risk of ventricular arrhythmias when disopyramide given with ● **ATOMOXETINE**
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**; increased risk of ventricular arrhythmias when disopyramide given with
 - **SOTALOL**—avoid concomitant use
- Calcium-channel Blockers: increased risk of myocardial depression and asystole when disopyramide given with
 - **VERAPAMIL**
- Cytotoxics: possible increased risk of ventricular arrhythmias when disopyramide given with ● **BOSUTINIB**; possible increased risk of ventricular arrhythmias when disopyramide given with
 - **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when disopyramide given with
 - **ARSENIC TRIOXIDE**
- Diuretics: increased cardiac toxicity with disopyramide if hypokalaemia occurs with ● **ACETAZOLAMIDE**, ● **LOOP DIURETICS** or ● **THIAZIDES AND RELATED DIURETICS**
- Fingolimod: possible increased risk of bradycardia when disopyramide given with ● **FINGOLIMOD**
- Ivabradine: increased risk of ventricular arrhythmias when disopyramide given with ● **IVABRADINE**
- Nitrates: disopyramide reduces effects of sublingual tablets of **NITRATES** (failure to dissolve under tongue owing to dry mouth)
- Pentamidine Isetionate: possible increased risk of ventricular arrhythmias when disopyramide given with ● **PENTAMIDINE ISETIONATE**
- Ranolazine: avoidance of disopyramide advised by manufacturer of ● **RANOLAZINE**
- Sildenafil: manufacturer of disopyramide advises avoid concomitant use with **SILDENAFIL** (risk of ventricular arrhythmias)
- Tadalafil: manufacturer of disopyramide advises avoid concomitant use with **TADALAFIL** (risk of ventricular arrhythmias)
- Vardenafil: manufacturer of disopyramide advises avoid concomitant use with **VARDENAFIL** (risk of ventricular arrhythmias)

Disulfiram

- Alcohol: disulfiram reaction when disulfiram given with **ALCOHOL**
- Aminophylline: disulfiram inhibits metabolism of **AMINOPHYLLINE** (increased risk of toxicity)
- Antibacterials: psychotic reaction reported when disulfiram given with **METRONIDAZOLE**; CNS effects of disulfiram possibly increased by **ISONIAZID**
- Anticoagulants: disulfiram enhances anticoagulant effect of
 - **COUMARINS**

Disulfiram (continued)

- ▶ Antidepressants: increased disulfiram reaction with alcohol reported with concomitant **AMITRIPTYLINE**; disulfiram inhibits metabolism of **TRICYCLICS** (increased plasma concentration)
- Antiepileptics: disulfiram inhibits metabolism of
 - **FOSPHENYTOIN** and ● **PHENYTOIN** (increased risk of toxicity)
- ▶ Anxiolytics and Hypnotics: disulfiram increases risk of **TEMAZEPAM** toxicity; disulfiram inhibits metabolism of **BENZODIAZEPINES** (increased sedative effects)
- Paraldehyde: risk of toxicity when disulfiram given with
 - **PARALDEHYDE**
- ▶ Theophylline: disulfiram inhibits metabolism of **THEOPHYLLINE** (increased risk of toxicity)

Diuretics

NOTE Since systemic absorption may follow topical application of brinzolamide to the eye, the possibility of interactions should be borne in mind

NOTE Since systemic absorption may follow topical application of dorzolamide to the eye, the possibility of interactions should be borne in mind

- ACE Inhibitors: enhanced hypotensive effect when diuretics given with ● **ACE INHIBITORS**; increased risk of severe hyperkalaemia when amiloride, potassium canrenoate or triamterene given with ● **ACE INHIBITORS**; increased risk of severe hyperkalaemia when eplerenone and spironolactone given with ● **ACE INHIBITORS**—avoid concurrent use or use lowest possible doses of both drugs
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when diuretics given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: enhanced hypotensive effect when diuretics given with **ALCOHOL**
- ▶ Aldesleukin: enhanced hypotensive effect when diuretics given with **ALDESLEUKIN**
- ▶ Aliskiren: plasma concentration of furosemide reduced by **ALISKIREN**; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **ALISKIREN**
- ▶ Allopurinol: increased risk of hypersensitivity when thiazides and related diuretics given with **ALLOPURINOL** especially in renal impairment
- Alpha-blockers: enhanced hypotensive effect when diuretics given with ● **ALPHA-BLOCKERS**, also increased risk of first-dose hypotension with post-synaptic alpha-blockers such as prazosin
- ▶ Aminophylline: increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with **AMINOPHYLLINE**
- ▶ Anaesthetics, General: enhanced hypotensive effect when diuretics given with **GENERAL ANAESTHETICS**
- Analgesics: diuretics increase risk of nephrotoxicity of **NSAIDS**, also antagonism of diuretic effect; diuretic effect of potassium canrenoate possibly antagonised by **NSAIDS**; possible increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **NSAIDS**; furosemide possibly increases the excretion of **ACETAMINEN**; effects of diuretics antagonised by **INDOMETACIN** and **KETOROLAC**; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **INDOMETACIN**; occasional reports of reduced renal function when triamterene given with ● **INDOMETACIN**—avoid concomitant use; diuretic effect of spironolactone antagonised by **ASPIRIN**; possible increased risk of toxicity when loop diuretics given with high-dose **ASPIRIN** (also possible reduced effect of loop diuretics); increased risk of toxicity when acetazolamide given with high-dose ● **ASPIRIN**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when diuretics given with ● **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**; increased risk of severe hyperkalaemia when amiloride, potassium canrenoate or triamterene given with ● **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**; increased risk of severe hyperkalaemia when eplerenone and spironolactone given with ● **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**—avoid concurrent use or use lowest possible doses of both drugs; plasma concentration of furosemide reduced by **VALSARTAN**
- Anti-arrhythmics: hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases cardiac

Diuretics

- Anti-arrhythmics (continued)
 - toxicity with **AMIODARONE**; plasma concentration of eplerenone increased by **AMIODARONE** (reduce dose of eplerenone); hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases cardiac toxicity with ● **DISOPYRAMIDE**; hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases cardiac toxicity with ● **FLECAINIDE**; hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics antagonises action of
 - **LIDOCAINE**
- Antibacterials: plasma concentration of eplerenone increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—avoid concomitant use; plasma concentration of eplerenone increased by **ERYTHROMYCIN** (reduce dose of eplerenone); plasma concentration of eplerenone reduced by
 - **RIFAMPICIN**—avoid concomitant use; avoidance of diuretics advised by manufacturer of **LYMECYCLINE**; increased risk of ototoxicity when loop diuretics given with ● **AMINOGLYCOSIDES**, ● **POLYMYXINS** or ● **VANCOMYCIN**; acetazolamide antagonises effects of ● **METHENAMINE**; increased risk of hyperkalaemia when eplerenone given with **TRIMETHOPRIM**; possible increased risk of hyperkalaemia when spironolactone given with **TRIMETHOPRIM**
- Antidepressants: possible increased risk of hypokalaemia when loop diuretics or thiazides and related diuretics given with **REBOXETINE**; enhanced hypotensive effect when diuretics given with **MAOIS**; plasma concentration of eplerenone reduced by ● **ST JOHN'S WORT**—avoid concomitant use; increased risk of postural hypotension when diuretics given with **TRICYCLICS**
- ▶ Antidiabetics: loop diuretics and thiazides and related diuretics antagonise hypoglycaemic effect of **ANTI-DIABETICS**; diuretic effect of diuretics possibly enhanced by **CANAGLIFLOZIN**; avoidance of loop diuretics advised by manufacturer of **CANAGLIFLOZIN**; diuretic effect of loop diuretics and thiazides and related diuretics possibly enhanced by **DAPAGLIFLOZIN**
- Antiepileptics: increased risk of hyponatraemia when diuretics given with **CARBAMAZEPINE**; acetazolamide increases plasma concentration of ● **CARBAMAZEPINE**; plasma concentration of eplerenone reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use; increased risk of osteomalacia when carbonic anhydrase inhibitors given with **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** or **PRIMIDONE**; effects of furosemide antagonised by **FOSPHENYTOIN** and **PHENYTOIN**; acetazolamide possibly increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN**; hydrochlorothiazide possibly increases plasma concentration of **TOPIRAMATE**; avoidance of carbonic anhydrase inhibitors in children advised by manufacturer of **ZONISAMIDE**
- Antifungals: plasma concentration of eplerenone increased by ● **ITRACONAZOLE** and ● **KETOCONAZOLE**—avoid concomitant use; increased risk of hypokalaemia when loop diuretics or thiazides and related diuretics given with **AMPHOTERICIN**; hydrochlorothiazide increases plasma concentration of **FLUCONAZOLE**; plasma concentration of eplerenone increased by **FLUCONAZOLE** (reduce dose of eplerenone)
- Antipsychotics: hypokalaemia caused by diuretics increases risk of ventricular arrhythmias with ● **AMISULPRIDE**; enhanced hypotensive effect when diuretics given with **PHENOTHIAZINES**; hypokalaemia caused by diuretics increases risk of ventricular arrhythmias with ● **PIMOZIDE** (avoid concomitant use)
- Antivirals: plasma concentration of furosemide increased by ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR** (reduce dose of furosemide); plasma concentration of eplerenone increased by ● **RITONAVIR**—avoid concomitant use; plasma concentration of eplerenone increased by **SAQUINAVIR** (reduce dose of eplerenone)
- ▶ Anxiolytics and Hypnotics: enhanced hypotensive effect when diuretics given with **ANXIOLYTICS** and **HYPNOTICS**; administration of parenteral furosemide with **CHLORAL** may displace thyroid hormone from binding sites
- Atomoxetine: hypokalaemia caused by diuretics increases risk of ventricular arrhythmias with ● **ATOMOXETINE**

Diuretics (continued)

- **Beta-blockers:** enhanced hypotensive effect when diuretics given with **BETA-BLOCKERS**; hypokalaemia caused by loop diuretics or thiazides and related diuretics increases risk of ventricular arrhythmias with **SOTALOL**
- **Calcium Salts:** increased risk of hypercalcaemia when thiazides and related diuretics given with **CALCIUM SALTS**
- **Calcium-channel Blockers:** enhanced hypotensive effect when diuretics given with **CALCIUM-CHANNEL BLOCKERS**; plasma concentration of eplerenone increased by **DILTIAZEM** and **VERAPAMIL** (reduce dose of eplerenone)
- **Cardiac Glycosides:** hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases cardiac toxicity with **CARDIAC GLYCOSIDES**; potassium canrenoate possibly increases plasma concentration of **DIGOXIN**; spironolactone increases plasma concentration of **DIGOXIN**
- **Ciclosporin:** increased risk of nephrotoxicity and possibly hypermagnesaemia when thiazides and related diuretics given with **CICLOSPORIN**; increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **CICLOSPORIN**; acetazolamide possibly increases plasma concentration of **CICLOSPORIN**
- **Clonidine:** enhanced hypotensive effect when diuretics given with **CLONIDINE**
- **Corticosteroids:** diuretic effect of diuretics antagonised by **CORTICOSTEROIDS**; increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with **CORTICOSTEROIDS**
- **Cytotoxics:** alkaline urine due to acetazolamide increases excretion of **METHOTREXATE**; hypokalaemia caused by acetazolamide, loop diuretics or thiazides and related diuretics increases risk of ventricular arrhythmias with **ARSENIC TRIOXIDE**; avoidance of spironolactone advised by manufacturer of **MITOTANE** (antagonism of effect); increased risk of nephrotoxicity and ototoxicity when diuretics given with **PLATINUM COMPOUNDS**
- **Diazoxide:** enhanced hypotensive and hyperglycaemic effects when diuretics given with **DIAZOXIDE**
- **Diuretics:** increased risk of hypokalaemia when loop diuretics or thiazides and related diuretics given with **ACETAZOLAMIDE**; profound diuresis possible when metolazone given with **FUROSEMIDE**; increased risk of hypokalaemia when thiazides and related diuretics given with **LOOP DIURETICS**
- **Dopaminergics:** enhanced hypotensive effect when diuretics given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- **Hormone Antagonists:** avoidance of spironolactone advised by manufacturer of **ABIRATERONE**; increased risk of hypercalcaemia when thiazides and related diuretics given with **TOREMIFENE**
- **Lipid-regulating Drugs:** absorption of thiazides and related diuretics reduced by **COLESTIPOL** and **COLESTYRAMINE** (give at least 2 hours apart)
- **Lithium:** loop diuretics and thiazides and related diuretics reduce excretion of **LITHIUM** (increased plasma concentration and risk of toxicity)—loop diuretics safer than thiazides; potassium-sparing diuretics and aldosterone antagonists reduce excretion of **LITHIUM** (increased plasma concentration and risk of toxicity); acetazolamide increases the excretion of **LITHIUM**
- **Methyldopa:** enhanced hypotensive effect when diuretics given with **METHYLDOPA**
- **Moxisylyte:** enhanced hypotensive effect when diuretics given with **MOXISYLYTE**
- **Moxonidine:** enhanced hypotensive effect when diuretics given with **MOXONIDINE**
- **Muscle Relaxants:** enhanced hypotensive effect when diuretics given with **BACLOFEN** or **TIZANIDINE**
- **Nitrates:** enhanced hypotensive effect when diuretics given with **NITRATES**
- **Oestrogens:** diuretic effect of diuretics antagonised by **OESTROGENS**
- **Potassium Salts:** increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **POTASSIUM SALTS**

Diuretics (continued)

- **Progestogens:** risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **DROSPIRENONE** (monitor serum potassium during first cycle)
- **Prostaglandins:** enhanced hypotensive effect when diuretics given with **ALPROSTADIL**
- **Sacubitril:** plasma concentration of furosemide reduced by **SACUBITRIL**
- **Symphathomimetics, Beta₂:** increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with high doses of **BETA₂ SYMPATHOMIMETICS**
- **Tacrolimus:** increased risk of hyperkalaemia when potassium-sparing diuretics and aldosterone antagonists given with **TACROLIMUS**
- **Theophylline:** increased risk of hypokalaemia when acetazolamide, loop diuretics or thiazides and related diuretics given with **THEOPHYLLINE**
- **Vasodilator Antihypertensives:** enhanced hypotensive effect when diuretics given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**
- **Vitamins:** increased risk of hypercalcaemia when thiazides and related diuretics given with **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

Diuretics, Loop see Diuretics**Diuretics, Potassium-sparing and Aldosterone Antagonists** see Diuretics**Diuretics, Thiazide and related** see Diuretics**Dobutamine** see Sympathomimetics**Docetaxel**

- **Antibacterials:** plasma concentration of docetaxel possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- **Antifungals:** *in vitro* studies suggest a possible interaction between docetaxel and **KETOCONAZOLE** (consult docetaxel product literature); plasma concentration of docetaxel possibly increased by **ITRACONAZOLE** and **VORICONAZOLE**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- **Antipsychotics:** avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals:** plasma concentration of docetaxel possibly increased by **INDINAVIR**, **RITONAVIR** and **SAQUINAVIR**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- **Ciclosporin:** *in vitro* studies suggest a possible interaction between docetaxel and **CICLOSPORIN** (consult docetaxel product literature)
- **Cytotoxics:** possible increased risk of neutropenia when docetaxel given with **LAPATINIB**; plasma concentration of docetaxel increased by **SORAFENIB**
- **Netupitant:** plasma concentration of docetaxel increased by **NETUPITANT**

Dolutegravir

- **Antacids:** absorption of dolutegravir reduced by **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after aluminium hydroxide and oral magnesium salts
- **Antibacterials:** plasma concentration of dolutegravir reduced by **RIFAMPICIN** (see under Dolutegravir, p. 387)
- **Antidepressants:** plasma concentration of dolutegravir possibly reduced by **ST JOHN'S WORT** (see under Dolutegravir, p. 387)
- **Antidiabetics:** dolutegravir increases the plasma concentration of **METFORMIN**—consider reducing dose of metformin
- **Antiepileptics:** plasma concentration of dolutegravir reduced by **CARBAMAZEPINE** (see under Dolutegravir, p. 387); plasma concentration of dolutegravir possibly reduced by **FOSPHENYTOIN**, **OXCARBAZEPINE**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (see under Dolutegravir, p. 387)
- **Antivirals:** plasma concentration of dolutegravir reduced by **EFAVIRENZ**, **ETRAVIRINE** and **TIPRANAVIR** (see under Dolutegravir, p. 387); plasma concentration of dolutegravir reduced by **FOSAMPRENAVIR**; plasma concentration of dolutegravir possibly reduced by **NEVIRAPINE** (see under Dolutegravir, p. 387)

Dolutegravir (continued)

- ▶ Calcium Salts: absorption of dolutegravir reduced by **CALCIUM SALTS**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after calcium salts
- ▶ Iron Salts: absorption of dolutegravir reduced by **oral IRON SALTS**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after *oral* iron salts

Domperidone

- ▶ Analgesics: effects of domperidone on gastro-intestinal activity antagonised by **OPIOID ANALGESICS**
- Antibacterials: possible increased risk of ventricular arrhythmias when domperidone given with ● **CLARITHROMYCIN** or ● **TELITHROMYCIN**—avoid concomitant use; plasma concentration of domperidone increased by ● **ERYTHROMYCIN** (increased risk of ventricular arrhythmias—avoid concomitant use); possible increased risk of ventricular arrhythmias when domperidone given with ● **DELAMANID**
- Antifungals: avoidance of domperidone advised by manufacturer of ● **KETOCONAZOLE** (risk of ventricular arrhythmias); possible increased risk of ventricular arrhythmias when domperidone given with ● **ITRACONAZOLE** or ● **VORICONAZOLE**—avoid concomitant use
- Antimalarials: avoidance of domperidone advised by manufacturer of ● **ARTENIMOL** with **PIPERAQUINE** (possible risk of ventricular arrhythmias)
- ▶ Antimuscarinics: effects of domperidone on gastro-intestinal activity antagonised by **ANTIMUSCARINICS**
- Antivirals: possible increased risk of ventricular arrhythmias when domperidone given with ● **BOCEPREVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** or ● **TELAPREVIR**—avoid concomitant use
- Cobicistat: possible increased risk of ventricular arrhythmias when domperidone given with ● **COBICISTAT**—avoid concomitant use
- Cytotoxics: avoidance of domperidone advised by manufacturer of ● **BOSUTINIB** (risk of ventricular arrhythmias)
- Dopaminergics: possible increased risk of ventricular arrhythmias when domperidone given with ● **APOMORPHINE**; domperidone possibly antagonises hypoprolactinaemic effects of **BROMOCRIPTINE** and **CABERGOLINE**

Donepezil see Parasympathomimetics**Dopamine** see Sympathomimetics**Dopaminergics** see Amantadine, Apomorphine, Bromocriptine, Cabergoline, Entacapone, Levodopa, Pergolide, Pramipexole, Quinagoline, Rasagiline, Ropinrole, Rotigotine, Selegiline, and Tolcapone**Dopexamine** see Sympathomimetics**Dorzolamide** see Diuretics**Dosulepin** see Antidepressants, Tricyclic**Doxapram**

- ▶ Aminophylline: increased CNS stimulation when doxapram given with **AMINOPHYLLINE**
- Anaesthetics, General: increased risk of arrhythmias when doxapram given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS** (avoid doxapram for at least 10 minutes after volatile liquid general anaesthetics)
- ▶ Antidepressants: effects of doxapram enhanced by **MAOIS**
- ▶ Sympathomimetics: increased risk of hypertension when doxapram given with **SYMPATHOMIMETICS**
- ▶ Theophylline: increased CNS stimulation when doxapram given with **THEOPHYLLINE**

Doxazosin see Alpha-blockers**Doxepin** see Antidepressants, Tricyclic**Doxorubicin**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
 - ▶ Antivirals: doxorubicin possibly inhibits effects of **STAVUDINE**
 - ▶ Calcium-channel Blockers: plasma concentration of doxorubicin possibly increased by **VERAPAMIL**
 - ▶ Cardiac Glycosides: doxorubicin possibly reduces absorption of **DIGOXIN tablets**
 - Ciclosporin: increased risk of neurotoxicity when doxorubicin given with ● **CICLOSPORIN**
 - Cytotoxics: possible increased risk of cardiotoxicity when doxorubicin given with ● **TRASTUZUMAB**—avoid concomitant use for up to 28 weeks after stopping trastuzumab; plasma concentration of doxorubicin increased by **SORAFENIB**
- Doxorubicin** (continued)
- ▶ Ulcer-healing Drugs: plasma concentration of doxorubicin reduced by **CIMETIDINE**
 - Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Doxycycline see Tetracyclines**Dronedaron**

- ▶ Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILCAINE** or **ROPIVACAINE**
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**; increased risk of ventricular arrhythmias when dronedarone given with ● **AMIODARONE** or ● **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: manufacturer of dronedarone advises avoid concomitant use with ● **CLARITHROMYCIN** (risk of ventricular arrhythmias); plasma concentration of dronedarone increased by ● **ERYTHROMYCIN** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of dronedarone reduced by ● **RIFAMPICIN**—avoid concomitant use; avoidance of dronedarone advised by manufacturer of **FIDAXOMICIN**; increased risk of ventricular arrhythmias when dronedarone given with ● **TELITHROMYCIN**—avoid concomitant use
- Anticoagulants: dronedarone possibly enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; dronedarone increases plasma concentration of ● **DABIGATRAN**—avoid concomitant use; dronedarone increases plasma concentration of ● **EDOXABAN** (reduce dose of edoxaban—see under Edoxaban, in BNF); avoidance of dronedarone advised by manufacturer of **RIVAROXABAN**
- Antidepressants: avoidance of dronedarone advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); plasma concentration of dronedarone possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; manufacturer of dronedarone advises avoid concomitant use with ● **TRICYCLICS** (risk of ventricular arrhythmias)
- Antiepileptics: plasma concentration of dronedarone possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- Antifungals: plasma concentration of dronedarone increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of dronedarone advises avoid concomitant use with ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ● **ANTIPSYCHOTICS** that prolong the QT interval; manufacturer of dronedarone advises avoid concomitant use with ● **PHENOTHIAZINES** (risk of ventricular arrhythmias)
- Antivirals: manufacturer of dronedarone advises avoid concomitant use with ● **RITONAVIR**; increased risk of ventricular arrhythmias when dronedarone given with ● **SAQUINAVIR**—avoid concomitant use
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**; dronedarone possibly increases plasma concentration of **METOPROLOL** and **PROPRANOLOL**; increased risk of ventricular arrhythmias when dronedarone given with ● **SOTALOL**—avoid concomitant use
- Calcium-channel Blockers: plasma concentration of dronedarone increased by ● **NIFEDIPINE**; increased risk of bradycardia and myocardial depression when dronedarone given with ● **DILTIAZEM** and ● **VERAPAMIL**
- Cardiac Glycosides: dronedarone increases plasma concentration of ● **DIGOXIN** (halve dose of digoxin)
- Cytotoxics: dronedarone possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; dronedarone possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Fingolimod: possible increased risk of bradycardia when dronedarone given with ● **FINGOLIMOD**
- Grapefruit Juice: plasma concentration of dronedarone increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use

Dronedarone (continued)

- Lipid-regulating Drugs: dronedarone possibly increases plasma concentration of **ATORVASTATIN**; dronedarone increases plasma concentration of **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when dronedarone given with **SIMVASTATIN**; avoidance of dronedarone advised by manufacturer of **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Sirolimus: manufacturer of dronedarone advises caution with **SIROLIMUS**
- Tacrolimus: manufacturer of dronedarone advises caution with **TACROLIMUS**

Droperidol see Antipsychotics**Drospirenone** see Progestogens**Dulaglutide** see Antidiabetics**Duloxetine**

- Analgesics: possible increased serotonergic effects when SSRI-related antidepressants given with **FENTANYL**; possible increased serotonergic effects when duloxetine given with **PETHIDINE** or **TRAMADOL**
- Antibacterials: metabolism of duloxetine inhibited by **CIPROFLOXACIN**—avoid concomitant use
- Anticoagulants: possible increased risk of bleeding when SSRI-related antidepressants given with **DABIGATRAN**
- Antidepressants: metabolism of duloxetine inhibited by **FLUVOXAMINE**—avoid concomitant use; possible increased serotonergic effects when duloxetine given with **SSRIs**, **ST JOHN'S WORT**, **AMITRIPTYLINE**, **CLOMIPRAMINE**, **MOCLOBEMIDE** or **VENLAFAXINE**; duloxetine should not be started until 2 weeks after stopping **MAOIs**, also MAOIs should not be started until at least 5 days after stopping duloxetine; after stopping SSRI-related antidepressants do not start **MOCLOBEMIDE** for at least 1 week; possible increased risk of convulsions when SSRI-related antidepressants given with **VORTIOXETINE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE** and **ARTENIMOL WITH PIPERAQUINE**
- Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Dapoxetine: possible increased risk of serotonergic effects when duloxetine given with **DAPOXETINE** (manufacturer of dapoxetine advises duloxetine should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping duloxetine)
- 5HT₂-receptor Agonists: possible increased serotonergic effects when duloxetine given with **5HT₂ AGONISTS**
- 5HT₂-receptor Antagonists: possible increased serotonergic effects when SSRI-related antidepressants given with **5HT₂ ANTAGONISTS**
- Methylthioninium: risk of CNS toxicity when SSRI-related antidepressants given with **METHYLTHIONINIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Dutasteride

- Calcium-channel Blockers: plasma concentration of dutasteride increased by **DILTIAZEM** and **VERAPAMIL**

Dydrogesterone see Progestogens**Edoxaban**

- Analgesics: increased risk of bleeding when edoxaban given with **NSAIDs** (manufacturer of edoxaban advises avoid long-term NSAIDs); increased risk of haemorrhage when anticoagulants given with **intravenous DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with **KETOROLAC** (avoid concomitant use, including low-dose heparins); increased risk of bleeding when edoxaban given with high-dose **ASPIRIN** (avoid concomitant use)
- Anti-arrhythmics: plasma concentration of edoxaban increased by **DRONEDARONE** (reduce dose of edoxaban—see under Edoxaban, in BNF)
- Antibacterials: plasma concentration of edoxaban increased by **ERYTHROMYCIN** (reduce dose of edoxaban—see under Edoxaban, in BNF); plasma concentration of edoxaban reduced by **RIFAMPICIN**

Edoxaban (continued)

- Anticoagulants: increased risk of haemorrhage when edoxaban given with other **ANTICOAGULANTS** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with **APIXABAN**, **DABIGATRAN** and **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: plasma concentration of edoxaban possibly reduced by **ST JOHN'S WORT**
- Antiepileptics: plasma concentration of edoxaban possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of edoxaban increased by **KETOCONAZOLE** (reduce dose of edoxaban—see under Edoxaban, in BNF)
- Calcium-channel Blockers: plasma concentration of edoxaban increased by **VERAPAMIL**
- Cyclosporin: plasma concentration of edoxaban increased by **CYCLOSPORIN** (reduce dose of edoxaban—see under Edoxaban, in BNF)

Efavirenz

- Analgesics: efavirenz reduces plasma concentration of **METHADONE**
- Antibacterials: efavirenz reduces plasma concentration of **CLARITHROMYCIN**, also plasma concentration of active metabolite of clarithromycin increased; efavirenz reduces plasma concentration of **RIFABUTIN**—increase dose of rifabutin; plasma concentration of efavirenz reduced by **RIFAMPICIN**—increase dose of efavirenz; efavirenz possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use
- Anticoagulants: efavirenz possibly affects plasma concentration of **COUMARINS**
- Antidepressants: plasma concentration of efavirenz reduced by **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of both drugs reduced when efavirenz given with **CARBAMAZEPINE**
- Antifungals: efavirenz reduces plasma concentration of **ITRACONAZOLE**, **KETOCONAZOLE** and **POSACONAZOLE**; efavirenz reduces plasma concentration of **VORICONAZOLE**, also plasma concentration of efavirenz increased (increase voriconazole dose and reduce efavirenz dose); efavirenz possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin
- Antimalarials: efavirenz reduces plasma concentration of **ARTEMETHER WITH LUMEFANTRINE**; efavirenz possibly affects plasma concentration of **PROGUANIL**
- Antipsychotics: efavirenz possibly reduces plasma concentration of **ARIPIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); efavirenz possibly increases plasma concentration of **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antivirals: avoidance of efavirenz advised by manufacturer of **ATAZANAVIR** (plasma concentration of atazanavir reduced); efavirenz reduces the plasma concentration of **DACLATASVIR**—increase dose of daclatasvir (see under Daclatasvir, in BNF); efavirenz reduces plasma concentration of **DARUNAVIR** (adjust dose—consult product literature); avoidance of efavirenz advised by manufacturer of **DASABUVIR**, **ELVITEGRAVIR**, **OMBITASVIR** and **PARITAPREVIR**; efavirenz reduces the plasma concentration of **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); efavirenz possibly reduces plasma concentration of **ETRAVIRINE**—avoid concomitant use; efavirenz reduces plasma concentration of **INDINAVIR** and **SIMEPREVIR**; efavirenz reduces plasma concentration of **LOPINAVIR**—consider increasing dose of lopinavir; efavirenz possibly reduces plasma concentration of **MARAVIROC**—consider increasing dose of maraviroc; plasma concentration of efavirenz reduced by **NEVIRAPINE**—avoid concomitant use; toxicity of efavirenz increased by **RITONAVIR**, monitor liver function tests—manufacturer of **Atripla®** advises avoid concomitant use with high-dose ritonavir; efavirenz significantly reduces plasma concentration of **SAQUINAVIR**;

Efavirenz

- Antivirals (continued)
 - efavirenz reduces plasma concentration of ● **TELAPREVIR**—increase dose of telaprevir
- Anxiolytics and Hypnotics: increased risk of prolonged sedation when efavirenz given with ● **MIDAZOLAM**—avoid concomitant use
- Atovaquone: efavirenz reduces plasma concentration of ● **ATOVAQUONE**—avoid concomitant use
- ▶ Avanafil: efavirenz possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- ▶ Bupropion: efavirenz accelerates metabolism of **BUPROPION** (reduced plasma concentration)
- ▶ Calcium-channel Blockers: efavirenz reduces plasma concentration of **DILTIAZEM**
- Ciclosporin: efavirenz possibly reduces plasma concentration of ● **CICLOSPORIN**
- Cytotoxics: efavirenz possibly reduces plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when efavirenz given with ● **ERGOT ALKALOIDS**—avoid concomitant use
- ▶ Grapefruit Juice: plasma concentration of efavirenz possibly increased by **GRAPEFRUIT JUICE**
- Guanfacine: efavirenz possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- ▶ Lipid-regulating Drugs: efavirenz reduces plasma concentration of **ATORVASTATIN**, **PRAVASTATIN** and **SIMVASTATIN**
- Orlistat: absorption of efavirenz possibly reduced by ● **ORLISTAT**
- Progestogens: efavirenz possibly reduces contraceptive effect of ● **PROGESTOGENS**
- Tacrolimus: efavirenz possibly affects plasma concentration of ● **TACROLIMUS**

Eletriptan see **5HT₁-receptor Agonists** (under HT)

Eltrombopag

- ▶ Antacids: absorption of eltrombopag reduced by **ANTACIDS** (give at least 4 hours apart)
- ▶ Antivirals: plasma concentration of eltrombopag possibly reduced by **LOPINAVIR**
- ▶ Calcium Salts: absorption of eltrombopag possibly reduced by **CALCIUM SALTS** (give at least 4 hours apart)
- ▶ Dairy Products: absorption of eltrombopag possibly reduced by **DAIRY PRODUCTS** (give at least 4 hours apart)
- ▶ Iron Salts: absorption of eltrombopag possibly reduced by **oral IRON SALTS** (give at least 4 hours apart)
- Lipid-regulating Drugs: eltrombopag increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature)
- ▶ Selenium: absorption of eltrombopag possibly reduced by **SELENIUM** (give at least 4 hours apart)
- ▶ Zinc: absorption of eltrombopag possibly reduced by **ZINC** (give at least 4 hours apart)

Elvitegravir

- ▶ Antacids: absorption of elvitegravir reduced by **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS** (give at least 4 hours apart)
- Antibacterials: plasma concentration of elvitegravir reduced by ● **RIFABUTIN** also plasma concentration of active metabolite of rifabutin increased—reduce dose of rifabutin; manufacturer of elvitegravir advises avoid concomitant use with ● **RIFAMPICIN**
- Antidepressants: manufacturer of elvitegravir advises avoid concomitant use with ● **ST JOHN'S WORT**
- Antiepileptics: manufacturer of elvitegravir advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- Antivirals: plasma concentration of elvitegravir increased by ● **ATAZANAVIR** and ● **LOPINAVIR** boosted with ritonavir (reduce dose of elvitegravir); manufacturer of elvitegravir advises avoid concomitant use with **EFAVIRENZ** and **NEVIRAPINE**
- ▶ Bosentan: manufacturer of elvitegravir advises avoid concomitant use with **BOSENTAN**
- Orlistat: absorption of elvitegravir possibly reduced by ● **ORLISTAT**
- ▶ Progestogens: elvitegravir increases plasma concentration of **NORGESTIMATE**

Empagliflozin see **Antidiabetics**

Emtricitabine

- ▶ Antivirals: manufacturer of emtricitabine advises avoid concomitant use with **LAMIVUDINE**
- Orlistat: absorption of emtricitabine possibly reduced by ● **ORLISTAT**

Enalapril see **ACE Inhibitors**

Enfuvirtide

- Orlistat: absorption of enfuvirtide possibly reduced by ● **ORLISTAT**

Enoxaparin see **Heparins**

Enoximone see **Phosphodiesterase Inhibitors**

Entacapone

- Anticoagulants: entacapone enhances anticoagulant effect of ● **WARFARIN**
- Antidepressants: manufacturer of entacapone advises caution with **MOCLOBEMIDE**, **TRICYCLICS** and **VENLAFAXINE**; avoid concomitant use of entacapone with non-selective ● **MAOIS**
- ▶ Dopaminergics: entacapone possibly enhances effects of **APOMORPHINE**; entacapone possibly reduces plasma concentration of **RASAGILINE**; manufacturer of entacapone advises max. dose of 10 mg **SELEGILINE** if used concomitantly
- ▶ Iron Salts: absorption of entacapone reduced by **oral IRON SALTS**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: entacapone possibly enhances effects of **METHYLDOPA**; antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Sympathomimetics: entacapone possibly enhances effects of **ADRENALINE** (**EPINEPHRINE**), **DOBUTAMINE**, **DOPAMINE** and **NORADRENALINE** (**NOREPINEPHRINE**)

Enteral Feeds

- Anticoagulants: the presence of vitamin K in some enteral feeds can antagonise the anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- Antiepileptics: enteral feeds possibly reduce absorption of **FOSPHENYTOIN** and **PHENYTOIN**

Enzalutamide

- Anticoagulants: enzalutamide possibly reduces plasma concentration of ● **COUMARINS**
- ▶ Antivirals: avoidance of enzalutamide advised by manufacturer of **DASABUVIR**, **OMBITASVIR** and **PARITAPREVIR**
- Anxiolytics and Hypnotics: enzalutamide reduces plasma concentration of ● **MIDAZOLAM**
- Lipid-regulating Drugs: plasma concentration of enzalutamide increased by ● **GEMFIBROZIL**—manufacturer of enzalutamide advises avoid concomitant use or halve dose of enzalutamide
- ▶ Ulcer-healing Drugs: enzalutamide reduces plasma concentration of **OMEPRAZOLE**

Ephedrine see **Sympathomimetics**

Epinephrine

NOTE Epinephrine interactions as for adrenaline, see under sympathomimetics

Epirubicin

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Ciclosporin: plasma concentration of epirubicin increased by ● **CICLOSPORIN**
- Cytotoxics: possible increased risk of cardiotoxicity when epirubicin given with ● **TRASTUZUMAB**—avoid concomitant use for up to 28 weeks after stopping trastuzumab
- Ulcer-healing Drugs: plasma concentration of epirubicin increased by ● **CIMETIDINE**
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Eplerenone see **Diuretics**

Eprosartan see **Angiotensin-II Receptor Antagonists**

Eptifibatide

- ▶ Iloprost: increased risk of bleeding when eptifibatide given with **ILOPROST**

Ergocalciferol see **Vitamins**

Ergometrine see **Ergot Alkaloids**

Ergot Alkaloids

- Antibacterials: increased risk of ergotism when ergot alkaloids given with ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** or

Ergot Alkaloids

- **Antibacterials** (continued)
 - **TELITHROMYCIN**—avoid concomitant use; increased risk of ergotism when ergotamine given with **TETRACYCLINES**
- **Antidepressants**: possible risk of hypertension when ergotamine given with **REBOXETINE**
- **Antifungals**: avoidance of ergot alkaloids advised by manufacturer of • **KETOCONAZOLE**; avoidance of ergometrine advised by manufacturer of • **ITRACONAZOLE** (increased risk of ergotism); increased risk of ergotism when ergometrine given with • **VORICONAZOLE**—avoid concomitant use; increased risk of ergotism when ergotamine given with • **IMIDAZOLES** or • **TRIAZOLES**—avoid concomitant use
- **Antipsychotics**: plasma concentration of ergot alkaloids possibly increased by **LURASIDONE** (increased risk of toxicity)
- **Antivirals**: plasma concentration of ergot alkaloids possibly increased by • **ATAZANAVIR**—avoid concomitant use; avoidance of ergot alkaloids advised by manufacturer of • **BOCEPREVIR** and • **TELAPEREVIR**; increased risk of ergotism when ergot alkaloids given with • **DARUNAVIR**—manufacturer of darunavir advises avoid concomitant use; increased risk of ergotism when ergot alkaloids given with • **EFAVIRENZ** or • **RITONAVIR**—avoid concomitant use; increased risk of ergotism when ergotamine given with • **FOSAMPRENAVIR**, • **INDINAVIR** or • **SAQUINAVIR**—avoid concomitant use; increased risk of ergotism when ergometrine given with • **INDINAVIR**—avoid concomitant use
- **Beta-blockers**: increased peripheral vasoconstriction when ergot alkaloids given with **BETA-BLOCKERS**
- **Cobicistat**: plasma concentration of ergot alkaloids possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Cytotoxics**: caution with ergot alkaloids advised by manufacturer of • **CRIZOTINIB**; avoidance of ergotamine advised by manufacturer of **IDELALISIB**
- **5HT₂-receptor Agonists**: increased risk of vasospasm when ergotamine given with • **ALMOTRIPTAN**, • **RIZATRIPTAN**, • **SUMATRIPTAN** or • **ZOLMITRIPTAN** (avoid ergotamine for 6 hours after almotriptan, rizatriptan, sumatriptan or zolmitriptan for 24 hours after ergotamine); increased risk of vasospasm when ergotamine given with • **ELETRIPTAN**, • **FROVATRIPTAN** or • **NARATRIPTAN** (avoid ergotamine for 24 hours after eletriptan, frovatriptan or naratriptan, avoid eletriptan, frovatriptan or naratriptan for 24 hours after ergotamine)
- **Sympathomimetics**: increased risk of ergotism when ergot alkaloids given with **SYMPATHOMIMETICS**
- **Ticagrelor**: plasma concentration of ergot alkaloids possibly increased by • **TICAGRELOL**
- **Ulcer-healing Drugs**: increased risk of ergotism when ergotamine given with • **CIMETIDINE**—avoid concomitant use

Ergotamine see Ergot Alkaloids

Eribulin

- **Antibacterials**: plasma concentration of eribulin possibly reduced by **RIFAMPICIN**
- **Antidepressants**: plasma concentration of eribulin possibly reduced by **ST JOHN'S WORD**
- **Antiepileptics**: plasma concentration of eribulin possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**
- **Antipsychotics**: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)

Erlotinib

- **Analgesics**: increased risk of bleeding when erlotinib given with • **NSAIDS**
- **Antacids**: plasma concentration of erlotinib possibly reduced by • **ANTACIDS**—give antacids at least 4 hours before or 2 hours after erlotinib
- **Antibacterials**: plasma concentration of erlotinib increased by **CIPROFLOXACIN**; metabolism of erlotinib accelerated by **RIFAMPICIN** (reduced plasma concentration)
- **Anticoagulants**: increased risk of bleeding when erlotinib given with • **COUMARINS**
- **Antifungals**: metabolism of erlotinib inhibited by **KETOCONAZOLE** (increased plasma concentration)

Erlotinib (continued)

- **Antipsychotics**: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals**: avoidance of erlotinib advised by manufacturer of • **BOCEPREVIR**
- **Cytotoxics**: plasma concentration of erlotinib possibly increased by **CAPECITABINE**
- **Ulcer-healing Drugs**: manufacturer of erlotinib advises avoid concomitant use with • **CIMETIDINE**, • **ESOMEPRAZOLE**, • **FAMOTIDINE**, • **LANSOPRAZOLE**, • **NIZATIDINE**, • **PANTOPRAZOLE** and • **RABEPRAZOLE**; plasma concentration of erlotinib reduced by • **RANITIDINE**—manufacturer of erlotinib advises give at least 2 hours before or 10 hours after ranitidine; plasma concentration of erlotinib reduced by • **OMEPRAZOLE**—manufacturer of erlotinib advises avoid concomitant use

Ertapenem

- **Antiepileptics**: carbapenems reduce plasma concentration of • **SODIUM VALPROATE** and • **VALPROIC ACID**—avoid concomitant use
- **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Erythromycin see Macrolides

Escitalopram see Antidepressants, SSRI

Eslicarbazepine

- **Anticoagulants**: eslicarbazepine reduces plasma concentration of **WARFARIN**
- **Antidepressants**: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and • **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by • **SSRIS** and • **TRICYCLICS** (convulsive threshold lowered)
- **Antiepileptics**: plasma concentration of eslicarbazepine possibly reduced by **CARBAMAZEPINE** but risk of side-effects increased; plasma concentration of eslicarbazepine reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin increased; manufacturer of eslicarbazepine advises avoid concomitant use with **OXCARBAZEPINE**
- **Antimalarials**: anticonvulsant effect of antiepileptics antagonised by • **MEFLOQUINE**
- **Antipsychotics**: anticonvulsant effect of antiepileptics antagonised by • **ANTIPSYCHOTICS** (convulsive threshold lowered)
- **Lipid-regulating Drugs**: eslicarbazepine reduces plasma concentration of **ROSUVASTATIN**; eslicarbazepine reduces plasma concentration of **SIMVASTATIN**—consider increasing dose of simvastatin
- **Oestrogens**: eslicarbazepine accelerates metabolism of • **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- **Orlistat**: possible increased risk of convulsions when antiepileptics given with • **ORLISTAT**
- **Progestogens**: eslicarbazepine accelerates metabolism of • **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Esmolol see Beta-blockers

Esomeprazole see Proton Pump Inhibitors

Estradiol see Oestrogens

Estramustine

- **Antacids**: absorption of estramustine possibly reduced by **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS**—manufacturer of estramustine advises avoid concomitant administration
- **Antipsychotics**: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- **Bisphosphonates**: plasma concentration of estramustine increased by • **SODIUM CLODRONATE**
- **Calcium Salts**: absorption of estramustine reduced by **CALCIUM SALTS** (manufacturer of estramustine advises avoid concomitant administration)

Estrinol see Oestrogens

Estrone see Oestrogens

Etanercept

- Abatacept: avoid concomitant use of etanercept with
 - **ABATACEPT**
- Anakinra: avoid concomitant use of etanercept with
 - **ANAKINRA**
- Vaccines: risk of generalised infections when etanercept given with live ● **VACCINES**—avoid concomitant use

Ethambutol

- Antibacterials: plasma concentration of ethambutol increased by **DELAMANID**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Ethinylestradiol see Oestrogens**Ethosuximide**

- Antibacterials: metabolism of ethosuximide inhibited by
 - **ISONIAZID** (increased plasma concentration and risk of toxicity)
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of ethosuximide possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of ethosuximide possibly reduced by ● **FOSPHENYTOIN** and ● **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma concentration of ethosuximide possibly increased by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Etodolac see NSAIDs**Etomidate** see Anaesthetics, General**Etonogestrel** see Progestogens**Etoposide**

- Anticoagulants: etoposide possibly enhances anticoagulant effect of ● **COUMARINS**
- Antiepileptics: plasma concentration of etoposide possibly reduced by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of etoposide increased by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Atovaquone: plasma concentration of etoposide possibly increased by **ATOVAQUONE**
- Ciclosporin: plasma concentration of etoposide possibly increased by **CICLOSPORIN** (increased risk of toxicity)
- Netupitant: plasma concentration of etoposide increased by **NETUPITANT**

Etoricoxib see NSAIDs**Etravirine**

- Antibacterials: etravirine reduces plasma concentration of
 - **CLARITHROMYCIN** (but concentration of an active metabolite increased), also plasma concentration of etravirine increased; plasma concentration of both drugs reduced when etravirine given with ● **RIFABUTIN**; manufacturer of etravirine advises avoid concomitant use with **RIFAMPICIN**; etravirine possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use
- Antidepressants: manufacturer of etravirine advises avoid concomitant use with **ST JOHN'S WORT**
- Antiepileptics: manufacturer of etravirine advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antimalarials: etravirine reduces plasma concentration of **ARTEMETHER WITH LUMEFANTRINE**
- Antivirals: effects of both drugs possibly reduced when etravirine given with **BOCEPREVIR**; avoidance of etravirine advised by manufacturer of **DACLATASVIR** (plasma concentration of daclatasvir possibly reduced); avoidance of

Etravirine

- Antivirals (continued)
 - etravirine advised by manufacturer of **DASABUVIR**, **OMBITASVIR**, **PARITAPREVIR** and **SIMEPREVIR**; etravirine reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); plasma concentration of etravirine possibly reduced by ● **EFAVIRENZ** and ● **NEVIRAPINE**—avoid concomitant use; etravirine increases plasma concentration of ● **FOSAMPRENAVIR** (consider reducing dose of fosamprenavir); etravirine possibly reduces plasma concentration of ● **INDINAVIR**—avoid concomitant use; etravirine possibly reduces plasma concentration of **MARAVIROC**; plasma concentration of etravirine reduced by ● **TIPRANAVIR**, also plasma concentration of tipranavir increased (avoid concomitant use)
 - Cardiac Glycosides: etravirine increases plasma concentration of **DIGOXIN**
 - Clopidogrel: etravirine possibly reduces antiplatelet effect of
 - **CLOPIDOGREL**
 - Cytotoxics: etravirine possibly reduces plasma concentration of
 - **BOSUTINIB**—manufacturer of bosutinib advises avoid concomitant use
 - Guanfacine: etravirine possibly reduces plasma concentration of
 - **GUANFACINE**—increase dose of guanfacine
 - Lipid-regulating Drugs: etravirine possibly reduces plasma concentration of **ATORVASTATIN**
 - Orlistat: absorption of etravirine possibly reduced by
 - **ORLISTAT**
 - Sildenafil: etravirine reduces plasma concentration of **SILDENAFIL**
- Everolimus**
- ACE Inhibitors: increased risk of angioedema when everolimus given with ● **ACE INHIBITORS**
 - Antibacterials: plasma concentration of everolimus possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of everolimus advises avoid concomitant use; plasma concentration of everolimus increased by ● **ERYTHROMYCIN** (consider reducing the dose of everolimus—consult everolimus product literature); plasma concentration of everolimus reduced by ● **RIFAMPICIN** (avoid concomitant use or consider increasing the dose of everolimus—consult everolimus product literature)
 - Antidepressants: plasma concentration of everolimus possibly reduced by **ST JOHN'S WORT**—manufacturer of everolimus advises avoid concomitant use
 - Antifungals: plasma concentration of everolimus increased by
 - **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of everolimus possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—manufacturer of everolimus advises avoid concomitant use
 - Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
 - Antivirals: plasma concentration of everolimus possibly increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—manufacturer of everolimus advises avoid concomitant use
 - Calcium-channel Blockers: plasma concentration of both drugs may increase when everolimus given with ● **VERAPAMIL** (consider reducing the dose of everolimus—consult everolimus product literature)
 - Ciclosporin: plasma concentration of everolimus increased by
 - **CICLOSPORIN** (consider reducing the dose of everolimus—consult everolimus product literature)
 - Cytotoxics: plasma concentration of everolimus increased by
 - **IMATINIB** (consider reducing the dose of everolimus—consult everolimus product literature)
 - Grapefruit Juice: manufacturer of everolimus advises avoid concomitant use with **GRAPEFRUIT JUICE**

Exemestane

- Antibacterials: plasma concentration of exemestane possibly reduced by **RIFAMPICIN**

Exenatide see Antidiabetics**Ezetimibe**

- Anticoagulants: ezetimibe possibly enhances anticoagulant effect of **COUMARINS**

Ezetimibe (continued)

- **Ciclosporin**: plasma concentration of both drugs may increase when ezetimibe given with ● **CICLOSPORIN**
- **Lipid-regulating Drugs**: ezetimibe increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); increased risk of cholelithiasis and gallbladder disease when ezetimibe given with **FIBRATES**—discontinue if suspected

Famotidine see Histamine H₂-antagonists

Fampridine

- **Ulcer-healing Drugs**: manufacturer of fampridine advises avoid concomitant use with ● **CIMETIDINE**

Febuxostat

- **Azathioprine**: manufacturer of febuxostat advises avoid concomitant use with ● **AZATHIOPRINE**
- **Cytotoxics**: manufacturer of febuxostat advises avoid concomitant use with ● **MERCAPTOPURINE**

Felodipine see Calcium-channel Blockers

Fenofibrate see Fibrates

Fenoprofen see NSAIDs

Fentanyl see Opioid Analgesics

Ferrous Fumarate see Iron salts

Ferrous Gluconate see Iron salts

Ferrous Sulfate see Iron salts

Fesoterodine see Antimuscarinics

Fexofenadine see Antihistamines

Fibrates

- **Antibacterials**: increased risk of myopathy when fibrates given with ● **DAPTOMYCIN** (preferably avoid concomitant use)
- **Anticoagulants**: fibrates enhance anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- **Antidiabetics**: fibrates may improve glucose tolerance and have an additive effect with **INSULIN** or **SULFONYLUREAS**; gemfibrozil possibly enhances hypoglycaemic effect of **NATEGLINIDE**; increased risk of severe hypoglycaemia when gemfibrozil given with ● **REPAGLINIDE**—avoid concomitant use
- **Antivirals**: avoidance of gemfibrozil advised by manufacturer of **DASABUVIR**; gemfibrozil increases plasma concentration of ● **PARITAPREVR**—manufacturer of paritaprevir advises avoid concomitant use
 - **Ciclosporin**: increased risk of renal impairment when bezafibrate or fenofibrate given with **CICLOSPORIN**
- **Colchicine**: increased risk of myopathy when fibrates given with ● **COLCHICINE**
- **Cytotoxics**: gemfibrozil increases plasma concentration of **DABRAFENIB**; gemfibrozil increases plasma concentration of ● **BEXAROTENE**—avoid concomitant use
- **Hormone Antagonists**: gemfibrozil increases plasma concentration of ● **ENZALUTAMIDE**—manufacturer of enzalutamide advises avoid concomitant use or halve dose of enzalutamide
 - **Leukotriene Receptor Antagonists**: gemfibrozil increases plasma concentration of **MONTELUKAST**
- **Lipid-regulating Drugs**: increased risk of myopathy when gemfibrozil given with ● **ATORVASTATIN**, ● **FLUVASTATIN** or ● **PRAVASTATIN** (preferably avoid concomitant use); increased risk of myopathy when fibrates given with ● **ROSUVASTATIN** (see under Rosuvastatin, p. 124); possible increased risk of myopathy when bezafibrate given with ● **SIMVASTATIN** (see under Simvastatin, p. 125); possible increased risk of myopathy when ciprofibrate given with ● **SIMVASTATIN** (see under Simvastatin, in BNF); increased risk of myopathy when gemfibrozil given with ● **SIMVASTATIN** (avoid concomitant use); increased risk of cholelithiasis and gallbladder disease when fibrates given with **EZETIMIBE**—discontinue if suspected; increased risk of myopathy when fibrates given with ● **STATINS**; reduce maximum dose of fenofibrate when given with **STATINS**—see under Fenofibrate, p. 122

Fidaxomicin

- **Anti-arrhythmics**: manufacturer of fidaxomicin advises avoid concomitant use with **AMIODARONE** and **DRONEDARONE**
- **Antibacterials**: manufacturer of fidaxomicin advises avoid concomitant use with **CLARITHROMYCIN** and **ERYTHROMYCIN**
- **Antifungals**: manufacturer of fidaxomicin advises avoid concomitant use with **KETOCONAZOLE**

Fidaxomicin (continued)

- **Calcium-channel Blockers**: manufacturer of fidaxomicin advises avoid concomitant use with **VERAPAMIL**
- **Ciclosporin**: manufacturer of fidaxomicin advises avoid concomitant use with **CICLOSPORIN**
- **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Filgrastim

- **Cytotoxics**: neutropenia possibly exacerbated when filgrastim given with **CAPECITABINE**, **FLUOROURACIL** or **TEGAFUR**

Fingolimod

- **Anti-arrhythmics**: possible increased risk of bradycardia when fingolimod given with ● **AMIODARONE**, ● **DISOPYRAMIDE** or ● **DRONEDARONE**
- **Antidepressants**: plasma concentration of fingolimod possibly reduced by **ST JOHN'S WORT**—manufacturer of fingolimod advises avoid concomitant use
- **Antiepileptics**: plasma concentration of fingolimod reduced by **CARBAMAZEPINE**
- **Antifungals**: plasma concentration of fingolimod increased by ● **KETOCONAZOLE**
- **Beta-blockers**: possible increased risk of bradycardia when fingolimod given with ● **BETA-BLOCKERS**
- **Calcium-channel Blockers**: possible increased risk of bradycardia when fingolimod given with ● **DILTIAZEM** or ● **VERAPAMIL**

Flavoxate see Antimuscarinics

Flecainide

- **Anaesthetics, Local**: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILCAICINE** or **ROPIVACAINE**
- **Anti-arrhythmics**: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**; plasma concentration of flecainide increased by ● **AMIODARONE** (halve dose of flecainide)
- **Antidepressants**: plasma concentration of flecainide increased by **FLUOXETINE**; increased risk of ventricular arrhythmias when flecainide given with ● **TRICYCLICS**
- **Antihistamines**: increased risk of ventricular arrhythmias when flecainide given with ● **MIZOLASTINE**—avoid concomitant use
- **Antimalarials**: avoidance of flecainide advised by manufacturer of ● **ARTEMETHER WITH LUMEFRANTRINE** (risk of ventricular arrhythmias); plasma concentration of flecainide increased by ● **QUININE**
- **Antimuscarinics**: increased risk of ventricular arrhythmias when flecainide given with ● **TOLTERODINE**
- **Antipsychotics**: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ● **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of arrhythmias when flecainide given with ● **CLOZAPINE**
- **Antivirals**: plasma concentration of flecainide possibly increased by ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR** and ● **RITONAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when flecainide given with ● **SAQUINAVIR**—avoid concomitant use; caution with flecainide advised by manufacturer of ● **TELAPREVR** (risk of ventricular arrhythmias)
- **Beta-blockers**: increased risk of myocardial depression and bradycardia when flecainide given with ● **BETA-BLOCKERS**; increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**
- **Calcium-channel Blockers**: increased risk of myocardial depression and asystole when flecainide given with ● **VERAPAMIL**
- **Diuretics**: increased cardiac toxicity with flecainide if hypokalaemia occurs with ● **ACETAZOLAMIDE**, ● **LOOP DIURETICS** or ● **THIAZIDES AND RELATED DIURETICS**
- **Ulcer-healing Drugs**: metabolism of flecainide inhibited by **CIMETIDINE** (increased plasma concentration)

Flucloxacillin see Penicillins

Fluconazole see Antifungals, Triazole

Flucytosine

- **Antifungals**: renal excretion of flucytosine decreased and cellular uptake increased by **AMPHOTERICIN** (toxicity possibly increased)
- **Cytotoxics**: plasma concentration of flucytosine possibly reduced by **CYTARABINE**

Fludarabine

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: fludarabine increases intracellular concentration of **CYTARABINE**; increased pulmonary toxicity when fludarabine given with • **PENTOSTATIN** (unacceptably high incidence of fatalities)
 - ▷ Dipyridamole: effects of fludarabine possibly reduced by **DIPYRIDAMOLE**

Fludrocortisone see Corticosteroids

Fluorides

- Calcium Salts: absorption of fluorides reduced by **CALCIUM SALTS**

Fluorouracil

- Antibacterials: metabolism of fluorouracil inhibited by **METRONIDAZOLE** (increased toxicity)
- Anticoagulants: fluorouracil enhances anticoagulant effect of
 - **COUMARINS**
- Antiepileptics: fluorouracil possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: avoidance of fluorouracil advised by manufacturer of
 - **PANITUMUMAB**
- ▷ Filgrastim: neutropenia possibly exacerbated when fluoracil given with **FILGRASTIM**
- Folates: toxicity of fluorouracil increased by • **FOLIC ACID**—avoid concomitant use
 - ▷ Lipegfilgrastim: neutropenia possibly exacerbated when fluorouracil given with **LIPEGFILGRASTIM**
- ▷ Pegfilgrastim: neutropenia possibly exacerbated when fluorouracil given with **PEGFILGRASTIM**
- Temoporfin: increased skin photosensitivity when *topical* fluorouracil used with • **TEMOPORFIN**
- ▷ Ulcer-healing Drugs: metabolism of fluorouracil inhibited by **CIMETIDINE** (increased plasma concentration)

Fluoxetine see Antidepressants, SSRI

Flupentixol see Antipsychotics

Fluphenazine see Antipsychotics

Flurazepam see Anxiolytics and Hypnotics

Flurbiprofen see NSAIDs

Flutamide

- Anticoagulants: flutamide enhances anticoagulant effect of
 - **COUMARINS**

Fluticasone see Corticosteroids

Fluvastatin see Statins

Fluvoxamine see Antidepressants, SSRI

Folates

- Aminosalicilates: absorption of folic acid possibly reduced by **SULFASALAZINE**
- ▷ Antacids: absorption of folic acid possibly reduced by **ANTACIDS** (manufacturer of folic acid advises give at least 2 hours apart)
- ▷ Antiepileptics: folates possibly reduce plasma concentration of **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Cytotoxics: folic acid increases toxicity of • **CAPECITABINE**, • **FLUOROURACIL** and • **TEGAFUR**—avoid concomitant use; avoidance of folates advised by manufacturer of
 - **RALTITREXED**; avoidance of folic acid advised by manufacturer of • **PANITUMUMAB**

Folic Acid see Folate

Folinic Acid see Folate

Fondaparinux

- Analgesics: increased risk of haemorrhage when anticoagulants given with *intravenous* • **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with • **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with • **APIXABAN**, • **DABIGATRAN**, • **EDOXABAN** and • **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)

Formoterol see Sympathomimetics, Beta₂

Fosamprenavir

NOTE Fosamprenavir is a prodrug of amprenavir

- ▷ Analgesics: fosamprenavir reduces plasma concentration of **METHADONE**

Fosamprenavir (continued)

- Anti-arrhythmics: fosamprenavir possibly increases plasma concentration of • **AMIODARONE**, • **FLECAINIDE** and • **PROPAFENONE** (increased risk of ventricular arrhythmias—avoid concomitant use); fosamprenavir possibly increases plasma concentration of • **LIDOCAINE**—avoid concomitant use
- Antibacterials: fosamprenavir increases plasma concentration of • **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of fosamprenavir significantly reduced by
 - **RIFAMPICIN**—avoid concomitant use; avoidance of concomitant fosamprenavir in severe renal and hepatic impairment advised by manufacturer of • **TELITHROMYCIN**
- ▷ Anticoagulants: avoidance of fosamprenavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**; fosamprenavir may enhance or reduce anticoagulant effect of **COUMARINS**
- Antidepressants: plasma concentration of fosamprenavir reduced by • **ST JOHN'S WORT**—avoid concomitant use
- ▷ Antiepileptics: plasma concentration of fosamprenavir possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE**
- ▷ Antifungals: fosamprenavir increases plasma concentration of **KETOCONAZOLE** (also plasma concentration of fosamprenavir possibly increased); plasma concentration of both drugs may increase when fosamprenavir given with **ITRACONAZOLE**; fosamprenavir possibly reduces plasma concentration of **POSACONAZOLE**
- Antimalarials: caution with fosamprenavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; fosamprenavir possibly increases plasma concentration of • **QUININE** (increased risk of toxicity)
- ▷ Antimuscarinics: avoidance of fosamprenavir advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**
- Antipsychotics: fosamprenavir possibly increases plasma concentration of • **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); fosamprenavir increases plasma concentration of • **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); fosamprenavir possibly increases plasma concentration of • **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: manufacturer of fosamprenavir advises avoid concomitant use with • **BOCEPREVIR** and • **RALTEGRAVIR**; fosamprenavir reduces plasma concentration of
 - **DOLUTEGRAVIR**; plasma concentration of fosamprenavir increased by • **ETRAVIRINE** (consider reducing dose of fosamprenavir); plasma concentration of fosamprenavir reduced by **LOPINAVIR**, effect on lopinavir plasma concentration not predictable—avoid concomitant use; plasma concentration of fosamprenavir reduced by • **MARAVIROC**—avoid concomitant use; plasma concentration of fosamprenavir possibly reduced by **NEVIRAPINE**—avoid unboosted fosamprenavir; manufacturers advise avoid concomitant use of fosamprenavir with • **TELAPREVIR**; plasma concentration of fosamprenavir reduced by • **TIPRANAVIR**
- Anxiolytics and Hypnotics: fosamprenavir possibly increases plasma concentration of • **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of oral midazolam)
- Avanafil: fosamprenavir possibly increases plasma concentration of • **AVANAFIL**—see under Avanafil, in BNF
- Ciclosporin: fosamprenavir increases plasma concentration of • **CICLOSPORIN**
- Cytotoxics: fosamprenavir possibly increases the plasma concentration of • **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; fosamprenavir possibly increases the plasma concentration of • **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- ▷ Dapoxetine: manufacturer of dapoxetine advises dose reduction when fosamprenavir given with **DAPOXETINE** (see under Dapoxetine, in BNF)
- Ergot Alkaloids: increased risk of ergotism when fosamprenavir given with • **ERGOTAMINE**—avoid concomitant use
- ▷ Guanfacine: fosamprenavir possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- Lipid-regulating Drugs: possible increased risk of myopathy when fosamprenavir given with **ATORVASTATIN**; possible increased risk of myopathy when fosamprenavir given with

Fosamprenavir

- **Lipid-regulating Drugs** (continued)
 - **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; possible increased risk of myopathy when fosamprenavir given with ● **SIMVASTATIN**—avoid concomitant use; avoidance of fosamprenavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- **Orlistat**: absorption of fosamprenavir possibly reduced by ● **ORLISTAT**
- **Ranolazine**: fosamprenavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- **Sildenafil**: fosamprenavir possibly increases plasma concentration of **SILDENAFIL**
- **Tacrolimus**: fosamprenavir increases plasma concentration of ● **TACROLIMUS**
- **Tadalafil**: fosamprenavir possibly increases plasma concentration of **TADALAFIL**
- **Vardenafil**: fosamprenavir possibly increases plasma concentration of **VARDENAFIL**

Fosaprepitant

- **Antibacterials**: plasma concentration of fosaprepitant possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of fosaprepitant reduced by **RIFAMPICIN**
- **Anticoagulants**: fosaprepitant possibly reduces anticoagulant effect of **WARFARIN**
- **Antidepressants**: manufacturer of fosaprepitant advises avoid concomitant use with ● **ST JOHN'S WORT**
- **Antidiabetics**: fosaprepitant reduces plasma concentration of **TOLBUTAMIDE**
- **Antiepileptics**: plasma concentration of fosaprepitant possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- **Antifungals**: plasma concentration of fosaprepitant increased by **KETCONAZOLE**
- **Antipsychotics**: manufacturer of fosaprepitant advises avoid concomitant use with ● **PIMOZIDE**
- **Antivirals**: plasma concentration of fosaprepitant possibly increased by **RITONAVIR**
- **Anxiolytics and Hypnotics**: fosaprepitant increases plasma concentration of **MIDAZOLAM** (risk of prolonged sedation)
- **Avanafil**: fosaprepitant possibly increases plasma concentration of **AVANAFIL**
- **Calcium-channel Blockers**: plasma concentration of both drugs may increase when fosaprepitant given with **DILTIAZEM**
- **Corticosteroids**: fosaprepitant inhibits metabolism of **DEXAMETHASONE** and **METHYLPREDNISOLONE** (reduce dose of dexamethasone and methylprednisolone)
- **Cytotoxics**: fosaprepitant possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; fosaprepitant possibly increases plasma concentration of **IBRUTINIB**
- **Guanfacine**: fosaprepitant possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- **Lipid-regulating Drugs**: separating administration from fosaprepitant by 12 hours advised by manufacturer of **LOMITAPIDE**
- **Oestrogens**: fosaprepitant possibly causes contraceptive failure of hormonal contraceptives containing ● **OESTROGENS** (alternative contraception recommended)
- **Progestogens**: fosaprepitant possibly causes contraceptive failure of hormonal contraceptives containing ● **PROGESTOGENS** (alternative contraception recommended)

Foscarnet

- **Pentamidine Isetionate**: increased risk of hypocalcaemia when foscarnet given with **PENTAMIDINE ISETIONATE**

Fosfomycin

- **Metoclopramide**: plasma concentration of fosfomycin reduced by **METOCLOPRAMIDE**
- **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Fosinopril see ACE Inhibitors

Fosphenytoin

- **Alcohol**: plasma concentration of fosphenytoin possibly reduced by chronic heavy consumption of **ALCOHOL**
- **Aminophylline**: plasma concentration of both drugs reduced when fosphenytoin given with ● **AMINOPHYLLINE**
- **Analgesics**: excretion of fosphenytoin possibly reduced by **ACETAMIN** (increased risk of toxicity); fosphenytoin possibly accelerates metabolism of **FENTANYL** (reduced effect); fosphenytoin accelerates metabolism of **METHADONE** (reduced effect and risk of withdrawal effects); fosphenytoin possibly increases risk of ● **PETHIDINE** toxicity; effects of fosphenytoin enhanced by **ASPIRIN**; fosphenytoin possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- **Antacids**: absorption of fosphenytoin reduced by **ANTACIDS**
- **Anthelmintics**: fosphenytoin reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections; plasma concentration of fosphenytoin possibly increased by **LEVAMISOLE**
- **Anti-arrhythmics**: metabolism of fosphenytoin inhibited by ● **AMIODARONE** (increased plasma concentration); fosphenytoin reduces plasma concentration of **DISOPYRAMIDE**; fosphenytoin possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use
- **Antibacterials**: metabolism of fosphenytoin inhibited by **CLARITHROMYCIN** (increased plasma concentration); metabolism of fosphenytoin possibly inhibited by **METRONIDAZOLE** (increased plasma concentration); plasma concentration of fosphenytoin increased or decreased by **CIPROFLOXACIN**; fosphenytoin accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); fosphenytoin possibly reduces plasma concentration of ● **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of fosphenytoin increased by ● **CHLORAMPHENICOL** (increased risk of toxicity); metabolism of fosphenytoin possibly inhibited by **ISONIAZID** (increased risk of toxicity); metabolism of fosphenytoin accelerated by ● **RIFAMYCINS** (reduced plasma concentration); plasma concentration of fosphenytoin possibly increased by **SULFONAMIDES**; fosphenytoin reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after fosphenytoin); plasma concentration of fosphenytoin increased by ● **TRIMETHOPRIM** (also increased antifolate effect)
- **Anticoagulants**: fosphenytoin possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOXABAN**; fosphenytoin accelerates metabolism of ● **COUMARINS** (possibility of reduced anticoagulant effect, but enhancement also reported); fosphenytoin possibly reduces plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; fosphenytoin possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- **Antidepressants**: plasma concentration of fosphenytoin increased by ● **FLUOXETINE** and ● **FLUVOXAMINE**; fosphenytoin reduces plasma concentration of ● **MIANSERIN**, **MIRTAZAPINE** and **PAROXETINE**; plasma concentration of fosphenytoin possibly increased by **SERTRALINE**, also plasma concentration of sertraline possibly reduced; anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of fosphenytoin possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; fosphenytoin possibly reduces plasma concentration of ● **TRICYCLICS**; fosphenytoin possibly reduces plasma concentration of ● **VORTIOXETINE**—consider increasing dose of vortioxetine
- **Antidiabetics**: plasma concentration of fosphenytoin transiently increased by **TOLBUTAMIDE** (possibility of toxicity)
- **Antiepileptics**: plasma concentration of both drugs often reduced when fosphenytoin given with **CARBAMAZEPINE**, also plasma concentration of fosphenytoin may be increased; fosphenytoin reduces plasma concentration of **ESLICARBAMAZEPINE**, also plasma concentration of fosphenytoin increased; plasma concentration of fosphenytoin possibly

Fosphenytoin

● Antiepileptics (continued)

increased by ● **ETHOSUXIMIDE**, also plasma concentration of ethosuximide possibly reduced; fosphenytoin reduces plasma concentration of **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of fosphenytoin increased by **OXCARBAPENZINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; fosphenytoin reduces plasma concentration of ● **PERAMPANEL** (see under Perampanel, p. 193); fosphenytoin often increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**, plasma concentration of fosphenytoin often reduced but may be increased; fosphenytoin possibly reduces plasma concentration of **RETIGABINE**; fosphenytoin possibly reduces plasma concentration of **RUFINAMIDE**, also plasma concentration of fosphenytoin possibly increased; plasma concentration of fosphenytoin increased or possibly reduced when given with **SODIUM VALPROATE** and **VALPROIC ACID**, also plasma concentration of sodium valproate and valproic acid reduced; plasma concentration of fosphenytoin increased by ● **STIRIPENTOL**; plasma concentration of fosphenytoin increased by ● **TOPIRAMATE** (also plasma concentration of topiramate reduced); plasma concentration of fosphenytoin reduced by **VIGABATRIN**

- Antifungals: fosphenytoin reduces plasma concentration of ● **KETOCONAZOLE** and ● **POSACONAZOLE**; anticonvulsant effect of fosphenytoin enhanced by ● **MICONAZOLE** (plasma concentration of fosphenytoin increased); plasma concentration of fosphenytoin increased by ● **FLUCONAZOLE** (consider reducing dose of fosphenytoin); fosphenytoin reduces plasma concentration of ● **ITRACONAZOLE**—avoid concomitant use; plasma concentration of fosphenytoin increased by ● **VORICONAZOLE**, also fosphenytoin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for fosphenytoin toxicity); fosphenytoin possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin
- Antimalarials: avoidance of fosphenytoin advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**; anticonvulsant effect of fosphenytoin antagonised by ● **PYRIMETHAMINE**, also increased antifolate effect
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); fosphenytoin reduces plasma concentration of **HALOPERIDOL**; plasma concentration of fosphenytoin possibly increased or decreased by **CHLOROPROMAZINE**; fosphenytoin possibly reduces plasma concentration of ● **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); fosphenytoin accelerates metabolism of **CLOZAPINE** and **QUETIAPINE** (reduced plasma concentration); fosphenytoin possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: fosphenytoin possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **LOPINAVIR** and **SAQUINAVIR**; avoidance of fosphenytoin advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); fosphenytoin possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; fosphenytoin possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; fosphenytoin possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 587); avoidance of fosphenytoin advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**; fosphenytoin possibly reduces plasma concentration of ● **INDINAVIR**, also plasma concentration of fosphenytoin possibly increased; fosphenytoin possibly reduces plasma concentration of **RITONAVIR**, also plasma concentration of fosphenytoin possibly affected; plasma concentration of fosphenytoin increased or decreased by **ZIDOVUDINE**
- Anxiolytics and Hypnotics: fosphenytoin often reduces plasma concentration of **CLONAZEPAM**; plasma concentration of

Fosphenytoin

Anxiolytics and Hypnotics (continued)

- fosphenytoin increased or decreased by **DIAZEPAM**; plasma concentration of fosphenytoin possibly increased or decreased by **BENZODIAZEPINES**
- Aprepitant: fosphenytoin possibly reduces plasma concentration of **APREPITANT**
- Bupropion: fosphenytoin reduces plasma concentration of **BUPROPION**
- Caffeine citrate: fosphenytoin reduces plasma concentration of **CAFFEINE CITRATE**
- Calcium-channel Blockers: fosphenytoin reduces effects of **FELODIPINE** and **VERAPAMIL**; avoidance of fosphenytoin advised by manufacturer of **ISRADIPINE**; avoidance of fosphenytoin advised by manufacturer of **NIMODIPINE** (plasma concentration of nimodipine possibly reduced); plasma concentration of fosphenytoin increased by ● **DILTIAZEM** but also effect of diltiazem reduced
- Cannabis Extract: fosphenytoin possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- Cardiac Glycosides: fosphenytoin possibly reduces plasma concentration of **DIGOXIN**
- Ciclosporin: fosphenytoin accelerates metabolism of ● **CYCLOSPORIN** (reduced plasma concentration)
- Cobicistat: fosphenytoin possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: fosphenytoin accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- Cytotoxics: fosphenytoin possibly reduces plasma concentration of **BUSULFAN**, **ERIBULIN** and **ETOPOSIDE**; metabolism of fosphenytoin possibly inhibited by **CAPECITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased risk of toxicity); fosphenytoin increases antifolate effect of **METHOTREXATE**; plasma concentration of fosphenytoin possibly reduced by **CISPLATIN**; fosphenytoin possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); fosphenytoin possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB**, ● **IBRUTINIB**, ● **IDELALISIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib, ibrutinib, idelalisib and ponatinib advises avoid concomitant use; fosphenytoin possibly reduces plasma concentration of ● **CABOZANTINIB**—avoid concomitant use; avoidance of fosphenytoin advised by manufacturer of ● **CABAZITAXEL**, **DABRAFINIB**, **GEFITINIB**, ● **LAPATINIB** and **VEMLURAFENIB**; avoidance of fosphenytoin advised by manufacturer of **DASATINIB** and ● **VISMODEGIB** (plasma concentration of dasatinib and vismodegib possibly reduced); fosphenytoin reduces plasma concentration of ● **IMATINIB**—avoid concomitant use; fosphenytoin reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procabazine advises possible increased risk of hypersensitivity reactions when fosphenytoin given with **PROCARBAZINE**
- Dextrazoxane: absorption of fosphenytoin possibly reduced by ● **DEXRAZOXANE**
- Diazoxide: plasma concentration of fosphenytoin reduced by **DIAZOXIDE**, also effect of diazoxide may be reduced
- Disulfiram: metabolism of fosphenytoin inhibited by ● **DISULFIRAM** (increased risk of toxicity)
- Diuretics: plasma concentration of fosphenytoin possibly increased by ● **ACETAZOLAMIDE**; fosphenytoin antagonises effects of **FUROSEMIDE**; fosphenytoin reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when fosphenytoin given with **CARBONIC ANHYDRASE INHIBITORS**
- Dopaminergics: fosphenytoin possibly reduces effects of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- Enteral Feeds: absorption of fosphenytoin possibly reduced by **ENTERAL FEEDS**
- Folate: plasma concentration of fosphenytoin possibly reduced by **FOLATES**
- Fosaprepitant: fosphenytoin possibly reduces plasma concentration of **FOSAPREPITANT**

Fosphenytoin (continued)

- **Hormone Antagonists:** fosphenytoin possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; fosphenytoin possibly accelerates metabolism of **TOREMIFENE**
- **5HT₃-receptor Antagonists:** fosphenytoin accelerates metabolism of **ONDANSETRON** (reduced effect)
- **Ivacaftor:** fosphenytoin possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- **Leflunomide:** plasma concentration of fosphenytoin possibly increased by **LEFLUNOMIDE**
- **Lipid-regulating Drugs:** absorption of fosphenytoin possibly reduced by **COLESEVELAM**; combination of fosphenytoin with **FLUVASTATIN** may increase plasma concentration of either drug (or both)
- **Lithium:** neurotoxicity may occur when fosphenytoin given with **LITHIUM** without increased plasma concentration of lithium
- **Macitentan:** avoidance of fosphenytoin advised by manufacturer of **MACITENTAN**
- **Modafinil:** plasma concentration of fosphenytoin possibly increased by **MODAFINIL**
- **Muscle Relaxants:** *long-term use* of fosphenytoin reduces effects of ● **NON-DEPOLARISING MUSCLE RELAXANTS** (but *acute use* of fosphenytoin might increase effects of non-depolarising muscle relaxants)
- **Oestrogens:** fosphenytoin accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- **Progestogens:** fosphenytoin accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- **Roflumilast:** fosphenytoin possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- **Sulfinpyrazone:** plasma concentration of fosphenytoin increased by ● **SULFINPYRAZONE**
- **Sympathomimetics:** plasma concentration of fosphenytoin increased by **METHYLPHENIDATE**
- **Tacrolimus:** fosphenytoin reduces plasma concentration of **TACROLIMUS**, also plasma concentration of fosphenytoin possibly increased
- **Theophylline:** plasma concentration of both drugs reduced when fosphenytoin given with ● **THEOPHYLLINE**
- **Thyroid Hormones:** fosphenytoin accelerates metabolism of **THYROID HORMONES** (may increase requirements in hypothyroidism), also plasma concentration of fosphenytoin possibly increased
- **Tibolone:** fosphenytoin accelerates metabolism of **TIBOLONE**
- **Ticagrelor:** fosphenytoin possibly reduces plasma concentration of **TICAGRELOR**
- **Ulcer-healing Drugs:** metabolism of fosphenytoin inhibited by ● **CIMETIDINE** (increased plasma concentration); effects of fosphenytoin enhanced by ● **ESOMEPRAZOLE**; effects of fosphenytoin possibly enhanced by **OMEPRAZOLE**; absorption of fosphenytoin reduced by ● **SUCRALFATE**
- **Ulipristal:** avoidance of fosphenytoin advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- **Vaccines:** effects of fosphenytoin enhanced by **INFLUENZA VACCINE**
- **Vitamins:** fosphenytoin possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

Frovatriptan see 5HT₁-receptor Agonists (under HT)

Furosemide see Diuretics

Fusidic Acid

- **Antivirals:** plasma concentration of both drugs increased when fusidic acid given with ● **RITONAVIR**—avoid concomitant use; plasma concentration of both drugs may increase when fusidic acid given with **SAQUINAVIR**
- **Lipid-regulating Drugs:** risk of myopathy and rhabdomyolysis when fusidic acid given with ● **STATINS**—avoid concomitant use and for 7 days after last fusidic acid dose
- **Sugammadex:** fusidic acid possibly reduces response to **SUGAMMADEX**
- **Vaccines:** antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Gabapentin

- **Analgesics:** bioavailability of gabapentin increased by **MORPHINE**
- **Antacids:** absorption of gabapentin reduced by **ANTACIDS**
- **Antidepressants:** anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- **Antimalarials:** anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- **Antipsychotics:** anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Galantamine see Parasympathomimetics

Ganciclovir

- NOTE** Increased risk of myelosuppression with other myelosuppressive drugs—consult product literature
- **Antibacterials:** increased risk of convulsions when ganciclovir given with ● **IMIPENEM WITH CILASTATIN**
- **Antivirals:** ganciclovir possibly increases plasma concentration of **DIDANOSINE**; profound myelosuppression when ganciclovir given with ● **ZIDOVUDINE** (if possible avoid concomitant administration, particularly during initial ganciclovir therapy)
- **Mycophenolate:** plasma concentration of ganciclovir possibly increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- **Tacrolimus:** possible increased risk of nephrotoxicity when ganciclovir given with **TACROLIMUS**

Gefitinib

- **Antibacterials:** plasma concentration of gefitinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants:** gefitinib possibly enhances anticoagulant effect of ● **WARFARIN**
- **Antidepressants:** manufacturer of gefitinib advises avoid concomitant use with **ST JOHN'S WORT**
- **Antiepileptics:** manufacturer of gefitinib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- **Antifungals:** plasma concentration of gefitinib increased by **ITRACONAZOLE**
- **Antipsychotics:** avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals:** avoidance of gefitinib advised by manufacturer of ● **BOCEPREVIR**
- **Ulcer-healing Drugs:** plasma concentration of gefitinib reduced by ● **RANITIDINE**

Gemcitabine

- **Anticoagulants:** gemcitabine possibly enhances anticoagulant effect of **WARFARIN**
- **Antipsychotics:** avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Gemeprost see Prostaglandins

Gemfibrozil see Fibrates

Gentamicin see Aminoglycosides

Gestodene see Progestogens

Glibenclamide see Antidiabetics

Gliclazide see Antidiabetics

Glimepiride see Antidiabetics

Glipizide see Antidiabetics

Glucosamine

- Anticoagulants: glucosamine enhances anticoagulant effect of
 - **WARFARIN** (avoid concomitant use)

Glyceryl Trinitrate see Nitrates

Glycopyrronium see Antimuscarinics

Gold

NOTE see Sodium Aurothiomalate

Golimimumab

- Abatacept: avoid concomitant use of golimumab with
 - **ABATACEPT**
- Anakinra: avoid concomitant use of golimumab with
 - **ANAKINRA**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live
 - **VACCINES**—avoid concomitant use

Granisetron see 5HT₃-receptor Antagonists (under HT)

Grapefruit Juice

- Aliskiren: grapefruit juice reduces plasma concentration of
 - **ALISKIREN**—avoid concomitant use
- ▶ Anthelmintics: grapefruit juice increases plasma concentration of active metabolite of **ALBENDAZOLE**; grapefruit juice increases plasma concentration of **PRAZIQUANTEL**
- Anti-arrhythmics: grapefruit juice increases plasma concentration of **AMIODARONE**; grapefruit juice increases plasma concentration of **DRONEDARONE**—avoid concomitant use
- ▶ Antidepressants: grapefruit juice possibly increases plasma concentration of **SERTRALINE**
- Antihistamines: grapefruit juice reduces plasma concentration of **BILASTINE**
- ▶ Antimalarials: grapefruit juice possibly increases plasma concentration of **ARTEMETHER WITH LUMEFANTRINE**; avoidance of grapefruit juice advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoidance of grapefruit juice advised by manufacturer of **LURASIDONE** and **PIMOZIDE**; grapefruit juice possibly increases plasma concentration of **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- ▶ Antivirals: grapefruit juice possibly increases plasma concentration of **EFAVIRENZ**
- ▶ Anxiolytics and Hypnotics: grapefruit juice possibly increases plasma concentration of oral **MIDAZOLAM**; grapefruit juice increases plasma concentration of **BUSPIRONE**
- ▶ Avanafil: grapefruit juice possibly increases plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid grapefruit juice for 24 hours before avanafil
- ▶ Calcium-channel Blockers: grapefruit juice possibly increases plasma concentration of **AMLODIPINE**; grapefruit juice increases plasma concentration of **FELODIPINE**, **ISRADIPINE**, **LACIDIPINE**, **LERCANIDIPINE**, **NICARDIPINE**, **NIFEDIPINE**, **NIMODIPINE** and **VERAPAMIL**
- Ciclosporin: grapefruit juice increases plasma concentration of
 - **CYCLOSPORIN** (increased risk of toxicity)
- Colchicine: grapefruit juice possibly increases risk of
 - **COLCHICINE** toxicity
- Corticosteroids: grapefruit juice increases plasma concentration of oral **BUDESONIDE**—avoid concurrent use or separate administration by as much as possible and consider reducing oral budesonide dose
- Cytotoxics: grapefruit juice possibly increases plasma concentration of **AXITINIB**, **CABOZANTINIB** and **PONATINIB**; grapefruit juice possibly increases the plasma concentration of **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; grapefruit juice possibly increases plasma concentration of **CRIZOTINIB** and **VINFLUNINE**—manufacturer of crizotinib and vinflunine advises avoid concomitant use; avoidance of grapefruit juice advised by manufacturer of **DASATINIB** (plasma concentration of dasatinib possibly increased); avoidance of grapefruit juice advised by manufacturer of **EVEROLIMUS**, **IBRUTINIB**, **LAPATINIB**, **NILOTINIB** and **PAZOPANIB**
- ▶ Guanfacine: avoidance of grapefruit juice advised by manufacturer of **GUANFACINE**
- ▶ Ivabradine: grapefruit juice increases plasma concentration of **IVABRADINE**

Grapefruit Juice (continued)

- ▶ Ivacaftor: grapefruit juice possibly increases plasma concentration of **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- Lipid-regulating Drugs: grapefruit juice possibly increases plasma concentration of **ATORVASTATIN**; grapefruit juice increases plasma concentration of **SIMVASTATIN**—avoid concomitant use; avoidance of grapefruit juice advised by manufacturer of **LOMITAPIDE**
- ▶ Pirofenidone: avoidance of grapefruit juice advised by manufacturer of **PIRFENIDONE**
- Ranolazine: grapefruit juice possibly increases plasma concentration of **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- ▶ Sildenafil: grapefruit juice possibly increases plasma concentration of **SILDENAFIL**
- Sirolimus: grapefruit juice increases plasma concentration of
 - **SIROLIMUS**—avoid concomitant use
- Tacrolimus: grapefruit juice increases plasma concentration of
 - **TACROLIMUS**
- ▶ Tadalafil: grapefruit juice possibly increases plasma concentration of **TADALAFIL**
- Tolvaptan: grapefruit juice increases plasma concentration of
 - **TOLVAPTAN**—avoid concomitant use
- ▶ Ulipristal: avoidance of grapefruit juice advised by manufacturer of low-dose **ULIPRISTAL**
- Vardenafil: grapefruit juice possibly increases plasma concentration of **VARDENAFIL**—avoid concomitant use

Griseofulvin

- ▶ Alcohol: griseofulvin possibly enhances effects of **ALCOHOL**
- Anticoagulants: griseofulvin reduces anticoagulant effect of
 - **COUMARINS**
- ▶ Antiepileptics: absorption of griseofulvin reduced by **PHENOBARBITAL** and **PRIMIDONE** (reduced effect)
- ▶ Ciclosporin: griseofulvin possibly reduces plasma concentration of **CYCLOSPORIN**
- ▶ Oestrogens: anecdotal reports of contraceptive failure and menstrual irregularities when griseofulvin given with **OESTROGENS**
- ▶ Progestogens: anecdotal reports of contraceptive failure and menstrual irregularities when griseofulvin given with **PROGESTOGENS**

Guanethidine see Adrenergic Neurone Blockers

Guanfacine

- ▶ Alcohol: sedative effects possibly increased when guanfacine given with **ALCOHOL**
- Antibacterials: plasma concentration of guanfacine possibly increased by **CLARITHROMYCIN**, **ERYTHROMYCIN** and **TELITHROMYCIN** (halve dose of guanfacine); plasma concentration of guanfacine possibly reduced by **RIFABUTIN**—increase dose of guanfacine; plasma concentration of guanfacine reduced by **RIFAMPICIN**—increase dose of guanfacine; manufacturer of guanfacine advises halve dose when given with **CHLORAMPHENICOL**
- Antidepressants: plasma concentration of guanfacine possibly reduced by **ST JOHN'S WORT**—increase dose of guanfacine
- Antiepileptics: plasma concentration of guanfacine possibly reduced by **CARBAMAZEPINE**, **OXCARBAPINE**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—increase dose of guanfacine; guanfacine increases plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**
- Antifungals: plasma concentration of guanfacine increased by **KETOCONAZOLE** (halve dose of guanfacine); plasma concentration of guanfacine possibly increased by **FLUCONAZOLE**, **ITRACONAZOLE** and **POSACONAZOLE** (halve dose of guanfacine)
- ▶ Antipsychotics: sedative effects possibly increased when guanfacine given with **ANTIPSYCHOTICS**
- Antivirals: plasma concentration of guanfacine possibly increased by **ATAZANAVIR**, **BOCEPREVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **RITONAVIR**, **SAQUINAVIR** and **TELAAPREVIR** (halve dose of guanfacine); plasma concentration of guanfacine possibly reduced by **EFAVIRENZ**, **ETRAVIRINE** and **NEVIRAPINE**—increase dose of guanfacine
- ▶ Anxiolytics and Hypnotics: sedative effects possibly increased when guanfacine given with **ANXIOLYTICS AND HYPNOTICS**

Guanfacine (continued)

- **Appetitant:** plasma concentration of guanfacine possibly increased by **APREPITANT** (halve dose of guanfacine)
- **Bosentan:** plasma concentration of guanfacine possibly reduced by ● **BOSENTAN**—increase dose of guanfacine
- **Calcium-channel Blockers:** plasma concentration of guanfacine possibly increased by **DILTIAZEM** and **VERAPAMIL** (halve dose of guanfacine)
- **Cytotoxics:** plasma concentration of guanfacine possibly increased by **CRIZOTINIB** and **IMATINIB** (halve dose of guanfacine)
- **Fosaprepitant:** plasma concentration of guanfacine possibly increased by **FOSAPREPITANT** (halve dose of guanfacine)
- **Grapefruit Juice:** manufacturer of guanfacine advises avoid concomitant use with **GRAPEFRUIT JUICE**
- **Modafinil:** plasma concentration of guanfacine possibly reduced by ● **MODAFINIL**—increase dose of guanfacine

Haemophilus Vaccine see Vaccines

Haloperidol see Antipsychotics

Heparin see Heparins

Heparins

- **ACE Inhibitors:** increased risk of hyperkalaemia when heparins given with **ACE INHIBITORS**
- **Aliskiren:** increased risk of hyperkalaemia when heparins given with **ALISKIREN**
- **Analgesics:** possible increased risk of bleeding when heparins given with **NSAIDs**; increased risk of haemorrhage when anticoagulants given with **intravenous** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins); anticoagulant effect of heparins enhanced by ● **ASPIRIN**
- **Angiotensin-II Receptor Antagonists:** increased risk of hyperkalaemia when heparins given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- **Anticoagulants:** increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- **Clopidogrel:** increased risk of bleeding when heparins given with **CLOPIDOGREL**
- **Dipyridamole:** anticoagulant effect of heparins enhanced by **DIPYRIDAMOLE**
- **Iloprost:** anticoagulant effect of heparins possibly enhanced by **ILOPROST**
- **Nitrates:** anticoagulant effect of heparins reduced by *infusion* of ● **GLYCERYL TRINITRATE**

Hepatitis Vaccines see Vaccines

Histamine

- **Antidepressants:** manufacturer of histamine advises avoid concomitant use with **MAOIs**; effects of histamine theoretically antagonised by **TRICYCLICS**—manufacturer of histamine advises avoid concomitant use
- **Antihistamines:** effects of histamine theoretically antagonised by **ANTIHISTAMINES**—manufacturer of histamine advises avoid concomitant use
- **Antimalarials:** manufacturer of histamine advises avoid concomitant use with **ANTIMALARIALS**
- **Antipsychotics:** effects of histamine theoretically antagonised by **ANTIPSYCHOTICS**—manufacturer of histamine advises avoid concomitant use
- **Atovaquone:** manufacturer of histamine advises avoid concomitant use with **ATOVAQUONE**
- **Clonidine:** manufacturer of histamine advises avoid concomitant use with **CLONIDINE**
- **Corticosteroids:** manufacturer of histamine advises avoid concomitant use with **CORTICOSTEROIDS**
- **Ulcer-healing Drugs:** effects of histamine theoretically antagonised by **HISTAMINE H₂-ANTAGONISTS**—manufacturer of histamine advises avoid concomitant use

Histamine H₂-antagonists

- **Alpha-blockers:** cimetidine and ranitidine antagonise effects of ● **TOLAZOLINE**
- **Aminophylline:** cimetidine inhibits metabolism of ● **AMINOPHYLLINE** (increased plasma concentration)

Histamine H₂-antagonists (continued)

- **Analgesics:** cimetidine inhibits metabolism of **OPIOID ANALGESICS** (increased plasma concentration)
- **Anthelmintics:** cimetidine possibly enhances effects of **ALBENDAZOLE**; cimetidine possibly inhibits metabolism of **MEBENDAZOLE** (increased plasma concentration); cimetidine increases plasma concentration of **PRAZICANTHEL**
- **Anti-arrhythmics:** cimetidine increases plasma concentration of **AMIODARONE** and ● **PROPAFENONE**; cimetidine inhibits metabolism of **FLECAINIDE** (increased plasma concentration); cimetidine increases plasma concentration of ● **LIDOCAINE** (increased risk of toxicity)
- **Antibacterials:** cimetidine increases plasma concentration of **ERYTHROMYCIN** (increased risk of toxicity, including deafness); cimetidine inhibits metabolism of **METRONIDAZOLE** (increased plasma concentration); metabolism of cimetidine accelerated by **RIFAMPICIN** (reduced plasma concentration)
- **Anticoagulants:** cimetidine inhibits metabolism of ● **COUMARINS** (enhanced anticoagulant effect)
- **Antidepressants:** cimetidine increases plasma concentration of **CITALOPRAM**, **ESCITALOPRAM**, **MIRTAZAPINE** and **SERTRALINE**; cimetidine inhibits metabolism of **AMITRIPTYLINE**, **DOXEPIN**, **IMIPRAMINE** and **NORTRIPTYLINE** (increased plasma concentration); cimetidine increases plasma concentration of **MOCLOBEMIDE** (halve dose of moclobemide); cimetidine possibly increases plasma concentration of **TRICYCLICS**
- **Antidiabetics:** cimetidine reduces excretion of **METFORMIN** (increased plasma concentration); cimetidine enhances hypoglycaemic effect of **SULFONYLUREAS**
- **Antiepileptics:** cimetidine inhibits metabolism of ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENYTOIN**, ● **SODIUM VALPROATE** and ● **VALPROIC ACID** (increased plasma concentration)
- **Antifungals:** histamine H₂-antagonists reduce absorption of **ITRACONAZOLE** and **KETOCONAZOLE**; cimetidine reduces plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; famotidine, nizatidine and ranitidine possibly reduce plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; cimetidine increases plasma concentration of **TERBINAFINE**
- **Antihistamines:** manufacturer of loratadine advises cimetidine possibly increases plasma concentration of **LORATADINE**; cimetidine increases plasma concentration of **HYDROXYZINE**
- **Antimalarials:** avoidance of cimetidine advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; cimetidine inhibits metabolism of **CHLOROQUINE**, **HYDROXYCHLOROQUINE** and **QUININE** (increased plasma concentration)
- **Antipsychotics:** cimetidine possibly enhances effects of **ANTIPSYCHOTICS**, **CHLORPROMAZINE** and **CLOZAPINE**
- **Antivirals:** famotidine and ranitidine reduce the plasma concentration of ● **ATAZANAVIR** (adjust doses of both drugs—consult atazanavir product literature); manufacturer of atazanavir advises adjust doses of both drugs when cimetidine and nizatidine given with **ATAZANAVIR**—consult atazanavir product literature; famotidine reduces plasma concentration of **LEDIPASVIR**; famotidine increases plasma concentration of **RALTEGRAVIR**; avoidance of histamine H₂-antagonists for 12 hours before or 4 hours after **RILPIVIRINE** advised by manufacturer of rilpivirine—consult product literature; cimetidine possibly increases plasma concentration of **SAQUINAVIR**
- **Anxiolytics and Hypnotics:** cimetidine inhibits metabolism of **BENZODIAZEPINES**, **CLOMETHIAZOLE** and **ZALEPLON** (increased plasma concentration); cimetidine increases plasma concentration of **MELATONIN**
- **Azathioprine:** manufacturer of azathioprine advises possible increased risk of myelosuppression when cimetidine given with **AZATHIOPRINE**
- **Beta-blockers:** cimetidine increases plasma concentration of **LABETALOL**, **METOPROLOL** and **PROPRANOLOL**; cimetidine possibly increases plasma concentration of *oral* **TIMOLOL**
- **Caffeine citrate:** cimetidine increases plasma concentration of **CAFFEINE CITRATE**
- **Calcium-channel Blockers:** cimetidine possibly inhibits metabolism of **CALCIUM-CHANNEL BLOCKERS** (increased plasma

Histamine H₂-antagonists

- Calcium-channel Blockers (continued) concentration); cimetidine increases plasma concentration of **ISRADIPINE** (halve dose of isradipine)
- Ciclosporin: cimetidine possibly increases plasma concentration of ● **CICLOSPORIN**
- Clopidogrel: cimetidine possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- Cytotoxics: cimetidine possibly enhances myelosuppressive effects of **CARMUSTINE** and **LOMUSTINE**; cimetidine reduces plasma concentration of **DOXORUBICIN**; cimetidine increases plasma concentration of ● **EPIRUBICIN**; cimetidine inhibits metabolism of **CAPECITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased plasma concentration); famotidine possibly reduces plasma concentration of **DASATINIB**; avoidance of cimetidine, famotidine and nizatidine advised by manufacturer of ● **ERLOTINIB**; ranitidine reduces plasma concentration of ● **ERLOTINIB**—manufacturer of erlotinib advises give at least 2 hours before or 10 hours after ranitidine; ranitidine reduces plasma concentration of ● **GEFITINIB**; histamine H₂-antagonists possibly reduce absorption of **LAPATINIB**; histamine H₂-antagonists possibly reduce absorption of **PAZOPANIB**—manufacturer of pazopanib advises give at least 2 hours before or 10 hours after histamine H₂-antagonists
- Dopaminergics: cimetidine reduces excretion of **PRAMIPEXOLE** (increased plasma concentration)
- Ergot Alkaloids: increased risk of ergotism when cimetidine given with ● **ERGOTAMINE**—avoid concomitant use
- Fampridine: avoidance of cimetidine advised by manufacturer of ● **FAMPRIDINE**
- Histamine: histamine H₂-antagonists theoretically antagonise effects of **HISTAMINE**—manufacturer of histamine advises avoid concomitant use
- Hormone Antagonists: absorption of cimetidine possibly delayed by **OCTREOTIDE**
- 5HT₂-receptor Agonists: cimetidine inhibits metabolism of **ZOLMITRIPTAN** (reduce dose of zolmitriptan)
- Lipid-regulating Drugs: separating administration from cimetidine and ranitidine by 12 hours advised by manufacturer of **LOMITAPIDE**
- Roflumilast: cimetidine inhibits the metabolism of **ROFLUMILAST**
- Sildenafil: cimetidine increases plasma concentration of **SILDENAFIL**—consider reducing dose of sildenafil for erectile dysfunction
- Sympathomimetics: cimetidine possibly inhibits metabolism of **DOBUTAMINE**
- Theophylline: cimetidine inhibits metabolism of ● **THEOPHYLLINE** (increased plasma concentration)
- Thyroid Hormones: cimetidine reduces absorption of **LEVOTHYROXINE**

Homatropine see Antimuscarinics

Hormone Antagonists see Abiraterone, Bicalutamide, Danazol, Dutasteride, Enzalutamide, Exemestane, Flutamide, Lanreotide, Octreotide, Pasireotide, Tamoxifen, and Toremifene

5HT₂-receptor Agonists

- Antibacterials: plasma concentration of eletriptan increased by ● **CLARITHROMYCIN** and ● **ERYTHROMYCIN** (risk of toxicity)—avoid concomitant use; metabolism of zolmitriptan possibly inhibited by **QUINOLONES** (reduce dose of zolmitriptan)
- Antidepressants: increased risk of CNS toxicity when 5HT₁ agonists given with ● **CITALOPRAM** (manufacturer of citalopram advises avoid concomitant use); increased risk of CNS toxicity when sumatriptan given with ● **CITALOPRAM**, ● **ESCITALOPRAM**, ● **FLUOXETINE**, ● **FLUOXAMINE** or ● **PAROXETINE**; metabolism of frovatriptan inhibited by **FLUVOXAMINE**; metabolism of zolmitriptan possibly inhibited by **FLUVOXAMINE** (reduce dose of zolmitriptan); CNS toxicity reported when sumatriptan given with **SERTRALINE**; possible increased serotonergic effects when 5HT₁ agonists given with **DULOXETINE**, **VENLAFAXINE** or **VORTIOXETINE**; risk of CNS toxicity when rizatriptan or sumatriptan given with ● **MAOIS** (avoid rizatriptan or sumatriptan for 2 weeks after MAOIs); risk of CNS toxicity when zolmitriptan given with ● **MAOIS** or

5HT₂-receptor Agonists

- Antidepressants (continued)
 - **MOCLOBEMIDE** (reduce dose of zolmitriptan); risk of CNS toxicity when rizatriptan or sumatriptan given with
 - **MOCLOBEMIDE** (avoid rizatriptan or sumatriptan for 2 weeks after moclobemide); possible increased serotonergic effects when naratriptan given with **SSRIs**; increased serotonergic effects when 5HT₁ agonists given with ● **ST JOHN'S WORT**—avoid concomitant use
- Antifungals: plasma concentration of eletriptan increased by ● **ITRACONAZOLE** and ● **KETOCONAZOLE** (risk of toxicity)—avoid concomitant use; plasma concentration of almotriptan increased by **KETOCONAZOLE** (increased risk of toxicity)
- Antivirals: plasma concentration of eletriptan increased by ● **INDINAVIR** and ● **RITONAVIR** (risk of toxicity)—avoid concomitant use
- Beta-blockers: plasma concentration of rizatriptan increased by **PROPRANOLOL** (manufacturer of rizatriptan advises halve dose and avoid within 2 hours of propranolol)
- Dapoxetine: possible increased risk of serotonergic effects when 5HT₁ agonists given with ● **DAPOXETINE** (manufacturer of dapoxetine advises 5HT₁ agonists should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping 5HT₁ agonists)
- Dopaminergics: avoidance of 5HT₁ agonists advised by manufacturer of **SELEGILINE**
- Ergot Alkaloids: increased risk of vasospasm when eletriptan, frovatriptan or naratriptan given with ● **ERGOTAMINE** (avoid ergotamine for 24 hours after eletriptan, frovatriptan or naratriptan, avoid eletriptan, frovatriptan or naratriptan for 24 hours after ergotamine); increased risk of vasospasm when almotriptan, rizatriptan, sumatriptan or zolmitriptan given with ● **ERGOTAMINE** (avoid ergotamine for 6 hours after almotriptan, rizatriptan, sumatriptan or zolmitriptan, avoid almotriptan, rizatriptan, sumatriptan or zolmitriptan for 24 hours after ergotamine)
- Lithium: possible risk of toxicity when sumatriptan given with **LITHIUM**
- Ulcer-healing Drugs: metabolism of zolmitriptan inhibited by **CIMETIDINE** (reduce dose of zolmitriptan)

5HT₂-receptor Antagonists

- Analgesics: ondansetron possibly antagonises effects of **TRAMADOL**
- Antibacterials: metabolism of ondansetron accelerated by **RIFAMPICIN** (reduced effect)
- Antidepressants: possible increased serotonergic effects when 5HT₂ antagonists given with **SSRI-RELATED ANTIDEPRESSANTS** or **SSRIs**
- Antiepileptics: metabolism of ondansetron accelerated by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN** (reduced effect)
- Cytotoxics: increased risk of ventricular arrhythmias when ondansetron given with ● **VANDETANIB**—avoid concomitant use
- Dopaminergics: possible increased hypotensive effect when ondansetron given with ● **APOMORPHINE**—avoid concomitant use

Human papillomavirus Vaccine see Vaccines

Hydralazine see Vasodilator Antihypertensives

Hydrochlorothiazide see Diuretics

Hydrocortisone see Corticosteroids

Hydroflumethiazide see Diuretics

Hydromorphone see Opioid Analgesics

Hydrotalcite see Antacids

Hydroxocobalamin

- Antibacterials: response to hydroxocobalamin reduced by **CHLORAMPHENICOL**

Hydroxycarbamide

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: increased risk of toxicity when hydroxycarbamide given with ● **DIDANOSINE** and ● **STAVUDINE**—avoid concomitant use
- Vaccines: risk of generalised infections when hydroxycarbamide given with live ● **VACCINES**—avoid concomitant use

Hydroxychloroquine

- Adsorbents: absorption of hydroxychloroquine reduced by **KAOLIN**

Hydroxychloroquine (continued)

- Agalsidase Alfa and Beta: hydroxychloroquine possibly inhibits effects of **AGALSIDASE ALFA** and **BETA** (manufacturers of agalsidase alfa and beta advise avoid concomitant use)
- Antacids: absorption of hydroxychloroquine reduced by **ANTACIDS**
- Anti-arrhythmics: increased risk of ventricular arrhythmias when hydroxychloroquine given with ● **AMIODARONE**—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when hydroxychloroquine given with ● **MOXIFLOXACIN**—avoid concomitant use
- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; increased risk of convulsions when hydroxychloroquine given with ● **MEFLOQUINE**
- Antipsychotics: increased risk of ventricular arrhythmias when hydroxychloroquine given with ● **DROPERIDOL**—avoid concomitant use
- Cardiac Glycosides: hydroxychloroquine possibly increases plasma concentration of ● **DIGOXIN**
- Ciclosporin: hydroxychloroquine increases plasma concentration of ● **CYCLOSPORIN** (increased risk of toxicity)
- Cytotoxics: possible increased risk of ventricular arrhythmias when hydroxychloroquine given with ● **BOSUTINIB**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Lanthanum: absorption of hydroxychloroquine possibly reduced by **LANTHANUM** (give at least 2 hours apart)
- Laronidase: hydroxychloroquine possibly inhibits effects of **LARONIDASE** (manufacturer of laronidase advises avoid concomitant use)
- Parasympathomimetics: hydroxychloroquine has potential to increase symptoms of myasthenia gravis and thus diminish effect of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Ulcer-healing Drugs: metabolism of hydroxychloroquine inhibited by **CIMETIDINE** (increased plasma concentration)
- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Hydroxyzine see Antihistamines**Hyoscine** see Antimuscarinics**Ibandronic Acid** see Bisphosphonates**Ibrutinib**

- Anti-arrhythmics: plasma concentration of ibrutinib possibly increased by ● **AMIODARONE** and ● **DRONEDARONE**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Antibacterials: plasma concentration of ibrutinib possibly increased by ● **CIPROFLOXACIN**, ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); plasma concentration of ibrutinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- Anticoagulants: manufacturer of ibrutinib advises avoid concomitant use with **COUMARINS** and **PHENINDIONE**
- Antidepressants: plasma concentration of ibrutinib possibly reduced by ● **ST JOHN'S WORT**—manufacturer of ibrutinib advises avoid concomitant use
- Antiepileptics: plasma concentration of ibrutinib possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**—manufacturer of ibrutinib advises avoid concomitant use
- Antifungals: plasma concentration of ibrutinib increased by ● **KETOCONAZOLE**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); plasma concentration of ibrutinib possibly increased by ● **FLUCONAZOLE**, ● **ITRACONAZOLE** and ● **VORICONAZOLE**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of ibrutinib possibly increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)

Ibrutinib (continued)

- Aprepitant: plasma concentration of ibrutinib possibly increased by ● **APREPITANT**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Calcium-channel Blockers: plasma concentration of ibrutinib possibly increased by ● **DILTIAZEM** and ● **VERAPAMIL**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Cardiac Glycosides: manufacturer of ibrutinib advises give **DIGOXIN** at least 6 hours before or after ibrutinib
- Cobicistat: plasma concentration of ibrutinib possibly increased by ● **COBICISTAT**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Cytotoxics: plasma concentration of ibrutinib possibly increased by ● **CRIZOTINIB** and ● **IMATINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF)
- Fosaprepitant: plasma concentration of ibrutinib possibly increased by **FOSAPREPITANT**
- Grapefruit Juice: manufacturer of ibrutinib advises avoid concomitant use with **GRAPEFRUIT JUICE**
- Vitamins: manufacturer of ibrutinib advises avoid concomitant use with **VITAMIN E**

Ibuprofen see NSAIDs**Idarubicin**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Ciclosporin: plasma concentration of idarubicin increased by ● **CYCLOSPORIN**
- Cytotoxics: possible increased risk of cardiotoxicity when idarubicin given with ● **TRASTUZUMAB**—avoid concomitant use for up to 28 weeks after stopping trastuzumab
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Idelalisib

- Alpha-blockers: manufacturer of idelalisib advises avoid concomitant use with **ALFUZOSIN**
- Anti-arrhythmics: manufacturer of idelalisib advises avoid concomitant use with **AMIODARONE**
- Antibacterials: plasma concentration of idelalisib reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of idelalisib possibly reduced by ● **ST JOHN'S WORT**—manufacturer of idelalisib advises avoid concomitant use
- Antiepileptics: plasma concentration of idelalisib possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**—manufacturer of idelalisib advises avoid concomitant use
- Antifungals: plasma concentration of idelalisib increased by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis); manufacturer of idelalisib advises avoid concomitant use with **PIMOZIDE** and **QUETIAPINE**
- Anxiolytics and Hypnotics: manufacturer of idelalisib advises avoid concomitant use of **oral MIDAZOLAM**
- Ergot Alkaloids: manufacturer of idelalisib advises avoid concomitant use with **ERGOTAMINE**
- Lipid-regulating Drugs: manufacturer of idelalisib advises avoid concomitant use with **SIMVASTATIN**
- Sildenafil: manufacturer of idelalisib advises avoid concomitant use of **SILDENAFIL** for pulmonary arterial hypertension
- Sympathomimetics, Beta₂: manufacturer of idelalisib advises avoid concomitant use with **SALMETEROL**

Ifosfamide

- Anticoagulants: ifosfamide possibly enhances anticoagulant effect of ● **COUMARINS**
- Antifungals: metabolism of ifosfamide inhibited by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased risk of toxicity when ifosfamide given with **CISPLATIN**

Iloprost

- Analgesics: increased risk of bleeding when iloprost given with **NSAIDs** or **ASPIRIN**

Iloprost (continued)

- ▶ Anticoagulants: iloprost possibly enhances anticoagulant effect of **COUMARINS** and **HEPARINS**; increased risk of bleeding when iloprost given with **PHENINDIONE**
- ▶ Clopidogrel: increased risk of bleeding when iloprost given with **CLOPIDOGREL**
- ▶ Eptifibatide: increased risk of bleeding when iloprost given with **EPTIFIBATIDE**
- ▶ Tirofiban: increased risk of bleeding when iloprost given with **TIROFIBAN**

Imatinib

- ▶ Analgesics: manufacturer of imatinib advises caution with **PARACETAMOL**
- Antibacterials: plasma concentration of imatinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- ▶ Anticoagulants: manufacturer of imatinib advises replacement of **WARFARIN** with a heparin (possibility of enhanced warfarin effect)
- Antidepressants: plasma concentration of imatinib reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of imatinib reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE** and ● **PHENYTOIN**—avoid concomitant use
- ▶ Antifungals: plasma concentration of imatinib increased by **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of imatinib advised by manufacturer of ● **BOCEPREVIR**
- ▶ Ciclosporin: imatinib possibly increases plasma concentration of **CICLOSPORIN**
- Cytotoxics: imatinib possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; imatinib increases plasma concentration of ● **EVEROLIMUS** (consider reducing the dose of everolimus—consult everolimus product literature); imatinib possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNf)
- ▶ Guanfacine: imatinib possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- ▶ Lipid-regulating Drugs: imatinib increases plasma concentration of **SIMVASTATIN**
- ▶ Tacrolimus: imatinib increases plasma concentration of **TACROLIMUS**
- ▶ Thyroid Hormones: imatinib possibly reduces plasma concentration of **LEVOTHYROXINE**

Imidapril see ACE Inhibitors

Imipenem with Cilastatin

- Antiepileptics: carbapenems reduce plasma concentration of ● **SODIUM VALPROATE** and ● **VALPROIC ACID**—avoid concomitant use
- Antivirals: increased risk of convulsions when imipenem with cilastatin given with ● **GANCICLOVIR** or ● **VALGANCICLOVIR**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNfC

Imipramine see Antidepressants, Tricyclic

Immunoglobulins

- Vaccines: anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **BCG VACCINE**—give BCG vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **MMR VACCINE**—give MMR vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to live ● **INFLUENZA VACCINE**—give live influenza vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **ORAL TYPHOID VACCINE**—give oral typhoid vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to

Immunoglobulins

● Vaccines (continued)

- oral** ● **POLIOMYELITIS VACCINE**—give oral poliomyelitis vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **ROTAVIRUS VACCINE**—give rotavirus vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **SMALLPOX VACCINE**—give smallpox vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **VARICELLA-ZOSTER VACCINE**—give varicella-zoster vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; anti-d immunoglobulins and normal immunoglobulin might impair immune response to ● **YELLOW FEVER VACCINE**—give yellow fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin

Indacaterol see Sympathomimetics, Beta₂

Indapamide see Diuretics

Indinavir

- ▶ Aldesleukin: plasma concentration of indinavir possibly increased by **ALDESLEUKIN**
- Anti-arrhythmics: indinavir possibly increases plasma concentration of ● **AMIODARONE**—avoid concomitant use; indinavir possibly increases plasma concentration of ● **FLECAINIDE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antibacterials: indinavir increases plasma concentration of ● **RIFABUTIN**, also plasma concentration of indinavir decreased (reduce dose of rifabutin and increase dose of indinavir); metabolism of indinavir accelerated by ● **RIFAMPICIN** (reduced plasma concentration—avoid concomitant use); avoidance of concomitant indinavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
- ▶ Anticoagulants: avoidance of indinavir advised by manufacturer of **APIXABAN** and **RIVAROXBAN**
- Antidepressants: plasma concentration of indinavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of indinavir possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**, also plasma concentration of carbamazepine, fosphenytoin and phenytoin possibly increased; plasma concentration of indinavir possibly reduced by ● **PHENOBARBITAL** and ● **PRIMIDONE**
- Antifungals: plasma concentration of indinavir increased by ● **ITRACONAZOLE** and ● **KETOCONAZOLE** (consider reducing dose of indinavir)
- Antimalarials: caution with indinavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; indinavir possibly increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- ▶ Antimuscarinics: avoidance of indinavir advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when indinavir given with **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: indinavir possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); indinavir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; indinavir possibly increases plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); indinavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: avoid concomitant use of indinavir with ● **ATAZANAVIR**; plasma concentration of both drugs increased when indinavir given with **DARUNAVIR**; absorption of indinavir reduced by **DIDANOSINE tablets** (give at least 1 hour apart); plasma concentration of indinavir reduced by **EFAVIRENZ** and **NEVIRAPINE**; plasma concentration of indinavir possibly reduced by ● **ETRAVIRINE**—avoid concomitant use; indinavir increases plasma concentration of ● **MARAVIROC** (consider

Indinavir

- **Antivirals** (continued)
 - reducing dose of maraviroc; avoidance of indinavir advised by manufacturer of **PARITAPREVIR**; plasma concentration of indinavir increased by **RITONAVIR**; indinavir increases plasma concentration of **SAQUINAVIR**
 - **Anxiolytics and Hypnotics**: increased risk of prolonged sedation when indinavir given with ● **ALPRAZOLAM**—avoid concomitant use; indinavir possibly increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam)
 - **Atovaquone**: plasma concentration of indinavir possibly reduced by **ATOVAQUONE**
 - **Avanafil**: indinavir possibly increases plasma concentration of ● **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
 - **Bosentan**: plasma concentration of indinavir possibly reduced by **BOSENTAN**
 - **Ciclosporin**: indinavir increases plasma concentration of ● **CICLOSPORIN**
 - **Colchicine**: indinavir possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
 - **Corticosteroids**: plasma concentration of indinavir possibly reduced by **DEXAMETHASONE**
 - **Cytotoxics**: indinavir possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); indinavir possibly increases the plasma concentration of ● **BOSUTINIB** and ● **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; indinavir possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; indinavir possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); indinavir possibly increases plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); indinavir possibly increases plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF); manufacturer of ruxolitinib advises dose reduction when indinavir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; indinavir possibly increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; avoidance of indinavir advised by manufacturer of ● **OLAPARIB**
 - **Ergot Alkaloids**: increased risk of ergotism when indinavir given with ● **ERGOMETRINE** or ● **ERGOTAMINE**—avoid concomitant use
 - **Guanfacine**: indinavir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
 - **5HT₁-receptor Agonists**: indinavir increases plasma concentration of ● **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
 - **Lipid-regulating Drugs**: possible increased risk of myopathy when indinavir given with **ATORVASTATIN**; possible increased risk of myopathy when indinavir given with ● **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when indinavir given with ● **SIMVASTATIN** (avoid concomitant use); avoidance of indinavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
 - **Orlistat**: absorption of indinavir possibly reduced by ● **ORLISTAT**
 - **Ranolazine**: indinavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
 - **Sildenafil**: indinavir increases plasma concentration of ● **SILDENAFIL**—reduce initial dose of sildenafil
 - **Tadalafil**: indinavir possibly increases plasma concentration of **TADALAFIL**
 - **Vardenafil**: indinavir increases plasma concentration of ● **VARDENAFIL**—avoid concomitant use
- Indometacin** see NSAIDs
- Indoramin** see Alpha-blockers
- Infliximab**
- **Abatacept**: avoid concomitant use of infliximab with ● **ABATACEPT**

Infliximab (continued)

- **Anakinra**: avoid concomitant use of infliximab with ● **ANAKINRA**
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Influenza Vaccine see Vaccines**Insulin** see Antidiabetics**Interferon Alfa** see Interferons**Interferon Gamma** see Interferons**Interferons**

- **Aminophylline**: interferon alfa and peginterferon alfa inhibit metabolism of ● **AMINOPHYLLINE** (consider reducing dose of aminophylline)
- **Antivirals**: caution with peginterferon alfa advised by manufacturer of **ADEFOVIR**; increased risk of peripheral neuropathy when interferon alfa and peginterferon alfa given with ● **TELBIVUDINE**
- **Theophylline**: interferon alfa and peginterferon alfa inhibit metabolism of ● **THEOPHYLLINE** (consider reducing dose of theophylline)
- **Vaccines**: manufacturer of interferon gamma advises avoid concomitant use with **VACCINES**

Ipilimumab

- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Cytotoxics**: manufacturer of ipilimumab advises avoid concomitant use with **VEMURAFENIB**
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Ipratropium see Antimuscarinics**Irbesartan** see Angiotensin-II Receptor Antagonists**Irinotecan**

- **Antidepressants**: metabolism of irinotecan accelerated by ● **ST JOHN'S WORT** (reduced plasma concentration—avoid concomitant use)
- **Antiepileptics**: plasma concentration of irinotecan and its active metabolite reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- **Antifungals**: plasma concentration of irinotecan reduced by ● **KETOCONAZOLE** (but concentration of active metabolite of irinotecan increased)—avoid concomitant use; increased risk of toxicity when irinotecan given with ● **ITRACONAZOLE**—avoid concomitant use
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals**: metabolism of irinotecan possibly inhibited by ● **ATAZANAVIR** (increased risk of toxicity)
- **Cytotoxics**: avoidance of irinotecan advised by manufacturer of ● **PANITUMUMAB**; plasma concentration of active metabolite of irinotecan increased by ● **LAPATINIB**—consider reducing dose of irinotecan; plasma concentration of irinotecan increased by **REGORAFENIB**; plasma concentration of irinotecan possibly increased by **SORAFENIB**

Iron Salts

- **Antacids**: absorption of *oral* iron salts reduced by **ORAL MAGNESIUM SALTS** (as magnesium trisilicate)
- **Antibacterials**: *oral* iron salts reduce absorption of **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin); *oral* iron salts reduce absorption of **LEVOFLOXACIN**, **NORFLOXACIN** and **OFLOXACIN** (give at least 2 hours apart); *oral* iron salts reduce absorption of **MOXIFLOXACIN** (give at least 6 hours apart); effects of iron salts possibly inhibited by **CHLORAMPHENICOL**; *oral* iron salts reduce absorption of tetracyclines, also absorption of *oral* iron salts reduced by **TETRACYCLINES** (give at least 2 to 3 hours apart)
- **Antivirals**: *oral* iron salts reduce absorption of **DOLUTEGRAVIR**—manufacturer of dolutegravir advises give at least 2 hours before or 6 hours after *oral* iron salts
- **Bisphosphonates**: *oral* iron salts reduce absorption of **BISPHOSPHONATES**
- **Calcium Salts**: absorption of *oral* iron salts reduced by **CALCIUM SALTS**
- **Dopaminergics**: *oral* iron salts possibly reduce absorption of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**; *oral* iron salts reduce absorption of **ENTACAPONE**

Iron Salts (continued)

- ▶ **Eltrombopag**: *oral* iron salts possibly reduce absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- ▶ **Methylodopa**: *oral* iron salts antagonise hypotensive effect of **METHYLDOPA**
- ▶ **Mycophenolate**: *oral* iron salts reduce absorption of **MYCOPHENOLATE**
- ▶ **Penicillamine**: *oral* iron salts reduce absorption of **PENICILLAMINE**
- ▶ **Thyroid Hormones**: *oral* iron salts reduce absorption of **LEVOTHYROXINE** (give at least 2 hours apart)
- ▶ **Trientine**: absorption of *oral* iron salts reduced by **TRIENTINE**
- ▶ **Zinc**: *oral* iron salts reduce absorption of **ZINC**, also absorption of *oral* iron salts reduced by zinc

Isocarboxazid see MAOIs

Isoflurane see Anaesthetics, General

Isometheptene see Sympathomimetics

Isoniazid

- ▶ **Aminophylline**: isoniazid possibly increases plasma concentration of **AMINOPHYLLINE**
- ▶ **Anaesthetics, General**: increased risk of hepatotoxicity when isoniazid given with **ISOFLURANE**
- ▶ **Analgesics**: avoidance of isoniazid advised by manufacturer of **PETHIDINE**
- ▶ **Antacids**: absorption of isoniazid reduced by **ANTACIDS**
- ▶ **Antibacterials**: increased risk of hepatotoxicity when isoniazid given with ● **RIFAMPICIN**; increased risk of CNS toxicity when isoniazid given with **CYCLOSERINE**
- ▶ **Antiepileptics**: isoniazid increases plasma concentration of ● **CARBAMAZEPINE** (also possibly increased isoniazid hepatotoxicity); isoniazid inhibits metabolism of ● **ETHOSUXIMIDE** (increased plasma concentration and risk of toxicity); isoniazid possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- ▶ **Antifungals**: isoniazid possibly reduces plasma concentration of **KETOCONAZOLE**
- ▶ **Anxiolytics and Hypnotics**: isoniazid inhibits the metabolism of **DIAZEPAM**
- ▶ **Corticosteroids**: plasma concentration of isoniazid possibly reduced by **CORTICOSTEROIDS**
- ▶ **Disulfiram**: isoniazid possibly increases CNS effects of **DISULFIRAM**
- ▶ **Dopaminergics**: isoniazid possibly reduces effects of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- ▶ **Lipid-regulating Drugs**: separating administration from isoniazid by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ **Theophylline**: isoniazid possibly increases plasma concentration of **THEOPHYLLINE**
- ▶ **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Isosorbide Dinitrate see Nitrates

Isosorbide Mononitrate see Nitrates

Isotretinoin see Retinoids

Isradipine see Calcium-channel Blockers

Itraconazole see Antifungals, Triazole

Ivabradine

- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when ivabradine given with ● **AMIODARONE** or ● **DISOPYRAMIDE**
- **Antibacterials**: plasma concentration of ivabradine possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—avoid concomitant use; increased risk of ventricular arrhythmias when ivabradine given with ● **ERYTHROMYCIN**—avoid concomitant use
- ▶ **Antidepressants**: plasma concentration of ivabradine reduced by **ST JOHN'S WORT**—avoid concomitant use
- **Antifungals**: plasma concentration of ivabradine increased by ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of ivabradine increased by **FLUCONAZOLE**—reduce initial dose of ivabradine; plasma concentration of ivabradine possibly increased by ● **ITRACONAZOLE**—avoid concomitant use
- **Antimalarials**: increased risk of ventricular arrhythmias when ivabradine given with ● **MEFLOQUINE**
- **Antipsychotics**: increased risk of ventricular arrhythmias when ivabradine given with ● **PIMOZIDE**

Ivabradine (continued)

- **Antivirals**: plasma concentration of ivabradine possibly increased by ● **RITONAVIR**—avoid concomitant use
- **Beta-blockers**: increased risk of ventricular arrhythmias when ivabradine given with ● **SOTALOL**
- **Calcium-channel Blockers**: plasma concentration of ivabradine increased by ● **DILTIAZEM** and ● **VERAPAMIL**—avoid concomitant use
- ▶ **Grapefruit Juice**: plasma concentration of ivabradine increased by **GRAPEFRUIT JUICE**
- **Pentamidine Isetonate**: increased risk of ventricular arrhythmias when ivabradine given with ● **PENTAMIDINE ISETONATE**

Ivacaftor

- **Antibacterials**: plasma concentration of ivacaftor possibly increased by ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN** (see under Ivacaftor, p. 175); plasma concentration of ivacaftor possibly reduced by ● **RIFABUTIN**—manufacturer of ivacaftor advises avoid concomitant use; plasma concentration of ivacaftor reduced by ● **RIFAMPICIN**—manufacturer of ivacaftor advises avoid concomitant use
- **Antidepressants**: plasma concentration of ivacaftor possibly reduced by ● **ST JOHN'S WORT**—manufacturer of ivacaftor advises avoid concomitant use
- **Antiepileptics**: plasma concentration of ivacaftor possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of ivacaftor advises avoid concomitant use
- **Antifungals**: plasma concentration of ivacaftor increased by ● **FLUCONAZOLE** and ● **KETOCONAZOLE** (see under Ivacaftor, p. 175); plasma concentration of ivacaftor possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE** (see under Ivacaftor, p. 175)
- ▶ **Anxiolytics and Hypnotics**: ivacaftor increases plasma concentration of **MIDAZOLAM**
- ▶ **Cardiac Glycosides**: ivacaftor increases plasma concentration of **DIGOXIN**
- ▶ **Grapefruit Juice**: plasma concentration of ivacaftor possibly increased by **GRAPEFRUIT JUICE**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ **Lipid-regulating Drugs**: separating administration from ivacaftor by 12 hours advised by manufacturer of **LOMITAPIDE**

Ivermectin

- ▶ **Anthelmintics**: plasma concentration of ivermectin possibly increased by **LEVAMISOLE**
- ▶ **Anticoagulants**: ivermectin possibly enhances anticoagulant effect of **COUMARINS**

Japanese Encephalitis Vaccine see Vaccines

Kaolin

- ▶ **Analgesics**: kaolin possibly reduces absorption of **ASPIRIN**
- ▶ **Antibacterials**: kaolin possibly reduces absorption of **TETRACYCLINES**
- ▶ **Antimalarials**: kaolin reduces absorption of **CHLOROQUINE** and **HYDROXYCHLOROQUINE**
- ▶ **Antipsychotics**: kaolin possibly reduces absorption of **PHENOTHIAZINES**

Ketamine see Anaesthetics, General

Ketoconazole see Antifungals, Imidazole

Ketoprofen see NSAIDs

Ketorolac see NSAIDs

Ketotifen see Antihistamines

Labetalol see Beta-blockers

Lacidipine see Calcium-channel Blockers

Lacosamide

- **Antidepressants**: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- **Antimalarials**: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- **Antipsychotics**: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- **Orlistat**: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Lactulose

- Anticoagulants: lactulose possibly enhances anticoagulant effect of **COUMARINS**

Lamivudine

- Antibacterials: plasma concentration of lamivudine increased by **TRIMETHOPRIM** (as co-trimoxazole)—avoid concomitant use of high-dose co-trimoxazole
- Antivirals: avoidance of lamivudine advised by manufacturer of **EMTRICITABINE**
- Cytotoxics: manufacturer of lamivudine advises avoid concomitant use with **CLADRIBINE**
- Orlistat: absorption of lamivudine possibly reduced by **ORLISTAT**

Lamotrigine

- Antibacterials: plasma concentration of lamotrigine reduced by **RIFAMPICIN**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of lamotrigine often reduced by **CARBAMAZEPINE**, also plasma concentration of an active metabolite of carbamazepine sometimes raised (but evidence is conflicting); plasma concentration of lamotrigine reduced by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**; plasma concentration of lamotrigine increased by **SODIUM VALPROATE** and **VALPROIC ACID** (increased risk of toxicity—reduce lamotrigine dose)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Antivirals: plasma concentration of lamotrigine possibly reduced by **RITONAVIR**
- Oestrogens: plasma concentration of lamotrigine reduced by **OESTROGENS**—consider increasing dose of lamotrigine
- Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**
- Progestogens: plasma concentration of lamotrigine possibly increased by **DESOGESTREL**

 Lanreotide

- Antidiabetics: lanreotide possibly reduces requirements for **ANTI-DIABETICS**
- Ciclosporin: lanreotide reduces plasma concentration of **CYCLOSPORIN**

Lansoprazole see Proton Pump Inhibitors**Lanthanum**

- Antibacterials: lanthanum possibly reduces absorption of **QUINOLONES** (give at least 2 hours before or 4 hours after lanthanum)
- Antifungals: lanthanum possibly reduces absorption of **KETOCONAZOLE** (give at least 2 hours apart)
- Antimalarials: lanthanum possibly reduces absorption of **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (give at least 2 hours apart)
- Thyroid Hormones: lanthanum reduces absorption of **LEVOTHYROXINE** (give at least 2 hours apart)

Lapatinib

- Antibacterials: manufacturer of lapatinib advises avoid concomitant use with **RIFABUTIN**, **RIFAMPICIN** and **TELITHROMYCIN**
- Antidepressants: manufacturer of lapatinib advises avoid concomitant use with **ST JOHN'S WORT**
- Antidiabetics: manufacturer of lapatinib advises avoid concomitant use with **REPAGLINIDE**
- Antiepileptics: plasma concentration of lapatinib reduced by **CARBAMAZEPINE**—avoid concomitant use; manufacturer of lapatinib advises avoid concomitant use with **FOSPHENYTOIN** and **PHENYTOIN**
- Antifungals: plasma concentration of lapatinib increased by **KETOCONAZOLE**—avoid concomitant use; manufacturer of lapatinib advises avoid concomitant use with **ITRACONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE**

Lapatinib (continued)

- Antipsychotics: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis); manufacturer of lapatinib advises avoid concomitant use with **PIMOZIDE**
- Antivirals: avoidance of lapatinib advised by manufacturer of **BOCEPREVIR**; manufacturer of lapatinib advises avoid concomitant use with **RITONAVIR** and **SAQUINAVIR**
- Cytotoxics: lapatinib increases plasma concentration of **PAZOPANIB**; possible increased risk of neutropenia when lapatinib given with **DOCETAXEL**; increased risk of neutropenia when lapatinib given with **PACLITAXEL**; lapatinib increases plasma concentration of active metabolite of **IRINOTECAN**—consider reducing dose of irinotecan
- Grapefruit Juice: manufacturer of lapatinib advises avoid concomitant use with **GRAPEFRUIT JUICE**
- Lipid-regulating Drugs: separating administration from lapatinib by 12 hours advised by manufacturer of **LOMITAPIDE**
- Ulcer-healing Drugs: absorption of lapatinib possibly reduced by **HISTAMINE H₂-ANTAGONISTS** and **PROTON PUMP INHIBITORS**

Laronidase

- Antimalarials: effects of laronidase possibly inhibited by **CHLOROQUINE** and **HYDROXYCHLOROQUINE** (manufacturer of laronidase advises avoid concomitant use)

Ledipasvir

- Antacids: manufacturer of ledipasvir advises separating administration from **ANTACIDS** by 4 hours
- Anti-arrhythmics: possible increased risk of bradycardia when ledipasvir (with sofosbuvir) given with **AMIODARONE**—see under Amiodarone, in BNf
- Antibacterials: manufacturer of ledipasvir advises avoid concomitant use with **RIFABUTIN** and **RIFAMPICIN**
- Antidepressants: manufacturer of ledipasvir advises avoid concomitant use with **ST JOHN'S WORT**
- Antiepileptics: manufacturer of ledipasvir advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **OXCARBAZEPINE**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antivirals: plasma concentration of both drugs increased when ledipasvir given with **SIMEPREVIR**—manufacturer of ledipasvir advises avoid concomitant use
- Calcium Salts: manufacturer of ledipasvir advises separating administration from **CALCIUM SALTS** by 4 hours
- Lipid-regulating Drugs: possible increased risk of myopathy when ledipasvir given with **ATORVASTATIN**, **FLUVASTATIN** and **SIMVASTATIN**—manufacturer of ledipasvir advises consider reducing dose of atorvastatin, fluvastatin and simvastatin; manufacturer of ledipasvir advises avoid concomitant use with **ROSUVASTATIN**
- Ulcer-healing Drugs: plasma concentration of ledipasvir reduced by **FAMOTIDINE** and **OMEPRAZOLE**; manufacturer of ledipasvir advises do not take **PROTON PUMP INHIBITORS** before ledipasvir

Leflunomide

- NOTE** Increased risk of toxicity with other haematotoxic and hepatotoxic drugs
- Antibacterials: plasma concentration of active metabolite of leflunomide possibly increased by **RIFAMPICIN**
- Anticoagulants: leflunomide possibly enhances anticoagulant effect of **WARFARIN**
- Antidiabetics: leflunomide possibly enhances hypoglycaemic effect of **TOLBUTAMIDE**
- Antiepileptics: leflunomide possibly increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Cytotoxics: risk of toxicity when leflunomide given with **METHOTREXATE**
- Lipid-regulating Drugs: the effect of leflunomide is significantly decreased by **COLESTYRAMINE** (enhanced elimination)—avoid unless drug elimination desired
- Vaccines: risk of generalised infections when leflunomide given with live **VACCINES**—avoid concomitant use

Lenalidomide

- Antibacterials: plasma concentration of lenalidomide possibly increased by **CLARITHROMYCIN** (increased risk of toxicity)
- Antifungals: plasma concentration of lenalidomide possibly increased by **ITRACONAZOLE** and **KETOCONAZOLE** (increased risk of toxicity)

Lenalidomide (continued)

- Calcium-channel Blockers: plasma concentration of lenalidomide possibly increased by ● **VERAPAMIL** (increased risk of toxicity)
- ▶ Cardiac Glycosides: lenalidomide possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: plasma concentration of lenalidomide possibly increased by ● **CICLOSPORIN** (increased risk of toxicity)

Lercanidipine see Calcium-channel Blockers

Leukotriene Receptor Antagonists

- ▶ Aminophylline: zafirlukast possibly increases plasma concentration of **AMINOPHYLLINE**, also plasma concentration of zafirlukast reduced
- ▶ Analgesics: plasma concentration of zafirlukast increased by **ASPIRIN**
- ▶ Antibacterials: plasma concentration of zafirlukast reduced by **ERYTHROMYCIN**
- ▶ Anticoagulants: zafirlukast enhances anticoagulant effect of **WARFARIN**
- ▶ Antiepileptics: plasma concentration of montelukast reduced by **PHENOBARBITAL** and **PRIMIDONE**
- ▶ Antifungals: plasma concentration of zafirlukast increased by **FLUCONAZOLE**
- ▶ Lipid-regulating Drugs: plasma concentration of montelukast increased by **GEMFIBROZIL**
- ▶ Theophylline: zafirlukast possibly increases plasma concentration of **THEOPHYLLINE**, also plasma concentration of zafirlukast reduced

Levamisole

- ▶ Alcohol: possibility of disulfiram-like reaction when levamisole given with **ALCOHOL**
- ▶ Anthelmintics: plasma concentration of both drugs possibly reduced when levamisole given with **ALBENDAZOLE**; levamisole possibly increases plasma concentration of **IVERMECTIN**
- Anticoagulants: levamisole possibly enhances anticoagulant effect of ● **WARFARIN**
- ▶ Antiepileptics: levamisole possibly increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**

Levetiracetam

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: levetiracetam possibly increases risk of **CARBAMAZEPINE** toxicity
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Cytotoxics: levetiracetam possibly increases plasma concentration of ● **METHOTREXATE**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Levobunolol see Beta-blockers

Levobupivacaine

- ▶ Anti-arrhythmics: increased myocardial depression when levobupivacaine given with **ANTI-ARRHYTHMICS**

Levocarnitine

- ▶ Anticoagulants: levocarnitine possibly enhances anticoagulant effect of **COUMARINS**

Levocetirizine see Antihistamines

Levodopa

- ▶ ACE Inhibitors: enhanced hypotensive effect when levodopa given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when levodopa given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: enhanced hypotensive effect when levodopa given with **ALPHA-BLOCKERS**
- Anaesthetics, General: increased risk of arrhythmias when levodopa given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when levodopa given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**

Levodopa (continued)

- ▶ Antibacterials: effects of levodopa possibly reduced by **ISONIAZID**
 - Antidepressants: risk of hypertensive crisis when levodopa given with ● **MAOIS**; avoid levodopa for at least 2 weeks after stopping MAOIS; increased risk of side-effects when levodopa given with **MOCLOBEMIDE**
 - ▶ Antiepileptics: effects of levodopa possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**
 - ▶ Antimuscarinics: absorption of levodopa possibly reduced by **ANTIMUSCARINICS**
 - ▶ Antipsychotics: effects of levodopa antagonised by **ANTIPSYCHOTICS**; avoidance of levodopa advised by manufacturer of **AMISULPRIDE** (antagonism of effect)
 - ▶ Anxiolytics and Hypnotics: effects of levodopa possibly antagonised by **BENZODIAZEPINES**
 - ▶ Beta-blockers: enhanced hypotensive effect when levodopa given with **BETA-BLOCKERS**
 - ▶ Bupropion: increased risk of side-effects when levodopa given with **BUPROPION**
 - ▶ Calcium-channel Blockers: enhanced hypotensive effect when levodopa given with **CALCIUM-CHANNEL BLOCKERS**
 - ▶ Clonidine: enhanced hypotensive effect when levodopa given with **CLONIDINE**
 - ▶ Diazoxide: enhanced hypotensive effect when levodopa given with **DIAZOXIDE**
 - ▶ Diuretics: enhanced hypotensive effect when levodopa given with **DIURETICS**
 - ▶ Dopaminergics: enhanced effects and increased toxicity of levodopa when given with **SELEGILINE** (reduce dose of levodopa)
 - ▶ Iron Salts: absorption of levodopa possibly reduced by **oral IRON SALTS**
 - ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
 - ▶ Methyldopa: enhanced hypotensive effect when levodopa given with **METHYLDOPA**; antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
 - ▶ Moxonidine: enhanced hypotensive effect when levodopa given with **MOXONIDINE**
 - ▶ Muscle Relaxants: possible agitation, confusion and hallucinations when levodopa given with **BACLOFEN**
 - ▶ Nitrates: enhanced hypotensive effect when levodopa given with **NITRATES**
 - ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when levodopa given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**
 - ▶ Vitamins: effects of levodopa reduced by **PYRIDOXINE** when given without dopa-decarboxylase inhibitor
- Levofloxacin** see Quinolones
- Levofolinic Acid** see Folate
- Levomepromazine** see Antipsychotics
- Levonorgestrel** see Progestogens
- Levosimendan**
- Nitrates: possible severe postural hypotension when levosimendan given with ● **ISOSORBIDE MONONITRATE**
- Levothyroxine** see Thyroid Hormones
- Lidocaine**
- NOTE** Interactions less likely when lidocaine used topically
- ▶ Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAIN**, **LEVOBUPIVACAIN**, **PRILOCAINE** or **ROPIVACAIN**
 - Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**
 - Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ● **ANTIPSYCHOTICS** that prolong the QT interval
 - Antivirals: plasma concentration of lidocaine possibly increased by ● **ATAZANAVIR** and **LOPINAVIR**; plasma concentration of lidocaine possibly increased by **DARUNAVIR** and ● **FOSAMPRENAVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when lidocaine given with ● **SAQUINAVIR**—avoid concomitant use; caution with **intravenous** lidocaine advised by manufacturer of **TELAPREVIR**
 - Beta-blockers: increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**; possible increased

Lidocaine

- **Beta-blockers** (continued)
risk of lidocaine toxicity when given with **NADOLOL**; increased risk of lidocaine toxicity when given with **PROPRANOLOL**
- **Diuretics**: action of lidocaine antagonised by hypokalaemia caused by **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- **Muscle Relaxants**: neuromuscular blockade enhanced and prolonged when lidocaine given with **SUXAMETHONIUM**
- **Ulcer-healing Drugs**: plasma concentration of lidocaine increased by **CIMETIDINE** (increased risk of toxicity)

Linagliptin see Antidiabetics

Linezolid see MAOIs

Liothyronine see Thyroid Hormones

Lipegfilgrastim

- **Cytotoxics**: neutropenia possibly exacerbated when lipegfilgrastim given with **CAPECITABINE**, **FLUOROURACIL** or **TEGAFUR**

Lipid-regulating Drugs see Colesevelam, Colestipol, Colestyramine, Ezetimibe, Fibrates, Lomitapide, Nicotinic Acid, and Statins

Liraglutide see Antidiabetics

Lisdexamfetamine see Sympathomimetics

Lisinopril see ACE Inhibitors

Lithium

- **ACE Inhibitors**: excretion of lithium reduced by **ACE INHIBITORS** (increased plasma concentration)
- **Aminophylline**: excretion of lithium increased by **AMINOPHYLLINE** (reduced plasma concentration)
- **Analgesics**: excretion of lithium reduced by **NSAIDS** (increased risk of toxicity); excretion of lithium reduced by **KETOROLAC** (increased risk of toxicity)—avoid concomitant use
- **Angiotensin-II Receptor Antagonists**: excretion of lithium reduced by **ANGIOTENSIN-II RECEPTOR ANTAGONISTS** (increased plasma concentration)
- **Antacids**: excretion of lithium increased by **SODIUM BICARBONATE** (reduced plasma concentration)
- **Anti-arrhythmics**: avoidance of lithium advised by manufacturer of **AMIODARONE** (risk of ventricular arrhythmias)
- **Antibacterials**: increased risk of lithium toxicity when given with **METRONIDAZOLE**
- **Antidepressants**: possible increased serotonergic effects when lithium given with **VENLAFAXINE**; increased risk of CNS effects when lithium given with **SSRIS** (lithium toxicity reported); risk of toxicity when lithium given with **TRICYCLICS**
- **Antiepileptics**: neurotoxicity may occur when lithium given with **CARBAMAZEPINE**, **FOSPHENYTOIN** or **PHENYTOIN** without increased plasma concentration of lithium; plasma concentration of lithium possibly affected by **TOPIRAMATE**
- **Antipsychotics**: increased risk of extrapyramidal side-effects and possibly neurotoxicity when lithium given with **CLOZAPINE**, **FLUPENTIXOL**, **HALOPERIDOL**, **PHENOTHIAZINES**, **RISPERIDONE** or **ZUCLOPENTHIXOL**; possible risk of toxicity when lithium given with **OLANZAPINE**; lithium possibly increases extrapyramidal side-effects of **QUETIAPINE**; increased risk of extrapyramidal side-effects when lithium given with **SULPRIDE**
- **Anxiolytics and Hypnotics**: increased risk of neurotoxicity when lithium given with **CLONAZEPAM**
- **Calcium-channel Blockers**: neurotoxicity may occur when lithium given with **DILTIAZEM** or **VERAPAMIL** without increased plasma concentration of lithium
- **Cytotoxics**: increased risk of ventricular arrhythmias when lithium given with **ARSENIC TRIOXIDE**
- **Dopamine**: possible increased risk of serotonergic effects when lithium given with **DAPOXETINE** (manufacturer of dapoxetine advises lithium should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping lithium)
- **Diuretics**: excretion of lithium increased by **ACETAZOLAMIDE**; excretion of lithium reduced by **LOOP DIURETICS** and **THIAZIDES AND RELATED DIURETICS** (increased plasma concentration and risk of toxicity)—loop diuretics safer than thiazides; excretion of lithium reduced by

Lithium

- **Diuretics** (continued)
• **POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS** (increased plasma concentration and risk of toxicity)
• **5HT₂-receptor Agonists**: possible risk of toxicity when lithium given with **SUMATRIPTAN**
 - **Methylidopa**: neurotoxicity may occur when lithium given with **METHYLDOPA** without increased plasma concentration of lithium
 - **Muscle Relaxants**: lithium enhances effects of **MUSCLE RELAXANTS**; hyperkinesia caused by lithium possibly aggravated by **BACLOFEN**
 - **Parasympathomimetics**: lithium antagonises effects of **NEOSTIGMINE**
 - **Theophylline**: excretion of lithium increased by **THEOPHYLLINE** (reduced plasma concentration)
- Lixisenatide** see Antidiabetics
- Lofepamine** see Antidepressants, Tricyclic
- Lofexidine**
- **Alcohol**: increased sedative effect when lofexidine given with **ALCOHOL**
 - **Anxiolytics and Hypnotics**: increased sedative effect when lofexidine given with **ANXIOLYTICS AND HYPNOTICS**

Lomitapide

- **Alcohol**: manufacturer of lomitapide advises avoid concomitant use with **ALCOHOL**
- **Anti-arrhythmics**: manufacturer of lomitapide advises separating administration from **AMIODARONE** by 12 hours; manufacturer of lomitapide advises avoid concomitant use with **DRONEDARONE** (plasma concentration of lomitapide possibly increased)
- **Antibacterials**: manufacturer of lomitapide advises separating administration from **AZITHROMYCIN** and **ISONIAZID** by 12 hours; manufacturer of lomitapide advises avoid concomitant use with **CLARITHROMYCIN**, **ERYTHROMYCIN** and **TELITHROMYCIN** (plasma concentration of lomitapide possibly increased)
- **Anticoagulants**: lomitapide possibly enhances anticoagulant effect of **WARFARIN**
- **Antidepressants**: manufacturer of lomitapide advises separating administration from **FLUOXETINE** and **FLUVOXAMINE** by 12 hours
- **Antidiabetics**: manufacturer of lomitapide advises separating administration from **LINAGLIPTIN** by 12 hours
- **Antifungals**: plasma concentration of lomitapide increased by **KETOCONAZOLE**—avoid concomitant use; manufacturer of lomitapide advises avoid concomitant use with **TRIAZOLES** (plasma concentration of lomitapide possibly increased)
- **Antivirals**: manufacturer of lomitapide advises avoid concomitant use with **DARUNAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR**, **RITONAVIR**, **SAQUINAVIR**, **TELAPREVIR** and **TIPRANAVIR** (plasma concentration of lomitapide possibly increased)
- **Anxiolytics and Hypnotics**: manufacturer of lomitapide advises separating administration from **ALPRAZOLAM** by 12 hours
- **Calcium-channel Blockers**: manufacturer of lomitapide advises separating administration from **AMLODIPINE** and **LACIDIPINE** by 12 hours; manufacturer of lomitapide advises avoid concomitant use with **DILTIAZEM** and **VERAPAMIL** (plasma concentration of lomitapide possibly increased)
- **Ciclosporin**: manufacturer of lomitapide advises separating administration from **CYCLOSPORIN** by 12 hours
- **Clofazone**: manufacturer of lomitapide advises separating administration from **CLOSTAZOL** by 12 hours
- **Cytotoxics**: manufacturer of lomitapide advises separating administration from **LAPATINIB**, **NILOTINIB** and **PAZOPANIB** by 12 hours
- **Fosaprepitant**: manufacturer of lomitapide advises separating administration from **FOSAPREPITANT** by 12 hours
- **Grapefruit Juice**: manufacturer of lomitapide advises avoid concomitant use with **GRAPEFRUIT JUICE**
- **Hormone Antagonists**: manufacturer of lomitapide advises separating administration from **BICALUTAMIDE** by 12 hours
- **Ivacaftor**: manufacturer of lomitapide advises separating administration from **IVACAFTOR** by 12 hours
- **Lipid-regulating Drugs**: lomitapide increases plasma concentration of **ATORVASTATIN**—manufacturer of lomitapide

Lomitipide● **Lipid-regulating Drugs** (continued)

- advises reduce dose of atorvastatin by half or separate administration by 12 hours; lomitipide increases plasma concentration of ● **SIMVASTATIN** (see under Simvastatin, in BNF); absorption of lomitipide possibly reduced by ● **BILE ACID SEQUESTRANTS** (give at least 4 hours apart)
- ▶ Oestrogens: manufacturer of lomitipide advises separating administration from ● **OSTROGENS** by 12 hours
 - ▶ Ranolazine: manufacturer of lomitipide advises separating administration from ● **RANOLAZINE** by 12 hours
 - ▶ Tacrolimus: manufacturer of lomitipide advises separating administration from ● **TACROLIMUS** by 12 hours
 - ▶ Ticagrelor: manufacturer of lomitipide advises separating administration from ● **TICAGRELOR** by 12 hours
 - ▶ Tolvaptan: manufacturer of lomitipide advises separating administration from ● **TOLVAPTAN** by 12 hours
 - ▶ Ulcer-healing Drugs: manufacturer of lomitipide advises separating administration from ● **CIMETIDINE** and ● **RANITIDINE** by 12 hours

Lomustine

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Ulcer-healing Drugs: myelosuppressive effects of lomustine possibly enhanced by ● **CIMETIDINE**

Loperamide

- ▶ Desmopressin: loperamide increases plasma concentration of oral ● **DESMOPRESSIN**

Lopinavir

- NOTE** In combination with ritonavir as **Kaletra®** (ritonavir is present to inhibit lopinavir metabolism and increase plasma-lopinavir concentration)—see also Ritonavir
- Anti-arrhythmics: lopinavir possibly increases plasma concentration of ● **FLECAINIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); lopinavir possibly increases plasma concentration of ● **LIDOCAINE**
 - Antibacterials: plasma concentration of lopinavir reduced by ● **RIFAMPICIN**—avoid concomitant use; lopinavir increases plasma concentration of ● **DELMANID**; avoidance of concomitant lopinavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
 - ▶ Anticoagulants: avoidance of lopinavir advised by manufacturer of ● **APIXABAN**; manufacturers advise avoid concomitant use of lopinavir with ● **RIVAROXABAN**
 - Antidepressants: plasma concentration of lopinavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
 - Antiepileptics: plasma concentration of lopinavir possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
 - ▶ Antihistamines: lopinavir possibly increases plasma concentration of ● **CHLORPHENAMINE**
 - ▶ Antimalarials: caution with lopinavir advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**
 - ▶ Antimuscarinics: avoidance of lopinavir advised by manufacturer of ● **DARIFENACIN** and ● **TOLTERODINE**
 - Antipsychotics: lopinavir possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); lopinavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
 - Antivirals: manufacturers advise avoid concomitant use of lopinavir with ● **BOCEPREVIR** and ● **TELAPREVIR**; lopinavir reduces plasma concentration of ● **DARUNAVIR**—avoid concomitant use; plasma concentration of lopinavir reduced by ● **EFAVIRENZ**—consider increasing dose of lopinavir; lopinavir boosted with ritonavir increases plasma concentration of ● **ELVITEGRAVIR** (reduce dose of elvitegravir); lopinavir reduces plasma concentration of ● **FOSAMPRENAVIR**, effect on lopinavir plasma concentration not predictable—avoid concomitant use; lopinavir increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); plasma concentration of lopinavir possibly reduced by ● **NEVIRAPINE**—consider increasing dose of lopinavir; lopinavir increases plasma concentration of ● **PARITAPREVIR**—manufacturer of paritaprevir advises avoid

Lopinavir● **Antivirals** (continued)

- concomitant use; increased risk of ventricular arrhythmias when lopinavir given with ● **SAQUINAVIR**—avoid concomitant use; lopinavir increases plasma concentration of ● **TENOFOVIR**; plasma concentration of lopinavir reduced by ● **TIPRANAVIR**
 - Bosentan: lopinavir increases plasma concentration of ● **BOSENTAN** (consider reducing dose of bosentan)
 - ▶ Corticosteroids: plasma concentration of lopinavir possibly reduced by ● **DEXAMETHASONE**
 - Cytotoxics: manufacturer of ruxolitinib advises dose reduction when lopinavir given with ● **RUXOLITINIB**—consult ruxolitinib product literature
 - ▶ Eltrombopag: lopinavir possibly reduces plasma concentration of ● **ELTROMBOPAG**
 - Lipid-regulating Drugs: possible increased risk of myopathy when lopinavir given with ● **ATORVASTATIN**; lopinavir increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); possible increased risk of myopathy when lopinavir given with ● **SIMVASTATIN**—avoid concomitant use; avoidance of lopinavir advised by manufacturer of ● **LOMITIPIDE** (plasma concentration of lomitipide possibly increased)
 - Orlistat: absorption of lopinavir possibly reduced by ● **ORLISTAT**
 - Ranolazine: lopinavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
 - ▶ Sirolimus: lopinavir possibly increases plasma concentration of ● **SIROLIMUS**
 - ▶ Sympathomimetics, Beta₂: manufacturer of lopinavir advises avoid concomitant use with ● **SALMETEROL**
- Loprazolam** see Anxiolytics and Hypnotics
- Loratadine** see Antihistamines
- Lorazepam** see Anxiolytics and Hypnotics
- Lormetazepam** see Anxiolytics and Hypnotics
- Losartan** see Angiotensin-II Receptor Antagonists
- Lurasidone** see Antipsychotics
- Lymeridine** see Tetracyclines
- Macitentan**
- Antibacterials: plasma concentration of macitentan reduced by ● **RIFAMPICIN**—avoid concomitant use
 - ▶ Antidepressants: manufacturer of macitentan advises avoid concomitant use with ● **ST JOHN'S WORT**
 - ▶ Antiepileptics: manufacturer of macitentan advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**
 - ▶ Antifungals: plasma concentration of macitentan increased by ● **KETOCONAZOLE**

Macrogols

NOTE Some manufacturers suggest taking other oral medication 1 hour before or 1 hour after macrogols to reduce possible interference with absorption

Macrolides

NOTE See also Telithromycin

- NOTE** Interactions do not apply to small amounts of erythromycin used topically
- Aminophylline: clarithromycin possibly increases plasma concentration of ● **AMINOPHYLLINE**; erythromycin increases plasma concentration of ● **AMINOPHYLLINE** (also aminophylline may reduce absorption of oral erythromycin)
 - ▶ Analgesics: erythromycin increases plasma concentration of ● **ALFENTANIL**; clarithromycin possibly increases plasma concentration of ● **FENTANYL**
 - ▶ Antacids: absorption of azithromycin reduced by ● **ANTACIDS** (give at least 2 hours before or 1 hour after antacids)
 - Anti-arrhythmics: increased risk of ventricular arrhythmias when parenteral erythromycin given with ● **AMIODARONE**—avoid concomitant use; erythromycin increases plasma concentration of ● **DISOPYRAMIDE** (increased risk of toxicity); clarithromycin possibly increases plasma concentration of ● **DISOPYRAMIDE** (increased risk of ventricular arrhythmias); azithromycin possibly increases plasma concentration of ● **DISOPYRAMIDE** (increased risk of toxicity); avoidance of clarithromycin advised by manufacturer of ● **DRONEDARONE** (risk of ventricular arrhythmias); erythromycin increases

Macrolides

- **Anti-arrhythmics** (continued)
 - plasma concentration of ● **DRONEDARONE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- **Antibacterials**: increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **MOXIFLOXACIN**—avoid concomitant use; increased risk of side-effects including neutropenia when azithromycin given with ● **RIFABUTIN**; clarithromycin increases plasma concentration of ● **RIFABUTIN** (increased risk of toxicity—reduce rifabutin dose); erythromycin possibly increases plasma concentration of ● **RIFABUTIN** (increased risk of toxicity—reduce rifabutin dose); clarithromycin and erythromycin possibly increase plasma concentration of ● **BEDAQUILINE**—avoid concomitant use if clarithromycin and erythromycin given for more than 14 days; possible increased risk of ventricular arrhythmias when clarithromycin and erythromycin given with ● **DELAMANID**; avoidance of clarithromycin and erythromycin advised by manufacturer of ● **FIDAXOMICIN**; plasma concentration of clarithromycin reduced by ● **RIFAMYCIN**
- **Anticoagulants**: avoidance of clarithromycin advised by manufacturer of ● **APIXABAN**; clarithromycin and erythromycin enhance anticoagulant effect of ● **COUMARINS**; azithromycin possibly enhances anticoagulant effect of ● **COUMARINS**; possible increased risk of bleeding when clarithromycin given with ● **DABIGATRAN**; erythromycin increases plasma concentration of ● **EDOXABAN** (reduce dose of edoxaban—see under Edoxaban, in BNF)
- **Antidepressants**: avoidance of macrolides advised by manufacturer of ● **REBOXETINE**; avoidance of *intravenous* erythromycin advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); avoidance of erythromycin advised by manufacturer of ● **VENLAFAXINE** (risk of ventricular arrhythmias); clarithromycin possibly increases plasma concentration of ● **TRAZODONE**
- ▶ **Antidiabetics**: clarithromycin enhances effects of ● **REPAGLINIDE**
- **Antiepileptics**: erythromycin increases plasma concentration of ● **CARBAMAZEPINE**; clarithromycin increases plasma concentration of ● **CARBAMAZEPINE** (consider reducing dose of carbamazepine); clarithromycin inhibits metabolism of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (increased plasma concentration); erythromycin possibly inhibits metabolism of ● **SODIUM VALPROATE** and ● **VALPROIC ACID** (increased plasma concentration)
- **Antifungals**: avoidance of concomitant clarithromycin in severe renal impairment advised by manufacturer of ● **KETOCONAZOLE**; avoidance of erythromycin advised by manufacturer of ● **FLUCONAZOLE**; clarithromycin increases plasma concentration of ● **ITRACONAZOLE**
- **Antihistamines**: manufacturer of loratadine advises erythromycin possibly increases plasma concentration of ● **LORATADINE**; macrolides possibly inhibit metabolism of ● **MIZOLASTINE** (avoid concomitant use); erythromycin inhibits metabolism of ● **MIZOLASTINE**—avoid concomitant use
- **Antimalarials**: avoidance of macrolides advised by manufacturer of ● **ARTEMETER WITH LUMEFANTRINE**; avoidance of macrolides advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- ▶ **Antimuscarinics**: erythromycin possibly increases plasma concentration of ● **DARIFENACIN**; manufacturer of fesoterodine advises dose reduction when clarithromycin given with ● **FESOTERODINE**—consult fesoterodine product literature; avoidance of clarithromycin and erythromycin advised by manufacturer of ● **TOLTERODINE**
- **Antipsychotics**: avoidance of macrolides advised by manufacturer of ● **DROPERIDOL** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **ZUCLOPENTHIXOL**—avoid concomitant use; increased risk of ventricular arrhythmias when erythromycin given with ● **AMISULPRIDE**—avoid concomitant use; erythromycin possibly increases plasma concentration of ● **CLOZAPINE** (possible increased risk of convulsions); clarithromycin possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; erythromycin possibly increases the plasma concentration of ● **LURASIDONE** (see under Lurasidone, in BNF); increased risk of

Macrolides

- **Antipsychotics** (continued)
 - ventricular arrhythmias when clarithromycin given with ● **PIMOZIDE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when erythromycin given with ● **PIMOZIDE**—avoid concomitant use; clarithromycin possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use; erythromycin increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use; increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **SULPIRIDE**
- **Antivirals**: plasma concentration of both drugs increased when clarithromycin given with ● **ATAZANAVIR**; clarithromycin possibly increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); avoidance of clarithromycin advised by manufacturer of ● **DASABUVIR** and ● **PARITAPREVIR**; plasma concentration of clarithromycin reduced by ● **EFAVIRENZ**, also plasma concentration of active metabolite of clarithromycin increased; plasma concentration of clarithromycin reduced by ● **ETRAVIRINE** and ● **NEVIRAPINE** (but concentration of an active metabolite increased), also plasma concentration of etravirine and nevirapine increased; clarithromycin possibly increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); avoidance of clarithromycin and erythromycin advised by manufacturer of ● **RILPIVIRINE** (plasma concentration of rilpivirine possibly increased); plasma concentration of clarithromycin increased by ● **RITONAVIR** (reduce dose of clarithromycin in renal impairment); plasma concentration of azithromycin and erythromycin possibly increased by ● **RITONAVIR**; increased risk of ventricular arrhythmias when erythromycin given with ● **SAQUINAVIR**—avoid concomitant use; plasma concentration of both drugs possibly increased when clarithromycin given with ● **SAQUINAVIR** and ● **TELAPREVIR** (increased risk of ventricular arrhythmias); plasma concentration of both drugs increased when erythromycin given with ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; clarithromycin possibly increases plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs possibly increased when erythromycin given with ● **TELAPREVIR** (increased risk of ventricular arrhythmias); plasma concentration of clarithromycin increased by ● **TIPRANAVIR** (reduce dose of clarithromycin in renal impairment), also clarithromycin increases plasma concentration of tipranavir; clarithromycin tablets reduce absorption of ● **ZIDOVIDUINE** (give at least 2 hours apart)
- **Anxiolytics and Hypnotics**: clarithromycin and erythromycin inhibit metabolism of ● **MIDAZOLAM** (increased plasma concentration with increased sedation); erythromycin increases plasma concentration of ● **BUSPIRONE** (reduce dose of buspirone); erythromycin inhibits the metabolism of ● **ZOPICLONE**
- ▶ **Aprepitant**: clarithromycin possibly increases plasma concentration of ● **APREPITANT**
- **Atomoxetine**: increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **ATOMOXETINE**
- **Avanafil**: clarithromycin possibly increases plasma concentration of ● **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use; erythromycin increases plasma concentration of ● **AVANAFIL**—see under Avanafil, in BNF
- **Calcium-channel Blockers**: clarithromycin and erythromycin possibly inhibit metabolism of ● **CALCIUM-CHANNEL BLOCKERS** (increased risk of side-effects); avoidance of erythromycin advised by manufacturer of ● **LERCANIDIPINE**
- ▶ **Cardiac Glycosides**: macrolides increase plasma concentration of ● **DIGOXIN** (increased risk of toxicity)
- **Ciclosporin**: macrolides possibly inhibit metabolism of ● **CICLOSPORIN** (increased plasma concentration); azithromycin increases plasma concentration of ● **CICLOSPORIN**; clarithromycin and erythromycin inhibit metabolism of ● **CICLOSPORIN** (increased plasma concentration)
- **Cilostazol**: clarithromycin possibly increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, in BNF);

Macrolides

- **Clostrazol** (continued)
 - erythromycin increases plasma concentration of ● **CLOSTAZOL** (see under Clostrazol, in BNF)
- **Clopidogrel**: erythromycin possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- **Colchicine**: azithromycin, clarithromycin and erythromycin possibly increase risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- ▶ **Corticosteroids**: erythromycin possibly inhibits metabolism of **CORTICOSTEROIDS**; erythromycin inhibits the metabolism of **METHYLPREDNISOLONE**; clarithromycin possibly increases plasma concentration of **METHYLPREDNISOLONE**
- **Cytotoxics**: erythromycin possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of erythromycin by 6 to 12 hours; clarithromycin and erythromycin possibly increase plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); clarithromycin and erythromycin possibly increase the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; clarithromycin and erythromycin possibly increase plasma concentration of **CABOZANTINIB**; clarithromycin possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; avoidance of clarithromycin and erythromycin advised by manufacturer of **DASATINIB** (plasma concentration of dasatinib possibly increased); erythromycin increases plasma concentration of ● **EVEROLIMUS** (consider reducing the dose of everolimus—consult everolimus product literature); clarithromycin and erythromycin possibly increase the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); avoidance of clarithromycin advised by manufacturer of ● **NILOTINIB** and ● **OLAPARIB**; clarithromycin possibly increases plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); clarithromycin possibly increases plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF); manufacturer of ruxolitinib advises dose reduction when clarithromycin given with ● **RUXOLITINIB**—consult ruxolitinib product literature; possible increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **VANDETANIB**—avoid concomitant use; clarithromycin possibly increases the plasma concentration of ● **CABAZITAXEL**—manufacturer of cabazitaxel advises avoid or consider reducing dose of cabazitaxel; clarithromycin possibly increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; increased risk of ventricular arrhythmias when erythromycin given with ● **ARSENIC TRIOXIDE**; erythromycin increases toxicity of ● **VINBLASTINE**—avoid concomitant use; possible increased risk of neutropenia when clarithromycin given with ● **VINORELBINE**
- ▶ **Dapoxetine**: manufacturer of dapoxetine advises dose reduction when clarithromycin and erythromycin given with **DAPOXETINE** (see under Dapoxetine, in BNF)
- **Diuretics**: clarithromycin increases plasma concentration of ● **EPLERENONE**—avoid concomitant use; erythromycin increases plasma concentration of **EPLERENONE** (reduce dose of eplerenone)
- **Domperidone**: possible increased risk of ventricular arrhythmias when clarithromycin given with ● **DOMPERIDONE**—avoid concomitant use; erythromycin increases plasma concentration of ● **DOMPERIDONE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- ▶ **Dopaminergics**: macrolides possibly increase plasma concentration of **BROMOCRIPTINE** and **CABERGOLINE** (increased risk of toxicity); erythromycin increases plasma concentration of **BROMOCRIPTINE** and **CABERGOLINE** (increased risk of toxicity)
- **Ergot Alkaloids**: increased risk of ergotism when clarithromycin or erythromycin given with ● **ERGOT ALKALOIDS**—avoid concomitant use
- ▶ **Fosaprepitant**: clarithromycin possibly increases plasma concentration of **FOSAPREPITANT**

Macrolides (continued)

- **Guanfacine**: clarithromycin and erythromycin possibly increase the plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- **5HT₂-receptor Agonists**: clarithromycin and erythromycin increase plasma concentration of ● **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
- **Ivabradine**: clarithromycin possibly increases plasma concentration of ● **IVABRADINE**—avoid concomitant use; increased risk of ventricular arrhythmias when erythromycin given with ● **IVABRADINE**—avoid concomitant use
- **Ivacaftor**: clarithromycin and erythromycin possibly increase plasma concentration of ● **IVACAFITOR** (see under Ivacaftor, p. 175)
- **Lenalidomide**: clarithromycin possibly increases plasma concentration of ● **LENALIDOMIDE** (increased risk of toxicity)
- ▶ **Leukotriene Receptor Antagonists**: erythromycin reduces plasma concentration of **ZAFIRLUKAST**
- **Lipid-regulating Drugs**: possible increased risk of myopathy when azithromycin or erythromycin given with ● **ATORVASTATIN**; clarithromycin increases plasma concentration of ● **ATORVASTATIN** and **PRAVASTATIN**; erythromycin increases plasma concentration of **PRAVASTATIN**; erythromycin reduces plasma concentration of **ROSUVASTATIN**; possible increased risk of myopathy when azithromycin given with ● **SIMVASTATIN**; increased risk of myopathy when clarithromycin or erythromycin given with ● **SIMVASTATIN** (avoid concomitant use); avoidance of clarithromycin and erythromycin advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased); separating administration from azithromycin by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ **Mirabegron**: when given with clarithromycin avoid or reduce dose of **MIRABEGRON** in hepatic or renal impairment—see Mirabegron, in BNF
- **Netupitant**: plasma concentration of erythromycin increased by **NETUPITANT**
- **Oestrogens**: erythromycin increases plasma concentration of **ESTRADIOL**
- ▶ **Parasympathomimetics**: erythromycin increases plasma concentration of **GALANTAMINE**
- **Pentamidine Isetionate**: increased risk of ventricular arrhythmias when *parenteral* erythromycin given with ● **PENTAMIDINE ISETIONATE**
- ▶ **Progestogens**: erythromycin increases plasma concentration of **DENOGEST**
- **Ranolazine**: clarithromycin possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- **Sildenafil**: clarithromycin increases the plasma concentration of ● **SILDENAFIL**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension; erythromycin increases plasma concentration of **SILDENAFIL**—reduce initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to twice daily for pulmonary hypertension
- **Sirolimus**: clarithromycin increases plasma concentration of ● **SIROLIMUS**—avoid concomitant use; plasma concentration of both drugs increased when erythromycin given with ● **SIROLIMUS**
- **Tacrolimus**: clarithromycin and erythromycin increase plasma concentration of ● **TACROLIMUS**
- ▶ **Tadalafil**: clarithromycin and erythromycin possibly increase plasma concentration of **TADALAFIL**
- **Theophylline**: clarithromycin possibly increases plasma concentration of **THEOPHYLLINE**; erythromycin increases plasma concentration of ● **THEOPHYLLINE** (also theophylline may reduce absorption of *oral* erythromycin)
- **Ticagrelor**: clarithromycin possibly increases plasma concentration of ● **TICAGRELOR**—manufacturer of ticagrelor advises avoid concomitant use; erythromycin possibly increases plasma concentration of **TICAGRELOR**
- ▶ **Ulcer-healing Drugs**: plasma concentration of erythromycin increased by **CIMETIDINE** (increased risk of toxicity, including deafness); plasma concentration of both drugs increased when clarithromycin given with **OMEPRAZOLE**

Macrolides (continued)

- ▶ **Ulipristal**: avoidance of clarithromycin advised by manufacturer of **low-dose ULIPRISTAL**; erythromycin increases plasma concentration of **low-dose ULIPRISTAL**—manufacturer of **low-dose ulipristal** advises avoid concomitant use
- ▶ **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC
- ▶ **Vardenafil**: clarithromycin possibly increases plasma concentration of **VARDENAFIL** (consider reducing initial dose of vardenafil); erythromycin increases plasma concentration of **VARDENAFIL** (reduce dose of vardenafil)

Magnesium (parenteral)

- **Calcium-channel Blockers**: profound hypotension reported with concomitant use of parenteral magnesium and ● **NIFEDIPINE** in pre-eclampsia
- ▶ **Muscle Relaxants**: parenteral magnesium enhances effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**

Magnesium Salts (oral) see Antacids**Mannitol**

- ▶ **Antibacterials**: avoidance of mannitol advised by manufacturer of **TOBRAMYCIN**
- ▶ **Ciclosporin**: possible increased risk of nephrotoxicity when mannitol given with **CYCLOSPORIN**

MAOIs

NOTE For interactions of reversible MAO-A inhibitors (RIMAs) see Moclobemide, and for interactions of MAO-B inhibitors see Rasagiline and Selegiline

NOTE Linezolid is a reversible, non-selective MAO inhibitor and an antibacterial

- ▶ **ACE Inhibitors**: MAOIs possibly enhance hypotensive effect of **ACE INHIBITORS**
- ▶ **Adrenergic Neurone Blockers**: enhanced hypotensive effect when MAOIs given with **ADRENERGIC NEURONE BLOCKERS**
- **Alcohol**: MAOIs interact with tyramine found in some beverages containing ● **ALCOHOL** and some dealcoholised beverages (hypertensive crisis)—if no tyramine, enhanced hypotensive effect
- ▶ **Alpha-adrenoceptor Stimulants**: avoidance of MAOIs advised by manufacturer of **APRACLOINIDINE** and **BRIMONIDINE**
- **Alpha-blockers**: avoidance of MAOIs advised by manufacturer of ● **INDORAMIN**; enhanced hypotensive effect when MAOIs given with **ALPHA-BLOCKERS**
- **Analgesics**: possible increased serotonergic effects when MAOIs given with **FENTANYL**; CNS excitation or depression (hypertension or hypotension) when MAOIs given with ● **PETHIDINE**—avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serotonergic effects and increased risk of convulsions when MAOIs given with ● **TRAMADOL**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; avoidance of MAOIs advised by manufacturer of ● **NEFOPAM**; possible CNS excitation or depression (hypertension or hypotension) when MAOIs given with ● **OPIOID ANALGESICS**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs
- ▶ **Angiotensin-II Receptor Antagonists**: MAOIs possibly enhance hypotensive effect of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ **Antibacterials**: plasma concentration of linezolid reduced by **RIFAMPICIN** (possible therapeutic failure of linezolid)
- **Antidepressants**: increased risk of hypertension and CNS excitation when MAOIs given with ● **REBOXETINE** (MAOIs should not be started until 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs); after stopping MAOIs do not start ● **CITALOPRAM**, ● **ESCITALOPRAM**, ● **FLUVOXAMINE**, ● **PAROXETINE** or ● **SERTRALINE** for 2 weeks, also MAOIs should not be started until at least 1 week after stopping citalopram, escitalopram, fluvoxamine, paroxetine or sertraline; after stopping MAOIs do not start ● **FLUOXETINE** for 2 weeks, also MAOIs should not be started until at least 5 weeks after stopping fluoxetine; after stopping MAOIs do not start ● **DULOXETINE** for 2 weeks, also MAOIs should not be started until at least 5 days after stopping duloxetine; enhanced CNS effects and toxicity when MAOIs given with ● **VENLAFAXINE** (venlafaxine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 1 week after stopping venlafaxine); increased risk of hypertension and

MAOIs**Antidepressants** (continued)

- **CNS excitation** when MAOIs given with other ● **MAOIs** (avoid for at least 2 weeks after stopping previous MAOIs and then start at a reduced dose); after stopping MAOIs do not start ● **MOCLOBEMIDE** for at least 1 week; MAOIs increase CNS effects of ● **SSRIs** (risk of serious toxicity); after stopping MAOIs do not start ● **MIRTAZAPINE** for 2 weeks, also MAOIs should not be started until at least 2 weeks after stopping mirtazapine; after stopping MAOIs do not start ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** for 2 weeks, also MAOIs should not be started until at least 1–2 weeks after stopping tricyclic-related antidepressants; increased risk of hypertension and CNS excitation when MAOIs given with ● **TRICYCLICS**, tricyclics should not be started until 2 weeks after stopping MAOIs (3 weeks if starting clomipramine or imipramine), also MAOIs should not be started for at least 1–2 weeks after stopping tricyclics (3 weeks in the case of clomipramine or imipramine); increased risk of hypertension and CNS excitation when MAOIs given with ● **VORTIOXETINE** (vortioxetine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 2 weeks after stopping vortioxetine); avoidance of linezolid advised by manufacturer of ● **VORTIOXETINE**
- ▶ **Antidiabetics**: MAOIs possibly enhance hypoglycaemic effect of **ANTIDIABETICS**; MAOIs enhance hypoglycaemic effect of **INSULIN**, **METFORMIN** and **SULFONYLUREAS**
- **Antiepileptics**: MAOIs possibly antagonise anticonvulsant effect of **ANTIEPILEPTICS** (convulsive threshold lowered); avoidance for 2 weeks after stopping MAOIs advised by manufacturer of ● **CARBAMAZEPINE**, also antagonism of anticonvulsant effect
- ▶ **Antihistamines**: avoidance of MAOIs advised by manufacturer of **HYDROXYZINE**; avoidance of promethazine for 2 weeks after stopping MAOIs advised by manufacturer of **PROMETHAZINE**; increased antimuscarinic and sedative effects when MAOIs given with **ANTIHISTAMINES**
- **Antimalarials**: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- ▶ **Antimuscarinics**: increased risk of antimuscarinic side-effects when MAOIs given with **ANTIMUSCARINICS**
- **Antipsychotics**: CNS effects of MAOIs possibly increased by ● **CLOZAPINE**
- **Anxiolytics and Hypnotics**: manufacturer of tranlycypromine advises avoid ● **BUSPIRONE** for 14 days after stopping tranlycypromine; avoidance of MAOIs advised by manufacturer of **BUSPIRONE**
- **Atomoxetine**: after stopping MAOIs do not start ● **ATOMOXETINE** for 2 weeks, also MAOIs should not be started until at least 2 weeks after stopping atomoxetine; possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- **Beta-blockers**: enhanced hypotensive effect when MAOIs given with **BETA-BLOCKERS**
- **Bupropion**: avoidance of bupropion for 2 weeks after stopping MAOIs advised by manufacturer of ● **BUPROPION**
- ▶ **Calcium-channel Blockers**: enhanced hypotensive effect when MAOIs given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ **Clonidine**: enhanced hypotensive effect when MAOIs given with **CLONIDINE**
- **Dapoxetine**: increased risk of serotonergic effects when MAOIs given with ● **DAPOXETINE** (MAOIs should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping MAOIs)
- ▶ **Diazoxide**: enhanced hypotensive effect when MAOIs given with **DIAZOXIDE**
- ▶ **Diuretics**: enhanced hypotensive effect when MAOIs given with **DIURETICS**
- **Dopaminergics**: risk of hypertensive crisis when MAOIs given with ● **CO-BENELDOPA**, ● **CO-CARELDOPA** or ● **LEVODOPA**, avoid co-beneldopa, co-careldopa or levodopa for at least 2 weeks after stopping MAOIs; avoid concomitant use of non-selective MAOIs with ● **ENTACAPONE**; risk of hypertensive crisis when MAOIs given with ● **RASAGILINE**, avoid MAOIs for at least 2 weeks after stopping rasagiline; enhanced hypotensive effect when MAOIs given with ● **SELEGILINE**—manufacturer of

MAOIs

- **Dopaminergics** (continued)
 - selegiline advises avoid concomitant use; avoid concomitant use of MAOIs with **TOLCAPONE**
- ▷ **Doxapram**: MAOIs enhance effects of **DOXAPRAM**
- ▷ **Histamine**: avoidance of MAOIs advised by manufacturer of **HISTAMINE**
- **5HT₂-receptor Agonists**: risk of CNS toxicity when MAOIs given with
 - **RIZATRIPTAN** or • **SUMATRIPTAN** (avoid rizatriptan or sumatriptan for 2 weeks after MAOIs); risk of CNS toxicity when MAOIs given with • **ZOLMITRIPTAN** (reduce dose of zolmitriptan)
- **Methyl dopa**: avoidance of MAOIs advised by manufacturer of
 - **METHYLDOPA**
- ▷ **Moxonidine**: enhanced hypotensive effect when MAOIs given with **MOXONIDINE**
- ▷ **Muscle Relaxants**: phenelzine enhances effects of **SUXAMETHONIUM**
- ▷ **Nicorandil**: enhanced hypotensive effect when MAOIs given with **NICORANDIL**
- ▷ **Nitrates**: enhanced hypotensive effect when MAOIs given with **NITRATES**
- ▷ **Pholcodine**: avoidance of pholcodine for 2 weeks after stopping MAOIs advised by manufacturer of **PHOLCODINE**
- **Sympathomimetics**: risk of hypertensive crisis when MAOIs given with
 - **ADRENALINE** (**EPINEPHRINE**), • **DOBUTAMINE**, • **DOPAMINE**, • **NORADRENALINE** (**NOREPINEPHRINE**) or • **XYLOMETAZOLINE**; risk of hypertensive crisis when MAOIs given with • **DEXAMFETAMINE**, • **EPHEDRINE**, • **ISOMETHEPTENE**, • **LISDEXAMFETAMINE**, • **METARAMINOL**, • **METHYLPHENIDATE**, • **PHENYLEPHRINE** or • **PSEUDOEPHEDRINE**, avoid dexamfetamine, ephedrine, isometheptene, lisdexamfetamine, metaraminol, methylphenidate, phenylephrine or pseudoephedrine for at least 2 weeks after stopping MAOIs; avoidance of MAOIs advised by manufacturer of **MIDODRINE**; risk of hypertensive crisis when MAOIs given with • **OXYMETAZOLINE**, some manufacturers advise avoid oxymetazoline for at least 2 weeks after stopping MAOIs
- **Tetrabenazine**: risk of CNS toxicity when MAOIs given with
 - **TETRABENAZINE** (avoid tetrabenazine for 2 weeks after MAOIs)
- ▷ **Vaccines**: antibacterials including linezolid inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC
- ▷ **Vasodilator Antihypertensives**: enhanced hypotensive effect when MAOIs given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

MAOIs, reversible see Moclobemide

Maraviroc

- **Antibacterials**: plasma concentration of maraviroc possibly increased by
 - **CLARITHROMYCIN** and • **TELITHROMYCIN** (consider reducing dose of maraviroc); plasma concentration of maraviroc reduced by • **RIFAMPICIN**—consider increasing dose of maraviroc
- **Antidepressants**: plasma concentration of maraviroc possibly reduced by • **ST JOHN'S WORT**—avoid concomitant use
- **Antifungals**: plasma concentration of maraviroc increased by
 - **KETOCONAZOLE** (consider reducing dose of maraviroc)
- **Antivirals**: plasma concentration of maraviroc increased by
 - **ATAZANAVIR**, • **BOCEPREVIR**, • **DARUNAVIR**, • **INDINAVIR**, • **LOPINAVIR**, • **SAQUINAVIR** and • **TELAPREVIR** (consider reducing dose of maraviroc); plasma concentration of maraviroc possibly reduced by • **EFAVIRENZ**—consider increasing dose of maraviroc; plasma concentration of maraviroc possibly reduced by **ETRAVIRINE**; maraviroc reduces plasma concentration of • **FOSAMPRENAVIR**—avoid concomitant use; plasma concentration of maraviroc increased by **RITONAVIR**
- **Cobicistat**: plasma concentration of maraviroc possibly increased by • **COBICISTAT** (reduce dose of maraviroc)
- **Orlistat**: absorption of maraviroc possibly reduced by
 - **ORLISTAT**

Mebendazole

- ▷ **Ulcer-healing Drugs**: metabolism of mebendazole possibly inhibited by **CIMETIDINE** (increased plasma concentration)

Medroxyprogesterone see Progestogens

Mefenamic Acid see NSAIDs

Mefloquine

- **Anti-arrhythmics**: increased risk of ventricular arrhythmias when mefloquine given with • **AMIODARONE**—avoid concomitant use
- **Antibacterials**: increased risk of ventricular arrhythmias when mefloquine given with • **MOXIFLOXACIN**—avoid concomitant use; plasma concentration of mefloquine reduced by
 - **RIFAMPICIN**—avoid concomitant use
- **Antidepressants**: possible increased risk of convulsions when mefloquine given with • **VORTIOXETINE**
- **Antiepileptics**: mefloquine antagonises anticonvulsant effect of
 - **ANTIEPILEPTICS**
- ▷ **Antifungals**: plasma concentration of mefloquine increased by **KETOCONAZOLE**
- **Antimalarials**: avoidance of antimalarials advised by manufacturer of • **ARTEMETHER WITH LUMEFANTRINE**; increased risk of convulsions when mefloquine given with
 - **CHLOROQUINE** or • **HYDROXYCHLOROQUINE**; increased risk of convulsions when mefloquine given with • **QUININE** (but should not prevent the use of *intravenous* quinine in severe cases)
- **Antipsychotics**: possible increased risk of ventricular arrhythmias when mefloquine given with • **HALOPERIDOL**—avoid concomitant use; avoidance of mefloquine advised by manufacturer of **AMISULPRIDE**; increased risk of ventricular arrhythmias when mefloquine given with • **PIMOZIDE**—avoid concomitant use; manufacturer of risperidone advises possible risk of ventricular arrhythmias when mefloquine given with • **RISPERIDONE**
- ▷ **Antivirals**: mefloquine possibly reduces plasma concentration of **RITONAVIR**
- **Atomoxetine**: increased risk of ventricular arrhythmias when mefloquine given with • **ATOMOXETINE**
- ▷ **Beta-blockers**: increased risk of bradycardia when mefloquine given with **BETA-BLOCKERS**
- ▷ **Calcium-channel Blockers**: possible increased risk of bradycardia when mefloquine given with **CALCIUM-CHANNEL BLOCKERS**
- ▷ **Cardiac Glycosides**: possible increased risk of bradycardia when mefloquine given with **DIGOXIN**
- ▷ **Cytotoxics**: possible increased risk of bradycardia when mefloquine given with **CRIZOTINIB**
- ▷ **Histamine**: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- **Ivabradine**: increased risk of ventricular arrhythmias when mefloquine given with • **IVABRADINE**
- ▷ **Penicillamine**: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▷ **Vaccines**: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Megestrol see Progestogens

Melatonin see Anxiolytics and Hypnotics

Meloxicam see NSAIDs

Melphalan

- ▷ **Antibacterials**: increased risk of melphalan toxicity when given with **NALIDIXIC ACID**
- **Antipsychotics**: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- ▷ **Cardiac Glycosides**: melphalan possibly reduces absorption of **DIGOXIN tablets**
- **Ciclosporin**: increased risk of nephrotoxicity when melphalan given with • **CICLOSPORIN**

Memantine

- **Anaesthetics, General**: increased risk of CNS toxicity when memantine given with • **KETAMINE** (manufacturer of memantine advises avoid concomitant use)
- **Analgesics**: increased risk of CNS toxicity when memantine given with • **DEXTROMETHORPHAN** (manufacturer of memantine advises avoid concomitant use)
- ▷ **Anticoagulants**: memantine possibly enhances anticoagulant effect of **WARFARIN**
- ▷ **Antimuscarinics**: memantine possibly enhances effects of **ANTIMUSCARINICS**
- ▷ **Antipsychotics**: memantine possibly reduces effects of **ANTIPSYCHOTICS**

Memantine (continued)

- Dopaminergics: memantine possibly enhances effects of **DOPAMINERGICS** and **SELEGILINE**; increased risk of CNS toxicity when memantine given with • **AMANTADINE** (manufacturer of memantine advises avoid concomitant use)
- Muscle Relaxants: memantine possibly modifies effects of **BACLOFEN** and **DANTROLENE**

Meningococcal Vaccines see Vaccines

Mepacrine

- Antimalarials: mepacrine increases plasma concentration of **PRIMAQUINE** (increased risk of toxicity)

Meprobamate see Anxiolytics and Hypnotics

Meptazinol see Opioid Analgesics

Mercaptopurine

- Allopurinol: enhanced effects and increased toxicity of mercaptopurine when given with • **ALLOPURINOL** (reduce dose of mercaptopurine to one quarter of usual dose)
- Antibacterials: increased risk of haematological toxicity when mercaptopurine given with • **SULFAMETHOXAZOLE** (as co-trimoxazole); increased risk of haematological toxicity when mercaptopurine given with • **TRIMETHOPRIM** (also with co-trimoxazole)
- Anticoagulants: mercaptopurine possibly reduces anticoagulant effect of • **COUMARINS**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Dairy Products: plasma concentration of mercaptopurine possibly reduced by **DAIRY PRODUCTS**—manufacturer of mercaptopurine advises give at least 1 hour before or 3 hours after dairy products
- Febuxostat: avoidance of mercaptopurine advised by manufacturer of • **FEBUXOSTAT**

Meropenem

- Antiepileptics: carbapenems reduce plasma concentration of • **SODIUM VALPROATE** and • **VALPROIC ACID**—avoid concomitant use
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Mestranol see Oestrogens

Metaraminol see Sympathomimetics

Metformin see Antidiabetics

Methadone see Opioid Analgesics

Methenamine

- Antacids: avoid concomitant use of methenamine with **ANTACIDS**
- Antibacterials: increased risk of crystalluria when methenamine given with • **SULFONAMIDES**
- Diuretics: effects of methenamine antagonised by • **ACETAZOLAMIDE**
- Potassium Salts: avoid concomitant use of methenamine with **POTASSIUM CITRATE**
- Sodium Citrate: avoid concomitant use of methenamine with **SODIUM CITRATE**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Methocarbamol see Muscle Relaxants

Methotrexate

- Aminophylline: methotrexate possibly increases plasma concentration of **AMINOPHYLLINE**
- Anaesthetics, General: antifolate effect of methotrexate increased by • **NITROUS OXIDE**—avoid concomitant use
- Analgesics: excretion of methotrexate probably reduced by • **NSAIDS** (increased risk of toxicity); excretion of methotrexate reduced by • **ASPIRIN**, • **DICLOFENAC**, • **IBUPROFEN**, • **INDOMETACIN**, • **KETOPROFEN**, • **MELOXICAM** and • **NAPROXEN** (increased risk of toxicity)
- Antibacterials: absorption of methotrexate possibly reduced by **NEOMYCIN**; excretion of methotrexate possibly reduced by **CIPROFLOXACIN** (increased risk of toxicity); increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when methotrexate given with • **SULFAMETHOXAZOLE** (as co-trimoxazole); increased risk of methotrexate toxicity when given with **DOXYCYCLINE**, **SULFONAMIDES** or **TETRACYCLINE**; excretion of methotrexate reduced by **PENICILLINS** (increased risk of toxicity); increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when

Methotrexate

- Antibacterials (continued)
 - methotrexate given with • **TRIMETHOPRIM** (also with co-trimoxazole)
- Antiepileptics: antifolate effect of methotrexate increased by **FOSPHENYTOIN** and **PHENYTOIN**; plasma concentration of methotrexate possibly increased by • **LEVETIRACETAM**
- Antimalarials: antifolate effect of methotrexate increased by • **PYRIMETHAMINE**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Cardiac Glycosides: methotrexate possibly reduces absorption of **DIGOXIN tablets**
- Ciclosporin: risk of toxicity when methotrexate given with • **CICLOSPORIN**
- Corticosteroids: possible increased risk of hepatotoxicity when *high-dose* methotrexate given with **DEXAMETHASONE**
- Cytotoxics: increased pulmonary toxicity when methotrexate given with • **CISPLATIN**
- Diuretics: excretion of methotrexate increased by alkaline urine due to **ACETAZOLAMIDE**
- Leflunomide: risk of toxicity when methotrexate given with • **LEFLUNOMIDE**
- Retinoids: plasma concentration of methotrexate increased by • **ACITRETIN** (also increased risk of hepatotoxicity)—avoid concomitant use
- Theophylline: methotrexate possibly increases plasma concentration of **THEOPHYLLINE**
- Ulcer-healing Drugs: excretion of methotrexate possibly reduced by **PROTON PUMP INHIBITORS** (increased risk of toxicity)

Methyldopa

- ACE Inhibitors: enhanced hypotensive effect when methyldopa given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when methyldopa given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: enhanced hypotensive effect when methyldopa given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when methyldopa given with **ALDESLEUKIN**
- Alpha-blockers: enhanced hypotensive effect when methyldopa given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when methyldopa given with **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of methyldopa antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when methyldopa given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antidepressants: manufacturer of methyldopa advises avoid concomitant use with • **MAOIS**
- Antipsychotics: enhanced hypotensive effect when methyldopa given with **ANTIPSYCHOTICS** (also increased risk of extrapyramidal effects)
- Anxiolytics and Hypnotics: enhanced hypotensive effect when methyldopa given with **ANXIOLYTICS AND HYPNOTICS**
- Beta-blockers: enhanced hypotensive effect when methyldopa given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when methyldopa given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when methyldopa given with **CLONIDINE**
- Corticosteroids: hypotensive effect of methyldopa antagonised by **CORTICOSTEROIDS**
- Diazoxide: enhanced hypotensive effect when methyldopa given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when methyldopa given with **DIURETICS**
- Dopaminergics: methyldopa antagonises antiparkinsonian effect of **DOPAMINERGICS**; increased risk of extrapyramidal side-effects when methyldopa given with **AMANTADINE**; enhanced hypotensive effect when methyldopa given with **CO-BENELDOPA**, **CO-CARLEDOPA** or **LEVODOPA**; effects of methyldopa possibly enhanced by **ENTACAPONE**
- Iron Salts: hypotensive effect of methyldopa antagonised by *oral* **IRON SALTS**
- Lithium: neurotoxicity may occur when methyldopa given with • **LITHIUM** without increased plasma concentration of lithium

Methylidopa (continued)

- Moxisylyte: enhanced hypotensive effect when methylidopa given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when methylidopa given with **MOXONIDINE**
- Muscle Relaxants: enhanced hypotensive effect when methylidopa given with **BACLOFEN** or **TIZANIDINE**
- Nitrates: enhanced hypotensive effect when methylidopa given with **NITRATES**
- Oestrogens: hypotensive effect of methylidopa antagonised by **OESTROGENS**
- Prostaglandins: enhanced hypotensive effect when methylidopa given with **ALPROSTADIL**
- Sympathomimetics, Beta: acute hypotension reported when methylidopa given with infusion of ● **SALBUTAMOL**
- Vasodilator Antihypertensives: enhanced hypotensive effect when methylidopa given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Methylphenidate see Sympathomimetics**Methylprednisolone** see Corticosteroids**Methylthioninium**

- Antidepressants: risk of CNS toxicity when methylthioninium given with ● **SSRI-RELATED ANTIDEPRESSANTS**, ● **SSRIS** and ● **CLOMIPRAMINE**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration); possible risk of CNS toxicity when methylthioninium given with ● **MIRTAZAPINE**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)
- Anxiolytics and Hypnotics: possible risk of CNS toxicity when methylthioninium given with ● **BUSPIRONE**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)
- Bupropion: possible risk of CNS toxicity when methylthioninium given with ● **BUPROPION**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)

Metoclopramide

- Alcohol: metoclopramide possibly increases absorption of **ALCOHOL**
- Anaesthetics, General: metoclopramide enhances effects of **THIOPENTAL**
- Analgesics: metoclopramide increases rate of absorption of **ASPIRIN** (enhanced effect); effects of metoclopramide on gastro-intestinal activity antagonised by **OPIOID ANALGESICS**; metoclopramide increases rate of absorption of **PARACETAMOL**
- Antibacterials: metoclopramide reduces plasma concentration of **FOSFOMYCIN**
- Antidepressants: CNS toxicity reported when metoclopramide given with **SSRIS**
- Antimuscarinics: effects of metoclopramide on gastro-intestinal activity antagonised by **ANTIMUSCARINICS**
- Antipsychotics: increased risk of extrapyramidal side-effects when metoclopramide given with **ANTIPSYCHOTICS**
- Atovaquone: metoclopramide reduces plasma concentration of **ATOVAQUONE**—avoid concomitant use
- Ciclosporin: metoclopramide increases plasma concentration of ● **CICLOSPORIN**
- Dopaminergics: metoclopramide antagonises hypoprolactinaemic effects of **BROMOCRIPTINE** and **CABERGOLINE**; metoclopramide antagonises antiparkinsonian effect of **PERGOLIDE**; avoidance of metoclopramide advised by manufacturer of **ROPINIROLE** and **ROTIGOTINE** (antagonism of effect)
- Muscle Relaxants: metoclopramide enhances effects of **SUXAMETHONIUM**
- Tetrabenazine: increased risk of extrapyramidal side-effects when metoclopramide given with **TETRABENAZINE**

Metolazone see Diuretics**Metoprolol** see Beta-blockers**Metronidazole**

NOTE Interactions do not apply to topical metronidazole preparations

Metronidazole (continued)

- Alcohol: disulfiram-like reaction when metronidazole given with **ALCOHOL**
- Anticoagulants: metronidazole enhances anticoagulant effect of ● **COUMARINS**
- Antiepileptics: metronidazole possibly inhibits metabolism of **FOSPHENTYTOIN** and **PHENYTOIN** (increased plasma concentration); metabolism of metronidazole accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced effect)
- Cytotoxics: metronidazole increases plasma concentration of ● **BUSULFAN** (increased risk of toxicity); metronidazole inhibits metabolism of **CAPECITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased toxicity)
- Disulfiram: psychotic reaction reported when metronidazole given with **DISULFIRAM**
- Lithium: metronidazole increases risk of **LITHIUM** toxicity
- Mycophenolate: metronidazole possibly reduces bioavailability of **MYCOPHENOLATE**
- Ulcer-healing Drugs: metabolism of metronidazole inhibited by **CIMETIDINE** (increased plasma concentration)
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Mianserin see Antidepressants, Tricyclic (related)**Micafungin**

- Antifungals: micafungin possibly increases plasma concentration of **AMPHOTERICIN**; micafungin increases plasma concentration of **ITRACONAZOLE** (consider reducing dose of itraconazole)
- Calcium-channel Blockers: micafungin increases plasma concentration of **NIFEDIPINE**
- Ciclosporin: micafungin possibly increases plasma concentration of **CICLOSPORIN**
- Sirolimus: micafungin increases plasma concentration of **SIROLIMUS**

Miconazole see Antifungals, Imidazole**Midazolam** see Anxiolytics and Hypnotics**Midodrine** see Sympathomimetics**Mifamurtide**

- Analgesics: manufacturer of mifamurtide advises avoid concomitant use with high doses of **NSAIDS**
- Ciclosporin: manufacturer of mifamurtide advises avoid concomitant use with **CICLOSPORIN**
- Corticosteroids: manufacturer of mifamurtide advises avoid concomitant use with **CORTICOSTEROIDS**
- Tacrolimus: manufacturer of mifamurtide advises avoid concomitant use with **TACROLIMUS**

Mifepristone

- Corticosteroids: mifepristone may reduce effect of **CORTICOSTEROIDS** (including *inhaled* corticosteroids) for 3–4 days

Milrinone see Phosphodiesterase Inhibitors**Minocycline** see Tetracyclines**Minoxidil** see Vasodilator Antihypertensives**Mirabegron**

- Antibacterials: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **CLARITHROMYCIN**—see Mirabegron, in BNF
- Antifungals: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **ITRACONAZOLE** and **KETOCONAZOLE**—see Mirabegron, in BNF
- Antivirals: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **RITONAVIR**—see Mirabegron, in BNF
- Beta-blockers: mirabegron increases plasma concentration of **METOPROLOL**
- Cardiac Glycosides: mirabegron increases plasma concentration of **DIGOXIN**—reduce initial dose of digoxin

Mirtazapine

- Alcohol: increased sedative effect when mirtazapine given with ● **ALCOHOL**
- Analgesics: possible increased serotonergic effects when mirtazapine given with **TRAMADOL**
- Anticoagulants: mirtazapine enhances anticoagulant effect of **WARFARIN**
- Antidepressants: possible increased serotonergic effects when mirtazapine given with **FLUOXETINE**, **FLUVOXAMINE** or

Mirtazapine

● Antidepressants (continued)

- VENLAFAXINE; mirtazapine should not be started until 2 weeks after stopping ● MAOIs, also MAOIs should not be started until at least 2 weeks after stopping mirtazapine; after stopping mirtazapine do not start ● MOCLOBEMIDE for at least 1 week
- Antiepileptics: plasma concentration of mirtazapine reduced by CARBAMAZEPINE, FOSPHENYTOIN and PHENYTOIN
- Antifungals: plasma concentration of mirtazapine increased by KETOCONAZOLE
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● ARTEMETHER WITH LUMEFANTRINE and ● ARTEMIMOL WITH PIPERAQUINE
- Anxiolytics and Hypnotics: increased sedative effect when mirtazapine given with ANXIOLYTICS AND HYPNOTICS
- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE
- Clonidine: mirtazapine possibly antagonises hypotensive effect of CLONIDINE
- Methylthioninium: possible risk of CNS toxicity when mirtazapine given with ● METHYLTHIONINIUM—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)
- Ulcer-healing Drugs: plasma concentration of mirtazapine increased by CIMETIDINE

Misoprostol

- Antacids: absorption of misoprostol possibly reduced by ANTACIDS

Mitomycin

- Antipsychotics: avoid concomitant use of cytotoxics with ● CLOZAPINE (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● VACCINES—avoid concomitant use

Mitotane

- Anticoagulants: mitotane possibly reduces anticoagulant effect of ● COUMARINS
- Antipsychotics: avoid concomitant use of cytotoxics with ● CLOZAPINE (increased risk of agranulocytosis)
- Antivirals: avoidance of mitotane advised by manufacturer of DASABUVIR, OMBITASVIR and PARITAPREVIR
- Diuretics: manufacturer of mitotane advises avoid concomitant use of SPIRONOLACTONE (antagonism of effect)

Mitoxantrone

- Antipsychotics: avoid concomitant use of cytotoxics with ● CLOZAPINE (increased risk of agranulocytosis)
- Ciclosporin: excretion of mitoxantrone reduced by CICLOSPORIN (increased plasma concentration)
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● VACCINES—avoid concomitant use

Mivacurium see Muscle Relaxants

Mizolastine see Antihistamines

MMR Vaccine see Vaccines

Moclobemide

- Analgescics: possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with ● DEXTROMETHORPHAN or ● PETHIDINE—avoid concomitant use; possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with ● OPIOID ANALGESICS—manufacturer of moclobemide advises consider reducing dose of opioid analgesics
- Antidepressants: moclobemide should not be started for at least 1 week after stopping ● MAOIs, ● SSRI-RELATED ANTIDEPRESSANTS, ● CITALOPRAM, ● FLUVOXAMINE, ● MIRTAZAPINE, ● PAROXETINE, ● SERTRALINE, ● TRICYCLIC-RELATED ANTIDEPRESSANTS or ● TRICYCLICS; increased risk of CNS toxicity when moclobemide given with ● ESCITALOPRAM, preferably avoid concomitant use; moclobemide should not be started until 5 weeks after stopping ● FLUOXETINE; possible increased serotonergic effects when moclobemide given with ● DULOXETINE; avoidance of moclobemide advised by manufacturer of ● VORTIOXETINE
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● ARTEMETHER WITH LUMEFANTRINE and ● ARTEMIMOL WITH PIPERAQUINE

Moclobemide (continued)

- Atomoxetine: possible increased risk of convulsions when antidepressants given with ATOMOXETINE
- Bupropion: avoidance of moclobemide advised by manufacturer of ● BUPROPION
- Clopidogrel: moclobemide possibly reduces antiplatelet effect of ● CLOPIDOGREL
- Dopaminergics: increased risk of side-effects when moclobemide given with CO-BENELDOPA, CO-CARELDOPA or LEVODOPA; caution with moclobemide advised by manufacturer of ENTACAPONE; avoid concomitant use of moclobemide with ● SELEGILINE
- 5HT₂-receptor Agonists: risk of CNS toxicity when moclobemide given with ● RIZATRIPTAN or ● SUMATRIPTAN (avoid rizatriptan or sumatriptan for 2 weeks after moclobemide); risk of CNS toxicity when moclobemide given with ● ZOLMITRIPTAN (reduce dose of zolmitriptan)
- Sympathomimetics: risk of hypertensive crisis when moclobemide given with ● SYMPATHOMIMETICS
- Ulcer-healing Drugs: plasma concentration of moclobemide increased by CIMETIDINE (halve dose of moclobemide)

Modafinil

- Antiepileptics: modafinil possibly increases plasma concentration of FOSPHENYTOIN and PHENYTOIN
- Ciclosporin: modafinil reduces plasma concentration of ● CICLOSPORIN
- Cytotoxics: modafinil possibly reduces plasma concentration of ● BOSUTINIB—manufacturer of bosutinib advises avoid concomitant use
- Guanfacine: modafinil possibly reduces plasma concentration of ● GUANFACINE—increase dose of guanfacine
- Oestrogens: modafinil accelerates metabolism of ● OESTROGENS (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)

Moexipril see ACE Inhibitors

Mometasone see Corticosteroids

Monobactams see Aztreonam

Monoclonal antibodies see individual drugs

Montelukast see Leukotriene Receptor Antagonists

Morphine see Opioid Analgesics

Moxifloxacin see Quinolones

Moxisylyte

- ACE Inhibitors: enhanced hypotensive effect when moxisylyte given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when moxisylyte given with ADRENERGIC NEURONE BLOCKERS
- Alpha-blockers: possible severe postural hypotension when moxisylyte given with ● ALPHA-BLOCKERS
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxisylyte given with ANGIOTENSIN-II RECEPTOR ANTAGONISTS
- Beta-blockers: possible severe postural hypotension when moxisylyte given with ● BETA-BLOCKERS
- Calcium-channel Blockers: enhanced hypotensive effect when moxisylyte given with CALCIUM-CHANNEL BLOCKERS
- Clonidine: enhanced hypotensive effect when moxisylyte given with CLONIDINE
- Diazoxide: enhanced hypotensive effect when moxisylyte given with DIAZOXIDE
- Diuretics: enhanced hypotensive effect when moxisylyte given with DIURETICS
- Methyldopa: enhanced hypotensive effect when moxisylyte given with METHYLDOPA
- Moxonidine: enhanced hypotensive effect when moxisylyte given with MOXONIDINE
- Nitrates: enhanced hypotensive effect when moxisylyte given with NITRATES
- Vasodilator Antihypertensives: enhanced hypotensive effect when moxisylyte given with HYDRALAZINE, MINOXIDIL or SODIUM NITROPRUSSIDE

Moxonidine

- ACE Inhibitors: enhanced hypotensive effect when moxonidine given with ACE INHIBITORS
- Adrenergic Neurone Blockers: enhanced hypotensive effect when moxonidine given with ADRENERGIC NEURONE BLOCKERS

Moxonidine (continued)

- Alcohol: enhanced hypotensive effect when moxonidine given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when moxonidine given with **ALDESLEUKIN**
- Alpha-blockers: enhanced hypotensive effect when moxonidine given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when moxonidine given with **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of moxonidine antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxonidine given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antidepressants: enhanced hypotensive effect when moxonidine given with **MAOIs**; hypotensive effect of moxonidine possibly antagonised by **TRICYCLICS** (manufacturer of moxonidine advises avoid concomitant use)
- Antipsychotics: enhanced hypotensive effect when moxonidine given with **PHENOTHIAZINES**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when moxonidine given with **ANXIOLYTICS AND HYPNOTICS**; sedative effects possibly increased when moxonidine given with **BENZODIAZEPINES**
- Beta-blockers: enhanced hypotensive effect when moxonidine given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when moxonidine given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when moxonidine given with **CLONIDINE**
- Corticosteroids: hypotensive effect of moxonidine antagonised by **CORTICOSTEROIDS**
- Diazoxide: enhanced hypotensive effect when moxonidine given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when moxonidine given with **DIURETICS**
- Dopaminergics: enhanced hypotensive effect when moxonidine given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- Methyldopa: enhanced hypotensive effect when moxonidine given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when moxonidine given with **MOXISYLYTE**
- Muscle Relaxants: enhanced hypotensive effect when moxonidine given with **BACLOFEN** or **TIZANIDINE**
- Nitrates: enhanced hypotensive effect when moxonidine given with **NITRATES**
- Oestrogens: hypotensive effect of moxonidine antagonised by **OESTROGENS**
- Prostaglandins: enhanced hypotensive effect when moxonidine given with **ALPROSTADIL**
- Vasodilator Antihypertensives: enhanced hypotensive effect when moxonidine given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Muscle Relaxants

- ACE Inhibitors: enhanced hypotensive effect when baclofen or tizanidine given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when baclofen or tizanidine given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: increased sedative effect when baclofen, methocarbamol or tizanidine given with **ALCOHOL**
- Alpha-blockers: enhanced hypotensive effect when baclofen or tizanidine given with **ALPHA-BLOCKERS**
- Anaesthetics, General: effects of atracurium enhanced by **KETAMINE**; increased risk of myocardial depression and bradycardia when suxamethonium given with **• PROPOFOL**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **VOLATILE LIQUID GENERAL ANAESTHETICS**
- Analgesics: excretion of baclofen possibly reduced by **NSAIDS** (increased risk of toxicity); excretion of baclofen reduced by **IBUPROFEN** (increased risk of toxicity); increased sedative effect when baclofen given with **FENTANYL** or **MORPHINE**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when baclofen or tizanidine given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**

Muscle Relaxants (continued)

- Anti-arrhythmics: neuromuscular blockade enhanced and prolonged when suxamethonium given with **LIDOCAINE**
- Antibacterials: effects of non-depolarising muscle relaxants and suxamethonium enhanced by **PIPERACILLIN**; plasma concentration of tizanidine increased by **• CIPROFLOXACIN** (increased risk of toxicity)—avoid concomitant use; plasma concentration of tizanidine possibly increased by **NORFLOXACIN** (increased risk of toxicity); plasma concentration of tizanidine possibly reduced by **RIFAMPICIN**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **• AMINOGLYCOSIDES**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **• CLINDAMYCIN**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **• POLYMYXINS**; effects of suxamethonium enhanced by **• VANCOMYCIN**
- Antidepressants: plasma concentration of tizanidine increased by **• FLUVOXAMINE** (increased risk of toxicity)—avoid concomitant use; effects of suxamethonium enhanced by **PHENELZINE**; muscle relaxant effect of baclofen enhanced by **TRICYCLICS**
- Antiepileptics: muscle relaxant effect of non-depolarising muscle relaxants antagonised by **CARBAMAZEPINE** (accelerated recovery from neuromuscular blockade); effects of non-depolarising muscle relaxants reduced by *long-term* use of **• FOSPHENYTOIN** and **• PHENYTOIN** (but effects of non-depolarising muscle relaxants might be increased by *acute* use of fosphenytoin and phenytoin)
- Antimalarials: effects of suxamethonium possibly enhanced by **QUININE**
- Antipsychotics: effects of suxamethonium possibly enhanced by **PROMAZINE**
- Anxiolytics and Hypnotics: increased sedative effect when baclofen or tizanidine given with **ANXIOLYTICS AND HYPNOTICS**
- Beta-blockers: enhanced hypotensive effect when baclofen given with **BETA-BLOCKERS**; possible enhanced hypotensive effect and bradycardia when tizanidine given with **BETA-BLOCKERS**; effects of muscle relaxants enhanced by **PROPRANOLOL**
- Calcium-channel Blockers: enhanced hypotensive effect when baclofen or tizanidine given with **CALCIUM-CHANNEL BLOCKERS**; effects of non-depolarising muscle relaxants possibly enhanced by **CALCIUM-CHANNEL BLOCKERS**; possible increased risk of ventricular arrhythmias when *intravenous* dantrolene given with **DILTIAZEM**—manufacturer of diltiazem advises avoid concomitant use; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **VERAPAMIL**; avoidance of *intravenous* dantrolene advised by manufacturer of **VERAPAMIL**
- Cardiac Glycosides: possible increased risk of bradycardia when tizanidine given with **CARDIAC GLYCOSIDES**; risk of ventricular arrhythmias when suxamethonium given with **CARDIAC GLYCOSIDES**
- Clonidine: enhanced hypotensive effect when baclofen or tizanidine given with **CLONIDINE**
- Corticosteroids: effects of pancuronium and vecuronium possibly antagonised by **CORTICOSTEROIDS**
- Cytotoxics: effects of suxamethonium enhanced by **CYCLOPHOSPHAMIDE** and **THIOTEPA**
- Deferasirox: avoidance of tizanidine advised by manufacturer of **DEFERASIROX**
- Diazoxide: enhanced hypotensive effect when baclofen or tizanidine given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when baclofen or tizanidine given with **DIURETICS**
- Dopaminergics: possible agitation, confusion and hallucinations when baclofen given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- Lithium: effects of muscle relaxants enhanced by **LITHIUM**; baclofen possibly aggravates hyperkinesia caused by **LITHIUM**
- Magnesium (parenteral): effects of non-depolarising muscle relaxants and suxamethonium enhanced by **PARENTERAL MAGNESIUM**
- Memantine: effects of baclofen and dantrolene possibly modified by **MEMANTINE**

Muscle Relaxants (continued)

- **Methyldopa**: enhanced hypotensive effect when baclofen or tizanidine given with **METHYLDOPA**
- **Metoclopramide**: effects of suxamethonium enhanced by **METOCLOPRAMIDE**
- **Moxonidine**: enhanced hypotensive effect when baclofen or tizanidine given with **MOXONIDINE**
- **Nitrates**: enhanced hypotensive effect when baclofen or tizanidine given with **NITRATES**
- **Oestrogens**: plasma concentration of tizanidine possibly increased by **OESTROGENS** (increased risk of toxicity)
- **Parasympathomimetics**: effects of non-depolarising muscle relaxants possibly antagonised by **DONEPEZIL**; effects of suxamethonium possibly enhanced by **DONEPEZIL**; effects of suxamethonium enhanced by **GALANTAMINE**, **NEOSTIGMINE**, **PYRIDOSTIGMINE** and **RIVASTIGMINE**; effects of non-depolarising muscle relaxants antagonised by **NEOSTIGMINE**, **PYRIDOSTIGMINE** and **RIVASTIGMINE**
- **Progestogens**: plasma concentration of tizanidine possibly increased by **PROGESTOGENS** (increased risk of toxicity)
- **Sympathomimetics, Beta₂**: effects of suxamethonium enhanced by **BAMBUTEROL**
- **Vasodilator Antihypertensives**: enhanced hypotensive effect when baclofen or tizanidine given with **HYDRALAZINE**; enhanced hypotensive effect when baclofen or tizanidine given with **MINOXIDIL**; enhanced hypotensive effect when baclofen or tizanidine given with **SODIUM NITROPRUSSIDE**

Muscle Relaxants, depolarising see Muscle Relaxants**Muscle Relaxants, non-depolarising** see Muscle Relaxants**Mycophenolate**

- **Antacids**: absorption of mycophenolate reduced by **ANTACIDS**
- **Antibacterials**: bioavailability of mycophenolate possibly reduced by **METRONIDAZOLE** and **NORFLOXACIN**; plasma concentration of mycophenolate possibly reduced by **CO-AMOXICILAV**; plasma concentration of active metabolite of mycophenolate reduced by ● **RIFAMPICIN**
- **Antivirals**: mycophenolate increases plasma concentration of **ACICLOVIR** and **VALACICLOVIR**, also plasma concentration of inactive metabolite of mycophenolate increased; mycophenolate possibly increases plasma concentration of **GANCICLOVIR** and **VALGANCICLOVIR**, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- **Iron Salts**: absorption of mycophenolate reduced by oral **IRON SALTS**
- **Lipid-regulating Drugs**: absorption of mycophenolate reduced by **COLESTYRAMINE**
- **Sevelamer**: plasma concentration of mycophenolate possibly reduced by **SEVELAMER**

Nabumetone see NSAIDs**Nadolol** see Beta-blockers**Nalidixic Acid** see Quinolones**Nalmefene**

- **Analgesics**: manufacturer of nalmefene advises avoid concomitant use with ● **OPIOID ANALGESICS**

Nandrolone see Anabolic Steroids**Naproxen** see NSAIDs**Naratriptan** see 5HT₁-receptor Agonists (under HT)**Natalizumab**

- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Nateglinide see Antidiabetics**Nebivolol** see Beta-blockers**Nefopam**

- **Antidepressants**: manufacturer of nefopam advises avoid concomitant use with ● **MAOIS**; side-effects possibly increased when nefopam given with **TRICYCLICS**
- **Antimuscarinics**: increased risk of antimuscarinic side-effects when nefopam given with **ANTIMUSCARINICS**

Neomycin see Aminoglycosides**Neostigmine** see Parasympathomimetics**Netupitant**

- **Analgesics**: manufacturer of netupitant advises caution with **MORPHINE**

Netupitant (continued)

- **Antibacterials**: netupitant increases plasma concentration of **ERYTHROMYCIN**; plasma concentration of netupitant reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants**: manufacturer of netupitant advises caution with **DABIGATRAN**
- **Antiepileptics**: manufacturer of netupitant advises caution with **VALPROIC ACID**
- **Antifungals**: plasma concentration of netupitant possibly increased by **KETOCONAZOLE**
- **Antivirals**: manufacturer of netupitant advises caution with **ZIDOVUDINE**
- **Anxiolytics and Hypnotics**: netupitant increases plasma concentration of **MIDAZOLAM**
- **Colchicine**: manufacturer of netupitant advises caution with **COLCHICINE**
- **Corticosteroids**: netupitant increases plasma concentration of ● **DEXAMETHASONE** (halve dose of dexamethasone)
- **Cytotoxics**: netupitant increases plasma concentration of **DOCETAXEL** and **ETOPOSIDE**

Nevirapine

- **Analgesics**: nevirapine possibly reduces plasma concentration of **METHADONE**
- **Antibacterials**: nevirapine reduces plasma concentration of **CLARITHROMYCIN** (but concentration of an active metabolite increased), also plasma concentration of nevirapine increased; nevirapine possibly increases plasma concentration of **RIFABUTIN**; plasma concentration of nevirapine reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants**: nevirapine may enhance or reduce anticoagulant effect of ● **WARFARIN**
- **Antidepressants**: plasma concentration of nevirapine reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- **Antiepileptics**: plasma concentration of nevirapine reduced by **CARBAMAZEPINE**
- **Antifungals**: nevirapine reduces plasma concentration of ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of nevirapine increased by ● **FLUCONAZOLE**; nevirapine possibly reduces plasma concentration of **CASPOFUNGIN** and **ITRACONAZOLE**—consider increasing dose of caspofungin and itraconazole
- **Antipsychotics**: nevirapine possibly reduces plasma concentration of ● **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature)
- **Antivirals**: nevirapine possibly reduces plasma concentration of ● **ATAZANAVIR** and ● **ETRAVIRINE**—avoid concomitant use; manufacturer of nevirapine advises avoid concomitant use with **BOCEPREVIR** and **RLPIVIRINE**; avoidance of nevirapine advised by manufacturer of **DACLATASVIR** (plasma concentration of daclatasvir possibly reduced); avoidance of nevirapine advised by manufacturer of **DASABUVIR**, **ELVITEGRAVIR**, **OMBITASVIR** and **PARITAPREVIR**; nevirapine possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); nevirapine reduces plasma concentration of ● **EFAVIRENZ**—avoid concomitant use; nevirapine possibly reduces plasma concentration of **FOSAMPRENAVIR**—avoid unboosted fosamprenavir; nevirapine reduces plasma concentration of **INDINAVIR**; nevirapine possibly reduces plasma concentration of ● **LOPINAVIR** and **TELAPREVIR**—consider increasing dose of lopinavir and telaprevir; nevirapine possibly reduces plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; increased risk of granulocytopenia when nevirapine given with ● **ZIDOVUDINE**
- **Cobicistat**: manufacturer of nevirapine advises avoid concomitant use with **COBICISTAT**
- **Cytotoxics**: avoidance of nevirapine advised by manufacturer of ● **OLAPARIB**
- **Guanfacine**: nevirapine possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Oestrogens**: nevirapine accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)

Nevirapine (continued)

- **Orlistat**: absorption of nevirapine possibly reduced by ● **ORLISTAT**
- **Progestogens**: nevirapine accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Nicardipine see Calcium-channel Blockers

Nicorandil

- **Alcohol**: hypotensive effect of nicorandil possibly enhanced by **ALCOHOL**
- **Analgesics**: increased risk of gastro-intestinal bleeding and ulceration when nicorandil given with **NSAIDs** or **ASPIRIN**
- **Antidepressants**: enhanced hypotensive effect when nicorandil given with **MAOIs**; hypotensive effect of nicorandil possibly enhanced by **TRICYCLICS**
- **Avanafil**: hypotensive effect of nicorandil significantly enhanced by ● **AVANAFIL** (avoid concomitant use)
- **Corticosteroids**: increased risk of gastro-intestinal bleeding and ulceration when nicorandil given with **CORTICOSTEROIDS**
- **Riociguat**: possible enhanced hypotensive effect when nicorandil given with ● **RIOCIGUAT**—avoid concomitant use
- **Sildenafil**: hypotensive effect of nicorandil significantly enhanced by ● **SILDENAFIL** (avoid concomitant use)
- **Tadalafil**: hypotensive effect of nicorandil significantly enhanced by ● **TADALAFIL** (avoid concomitant use)
- **Vardenafil**: possible increased hypotensive effect when nicorandil given with ● **VARDENAFIL**—avoid concomitant use
- **Vasodilator Antihypertensives**: possible enhanced hypotensive effect when nicorandil given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Nicotine

- **Anti-arrhythmics**: nicotine possibly enhances effects of **ADENOSINE**

Nicotinic Acid

- **Lipid-regulating Drugs**: increased risk of myopathy when nicotinic acid given with ● **STATINS** (applies to lipid regulating doses of nicotinic acid)

Nifedipine see Calcium-channel Blockers

Nilotinib

- **Antibacterials**: manufacturer of nilotinib advises avoid concomitant use with ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**; plasma concentration of nilotinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Antifungals**: plasma concentration of nilotinib increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of nilotinib advises avoid concomitant use with ● **ITRACONAZOLE** and ● **VORICONAZOLE**
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Antivirals**: avoidance of nilotinib advised by manufacturer of ● **BOCEPREVIR**; plasma concentration of nilotinib possibly increased by **RITONAVIR**—manufacturer of nilotinib advises avoid concomitant use
- **Anxiolytics and Hypnotics**: nilotinib increases plasma concentration of **MIDAZOLAM**
- **Grapefruit Juice**: manufacturer of nilotinib advises avoid concomitant use with ● **GRAPEFRUIT JUICE**
- **Lipid-regulating Drugs**: separating administration from nilotinib by 12 hours advised by manufacturer of **LOMITAPIDE**

Nimodipine see Calcium-channel Blockers

Nintedanib

- **Antibacterials**: plasma concentration of nintedanib reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Antifungals**: plasma concentration of nintedanib increased by ● **KETOCONAZOLE**
- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Nitrates

- **ACE Inhibitors**: enhanced hypotensive effect when nitrates given with **ACE INHIBITORS**
- **Adrenergic Neurone Blockers**: enhanced hypotensive effect when nitrates given with **ADRENERGIC NEURONE BLOCKERS**

Nitrates (continued)

- **Alcohol**: enhanced hypotensive effect when nitrates given with **ALCOHOL**
- **Aldesleukin**: enhanced hypotensive effect when nitrates given with **ALDESLEUKIN**
- **Alpha-blockers**: enhanced hypotensive effect when nitrates given with **ALPHA-BLOCKERS**
- **Anaesthetics, General**: enhanced hypotensive effect when nitrates given with **GENERAL ANAESTHETICS**
- **Analgesics**: hypotensive effect of nitrates antagonised by **NSAIDs**
- **Angiotensin-II Receptor Antagonists**: enhanced hypotensive effect when nitrates given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- **Anti-arrhythmics**: effects of sublingual tablets of nitrates reduced by **DISOPYRAMIDE** (failure to dissolve under tongue owing to dry mouth)
- **Anticoagulants**: infusion of glyceryl trinitrate reduces anticoagulant effect of ● **HEPARINS**
- **Antidepressants**: enhanced hypotensive effect when nitrates given with **MAOIs**; effects of sublingual tablets of nitrates possibly reduced by **TRICYCLIC-RELATED ANTIDEPRESSANTS** (failure to dissolve under tongue owing to dry mouth); effects of sublingual tablets of nitrates reduced by **TRICYCLICS** (failure to dissolve under tongue owing to dry mouth)
- **Antimuscarinics**: effects of sublingual tablets of nitrates possibly reduced by **ANTIMUSCARINICS** (failure to dissolve under tongue owing to dry mouth)
- **Antipsychotics**: enhanced hypotensive effect when nitrates given with **PHENOTHIAZINES**
- **Anxiolytics and Hypnotics**: enhanced hypotensive effect when nitrates given with **ANXIOLYTICS AND HYPNOTICS**
- **Avanafil**: hypotensive effect of nitrates significantly enhanced by ● **AVANAFIL** (avoid concomitant use)
- **Beta-blockers**: enhanced hypotensive effect when nitrates given with **BETA-BLOCKERS**
- **Calcium-channel Blockers**: enhanced hypotensive effect when nitrates given with **CALCIUM-CHANNEL BLOCKERS**
- **Clonidine**: enhanced hypotensive effect when nitrates given with **CLONIDINE**
- **Corticosteroids**: hypotensive effect of nitrates antagonised by **CORTICOSTEROIDS**
- **Diazoxide**: enhanced hypotensive effect when nitrates given with **DIAZOXIDE**
- **Diuretics**: enhanced hypotensive effect when nitrates given with **DIURETICS**
- **Dopaminergics**: enhanced hypotensive effect when nitrates given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- **Levosimendan**: possible severe postural hypotension when isosorbide mononitrate given with ● **LEVOSIMENDAN**
- **Methyldopa**: enhanced hypotensive effect when nitrates given with **METHYLDOPA**
- **Moxisylyte**: enhanced hypotensive effect when nitrates given with **MOXISYLYTE**
- **Moxonidine**: enhanced hypotensive effect when nitrates given with **MOXONIDINE**
- **Muscle Relaxants**: enhanced hypotensive effect when nitrates given with **BACLOFEN** or **TIZANIDINE**
- **Oestrogens**: hypotensive effect of nitrates antagonised by **OESTROGENS**
- **Prostaglandins**: enhanced hypotensive effect when nitrates given with **ALPROSTADIL**
- **Riociguat**: possible enhanced hypotensive effect when nitrates given with ● **RIOCIGUAT**—avoid concomitant use
- **Sildenafil**: hypotensive effect of nitrates significantly enhanced by ● **SILDENAFIL** (avoid concomitant use)
- **Tadalafil**: hypotensive effect of nitrates significantly enhanced by ● **TADALAFIL** (avoid concomitant use)
- **Vardenafil**: possible increased hypotensive effect when nitrates given with ● **VARDENAFIL**—avoid concomitant use
- **Vasodilator Antihypertensives**: enhanced hypotensive effect when nitrates given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Nitrazepam see Anxiolytics and Hypnotics

Nitrofurantoin

- **Antacids**: absorption of nitrofurantoin reduced by **ORAL MAGNESIUM SALTS** (as magnesium trisilicate)

Nitrofurantoin (continued)

- Antibacterials: nitrofurantoin possibly antagonises effects of **NALIDIXIC ACID**
- Sulfinpyrazone: excretion of nitrofurantoin reduced by **SULFINPYRAZONE** (increased risk of toxicity)
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Nitroimidazoles see Metronidazole and Tinidazole

Nitrous Oxide see Anaesthetics, General

Nizatidine see Histamine H₂-antagonists

Nomegestrol see Progestogens

Noradrenaline (norepinephrine) see Sympathomimetics

Norelgestromin see Progestogens

Norepinephrine

NOTE Norepinephrine interactions as for noradrenaline, see under sympathomimetics

Norethisterone see Progestogens

Norfloxacin see Quinolones

Norgestimate see Progestogens

Norgestrel see Progestogens

Normal Immunoglobulin see Immunoglobulins

Nortriptyline see Antidepressants, Tricyclic

NSAIDs

NOTE See also Aspirin. Interactions do not generally apply to topical NSAIDs

- ACE Inhibitors: increased risk of renal impairment when NSAIDs given with **ACE INHIBITORS**, also hypotensive effect antagonised
- Adrenergic Neurone Blockers: NSAIDs antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**
- Aliskiren: NSAIDs possibly antagonise hypotensive effect of **ALISKIREN**
- Alpha-blockers: NSAIDs antagonise hypotensive effect of **ALPHA-BLOCKERS**
- Analgesics: avoid concomitant use of NSAIDs with **NSAIDs** or **ASPIRIN** (increased side-effects); avoid concomitant use of NSAIDs with **KETOROLAC** (increased side-effects and haemorrhage); ibuprofen possibly reduces antiplatelet effect of **ASPIRIN**
- Angiotensin-II Receptor Antagonists: increased risk of renal impairment when NSAIDs given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**, also hypotensive effect antagonised
- Antacids: absorption of acemetacin possibly reduced by **ANTACIDS**
- Antibacterials: indometacin possibly increases plasma concentration of **AMIKACIN** and **GENTAMICIN** in neonates; plasma concentration of celecoxib, diclofenac and etoricoxib reduced by **RIFAMPICIN**; possible increased risk of convulsions when NSAIDs given with **QUINOLONES**
- Anticoagulants: increased risk of haemorrhage when *intravenous* diclofenac given with **ANTICOAGULANTS** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when ketorolac given with **ANTICOAGULANTS** (avoid concomitant use, including low-dose heparins); NSAIDs possibly enhance anticoagulant effect of **COUMARINS** and **PHENINDIONE**; possible increased risk of bleeding when NSAIDs given with **DABIGATRAN** or **HEPARINS**; increased risk of bleeding when NSAIDs given with **EDOXABAN** (manufacturer of edoxaban advises avoid long-term NSAIDs)
- Antidepressants: increased risk of bleeding when NSAIDs given with **SSRIS** or **VENLAFAXINE**
- Antidiabetics: NSAIDs possibly enhance effects of **SULFONYLUREAS**
- Antiepileptics: acemetacin possibly reduces excretion of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- Antifungals: plasma concentration of parecoxib increased by **FLUCONAZOLE** (reduce dose of parecoxib); plasma concentration of celecoxib increased by **FLUCONAZOLE** (halve dose of celecoxib); plasma concentration of flurbiprofen and ibuprofen increased by **FLUCONAZOLE**; plasma concentration of diclofenac and ibuprofen increased by **VORICONAZOLE**
- Antipsychotics: possible severe drowsiness when acemetacin or indometacin given with **HALOPERIDOL**
- Antivirals: plasma concentration of NSAIDs possibly increased by **RITONAVIR**; plasma concentration of piroxicam increased by **RITONAVIR** (risk of toxicity)—avoid concomitant use;

NSAIDs**Antivirals** (continued)

- increased risk of haematological toxicity when NSAIDs given with **ZIDOVUDINE**
- Azathioprine: manufacturer of azathioprine advises possible increased risk of myelosuppression when indometacin given with **AZATHIOPRINE**
- Beta-blockers: NSAIDs antagonise hypotensive effect of **BETA-BLOCKERS**
- Calcium-channel Blockers: NSAIDs antagonise hypotensive effect of **CALCIUM-CHANNEL BLOCKERS**
- Cardiac Glycosides: NSAIDs possibly increase plasma concentration of **CARDIAC GLYCOSIDES**, also possible exacerbation of heart failure and reduction of renal function
- Ciclosporin: increased risk of nephrotoxicity when NSAIDs given with **CICLOSPORIN**; plasma concentration of diclofenac increased by **CICLOSPORIN** (halve dose of diclofenac)
- Clonidine: NSAIDs antagonise hypotensive effect of **CLONIDINE**
- Clopidogrel: increased risk of bleeding when NSAIDs given with **CLOPIDOGREL**
- Corticosteroids: increased risk of gastro-intestinal bleeding and ulceration when NSAIDs given with **CORTICOSTEROIDS**
- Cytotoxics: NSAIDs probably reduce excretion of **METHOTREXATE** (increased risk of toxicity); diclofenac, ibuprofen, indometacin, ketoprofen, meloxicam and naproxen reduce excretion of **METHOTREXATE** (increased risk of toxicity); NSAIDs possibly reduce renal excretion of **POMETREXED**—consult product literature; increased risk of bleeding when NSAIDs given with **ERLOTINIB**; avoidance of mefenamic acid advised by manufacturer of **REGORAFENIB**
- Desmopressin: indometacin enhances effects of **DESMOPRESSIN**
- Diazoxide: NSAIDs antagonise hypotensive effect of **DIAZOXIDE**
- Dimethyl sulfoxide: avoid concomitant use of sulindac with **DIMETHYL SULFOXIDE**
- Diuretics: risk of nephrotoxicity of NSAIDs increased by **DIURETICS**, also antagonism of diuretic effect; indometacin and ketorolac antagonise effects of **DIURETICS**; excretion of acemetacin possibly increased by **FUROSEMIDE**; NSAIDs possibly antagonise diuretic effect of **POTASSIUM CANRENOATE**; occasional reports of reduced renal function when indometacin given with **TRIAMETERENE**—avoid concomitant use; increased risk of hyperkalaemia when indometacin given with **POTASSIUM-SPARING DIURETICS** and **ALDOSTERONE ANTAGONISTS**; possible increased risk of hyperkalaemia when NSAIDs given with **POTASSIUM-SPARING DIURETICS** and **ALDOSTERONE ANTAGONISTS**
- Iloprost: increased risk of bleeding when NSAIDs given with **ILOPROST**
- Lipid-regulating Drugs: excretion of meloxicam increased by **COLESTYRAMINE**
- Lithium: NSAIDs reduce excretion of **LITHIUM** (increased risk of toxicity); ketorolac reduces excretion of **LITHIUM** (increased risk of toxicity)—avoid concomitant use
- Methyldopa: NSAIDs antagonise hypotensive effect of **METHYLDOPA**
- Mifamurtide: avoidance of high doses of NSAIDs advised by manufacturer of **MIFAMURTIDE**
- Moxonidine: NSAIDs antagonise hypotensive effect of **MOXONIDINE**
- Muscle Relaxants: ibuprofen reduces excretion of **BACLOFEN** (increased risk of toxicity); NSAIDs possibly reduce excretion of **BACLOFEN** (increased risk of toxicity)
- Nicorandil: increased risk of gastro-intestinal bleeding and ulceration when NSAIDs given with **NICORANDIL**
- Nitrates: NSAIDs antagonise hypotensive effect of **NITRATES**
- Oestrogens: etoricoxib increases plasma concentration of **ETHINYLESTRADIOL**
- Penicillamine: possible increased risk of nephrotoxicity when NSAIDs given with **PENICILLAMINE**
- Pentoxifylline: possible increased risk of bleeding when NSAIDs given with **PENTOXIFYLLINE**; increased risk of bleeding when ketorolac given with **PENTOXIFYLLINE** (avoid concomitant use)
- Prasugrel: possible increased risk of bleeding when NSAIDs given with **PRASUGREL**

NSAIDs (continued)

- Tacrolimus: possible increased risk of nephrotoxicity when NSAIDs given with **TACROLIMUS**; increased risk of nephrotoxicity when ibuprofen given with ● **TACROLIMUS**
- ▶ Vasodilator Antihypertensives: NSAIDs antagonise hypotensive effect of **HYDRALAZINE**, **MINOXIDIL** and **SODIUM NITROPRUSSIDE**

Obinutuzumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Octreotide

- ▶ Antidiabetics: octreotide possibly reduces requirements for **ANTI-DIABETICS**
- Ciclosporin: octreotide reduces plasma concentration of ● **CICLOSPORIN**
- ▶ Dopaminergics: octreotide increases plasma concentration of **BROMOCRIPTINE**
- ▶ Ulcer-healing Drugs: octreotide possibly delays absorption of **CIMETIDINE**

Oestrogens

- ▶ ACE Inhibitors: oestrogens antagonise hypotensive effect of **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: oestrogens antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: oestrogens antagonise hypotensive effect of **ALPHA-BLOCKERS**
- ▶ Aminophylline: oestrogens increase plasma concentration of **AMINOPHYLLINE** (consider reducing dose of aminophylline)
- ▶ Analgesics: plasma concentration of ethinylestradiol increased by **ETORICOXIB**
- ▶ Angiotensin-II Receptor Antagonists: oestrogens antagonise hypotensive effect of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antibacterials: plasma concentration of estradiol increased by **ERYTHROMYCIN**; metabolism of oestrogens accelerated by ● **RIFAMYCINS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Anticoagulants: oestrogens may enhance or reduce anticoagulant effect of **COUMARINS**; oestrogens antagonise anticoagulant effect of ● **PHENINDIONE**
- Antidepressants: contraceptive effect of oestrogens reduced by ● **ST JOHN'S WORT** (avoid concomitant use); oestrogens antagonise antidepressant effect of **TRICYCLICS** (but side-effects of tricyclics possibly increased due to increased plasma concentration)
- ▶ Antidiabetics: oestrogens antagonise hypoglycaemic effect of **ANTI-DIABETICS**
- Antiepileptics: metabolism of oestrogens accelerated by ● **CARBAMAZEPINE**, ● **ESLICARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN**, ● **PRIMIDONE**, ● **RUFINAMIDE** and ● **TOPIRAMATE** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC); oestrogens reduce plasma concentration of ● **LAMOTRIGINE**—consider increasing dose of lamotrigine; ethinylestradiol possibly reduces plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**
- ▶ Antifungals: plasma concentration of ethinylestradiol increased by **KETOCONAZOLE**; oestrogens increase plasma concentration of **VORICONAZOLE**; anecdotal reports of contraceptive failure and menstrual irregularities when oestrogens given with **GRISOFULVIN**; anecdotal reports of contraceptive failure when oestrogens given with **IMIDAZOLES**; occasional reports of breakthrough bleeding when oestrogens (used for contraception) given with **TERBINAFINE**
- Antivirals: plasma concentration of ethinylestradiol increased by **ATAZANAVIR**; avoidance of ethinylestradiol advised by manufacturer of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—use alternative form of contraception; metabolism of oestrogens accelerated by ● **NEVIRAPINE** and ● **RITONAVIR** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC); plasma concentration of ethinylestradiol possibly reduced by ● **TELAPREVIR**—

Oestrogens

- Antivirals (continued)
manufacturer of telaprevir advises additional contraceptive precautions
- ▶ Anxiolytics and Hypnotics: oestrogens possibly increase plasma concentration of **CHLORDIAZEPOXIDE**, **DIAZEPAM** and **NITRAZEPAM**; oestrogens possibly reduce plasma concentration of **LORAZEPAM**, **OXAZEPAM** and **TEMAZEPAM**; oestrogens increase plasma concentration of **MELATONIN**
- Aprepitant: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **APREPITANT** (alternative contraception recommended)
- ▶ Beta-blockers: oestrogens antagonise hypotensive effect of **BETA-BLOCKERS**
- Bosentan: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **BOSENTAN** (alternative contraception recommended)
- ▶ Calcium-channel Blockers: oestrogens antagonise hypotensive effect of **CALCIUM-CHANNEL BLOCKERS**
- Ciclosporin: oestrogens possibly increase plasma concentration of **CICLOSPORIN**
- ▶ Clonidine: oestrogens antagonise hypotensive effect of **CLONIDINE**
- Cobicistat: metabolism of oestrogens accelerated by ● **COBICISTAT** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- ▶ Corticosteroids: oral contraceptives containing oestrogens increase plasma concentration of **CORTICOSTEROIDS**
- Cytotoxics: possible reduction in contraceptive effect of oestrogens advised by manufacturer of ● **CRIZOTINIB** and ● **VEMURAFENIB**; possible reduced contraceptive effect of hormonal contraceptives containing oestrogens advised by manufacturer of ● **DABRAFENIB** (alternative contraception recommended)
- ▶ Diuretics: oestrogens antagonise diuretic effect of **DIURETICS**
- ▶ Dopaminergics: oestrogens increase plasma concentration of **ROPINIROLE**; oestrogens increase plasma concentration of ● **SELEGILINE**—manufacturer of selegiline advises avoid concomitant use
- Fosaprepitant: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **FOSAPREPITANT** (alternative contraception recommended)
- ▶ Lipid-regulating Drugs: absorption of ethinylestradiol reduced by **COLESEVELAM**; plasma concentration of ethinylestradiol increased by **ATORVASTATIN** and **ROSUVASTATIN**; separating administration from oestrogens by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ Methyldopa: oestrogens antagonise hypotensive effect of **METHYLDOPA**
- Modafinil: metabolism of oestrogens accelerated by ● **MODAFINIL** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- ▶ Moxonidine: oestrogens antagonise hypotensive effect of **MOXONIDINE**
- ▶ Muscle Relaxants: oestrogens possibly increase plasma concentration of **TIZANIDINE** (increased risk of toxicity)
- ▶ Nitrates: oestrogens antagonise hypotensive effect of **NITRATES**
- ▶ Somatropin: oestrogens (when used as oral replacement therapy) may increase dose requirements of **SOMATROPIN**
- ▶ Tacrolimus: ethinylestradiol possibly increases plasma concentration of **TACROLIMUS**
- ▶ Teriflunomide: plasma concentration of ethinylestradiol increased by **TERIFLUNOMIDE**
- ▶ Theophylline: oestrogens increase plasma concentration of **THEOPHYLLINE** (consider reducing dose of theophylline)
- ▶ Thyroid Hormones: oestrogens may increase requirements for **THYROID HORMONES** in hypothyroidism
- ▶ Vasodilator Antihypertensives: oestrogens antagonise hypotensive effect of **HYDRALAZINE**, **MINOXIDIL** and **SODIUM NITROPRUSSIDE**

Oestrogens, conjugated see Oestrogens**Ofatumumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Ofatumumab (continued)

- **Vaccines:** risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use
- **Ofloxacin** see Quinolones
- **Olanzapine** see Antipsychotics
- **Olaparib**
 - **Antibacterials:** manufacturer of olaparib advises avoid concomitant use with ● **CLARITHROMYCIN**, ● **RIFABUTIN**, ● **RIFAMPICIN** and ● **TELITHROMYCIN**
 - **Antidepressants:** manufacturer of olaparib advises avoid concomitant use with ● **ST JOHN'S WORT**
 - **Antiepileptics:** manufacturer of olaparib advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PHENYTOIN**
 - **Antifungals:** manufacturer of olaparib advises avoid concomitant use with ● **ITRACONAZOLE**
 - **Antipsychotics:** avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
 - **Antivirals:** manufacturer of olaparib advises avoid concomitant use with ● **BOCEPREVIR**, ● **INDINAVIR**, ● **NEVIRAPINE**, ● **SAQUINAVIR** and ● **TELAPREVIR**

Olmestartan see Angiotensin-II Receptor Antagonists**Olodaterol** see Sympathomimetics, Beta₂**Ombitasvir**

- **Antibacterials:** plasma concentration of ombitasvir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Antidepressants:** plasma concentration of ombitasvir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of ombitasvir advises avoid concomitant use
- **Antiepileptics:** plasma concentration of ombitasvir reduced by ● **CARBAMAZEPINE**—avoid concomitant use; plasma concentration of ombitasvir possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- **Antifungals:** manufacturer of ombitasvir advises avoid concomitant use with ● **KETOCONAZOLE**
- **Antivirals:** manufacturer of ombitasvir advises avoid concomitant use with ● **EFAVIREN**, ● **ETRAVIRINE** and ● **NEVIRAPINE**
- **Cobistat:** manufacturer of ombitasvir advises avoid concomitant use with ● **COBICISTAT**
- **Cytotoxics:** manufacturer of ombitasvir advises avoid concomitant use with ● **MITOTANE**
- **Diuretics:** ombitasvir increases plasma concentration of ● **FUROSEMIDE** (reduce dose of furosemide)
- **Hormone Antagonists:** manufacturer of ombitasvir advises avoid concomitant use with ● **ENZALUTAMIDE**
- **Lipid-regulating Drugs:** manufacturer of ombitasvir advises avoid concomitant use with ● **ATORVASTATIN** and ● **SIMVASTATIN**
- **Oestrogens:** manufacturer of ombitasvir advises avoid concomitant use of ● **ETHINYLESTRADIOL**—use alternative form of contraception

Omeprazole see Proton Pump Inhibitors**Ondansetron** see 5HT₃-receptor Antagonists (under HT)**Opioid Analgesics**

- **Alcohol:** enhanced hypotensive and sedative effects when opioid analgesics given with ● **ALCOHOL**
- **Anaesthetics, General:** fentanyl inhibits metabolism of ● **ETOMIDATE** (consider reducing dose of etomidate); opioid analgesics possibly enhance effects of ● **INTRAVENOUS GENERAL ANAESTHETICS** and ● **VOLATILE LIQUID GENERAL ANAESTHETICS**
- **Analgesics:** possible opioid withdrawal when tapentadol given with ● **BUPRENORPHINE** and ● **PENTAZOCINE**; possible opioid withdrawal when buprenorphine given with ● **DIAMORPHINE**, ● **DIPIANONE**, ● **HYDROMORPHONE**, ● **METHADONE**, ● **MORPHINE**, ● **OXYCODONE**, ● **PAPAVERTUM**, ● **PETHIDINE** and ● **TRAMADOL**; avoidance of buprenorphine advised by manufacturer of ● **FENTANYL**; possible opioid withdrawal when diamorphine, dipipanone, hydromorphone, methadone, morphine, oxycodone and papaveretum given with ● **PENTAZOCINE**; manufacturer of fentanyl advises avoid concomitant use with ● **PENTAZOCINE**; possible opioid withdrawal when pentazocine given with ● **PETHIDINE** and ● **TRAMADOL**
- **Antibacterials:** plasma concentration of fentanyl possibly increased by ● **CLARITHROMYCIN**; plasma concentration of alfentanil increased by ● **ERYTHROMYCIN**; metabolism of alfentanil, codeine, fentanyl, methadone and morphine

Opioid Analgesics

- **Antibacterials** (continued)
 - accelerated by ● **RIFAMPICIN** (reduced effect); metabolism of oxycodone possibly accelerated by ● **RIFAMPICIN**; increased risk of ventricular arrhythmias when methadone given with ● **DELANANID**; manufacturer of pethidine advises avoid concomitant use with ● **ISONIAZID**; metabolism of oxycodone inhibited by ● **TELITHROMYCIN**; possible increased risk of ventricular arrhythmias when methadone given with ● **TELITHROMYCIN**
- **Anticoagulants:** tramadol enhances anticoagulant effect of ● **COUMARINS**
- **Antidepressants:** plasma concentration of methadone possibly increased by ● **FLUOXETINE**, ● **FLUVOXAMINE**, ● **PAROXETINE** and ● **SERTRALINE**; possible increased serotonergic effects when pethidine or tramadol given with ● **DULOXETINE**; possible increased serotonergic effects when tramadol given with ● **MIRTAZAPINE**, ● **VENLAFAXINE** or ● **VORTIOXETINE**; possible increased serotonergic effects and increased risk of convulsions when tramadol given with ● **MAOIS**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; CNS excitation or depression (hypertension or hypotension) when pethidine given with ● **MAOIS**—avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serotonergic effects when fentanyl given with ● **MAOIS**, ● **SSRI-RELATED ANTIDEPRESSANTS** or ● **SSRIs**; possible CNS excitation or depression (hypertension or hypotension) when opioid analgesics given with ● **MAOIS**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; possible CNS excitation or depression (hypertension or hypotension) when opioid analgesics given with ● **MOCLOBEMIDE**—manufacturer of moclobemide advises consider reducing dose of opioid analgesics; possible CNS excitation or depression (hypertension or hypotension) when dextromethorphan or pethidine given with ● **MOCLOBEMIDE**—avoid concomitant use; increased risk of CNS toxicity when tramadol given with ● **SSRIs** or ● **TRICYCLICS**; plasma concentration of methadone possibly reduced by ● **ST JOHN'S WORT**; sedative effects possibly increased when opioid analgesics given with ● **TRICYCLICS**
- **Antiepileptics:** metabolism of fentanyl possibly accelerated by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN** (reduced effect); dextropropoxyphene enhances effects of ● **CARBAMAZEPINE**; effects of tramadol reduced by ● **CARBAMAZEPINE**; plasma concentration of methadone reduced by ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE**; possible increased risk of pethidine toxicity when given with ● **FOSPHENYTOIN** and ● **PHENYTOIN**; metabolism of methadone accelerated by ● **FOSPHENYTOIN** and ● **PHENYTOIN** (reduced effect and risk of withdrawal effects); morphine increases bioavailability of ● **GABAPENTIN**
- **Antifungals:** metabolism of buprenorphine inhibited by ● **KETOCONAZOLE** (reduce dose of buprenorphine); possible increased risk of ventricular arrhythmias when methadone given with ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of oxycodone increased by ● **ITRACONAZOLE**, ● **KETOCONAZOLE** and ● **VORICONAZOLE**; metabolism of alfentanil inhibited by ● **FLUCONAZOLE** (risk of prolonged or delayed respiratory depression); plasma concentration of methadone increased by ● **FLUCONAZOLE**; metabolism of alfentanil possibly inhibited by ● **ITRACONAZOLE**; plasma concentration of methadone possibly increased by ● **ITRACONAZOLE** (increased risk of ventricular arrhythmias); plasma concentration of alfentanil and methadone increased by ● **VORICONAZOLE** (consider reducing dose of alfentanil and methadone); plasma concentration of fentanyl possibly increased by ● **TRIAZOLES**
- **Antihistamines:** sedative effects possibly increased when opioid analgesics given with ● **SEDATING ANTIHISTAMINES**
- **Antimalarials:** avoidance of methadone advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- **Antimuscarinics:** possible increased risk of antimuscarinic side-effects when codeine given with ● **ANTIMUSCARINICS**
- **Antipsychotics:** enhanced hypotensive and sedative effects when opioid analgesics given with ● **ANTIPSYCHOTICS**; increased

Opioid Analgesics

- Antipsychotics (continued)
 - risk of ventricular arrhythmias when methadone given with
 - **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of convulsions when tramadol given with **ANTIPSYCHOTICS**; increased risk of ventricular arrhythmias when methadone given with
 - **AMISULPRIDE**—avoid concomitant use
 - Antivirals: plasma concentration of methadone possibly reduced by **ABACAVIR**, **NEVIRAPINE** and **RILPIVIRINE**; plasma concentration of buprenorphine increased by **ATAZANAVIR**; plasma concentration of methadone possibly affected by **BOCEPREVIR**; possible increased risk of prolonged sedation and respiratory depression when buprenorphine given with **BOCEPREVIR**; methadone possibly reduces plasma concentration of **DIDANOSINE**; plasma concentration of methadone reduced by **EFAVIRENZ**, **FOSAMPRENAVIR** and **RITONAVIR**; plasma concentration of alfentanil and fentanyl increased by
 - **RITONAVIR**; plasma concentration of pethidine reduced by
 - **RITONAVIR**, but plasma concentration of toxic pethidine metabolite increased (avoid concomitant use); plasma concentration of morphine possibly reduced by **RITONAVIR**; plasma concentration of dextropropoxyphene increased by
 - **RITONAVIR** (risk of toxicity)—avoid concomitant use; plasma concentration of buprenorphine possibly increased by **RITONAVIR**; increased risk of ventricular arrhythmias when alfentanil, fentanyl or methadone given with
 - **SAQUINAVIR**—avoid concomitant use; caution with methadone advised by manufacturer of
 - **TELAPREVIR** (risk of ventricular arrhythmias); buprenorphine possibly reduces plasma concentration of **TIPRANAVIR**; methadone possibly increases plasma concentration of **ZIDOVUDINE**
 - Anxiolytics and Hypnotics: increased sedative effect when opioid analgesics given with **ANXIOLYTICS** and **HYPNOTICS**; fentanyl possibly inhibits metabolism of **MIDAZOLAM**
 - Atomoxetine: increased risk of ventricular arrhythmias when methadone given with
 - **ATOMOXETINE**; possible increased risk of convulsions when tramadol given with **ATOMOXETINE**
 - Beta-blockers: morphine possibly increases plasma concentration of **ESMOLOL**
 - Calcium-channel Blockers: metabolism of alfentanil inhibited by **DILTIAZEM** (risk of prolonged or delayed respiratory depression)
 - Cytotoxics: possible increased risk of ventricular arrhythmias when methadone given with
 - **BOSUTINIB**; caution with alfentanil and fentanyl advised by manufacturer of
 - **CRIZOTINIB**; possible increased risk of ventricular arrhythmias when methadone given with
 - **VANDETANIB**—avoid concomitant use
 - Dapoxetine: possible increased risk of serotonergic effects when tramadol given with
 - **DAPOXETINE** (manufacturer of dapoxetine advises tramadol should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tramadol)
 - Domperidone: opioid analgesics antagonise effects of **DOMPERIDONE** on gastro-intestinal activity
 - Dopaminergics: avoid concomitant use of dextromethorphan with
 - **RASAGILINE**; risk of CNS toxicity when pethidine given with
 - **RASAGILINE** (avoid pethidine for 2 weeks after rasagiline); avoidance of opioid analgesics advised by manufacturer of **SELEGILINE**; hyperpyrexia and CNS toxicity reported when pethidine given with
 - **SELEGILINE** (avoid concomitant use)
 - Hormone Antagonists: plasma concentration of dextromethorphan increased by **ABIRATERONE**
 - 5HT₂-receptor Antagonists: effects of tramadol possibly antagonised by **ONDANSETRON**
 - Memantine: increased risk of CNS toxicity when dextromethorphan given with
 - **MEMANTINE** (manufacturer of memantine advises avoid concomitant use)
 - Metoclopramide: opioid analgesics antagonise effects of **METOCLOPRAMIDE** on gastro-intestinal activity
 - Muscle Relaxants: increased sedative effect when fentanyl or morphine given with **BACLOFEN**
 - Nalmefene: avoidance of opioid analgesics advised by manufacturer of
 - **NALMEFENE**

Opioid Analgesics (continued)

- **NETUPITANT**: caution with morphine advised by manufacturer of **NETUPITANT**
- Sodium Oxybate: opioid analgesics enhance effects of
 - **SODIUM OXYBATE** (avoid concomitant use)
- Ulcer-healing Drugs: metabolism of opioid analgesics inhibited by **CIMETIDINE** (increased plasma concentration)
- **Oritavancin**
 - Anticoagulants: oritavancin possibly increases plasma concentration of **WARFARIN**
 - Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC
- **Orlistat**
 - Anti-arrhythmics: orlistat possibly reduces plasma concentration of **AMIODARONE**
 - Anticoagulants: manufacturer of orlistat recommends monitoring anticoagulant effect of **COUMARINS**
 - Antidiabetics: manufacturer of orlistat advises avoid concomitant use with **ACARBOSE**
 - Antiepileptics: possible increased risk of convulsions when orlistat given with
 - **ANTIEPILEPTICS**
 - Antivirals: orlistat possibly reduces absorption of
 - **ABACAVIR**, **ATAZANAVIR**, **DARUNAVIR**, **DIDANOSINE**, **EFAVIRENZ**, **ELVITEGRAVIR**, **EMTRICITABINE**, **ENFUVIRTIDE**, **ETRAVIRINE**, **FOSAMPRENAVIR**, **INDINAVIR**, **LAMIVUDINE**, **LOPINAVIR**, **MARAVIROC**, **NEVIRAPINE**, **RALTEGRAVIR**, **RILPIVIRINE**, **RITONAVIR**, **SAQUINAVIR**, **STAVUDINE**, **TENOFOVIR**, **TIPRANAVIR** and **ZIDOVUDINE**
 - Ciclosporin: orlistat possibly reduces absorption of
 - **CICLOSPORIN**
 - Thyroid Hormones: possible increased risk of hypothyroidism when orlistat given with **LEVOTHYROXINE**
- **Orphenadrine** see Antimuscarinics
- **Oxaliplatin** see Platinum Compounds
- **Oxandrolone** see Anabolic Steroids
- **Oxazepam** see Anxiolytics and Hypnotics
- **Oxcarbazepine**
 - Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and
 - **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by
 - **SSRIs** and **TRICYCLICS** (convulsive threshold lowered)
 - Antiepileptics: oxcarbazepine sometimes reduces plasma concentration of **CARBAMAZEPINE** (but concentration of an active metabolite of carbamazepine may be increased), also plasma concentration of an active metabolite of oxcarbazepine often reduced; avoidance of oxcarbazepine advised by manufacturer of **ESLICARBAZEPINE**; oxcarbazepine increases plasma concentration of **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; oxcarbazepine reduces plasma concentration of
 - **PERAMPANEL**, also plasma concentration of oxcarbazepine increased (see under Perampanel, p. 193); plasma concentration of an active metabolite of oxcarbazepine sometimes reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
 - Antimalarials: anticonvulsant effect of antiepileptics antagonised by
 - **MEFLOQUINE**
 - Antipsychotics: anticonvulsant effect of antiepileptics antagonised by
 - **ANTIPSYCHOTICS** (convulsive threshold lowered)
 - Antivirals: oxcarbazepine possibly reduces plasma concentration of
 - **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; oxcarbazepine possibly reduces the plasma concentration of
 - **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); avoidance of oxcarbazepine advised by manufacturer of **LEDIPASVIR** and **SOFOSBUVIR**; avoidance of oxcarbazepine advised by manufacturer of
 - **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced)
 - Ciclosporin: oxcarbazepine possibly reduces plasma concentration of **CICLOSPORIN**
 - Clopidogrel: oxcarbazepine possibly reduces antiplatelet effect of
 - **CLOPIDOGREL**
 - Cytotoxics: oxcarbazepine reduces plasma concentration of
 - **IMATINIB**—avoid concomitant use

Oxcarbazepine (continued)

- Guanfacine: oxcarbazepine possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Oestrogens: oxcarbazepine accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: oxcarbazepine accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Oxprenolol see Beta-blockers

Oxybutynin see Antimuscarinics

Oxycodone see Opioid Analgesics

Oxymetazoline see Sympathomimetics

Oxytetracycline see Tetracyclines

Oxytocin

- Anaesthetics, General: oxytocic effect possibly reduced, also enhanced hypotensive effect and risk of arrhythmias when oxytocin given with **VOLATILE LIQUID GENERAL ANAESTHETICS**
- Prostaglandins: uterotonic effect of oxytocin potentiated by **PROSTAGLANDINS**
- Sympathomimetics: risk of hypertension when oxytocin given with vasoconstrictor **SYMPATHOMIMETICS** (due to enhanced vasopressor effect)

Paclitaxel

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of paclitaxel increased by **RITONAVIR**
- Cytotoxics: increased risk of neutropenia when paclitaxel given with ● **LAPATINIB**

Paliperidone see Antipsychotics

Palonosetron see 5HT₃-receptor Antagonists (under HT)

Pamidronate Disodium see Bisphosphonates

Pancreatin

- Antidiabetics: pancreatin antagonises hypoglycaemic effect of **ACARBOSE**

Pancuronium see Muscle Relaxants

Panitumumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: manufacturer of panitumumab advises avoid concomitant use with ● **BEVACIZUMAB**, ● **FLUOROURACIL**, ● **IRINOTECAN** and ● **OXALIPLATIN**
- Folate: manufacturer of panitumumab advises avoid concomitant use with ● **FOLINIC ACID**
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Pantoprazole see Proton Pump Inhibitors

Papaveretum see Opioid Analgesics

Paracetamol

- Anticoagulants: prolonged regular use of paracetamol possibly enhances anticoagulant effect of **COUMARINS**
- Antidiabetics: absorption of paracetamol possibly reduced when given 1 to 4 hours after **LIXISENATIDE**
- Antiepileptics: metabolism of paracetamol possibly accelerated by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (also isolated reports of hepatotoxicity)
- Antifungals: avoidance of paracetamol advised by manufacturer of **KETOCONAZOLE**
- Cytotoxics: paracetamol possibly inhibits metabolism of **intravenous BUSULFAN** (manufacturer of **intravenous busulfan** advises caution within 72 hours of paracetamol); caution with paracetamol advised by manufacturer of **IMATINIB**
- Lipid-regulating Drugs: absorption of paracetamol reduced by **COLESTYRAMINE**
- Metoclopramide: rate of absorption of paracetamol increased by **METOCLOPRAMIDE**

Paraldehyde

- Alcohol: increased sedative effect when paraldehyde given with ● **ALCOHOL**

Paraldehyde (continued)

- Disulfiram: risk of toxicity when paraldehyde given with ● **DISULFIRAM**

Parasympathomimetics

- Anti-arrhythmics: effects of neostigmine and pyridostigmine possibly antagonised by **PROPAFENONE**
- Antibacterials: plasma concentration of galantamine increased by **ERYTHROMYCIN**; effects of neostigmine and pyridostigmine antagonised by ● **AMINOGLYCOSIDES**; effects of neostigmine and pyridostigmine antagonised by **CLINDAMYCIN**; effects of neostigmine and pyridostigmine antagonised by ● **POLYMYXINS**
- Antidepressants: plasma concentration of galantamine increased by **PAROXETINE**
- Antifungals: plasma concentration of galantamine increased by **KETOCONAZOLE**
- Antimalarials: effects of neostigmine and pyridostigmine may be diminished because of potential for **CHLOROQUINE** to increase symptoms of myasthenia gravis; effects of neostigmine and pyridostigmine may be diminished because of potential for **HYDROXYCHLOROQUINE** to increase symptoms of myasthenia gravis
- Antimuscarinics: effects of parasympathomimetics antagonised by **ANTIMUSCARINICS**
- Beta-blockers: increased risk of arrhythmias when pilocarpine given with **BETA-BLOCKERS**; effects of neostigmine and pyridostigmine antagonised by **PROPRANOLOL**
- Cytotoxics: possible increased risk of bradycardia when pilocarpine given with **CRIZOTINIB**
- Lithium: effects of neostigmine antagonised by **LITHIUM**
- Muscle Relaxants: donepezil possibly enhances effects of **SUXAMETHONIUM**; galantamine, neostigmine, pyridostigmine and rivastigmine enhance effects of **SUXAMETHONIUM**; neostigmine, pyridostigmine and rivastigmine antagonise effects of **NON-DEPOLARISING MUSCLE RELAXANTS**; donepezil possibly antagonises effects of **NON-DEPOLARISING MUSCLE RELAXANTS**

Parecoxib see NSAIDs

Paricalcitol see Vitamins

Paritaprevir

- Angiotensin-II Receptor Antagonists: manufacturer of paritaprevir advises reduce dose when given with **VALSARTAN**
- Antibacterials: manufacturer of paritaprevir advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of paritaprevir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of paritaprevir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of paritaprevir advises avoid concomitant use
- Antiepileptics: plasma concentration of paritaprevir reduced by ● **CARBAMAZEPINE**—avoid concomitant use; plasma concentration of paritaprevir possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- Antifungals: plasma concentration of both drugs increased when paritaprevir given with ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of both drugs possibly increased when paritaprevir given with ● **ITRACONAZOLE** and ● **POSACONAZOLE**—avoid concomitant use
- Antivirals: plasma concentration of paritaprevir increased by ● **ATAZANAVIR**; plasma concentration of paritaprevir increased by ● **DARUNAVIR** and plasma concentration of darunavir decreased; manufacturer of paritaprevir advises avoid concomitant use with **EFAVIRENZ**, **ETRAVIRINE**, **INDINAVIR**, **NEVIRAPINE**, **SAQUINAVIR** and **TIPRANAVIR**; plasma concentration of paritaprevir increased by ● **LOPINAVIR**—manufacturer of paritaprevir advises avoid concomitant use
- Cardiac Glycosides: paritaprevir possibly increases plasma concentration of **DIGOXIN** (consider reducing dose of digoxin)
- Cobicistat: manufacturer of paritaprevir advises avoid concomitant use with **COBICISTAT**
- Cytotoxics: manufacturer of paritaprevir advises avoid concomitant use with **MITOTANE**
- Diuretics: paritaprevir increases plasma concentration of ● **FUROSEMIDE** (reduce dose of furosemide)
- Hormone Antagonists: manufacturer of paritaprevir advises avoid concomitant use with **ENZALUTAMIDE**

Paritaprevir (continued)

- Lipid-regulating Drugs: plasma concentration of paritaprevir increased by ● **GEMFIBROZIL**—manufacturer of paritaprevir advises avoid concomitant use; manufacturer of paritaprevir advises avoid concomitant use with ● **ATORVASTATIN**, **FLUVASTATIN** and ● **SIMVASTATIN**; paritaprevir increases plasma concentration of ● **PRAVASTATIN** (reduce dose of pravastatin); paritaprevir increases plasma concentration of ● **ROSUVASTATIN** (reduce dose of rosuvastatin—see under Rosuvastatin, in BNF)
- Oestrogens: manufacturer of paritaprevir advises avoid concomitant use of ● **ETHINYLESTRADIOL**—use alternative form of contraception

Paroxetine see Antidepressants, SSRI

Psireotide

- ▶ Antidiabetics: psireotide possibly reduces requirements for **ANTI-DIABETICS**
- ▶ Antifungals: avoidance of psireotide advised by manufacturer of **KETOCONAZOLE**
- ▶ Antimuscarinics: possible increased risk of bradycardia when psireotide given with **IPRATROPIUM** or **OXYBUTYRIN**
- ▶ Beta-blockers: possible increased risk of bradycardia when psireotide given with **CARTEOLOL**, **METOPROLOL**, **PROPRANOLOL** or **SOTALOL**
- ▶ Calcium-channel Blockers: possible increased risk of bradycardia when psireotide given with **DILTIAZEM** or **VERAPAMIL**
- Ciclosporin: psireotide possibly reduces plasma concentration of ● **CICLOSPORIN**

Pazopanib

- Antibacterials: plasma concentration of pazopanib possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN** (reduce dose of pazopanib); plasma concentration of pazopanib possibly reduced by ● **RIFAMPICIN**
- Antifungals: plasma concentration of pazopanib increased by ● **KETOCONAZOLE** (reduce dose of pazopanib); plasma concentration of pazopanib possibly increased by ● **ITRACONAZOLE** and ● **VORICONAZOLE** (reduce dose of pazopanib)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of pazopanib possibly increased by ● **ATAZANAVIR**, ● **INDINAVIR** and ● **RITONAVIR** (reduce dose of pazopanib); avoidance of pazopanib advised by manufacturer of ● **BOCEPREVIR**; increased risk of ventricular arrhythmias when pazopanib given with ● **SAQUINAVIR**—avoid concomitant use
- ▶ Cytotoxics: plasma concentration of pazopanib increased by **LAPATINIB**
- Grapefruit Juice: manufacturer of pazopanib advises avoid concomitant use with ● **GRAPEFRUIT JUICE**
- ▶ Lipid-regulating Drugs: separating administration from pazopanib by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ Ulcer-healing Drugs: absorption of pazopanib possibly reduced by **HISTAMINE H₂-ANTAGONISTS**—manufacturer of pazopanib advises give at least 2 hours before or 10 hours after histamine H₂-antagonists; absorption of pazopanib possibly reduced by **PROTON PUMP INHIBITORS**—manufacturer of pazopanib advises give at the same time as proton pump inhibitors

Pegfilgrastim

- Cytotoxics: neutropenia possibly exacerbated when pegfilgrastim given with **CAPECITABINE**, **FLUOROURACIL** or **TEGAFUR**

Peginterferon Alfa see Interferons

Pembrolizumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Pemetrexed

- ▶ Analgesics: renal excretion of pemetrexed possibly reduced by **NSAIDS** and **ASPIRIN**—consult product literature
- Antimalarials: atfolate effect of pemetrexed increased by ● **PYRIMETHAMINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Penicillamine

- ▶ Analgesics: possible increased risk of nephrotoxicity when penicillamine given with **NSAIDS**
- ▶ Antacids: absorption of penicillamine reduced by **ANTACIDS**
- ▶ Antimalarials: increased risk of haematological toxicity when penicillamine given with **ANTIMALARIALS**—manufacturer of penicillamine advises avoid concomitant use
- Antipsychotics: increased risk of haematological toxicity when penicillamine given with ● **CLOZAPINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Cardiac Glycosides: penicillamine possibly reduces plasma concentration of **DIGOXIN**
- ▶ Iron Salts: absorption of penicillamine reduced by oral **IRON SALTS**
- Sodium Aurothiomalate: increased risk of haematological toxicity when penicillamine given with ● **SODIUM AUROTHIOMALATE**—see under Penicillamine, in BNF)
- ▶ Zinc: penicillamine reduces absorption of **ZINC**, also absorption of penicillamine reduced by zinc

Penicillins

- ▶ Allopranolol: increased risk of rash when amoxicillin, ampicillin or co-amoxiclav given with **ALLOPURINOL**
- ▶ Antibacterials: absorption of phenoxymethylpenicillin reduced by **NEOMYCIN**; effects of penicillins possibly antagonised by **TETRACYCLINES**
- ▶ Anticoagulants: an interaction between broad-spectrum penicillins and **COUMARINS** and **PHENINDIONE** has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered
- Antiepileptics: manufacturer of pivmecillinam advises avoid concomitant use with ● **SODIUM VALPROATE** and ● **VALPROIC ACID**
- ▶ Cytotoxics: penicillins reduce excretion of **METHOTREXATE** (increased risk of toxicity)
- ▶ Muscle Relaxants: piperacillin enhances effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**
- ▶ Mycophenolate: co-amoxiclav possibly reduces plasma concentration of **MYCOPHENOLATE**
- ▶ Sulfinpyrazone: excretion of penicillins reduced by **SULFINPYRAZONE**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF

Pentamidine Isetionate

- Anti-arrhythmics: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **AMIODARONE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **DISOPYRAMIDE**
- Antibacterials: increased risk of ventricular arrhythmias when pentamidine isetionate given with *parenteral* ● **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **MOXIFLOXACIN**—avoid concomitant use; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **DELANADIN**; possible increased risk of ventricular arrhythmias when *parenteral* pentamidine isetionate given with ● **TELITHROMYCIN**
- Antidepressants: avoidance of pentamidine isetionate advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **TRICYCLICS**
- ▶ Antifungals: possible increased risk of nephrotoxicity when pentamidine isetionate given with **AMPHOTERICIN**
- Antimalarials: avoidance of pentamidine isetionate advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- Antipsychotics: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **AMISULPRIDE** or ● **DROPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **PHENOTHIAZINES**
- Antivirals: increased risk of hypocalcaemia when *parenteral* pentamidine isetionate given with ● **FOSCARNET**; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **SAQUINAVIR**—avoid concomitant use

Pentamidine Isetionate (continued)

- Cytotoxics: possible increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **VANDETANIB**—avoid concomitant use
- Ivabradine: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **IVABRADINE**

Pentazocine see Opioid Analgesics**Pentostatin**

- Antipshotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased toxicity when pentostatin given with high-dose ● **CYCLOPHOSPHAMIDE**—avoid concomitant use; increased pulmonary toxicity when pentostatin given with ● **FLUDARABINE** (unacceptably high incidence of fatalities)

Pentoxifylline

- Aminophylline: pentoxifylline increases plasma concentration of **AMINOPHYLLINE**
- Analgesics: possible increased risk of bleeding when pentoxifylline given with **NSAIDS**; increased risk of bleeding when pentoxifylline given with ● **KETOROLAC** (avoid concomitant use)
- Theophylline: pentoxifylline increases plasma concentration of **THEOPHYLLINE**

Perampanel

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of perampanel reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN** (see under Perampanel, p. 193); plasma concentration of perampanel reduced by ● **OXCARBAMAZEPINE**, also plasma concentration of oxcabazepine increased (see under Perampanel, p. 193); plasma concentration of perampanel reduced by **TOPIRAMATE**
- Antifungals: plasma concentration of perampanel increased by **KETOCONAZOLE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Anxiolytics and Hypnotics: perampanel reduces plasma concentration of **MIDAZOLAM**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: perampanel accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Pergolide

- Antipsychotics: effects of pergolide antagonised by **ANTIPSYCHOTICS**
- Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- Metoclopramide: antiparkinsonian effect of pergolide antagonised by **METOCLOPRAMIDE**

Pericyazine see Antipsychotics**Perindopril** see ACE Inhibitors**Perphenazine** see Antipsychotics**Pertuzumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Pethidine see Opioid Analgesics**Phenelzine** see MAOIs**Phenindione**

NOTE Change in patient's clinical condition particularly associated with liver disease, intercurrent illness, or drug administration, necessitates more frequent testing. Major changes in diet (especially involving salads and vegetables)

Phenindione (continued)

- and in alcohol consumption may also affect anticoagulant control
- Alcohol: anticoagulant control with phenindione may be affected by major changes in consumption of ● **ALCOHOL**
- Anabolic Steroids: anticoagulant effect of phenindione enhanced by ● **ANABOLIC STEROIDS**
- Analgesics: anticoagulant effect of phenindione possibly enhanced by ● **NSAIDS**; increased risk of haemorrhage when anticoagulants given with **intravenous** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins); increased risk of bleeding when phenindione given with ● **ASPIRIN** (due to antiplatelet effect)
- Anti-arrhythmics: metabolism of phenindione inhibited by ● **AMIODARONE** (enhanced anticoagulant effect); anticoagulant effect of phenindione possibly enhanced by ● **DRONEDARONE**
- Antibacterials: experience in anticoagulant clinics suggests that INR possibly altered when phenindione is given with ● **NEOMYCIN** (given for local action on gut); anticoagulant effect of phenindione possibly enhanced by **LEVOFLOXACIN** and ● **TETRACYCLINES**; an interaction between phenindione and broad-spectrum **PENICILLINS** has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered; metabolism of phenindione possibly inhibited by **SULFONAMIDES**
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antivirals: anticoagulant effect of phenindione possibly enhanced by ● **RITONAVIR**
- Clopidogrel: anticoagulant effect of phenindione enhanced due to antiplatelet action of ● **CLOPIDOGREL**
- Corticosteroids: anticoagulant effect of phenindione may be enhanced or reduced by **CORTICOSTEROIDS**
- Cytotoxics: avoidance of phenindione advised by manufacturer of **IBRUTINIB**
- Dipyridamole: anticoagulant effect of phenindione enhanced due to antiplatelet action of ● **DIPYRIDAMOLE**
- Enteral Feeds: anticoagulant effect of phenindione antagonised by vitamin K (present in some ● **ENTERAL FEEDS**)
- Iloprost: increased risk of bleeding when phenindione given with **ILOPROST**
- Lipid-regulating Drugs: anticoagulant effect of phenindione may be enhanced or reduced by ● **COLESTYRAMINE**; anticoagulant effect of phenindione possibly enhanced by ● **ROSUVASTATIN**; anticoagulant effect of phenindione enhanced by ● **FIBRATES**
- Oestrogens: anticoagulant effect of phenindione antagonised by ● **OESTROGENS**
- Prasugrel: possible increased risk of bleeding when phenindione given with **PRASUGREL**
- Progestogens: anticoagulant effect of phenindione antagonised by ● **PROGESTOGENS**
- Testolactone: anticoagulant effect of phenindione enhanced by ● **TESTOLACTONE**
- Testosterone: anticoagulant effect of phenindione enhanced by ● **TESTOSTERONE**
- Thyroid Hormones: anticoagulant effect of phenindione enhanced by ● **THYROID HORMONES**
- Vitamins: anticoagulant effect of phenindione antagonised by ● **VITAMIN K**

Phenobarbital

- Alcohol: increased sedative effect when phenobarbital given with **ALCOHOL**
- Aminophylline: phenobarbital accelerates metabolism of ● **AMINOPHYLLINE** (reduced effect)
- Analgesics: phenobarbital reduces plasma concentration of **METHADONE**; phenobarbital possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- Anthelmintics: phenobarbital reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing

Phenobarbital

- Anthelmintics (continued)
 - albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: phenobarbital accelerates metabolism of **DISOPYRAMIDE** (reduced plasma concentration); phenobarbital possibly reduces plasma concentration of **DRONEDARONE**—avoid concomitant use; phenobarbital possibly accelerates metabolism of **PROPAFENONE**
- Antibacterials: phenobarbital accelerates metabolism of **METRONIDAZOLE** (reduced effect); phenobarbital possibly reduces plasma concentration of **RIFAMPICIN**; phenobarbital accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); phenobarbital possibly accelerates metabolism of **CHLORAMPHENICOL** (reduced plasma concentration); phenobarbital reduces plasma concentration of **TELITHROMYCIN** (avoid during and for 2 weeks after phenobarbital)
- Anticoagulants: phenobarbital possibly reduces plasma concentration of **APIXABAN** and **EDOXABAN**; phenobarbital accelerates metabolism of **COUMARINS** (reduced anticoagulant effect); phenobarbital possibly reduces plasma concentration of **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: phenobarbital possibly reduces plasma concentration of **REBOXETINE**; phenobarbital reduces plasma concentration of **PAROXETINE**; phenobarbital accelerates metabolism of **MIANSERIN** (reduced plasma concentration); anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered); plasma concentration of phenobarbital possibly reduced by **ST JOHN'S WORT**—avoid concomitant use; phenobarbital possibly accelerates metabolism of **TRICYCLICS** (reduced plasma concentration)
- Antiepileptics: plasma concentration of phenobarbital possibly increased by **CARBAMAZEPINE**; phenobarbital possibly reduces plasma concentration of **ETHOSUXIMIDE**, **RUFINAMIDE** and **TOPIRAMATE**; plasma concentration of phenobarbital often increased by **FOSPHENYTOIN** and **PHENYTOIN**, plasma concentration of fosphenytoin and phenytoin often reduced but may be increased; phenobarbital reduces plasma concentration of **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of phenobarbital increased by **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; plasma concentration of phenobarbital increased by **SODIUM VALPROATE** and **VALPROIC ACID** (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of phenobarbital increased by **STIRIPENTOL**
- Antifungals: phenobarbital possibly reduces plasma concentration of **ITRACONAZOLE** and **POSACONAZOLE**; phenobarbital possibly reduces plasma concentration of **VORICONAZOLE**—avoid concomitant use; phenobarbital reduces absorption of **GRISEOFULVIN** (reduced effect)
- Antimalarials: avoidance of phenobarbital advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
- Antimuscarinics: phenobarbital possibly reduces plasma concentration of active metabolite of **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered); phenobarbital accelerates metabolism of **HALOPERIDOL** (reduced plasma concentration); plasma concentration of both drugs reduced when phenobarbital given with **CHLORPROMAZINE**; phenobarbital possibly reduces plasma concentration of **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); phenobarbital possibly reduces plasma concentration of **CLOZAPINE**; phenobarbital possibly reduces plasma concentration of **LURASIDONE**—avoid concomitant use
- Antivirals: phenobarbital possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **FOSAMPRENAVIR**,

Phenobarbital

- Antivirals (continued)
 - **INDINAVIR**, **LOPINAVIR** and **SAQUINAVIR**; avoidance of phenobarbital advised by manufacturer of **BOCEPREVIR** and **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); phenobarbital possibly reduces plasma concentration of **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; phenobarbital possibly reduces plasma concentration of **DASABUVIR**, **OMBITASVIR** and **PARITAPREVIR**—avoid concomitant use; phenobarbital possibly reduces the plasma concentration of **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); avoidance of phenobarbital advised by manufacturer of **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and **TELAPREVIR**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when phenobarbital given with **ANXIOLYTICS AND HYPNOTICS**; phenobarbital often reduces plasma concentration of **CLONAZEPAM**
- Premilast: phenobarbital possibly reduces plasma concentration of **APREMILAST**—avoid concomitant use
- ▶ Aprepitant: phenobarbital possibly reduces plasma concentration of **APREPITANT**
- ▶ Avanafil: phenobarbital possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- ▶ Beta-blockers: phenobarbital possibly reduces plasma concentration of **PROPRANOLOL**
- Bile Acids: avoidance of phenobarbital advised by manufacturer of **CHOLIC ACID**
- ▶ Caffeine citrate: effects of phenobarbital possibly antagonised by **CAFFEINE CITRATE**
- Calcium-channel Blockers: phenobarbital probably reduces effects of **CALCIUM-CHANNEL BLOCKERS**; avoidance of phenobarbital advised by manufacturer of **ISRADIPINE**; avoidance of phenobarbital advised by manufacturer of **NIMODIPINE** (plasma concentration of nimodipine reduced)
- Cannabis Extract: phenobarbital possibly reduces plasma concentration of **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- Ciclosporin: phenobarbital accelerates metabolism of **CICLOSPORIN** (reduced plasma concentration)
- Cobicistat: phenobarbital possibly reduces plasma concentration of **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: phenobarbital accelerates metabolism of **CORTICOSTEROIDS** (reduced effect)
- Cytotoxics: phenobarbital possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); phenobarbital possibly reduces plasma concentration of **BORTEZOMIB**, **BOSUTINIB**, **CRIZOTINIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib and ponatinib advises avoid concomitant use; phenobarbital possibly reduces plasma concentration of **CABOZANTINIB**—avoid concomitant use; avoidance of phenobarbital advised by manufacturer of **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB** and **OLAPARIB**; avoidance of phenobarbital advised by manufacturer of **DASATINIB** and **VANDETANIB** (plasma concentration of dasatinib and vandetanib possibly reduced); phenobarbital possibly reduces plasma concentration of **ETOPOSIDE**; phenobarbital reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procabazine advises possible increased risk of hypersensitivity reactions when phenobarbital given with **PROCARBAZINE**
- Diuretics: phenobarbital reduces plasma concentration of **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when phenobarbital given with **CARBONIC ANHYDRASE INHIBITORS**
- ▶ Folate: plasma concentration of phenobarbital possibly reduced by **FOLATES**
- ▶ Fosaprepitant: phenobarbital possibly reduces plasma concentration of **FOSAPREPITANT**
- Guanfacine: phenobarbital possibly reduces plasma concentration of **GUANFACINE**—increase dose of guanfacine

Phenobarbital (continued)

- **Hormone Antagonists:** phenobarbital possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; phenobarbital accelerates metabolism of **TORÉMIFENE** (reduced plasma concentration)
- **Ivacaftor:** phenobarbital possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- **Leukotriene Receptor Antagonists:** phenobarbital reduces plasma concentration of **MONTELUKAST**
- **Oestrogens:** phenobarbital accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- **Progestogens:** phenobarbital accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- **Roflumilast:** phenobarbital possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- **Sodium Oxybate:** avoidance of phenobarbital advised by manufacturer of **SODIUM OXYBATE**
- **Sympathomimetics:** plasma concentration of phenobarbital possibly increased by **METHYLPHENIDATE**
- **Tacrolimus:** phenobarbital reduces plasma concentration of ● **TACROLIMUS**
- **Theophylline:** phenobarbital accelerates metabolism of ● **THEOPHYLLINE** (reduced effect)
- **Thyroid Hormones:** phenobarbital accelerates metabolism of **THYROID HORMONES** (may increase requirements for thyroid hormones in hypothyroidism)
- **Ticagrelor:** phenobarbital possibly reduces plasma concentration of **TICAGRELOR**
- **Ulipristal:** avoidance of phenobarbital advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- **Vitamins:** phenobarbital possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

Phenothiazines see Antipsychotics

Phenoxybenzamine see Alpha-blockers

Phenoxymethylpenicillin see Penicillins

Phentolamine see Alpha-blockers

Phenylephrine see Sympathomimetics

Phenytoin

- **Alcohol:** plasma concentration of phenytoin possibly reduced by chronic heavy consumption of **ALCOHOL**
- **Aminophylline:** plasma concentration of both drugs reduced when phenytoin given with ● **AMINOPHYLLINE**
- **Analgesics:** excretion of phenytoin possibly reduced by **ACETAMIN** (increased risk of toxicity); phenytoin possibly accelerates metabolism of **FENTANYL** (reduced effect); phenytoin accelerates metabolism of **METHADONE** (reduced effect and risk of withdrawal effects); phenytoin possibly increases risk of ● **PETHIDINE** toxicity; effects of phenytoin enhanced by **ASPIRIN**; phenytoin possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- **Antacids:** absorption of phenytoin reduced by **ANTACIDS**
- **Anthelmintics:** phenytoin reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections; plasma concentration of phenytoin possibly increased by **LEVAMISOLE**
- **Anti-arrhythmics:** metabolism of phenytoin inhibited by ● **AMIODARONE** (increased plasma concentration); phenytoin reduces plasma concentration of **DISOPYRAMIDE**; phenytoin possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use

Phenytoin (continued)

- **Antibacterials:** metabolism of phenytoin inhibited by **CLARITHROMYCIN** (increased plasma concentration); metabolism of phenytoin possibly inhibited by **METRONIDAZOLE** (increased plasma concentration); plasma concentration of phenytoin increased or decreased by **CIPROFLOXACIN**; phenytoin accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); phenytoin possibly reduces plasma concentration of ● **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; plasma concentration of phenytoin increased by ● **CHLORAMPHENICOL** (increased risk of toxicity); metabolism of phenytoin possibly inhibited by **ISONIAZID** (increased risk of toxicity); metabolism of phenytoin accelerated by ● **RIFAMYCINS** (reduced plasma concentration); plasma concentration of phenytoin possibly increased by **SULFONAMIDES**; phenytoin reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after phenytoin); plasma concentration of phenytoin increased by ● **TRIMETHOPRIM** (also increased antifolate effect)
- **Anticoagulants:** phenytoin possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOXABAN**; phenytoin accelerates metabolism of ● **COUMARINS** (possibility of reduced anticoagulant effect, but enhancement also reported); phenytoin possibly reduces plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- **Antidepressants:** plasma concentration of phenytoin increased by ● **FLUOXETINE** and ● **FLUVOXAMINE**; phenytoin reduces plasma concentration of ● **MIANSERIN**, **MIRTAZAPINE** and **PAROXETINE**; plasma concentration of phenytoin possibly increased by **SERTRALINE**, also plasma concentration of sertraline possibly reduced; anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of phenytoin possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **TRICYCLICS**; phenytoin possibly reduces plasma concentration of ● **VORTIOXETINE**—consider increasing dose of vortioxetine
- **Antidiabetics:** plasma concentration of phenytoin transiently increased by **TOLBUTAMIDE** (possibility of toxicity)
- **Antiepileptics:** plasma concentration of both drugs often reduced when phenytoin given with **CARBAMAZEPINE**, also plasma concentration of phenytoin may be increased; phenytoin reduces plasma concentration of **ESLICARBAMAZEPINE**, also plasma concentration of phenytoin increased; plasma concentration of phenytoin possibly increased by ● **ETHOSUXIMIDE**, also plasma concentration of ethosuximide possibly reduced; phenytoin reduces plasma concentration of **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of phenytoin increased by **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; phenytoin reduces plasma concentration of ● **PERAMPANEL** (see under Perampanel, p. 193); phenytoin often increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**, plasma concentration of phenytoin often reduced but may be increased; phenytoin possibly reduces plasma concentration of **RETIGABINE**; phenytoin possibly reduces plasma concentration of **RUFINAMIDE**, also plasma concentration of phenytoin possibly increased; plasma concentration of phenytoin increased or possibly reduced when given with **SODIUM VALPROATE** and **VALPROIC ACID**, also plasma concentration of sodium valproate and valproic acid reduced; plasma concentration of phenytoin increased by ● **STIRIPENTOL**; plasma concentration of phenytoin increased by ● **TOPIRAMATE** (also plasma concentration of topiramate reduced); plasma concentration of phenytoin reduced by **VIGABATRIN**
- **Antifungals:** phenytoin reduces plasma concentration of ● **KETOCONAZOLE** and ● **POSACONAZOLE**; anticonvulsant effect of phenytoin enhanced by ● **MICONAZOLE** (plasma concentration

Phenytoin

- **Antifungals (continued)**
- of phenytoin increased); plasma concentration of phenytoin increased by ● **FLUCONAZOLE** (consider reducing dose of phenytoin); phenytoin reduces plasma concentration of ● **ITRACONAZOLE**—avoid concomitant use; plasma concentration of phenytoin increased by ● **VORICONAZOLE**, also phenytoin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for phenytoin toxicity); phenytoin possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin
- **Antifolates:** avoidance of phenytoin advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**; anticonvulsant effect of phenytoin antagonised by ● **PYRIMETHAMINE**, also increased antifolate effect
- **Antimuscarinics:** phenytoin possibly reduces plasma concentration of active metabolite of ● **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- **Antipsychotics:** anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); phenytoin reduces plasma concentration of **HALOPERIDOL**; plasma concentration of phenytoin possibly increased or decreased by **CHLORPROMAZINE**; phenytoin possibly reduces plasma concentration of ● **ARIPIRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); phenytoin accelerates metabolism of **CLOZAPINE** and **QUETIAPINE** (reduced plasma concentration); phenytoin possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- **Antivirals:** phenytoin possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **LOPINAVIR** and **SAQUINAVIR**; avoidance of phenytoin advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); phenytoin possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; phenytoin possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); avoidance of phenytoin advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**; phenytoin possibly reduces plasma concentration of ● **INDINAVIR**, also plasma concentration of phenytoin possibly increased; phenytoin possibly reduces plasma concentration of **RITONAVIR**, also plasma concentration of phenytoin possibly affected; plasma concentration of phenytoin increased or decreased by **ZIDOVUDINE**
- **Anxiolytics and Hypnotics:** phenytoin often reduces plasma concentration of **CLONAZEPAM**; plasma concentration of phenytoin increased or decreased by **DIAZEPAM**; plasma concentration of phenytoin possibly increased or decreased by **BENZODIAZEPINES**
- **Apremilast:** phenytoin possibly reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- **Aprepitant:** phenytoin possibly reduces plasma concentration of **APREPITANT**
- **Bupropion:** phenytoin reduces plasma concentration of **BUPROPION**
- **Caffeine citrate:** phenytoin reduces plasma concentration of **CAFFEINE CITRATE**
- **Calcium-channel Blockers:** phenytoin reduces effects of **FELODIPINE** and **VERAPAMIL**; avoidance of phenytoin advised by manufacturer of **ISRADIPINE**; avoidance of phenytoin advised by manufacturer of **NIMODIPINE** (plasma concentration of nimodipine possibly reduced); plasma concentration of phenytoin increased by ● **DILTIAZEM** but also effect of diltiazem reduced
- **Cannabis Extract:** phenytoin possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- **Cardiac Glycosides:** phenytoin possibly reduces plasma concentration of **DIGOXIN**

Phenytoin (continued)

- **Ciclosporin:** phenytoin accelerates metabolism of ● **CICLOSPORIN** (reduced plasma concentration)
- **Cobicistat:** phenytoin possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Corticosteroids:** phenytoin accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- **Cytotoxics:** phenytoin possibly reduces plasma concentration of **BUSULFAN**, **ERIBULIN** and **ETOPOSIDE**; metabolism of phenytoin possibly inhibited by **CAPECITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased risk of toxicity); phenytoin increases antifolate effect of **METHOTREXATE**; plasma concentration of phenytoin possibly reduced by **CISPLATIN**; phenytoin possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); phenytoin possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB**, ● **IBRUTINIB**, ● **IDELALISIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib, ibrutinib, idelalisib and ponatinib advises avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **CABOZANTINIB**—avoid concomitant use; avoidance of phenytoin advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB**, ● **LAPATINIB**, ● **OLAPARIB** and **VEMURAFENIB**; avoidance of phenytoin advised by manufacturer of **DASATINIB** and ● **VISMODEGIB** (plasma concentration of dasatinib and vismodegib possibly reduced); phenytoin reduces plasma concentration of ● **IMATINIB**—avoid concomitant use; phenytoin reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when phenytoin given with **PROCARBAZINE**
- **Dexrazoxane:** absorption of phenytoin possibly reduced by ● **DEXRAZOXANE**
- **Diazoxide:** plasma concentration of phenytoin reduced by **DIAZOXIDE**, also effect of diazoxide may be reduced
- **Disulfiram:** metabolism of phenytoin inhibited by ● **DISULFIRAM** (increased risk of toxicity)
- **Diuretics:** plasma concentration of phenytoin possibly increased by ● **ACETAZOLAMIDE**; phenytoin antagonises effects of **FUROSEMIDE**; phenytoin reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when phenytoin given with **CARBONIC ANHYDRASE INHIBITORS**
- **Dopaminergics:** phenytoin possibly reduces effects of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- **Enteral Feeds:** absorption of phenytoin possibly reduced by **ENTERAL FEEDS**
- **Folates:** plasma concentration of phenytoin possibly reduced by **FOLATES**
- **Fosaprepitant:** phenytoin possibly reduces plasma concentration of **FOSAPREPITANT**
- **Guanfacine:** phenytoin possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Hormone Antagonists:** phenytoin possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; phenytoin possibly accelerates metabolism of **TOREMIFENE**
- **5HT₃-receptor Antagonists:** phenytoin accelerates metabolism of **ONDANSETRON** (reduced effect)
- **Ivacaftor:** phenytoin possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- **Leflunomide:** plasma concentration of phenytoin possibly increased by **LEFLUNOMIDE**
- **Lipid-regulating Drugs:** absorption of phenytoin possibly reduced by **COLESEVELAM**; combination of phenytoin with **FLUVASTATIN** may increase plasma concentration of either drug (or both)
- **Lithium:** neurotoxicity may occur when phenytoin given with **LITHIUM** without increased plasma concentration of lithium
- **Macitentan:** avoidance of phenytoin advised by manufacturer of **MACITENTAN**
- **Modafinil:** plasma concentration of phenytoin possibly increased by **MODAFINIL**

Phenytoin (continued)

- **Muscle Relaxants:** *long-term use* of phenytoin reduces effects of
 - **NON-DEPOLARISING MUSCLE RELAXANTS** (but *acute use* of phenytoin might increase effects of non-depolarising muscle relaxants)
- **Oestrogens:** phenytoin accelerates metabolism of
 - **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see **Contraceptive Interactions** in BNFC)
- **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- **Progestogens:** phenytoin accelerates metabolism of
 - **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see **Contraceptive Interactions** in BNFC)
- **Roflumilast:** phenytoin possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- **Sulfinpyrazone:** plasma concentration of phenytoin increased by ● **SULFINPYRAZONE**
- **Sympathomimetics:** plasma concentration of phenytoin increased by ● **METHYLPHENIDATE**
- **Tacrolimus:** phenytoin reduces plasma concentration of **TACROLIMUS**, also plasma concentration of phenytoin possibly increased
- **Theophylline:** plasma concentration of both drugs reduced when phenytoin given with ● **THEOPHYLLINE**
- **Thyroid Hormones:** phenytoin accelerates metabolism of **THYROID HORMONES** (may increase requirements in hypothyroidism), also plasma concentration of phenytoin possibly increased
- **Tibolone:** phenytoin accelerates metabolism of **TIBOLONE**
- **Ticagrelor:** phenytoin possibly reduces plasma concentration of **TICAGRELOR**
- **Ulcer-healing Drugs:** metabolism of phenytoin inhibited by
 - **CIMETIDINE** (increased plasma concentration); effects of phenytoin enhanced by ● **ESOMEPRAZOLE**; effects of phenytoin possibly enhanced by **OMEPRAZOLE**; absorption of phenytoin reduced by ● **SUCRALFATE**
- **Ulipristal:** avoidance of phenytoin advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- **Vaccines:** effects of phenytoin enhanced by **INFLUENZA VACCINE**
- **Vitamins:** phenytoin possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

Pholcodine

- **Antidepressants:** manufacturer of pholcodine advises avoid for 2 weeks after stopping **MAOIs**

Phosphodiesterase Type-3 Inhibitors

- **Anagrelide:** avoidance of enoximone and milrinone advised by manufacturer of ● **ANAGRELIDE**

Pilocarpine see Parasympathomimetics**Pimozide** see Antipsychotics**Pindolol** see Beta-blockers**Pioglitazone** see Antidiabetics**Piperacillin** see Penicillins**Piperaquine** see Artemimol with Piperaquine**Pirfenidone**

- **Antibacterials:** plasma concentration of pirfenidone increased by ● **CIPROFLOXACIN**—see under Pirfenidone, in BNF
- **Antidepressants:** plasma concentration of pirfenidone increased by ● **FLUVOXAMINE**—manufacturer of pirfenidone advises avoid concomitant use
- **Grapefruit Juice:** manufacturer of pirfenidone advises avoid concomitant use with **GRAPEFRUIT JUICE**

Piroxicam see NSAIDs**Pivmecillinam** see Penicillins**Pixantrone**

- **Antipsychotics:** avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines:** risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

Pizotifen

- **Adrenergic Neurone Blockers:** pizotifen antagonises hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**

Platinum Compounds

- **Aldesleukin:** avoidance of cisplatin advised by manufacturer of ● **ALDESLEUKIN**
- **Antibacterials:** increased risk of nephrotoxicity and possibly of ototoxicity when platinum compounds given with
 - **AMINOGLYCOSIDES** or ● **POLYMYXINS**; increased risk of nephrotoxicity and ototoxicity when platinum compounds given with **CAPREOMYCIN**; increased risk of nephrotoxicity and possibly of ototoxicity when cisplatin given with **VANCOMYCIN**
- **Antiepileptics:** cisplatin possibly reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- **Antipsychotics:** avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- **Cytotoxics:** increased risk of toxicity when cisplatin given with
 - **IFOSFAMIDE**; increased pulmonary toxicity when cisplatin given with ● **BLEOMYCIN** and ● **METHOTREXATE**; avoidance of oxaliplatin advised by manufacturer of ● **PANITUMUMAB**
- **Diuretics:** increased risk of nephrotoxicity and ototoxicity when platinum compounds given with **DIURETICS**

Pneumococcal Vaccine see Vaccines**Polymycolitis Vaccine** see Vaccines**Polymyxins**

- **Antibacterials:** increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with **AMINOGLYCOSIDES**; increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with **CAPREOMYCIN**; increased risk of nephrotoxicity when polymyxins given with **VANCOMYCIN**; increased risk of nephrotoxicity and ototoxicity when colistimethate sodium given with **VANCOMYCIN**
- **Antifungals:** increased risk of nephrotoxicity when polymyxins given with **AMPHOTERICIN**
- **Ciclosporin:** increased risk of nephrotoxicity when polymyxins given with ● **CICLOSPORIN**
- **Cytotoxics:** increased risk of nephrotoxicity and possibly of ototoxicity when polymyxins given with ● **PLATINUM COMPOUNDS**
- **Diuretics:** increased risk of ototoxicity when polymyxins given with ● **LOOP DIURETICS**
- **Muscle Relaxants:** polymyxins enhance effects of ● **NON-DEPOLARISING MUSCLE RELAXANTS** and ● **SUXAMETHONIUM**
- **Parasympathomimetics:** polymyxins antagonise effects of
 - **NEOSTIGMINE** and ● **PYRIDOSTIGMINE**
- **Vaccines:** antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Polysaccharide-iron Complex see Iron salts**Polystyrene Sulfonate Resins**

- **Antacids:** risk of intestinal obstruction when polystyrene sulfonate resins given with **ALUMINIUM HYDROXIDE**; risk of metabolic alkalosis when polystyrene sulfonate resins given with **ORAL MAGNESIUM SALTS**
- **Thyroid Hormones:** polystyrene sulfonate resins reduce absorption of **LEVOTHYROXINE**

Pomalidomide

- **Antidepressants:** plasma concentration of pomalidomide increased by ● **FLUVOXAMINE**

Ponatinib

- **Antibacterials:** plasma concentration of ponatinib possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF); plasma concentration of ponatinib possibly reduced by **RIFABUTIN**—manufacturer of ponatinib advises avoid concomitant use; plasma concentration of ponatinib reduced by ● **RIFAMPICIN**—manufacturer of ponatinib advises avoid concomitant use
- **Antidepressants:** plasma concentration of ponatinib possibly reduced by **ST JOHN'S WORT**—manufacturer of ponatinib advises avoid concomitant use
- **Antiepileptics:** plasma concentration of ponatinib possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—manufacturer of ponatinib advises avoid concomitant use

Ponatinib (continued)

- ▶ Antifungals: plasma concentration of ponatinib increased by **KETOCONAZOLE**; plasma concentration of ponatinib possibly increased by **ITRACONAZOLE** and **VORICONAZOLE**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF)
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Antivirals: plasma concentration of ponatinib possibly increased by **INDINAVIR**, **RTONAVIR** and **SAQUINAVIR**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF)
- ▶ Grapefruit Juice: plasma concentration of ponatinib possibly increased by **GRAPEFRUIT JUICE**

Posaconazole see Antifungals, Triazole

Potassium Canrenoate see Diuretics

Potassium Aminobenzoate

- ▶ Antibacterials: potassium aminobenzoate inhibits effects of **SULFONAMIDES**

Potassium Bicarbonate see Potassium Salts

Potassium Chloride see Potassium Salts

Potassium Citrate see Potassium Salts

Potassium Salts

NOTE Includes salt substitutes

- ACE Inhibitors: increased risk of severe hyperkalaemia when potassium salts given with ● **ACE INHIBITORS**
- ▶ Aliskiren: increased risk of hyperkalaemia when potassium salts given with **ALISKIREN**
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when potassium salts given with
 - **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Antibacterials: avoid concomitant use of potassium citrate with **METHENAMINE**
- Ciclosporin: increased risk of hyperkalaemia when potassium salts given with ● **CICLOSPORIN**
- Diuretics: increased risk of hyperkalaemia when potassium salts given with ● **POTASSIUM-SPARING DIURETICS AND ALDOSTERONE ANTAGONISTS**
- Tacrolimus: increased risk of hyperkalaemia when potassium salts given with ● **TACROLIMUS**
- ▶ Ulcer-healing Drugs: avoidance of potassium citrate advised by manufacturer of **SUCRALFATE**

Pramipexole

- ▶ Antipsychotics: manufacturer of pramipexole advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Ulcer-healing Drugs: excretion of pramipexole reduced by **CIMETIDINE** (increased plasma concentration)

Prasugrel

- ▶ Analgesics: possible increased risk of bleeding when prasugrel given with **NSAIDS**
- ▶ Anticoagulants: possible increased risk of bleeding when prasugrel given with **COUMARINS** or **PHENINDIONE**
- ▶ Clopidogrel: possible increased risk of bleeding when prasugrel given with **CLOPIDOGREL**

Pravastatin see Statins

Praziquantel

- Antibacterials: plasma concentration of praziquantel reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antiepileptics: plasma concentration of praziquantel reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—consider increasing praziquantel dose when given for systemic infections
- ▶ Antifungals: plasma concentration of praziquantel increased by **KETOCONAZOLE**
- Antimalarials: plasma concentration of praziquantel reduced by ● **CHLOROQUINE**—consider increasing praziquantel dose when given for systemic infections
- ▶ Corticosteroids: plasma concentration of praziquantel possibly reduced by continuous use of **DEXAMETHASONE**
- ▶ Grapefruit Juice: plasma concentration of praziquantel increased by **GRAPEFRUIT JUICE**

Praziquantel (continued)

- ▶ Ulcer-healing Drugs: plasma concentration of praziquantel increased by **CIMETIDINE**

Prazosin see Alpha-blockers

Prednisolone see Corticosteroids

Prednisone see Corticosteroids

Pregabalin

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Prilocaline

- ▶ Anti-arrhythmics: increased myocardial depression when prilocaline given with **ANTI-ARRHYTHMICS**
- ▶ Antibacterials: increased risk of methaemoglobinaemia when prilocaline given with **SULFONAMIDES**

Primaquine

- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFRANTINE**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Mepacrine: plasma concentration of primaquine increased by **MEPACRINE** (increased risk of toxicity)
- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Primidone

- ▶ Alcohol: increased sedative effect when primidone given with **ALCOHOL**
- Aminophylline: primidone accelerates metabolism of ● **AMINOPHYLLINE** (reduced effect)
- ▶ Analgesics: primidone reduces plasma concentration of **METHADONE**; primidone possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- Anthelmintics: primidone reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: primidone accelerates metabolism of **DISOPYRAMIDE** (reduced plasma concentration); primidone possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use; primidone possibly accelerates metabolism of **PROPAFENONE**
- Antibacterials: primidone accelerates metabolism of **METRONIDAZOLE** (reduced effect); primidone possibly reduces plasma concentration of **RIFAMPICIN**; primidone accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); primidone possibly accelerates metabolism of ● **CHLORAMPHENICOL** (reduced plasma concentration); primidone reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after primidone)
- Anticoagulants: primidone possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOABAN**; primidone accelerates metabolism of ● **COUMARINS** (reduced anticoagulant effect); primidone possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: primidone possibly reduces plasma concentration of **REBOXETINE**; primidone reduces plasma concentration of **PAROXETINE**; primidone accelerates metabolism of ● **MIANSERIN** (reduced plasma concentration); anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of

Primidone

- Antidepressants (continued)
 - primidone possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; primidone possibly accelerates metabolism of ● **TRICYCLICS** (reduced plasma concentration)
- Antiepileptics: plasma concentration of primidone possibly increased by ● **CARBAMAZEPINE**; primidone possibly reduces plasma concentration of ● **ETHOSUXIMIDE**, ● **RUFINAMIDE** and ● **TOPIRAMATE**; plasma concentration of primidone often increased by ● **FOSPHENYTOIN** and ● **PHENYTOIN**, plasma concentration of fosphenytoin and phenytoin often reduced but may be increased; primidone reduces plasma concentration of ● **LAMOTRIGINE**, ● **TIAGABINE** and ● **ZONISAMIDE**; plasma concentration of primidone increased by ● **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; plasma concentration of primidone increased by ● **SODIUM VALPROATE** and ● **VALPROIC ACID** (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of primidone increased by ● **STIRIPENTOL**
- Antifungals: primidone possibly reduces plasma concentration of ● **ITRACONAZOLE** and ● **POSACONAZOLE**; primidone possibly reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use; primidone reduces absorption of ● **GRISEOFULVIN** (reduced effect)
- Antimalarials: avoidance of primidone advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); primidone accelerates metabolism of ● **HALOPERIDOL** (reduced plasma concentration); plasma concentration of both drugs reduced when primidone given with ● **CHLORPROMAZINE**; primidone possibly reduces plasma concentration of ● **ARIPIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); primidone possibly reduces plasma concentration of ● **CLOZAPINE**; primidone possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: primidone possibly reduces plasma concentration of ● **ABACAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR** and ● **SAQUINAVIR**; avoidance of primidone advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); primidone possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; primidone possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; primidone possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); avoidance of primidone advised by manufacturer of ● **ELVITEGRAVIR**, ● **ETRAVIRINE**, ● **LEDIPASVIR**, ● **SOFOSBUVIR** and ● **TELAPREVIR**
- Anxiolytics and Hypnotics: increased sedative effect when primidone given with ● **ANXIOLYTICS AND HYPNOTICS**; primidone often reduces plasma concentration of ● **CLONAZEPAM**
- Appetitants: primidone possibly reduces plasma concentration of ● **APREPITANT**
- Avanafil: primidone possibly reduces plasma concentration of ● **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- Beta-blockers: primidone possibly reduces plasma concentration of ● **PROPRANOLOL**
- Caffeine citrate: effects of primidone possibly antagonised by ● **CAFFEINE CITRATE**
- Calcium-channel Blockers: primidone probably reduces effects of ● **CALCIUM-CHANNEL BLOCKERS**; avoidance of primidone advised by manufacturer of ● **ISRADIPINE**; avoidance of primidone advised by manufacturer of ● **NIMODIPINE** (plasma concentration of nimodipine reduced)
- Cannabis Extract: primidone possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- Ciclosporin: primidone accelerates metabolism of ● **CICLOSPORIN** (reduced plasma concentration)

Primidone (continued)

- Cobicistat: primidone possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: primidone accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- Cytotoxics: primidone possibly decreases plasma concentration of ● **AXITINIB** (increase dose of axitinib—consult axitinib product literature); primidone possibly reduces plasma concentration of ● **BORTEZOMIB**, ● **BOSUTINIB**, ● **CRIZOTINIB** and ● **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib and ponatinib advises avoid concomitant use; primidone possibly reduces plasma concentration of ● **CABOZANTINIB**—avoid concomitant use; avoidance of primidone advised by manufacturer of ● **CABAZITAXEL**, ● **DABRAFENIB** and ● **GEFITINIB**; avoidance of primidone advised by manufacturer of ● **DASATINIB** and ● **VANDETANIB** (plasma concentration of dasatinib and vandetanib possibly reduced); primidone possibly reduces plasma concentration of ● **ETOPOSIDE**; primidone reduces plasma concentration of ● **IRINOTECAN** and its active metabolite; manufacturer of procabazine advises possible increased risk of hypersensitivity reactions when primidone given with ● **PROCARBAZINE**
- Diuretics: primidone reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when primidone given with ● **CARBONIC ANHYDRASE INHIBITORS**
- Folate: plasma concentration of primidone possibly reduced by ● **FOLATES**
- Fosaprepitant: primidone possibly reduces plasma concentration of ● **FOSAPREPITANT**
- Guanfacine: primidone possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Hormone Antagonists: primidone possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; primidone accelerates metabolism of ● **TREMIFENE** (reduced plasma concentration)
- Ivacaftor: primidone possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- Leukotriene Receptor Antagonists: primidone reduces plasma concentration of ● **MONTELUKAST**
- Oestrogens: primidone accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: primidone accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- Roflumilast: primidone possibly inhibits effects of ● **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- Sodium Oxybate: avoidance of primidone advised by manufacturer of ● **SODIUM OXYBATE**
- Sympathomimetics: plasma concentration of primidone possibly increased by ● **METHYLPHENIDATE**
- Tacrolimus: primidone reduces plasma concentration of ● **TACROLIMUS**
- Theophylline: primidone accelerates metabolism of ● **THEOPHYLLINE** (reduced effect)
- Thyroid Hormones: primidone accelerates metabolism of ● **THYROID HORMONES** (may increase requirements for thyroid hormones in hypothyroidism)
- Ticagrelor: primidone possibly reduces plasma concentration of ● **TICAGRELOR**
- Ulipristal: avoidance of primidone advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- Vitamins: primidone possibly increases requirements for ● **ALFACALCIDOL**, ● **CALCITRIOL**, ● **COLECALCIFEROL**, ● **DIHYDROTACHYSTEROL**, ● **ERGOCALCIFEROL**, ● **PARICALCITOL** or ● **VITAMIN D**

Procabazine

- Alcohol: disulfiram-like reaction when procabazine given with **ALCOHOL**
- Antiepileptics: manufacturer of procabazine advises possible increased risk of hypersensitivity reactions when given with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Cardiac Glycosides: procabazine possibly reduces absorption of **DIGOXIN tablets**

Prochlorperazine see Antipsychotics

Procydiline see Antimuscarinics

Progesterone see Progesterogens

Progesterogens

- Antibacterials: plasma concentration of dienogest increased by **ERYTHROMYCIN**; metabolism of progesterogens accelerated by • **RIFAMYCINS** (reduced contraceptive effect with combined oral contraceptives, progesterone-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- Anticoagulants: progesterogens may enhance or reduce anticoagulant effect of **COUMARINS**; progesterogens antagonise anticoagulant effect of • **PHENINDIONE**
- Antidepressants: contraceptive effect of progesterogens reduced by • **ST JOHN'S WORT** (avoid concomitant use)
- Antidiabetics: progesterogens antagonise hypoglycaemic effect of **ANTI-DIABETICS**
- Antiepileptics: metabolism of progesterogens accelerated by • **CARBAMAZEPINE**, • **ESLICARBAPINE**, • **FOSPHENYTOIN**, • **OXCARBAPINE**, • **PERAMPANEL**, • **PHENOBARBITAL**, • **PHENYTOIN**, • **PRIMIDONE**, • **RUFINAMIDE** and • **TOPIRAMATE** (reduced contraceptive effect with combined oral contraceptives, progesterone-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC); desogestrel possibly increases plasma concentration of **LAMOTRIGINE**
- Antifungals: plasma concentration of drospirenone increased by **KETOCONAZOLE**; progesterogens possibly increase plasma concentration of **VORICONAZOLE**; anecdotal reports of contraceptive failure and menstrual irregularities when progesterogens given with **GRISEOFULVIN**; occasional reports of breakthrough bleeding when progesterogens (used for contraception) given with **TERBINAFINE**
- Antivirals: plasma concentration of norethisterone increased by **ATAZANAVIR**; plasma concentration of drospirenone increased by **BOCEPREVIR** (increased risk of toxicity); contraceptive effect of progesterogens possibly reduced by • **EFAVIRENZ**; plasma concentration of norgestimate increased by **ELVITEGRAVIR**; metabolism of progesterogens accelerated by • **NEVIRAPINE** (reduced contraceptive effect with combined oral contraceptives, progesterone-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- Anxiolytics and Hypnotics: progesterogens possibly increase plasma concentration of **CHLORDIAZEPOXIDE**, **DIAZEPAM** and **NITRAZEPAM**; progesterogens possibly reduce plasma concentration of **LORAZEPAM**, **OXAZEPAM** and **TEMAZEPAM**
- Aprepitant: possible contraceptive failure of hormonal contraceptives containing progesterogens when given with • **APREPITANT** (alternative contraception recommended)
- Bosentan: possible contraceptive failure of hormonal contraceptives containing progesterogens when given with • **BOSENTAN** (alternative contraception recommended)
- Ciclosporin: progesterogens possibly increase plasma concentration of **CICLOSPORIN**
- Cobicistat: plasma concentration of norgestimate increased by **COBICISTAT**
- Cytotoxics: possible reduction in contraceptive effect of progesterogens advised by manufacturer of • **CRIZOTINIB** and • **VEURAFENIB**; possible reduced contraceptive effect of hormonal contraceptives containing progesterogens advised by

Progesterogens

- Cytotoxics (continued) manufacturer of • **DABRAFENIB** (alternative contraception recommended)
- Diuretics: risk of hyperkalaemia when drospirenone given with **POTASSIUM-SPARING DIURETICS** and **ALDOSTERONE ANTAGONISTS** (monitor serum potassium during first cycle)
- Dopaminergics: progesterogens increase plasma concentration of • **SELEGILINE**—manufacturer of selegiline advises avoid concomitant use
- Fosaprepitant: possible contraceptive failure of hormonal contraceptives containing progesterogens when given with • **FOSAPREPITANT** (alternative contraception recommended)
- Lipid-regulating Drugs: plasma concentration of norethisterone increased by **ATORVASTATIN**; plasma concentration of active metabolite of norgestimate increased by **ROSUVASTATIN**; plasma concentration of norgestrel increased by **ROSUVASTATIN**
- Muscle Relaxants: progesterogens possibly increase plasma concentration of **TIZANIDINE** (increased risk of toxicity)
- Sugammadex: plasma concentration of progesterogens possibly reduced by **SUGAMMADEX**—manufacturer of sugammadex advises additional contraceptive precautions
- Teriflunomide: plasma concentration of levonorgestrel increased by **TERIFLUNOMIDE**
- Ulipristal: contraceptive effect of progesterogens possibly reduced by • **ULIPRISTAL**

Proguanil

- Antacids: absorption of proguanil reduced by **ORAL MAGNESIUM SALTS** (as magnesium trisilicate)
- Anticoagulants: isolated reports that proguanil may enhance anticoagulant effect of **WARFARIN**
- Antimalarials: avoidance of antimalarials advised by manufacturer of • **ARTEMETHER WITH LUMEFANTRINE**; increased antifolate effect when proguanil given with **PYRIMETHAMINE**
- Antivirals: plasma concentration of proguanil possibly affected by **EFAVIRENZ**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Promazine see Antipsychotics

Promethazine see Antihistamines

Propafenone

- Aminophylline: propafenone increases plasma concentration of **AMINOPHYLLINE**
- Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILOCAINE** or **ROPIVACAINE**
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other • **ANTI-ARRHYTHMICS**
- Antibacterials: metabolism of propafenone accelerated by • **RIFAMPICIN** (reduced effect)
- Anticoagulants: propafenone enhances anticoagulant effect of • **COUMARINS**
- Antidepressants: metabolism of propafenone possibly inhibited by **FLUOXETINE** and **PAROXETINE**; increased risk of arrhythmias when propafenone given with • **TRICYCLICS**
- Antiepileptics: metabolism of propafenone possibly accelerated by **PHENOBARBITAL** and **PRIMIDONE**
- Antihistamines: avoidance of propafenone advised by manufacturer of **MIZOLASTINE** (possible risk of ventricular arrhythmias)
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with • **ANTI-PSYCHOTICS** that prolong the QT interval
- Antivirals: plasma concentration of propafenone possibly increased by • **FOSAMPRENAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of propafenone increased by • **RITONAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when propafenone given with • **SAQUINAVIR**—avoid concomitant use; caution with

Propafenone

- Antivirals (continued)
 - propafenone advised by manufacturer of ● **TELAPREVIR** (risk of ventricular arrhythmias)
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**; propafenone increases plasma concentration of **METOPROLOL** and **PROPRANOLOL**
- Cardiac Glycosides: propafenone increases plasma concentration of ● **DIGOXIN** (halve dose of digoxin)
- Ciclosporin: propafenone possibly increases plasma concentration of **CICLOSPORIN**
- Parasympathomimetics: propafenone possibly antagonises effects of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
- Theophylline: propafenone increases plasma concentration of **THEOPHYLLINE**
- Ulcer-healing Drugs: plasma concentration of propafenone increased by ● **CIMETIDINE**

Propantheline see Antimuscarinics

Propiverine see Antimuscarinics

Propofol see Anaesthetics, General

Propranolol see Beta-blockers

Prostaglandins

- ACE Inhibitors: enhanced hypotensive effect when alprostadil given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when alprostadil given with **ADRENERGIC NEURONE BLOCKERS**
- Alpha-blockers: enhanced hypotensive effect when alprostadil given with **ALPHA-BLOCKERS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when alprostadil given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Beta-blockers: enhanced hypotensive effect when alprostadil given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when alprostadil given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when alprostadil given with **CLONIDINE**
- Diazoxide: enhanced hypotensive effect when alprostadil given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when alprostadil given with **DIURETICS**
- Methyldopa: enhanced hypotensive effect when alprostadil given with **METHYLDOPA**
- Moxonidine: enhanced hypotensive effect when alprostadil given with **MOXONIDINE**
- Nitrates: enhanced hypotensive effect when alprostadil given with **NITRATES**
- Oxytocin: prostaglandins potentiate uterotonic effect of **OXYTOCIN**
- Vasodilator Antihypertensives: enhanced hypotensive effect when alprostadil given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

Protein Kinase Inhibitors see individual drugs

Proton Pump Inhibitors

- Antacids: absorption of lansoprazole possibly reduced by **ANTACIDS**
- Antibacterials: plasma concentration of both drugs increased when omeprazole given with **CLARITHROMYCIN**
- Anticoagulants: pantoprazole might enhance the anticoagulant effect of **COUMARINS**; esomeprazole and omeprazole possibly enhance anticoagulant effect of ● **COUMARINS**
- Antidepressants: omeprazole increases plasma concentration of **ESCITALOPRAM**; plasma concentration of lansoprazole possibly increased by **FLUVOXAMINE**; plasma concentration of omeprazole possibly reduced by **ST JOHN'S WORT**
- Antiepileptics: esomeprazole enhances effects of ● **FOSPHENYTOIN** and ● **PHENYTOIN**; omeprazole possibly enhances effects of **FOSPHENYTOIN** and **PHENYTOIN**
- Antifungals: proton pump inhibitors reduce absorption of **ITRACONAZOLE** and **KETOCONAZOLE**; esomeprazole reduces plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; lansoprazole, omeprazole, pantoprazole and rabeprazole possibly reduce plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid

Proton Pump Inhibitors

- Antifungals (continued)
 - concomitant use; plasma concentration of esomeprazole possibly increased by **VORICONAZOLE**; plasma concentration of omeprazole increased by **VORICONAZOLE** (consider reducing dose of omeprazole)
- Antipsychotics: omeprazole possibly reduces plasma concentration of **CLOZAPINE**
- Antivirals: proton pump inhibitors reduce plasma concentration of ● **ATAZANAVIR**—avoid or adjust dose of both drugs (consult product literature); do not take proton pump inhibitors before **LEDIPASVIR** advised by manufacturer of ledipasvir; omeprazole reduces plasma concentration of **LEDIPASVIR**; omeprazole increases plasma concentration of **RALTEGRAVIR**; omeprazole reduces plasma concentration of ● **RILPIVIRINE**—avoid concomitant use; avoidance of esomeprazole, lansoprazole, pantoprazole and rabeprazole advised by manufacturer of **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced); omeprazole increases plasma concentration of ● **SAQUINAVIR**—manufacturer of saquinavir advises avoid concomitant use; esomeprazole, lansoprazole, pantoprazole and rabeprazole possibly increase plasma concentration of ● **SAQUINAVIR**—manufacturer of saquinavir advises avoid concomitant use; plasma concentration of esomeprazole and omeprazole reduced by ● **TIPRANAVIR**
- Anxiolytics and Hypnotics: esomeprazole and omeprazole possibly inhibit metabolism of **DIAZEPAM** (increased plasma concentration)
- Cardiac Glycosides: proton pump inhibitors possibly slightly increase plasma concentration of **DIGOXIN**
- Ciclosporin: omeprazole possibly affects plasma concentration of **CICLOSPORIN**
- Clistazol: omeprazole increases plasma concentration of ● **CLOSTAZOL** (see under Clistazol, in BNF)
- Clopidogrel: esomeprazole and omeprazole reduce antiplatelet effect of ● **CLOPIDOGREL**; lansoprazole, pantoprazole and rabeprazole possibly reduce antiplatelet effect of **CLOPIDOGREL**
- Cytotoxics: proton pump inhibitors possibly reduce excretion of **METHOTREXATE** (increased risk of toxicity); lansoprazole reduces plasma concentration of **BOSUTINIB**; avoidance of proton pump inhibitors advised by manufacturer of **DABRAFENIB** (plasma concentration of dabrafenib possibly reduced); avoidance of esomeprazole, lansoprazole, pantoprazole and rabeprazole advised by manufacturer of ● **ERLOTINIB**; omeprazole reduces plasma concentration of ● **ERLOTINIB**—manufacturer of erlotinib advises avoid concomitant use; proton pump inhibitors possibly reduce absorption of **LAPATINIB**; proton pump inhibitors possibly reduce absorption of **PAZOPANIB**—manufacturer of pazopanib advises give at the same time as proton pump inhibitors
- Hormone Antagonists: plasma concentration of omeprazole reduced by **ENZALUTAMIDE**
- Tacrolimus: omeprazole possibly increases plasma concentration of **TACROLIMUS**
- Ulcer-healing Drugs: absorption of lansoprazole possibly reduced by **SUCRALFATE**

Pseudoephedrine see Sympathomimetics

Pyrazinamide

- Sulfonpyrazole: pyrazinamide antagonises effects of **SULFINPYRAZONE**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Pyridostigmine see Parasympathomimetics

Pyridoxine see Vitamins

Pyrimethamine

- Antibacterials: increased antifolate effect when pyrimethamine given with ● **SULFONAMIDES** or ● **TRIMETHOPRIM**
- Antiepileptics: pyrimethamine antagonises anticonvulsant effect of ● **FOSPHENYTOIN** and ● **PHENYTOIN**, also increased antifolate effect
- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; increased antifolate effect when pyrimethamine given with **PROGUANIL**
- Antivirals: increased antifolate effect when pyrimethamine given with **ZIDOVUDINE**

Pyrimethamine (continued)

- Cytotoxics: pyrimethamine increases antifolate effect of
 - **METHOTREXATE** and • **PEMETREXED**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Quetiapine see Antipsychotics

Quinagolide

- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**

Quinapril see ACE Inhibitors

Quinine

- Anti-arrhythmics: increased risk of ventricular arrhythmias when quinine given with • **AMIODARONE**—avoid concomitant use; quinine increases plasma concentration of • **FLECAINIDE**
- Antibacterials: increased risk of ventricular arrhythmias when quinine given with • **MOXIFLOXACIN**—avoid concomitant use; plasma concentration of quinine reduced by • **RIFAMPICIN**
- ▶ Anticoagulants: plasma concentration of both drugs increased when quinine given with **WARFARIN**
- Antidepressants: possible increased risk of ventricular arrhythmias when quinine given with • **CITALOPRAM** or • **ESCITALOPRAM**—avoid concomitant use
- Antimalarials: increased risk of ventricular arrhythmias when quinine given with • **ARTEMETHER WITH LUMEFANTRINE**; avoidance of antimalarials advised by manufacturer of • **ARTEMETHER WITH LUMEFANTRINE**; increased risk of convulsions when quinine given with • **MEFLOQUINE** (but should not prevent the use of intravenous quinine in severe cases)
- Antipsychotics: increased risk of ventricular arrhythmias when quinine given with • **DROPERIDOL** or • **PIMOZIDE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when quinine given with • **HALOPERIDOL**—avoid concomitant use; possible increased risk of ventricular arrhythmias when quinine given with • **RISPERIDONE**
- Antivirals: plasma concentration of quinine possibly increased by • **ATAZANAVIR**, • **DARUNAVIR**, • **FOSAPRENNAVIR**, • **INDINAVIR** and • **TIPRANAVIR** (increased risk of toxicity); plasma concentration of quinine increased by • **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when quinine given with • **SAQUINAVIR**—avoid concomitant use
- Cardiac Glycosides: quinine increases plasma concentration of • **DIGOXIN**
- ▶ Dopaminergics: quinine possibly increases plasma concentration of **AMANTADINE**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Muscle Relaxants: quinine possibly enhances effects of **SUXAMETHONIUM**
- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Ulcer-healing Drugs: metabolism of quinine inhibited by **CIMETIDINE** (increased plasma concentration)
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Quinolones

- Aminophylline: possible increased risk of convulsions when quinolones given with • **AMINOPHYLLINE**; ciprofloxacin and norfloxacin increase plasma concentration of • **AMINOPHYLLINE**
- Analgesics: possible increased risk of convulsions when quinolones given with • **NSAIDS**
- ▶ Antacids: absorption of moxifloxacin reduced by **ANTACIDS** (give at least 6 hours apart); absorption of ciprofloxacin and levofloxacin reduced by **ANTACIDS** (give at least 2 hours before or 4 hours after ciprofloxacin and levofloxacin); absorption of norfloxacin reduced by **ANTACIDS**; absorption of ofloxacin reduced by **ANTACIDS** (give at least 2 hours apart)

Quinolones (continued)

- Anti-arrhythmics: increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with • **AMIODARONE**—avoid concomitant use; increased risk of ventricular arrhythmias when moxifloxacin given with • **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when moxifloxacin given with *parenteral* • **ERYTHROMYCIN**—avoid concomitant use; avoidance of moxifloxacin advised by manufacturer of **BEDAQUILINE**; ciprofloxacin possibly increases plasma concentration of **BEDAQUILINE**—avoid concomitant use if ciprofloxacin given for more than 14 days; increased risk of ventricular arrhythmias when moxifloxacin given with • **DELAMANID**; effects of nalidixic acid possibly antagonised by **NITROFURANTOIN**; possible increased risk of ventricular arrhythmias when moxifloxacin given with • **TELITHROMYCIN**
- Anticoagulants: ciprofloxacin and levofloxacin possibly enhance anticoagulant effect of **COUMARINS**; nalidixic acid, norfloxacin and ofloxacin enhance anticoagulant effect of • **COUMARINS**; levofloxacin possibly enhances anticoagulant effect of **PHENINDIONE**
- Antidepressants: avoidance of moxifloxacin advised by manufacturer of • **CITALOPRAM**, • **ESCITALOPRAM** and • **VENLAFAXINE** (risk of ventricular arrhythmias); ciprofloxacin inhibits metabolism of • **DULOXETINE**—avoid concomitant use; avoidance of ciprofloxacin advised by manufacturer of • **AGOMELATINE**; increased risk of ventricular arrhythmias when moxifloxacin given with • **TRICYCLICS**—avoid concomitant use
- ▶ Antidiabetics: norfloxacin possibly enhances effects of **GLIBENCLAMIDE**
- ▶ Antiepileptics: ciprofloxacin increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antihistamines: increased risk of ventricular arrhythmias when moxifloxacin given with • **MIZOLASTINE**—avoid concomitant use
- Antimalarials: avoidance of quinolones advised by manufacturer of • **ARTEMETHER WITH LUMEFANTRINE**; avoidance of moxifloxacin advised by manufacturer of • **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when moxifloxacin given with • **CHLOROQUINE**, • **HYDROXYCHLOROQUINE**, • **MEFLOQUINE** or • **QUININE**—avoid concomitant use
- Antipsychotics: increased risk of ventricular arrhythmias when moxifloxacin given with • **BENPERIDOL**—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when moxifloxacin given with • **DROPERIDOL**, • **HALOPERIDOL**, • **PHENOTHIAZINES**, • **PIMOZIDE** or • **ZUCLOPENTHIXOL**—avoid concomitant use; ciprofloxacin increases plasma concentration of **CLOZAPINE**; ciprofloxacin possibly increases plasma concentration of **OLANZAPINE**
- Antivirals: manufacturer of levofloxacin advises give **DIDANOSINE tablets** at least 2 hours before or after levofloxacin; absorption of ciprofloxacin reduced by **DIDANOSINE tablets** (give at least 2 hours before or 4 hours after ciprofloxacin); manufacturer of moxifloxacin advises give **DIDANOSINE tablets** at least 6 hours before or after moxifloxacin; manufacturer of norfloxacin advises give **DIDANOSINE** at least 2 hours before or after norfloxacin; increased risk of ventricular arrhythmias when moxifloxacin given with • **SAQUINAVIR**—avoid concomitant use
- ▶ Anxiolytics and Hypnotics: avoidance of ciprofloxacin advised by manufacturer of **ZOLPIDEM**
- Atomoxetine: increased risk of ventricular arrhythmias when moxifloxacin given with • **ATOMOXETINE**
- Beta-blockers: increased risk of ventricular arrhythmias when moxifloxacin given with • **SOTALOL**—avoid concomitant use
- ▶ Calcium Salts: absorption of ciprofloxacin reduced by **CALCIUM SALTS** (give at least 2 hours before or 4 hours after ciprofloxacin)
- Ciclosporin: increased risk of nephrotoxicity when quinolones given with • **CICLOSPORIN**
- Clopidogrel: ciprofloxacin possibly reduces antiplatelet effect of • **CLOPIDOGREL**
- Cytotoxics: nalidixic acid increases risk of **MELPHALAN** toxicity; ciprofloxacin possibly reduces excretion of **METHOTREXATE** (increased risk of toxicity); possible increased risk of

Quinolones

- Cytotoxics (continued)
 - ventricular arrhythmias when moxifloxacin given with ● **BOSUTINIB**; ciprofloxacin possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; ciprofloxacin increases plasma concentration of ● **ERLOTINIB**; ciprofloxacin possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNf); possible increased risk of ventricular arrhythmias when moxifloxacin given with ● **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with ● **ARSENIC TRIOXIDE**
- Dairy Products: absorption of ciprofloxacin reduced by **DAIRY PRODUCTS** (give at least 2 hours apart); absorption of norfloxacin reduced by **DAIRY PRODUCTS**
- Dopaminergics: ciprofloxacin increases plasma concentration of ● **RASAGILINE**; ciprofloxacin inhibits metabolism of ● **ROPINIROLE** (increased plasma concentration)
- 5HT₂-receptor Agonists: quinolones possibly inhibit metabolism of ● **ZOLMITRIPTAN** (reduce dose of zolmitriptan)
- Iron Salts: absorption of moxifloxacin reduced by **oral IRON SALTS** (give at least 6 hours apart); absorption of ciprofloxacin reduced by **oral IRON SALTS** (give at least 2 hours before or 4 hours after ciprofloxacin); absorption of levofloxacin, norfloxacin and ofloxacin reduced by **oral IRON SALTS** (give at least 2 hours apart)
- Lanthanum: absorption of quinolones possibly reduced by **LANTHANUM** (give at least 2 hours before or 4 hours after lanthanum)
- Muscle Relaxants: ciprofloxacin increases plasma concentration of ● **TIZANIDINE** (increased risk of toxicity)—avoid concomitant use; norfloxacin possibly increases plasma concentration of ● **TIZANIDINE** (increased risk of toxicity)
- Mycophenolate: norfloxacin possibly reduces bioavailability of ● **MYCOPHENOLATE**
- Pentamidine Isetionate: increased risk of ventricular arrhythmias when moxifloxacin given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use
- Pirfenidone: ciprofloxacin increases plasma concentration of ● **PIRFENIDONE**—see under Pirfenidone, in BNf
- Sevelamer: absorption of ciprofloxacin reduced by ● **SEVELAMER** (give at least 2 hours before or 4 hours after ciprofloxacin)
- Strontium Ranelate: absorption of quinolones reduced by ● **STRONTIUM RANELATE** (manufacturer of strontium ranelate advises avoid concomitant use)
- Theophylline: possible increased risk of convulsions when quinolones given with ● **THEOPHYLLINE**; ciprofloxacin and norfloxacin increase plasma concentration of ● **THEOPHYLLINE**
- Ulcer-healing Drugs: absorption of moxifloxacin reduced by ● **SUCRALFATE** (give at least 6 hours apart); absorption of levofloxacin, norfloxacin and ofloxacin reduced by ● **SUCRALFATE** (give at least 2 hours apart); absorption of ciprofloxacin reduced by ● **SUCRALFATE** (give at least 2 hours before or 4 hours after ciprofloxacin)
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNfC
- Zinc: absorption of moxifloxacin reduced by ● **ZINC** (give at least 6 hours apart); absorption of ciprofloxacin, levofloxacin, norfloxacin and ofloxacin reduced by ● **ZINC** (give at least 2 hours apart)

Rabeprazole see Proton Pump Inhibitors

Rabies Vaccine see Vaccines

Raloxifene

- Anticoagulants: raloxifene antagonises anticoagulant effect of ● **COUMARINS**
- Lipid-regulating Drugs: absorption of raloxifene reduced by ● **COLESTYRAMINE** (manufacturer of raloxifene advises avoid concomitant administration)

Raltegravir

- Antacids: plasma concentration of raltegravir reduced by ● **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS**—manufacturer of raltegravir advises avoid concomitant use
- Antibacterials: plasma concentration of raltegravir reduced by ● **RIFAMPICIN**—consider increasing dose of raltegravir

Raltegravir (continued)

- Antivirals: increased risk of rash when raltegravir given with ● **DARUNAVIR**; avoidance of raltegravir advised by manufacturer of ● **FOSAMPRENAVIR**
- Orlistat: absorption of raltegravir possibly reduced by ● **ORLISTAT**
- Ulcer-healing Drugs: plasma concentration of raltegravir increased by ● **FAMOTIDINE** and ● **OMEPRAZOLE**

Raltitrexed

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Folate: manufacturer of raltitrexed advises avoid concomitant use with ● **FOLATES**

Ramipril see ACE Inhibitors

Ramucicromab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Ranitidine see Histamine H₂-antagonists

Ranolazine

- Anti-arrhythmics: manufacturer of ranolazine advises avoid concomitant use with ● **DISOPYRAMIDE**
- Antibacterials: plasma concentration of ranolazine possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of ranolazine advises avoid concomitant use; plasma concentration of ranolazine reduced by ● **RIFAMPICIN**—manufacturer of ranolazine advises avoid concomitant use
- Antidepressants: plasma concentration of ranolazine increased by ● **PAROXETINE**
- Antifungals: plasma concentration of ranolazine increased by ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of ranolazine possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—manufacturer of ranolazine advises avoid concomitant use
- Antivirals: plasma concentration of ranolazine possibly increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** and ● **TIPRANAVIR**—manufacturer of ranolazine advises avoid concomitant use
- Beta-blockers: manufacturer of ranolazine advises avoid concomitant use with ● **SOTALOL**
- Calcium-channel Blockers: plasma concentration of ranolazine increased by ● **DILTIAZEM** and ● **VERAPAMIL** (consider reducing dose of ranolazine)
- Cardiac Glycosides: ranolazine increases plasma concentration of ● **DIGOXIN**
- Ciclosporin: plasma concentration of both drugs may increase when ranolazine given with ● **CYCLOSPORIN**
- Grapefruit Juice: plasma concentration of ranolazine possibly increased by ● **GRAPEFRUIT JUICE**—manufacturer of ranolazine advises avoid concomitant use
- Lipid-regulating Drugs: ranolazine increases plasma concentration of ● **SIMVASTATIN** (see under Simvastatin, in BNf); separating administration from ranolazine by 12 hours advised by manufacturer of ● **LOMITAPIDE**
- Tacrolimus: ranolazine increases plasma concentration of ● **TACROLIMUS**

Rasagiline

NOTE Rasagiline is a MAO-B inhibitor

- Analgesics: avoid concomitant use of rasagiline with ● **DEXTROMETHORPHAN**; risk of CNS toxicity when rasagiline given with ● **PETHIDINE** (avoid pethidine for 2 weeks after rasagiline)
- Antibacterials: plasma concentration of rasagiline increased by ● **CIPROFLOXACIN**
- Antidepressants: after stopping rasagiline do not start ● **FLUOXETINE** for 2 weeks, also rasagiline should not be started until at least 5 weeks after stopping fluoxetine; after stopping rasagiline do not start ● **FLUVOXAMINE** for 2 weeks; risk of hypertensive crisis when rasagiline given with ● **MAOIS**, avoid MAOIs for at least 2 weeks after stopping rasagiline; increased risk of CNS toxicity when rasagiline given with ● **SSRIS** or ● **TRICYCLICS**; risk of CNS excitation and hypertension when rasagiline given with ● **VORTIOXETINE**

Rasagiline (continued)

- ▶ Dopaminergics: plasma concentration of rasagiline possibly reduced by **ENTACAPONE**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- Sympathomimetics: avoid concomitant use of rasagiline with **● SYMPATHOMIMETICS**

Reboxetine

- Antibacterials: manufacturer of reboxetine advises avoid concomitant use with **● MACROLIDES**
- Antidepressants: manufacturer of reboxetine advises avoid concomitant use with **● FLUVOXAMINE**; increased risk of hypertension and CNS excitation when reboxetine given with **● MAOIS** (MAOIs should not be started until 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs)
- ▶ Antiepileptics: plasma concentration of reboxetine possibly reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE**
- Antifungals: manufacturer of reboxetine advises avoid concomitant use with **● IMIDAZOLES** and **● TRIAZOLES**
- Antimalarials: avoidance of antidepressants advised by manufacturer of **● ARTEMETHER WITH LUMEFANTRINE** and **● ARTEMIMOL WITH PIPERAQUINE**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- ▶ Diuretics: possible increased risk of hypokalaemia when reboxetine given with **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- ▶ Ergot Alkaloids: possible risk of hypertension when reboxetine given with **ERGOTAMINE**

Regorafenib

- Analgesics: manufacturer of regorafenib advises avoid concomitant use with **MEFENAMIC ACID**
- Antibacterials: plasma concentration of regorafenib reduced by **● RIFAMPICIN**—manufacturer of regorafenib advises avoid concomitant use
- Anticoagulants: increased risk of bleeding when regorafenib given with **● WARFARIN**
- Antifungals: plasma concentration of regorafenib increased by **● KETOCONAZOLE**—avoid concomitant use
- Antipsychotics: avoid concomitant use of cytotoxics with **● CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cytotoxics: regorafenib increases plasma concentration of **IRINOTECAN**

Remifentanyl see Opioid Analgesics**Repaglinide** see Antidiabetics**Retigabine**

- ▶ Alcohol: increased risk of blurred vision when retigabine given with **ALCOHOL**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and **● TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **● SSRIS** and **● TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of retigabine possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by **● MEFLOROQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **● ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with **● ORLISTAT**

Retinoids

- Alcohol: etretinate formed from acitretin in presence of **● ALCOHOL** (increased risk of teratogenicity in women of child-bearing potential)
- Antibacterials: possible increased risk of benign intracranial hypertension when retinoids given with **● TETRACYCLINES** (avoid concomitant use)
- Anticoagulants: acitretin possibly reduces anticoagulant effect of **● COUMARINS**
- ▶ Antiepileptics: isotretinoin possibly reduces plasma concentration of **CARBAMAZEPINE**

Retinoids (continued)

- Antifungals: plasma concentration of alitretinoin increased by **● KETOCONAZOLE**; possible increased risk of tretinoin toxicity when given with **● FLUCONAZOLE**, **● KETOCONAZOLE** and **● VORICONAZOLE**
- Cytotoxics: acitretin increases plasma concentration of **● METHOTREXATE** (also increased risk of hepatotoxicity)—avoid concomitant use
- ▶ Lipid-regulating Drugs: alitretinoin reduces plasma concentration of **SIMVASTATIN**
- Vitamins: risk of hypervitaminosis A when retinoids given with **● VITAMIN A**—avoid concomitant use

Ribavirin

- Antivirals: effects of ribavirin possibly reduced by **● ABACAVIR**; increased risk of side-effects when ribavirin given with **● DIDANOSINE**—avoid concomitant use; increased risk of toxicity when ribavirin given with **● STAVUDINE**; increased risk of anaemia when ribavirin given with **● ZIDOVUDINE**—avoid concomitant use
- Azathioprine: ribavirin possibly enhances myelosuppressive effects of **● AZATHIOPRINE**

Rifabutin see Rifamycins**Rifampicin** see Rifamycins**Rifamycins**

NOTE Interactions do not apply to rifaximin

- ▶ ACE Inhibitors: rifampicin reduces plasma concentration of active metabolite of **IMIDAPRIL** (reduced antihypertensive effect)
- ▶ Aliskiren: rifampicin reduces plasma concentration of **ALISKIREN**
- ▶ Ambrisentan: rifampicin possibly increases plasma concentration of **AMBRISENTAN**
- ▶ Aminophylline: rifampicin accelerates metabolism of **AMINOPHYLLINE** (reduced plasma concentration)
- ▶ Analgesics: rifampicin reduces plasma concentration of **CELECOXIB**, **DICLOFENAC** and **ETORICOXIB**; rifampicin accelerates metabolism of **ALFENTANIL**, **CODEINE**, **FENTANYL**, **METHADONE** and **MORPHINE** (reduced effect); rifampicin possibly accelerates metabolism of **OXYCODONE**
- ▶ Angiotensin-II Receptor Antagonists: rifampicin reduces plasma concentration of **LOSARTAN** and its active metabolite
- ▶ Antacids: absorption of rifampicin reduced by **ANTACIDS**
- Anthelmintics: rifampicin reduces plasma concentration of **● PRAZIQUANTEL**—avoid concomitant use
- Anti-arrhythmics: rifamycins accelerate metabolism of **● DISOPYRAMIDE** (reduced plasma concentration); rifampicin reduces plasma concentration of **● DRONEDARONE**—avoid concomitant use; rifampicin accelerates metabolism of **● PROPAFENONE** (reduced effect)
- Antibacterials: increased risk of side-effects including neutropenia when rifabutin given with **● AZITHROMYCIN**; rifamycins reduce plasma concentration of **CLARITHROMYCIN** and **DAPSONE**; plasma concentration of rifabutin increased by **● CLARITHROMYCIN** (increased risk of toxicity—reduce rifabutin dose); plasma concentration of rifabutin possibly increased by **● ERYTHROMYCIN** (increased risk of toxicity—reduce rifabutin dose); rifampicin possibly reduces plasma concentration of **TINIDAZOLE** and **TRIMETHOPRIM**; rifampicin reduces plasma concentration of **DOXYCYCLINE**—consider increasing dose of doxycycline; rifampicin reduces plasma concentration of **● BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; rifabutin possibly reduces plasma concentration of **● BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; rifampicin accelerates metabolism of **CHLORAMPHENICOL** (reduced plasma concentration); rifampicin reduces plasma concentration of **● DELAMANID**; increased risk of hepatotoxicity when rifampicin given with **● ISONIAZID**; rifampicin reduces plasma concentration of **● TELITHROMYCIN** (avoid during and for 2 weeks after rifampicin)
- Anticoagulants: rifampicin possibly reduces plasma concentration of **● APIXABAN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; rifamycins accelerate metabolism of **● COUMARINS** (reduced anticoagulant effect); rifampicin reduces plasma concentration of

Rifamycins

- **Anticoagulants** (continued)
 - **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; rifampicin reduces plasma concentration of
 - **EDOXABAN**; rifampicin reduces plasma concentration of
 - **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- **Anti-depressants**: rifampicin reduces plasma concentration of **LINEZOLID** (possible therapeutic failure of linezolid); rifampicin reduces plasma concentration of ● **VORTIOXETINE**—consider increasing dose of vortioxetine
- **Antidiabetics**: rifamycins accelerate metabolism of
 - **TOLBUTAMIDE** (reduced effect); rifampicin reduces plasma concentration of ● **CANAGLIFLOZIN** and **NATEGLINIDE**; rifampicin possibly reduces effects of **LINAGLIPTIN**; rifampicin possibly antagonises hypoglycaemic effect of **REPAGLINIDE**; rifamycins possibly accelerate metabolism of ● **SULFONYLUREAS** (reduced effect)
- **Antiepileptics**: rifabutin reduces plasma concentration of
 - **CARBAMAZEPINE**; rifamycins accelerate metabolism of
 - **FOSPHENYTOIN** and ● **PHENYTOIN** (reduced plasma concentration); rifampicin reduces plasma concentration of
 - **LAMOTRIGINE**; plasma concentration of rifampicin possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**
- **Antifungals**: rifampicin accelerates metabolism of
 - **KETOCONAZOLE** (reduced plasma concentration), also plasma concentration of rifampicin may be reduced by ketoconazole; plasma concentration of rifabutin increased by ● **FLUCONAZOLE** (increased risk of uveitis—reduce rifabutin dose); rifampicin accelerates metabolism of ● **FLUCONAZOLE** (reduced plasma concentration); rifabutin and rifampicin reduce plasma concentration of ● **ITRACONAZOLE**—manufacturer of itraconazole advises avoid concomitant use; plasma concentration of rifabutin increased by ● **POSACONAZOLE** (also plasma concentration of posaconazole reduced); rifampicin reduces plasma concentration of ● **POSACONAZOLE** and
 - **TERBINAFINE**; plasma concentration of rifabutin increased by ● **VORICONAZOLE**, also rifabutin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for rifabutin toxicity); rifampicin reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use; rifampicin initially increases and then reduces plasma concentration of **CASPOFUNGIN** (consider increasing dose of caspofungin); plasma concentration of rifabutin possibly increased by ● **TRIAZOLES** (increased risk of uveitis—reduce rifabutin dose)
- **Antihistamines**: rifampicin possibly reduces effects of **FEXOFENADINE**
- **Antimalarials**: avoidance of rifampicin advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; rifampicin reduces plasma concentration of ● **MEFLOQUINE**—avoid concomitant use; rifampicin reduces plasma concentration of ● **QUININE**
- **Antimuscarinics**: rifampicin reduces plasma concentration of active metabolite of ● **FESOTERODINE**—avoid concomitant use
- **Antipsychotics**: rifampicin accelerates metabolism of
 - **HALOPERIDOL** (reduced plasma concentration); rifabutin and rifampicin possibly reduce plasma concentration of
 - **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); rifampicin possibly reduces plasma concentration of **CLOZAPINE**; rifampicin reduces plasma concentration of
 - **LURASIDONE**—avoid concomitant use
- **Antivirals**: rifampicin possibly reduces plasma concentration of **ABACAVIR**; rifampicin reduces plasma concentration of
 - **ATAZANAVIR**, ● **DACLATASVIR**, ● **LOPINAVIR**, ● **NEVIRAPINE** and ● **RILPIVIRINE**—avoid concomitant use; plasma concentration of rifabutin increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR** and ● **TIPRANAVIR** (reduce dose of rifabutin); avoidance of rifampicin advised by manufacturer of
 - **BOCEPREVIR** (plasma concentration of boceprevir possibly reduced); rifabutin possibly reduces plasma concentration of
 - **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; rifampicin significantly reduces plasma concentration of ● **DARUNAVIR**, ● **FOSAMPRENAVIR** and ● **TELAPREVIR**—avoid concomitant use; rifampicin possibly reduces plasma concentration of

Rifamycins

- **Antivirals** (continued)
 - **DASABUVIR**, ● **OMBITASVIR**, ● **PARITAPREVIR** and ● **TIPRANAVIR**—avoid concomitant use; rifampicin reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); plasma concentration of rifabutin reduced by **EFAVIRENZ**—increase dose of rifabutin; rifampicin reduces plasma concentration of **EFAVIRENZ**—increase dose of efavirenz; rifabutin reduces plasma concentration of
 - **ELVITEGRAVIR** also plasma concentration of active metabolite of rifabutin increased—reduce dose of rifabutin; avoidance of rifampicin advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and **ZIDOVUDINE**; plasma concentration of both drugs reduced when rifabutin given with ● **ETRAVIRINE**; rifampicin accelerates metabolism of
 - **INDINAVIR** (reduced plasma concentration—avoid concomitant use); plasma concentration of rifabutin increased by ● **INDINAVIR**, also plasma concentration of indinavir decreased (reduce dose of rifabutin and increase dose of indinavir); avoidance of rifabutin advised by manufacturer of **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**; rifampicin reduces plasma concentration of ● **MARAVIROC** and
 - **RALTEGRAVIR**—consider increasing dose of maraviroc and raltegravir; plasma concentration of rifabutin possibly increased by **NEVIRAPINE**; rifabutin decreases plasma concentration of ● **RILPIVIRINE** (increase dose of rilpivirine—consult rilpivirine product literature); rifampicin reduces plasma concentration of **RITONAVIR**; plasma concentration of rifabutin increased by ● **RITONAVIR** (increased risk of toxicity—reduce rifabutin dose); plasma concentration of rifabutin increased by ● **SAQUINAVIR** (also plasma concentration of saquinavir reduced)—reduce rifabutin dose; rifampicin significantly reduces plasma concentration of ● **SAQUINAVIR**, also risk of hepatotoxicity—avoid concomitant use; rifampicin reduces plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use
- **Anxiolytics and Hypnotics**: rifampicin accelerates metabolism of **DIAZEPAM** and **ZALEPLON** (reduced plasma concentration); rifampicin possibly accelerates metabolism of **BENZODIAZEPINES** (reduced plasma concentration); rifampicin possibly accelerates metabolism of **BUSPIRONE**; rifampicin accelerates metabolism of **ZOLPIDEM** (reduced plasma concentration and reduced effect); rifampicin significantly reduces plasma concentration of **ZOPICLONE**
- **Apremilast**: rifampicin reduces plasma concentration of
- **APREMILAST**—avoid concomitant use
- **Aprepitant**: rifampicin reduces plasma concentration of **APREPITANT**
- **Atovaquone**: avoidance of concomitant rifabutin advised by manufacturer of **ATOVAQUONE** (plasma concentration of both drugs reduced); rifampicin reduces plasma concentration of ● **ATOVAQUONE** (and concentration of rifampicin increased)—avoid concomitant use
- **Avanafil**: rifampicin possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- **Beta-blockers**: rifampicin accelerates metabolism of **BISOPROLOL** and **PROPRANOLOL** (plasma concentration significantly reduced); rifampicin reduces plasma concentration of **CARVEDILOL**, **CELIPROLOL** and **METOPROLOL**; rifampicin possibly reduces plasma concentration of *oral* **TIMOLOL**
- **Bosentan**: rifampicin reduces plasma concentration of
- **BOSENTAN**—avoid concomitant use
- **Calcium-channel Blockers**: rifampicin possibly reduces plasma concentration of **FELODIPINE**; rifampicin possibly accelerates metabolism of ● **ISRADIPINE** and ● **NICARDIPINE** (possibly significantly reduced plasma concentration); rifampicin accelerates metabolism of ● **DILTIAZEM**, ● **NIFEDIPINE**, ● **NIMODIPINE** and ● **VERAPAMIL** (plasma concentration significantly reduced)
- **Cannabis Extract**: rifampicin reduces plasma concentration of
- **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- **Cardiac Glycosides**: rifampicin possibly reduces plasma concentration of **DIGOXIN**

Rifamycins (continued)

- Cyclosporin: rifampicin accelerates metabolism of ● **CYCLOSPORIN** (reduced plasma concentration)
- Cobicistat: rifabutin reduces plasma concentration of ● **COBICISTAT** (adjust dose—consult product literature); rifampicin possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: rifamycins accelerate metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- Cytotoxics: rifampicin possibly reduces effects of ● **BRENTUXIMAB VEDOTIN**; rifampicin reduces plasma concentration of ● **AFATINIB**, ● **RUXOLITINIB**, ● **SORAFENIB** and ● **TRABECTEDIN**; rifabutin possibly decreases plasma concentration of ● **AXITINIB** (increase dose of axitinib—consult axitinib product literature); rifampicin decreases plasma concentration of ● **AXITINIB** (increase dose of axitinib—consult axitinib product literature); rifabutin possibly reduces plasma concentration of ● **BOSUTINIB**, ● **CRIZOTINIB** and ● **PONATINIB**—manufacturer of bosutinib, crizotinib and ponatinib advises avoid concomitant use; rifampicin reduces plasma concentration of ● **BORTEZOMIB**, ● **BOSUTINIB**, ● **CABAZITAXEL**, ● **CRIZOTINIB**, ● **PONATINIB**, ● **REGORAFENIB** and ● **VANDETANIB**—manufacturer of bortezomib, bosutinib, cabazitaxel, crizotinib, ponatinib, regorafenib and vandetanib advises avoid concomitant use; rifampicin reduces plasma concentration of ● **CABOZANTINIB**, ● **GEFITINIB**, ● **IBRUTINIB**, ● **IDELALISIB**, ● **IMATINIB**, ● **NILOTINIB** and ● **NINTEDANIB**—avoid concomitant use; avoidance of rifampicin advised by manufacturer of ● **DABRAFENIB**, ● **LAPATINIB**, ● **OLAPARIB** and ● **VEMURAFENIB**; rifampicin accelerates metabolism of ● **DASATINIB** (reduced plasma concentration—avoid concomitant use); rifampicin accelerates metabolism of ● **ERLOTINIB** and ● **SUNITINIB** (reduced plasma concentration); rifampicin reduces plasma concentration of ● **EVEROLIMUS** (avoid concomitant use or consider increasing the dose of everolimus—consult everolimus product literature); avoidance of rifabutin advised by manufacturer of ● **CABAZITAXEL**, ● **LAPATINIB**, ● **OLAPARIB** and ● **VEMURAFENIB**; rifampicin possibly reduces plasma concentration of ● **ERIBULIN** and ● **PAZOPANIB**; rifampicin reduces plasma concentration of active metabolite of ● **TEMSIROLIMUS**—avoid concomitant use; rifampicin possibly reduces plasma concentration of ● **VINFLUNINE**—manufacturer of vinflunine advises avoid concomitant use; avoidance of rifampicin advised by manufacturer of ● **VISMODEGIB** (plasma concentration of vismodegib possibly reduced)
- ▶ Deferasirox: rifampicin reduces plasma concentration of ● **DEFERASIROX**
- Diuretics: rifampicin reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use
- ▶ Fosaprepitant: rifampicin reduces plasma concentration of ● **FOSAPREPITANT**
- Guanfacine: rifabutin possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine; rifampicin reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Hormone Antagonists: rifampicin reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; rifabutin possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; rifampicin possibly reduces plasma concentration of ● **EXEMESTANE**; rifampicin accelerates metabolism of ● **TAMOXIFEN** (reduced plasma concentration)
- ▶ 5HT₂-receptor Antagonists: rifampicin accelerates metabolism of ● **ONDANSETRON** (reduced effect)
- Ivacaftor: rifabutin possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use; rifampicin reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ Leflunomide: rifampicin possibly increases plasma concentration of active metabolite of ● **LEFLUNOMIDE**
- ▶ Lipid-regulating Drugs: rifampicin possibly reduces plasma concentration of ● **ATORVASTATIN** and ● **SIMVASTATIN**; rifampicin accelerates metabolism of ● **FLUVASTATIN** (reduced effect)

Rifamycins (continued)

- Macitentan: rifampicin reduces plasma concentration of ● **MACITENTAN**—avoid concomitant use
- ▶ Muscle Relaxants: rifampicin possibly reduces plasma concentration of ● **TIZANIDINE**
- Mycophenolate: rifampicin reduces plasma concentration of active metabolite of ● **MYCOPHENOLATE**
- Netupitant: rifampicin reduces plasma concentration of ● **NETUPITANT**—avoid concomitant use
- Oestrogens: rifamycins accelerate metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Progestogens: rifamycins accelerate metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)
- Ranolazine: rifampicin reduces plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- Roflumilast: rifampicin inhibits effects of ● **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- Sirolimus: rifabutin and rifampicin reduce plasma concentration of ● **SIROLIMUS**—avoid concomitant use
- Tacrolimus: rifabutin possibly reduces plasma concentration of ● **TACROLIMUS**; rifampicin reduces plasma concentration of ● **TACROLIMUS**
- Tadalafil: rifampicin reduces plasma concentration of ● **TADALAFIL**—manufacturer of tadalafil advises avoid concomitant use
- ▶ Teriflunomide: rifampicin reduces plasma concentration of ● **TERIFLUNOMIDE**
- ▶ Theophylline: rifampicin accelerates metabolism of ● **THEOPHYLLINE** (reduced plasma concentration)
- Thyroid Hormones: rifampicin accelerates metabolism of ● **LEVOTHYROXINE** (may increase requirements for levothyroxine in hypothyroidism)
- ▶ Tibolone: rifampicin accelerates metabolism of ● **TIBOLONE** (reduced plasma concentration)
- Ticagrelor: rifampicin reduces plasma concentration of ● **TICAGRELOR**
- ▶ Tolvaptan: rifampicin reduces plasma concentration of ● **TOLVAPTAN**
- ▶ Ulcer-healing Drugs: rifampicin accelerates metabolism of ● **CIMETIDINE** (reduced plasma concentration)
- Ulipristal: avoidance of rifampicin advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- ▶ Vaccines: antibacterials inactivate ● **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Rifaximin

- NOTE** Rifamycins interactions do not apply to rifaximin
- ▶ Anticoagulants: rifaximin possibly reduces anticoagulant effect of ● **WARFARIN**
 - Cyclosporin: plasma concentration of rifaximin increased by ● **CYCLOSPORIN**
 - ▶ Vaccines: antibacterials inactivate ● **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Rilpivirine

- ▶ Analgesics: rilpivirine possibly reduces plasma concentration of ● **METHADONE**
- ▶ Antacids: manufacturer of rilpivirine advises give ● **ANTACIDS** 2 hours before or 4 hours after rilpivirine
- Antibacterials: manufacturer of rilpivirine advises avoid concomitant use with ● **CLARITHROMYCIN** and ● **ERYTHROMYCIN** (plasma concentration of rilpivirine possibly increased); plasma concentration of rilpivirine decreased by ● **RIFABUTIN** (increase dose of rilpivirine—consult rilpivirine product literature); plasma concentration of rilpivirine reduced by ● **RIFAMPIN**—avoid concomitant use
- ▶ Anticoagulants: rilpivirine possibly increases plasma concentration of ● **DABIGATRAN**

Rilpivirine (continued)

- Antidepressants: manufacturer of rilpivirine advises avoid concomitant use with ● **ST JOHN'S WORT** (plasma concentration of rilpivirine possibly reduced)
- Antiepileptics: manufacturer of rilpivirine advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (plasma concentration of rilpivirine possibly reduced)
- Antivirals: manufacturer of rilpivirine advises give **DIDANOSINE** 2 hours before or 4 hours after rilpivirine; avoidance of rilpivirine advised by manufacturer of **NEVIRAPINE**
- Calcium Salts: manufacturer of rilpivirine advises give **CALCIUM SALTS** 2 hours before or 4 hours after rilpivirine
- Corticosteroids: manufacturer of rilpivirine advises avoid concomitant use with ● **DEXAMETHASONE** (except when given as a single dose)
- Orlistat: absorption of rilpivirine possibly reduced by ● **ORLISTAT**
- Ulcer-healing Drugs: manufacturer of rilpivirine advises avoid concomitant use with ● **ESOMEPRAZOLE**, **LANSOPRAZOLE**, **PANTOPRAZOLE** and **RABEPRAZOLE** (plasma concentration of rilpivirine possibly reduced); plasma concentration of rilpivirine reduced by ● **OMEPRAZOLE**—avoid concomitant use; manufacturer of rilpivirine advises avoid **HISTAMINE H₂-ANTAGONISTS** for 12 hours before or 4 hours after rilpivirine—consult product literature

Riociguat

- Antacids: absorption of riociguat reduced by **ANTACIDS** (give at least 2 hours before or 1 hour after riociguat)
- Antifungals: manufacturer of riociguat advises avoid concomitant use with **ITRACONAZOLE**, **KETOCONAZOLE** and **VORICONAZOLE**
- Antivirals: manufacturer of riociguat advises avoid concomitant use with **RITONAVIR**
- Avanafil: possible enhanced hypotensive effect when riociguat given with ● **AVANAFIL**—avoid concomitant use
- Bosentan: plasma concentration of riociguat reduced by **BOSENTAN**
- Nicorandil: possible enhanced hypotensive effect when riociguat given with ● **NICORANDIL**—avoid concomitant use
- Nitrates: possible enhanced hypotensive effect when riociguat given with ● **NITRATES**—avoid concomitant use
- Sildenafil: enhanced hypotensive effect when riociguat given with ● **SILDENAFIL**—avoid concomitant use
- Tadalafil: possible enhanced hypotensive effect when riociguat given with ● **TADALAFIL**—avoid concomitant use
- Vardenafil: possible enhanced hypotensive effect when riociguat given with ● **VARDENAFIL**—avoid concomitant use

Risedronate Sodium see Bisphosphonates

Risperidone see Antipsychotics

Ritonavir

- Alpha-blockers: ritonavir possibly increases plasma concentration of ● **ALFUZOSIN**—avoid concomitant use
- Aminophylline: ritonavir accelerates metabolism of ● **AMINOPHYLLINE** (reduced plasma concentration)
- Analgesics: ritonavir possibly increases plasma concentration of **NSAIDs** and **BUPRENORPHINE**; ritonavir increases plasma concentration of ● **DEXTROPROPOXYPHENE** and ● **PIROXICAM** (risk of toxicity)—avoid concomitant use; ritonavir increases plasma concentration of ● **ALFENTANIL** and ● **FENTANYL**; ritonavir reduces plasma concentration of **METHADONE**; ritonavir possibly reduces plasma concentration of **MORPHINE**; ritonavir reduces plasma concentration of ● **PETHIDINE**, but increases plasma concentration of toxic metabolite of pethidine (avoid concomitant use)
- Anthelmintics: ritonavir possibly reduces plasma concentration of active metabolite of ● **ALBENDAZOLE**—consider increasing albendazole dose when given for systemic infections
- Anti-arrhythmics: ritonavir increases plasma concentration of ● **AMIODARONE** and ● **PROPAFENONE** (increased risk of ventricular arrhythmias—avoid concomitant use); ritonavir possibly increases plasma concentration of ● **DISOPYRAMIDE** (increased risk of toxicity); avoidance of ritonavir advised by manufacturer of ● **DRONEDARONE**; ritonavir possibly increases

Ritonavir

- Anti-arrhythmics (continued)
 - plasma concentration of ● **FLECAINIDE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antibacterials: ritonavir possibly increases plasma concentration of **AZITHROMYCIN** and **ERYTHROMYCIN**; ritonavir increases plasma concentration of ● **CLARITHROMYCIN** (reduce dose of clarithromycin in renal impairment); ritonavir increases plasma concentration of ● **RIFABUTIN** (increased risk of toxicity—reduce rifabutin dose); plasma concentration of ritonavir reduced by **RIFAMPICIN**; ritonavir possibly increases plasma concentration of **BEDAQUILINE**—manufacturer of ritonavir advises avoid concomitant use; ritonavir increases plasma concentration of **DELANAMID**; plasma concentration of both drugs increased when ritonavir given with ● **FUSIDIC ACID**—avoid concomitant use; avoidance of concomitant ritonavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
- Anticoagulants: ritonavir may enhance or reduce anticoagulant effect of ● **WARFARIN**; avoidance of ritonavir advised by manufacturer of **APIXABAN**; ritonavir possibly enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; ritonavir increases plasma concentration of ● **RIVAROXABAN**—avoid concomitant use
- Antidepressants: ritonavir possibly reduces plasma concentration of **PAROXETINE**; ritonavir increases plasma concentration of ● **TRAZODONE** (increased risk of toxicity); ritonavir possibly increases plasma concentration of ● **SSRIS** and ● **TRICYCLICS**; plasma concentration of ritonavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antidiabetics: ritonavir possibly increases plasma concentration of **TOLBUTAMIDE**
- Antiepileptics: ritonavir possibly increases plasma concentration of ● **CARBAMAZEPINE**; plasma concentration of ritonavir possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly affected; ritonavir possibly reduces plasma concentration of **LAMOTRIGINE**, **SODIUM VALPROATE** and **VALPROIC ACID**
- Antifungals: ritonavir increases plasma concentration of ● **KETOCONAZOLE** (reduce dose of ketoconazole); plasma concentration of ritonavir increased by **FLUCONAZOLE**; combination of ritonavir with ● **ITRACONAZOLE** may increase plasma concentration of either drug (or both); ritonavir reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use
- Antihistamines: ritonavir possibly increases plasma concentration of **NON-SEDATING ANTIHISTAMINES**
- Antimalarials: caution with ritonavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; plasma concentration of ritonavir possibly reduced by **MEFLOQUINE**; ritonavir increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- Antimuscarinics: avoidance of ritonavir advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when ritonavir given with **FESOTERODINE**—consult fesoterodine product literature; ritonavir possibly increases plasma concentration of ● **SOLIFENACIN**—see under Solifenacin, in BNF
- Antipsychotics: ritonavir possibly increases plasma concentration of ● **ANTIPSYCHOTICS**; ritonavir possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); manufacturer of ritonavir advises avoid concomitant use with ● **CLOZAPINE** (increased risk of toxicity); ritonavir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; ritonavir reduces plasma concentration of **OLANZAPINE**—consider increasing dose of olanzapine; ritonavir increases plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); ritonavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: plasma concentration of both drugs reduced when ritonavir given with ● **BOCEPREVIR**; manufacturer of ritonavir advises ritonavir and **DIDANOSINE** should be taken 2.5 hours apart; ritonavir increases the toxicity of ● **EFAVIRENZ**, monitor

Ritonavir

- **Antivirals** (continued)
 - liver function tests —manufacturer of **Atripla**® advises avoid concomitant use with **high-dose** ritonavir; ritonavir increases plasma concentration of **INDINAVIR**, **MARAVIROC** and **SAQUINAVIR**; ritonavir increases plasma concentration of **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; ritonavir possibly reduces plasma concentration of **TELAPREVIR**
- **Anxiolytics and Hypnotics**: ritonavir possibly increases plasma concentration of **ANXIOLYTICS AND HYPNOTICS**; ritonavir possibly increases plasma concentration of **ALPRAZOLAM**, **DIAZEPAM**, **FLURAZEPAM** and **ZOLPIDEM** (risk of extreme sedation and respiratory depression—avoid concomitant use); ritonavir possibly increases plasma concentration of **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam); ritonavir increases plasma concentration of **BUSPIRONE** (increased risk of toxicity)
 - **Aprepitant**: ritonavir possibly increases plasma concentration of **APREPITANT**
 - **Atovaquone**: ritonavir possibly reduces plasma concentration of **ATOVAQUONE**—manufacturer of atovaquone advises avoid concomitant use
- **Avanafil**: ritonavir significantly increases plasma concentration of **AVANAFIL**—avoid concomitant use
- **Bosentan**: ritonavir increases plasma concentration of **BOSENTAN** (consider reducing dose of bosentan)
 - **Bupropion**: ritonavir reduces plasma concentration of **BUPROPION**
- **Calcium-channel Blockers**: ritonavir possibly increases plasma concentration of **CALCIUM-CHANNEL BLOCKERS**; ritonavir increases plasma concentration of **AMLODIPINE** (reduce dose of amlodipine); avoidance of ritonavir advised by manufacturer of **LERCANIDIPINE**
- **Cardiac Glycosides**: ritonavir possibly increases plasma concentration of **DIGOXIN**
- **Ciclosporin**: ritonavir possibly increases plasma concentration of **CICLOSPORIN**
- **Clostrazol**: ritonavir possibly increases plasma concentration of **CLOSTAZOL** (see under Clostrazol, in BNF)
- **Cobicistat**: avoidance of ritonavir advised by manufacturer of **COBICISTAT**
- **Colchicine**: ritonavir possibly increases risk of **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- **Corticosteroids**: ritonavir possibly increases plasma concentration of **CORTICOSTEROIDS**—increased risk of adrenal suppression; ritonavir possibly increases plasma concentration of **BUDESONIDE** (including *inhaled*, *intranasal*, and *rectal* budesonide)—increased risk of adrenal suppression; ritonavir increases plasma concentration of *inhaled* and *intranasal* **FLUTICASON**—increased risk of adrenal suppression; ritonavir increases plasma concentration of **TRIAMCINOLONE injection**—increased risk of adrenal suppression
- **Cytotoxics**: ritonavir increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of ritonavir by 6 to 12 hours; ritonavir possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); ritonavir possibly increases the plasma concentration of **BOSUTINIB** and **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; ritonavir possibly increases plasma concentration of **CABOZANTINIB** and **VINBLASTINE**; ritonavir possibly increases plasma concentration of **CRIZOTINIB**, **EVEROLIMUS**, **NILOTINIB** and **VINFLUNINE**—manufacturer of crizotinib, everolimus, nilotinib and vinflunine advises avoid concomitant use; avoidance of ritonavir advised by manufacturer of **DASATINIB** (plasma concentration of dasatinib possibly increased); ritonavir possibly increases the plasma concentration of **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); avoidance of ritonavir advised by manufacturer of **LAPATINIB**; ritonavir possibly increases plasma concentration of **PAZOPANIB** (reduce dose of pazopanib); ritonavir possibly increases plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see

Ritonavir

- **Cytotoxics** (continued)
 - under Ponatinib, in BNF); manufacturer of ruxolitinib advises dose reduction when ritonavir given with **RUXOLITINIB**—consult ruxolitinib product literature; ritonavir possibly increases plasma concentration of **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; ritonavir increases plasma concentration of **PACLITAXEL**
- **Dapoxetine**: avoidance of ritonavir advised by manufacturer of **DAPOXETINE** (increased risk of toxicity)
- **Diuretics**: ritonavir increases plasma concentration of **EPLERENONE**—avoid concomitant use
- **Domeperidone**: possible increased risk of ventricular arrhythmias when ritonavir given with **DOMPERIDONE**—avoid concomitant use
- **Ergot Alkaloids**: increased risk of ergotism when ritonavir given with **ERGOT ALKALOIDS**—avoid concomitant use
 - **Fosaprepitant**: ritonavir possibly increases plasma concentration of **FOSAPREPITANT**
- **Guanfacine**: ritonavir possibly increases plasma concentration of **GUANFACINE** (halve dose of guanfacine)
- **5HT₂-receptor Agonists**: ritonavir increases plasma concentration of **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
- **Ivabradine**: ritonavir possibly increases plasma concentration of **IVABRADINE**—avoid concomitant use
- **Lipid-regulating Drugs**: ritonavir possibly increases plasma concentration of **ATORVASTATIN** (use lowest possible dose of atorvastatin); possible increased risk of myopathy when ritonavir given with **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when ritonavir given with **SIMVASTATIN** (avoid concomitant use); avoidance of ritonavir advised by manufacturer of **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
 - **Mirabegron**: when given with ritonavir avoid or reduce dose of **MIRABEGRON** in hepatic or renal impairment—see Mirabegron, in BNF
- **Oestrogens**: ritonavir accelerates metabolism of **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- **Orlistat**: absorption of ritonavir possibly reduced by **ORLISTAT**
- **Ranolazine**: ritonavir possibly increases plasma concentration of **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
 - **Riociguat**: avoidance of ritonavir advised by manufacturer of **RIOCIQUAT**
- **Sildenafil**: ritonavir significantly increases plasma concentration of **SILDENAFIL**—avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction (consult sildenafil product literature)
 - **Sympathomimetics**: ritonavir possibly increases plasma concentration of **DEXAMFETAMINE**
 - **Sympathomimetics, Beta₂**: manufacturer of ritonavir advises avoid concomitant use with **SALMETEROL**
- **Tacrolimus**: ritonavir possibly increases plasma concentration of **TACROLIMUS**
- **Tadalafil**: ritonavir increases plasma concentration of **TADALAFIL**—avoid concomitant use of tadalafil for pulmonary hypertension
- **Theophylline**: ritonavir accelerates metabolism of **THEOPHYLLINE** (reduced plasma concentration)
- **Ticagrelor**: ritonavir possibly increases plasma concentration of **TICAGRELO**—manufacturer of ticagrelor advises avoid concomitant use
- **Ulipristal**: avoidance of ritonavir advised by manufacturer of **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- **Vardenafil**: ritonavir increases plasma concentration of **VARDENAFIL**—avoid concomitant use

Ritonavir

- **Antipsychotics**: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)

Rituximab (continued)

- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Rivaroxaban

- Analgesics: increased risk of haemorrhage when anticoagulants given with **INTRAVENOUS** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- ▶ Anti-arrhythmics: manufacturer of rivaroxaban advises avoid concomitant use with **DRONEDARONE**
- Antibacterials: plasma concentration of rivaroxaban reduced by ● **RIFAMPICIN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Anticoagulants: increased risk of haemorrhage when rivaroxaban given with other ● **ANTICOAGULANTS** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN** and ● **EDOXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: plasma concentration of rivaroxaban possibly reduced by ● **ST JOHN'S WORT**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antiepileptics: plasma concentration of rivaroxaban possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antifungals: plasma concentration of rivaroxaban increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of rivaroxaban advises avoid concomitant use with **ITRACONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE**
- Antivirals: manufacturer of rivaroxaban advises avoid concomitant use with **ATAZANAVIR**, **DARUNAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **SAQUINAVIR** and **TIPRANAVIR**; manufacturers advise avoid concomitant use of rivaroxaban with **LOPINAVIR**; plasma concentration of rivaroxaban increased by ● **RITONAVIR**—avoid concomitant use
- Cobicistat: anticoagulant effect of rivaroxaban possibly enhanced by ● **COBICISTAT**—avoid concomitant use

Rivastigmine see Parasympathomimetics**Rizatriptan** see 5HT₁-receptor Agonists (under HT)**Rocuronium** see Muscle Relaxants**Roflumilast**

- ▶ Aminophylline: manufacturer of roflumilast advises avoid concomitant use with **AMINOPHYLLINE**
- Antibacterials: effects of roflumilast inhibited by ● **RIFAMPICIN** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Antidepressants: metabolism of roflumilast inhibited by **FLUVOXAMINE**
- Antiepileptics: effects of roflumilast possibly inhibited by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Theophylline: manufacturer of roflumilast advises avoid concomitant use with **THEOPHYLLINE**
- ▶ Ulcer-healing Drugs: metabolism of roflumilast inhibited by **CIMETIDINE**

Ropinirole

- ▶ Antibacterials: metabolism of ropinirole inhibited by **CIPROFLOXACIN** (increased plasma concentration)
- Antipsychotics: manufacturer of ropinirole advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Metoclopramide: manufacturer of ropinirole advises avoid concomitant use of **METOCLOPRAMIDE** (antagonism of effect)
- Oestrogens: plasma concentration of ropinirole increased by **OESTROGENS**

Ropivacaine

- ▶ Anti-arrhythmics: increased myocardial depression when ropivacaine given with **ANTI-ARRHYTHMICS**
 - ▶ Antidepressants: metabolism of ropivacaine inhibited by **FLUVOXAMINE**—avoid prolonged administration of ropivacaine
- Rosuvastatin** see Statins
- Rotavirus Vaccine** see Vaccines
- Rotigotine**
- ▶ Antipsychotics: manufacturer of rotigotine advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
 - ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
 - ▶ Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
 - ▶ Metoclopramide: manufacturer of rotigotine advises avoid concomitant use of **METOCLOPRAMIDE** (antagonism of effect)

Rufinamide

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of both drugs possibly reduced when rufinamide given with **CARBAMAZEPINE**; plasma concentration of rufinamide possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma concentration of rufinamide possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of rufinamide possibly increased by **SODIUM VALPROATE** and **VALPROIC ACID** (reduce dose of rufinamide)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Oestrogens: rufinamide accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: rufinamide accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Ruxolitinib

- Antibacterials: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—consult ruxolitinib product literature; plasma concentration of ruxolitinib reduced by **RIFAMPICIN**
- Antifungals: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **KETOCONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—consult ruxolitinib product literature
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **BOCEPREVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** and ● **TELAPREVIR**—consult ruxolitinib product literature

Sacubitril

- ACE Inhibitors: manufacturer of sacubitril advises avoid ● **ACE INHIBITORS** for 36 hours before or after sacubitril
- ▶ Diuretics: sacubitril reduces plasma concentration of **FUROSEMIDE**
- ▶ Lipid-regulating Drugs: sacubitril increases plasma concentration of **ATORVASTATIN**

St John's Wort

- ▶ Aminophylline: St John's wort possibly reduces plasma concentration of **AMINOPHYLLINE**
- ▶ Analgesics: St John's wort possibly reduces plasma concentration of **METHADONE**

St John's Wort (continued)

- Anti-arrhythmics: St John's wort possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: St John's wort possibly reduces plasma concentration of ● **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; St John's wort reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after St John's wort)
- Anticoagulants: St John's wort possibly reduces plasma concentration of ● **APIXABAN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; St John's wort reduces anticoagulant effect of ● **COUMARINS** (avoid concomitant use); St John's wort possibly reduces plasma concentration of ● **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; St John's wort possibly reduces plasma concentration of ● **EDOXABAN**; St John's wort possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: possible increased serotonergic effects when St John's wort given with ● **DULOXETINE**, ● **VENLAFAXINE** or ● **VORTIOXETINE**; St John's wort reduces plasma concentration of ● **AMITRIPTYLINE**; increased serotonergic effects when St John's wort given with ● **SSRIs**—avoid concomitant use
- Antiepileptics: St John's wort possibly reduces plasma concentration of ● **CARBAMAZEPINE**; St John's wort possibly reduces plasma concentration of ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- Antifungals: St John's wort reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETER WITH LUMEFANTRINE** and ● **ARTEMILIN WITH PIPERAQUINE**
- Antimuscarinics: St John's wort possibly reduces plasma concentration of active metabolite of ● **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- Antipsychotics: St John's wort possibly reduces plasma concentration of ● **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); St John's wort possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: St John's wort reduces plasma concentration of ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **EFAVIRENZ**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **NEVIRAPINE**, ● **RITONAVIR** and ● **SAQUINAVIR**—avoid concomitant use; St John's wort possibly reduces plasma concentration of ● **DACLATASVIR**, ● **DASABUVIR**, ● **OMBITASVIR**, ● **PARITAPREVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir, dasabuvir, ombitasvir, paritaprevir and simeprevir advises avoid concomitant use; St John's wort possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); avoidance of St John's wort advised by manufacturer of ● **ELVITEGRAVIR**, ● **ETRAVIRINE**, ● **LEDIPASVIR**, ● **SOFOSBUVIR** and ● **TELAPREVIR**; St John's wort possibly reduces plasma concentration of ● **MARAVIROC** and ● **TIPRANAVIR**—avoid concomitant use; avoidance of St John's wort advised by manufacturer of ● **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced)
- ▶ Anxiolytics and Hypnotics: St John's wort possibly reduces plasma concentration of oral ● **MIDAZOLAM**
- Apremilast: St John's wort possibly reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- Aprepitant: avoidance of St John's wort advised by manufacturer of ● **APREPITANT**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with ● **ATOMOXETINE**
- Calcium-channel Blockers: St John's wort possibly reduces plasma concentration of ● **AMLODIPINE** and ● **FELODIPINE**; St John's wort reduces plasma concentration of ● **NIFEDIPINE**; St John's wort significantly reduces plasma concentration of ● **VERAPAMIL**
- Cannabis Extract: St John's wort possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use

St John's Wort (continued)

- Cardiac Glycosides: St John's wort reduces plasma concentration of ● **DIGOXIN**—avoid concomitant use
- Ciclosporin: St John's wort reduces plasma concentration of ● **CICLOSPORIN**—avoid concomitant use
- Cobicistat: St John's wort possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Cytotoxics: St John's wort possibly reduces plasma concentration of ● **AXITINIB**—consider increasing dose of axitinib; St John's wort possibly reduces plasma concentration of ● **BORTEZOMIB**, ● **BOSUTINIB**, ● **CABOZANTINIB**, ● **CRIZOTINIB**, ● **EVEROLIMUS**, ● **IBRUTINIB**, ● **IDELALISIB**, ● **PONATINIB** and ● **VINFLUNINE**—manufacturer of bortezomib, bosutinib, cabozantinib, crizotinib, everolimus, ibrutinib, idelalisib, ponatinib and vinflunine advises avoid concomitant use; avoidance of St John's wort advised by manufacturer of ● **CABAZITAXEL**, ● **DABRAFINIB**, ● **GEFITINIB**, ● **LAPATINIB**, ● **OLAPARIB** and ● **VEMLUFABIN**; St John's wort reduces plasma concentration of ● **IMATINIB**—avoid concomitant use; avoidance of St John's wort advised by manufacturer of ● **VANDETANIB** and ● **VISMODEGIB** (plasma concentration of vandetanib and vismodegib possibly reduced); St John's wort possibly reduces plasma concentration of ● **ERIBULIN**; St John's wort accelerates metabolism of ● **IRINOTECAN** (reduced plasma concentration—avoid concomitant use)
- Dapoxetine: possible increased risk of serotonergic effects when St John's wort given with ● **DAPOXETINE** (manufacturer of dapoxetine advises St John's wort should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping St John's wort)
- Diuretics: St John's wort reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use
- ▶ Fingolimod: St John's wort possibly reduces plasma concentration of ● **FINGOLIMOD**—manufacturer of fingolimod advises avoid concomitant use
- Fosaprepitant: avoidance of St John's wort advised by manufacturer of ● **FOSAPREPITANT**
- Guanfacine: St John's wort possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Hormone Antagonists: St John's wort possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use
- 5HT₂-receptor Agonists: increased serotonergic effects when St John's wort given with ● **5HT₂ AGONISTS**—avoid concomitant use
- ▶ Ivabradine: St John's wort reduces plasma concentration of ● **IVABRADINE**—avoid concomitant use
- Ivacaftor: St John's wort possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ Lipid-regulating Drugs: St John's wort reduces plasma concentration of ● **SIMVASTATIN**
- ▶ Macitentan: avoidance of St John's wort advised by manufacturer of ● **MACITENTAN**
- Oestrogens: St John's wort reduces contraceptive effect of ● **OESTROGENS** (avoid concomitant use)
- Progestogens: St John's wort reduces contraceptive effect of ● **PROGESTOGENS** (avoid concomitant use)
- Tacrolimus: St John's wort reduces plasma concentration of ● **TACROLIMUS**—avoid concomitant use
- ▶ Theophylline: St John's wort possibly reduces plasma concentration of ● **THEOPHYLLINE**
- ▶ Ulcer-healing Drugs: St John's wort possibly reduces plasma concentration of ● **OMEPRAZOLE**
- Ulipristal: avoidance of St John's wort advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)

Salbutamol see Sympathomimetics, Beta₂

Salmeterol see Sympathomimetics, Beta₂

Saquinavir

- Analgesics: increased risk of ventricular arrhythmias when saquinavir given with ● **ALFENTANIL**, ● **FENTANYL** or ● **METHADONE**—avoid concomitant use
- Anti-arrhythmics: increased risk of ventricular arrhythmias when saquinavir given with ● **AMIODARONE**, ● **DISOPYRAMIDE**,

Saxinavir

- Anti-arrhythmics (continued)
 - **DRONEDARONE**, ● **FLICAINE**, ● **LIDOCAINE** or ● **PROPAFENONE**—avoid concomitant use
- Antibacterials: plasma concentration of both drugs possibly increased when saxinavir given with ● **CLARITHROMYCIN** (increased risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saxinavir given with ● **DAPSONE**, ● **ERYTHROMYCIN** or ● **MOXIFLOXACIN**—avoid concomitant use; saxinavir increases plasma concentration of ● **RIFABUTIN** (also plasma concentration of saxinavir reduced)—reduce rifabutin dose; plasma concentration of saxinavir significantly reduced by ● **RIFAMPICIN**, also risk of hepatotoxicity—avoid concomitant use; increased risk of ventricular arrhythmias when saxinavir given with ● **DELANID**; plasma concentration of both drugs may increase when saxinavir given with ● **FUSIDIC ACID**; avoidance of saxinavir advised by manufacturer of ● **TELITHROMYCIN** (risk of ventricular arrhythmias)
- Anticoagulants: saxinavir possibly enhances anticoagulant effect of ● **WARFARIN**; avoidance of saxinavir advised by manufacturer of ● **APIXABAN** and ● **RIVAROXABAN**
- Antidepressants: increased risk of ventricular arrhythmias when saxinavir given with ● **TRAZODONE** or ● **TRICYCLICS**—avoid concomitant use; plasma concentration of saxinavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of saxinavir possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENITOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- Antifungals: plasma concentration of saxinavir increased by ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of saxinavir possibly increased by ● **IMIDAZOLES** and ● **TRIAZOLES**
- Antihistamines: increased risk of ventricular arrhythmias when saxinavir given with ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: caution with saxinavir advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of saxinavir advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saxinavir given with ● **QUININE**—avoid concomitant use
- Antimuscarinics: avoidance of saxinavir advised by manufacturer of ● **DARIFENACIN** and ● **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when saxinavir given with ● **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: increased risk of ventricular arrhythmias when saxinavir given with ● **CLOZAPINE**, ● **HALOPERIDOL** or ● **PHENOTHIAZINES**—avoid concomitant use; saxinavir possibly increases plasma concentration of ● **ARIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); saxinavir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; saxinavir possibly increases plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); saxinavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: increased risk of ventricular arrhythmias when saxinavir given with ● **ATAZANAVIR** or ● **LOPINAVIR**—avoid concomitant use; saxinavir reduces plasma concentration of ● **DARUNAVIR**—avoid concomitant use; plasma concentration of saxinavir significantly reduced by ● **EFAVIRENZ**; plasma concentration of saxinavir increased by ● **INDINAVIR** and ● **RITONAVIR**; saxinavir increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); avoidance of saxinavir advised by manufacturer of ● **PARTAPREVIR**; plasma concentration of saxinavir reduced by ● **TIPRANAVIR**
- Anxiolytics and Hypnotics: saxinavir increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of oral midazolam)
- Avanafil: saxinavir possibly increases plasma concentration of ● **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- Beta-blockers: increased risk of ventricular arrhythmias when saxinavir given with ● **SOTALOL**—avoid concomitant use

Saxinavir (continued)

- Ciclosporin: plasma concentration of both drugs increased when saxinavir given with ● **CICLOSPORIN**
- Corticosteroids: plasma concentration of saxinavir possibly reduced by ● **DEXAMETHASONE**
- Cytotoxics: saxinavir possibly increases the plasma concentration of ● **AFATINIB**—manufacturer of afatinib advises separating administration of saxinavir by 6 to 12 hours; saxinavir possibly increases plasma concentration of ● **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); saxinavir possibly increases the plasma concentration of ● **BOSUTINIB** and ● **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; saxinavir possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; saxinavir possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNF); avoidance of saxinavir advised by manufacturer of ● **LAPATINIB** and ● **OLAPARIB**; increased risk of ventricular arrhythmias when saxinavir given with ● **PAZOPANIB**—avoid concomitant use; saxinavir possibly increases plasma concentration of ● **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNF); manufacturer of ruxolitinib advises dose reduction when saxinavir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; saxinavir possibly increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- Dapoxetine: avoidance of saxinavir advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
- Diuretics: saxinavir increases plasma concentration of ● **EPLERENONE** (reduce dose of eplerenone)
- Domperidone: possible increased risk of ventricular arrhythmias when saxinavir given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when saxinavir given with ● **ERGOTAMINE**—avoid concomitant use
- Guanfacine: saxinavir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- Lipid-regulating Drugs: possible increased risk of myopathy when saxinavir given with ● **ATORVASTATIN**; possible increased risk of myopathy when saxinavir given with ● **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when saxinavir given with ● **SIMVASTATIN** (avoid concomitant use); avoidance of saxinavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Orlistat: absorption of saxinavir possibly reduced by ● **ORLISTAT**
- Pentamidine Isetionate: increased risk of ventricular arrhythmias when saxinavir given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use
- Ranolazine: saxinavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: increased risk of ventricular arrhythmias when saxinavir given with ● **SILDENAFIL**—avoid concomitant use
- Tacrolimus: saxinavir increases plasma concentration of ● **TACROLIMUS** (consider reducing dose of tacrolimus)
- Tadalafil: increased risk of ventricular arrhythmias when saxinavir given with ● **TADALAFIL**—avoid concomitant use
- Ulcer-healing Drugs: plasma concentration of saxinavir possibly increased by ● **CIMETIDINE**; plasma concentration of saxinavir possibly increased by ● **ESOMEPRAZOLE**, ● **LANSOPRAZOLE**, ● **PANTOPRAZOLE** and ● **RABEPRAZOLE**—manufacturer of saxinavir advises avoid concomitant use; plasma concentration of saxinavir increased by ● **OMEPRAZOLE**—manufacturer of saxinavir advises avoid concomitant use
- Vardenafil: increased risk of ventricular arrhythmias when saxinavir given with ● **VARDENAFIL**—avoid concomitant use

Saxagliptin see Antidiabetics

Secukinumab

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Selegiline

NOTE Selegiline is a MAO-B inhibitor

- Analgesics: hyperpyrexia and CNS toxicity reported when selegiline given with • **PETHIDINE** (avoid concomitant use); manufacturer of selegiline advises avoid concomitant use with **OPIOID ANALGESICS**
- Antidepressants: manufacturer of selegiline advises avoid concomitant use with **CITALOPRAM** and **ESCITALOPRAM**; increased risk of hypertension and CNS excitation when selegiline given with • **FLUOXETINE** (selegiline should not be started until 5 weeks after stopping fluoxetine, avoid fluoxetine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with • **FLUVOXAMINE**, • **SERTRALINE** or • **VENLAFAXINE** (selegiline should not be started until 1 week after stopping fluvoxamine, sertraline or venlafaxine, avoid fluvoxamine, sertraline or venlafaxine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with • **PAROXETINE** (selegiline should not be started until 2 weeks after stopping paroxetine, avoid paroxetine for 2 weeks after stopping selegiline); enhanced hypotensive effect when selegiline given with • **MAOIS**—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of selegiline with • **MOCLOBEMIDE**; CNS toxicity reported when selegiline given with • **TRICYCLICS**; risk of CNS excitation and hypertension when selegiline given with • **VORTIOXETINE**
- Dopaminergics: selegiline enhances effects and increases toxicity of **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA** (reduce dose of co-beneldopa, co-careldopa or levodopa); max. dose of 10 mg selegiline advised by manufacturer of **ENTACAPONE** if used concomitantly
- 5HT₂-receptor Agonists: manufacturer of selegiline advises avoid concomitant use with **5HT₂ AGONISTS**
- Memantine: effects of dopaminergics and selegiline possibly enhanced by **MEMANTINE**
- Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- Oestrogens: plasma concentration of selegiline increased by • **OESTROGENS**—manufacturer of selegiline advises avoid concomitant use
- Progestogens: plasma concentration of selegiline increased by • **PROGESTOGENS**—manufacturer of selegiline advises avoid concomitant use
- Sympathomimetics: manufacturer of selegiline advises avoid concomitant use with **SYMPATHOMIMETICS**; risk of hypertensive crisis when selegiline given with • **DOPAMINE**

Selenium

- Eltrombopag: selenium possibly reduces absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- Vitamins: absorption of selenium possibly reduced by **ASCORBIC ACID** (give at least 4 hours apart)

Sertraline see Antidepressants, SSRI

Sevelamer

- Antibacterials: sevelamer reduces absorption of **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin)
- Ciclosporin: sevelamer possibly reduces plasma concentration of **CICLOSPORIN**
- Mycophenolate: sevelamer possibly reduces plasma concentration of **MYCOPHENOLATE**
- Tacrolimus: sevelamer possibly reduces plasma concentration of **TACROLIMUS**
- Thyroid Hormones: sevelamer possibly reduces absorption of **LEVOTHYROXINE**
- Vitamins: sevelamer reduces absorption of **CALCITRIOL** (give at least 1 hour before or 3 hours after sevelamer)

Sevoflurane see Anaesthetics, General

Sildenafil

- Alpha-blockers: enhanced hypotensive effect when sildenafil given with • **ALPHA-BLOCKERS** (avoid alpha-blockers for 4 hours after sildenafil)—when patient is stable on the alpha blocker initiate sildenafil at the lowest possible dose

Sildenafil (continued)

- Anti-arrhythmics: avoidance of sildenafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- Antibacterials: plasma concentration of sildenafil increased by • **CLARITHROMYCIN**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension; plasma concentration of sildenafil increased by **ERYTHROMYCIN**—reduce initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to twice daily for pulmonary hypertension; plasma concentration of sildenafil possibly increased by • **TELITHROMYCIN**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension
- Antifungals: plasma concentration of sildenafil increased by • **KETOCONAZOLE**—reduce initial dose of sildenafil for erectile dysfunction and avoid concomitant use of sildenafil for pulmonary hypertension; plasma concentration of sildenafil increased by **ITRACONAZOLE**—reduce initial dose of sildenafil
- Antivirals: plasma concentration of sildenafil reduced by **ETRAVIRINE**; plasma concentration of sildenafil possibly increased by **FOSAMPRENAVIR**; plasma concentration of sildenafil increased by • **INDINAVIR**—reduce initial dose of sildenafil; plasma concentration of sildenafil significantly increased by • **RITONAVIR**—avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction (consult sildenafil product literature); increased risk of ventricular arrhythmias when sildenafil given with • **SAQUINAVIR**—avoid concomitant use; avoidance of sildenafil advised by manufacturer of • **TELAPREVIR**; avoidance of sildenafil for pulmonary arterial hypertension advised by manufacturer of **TIPRANAVIR**
- Bosentan: plasma concentration of sildenafil reduced by **BOSENTAN**, also plasma concentration of bosentan increased
- Calcium-channel Blockers: enhanced hypotensive effect when sildenafil given with **AMLODIPINE**
- Cobicistat: plasma concentration of sildenafil possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction—consult cobicistat product literature
- Cytotoxics: avoidance of sildenafil for pulmonary arterial hypertension advised by manufacturer of **IDELALISIB**
- Dapoxetine: avoidance of sildenafil advised by manufacturer of **DAPOXETINE**
- Grapefruit Juice: plasma concentration of sildenafil possibly increased by **GRAPEFRUIT JUICE**
- Nicorandil: sildenafil significantly enhances hypotensive effect of • **NICORANDIL** (avoid concomitant use)
- Nitrates: sildenafil significantly enhances hypotensive effect of • **NITRATES** (avoid concomitant use)
- Riociguat: enhanced hypotensive effect when sildenafil given with • **RIOICIGUAT**—avoid concomitant use
- Ulcer-healing Drugs: plasma concentration of sildenafil increased by **CIMETIDINE**—consider reducing dose of sildenafil for erectile dysfunction

Siltuximab

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

Simeprevir

- Anti-arrhythmics: possible increased risk of bradycardia when simeprevir (with sofosbuvir) given with • **AMIODARONE**—see under Amiodarone, in BNF
- Antibacterials: plasma concentration of simeprevir possibly increased by • **CLARITHROMYCIN** and • **TELITHROMYCIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs increased when simeprevir given with • **ERYTHROMYCIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir possibly reduced by **RIFABUTIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir reduced by • **RIFAMPICIN**—manufacturer of simeprevir advises avoid concomitant use

Simeprevir (continued)

- Antidepressants: plasma concentration of simeprevir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of simeprevir advises avoid concomitant use
- Antiepileptics: plasma concentration of simeprevir possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of simeprevir advises avoid concomitant use
- Antifungals: manufacturer of simeprevir advises avoid concomitant use with ● **KETOCONAZOLE**; plasma concentration of simeprevir possibly increased by ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—manufacturer of simeprevir advises avoid concomitant use
- Antivirals: plasma concentration of both drugs increased when simeprevir given with ● **DARUNAVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir reduced by ● **EFAVIRENZ**; manufacturer of simeprevir advises avoid concomitant use with ● **ETRAVIRINE**; plasma concentration of both drugs increased when simeprevir given with ● **LEDIPASVIR**—manufacturer of ledipasvir advises avoid concomitant use; plasma concentration of simeprevir possibly reduced by ● **NEVIRAPINE**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir increased by ● **RITONAVIR**—manufacturer of simeprevir advises avoid concomitant use
- Anxiolytics and Hypnotics: simeprevir increases plasma concentration of oral **MIDAZOLAM**
- Cardiac Glycosides: simeprevir increases plasma concentration of **DIGOXIN**
- Cobicistat: plasma concentration of simeprevir possibly increased by ● **COBICISTAT**—manufacturer of simeprevir advises avoid concomitant use
- Corticosteroids: plasma concentration of simeprevir possibly reduced by ● **DEXAMETHASONE**—manufacturer of simeprevir advises avoid concomitant use
- Lipid-regulating Drugs: simeprevir increases plasma concentration of **ATORVASTATIN**, **ROSUVASTATIN** and **SIMVASTATIN** (consider reducing dose of atorvastatin, rosuvastatin and simvastatin)

Simvastatin see Statins

Sirolimus

- Anti-arrhythmics: caution with sirolimus advised by manufacturer of **DRONEDARONE**
- Antibacterials: plasma concentration of sirolimus increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—avoid concomitant use; plasma concentration of both drugs increased when sirolimus given with ● **ERYTHROMYCIN**; plasma concentration of sirolimus reduced by ● **RIFABUTIN** and ● **RIFAMPICIN**—avoid concomitant use
- Antifungals: plasma concentration of sirolimus increased by ● **ITRACONAZOLE**, ● **KETOCONAZOLE** and ● **VORICONAZOLE**—avoid concomitant use; plasma concentration of sirolimus increased by ● **MICAFUNGIN** and ● **MICONAZOLE**; plasma concentration of sirolimus possibly increased by ● **FLUCONAZOLE** and ● **POSACONAZOLE**
- Antivirals: plasma concentration of sirolimus possibly increased by ● **ATAZANAVIR** and ● **LOPINAVIR**; plasma concentration of sirolimus increased by ● **BOCEPREVIR** (increased risk of toxicity—reduce sirolimus dose); plasma concentration of both drugs increased when sirolimus given with ● **TELAPREVIR** (reduce dose of sirolimus)
- Calcium-channel Blockers: plasma concentration of sirolimus possibly increased by ● **NICARDIPINE**; plasma concentration of sirolimus increased by ● **DILTIAZEM**; plasma concentration of both drugs increased when sirolimus given with ● **VERAPAMIL**
- Ciclosporin: plasma concentration of sirolimus increased by **CICLOSPORIN**
- Cytotoxics: caution with sirolimus advised by manufacturer of ● **CRIZOTINIB**
- Grapefruit Juice: plasma concentration of sirolimus increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use

Sitagliptin see Antidiabetics

Smallpox Vaccine see Vaccines

Sodium Aurothiomalate

- ACE Inhibitors: flushing and hypotension reported when sodium aurothiomalate given with ● **ACE INHIBITORS**
- Penicillamine: increased risk of haematological toxicity when sodium aurothiomalate given with ● **PENICILLAMINE**—see under Penicillamine, in BNF)

Sodium Benzoate

- Antiepileptics: effects of sodium benzoate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antipsychotics: effects of sodium benzoate possibly reduced by **HALOPERIDOL**
- Corticosteroids: effects of sodium benzoate possibly reduced by **CORTICOSTEROIDS**

Sodium Bicarbonate see Antacids

Sodium Citrate

- Antibacterials: avoid concomitant use of sodium citrate with **METHENAMINE**
- Ulcer-healing Drugs: avoidance of sodium citrate advised by manufacturer of **SUCRALFATE**

Sodium Clodronate see Bisphosphonates

Sodium Ferredate see Iron salts

Sodium Nitroprussside see Vasodilator Antihypertensives

Sodium Oxybate

- Analgesics: effects of sodium oxybate enhanced by ● **OPIOID ANALGESICS** (avoid concomitant use)
- Antidepressants: increased risk of side-effects when sodium oxybate given with **TRICYCLICS**
- Antiepileptics: manufacturer of sodium oxybate advises avoid concomitant use with **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of sodium oxybate increased by ● **SODIUM VALPROATE** and ● **VALPROIC ACID** (see under Sodium Oxybate, in BNF)
- Antipsychotics: effects of sodium oxybate possibly enhanced by **ANTIPSYCHOTICS**
- Anxiolytics and Hypnotics: effects of sodium oxybate enhanced by ● **BENZODIAZEPINES** (avoid concomitant use)

Sodium Phenylbutyrate

- Antiepileptics: effects of sodium phenylbutyrate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antipsychotics: effects of sodium phenylbutyrate possibly reduced by **HALOPERIDOL**
- Corticosteroids: effects of sodium phenylbutyrate possibly reduced by **CORTICOSTEROIDS**

Sodium Stibogluconate

- Antifungals: possible increased risk of arrhythmias when sodium stibogluconate given before ● **AMPHOTERICIN**—manufacturer of sodium stibogluconate advises giving 14 days apart

Sodium Valproate

- Analgesics: effects of sodium valproate enhanced by **ASPIRIN**
- Antibacterials: metabolism of sodium valproate possibly inhibited by **ERYTHROMYCIN** (increased plasma concentration); avoidance of sodium valproate advised by manufacturer of ● **PIVMECILLINAM**; plasma concentration of sodium valproate reduced by ● **CARBAPENEMS**—avoid concomitant use
- Anticoagulants: sodium valproate possibly enhances anticoagulant effect of **COUMARINS**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of sodium valproate reduced by **CARBAMAZEPINE**, also plasma concentration of active metabolite of carbamazepine increased; sodium valproate possibly increases plasma concentration of **ETHOSUXIMIDE**; sodium valproate increases or possibly decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of sodium valproate reduced; sodium valproate increases plasma concentration of ● **LAMOTRIGINE** (increased risk of toxicity—reduce lamotrigine dose); sodium valproate sometimes reduces plasma concentration of an active metabolite of **OXCARBAZEPINE**; sodium valproate increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE** (also plasma concentration of sodium valproate reduced); sodium valproate possibly

Sodium Valproate

- Antiepileptics (continued)
 - increases plasma concentration of **RUFINAMIDE** (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when sodium valproate given with **TOPIRAMATE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); sodium valproate possibly increases or decreases plasma concentration of **CLOZAPINE**; increased risk of side-effects including neutropenia when sodium valproate given with ● **OLANZAPINE**
- ▶ Antivirals: plasma concentration of sodium valproate possibly reduced by **RITONAVIR**; sodium valproate possibly increases plasma concentration of **ZIDOVUDINE** (increased risk of toxicity)
- ▶ Anxiolytics and Hypnotics: plasma concentration of sodium valproate possibly increased by **CLOBAZAM**; increased risk of side-effects when sodium valproate given with **CLONAZEPAM**; sodium valproate possibly increases plasma concentration of **DIAZEPAM** and **LORAZEPAM**
- ▶ Bupropion: sodium valproate inhibits the metabolism of **BUPROPION**
- ▶ Cytotoxics: sodium valproate increases plasma concentration of **TEMOZOLOMIDE**
- ▶ Guanfacine: plasma concentration of sodium valproate increased by **GUANFACINE**
- ▶ Lipid-regulating Drugs: absorption of sodium valproate possibly reduced by **COLESTYRAMINE**
- ▶ Oestrogens: plasma concentration of sodium valproate possibly reduced by **ETHINYLESTRADIOL**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- ▶ Sodium Benzoate: sodium valproate possibly reduces effects of **SODIUM BENZOATE**
- Sodium Oxybate: sodium valproate increases the plasma concentration of ● **SODIUM OXYBATE** (see under Sodium Oxybate, in BNF)
- ▶ Sodium Phenylbutyrate: sodium valproate possibly reduces effects of **SODIUM PHENYLBUTYRATE**
- Ulcer-healing Drugs: metabolism of sodium valproate inhibited by ● **CIMETIDINE** (increased plasma concentration)

Sofosbuvir

- Anti-arrhythmics: possible increased risk of bradycardia when sofosbuvir given with ● **AMIODARONE**—see under Amiodarone, in BNF
- ▶ Antibacterials: manufacturer of sofosbuvir advises avoid concomitant use with **RIFABUTIN** and **RIFAMPICIN**
- ▶ Antidepressants: manufacturer of sofosbuvir advises avoid concomitant use with **ST JOHN'S WORT**
- ▶ Antiepileptics: manufacturer of sofosbuvir advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **OXCARBAZEPINE**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**

Solifenacin see Antimuscarinics**Somatropin**

- ▶ Corticosteroids: growth-promoting effect of somatropin may be inhibited by **CORTICOSTEROIDS**
- ▶ Oestrogens: increased doses of somatropin may be needed when given with **OESTROGENS** (when used as oral replacement therapy)

Sorafenib

- ▶ Antibacterials: bioavailability of sorafenib reduced by **NEOMYCIN**; plasma concentration of sorafenib reduced by **RIFAMPICIN**
- Anticoagulants: sorafenib possibly enhances anticoagulant effect of ● **COUMARINS**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of sorafenib advised by manufacturer of ● **BOCEPREVIR**
- ▶ Cytotoxics: sorafenib increases plasma concentration of **DOCETAXEL** and **DOXORUBICIN**; sorafenib possibly increases plasma concentration of **IRINOTECAN**

Sotalol see Beta-blockers**Spirinolactone** see Diuretics**Statins**

- ▶ Antacids: absorption of rosuvastatin reduced by **ANTACIDS**
- Anti-arrhythmics: increased risk of myopathy when simvastatin given with ● **AMIODARONE** (see under Simvastatin, p. 125); plasma concentration of rosuvastatin increased by ● **DRONEDARONE**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when simvastatin given with ● **DRONEDARONE**; plasma concentration of atorvastatin possibly increased by **DRONEDARONE**
- Antibacterials: possible increased risk of myopathy when atorvastatin or simvastatin given with ● **AZITHROMYCIN**; plasma concentration of atorvastatin and pravastatin increased by ● **CLARITHROMYCIN**; increased risk of myopathy when simvastatin given with ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** or ● **TELITHROMYCIN** (avoid concomitant use); plasma concentration of rosuvastatin reduced by **ERYTHROMYCIN**; possible increased risk of myopathy when atorvastatin given with **ERYTHROMYCIN**; plasma concentration of pravastatin increased by **ERYTHROMYCIN**; plasma concentration of atorvastatin and simvastatin possibly reduced by **RIFAMPICIN**; metabolism of fluvastatin accelerated by **RIFAMPICIN** (reduced effect); increased risk of myopathy when statins given with ● **DAPTOMYCIN** (preferably avoid concomitant use); risk of myopathy and rhabdomyolysis when statins given with ● **FUSIDIC ACID**—avoid concomitant use and for 7 days after last fusidic acid dose; possible increased risk of myopathy when pravastatin given with **TELITHROMYCIN**; increased risk of myopathy when atorvastatin given with ● **TELITHROMYCIN** (avoid concomitant use)
- Anticoagulants: atorvastatin may transiently reduce anticoagulant effect of **WARFARIN**; rosuvastatin possibly enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; simvastatin can enhance the anticoagulant effect of **COUMARINS**; fluvastatin enhances anticoagulant effect of ● **COUMARINS**
- ▶ Antidepressants: plasma concentration of simvastatin reduced by **ST JOHN'S WORT**
- ▶ Antidiabetics: fluvastatin possibly increases plasma concentration of **GLIBENCLAMIDE**
- Antiepileptics: plasma concentration of simvastatin reduced by ● **CARBAMAZEPINE** and **ESLICARBAZEPINE**—consider increased dose of simvastatin; plasma concentration of rosuvastatin reduced by **ESLICARBAZEPINE**; combination of fluvastatin with **FOSPHENYTOIN** or **PHENYTOIN** may increase plasma concentration of either drug (or both)
- Antifungals: possible increased risk of myopathy when atorvastatin given with ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; increased risk of myopathy when simvastatin given with ● **ITRACONAZOLE**, ● **KETOCONAZOLE** or ● **POSACONAZOLE** (avoid concomitant use); possible increased risk of myopathy when simvastatin given with ● **FLUCONAZOLE** or ● **MICONAZOLE**; possible increased risk of myopathy when atorvastatin given with ● **FLUCONAZOLE** or **IMIDAZOLES**; plasma concentration of fluvastatin increased by **FLUCONAZOLE**—possible increased risk of myopathy; plasma concentration of rosuvastatin increased by ● **ITRACONAZOLE**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when atorvastatin given with ● **ITRACONAZOLE**, ● **POSACONAZOLE** or ● **VORICONAZOLE**; increased risk of myopathy when simvastatin given with ● **VORICONAZOLE**
- Antivirals: increased risk of myopathy when simvastatin given with ● **ATAZANAVIR**, ● **INDINAVIR**, ● **RITONAVIR** or ● **SAGUINAVIR** (avoid concomitant use); possible increased risk of myopathy when atorvastatin or pravastatin given with ● **ATAZANAVIR**; plasma concentration of rosuvastatin increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **LOPINAVIR** and ● **TIPRANAVIR**—adjust dose of rosuvastatin (consult product literature); plasma concentration of pravastatin increased by **BOCEPREVIR**; plasma concentration of atorvastatin increased by **BOCEPREVIR** (reduce dose of atorvastatin); manufacturers advise avoid concomitant use of simvastatin with ● **BOCEPREVIR** and ● **TELAPREVIR**; plasma concentration of rosuvastatin increased by **DACLATASVIR**; plasma concentration of pravastatin possibly increased by **DARUNAVIR** (use lowest possible dose of pravastatin); possible increased risk of myopathy when atorvastatin given with **DARUNAVIR**, **FOSAMPRENAVIR**,

Statins

● Antivirals (continued)

- **INDINAVIR**, **LOPINAVIR** or **SAQUINAVIR**: plasma concentration of rosvastatin increased by ● **DASABUVIR** and ● **PARITAPREVIR** (reduce dose of rosvastatin—see under Rosuvastatin, in BNF); avoidance of atorvastatin and simvastatin advised by manufacturer of ● **DASABUVIR**; plasma concentration of atorvastatin, pravastatin and simvastatin reduced by ● **EFAVIRENZ**; plasma concentration of atorvastatin possibly reduced by ● **ETRAVIRINE**; possible increased risk of myopathy when rosvastatin given with ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—manufacturer of rosvastatin advises avoid concomitant use; possible increased risk of myopathy when simvastatin given with ● **FOSAMPRENAVIR** or ● **LOPINAVIR**—avoid concomitant use; possible increased risk of myopathy when atorvastatin, fluvastatin and simvastatin given with ● **LEDIPASVIR**—manufacturer of ledipasvir advises consider reducing dose of atorvastatin, fluvastatin and simvastatin; avoidance of rosvastatin advised by manufacturer of ● **LEDIPASVIR**; avoidance of atorvastatin and simvastatin advised by manufacturer of ● **OMBITASVIR**; plasma concentration of pravastatin increased by ● **PARITAPREVIR** (reduce dose of pravastatin); avoidance of atorvastatin, fluvastatin and simvastatin advised by manufacturer of ● **PARITAPREVIR**; plasma concentration of atorvastatin possibly increased by ● **RITONAVIR** (use lowest possible dose of atorvastatin); plasma concentration of atorvastatin, rosvastatin and simvastatin increased by ● **SIMEPREVIR** (consider reducing dose of atorvastatin, rosvastatin and simvastatin); avoidance of atorvastatin advised by manufacturer of ● **TELAPREVIR**; increased risk of myopathy when atorvastatin given with ● **TIPRANAVIR** (see under Atorvastatin, p. 123); plasma concentration of simvastatin possibly increased by ● **TIPRANAVIR**—avoid concomitant use
- Anxiolytics and Hypnotics: atorvastatin increases plasma concentration of *intravenous* **MIDAZOLAM**
- Bosentan: plasma concentration of simvastatin reduced by ● **BOSENTAN**
- Calcium-channel Blockers: possible increased risk of myopathy when simvastatin given with ● **AMLODIPINE** and ● **DILTIAZEM** (see under Simvastatin, p. 125); plasma concentration of atorvastatin increased by ● **DILTIAZEM**—possible increased risk of myopathy; atorvastatin increases plasma concentration of ● **VERAPAMIL**, also possible increased risk of myopathy (consider reducing dose of atorvastatin); increased risk of myopathy when simvastatin given with ● **VERAPAMIL** (see under Simvastatin, p. 125)
- Cardiac Glycosides: atorvastatin possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: increased risk of myopathy when rosvastatin or simvastatin given with ● **CICLOSPORIN** (avoid concomitant use); increased risk of myopathy when atorvastatin given with ● **CICLOSPORIN** (see under Atorvastatin, p. 123); increased risk of myopathy when fluvastatin or pravastatin given with ● **CICLOSPORIN**
- Clopidogrel: plasma concentration of rosvastatin increased by ● **CLOPIDOGREL**—adjust dose of rosvastatin (consult product literature)
- Cobicistat: plasma concentration of atorvastatin possibly increased by ● **COBICISTAT**—manufacturer of cobicistat advises reduce dose of atorvastatin; avoidance of simvastatin advised by manufacturer of ● **COBICISTAT**
- Colchicine: possible increased risk of myopathy when statins given with ● **COLCHICINE**
- Cytotoxics: plasma concentration of simvastatin possibly increased by ● **DASATINIB**; avoidance of simvastatin advised by manufacturer of ● **IDELALISIB**; plasma concentration of simvastatin increased by ● **IMATINIB**
- Eltrombopag: plasma concentration of rosvastatin increased by ● **ELTROMBOPAG**—adjust dose of rosvastatin (consult product literature)
- Grapefruit Juice: plasma concentration of atorvastatin possibly increased by ● **GRAPEFRUIT JUICE**; plasma concentration of simvastatin increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use

Statins (continued)

- Hormone Antagonists: possible increased risk of myopathy when simvastatin given with ● **DANAZOL**—avoid concomitant use
- Lipid-regulating Drugs: possible increased risk of myopathy when simvastatin given with ● **BEZAFIBRATE** (see under Simvastatin, p. 125); possible increased risk of myopathy when simvastatin given with ● **CIPROFIBRATE** (see under Simvastatin, in BNF); when given with statins reduce maximum dose of ● **FENOFIBRATE**—see under Fenofibrate, p. 122; increased risk of myopathy when atorvastatin, fluvastatin or pravastatin given with ● **GEMFIBROZIL** (preferably avoid concomitant use); increased risk of myopathy when simvastatin given with ● **GEMFIBROZIL** (avoid concomitant use); plasma concentration of rosvastatin increased by ● **EZETIMIBE**—adjust dose of rosvastatin (consult product literature); increased risk of myopathy when statins given with ● **FIBRATES**; increased risk of myopathy when rosvastatin given with ● **FIBRATES** (see under Rosuvastatin, p. 124); plasma concentration of simvastatin increased by ● **LOMITAPIDE** (see under Simvastatin, in BNF); plasma concentration of atorvastatin increased by ● **LOMITAPIDE**—manufacturer of lomitapide advises reduce dose of atorvastatin by half or separate administration by 12 hours; increased risk of myopathy when statins given with ● **NICOTINIC ACID** (applies to lipid regulating doses of nicotinic acid)
- Oestrogens: atorvastatin and rosvastatin increase plasma concentration of **ETHINYLESTRADIOL**
- Progestogens: atorvastatin increases plasma concentration of **NORETHISTERONE**; rosvastatin increases plasma concentration of active metabolite of **NORGESTIMATE**; rosvastatin increases plasma concentration of **NORGESTREL**
- Ranolazine: plasma concentration of simvastatin increased by ● **RANOLAZINE** (see under Simvastatin, in BNF)
- Retinoids: plasma concentration of simvastatin reduced by ● **ALITRETINOIN**
- Sacubitril: plasma concentration of atorvastatin increased by ● **SACUBITRIL**
- Teriflunomide: plasma concentration of rosvastatin increased by ● **TERIFLUNOMIDE** (consider reducing dose of rosvastatin)
- Ticagrelor: plasma concentration of simvastatin increased by ● **TICAGRELOR** (increased risk of toxicity)

Stavudine

- Antivirals: increased risk of side-effects when stavudine given with ● **DIDANOSINE**; increased risk of toxicity when stavudine given with ● **RIBAVIRIN**; effects of stavudine possibly inhibited by ● **ZIDOVUDINE** (manufacturers advise avoid concomitant use)
- Cytotoxics: effects of stavudine possibly inhibited by ● **DOXORUBICIN**; increased risk of toxicity when stavudine given with ● **HYDROXYCARBAMIDE**—avoid concomitant use
- Orlistat: absorption of stavudine possibly reduced by ● **ORLISTAT**

Stiripentol

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: stiripentol increases plasma concentration of ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Anxiolytics and Hypnotics: stiripentol increases plasma concentration of **CLOBAZAM**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Streptomycin see Aminoglycosides

Strontium Ranelate

- ▶ Antibacterials: strontium ranelate reduces absorption of **QUINOLONES** and **TETRACYCLINES** (manufacturer of strontium ranelate advises avoid concomitant use)

Sucralfate

- ▶ Aminophylline: sucralfate possibly reduces absorption of **AMINOPHYLLINE** (give at least 2 hours apart)
- ▶ Antibacterials: sucralfate reduces absorption of **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin); sucralfate reduces absorption of **LEVOFLOXACIN**, **NORFLOXACIN** and **OFLOXACIN** (give at least 2 hours apart); sucralfate reduces absorption of **MOXIFLOXACIN** (give at least 6 hours apart); sucralfate reduces absorption of **TETRACYCLINES**
- Anticoagulants: sucralfate possibly reduces absorption of ● **COUMARINS** (reduced anticoagulant effect)
- Antiepileptics: sucralfate reduces absorption of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- ▶ Antifungals: sucralfate reduces absorption of **KETOCONAZOLE**
- ▶ Antipsychotics: sucralfate reduces absorption of **SULPIRIDE**
- ▶ Cardiac Glycosides: sucralfate possibly reduces absorption of **CARDIAC GLYCOSIDES**
- ▶ Potassium Salts: manufacturer of sucralfate advises avoid concomitant use with **POTASSIUM CITRATE**
- ▶ Sodium Citrate: manufacturer of sucralfate advises avoid concomitant use with **SODIUM CITRATE**
- ▶ Theophylline: sucralfate possibly reduces absorption of **THEOPHYLLINE** (give at least 2 hours apart)
- ▶ Thyroid Hormones: sucralfate reduces absorption of **LEVOTHYROXINE**
- ▶ Ulcer-healing Drugs: sucralfate possibly reduces absorption of **LANSOPRAZOLE**

Sucroferri Oxhydroxide see Iron Salts**Sugammadex**

- ▶ Antibacterials: response to sugammadex possibly reduced by **FUSIDIC ACID**
- ▶ Progestogens: sugammadex possibly reduces plasma concentration of **PROGESTOGENS**—manufacturer of sugammadex advises additional contraceptive precautions

Sulfadiazine see Sulfonamides**Sulfadoxine** see Sulfonamides**Sulfamethoxazole** see Sulfonamides**Sulfasalazine**

- ▶ Cardiac Glycosides: sulfasalazine possibly reduces absorption of **DIGOXIN**
- ▶ Folate: sulfasalazine possibly reduces absorption of **FOLIC ACID**

Sulfinpyrazone

- ▶ Aminophylline: sulfinpyrazone reduces plasma concentration of **AMINOPHYLLINE**
- ▶ Analgesics: effects of sulfinpyrazone antagonised by **ASPIRIN**
- ▶ Antibacterials: sulfinpyrazone reduces excretion of **NITROFURANTOIN** (increased risk of toxicity); sulfinpyrazone reduces excretion of **PENICILLINS**; effects of sulfinpyrazone antagonised by **PYRAZINAMIDE**
- Anticoagulants: increased risk of bleeding when sulfinpyrazone given with **APIXABAN**; sulfinpyrazone enhances anticoagulant effect of ● **COUMARINS**; possible increased risk of bleeding when sulfinpyrazone given with ● **DABIGATRAN**
- Antidiabetics: sulfinpyrazone enhances effects of ● **SULFONYLUREAS**
- Antiepileptics: sulfinpyrazone increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- ▶ Calcium-channel Blockers: sulfinpyrazone reduces plasma concentration of **VERAPAMIL**
- Ciclosporin: sulfinpyrazone reduces plasma concentration of ● **CICLOSPORIN**
- ▶ Theophylline: sulfinpyrazone reduces plasma concentration of **THEOPHYLLINE**

Sulfonamides

- Anaesthetics, General: sulfonamides enhance effects of **THIOPENTAL**
- Anaesthetics, Local: effects of sulfonamides possibly inhibited by ● **CHLOROPROCAINE** (manufacturer of chloroprocaine advises avoid concomitant use); increased risk of methaemoglobinaemia when sulfonamides given with **PRILOCAINE**

Sulfonamides (continued)

- ▶ Anti-arrhythmics: possible increased risk of ventricular arrhythmias when sulfamethoxazole (as co-trimoxazole) given with **AMIODARONE**—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole
- Antibacterials: increased risk of crystalluria when sulfonamides given with ● **METHENAMINE**
- Anticoagulants: sulfonamides enhance anticoagulant effect of ● **COUMARINS**; sulfonamides possibly inhibit metabolism of **PHENINDIONE**
- ▶ Antidiabetics: sulfonamides rarely enhance the effects of **SULFONYLUREAS**
- ▶ Antiepileptics: sulfonamides possibly increase plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antimalarials: increased antilife effect when sulfonamides given with ● **PYRIMETHAMINE**
- Antipsychotics: avoid concomitant use of sulfonamides with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Azathioprine: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with ● **AZATHIOPRINE**
- Ciclosporin: increased risk of nephrotoxicity when sulfonamides given with ● **CICLOSPORIN**; sulfadiazine possibly reduces plasma concentration of ● **CICLOSPORIN**
- Cytotoxics: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with ● **MERCAPTOPURINE**; sulfonamides increase risk of **METHOTREXATE** toxicity; increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when sulfamethoxazole (as co-trimoxazole) given with ● **METHOTREXATE**
- ▶ Potassium Aminobenzoate: effects of sulfonamides inhibited by **POTASSIUM AMINOENZOATE**
- Tacrolimus: possible increased risk of nephrotoxicity when sulfamethoxazole given with ● **TACROLIMUS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Sulfonfylureas see Antidiabetics**Sulindac** see NSAIDs**Sulpiride** see Antipsychotics**Sumatriptan** see 5HT₁-receptor Agonists (under HT)**Sunitinib**

- ▶ Antibacterials: metabolism of sunitinib accelerated by **RIFAMPICIN** (reduced plasma concentration)
- ▶ Antifungals: metabolism of sunitinib inhibited by **KETOCONAZOLE** (increased plasma concentration)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of sunitinib advised by manufacturer of ● **BOCEPREVIR**

Suxamethonium see Muscle Relaxants**Sympathomimetics**

- Adrenergic Neurone Blockers: ephedrine, isometheptene, metaraminol, methylphenidate, noradrenaline (norepinephrine), oxymetazoline, phenylephrine, pseudoephedrine and xylometazoline antihypertensive effect of ● **ADRENERGIC NEURONE BLOCKERS**; manufacturer of midodrine advises avoid concomitant use with **GUANETHIDINE**; dexafetamine and lisdexafetamine antagonise hypotensive effect of ● **GUANETHIDINE**; increased risk of hypertension when adrenaline (epinephrine) given with ● **GUANETHIDINE**
- ▶ Alcohol: effects of methylphenidate possibly enhanced by **ALCOHOL**
- ▶ Alpha₂-adrenoceptor Stimulants: avoidance of sympathomimetics advised by manufacturer of **APRACLOINIDE**
- Alpha-blockers: effects of midodrine possibly antagonised by **ALPHA-BLOCKERS**; avoid concomitant use of adrenaline (epinephrine) or dopamine with ● **TOLAZOLINE**
- ▶ Aminophylline: avoidance of ephedrine in children advised by manufacturer of **AMINOPHYLLINE**
- Anaesthetics, General: avoidance of sympathomimetics advised by manufacturer of ● **ISOFLURANE** (risk of ventricular arrhythmias); increased risk of hypertension when methylphenidate given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**; increased risk of arrhythmias when adrenaline

Sympathomimetics

- Anaesthetics, General (continued)
 - (epinephrine) or noradrenaline (norepinephrine) given with
 - **VOLATILE LIQUID GENERAL ANAESTHETICS**
- Antacids: absorption of pseudoephedrine possibly increased by **ALUMINIUM HYDROXIDE**
- Anticoagulants: methylphenidate possibly enhances anticoagulant effect of ● **COUMARINS**
- Antidepressants: risk of hypertensive crisis when dexamfetamine, ephedrine, isometheptene, lisdexamfetamine, metaraminol, methylphenidate, phenylephrine or pseudoephedrine given with ● **MAOIS**, avoid dexamfetamine, ephedrine, isometheptene, lisdexamfetamine, metaraminol, methylphenidate, phenylephrine or pseudoephedrine for at least 2 weeks after stopping MAOIs; manufacturer of midodrine advises avoid concomitant use with **MAOIS** and **TRICYCLICS**; risk of hypertensive crisis when adrenaline (epinephrine), dobutamine, dopamine, noradrenaline (norepinephrine) or xylometazoline given with ● **MAOIS**; risk of hypertensive crisis when oxymetazoline given with ● **MAOIS**, some manufacturers advise avoid oxymetazoline for at least 2 weeks after stopping MAOIs; risk of hypertensive crisis when sympathomimetics given with ● **MOCLOBEMIDE**; methylphenidate possibly inhibits metabolism of **SSRIs** and **TRICYCLICS**; increased risk of hypertension and arrhythmias when noradrenaline (norepinephrine) or phenylephrine given with ● **TRICYCLICS**; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with ● **TRICYCLICS** (but local anaesthetics with adrenaline appear to be safe)
- Antiepileptics: methylphenidate increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; methylphenidate possibly increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**
- Antihistamines: manufacturer of midodrine advises avoid concomitant use with **ANTIHISTAMINES**
- Antipsychotics: hypertensive effect of sympathomimetics antagonised by **ANTIPSYCHOTICS**; effects of lisdexamfetamine possibly reduced by **CHLORPROMAZINE**; dexamfetamine possibly antagonises antipsychotic effects of **CHLORPROMAZINE**; methylphenidate possibly increases side-effects of **RISPERIDONE**
- Antivirals: plasma concentration of dexamfetamine possibly increased by **RITONAVIR**
- Beta-blockers: increased risk of severe hypertension and bradycardia when adrenaline (epinephrine) given with non-cardioselective ● **BETA-BLOCKERS**, also response to adrenaline (epinephrine) may be reduced; increased risk of severe hypertension and bradycardia when dobutamine given with non-cardioselective ● **BETA-BLOCKERS**; possible increased risk of severe hypertension and bradycardia when noradrenaline (norepinephrine) given with non-cardioselective ● **BETA-BLOCKERS**
- Cardiac Glycosides: manufacturer of midodrine advises avoid concomitant use with **DIGOXIN**
- Clonidine: possible risk of hypertension when adrenaline (epinephrine) or noradrenaline (norepinephrine) given with **CLONIDINE**; serious adverse events reported with concomitant use of methylphenidate and ● **CLONIDINE** (causality not established)
- Corticosteroids: possible risk of hypertension when midodrine given with **CORTICOSTEROIDS**; ephedrine accelerates metabolism of **DEXAMETHASONE**
- Dopaminergics: risk of toxicity when isometheptene given with ● **BROMOCRIPTINE**; effects of adrenaline (epinephrine), dobutamine, dopamine and noradrenaline (norepinephrine) possibly enhanced by **ENTACAPONE**; avoid concomitant use of sympathomimetics with ● **RASAGILINE**; risk of hypertensive crisis when dopamine given with ● **SELEGILINE**; avoidance of sympathomimetics advised by manufacturer of **SELEGILINE**
- Doxapram: increased risk of hypertension when sympathomimetics given with **DOXAPRAM**
- Ergot Alkaloids: increased risk of ergotism when sympathomimetics given with **ERGOT ALKALOIDS**

Sympathomimetics (continued)

- Oxytocin: risk of hypertension when vasoconstrictor sympathomimetics given with **OXYTOCIN** (due to enhanced vasopressor effect)
 - Sympathomimetics: effects of adrenaline (epinephrine) possibly enhanced by ● **DOPEXAMINE**; dohexamine possibly enhances effects of ● **NORADRENALINE (NOREPINEPHRINE)**
 - Theophylline: avoidance of ephedrine in children advised by manufacturer of **THEOPHYLLINE**
 - Thyroid Hormones: manufacturer of midodrine advises avoid concomitant use with **THYROID HORMONES**
 - Ulcer-healing Drugs: metabolism of dobutamine possibly inhibited by **CIMETIDINE**
- ## Sympathomimetics, Beta₂
- Aminophylline: increased risk of hypokalaemia when high doses of beta₂ sympathomimetics given with **AMINOPHYLLINE**
 - Antifungals: plasma concentration of olodaterol increased by **KETOCONAZOLE**; metabolism of salmeterol inhibited by ● **KETOCONAZOLE** (increased plasma concentration)
 - Antivirals: plasma concentration of salmeterol possibly increased by **ATAZANAVIR**—manufacturer of atazanavir advises avoid concomitant use; avoidance of salmeterol advised by manufacturer of **LOPINAVIR**, **RITONAVIR** and **TIPRANAVIR**; avoidance of salmeterol advised by manufacturer of ● **TELAPREVIR** (risk of ventricular arrhythmias)
 - Atomoxetine: increased risk of cardiovascular side-effects when *parenteral* salbutamol given with **ATOMOXETINE**
 - Cardiac Glycosides: salbutamol possibly reduces plasma concentration of **DIGOXIN**
 - Cobicistat: avoidance of salmeterol advised by manufacturer of **COBICISTAT**
 - Corticosteroids: increased risk of hypokalaemia when high doses of beta₂ sympathomimetics given with **CORTICOSTEROIDS**
 - Cytotoxics: avoidance of salmeterol advised by manufacturer of **IDELALISIB**
 - Diuretics: increased risk of hypokalaemia when high doses of beta₂ sympathomimetics given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
 - Methylodopa: acute hypotension reported when *infusion* of salbutamol given with ● **METHYLDOPA**
 - Muscle Relaxants: bambuterol enhances effects of **SUXAMETHONIUM**
 - Theophylline: increased risk of hypokalaemia when high doses of beta₂ sympathomimetics given with **THEOPHYLLINE**

Tacrolimus

- NOTE** Interactions do not generally apply to tacrolimus used topically; risk of facial flushing and skin irritation with topical tacrolimus on consumption of alcohol
- Analgesics: possible increased risk of nephrotoxicity when tacrolimus given with **NSAIDs**; increased risk of nephrotoxicity when tacrolimus given with ● **IBUPROFEN**
 - Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when tacrolimus given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
 - Anti-arrhythmics: plasma concentration of tacrolimus possibly increased by **AMIODARONE**; caution with tacrolimus advised by manufacturer of **DRONEDARONE**
 - Antibacterials: plasma concentration of tacrolimus increased by ● **CLARITHROMYCIN** and ● **ERYTHROMYCIN**; plasma concentration of tacrolimus possibly reduced by **RIFABUTIN**; plasma concentration of tacrolimus reduced by ● **RIFAMPICIN**; possible increased risk of nephrotoxicity when tacrolimus given with ● **SULFAMETHOXAZOLE**, ● **TRIMETHOPRIM** or **VANCOMYCIN**; increased risk of nephrotoxicity when tacrolimus given with ● **AMINOGLYCOSIDES**; plasma concentration of tacrolimus possibly increased by ● **CHLORAMPHENICOL** and ● **TELITHROMYCIN**
 - Anticoagulants: tacrolimus possibly increases plasma concentration of ● **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use
 - Antidepressants: plasma concentration of tacrolimus reduced by ● **ST JOHN'S WORT**—avoid concomitant use
 - Antiepileptics: plasma concentration of tacrolimus reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma

Tacrolimus

- Antiepileptics (continued)
concentration of tacrolimus reduced by • **PHENOBARBITAL** and • **PRIMIDONE**
- Antifungals: plasma concentration of tacrolimus increased by • **FLUCONAZOLE**, • **ITRACONAZOLE**, • **KETOCONAZOLE**, • **POSACONAZOLE** and • **VORICONAZOLE** (consider reducing dose of tacrolimus); plasma concentration of tacrolimus possibly increased by • **MICONAZOLE oral gel**; increased risk of nephrotoxicity when tacrolimus given with • **AMPHOTERICIN**; plasma concentration of tacrolimus reduced by • **CASPOFUNGIN**
- Antipsychotics: avoidance of tacrolimus advised by manufacturer of • **DROPERIDOL** (risk of ventricular arrhythmias)
- Antivirals: possible increased risk of nephrotoxicity when tacrolimus given with **ACICLOVIR**, **GANCICLOVIR**, **VALACICLOVIR** or **VALGANCICLOVIR**; plasma concentration of tacrolimus possibly increased by • **ATAZANAVIR** and • **RITONAVIR**; plasma concentration of tacrolimus increased by • **BOCEPREVIR** (reduce dose of tacrolimus); plasma concentration of tacrolimus possibly affected by • **EFAVIRENZ**; plasma concentration of tacrolimus increased by • **FOSAMPRENAVIR**; plasma concentration of tacrolimus increased by • **SAQUINAVIR** (consider reducing dose of tacrolimus); plasma concentration of both drugs increased when tacrolimus given with • **TELAPREVIR** (reduce dose of tacrolimus)
- Calcium-channel Blockers: plasma concentration of tacrolimus possibly increased by **FELODIPINE** and **VERAPAMIL**; plasma concentration of tacrolimus increased by • **DILTIAZEM**, **NICARDIPINE** and • **NIFEDIPINE**
- Cyclosporin: tacrolimus increases plasma concentration of • **CYCLOSPORIN** (increased risk of nephrotoxicity)—avoid concomitant use
- Cytotoxics: tacrolimus possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of tacrolimus by 6 to 12 hours; caution with tacrolimus advised by manufacturer of • **CRIZOTINIB**; plasma concentration of tacrolimus increased by **IMATINIB**
 - ▶ Dexamethazone: increased risk of immunosuppression with tacrolimus advised by manufacturer of **DEXAMETHAZONE**
- Diuretics: increased risk of hyperkalaemia when tacrolimus given with • **POTASSIUM-SPARING DIURETICS** AND **ALDOSTERONE ANTAGONISTS**
- Grapefruit Juice: plasma concentration of tacrolimus increased by • **GRAPEFRUIT JUICE**
 - ▶ Hormone Antagonists: plasma concentration of tacrolimus possibly increased by **DANAZOL**
 - ▶ Lipid-regulating Drugs: separating administration from tacrolimus by 12 hours advised by manufacturer of **LOMITAPIDE**
 - ▶ Mifamurtide: avoidance of tacrolimus advised by manufacturer of **MIFAMURTIDE**
 - ▶ Oestrogens: plasma concentration of tacrolimus possibly increased by **ETHINYLESTRADIOL**
- Potassium Salts: increased risk of hyperkalaemia when tacrolimus given with • **POTASSIUM SALTS**
- Ranolazine: plasma concentration of tacrolimus increased by • **RANOLAZINE**
 - ▶ Sevelamer: plasma concentration of tacrolimus possibly reduced by **SEVELAMER**
 - ▶ Ulcer-healing Drugs: plasma concentration of tacrolimus possibly increased by **OMEPRAZOLE**

Tadalafil

- Alpha-blockers: enhanced hypotensive effect when tadalafil given with • **DOXAZOSIN**—manufacturer of tadalafil advises avoid concomitant use; enhanced hypotensive effect when tadalafil given with • **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate tadalafil at the lowest possible dose
 - ▶ Anti-arrhythmics: avoidance of tadalafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- Antibacterials: plasma concentration of tadalafil possibly increased by **CLARITHROMYCIN** and **ERYTHROMYCIN**; plasma concentration of tadalafil reduced by • **RIFAMPICIN**—manufacturer of tadalafil advises avoid concomitant use

Tadalafil (continued)

- Antifungals: tadalafil concentration is increased by • **KETOCONAZOLE**—avoid concomitant use of tadalafil for pulmonary hypertension; plasma concentration of tadalafil possibly increased by **ITRACONAZOLE**
- Antivirals: plasma concentration of tadalafil possibly increased by **FOSAMPRENAVIR** and **INDINAVIR**; plasma concentration of tadalafil increased by • **RITONAVIR**—avoid concomitant use of tadalafil for pulmonary hypertension; increased risk of ventricular arrhythmias when tadalafil given with • **SAQUINAVIR**—avoid concomitant use; avoidance of high doses of tadalafil advised by manufacturer of • **TELAPREVIR**—consult product literature
 - ▶ Bosentan: plasma concentration of tadalafil reduced by **BOSENTAN**
 - Cobicistat: plasma concentration of tadalafil possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises reduce dose of tadalafil (consult cobicistat product literature)
 - ▶ Dapoxetine: avoidance of tadalafil advised by manufacturer of **DAPOXETINE**
 - ▶ Grapefruit Juice: plasma concentration of tadalafil possibly increased by **GRAPEFRUIT JUICE**
 - Nicorandil: tadalafil significantly enhances hypotensive effect of • **NICORANDIL** (avoid concomitant use)
 - Nitrates: tadalafil significantly enhances hypotensive effect of • **NITRATES** (avoid concomitant use)
 - Riociguat: possible enhanced hypotensive effect when tadalafil given with • **RIOCIQUAT**—avoid concomitant use

Tamoxifen

- ▶ Antibacterials: metabolism of tamoxifen accelerated by **RIFAMPICIN** (reduced plasma concentration)
- Anticoagulants: tamoxifen enhances anticoagulant effect of • **COUMARINS**
- Antidepressants: metabolism of tamoxifen to active metabolite possibly inhibited by • **FLUOXETINE** and • **PAROXETINE** (avoid concomitant use)
- Antipsychotics: avoidance of tamoxifen advised by manufacturer of • **DROPERIDOL** (risk of ventricular arrhythmias)
- Bupropion: metabolism of tamoxifen to active metabolite possibly inhibited by • **BUPROPION** (avoid concomitant use)
- Cinacalcet: metabolism of tamoxifen to active metabolite possibly inhibited by • **CINACALCET** (avoid concomitant use)

Tamsulosin see Alpha-blockers**Tapentadol** see Opioid Analgesics**Taxanes** see Cabazitaxel, Docetaxel, and Paclitaxel**Tegafur**

- ▶ Antibacterials: metabolism of tegafur inhibited by **METRONIDAZOLE** (increased toxicity)
- Anticoagulants: tegafur enhances anticoagulant effect of • **COUMARINS**
- ▶ Antiepileptics: tegafur possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Filgrastim: neutropenia possibly exacerbated when tegafur given with **FILGRASTIM**
- Folate: toxicity of tegafur increased by • **FOLIC ACID**—avoid concomitant use
 - ▶ Lipefilgrastim: neutropenia possibly exacerbated when tegafur given with **LPEGFILGRASTIM**
 - ▶ Pegfilgrastim: neutropenia possibly exacerbated when tegafur given with **PEGFILGRASTIM**
 - ▶ Ulcer-healing Drugs: metabolism of tegafur inhibited by **CIMETIDINE** (increased plasma concentration)

Teicoplanin

- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Telaprevir

- Alpha-blockers: manufacturer of telaprevir advises avoid concomitant use with • **ALFUZOSIN**
- Analgesics: manufacturer of telaprevir advises caution with • **METHADONE** (risk of ventricular arrhythmias)
- Anti-arrhythmics: manufacturer of telaprevir advises avoid concomitant use with • **AMIODARONE** and • **DISOPYRAMIDE** (risk of ventricular arrhythmias); manufacturer of telaprevir

Telaprevir

- **Anti-arrhythmics** (continued)
 - advises caution with ● **FLECAINIDE** and ● **PROPAFENONE** (risk of ventricular arrhythmias); manufacturer of telaprevir advises caution with *intravenous* **LIDOCAINE**
- **Antibacterials**: plasma concentration of both drugs possibly increased when telaprevir given with ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN** (increased risk of ventricular arrhythmias); manufacturer of telaprevir advises avoid concomitant use with ● **RIFABUTIN**; plasma concentration of telaprevir significantly reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Anticoagulants**: telaprevir possibly affects plasma concentration of ● **WARFARIN**; avoidance of telaprevir advised by manufacturer of **APIXABAN**; telaprevir possibly increases plasma concentration of **DABIGATRAN**
- **Antidepressants**: telaprevir possibly increases plasma concentration of **TRAZODONE**; manufacturer of telaprevir advises avoid concomitant use with ● **ST JOHN'S WORT**
- **Antidiabetics**: telaprevir increases plasma concentration of **METFORMIN** (consider reducing dose of metformin)
- **Antiepileptics**: manufacturer of telaprevir advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- **Antifungals**: plasma concentration of both drugs possibly increased when telaprevir given with **KETOCONAZOLE** (increased risk of ventricular arrhythmias)—reduce dose of ketoconazole; telaprevir possibly increases plasma concentration of **ITRACONAZOLE**; telaprevir possibly increases plasma concentration of ● **POSACONAZOLE** (increased risk of ventricular arrhythmias); telaprevir possibly affects plasma concentration of ● **VORICONAZOLE** (possible increased risk of ventricular arrhythmias)
- **Antipsychotics**: telaprevir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; manufacturer of telaprevir advises avoid concomitant use with ● **PIMOZIDE**; telaprevir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- **Antivirals**: plasma concentration of telaprevir possibly reduced by **ATAZANAVIR**, also plasma concentration of atazanavir possibly increased; telaprevir increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNF); avoid concomitant use of telaprevir with ● **DARUNAVIR**; plasma concentration of telaprevir reduced by ● **EFAVIRENZ**—increase dose of telaprevir; manufacturers advise avoid concomitant use of telaprevir with ● **FOSAMPRENAVIR** and ● **LOPINAVIR**; telaprevir increases plasma concentration of **MARAVIROC** (consider reducing dose of maraviroc); plasma concentration of telaprevir possibly reduced by **NEVIRAPINE**—consider increasing dose of telaprevir; plasma concentration of telaprevir possibly reduced by **RITONAVIR**; telaprevir increases plasma concentration of **TENOFOVIR**; avoidance of telaprevir advised by manufacturer of **TIPRANAVIR**
- **Anxiolytics and Hypnotics**: telaprevir possibly increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam)
- **Beta-blockers**: manufacturer of telaprevir advises avoid concomitant use with ● **SOTALOL** (risk of ventricular arrhythmias)
- **Bosentan**: plasma concentration of telaprevir possibly reduced by **BOSENTAN**, also plasma concentration of bosentan possibly increased
- **Calcium-channel Blockers**: telaprevir increases plasma concentration of **AMLODIPINE** (consider reducing dose of amlodipine); manufacturer of telaprevir advises caution with **DILTIAZEM**, **FELODIPINE**, **NICARDIPINE**, **NIFEDIPINE** and **VERAPAMIL**
- **Cardiac Glycosides**: telaprevir increases plasma concentration of **DIGOXIN**
- **Ciclosporin**: plasma concentration of both drugs increased when telaprevir given with ● **CICLOSPORIN** (reduce dose of ciclosporin)
- **Cilostazol**: telaprevir possibly increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, in BNF)

Telaprevir (continued)

- **Colchicine**: telaprevir possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- **Corticosteroids**: telaprevir possibly increases plasma concentration of *inhaled* and *intranasal* **BUDESONIDE** and **FLUTICASONE**; plasma concentration of telaprevir possibly reduced by **DEXAMETHASONE**
- **Cytotoxics**: telaprevir possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; manufacturer of ruxolitinib advises dose reduction when telaprevir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; avoidance of telaprevir advised by manufacturer of ● **OLAPARIB**
- **Domperidone**: possible increased risk of ventricular arrhythmias when telaprevir given with ● **DOMPERIDONE**—avoid concomitant use
- **Ergot Alkaloids**: manufacturer of telaprevir advises avoid concomitant use with ● **ERGOT ALKALOIDS**
- **Guanfacine**: telaprevir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- **Lipid-regulating Drugs**: manufacturer of telaprevir advises avoid concomitant use with ● **ATORVASTATIN**; manufacturers advise avoid concomitant use of telaprevir with ● **SIMVASTATIN**; avoidance of telaprevir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- **Oestrogens**: telaprevir possibly reduces plasma concentration of ● **ETHINYLESTRADIOL**—manufacturer of telaprevir advises additional contraceptive precautions
- **Sildenafil**: manufacturer of telaprevir advises avoid concomitant use with ● **SILDENAFIL**
- **Sirolimus**: plasma concentration of both drugs increased when telaprevir given with ● **SIROLIMUS** (reduce dose of sirolimus)
- **Sympathomimetics, Beta**: manufacturer of telaprevir advises avoid concomitant use with ● **SALMETEROL** (risk of ventricular arrhythmias)
- **Tacrolimus**: plasma concentration of both drugs increased when telaprevir given with ● **TACROLIMUS** (reduce dose of tacrolimus)
- **Tadalafil**: manufacturer of telaprevir advises avoid concomitant use with high doses of ● **TADALAFIL**—consult product literature
- **Vardenafil**: manufacturer of telaprevir advises avoid concomitant use with ● **VARDENAFIL**

Telavancin

- **Vaccines**: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF

Telbivudine

- **Interferons**: increased risk of peripheral neuropathy when telbivudine given with ● **INTERFERON ALFA** and ● **PEGINTERFERON ALFA**

Telithromycin

- **Analgesics**: possible increased risk of ventricular arrhythmias when telithromycin given with ● **METHADONE**; telithromycin inhibits the metabolism of **OXYCODONE**
- **Anti-arrhythmics**: possible increased risk of ventricular arrhythmias when telithromycin given with ● **AMIODARONE** and ● **DISOPYRAMIDE**; increased risk of ventricular arrhythmias when telithromycin given with ● **DRONEDARONE**—avoid concomitant use
- **Antibacterials**: possible increased risk of ventricular arrhythmias when telithromycin given with ● **MOXIFLOXACIN**; plasma concentration of telithromycin reduced by ● **RIFAMPICIN** (avoid during and for 2 weeks after rifampicin)
- **Anticoagulants**: avoidance of telithromycin advised by manufacturer of **APIXABAN**
- **Antidepressants**: possible increased risk of ventricular arrhythmias when telithromycin given with ● **CITALOPRAM** and ● **TRICYCLICS**; plasma concentration of telithromycin reduced by ● **ST JOHN'S WORT** (avoid during and for 2 weeks after St John's wort)
- **Antiepileptics**: plasma concentration of telithromycin reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (avoid during and for 2 weeks

Telithromycin

- Antiepileptics (continued)
after carbamazepine, fosphenytoin, phenobarbital, phenytoin and primidone)
- Antifungals: plasma concentration of telithromycin increased by • **KETOCONAZOLE**—avoid in severe renal and hepatic impairment
- ▶ Antismuscarinics: manufacturer of fesoterodine advises dose reduction when telithromycin given with **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: possible increased risk of ventricular arrhythmias when telithromycin given with
• **CHLORPROMAZINE**; telithromycin possibly increases plasma concentration of • **LURASIDONE**—avoid concomitant use; increased risk of ventricular arrhythmias when telithromycin given with • **PIMOZIDE**—avoid concomitant use; telithromycin possibly increases plasma concentration of **QUETIAPINE**
- Antivirals: manufacturer of telithromycin advises avoid concomitant use with • **ATAZANAVIR**, • **FOSAMPRENAVIR**, • **INDINAVIR**, • **LOPINAVIR**, • **RITONAVIR** and • **TIPRANAVIR** in severe renal and hepatic impairment; telithromycin possibly increases the plasma concentration of • **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, in BNFC); avoidance of telithromycin advised by manufacturer of **DASABUVIR** and **PARITAPREVR**; telithromycin possibly increases plasma concentration of • **MARAVIROC** (consider reducing dose of maraviroc); manufacturer of telithromycin advises avoid concomitant use with • **SAQUINAVIR** (risk of ventricular arrhythmias); telithromycin possibly increases plasma concentration of • **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs possibly increased when telithromycin given with • **TELAPREVIR** (increased risk of ventricular arrhythmias)
- Anxiolytics and Hypnotics: telithromycin inhibits metabolism of • **MIDAZOLAM** (increased plasma concentration with increased sedation)
- ▶ Aprepitant: telithromycin possibly increases plasma concentration of **APREPITANT**
- Avanafil: telithromycin possibly increases plasma concentration of • **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- Calcium-channel Blockers: telithromycin possibly inhibits metabolism of • **CALCIUM-CHANNEL BLOCKERS** (increased risk of side-effects)
- ▶ Cardiac Glycosides: telithromycin possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: telithromycin possibly increases plasma concentration of • **CICLOSPORIN**
- Colchicine: telithromycin possibly increases risk of • **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Cytotoxics: telithromycin possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); telithromycin possibly increases the plasma concentration of • **BOSUTINIB** and • **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; telithromycin possibly increases plasma concentration of • **CRIZOTINIB** and • **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; avoidance of telithromycin advised by manufacturer of **DASATINIB** (plasma concentration of dasatinib possibly increased); telithromycin possibly increases the plasma concentration of • **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, in BNFC); avoidance of telithromycin advised by manufacturer of • **LAPATINIB**, • **NILOTINIB** and • **OLAPARIB**; telithromycin possibly increases plasma concentration of • **PAZOPANIB** (reduce dose of pazopanib); telithromycin possibly increases plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, in BNFC); manufacturer of ruxolitinib advises dose reduction when telithromycin given with • **RUXOLITINIB**—consult ruxolitinib product literature; telithromycin possibly increases plasma concentration of • **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose

Telithromycin (continued)

- Dapoxetine: avoidance of telithromycin advised by manufacturer of • **DAPOXETINE** (increased risk of toxicity)
 - Diuretics: telithromycin increases plasma concentration of • **EPLERENONE**—avoid concomitant use
 - Domperidone: possible increased risk of ventricular arrhythmias when telithromycin given with • **DOMPERIDONE**—avoid concomitant use
 - Ergot Alkaloids: increased risk of ergotism when telithromycin given with • **ERGOT ALKALOIDS**—avoid concomitant use
 - ▶ Fosaprepitant: telithromycin possibly increases plasma concentration of **FOSAPREPITANT**
 - Guanfacine: telithromycin possibly increases plasma concentration of • **GUANFACINE** (halve dose of guanfacine)
 - Ivabradine: telithromycin possibly increases plasma concentration of • **IVABRADINE**—avoid concomitant use
 - Ivacaftor: telithromycin possibly increases plasma concentration of • **IVACAFTOR** (see under Ivacaftor, p. 175)
 - Lipid-regulating Drugs: increased risk of myopathy when telithromycin given with • **ATORVASTATIN** or • **SIMVASTATIN** (avoid concomitant use); possible increased risk of myopathy when telithromycin given with **PRAVASTATIN**; avoidance of telithromycin advised by manufacturer of • **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
 - Pentamidine Isetionate: possible increased risk of ventricular arrhythmias when telithromycin given with *parenteral* • **PENTAMIDINE ISETIONATE**
 - Ranolazine: telithromycin possibly increases plasma concentration of • **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
 - Sildenafil: telithromycin possibly increases plasma concentration of • **SILDENAFIL**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension
 - Sirolimus: telithromycin increases plasma concentration of • **SIROLIMUS**—avoid concomitant use
 - Tacrolimus: telithromycin possibly increases plasma concentration of • **TACROLIMUS**
 - ▶ Ulipristal: avoidance of telithromycin advised by manufacturer of *low-dose* **ULIPRISTAL**
 - ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC
- Telmisartan** see Angiotensin-II Receptor Antagonists
- Temazepam** see Anxiolytics and Hypnotics
- Temocillin** see Penicillins
- Temoporfin**
- Cytotoxics: increased skin photosensitivity when temoporfin given with *topical* • **FLUOROURACIL**
- Temozolomide**
- ▶ Antiepileptics: plasma concentration of temozolomide increased by **SODIUM VALPROATE** and **VALPROIC ACID**
 - Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Temsirolimus**
- NOTE** The main active metabolite of temsirolimus is sirolimus—see also interactions of sirolimus and consult product literature
- Antibacterials: plasma concentration of active metabolite of temsirolimus reduced by • **RIFAMPICIN**—avoid concomitant use
 - Antifungals: plasma concentration of active metabolite of temsirolimus increased by • **KETOCONAZOLE**—avoid concomitant use; manufacturer of temsirolimus advises avoid concomitant use with • **TRACONAZOLE** (plasma concentration of temsirolimus possibly increased)
 - Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Tenofovir**
- Antivirals: manufacturer of tenofovir advises avoid concomitant use with **ADEFOVIR**; tenofovir reduces plasma concentration of **ATAZANAVIR**, also plasma concentration of tenofovir possibly increased; tenofovir increases plasma concentration of • **DIDANOSINE** (increased risk of toxicity)—avoid concomitant use; plasma concentration of tenofovir increased by **LOPINAVIR** and **TELAPREVIR**
 - Orlistat: absorption of tenofovir possibly reduced by • **ORLISTAT**
- Tenoxicam** see NSAIDs

Terazosin see Alpha-blockers

Terbinafine

- **Antibacterials:** plasma concentration of terbinafine reduced by
 - **RIFAMPICIN**
- **Antidepressants:** terbinafine possibly increases plasma concentration of **PAROXETINE** and **TRICYCLICS**
- **Antifungals:** terbinafine increases plasma concentration of **FLUCONAZOLE**
- **Ciclosporin:** terbinafine possibly reduces plasma concentration of **CYCLOSPORIN**
- **Oestrogens:** occasional reports of breakthrough bleeding when terbinafine given with **OESTROGENS** (when used for contraception)
- **Progestogens:** occasional reports of breakthrough bleeding when terbinafine given with **PROGESTOGENS** (when used for contraception)
- **Ulcer-healing Drugs:** plasma concentration of terbinafine increased by **CIMETIDINE**

Terbutaline see Sympathomimetics, Beta₂

Teriflunomide

- **Antibacterials:** teriflunomide increases plasma concentration of **CEFAZOLIN**; plasma concentration of teriflunomide reduced by **RIFAMPICIN**
- **Antidiabetics:** teriflunomide increases plasma concentration of **REPAGLINIDE**
- **Lipid-regulating Drugs:** the effect of teriflunomide is significantly decreased by **COLESTYRAMINE** (enhanced elimination)—avoid unless drug elimination desired; teriflunomide increases plasma concentration of
 - **ROSUVASTATIN** (consider reducing dose of rosuvastatin)
- **Oestrogens:** teriflunomide increases plasma concentration of **ETHINYLESTRADIOL**
- **Progestogens:** teriflunomide increases plasma concentration of **LEVONORGESTREL**
- **Vaccines:** risk of generalised infections when teriflunomide given with live ● **VACCINES**—avoid concomitant use

Testolactone

- **Anticoagulants:** testolactone enhances anticoagulant effect of
 - **COUMARINS** and ● **PHENINDIONE**

Testosterone

- **Anticoagulants:** testosterone enhances anticoagulant effect of
 - **COUMARINS** and ● **PHENINDIONE**
- **Antidiabetics:** testosterone possibly enhances hypoglycaemic effect of **ANTIIDIABETICS**

Tetrabenazine

- **Antidepressants:** risk of CNS toxicity when tetrabenazine given with ● **MAOIS** (avoid tetrabenazine for 2 weeks after MAOIs)
- **Antipsychotics:** increased risk of extrapyramidal side-effects when tetrabenazine given with **ANTI-PSYCHOTICS**
- **Dopaminergics:** increased risk of extrapyramidal side-effects when tetrabenazine given with **AMANTADINE**
- **Metoclopramide:** increased risk of extrapyramidal side-effects when tetrabenazine given with **METOCLOPRAMIDE**

Tetracosactide see Corticosteroids

Tetracycline see Tetracyclines

Tetracyclines

- **ACE Inhibitors:** absorption of tetracyclines reduced by **QUINAPRIL** tablets (quinapril tablets contain magnesium carbonate)
- **Adsorbents:** absorption of tetracyclines possibly reduced by **KAOLIN**
- **Antacids:** absorption of tetracyclines possibly reduced by **ANTACIDS** (give at least 2 to 3 hours apart)
- **Antibacterials:** plasma concentration of doxycycline reduced by **RIFAMPICIN**—consider increasing dose of doxycycline; tetracyclines possibly antagonise effects of **PENICILLINS**
- **Anticoagulants:** tetracyclines possibly enhance anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- **Antidiabetics:** tetracyclines possibly enhance hypoglycaemic effect of **SULFONYLUREAS**
- **Antiepileptics:** metabolism of doxycycline accelerated by **CARBAMAZEPINE** (reduced effect); metabolism of doxycycline accelerated by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (reduced plasma concentration)
- **Atovaquone:** tetracycline reduces plasma concentration of **ATOVAQUONE**

Tetracyclines (continued)

- **Calcium Salts:** absorption of tetracyclines possibly reduced by **CALCIUM SALTS** (give at least 2 to 3 hours apart)
- **Cytotoxics:** doxycycline or tetracycline increase risk of **METHOTREXATE** toxicity
- **Dairy Products:** absorption of tetracyclines (except doxycycline and minocycline) reduced by **DAIRY PRODUCTS**
- **Diuretics:** manufacturer of lymecycline advises avoid concomitant use with **DIURETICS**
- **Ergot Alkaloids:** increased risk of ergotism when tetracyclines given with **ERGOTAMINE**
- **Iron Salts:** absorption of tetracyclines reduced by **oral IRON SALTS**, also absorption of **oral** iron salts reduced by tetracyclines (give at least 2 to 3 hours apart)
- **Lipid-regulating Drugs:** absorption of tetracycline possibly reduced by **COLESTIPOL** and **COLESTYRAMINE**
- **Retinoids:** possible increased risk of benign intracranial hypertension when tetracyclines given with ● **RETINOIDS** (avoid concomitant use)
- **Strontium Ranelate:** absorption of tetracyclines reduced by **STRONTIUM RANELATE** (manufacturer of strontium ranelate advises avoid concomitant use)
- **Ulcer-healing Drugs:** absorption of tetracyclines reduced by **SUCRALFATE** and **TRIPOTASSIUM DICITRATOBISMUTHATE**
- **Vaccines:** antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC
- **Zinc:** absorption of tetracyclines possibly reduced by **ZINC** (give at least 2 to 3 hours apart)

Theophylline

- **Allopurinol:** plasma concentration of theophylline possibly increased by **ALLOPURINOL**
- **Anaesthetics, General:** increased risk of convulsions when theophylline given with **KETAMINE**
- **Anti-arrhythmics:** theophylline antagonises anti-arrhythmic effect of **ADENOSINE**—manufacturer of adenosine advises avoid theophylline for 24 hours before adenosine; plasma concentration of theophylline increased by **PROPAFENONE**
- **Antibacterials:** plasma concentration of theophylline possibly increased by **CLARITHROMYCIN** and **ISONIAZID**; plasma concentration of theophylline increased by ● **ERYTHROMYCIN** (also theophylline may reduce absorption of **oral** erythromycin); plasma concentration of theophylline increased by ● **CIPROFLOXACIN** and ● **NORFLOXACIN**; metabolism of theophylline accelerated by **RIFAMPICIN** (reduced plasma concentration); possible increased risk of convulsions when theophylline given with ● **QUINOLONES**
- **Antidepressants:** plasma concentration of theophylline increased by ● **FLUVOXAMINE** (concomitant use should usually be avoided, but where not possible halve theophylline dose and monitor plasma-theophylline concentration); plasma concentration of theophylline possibly reduced by **ST JOHN'S WORT**
- **Antiepileptics:** metabolism of theophylline accelerated by **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE** (reduced effect); plasma concentration of both drugs reduced when theophylline given with ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- **Antifungals:** plasma concentration of theophylline possibly increased by ● **FLUCONAZOLE** and ● **KETOCONAZOLE**
- **Antivirals:** plasma concentration of theophylline possibly increased by **ACICLOVIR** and **VALACICLOVIR**; metabolism of theophylline accelerated by ● **RITONAVIR** (reduced plasma concentration)
- **Anxiolytics and Hypnotics:** theophylline possibly reduces effects of **BENZODIAZEPINES**
- **Caffeine citrate:** avoidance of theophylline advised by manufacturer of **CAFFEINE CITRATE**
- **Calcium-channel Blockers:** plasma concentration of theophylline possibly increased by ● **CALCIUM-CHANNEL BLOCKERS** (enhanced effect); plasma concentration of theophylline increased by **DILTIAZEM**; plasma concentration of theophylline increased by ● **VERAPAMIL** (enhanced effect)
- **Corticosteroids:** increased risk of hypokalaemia when theophylline given with **CORTICOSTEROIDS**
- **Cytotoxics:** plasma concentration of theophylline possibly increased by **METHOTREXATE**

Theophylline (continued)

- Deferasirox: plasma concentration of theophylline increased by ● **DEFERASIROX** (consider reducing dose of theophylline)
- Disulfiram: metabolism of theophylline inhibited by **DISULFIRAM** (increased risk of toxicity)
- Diuretics: increased risk of hypokalaemia when theophylline given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
- Doxapram: increased CNS stimulation when theophylline given with **DOXAPRAM**
- Interferons: metabolism of theophylline inhibited by ● **INTERFERON ALFA** and ● **PEGINTERFERON ALFA** (consider reducing dose of theophylline)
- Leukotriene Receptor Antagonists: plasma concentration of theophylline possibly increased by **ZAFIRLUKAST**, also plasma concentration of zafirlukast reduced
- Lithium: theophylline increases excretion of **LITHIUM** (reduced plasma concentration)
- Oestrogens: plasma concentration of theophylline increased by **OESTROGENS** (consider reducing dose of theophylline)
- Pentoxifylline: plasma concentration of theophylline increased by **PENTOXIFYLLINE**
- Roflumilast: avoidance of theophylline advised by manufacturer of **ROFLUMILAST**
- Sulfipyrazole: plasma concentration of theophylline reduced by **SULFINPYRAZONE**
- Sympathomimetics: manufacturer of theophylline advises avoid concomitant use with **EPHEDRINE** in children
- Sympathomimetics, Beta₂: increased risk of hypokalaemia when theophylline given with high doses of **BETA₂**
- **SYMPATHOMIMETICS**
- Ulcer-healing Drugs: metabolism of theophylline inhibited by ● **CIMETIDINE** (increased plasma concentration); absorption of theophylline possibly reduced by **SUCRALFATE** (give at least 2 hours apart)
- Vaccines: plasma concentration of theophylline possibly increased by **INFLUENZA VACCINE**

Thiazolidinediones see Antidiabetics**Thiopental** see Anaesthetics, General**Thiopeta**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Muscle Relaxants: thiopeta enhances effects of **SUXAMETHONIUM**

Thioxanthenes see Antipsychotics**Thyroid Hormones**

- Antacids: absorption of levothyroxine possibly reduced by **ANTACIDS**
- Anti-arrhythmics: serum concentrations of thyroid hormones can be affected by **AMIODARONE**—monitor thyroid function closely
- Antibacterials: metabolism of levothyroxine accelerated by **RIFAMPICIN** (may increase requirements for levothyroxine in hypothyroidism)
- Anticoagulants: thyroid hormones enhance anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- Antidepressants: thyroid hormones enhance effects of **AMITRIPTYLINE** and **IMIPRAMINE**; thyroid hormones possibly enhance effects of **TRICYCLICS**
- Antiepileptics: metabolism of thyroid hormones accelerated by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE** (may increase requirements for thyroid hormones in hypothyroidism); metabolism of thyroid hormones accelerated by **FOSPHENYTOIN** and **PHENYTOIN** (may increase requirements in hypothyroidism), also plasma concentration of fosphenytoin and phenytoin possibly increased
- Beta-blockers: levothyroxine accelerates metabolism of **PROPRANOLOL**
- Calcium Salts: absorption of levothyroxine reduced by **CALCIUM SALTS**
- Cytotoxics: plasma concentration of levothyroxine possibly reduced by **IMATINIB**
- Iron Salts: absorption of levothyroxine reduced by oral **IRON SALTS** (give at least 2 hours apart)
- Lanthanum: absorption of levothyroxine reduced by **LANTHANUM** (give at least 2 hours apart)

Thyroid Hormones (continued)

- Lipid-regulating Drugs: absorption of levothyroxine reduced by **COLESEVELAM**; absorption of thyroid hormones reduced by **COLESTIPOL** and **COLESTYRAMINE**
- Oestrogens: requirements for thyroid hormones in hypothyroidism may be increased by **OESTROGENS**
- Orlistat: possible increased risk of hypothyroidism when levothyroxine given with **ORLISTAT**
- Polystyrene Sulfonate Resins: absorption of levothyroxine reduced by **POLYSTYRENE SULFONATE RESINS**
- Sevelamer: absorption of levothyroxine possibly reduced by **SEVELAMER**
- Sympathomimetics: avoidance of thyroid hormones advised by manufacturer of **MIDODRINE**
- Ulcer-healing Drugs: absorption of levothyroxine reduced by **CIMETIDINE** and **SUCRALFATE**

Tiagabine

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of tiagabine reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Tiaprofenic Acid see NSAIDs**Tibolone**

- Antibacterials: metabolism of tibolone accelerated by **RIFAMPICIN** (reduced plasma concentration)
- Antiepileptics: metabolism of tibolone accelerated by **CARBAMAZEPINE** (reduced plasma concentration); metabolism of tibolone accelerated by **FOSPHENYTOIN** and **PHENYTOIN**

Ticagrelor

- Antibacterials: plasma concentration of ticagrelor possibly increased by ● **CLARITHROMYCIN**—manufacturer of ticagrelor advises avoid concomitant use; plasma concentration of ticagrelor possibly increased by **ERYTHROMYCIN**; plasma concentration of ticagrelor reduced by ● **RIFAMPICIN**
- Anticoagulants: ticagrelor increases plasma concentration of ● **DABIGATRAN**
- Antidepressants: possible increased risk of bleeding when ticagrelor given with **CITALOPRAM**, **PAROXETINE** or **SERTRALINE**
- Antiepileptics: plasma concentration of ticagrelor possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of ticagrelor increased by ● **KETOCONAZOLE**—manufacturer of ticagrelor advises avoid concomitant use
- Antivirals: plasma concentration of ticagrelor possibly increased by ● **ATAZANAVIR** and ● **RITONAVIR**—manufacturer of ticagrelor advises avoid concomitant use
- Calcium-channel Blockers: plasma concentration of ticagrelor increased by **DILTIAZEM**
- Cardiac Glycosides: ticagrelor increases plasma concentration of ● **DIGOXIN**
- Ciclosporin: plasma concentration of ticagrelor increased by **CICLOSPORIN**
- Ergot Alkaloids: ticagrelor possibly increases plasma concentration of ● **ERGOT ALKALOIDS**
- Lipid-regulating Drugs: ticagrelor increases plasma concentration of ● **SIMVASTATIN** (increased risk of toxicity); separating administration from ticagrelor by 12 hours advised by manufacturer of **LOMITAPIDE**

Ticarcillin see Penicillins**Tick-borne Encephalitis Vaccine** see Vaccines**Tigecycline**

- Anticoagulants: tigecycline possibly enhances anticoagulant effect of **COUMARINS**

Tigecycline (continued)

- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Timolol see Beta-blockers

Tinidazole

- Alcohol: possibility of disulfiram-like reaction when tinidazole given with **ALCOHOL**
- Antibacterials: plasma concentration of tinidazole possibly reduced by **RIFAMPICIN**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Tinzaparin see Heparins

Tioguanine

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased risk of hepatotoxicity when tioguanine given with **BUSULFAN**

Tiotropium see Antimuscarinics

Tipranavir

- Analgesics: plasma concentration of tipranavir possibly reduced by **BUPRENORPHINE**
- Antacids: absorption of tipranavir reduced by **ANTACIDS** (give at least 2 hours apart)
- Antibacterials: tipranavir increases plasma concentration of
 - **CLARITHROMYCIN** (reduce dose of clarithromycin in renal impairment), also plasma concentration of tipranavir increased by clarithromycin; tipranavir increases plasma concentration of ● **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of tipranavir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use; avoidance of concomitant tipranavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
- Anticoagulants: avoidance of tipranavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**
- Antidepressants: plasma concentration of tipranavir possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of tipranavir possibly reduced by **CARBAMAZEPINE**
- Antifungals: plasma concentration of tipranavir increased by **FLUCONAZOLE**
- Antimalarials: caution with tipranavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; tipranavir possibly increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- Antimuscarinics: avoidance of tipranavir advised by manufacturer of **DARIFENACIN**
- Antipsychotics: tipranavir possibly increases plasma concentration of ● **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); tipranavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: tipranavir reduces plasma concentration of
 - **ABACAVIR**, ● **FOSAMPRENAVIR**, ● **LOPINAVIR**, ● **SAQUINAVIR** and ● **ZIDOVUDINE**; plasma concentration of tipranavir increased by **ATAZANAVIR** (also plasma concentration of atazanavir reduced); manufacturer of tipranavir advises avoid concomitant use with **BOCEPREVIR** and **TELAPREVIR**; tipranavir reduces plasma concentration of **DIDANOSINE**—manufacturer of tipranavir advises tipranavir and didanosine capsules should be taken at least 2 hours apart; tipranavir reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 387); tipranavir reduces plasma concentration of ● **ETRAVIRINE**, also plasma concentration of tipranavir increased (avoid concomitant use); avoidance of tipranavir advised by manufacturer of **PARITAPREVIR**
- Beta-blockers: manufacturer of tipranavir advises avoid concomitant use with ● **METOPROLOL** for heart failure
- Bosentan: manufacturer of tipranavir advises avoid concomitant use with **BOSENTAN**
- Cobicistat: plasma concentration of both drugs reduced when tipranavir given with ● **COBICISTAT** (avoid concomitant use)
- Lipid-regulating Drugs: increased risk of myopathy when tipranavir given with ● **ATORVASTATIN** (see under Atorvastatin, p. 123); tipranavir increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product

Tipranavir**● Lipid-regulating Drugs** (continued)

- literature); tipranavir possibly increases plasma concentration of ● **SIMVASTATIN**—avoid concomitant use; avoidance of tipranavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Orlistat: absorption of tipranavir possibly reduced by ● **ORLISTAT**
- Ranolazine: tipranavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: manufacturer of tipranavir advises avoid concomitant use of **SILDENAFIL** for pulmonary arterial hypertension
- Sympathomimetics, Beta: manufacturer of tipranavir advises avoid concomitant use with **SALMETEROL**
- Ulcer-healing Drugs: tipranavir reduces plasma concentration of ● **ESOMEPRAZOLE** and ● **OMEPRAZOLE**
- Vardenafil: manufacturer of tipranavir advises caution with **VARDENAFIL**
- Vitamins: increased risk of bleeding when tipranavir given with high doses of **VITAMIN E**

Tirofiban

- Iloprost: increased risk of bleeding when tirofiban given with **ILOPROST**

Tizanidine see Muscle Relaxants

Tobramycin see Aminoglycosides

Tocilizumab

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Tolazoline see Alpha-blockers

Tolbutamide see Antidiabetics

Tolcapone

- Antidepressants: avoid concomitant use of tolcapone with **MAOIS**
- Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**

Tolfenamic Acid see NSAIDs

Tolterodine see Antimuscarinics

Tolvaptan

- Antibacterials: plasma concentration of tolvaptan reduced by **RIFAMPICIN**
- Antifungals: plasma concentration of tolvaptan increased by **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use
- Cardiac Glycosides: tolvaptan increases plasma concentration of **DIGOXIN** (increased risk of toxicity)
- Grapefruit Juice: plasma concentration of tolvaptan increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use
- Lipid-regulating Drugs: separating administration from tolvaptan by 12 hours advised by manufacturer of **LOMITAPIDE**

Topiramate

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antidiabetics: topiramate possibly increases plasma concentration of **METFORMIN**; topiramate possibly reduces plasma concentration of **GLIBENCLAMIDE**
- Antiepileptics: plasma concentration of topiramate often reduced by **CARBAMAZEPINE**; topiramate increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (also plasma concentration of topiramate reduced); topiramate reduces plasma concentration of **PERAMPANEL**; plasma concentration of topiramate possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**; hyperammonaemia and CNS toxicity reported when topiramate given with **SODIUM VALPROATE** and **VALPROIC ACID**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**

Topiramate (continued)

- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- ▷ Diuretics: plasma concentration of topiramate possibly increased by **HYDROCHLOROTHIAZIDE**
- ▷ Lithium: topiramate possibly affects plasma concentration of **LITHIUM**
- Oestrogens: topiramate accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: topiramate accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNFC)

Toraseotide see Diuretics

Toremifene

- Anticoagulants: toremifene possibly enhances anticoagulant effect of ● **COUMARINS**
- ▷ Antiepileptics: metabolism of toremifene possibly accelerated by **CARBAMAZEPINE** (reduced plasma concentration); metabolism of toremifene possibly accelerated by **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of toremifene accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration)
- Cytotoxics: possible increased risk of ventricular arrhythmias when toremifene given with ● **VANDETANIB**—avoid concomitant use
- ▷ Diuretics: increased risk of hypercalcaemia when toremifene given with **THIAZIDES AND RELATED DIURETICS**

Trabectedin

- Alcohol: manufacturer of trabectedin advises avoid concomitant use with ● **ALCOHOL**
- Antibacterials: plasma concentration of trabectedin reduced by ● **RIFAMPICIN**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when trabectedin given with live ● **VACCINES**—avoid concomitant use

Tramadol see Opioid Analgesics

Trandolapril see ACE Inhibitors

Tranylcypromine see MAOIs

Trastuzumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: possible increased risk of cardiotoxicity when trastuzumab given with ● **DAUNORUBICIN**, ● **DOXORUBICIN**, ● **EPIRUBICIN** and ● **IDARUBICIN**—avoid concomitant use for up to 28 weeks after stopping trastuzumab
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

Trazodone see Antidepressants, Tricyclic (related)

Tretinoin see Retinoids

Triamcinolone see Corticosteroids

Triamterene see Diuretics

Trientine

- ▷ Iron Salts: trientine reduces absorption of *oral* **IRON SALTS**
- ▷ Zinc: trientine reduces absorption of **ZINC**, also absorption of trientine reduced by zinc

Trifluoperazine see Antipsychotics

Trihexyphenidyl see Antimuscarinics

Trimethoprim

- ▷ ACE Inhibitors: possible increased risk of hyperkalaemia when trimethoprim given with **ACE INHIBITORS**
- ▷ Angiotensin-II Receptor Antagonists: possible increased risk of hyperkalaemia when trimethoprim given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▷ Anti-arrhythmics: possible increased risk of ventricular arrhythmias when trimethoprim (as co-trimoxazole) given with **AMIODARONE**—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole

Trimethoprim (continued)

- ▷ Antibacterials: plasma concentration of trimethoprim possibly reduced by **RIFAMPICIN**; plasma concentration of both drugs may increase when trimethoprim given with **DAPSONE**
- ▷ Anticoagulants: trimethoprim possibly enhances anticoagulant effect of **COUMARINS**
- ▷ Antidiabetics: trimethoprim possibly enhances hypoglycaemic effect of **REPAGLINIDE**—manufacturer advises avoid concomitant use; trimethoprim rarely enhances the effects of **SULFONYLUREAS**
- Antiepileptics: trimethoprim increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (also increased antifolate effect)
- Antimalarials: increased antifolate effect when trimethoprim given with ● **PYRIMETHAMINE**
- ▷ Antivirals: trimethoprim (as co-trimoxazole) increases plasma concentration of **LAMIVUDINE**—avoid concomitant use of high-dose co-trimoxazole
- Azathioprine: increased risk of haematological toxicity when trimethoprim (also with co-trimoxazole) given with ● **AZATHIOPRINE**
- ▷ Cardiac Glycosides: trimethoprim possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: increased risk of nephrotoxicity when trimethoprim given with ● **CYCLOSPORIN**, also plasma concentration of ciclosporin reduced by *intravenous* trimethoprim
- Cytotoxics: increased risk of haematological toxicity when trimethoprim (also with co-trimoxazole) given with ● **MERCAPTOPYRINE**; increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when trimethoprim (also with co-trimoxazole) given with ● **METHOTREXATE**
- ▷ Diuretics: increased risk of hyperkalaemia when trimethoprim given with **EPLERENONE**; possible increased risk of hyperkalaemia when trimethoprim given with **SPIRONOLACTONE**
- Tacrolimus: possible increased risk of nephrotoxicity when trimethoprim given with ● **TACROLIMUS**
- ▷ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Trimipramine see Antidepressants, Tricyclic

Tripotassium Dicitratobismuthate

- ▷ Antibacterials: tripotassium dicitratobismuthate reduces absorption of **TETRACYCLINES**

Tropicamide see Antimuscarinics

Trospium see Antimuscarinics

Typhoid Vaccine (oral) see Vaccines

Typhoid Vaccine (parenteral) see Vaccines

Ubidecarenone

- ▷ Anticoagulants: ubidecarenone may enhance or reduce anticoagulant effect of **WARFARIN**

Ulcer-healing Drugs see Histamine H₂-antagonists, Proton Pump Inhibitors, Sucralfate, and Tripotassium Dicitratobismuthate

Ulipristal

- Antibacterials: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of *low-dose* ulipristal increased by **ERYTHROMYCIN**—manufacturer of *low-dose* ulipristal advises avoid concomitant use; manufacturer of ulipristal advises avoid concomitant use with ● **RIFAMPICIN** (contraceptive effect of ulipristal possibly reduced)
- ▷ Anticoagulants: manufacturer of ulipristal advises give **DABIGATRAN** at least 1.5 hours before or after ulipristal
- Antidepressants: manufacturer of ulipristal advises avoid concomitant use with ● **ST JOHN'S WORT** (contraceptive effect of ulipristal possibly reduced)
- Antiepileptics: manufacturer of ulipristal advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (contraceptive effect of ulipristal possibly reduced)
- ▷ Antifungals: plasma concentration of *low-dose* ulipristal increased by **KETOCONAZOLE**—manufacturer of *low-dose* ulipristal advises avoid concomitant use; manufacturer of ulipristal advises avoid concomitant use with **ITRACONAZOLE**

Ulipristal (continued)

- Antihistamines: manufacturer of ulipristal advises give **FXEOFENADINE** at least 1.5 hours before or after ulipristal
- Antivirals: manufacturer of ulipristal advises avoid concomitant use with **RITONAVIR** (contraceptive effect of ulipristal possibly reduced)
- Calcium-channel Blockers: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **VERAPAMIL**
- Cardiac Glycosides: manufacturer of ulipristal advises give **DIGOXIN** at least 1.5 hours before or after ulipristal
- Grapefruit Juice: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **GRAPEFRUIT JUICE**
- Progestogens: ulipristal possibly reduces contraceptive effect of **PROGESTGENS**

Umeclidinium see Antimuscarinics

Ursodeoxycholic Acid see Bile Acids

Ustekinumab

- Antipsychotics: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live **VACCINES**—avoid concomitant use

Vaccines

- Abatacept: risk of generalised infections when live vaccines given with **ABATACEPT**—avoid concomitant use
- Aminophylline: influenza vaccine possibly increases plasma concentration of **AMINOPHYLLINE**
- Anakinra: risk of generalised infections when live vaccines given with **ANAKINRA**—avoid concomitant use
- Antibacterials: oral typhoid vaccine inactivated by **ANTIBACTERIALS**—see under Typhoid Vaccine in BNFC
- Anticoagulants: influenza vaccine possibly enhances anticoagulant effect of **WARFARIN**
- Antidepressants: oral typhoid vaccine inactivated by antibacterials including **LINEZOLID**—see under Typhoid Vaccine in BNFC
- Antiepileptics: influenza vaccine enhances effects of **FOSPHENYTOIN** and **PHENYTOIN**
- Antimalarials: oral typhoid vaccine inactivated by **ANTIMALARIALS**—see under Typhoid Vaccine in BNFC
- Azathioprine: risk of generalised infections when live vaccines given with **AZATHIOPRINE**—avoid concomitant use
- Corticosteroids: immune response to vaccines impaired by high doses of **CORTICOSTEROIDS**—avoid concomitant use with live vaccines
- Cytotoxics: risk of generalised infections when live vaccines given with **CYTOTOXIC ANTIBIOTICS**, **HYDROXYCARBAMIDE**, **MONOCLONAL ANTIBODIES** or **TRABECTEDIN**—avoid concomitant use
- Dexrazoxane: risk of generalised infections when live vaccines given with **DEXRAZOXANE**—avoid concomitant use
- Etanercept: risk of generalised infections when live vaccines given with **ETANERCEPT**—avoid concomitant use
- Immunoglobulins: impaired immune response to oral poliomyelitis vaccine might occur with **ANTI-D IMMUNOGLOBULINS** and **NORMAL IMMUNOGLOBULIN**—give oral poliomyelitis vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with **ANTI-D IMMUNOGLOBULINS**—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins; impaired immune response to live influenza vaccine might occur with **ANTI-D IMMUNOGLOBULINS** and **NORMAL IMMUNOGLOBULIN**—give live influenza vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with **NORMAL IMMUNOGLOBULIN**—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine at least 3 weeks before or 3 months after normal immunoglobulin

Vaccines (continued)

- Interferons: avoidance of vaccines advised by manufacturer of **INTERFERON GAMMA**
- Leflunomide: risk of generalised infections when live vaccines given with **LEFLUNOMIDE**—avoid concomitant use
- Teriflunomide: risk of generalised infections when live vaccines given with **TERIFLUNOMIDE**—avoid concomitant use
- Theophylline: influenza vaccine possibly increases plasma concentration of **THEOPHYLLINE**

Valaciclovir

- Aminophylline: valaciclovir possibly increases plasma concentration of **AMINOPHYLLINE**
- Ciclosporin: increased risk of nephrotoxicity when valaciclovir given with **CICLOSPORIN**
- Mycophenolate: plasma concentration of valaciclovir increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate increased
- Tacrolimus: possible increased risk of nephrotoxicity when valaciclovir given with **TACROLIMUS**
- Theophylline: valaciclovir possibly increases plasma concentration of **THEOPHYLLINE**

Valganciclovir

- Antibacterials: increased risk of convulsions when valganciclovir given with **IMPENEM WITH CILASTATIN**
- Antivirals: valganciclovir possibly increases plasma concentration of **DIDANOSINE**; profound myelosuppression when valganciclovir given with **ZIDOVUDINE** (if possible avoid concomitant administration, particularly during initial valganciclovir therapy)
- Mycophenolate: plasma concentration of valganciclovir possibly increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- Tacrolimus: possible increased risk of nephrotoxicity when valganciclovir given with **TACROLIMUS**

Valproic Acid

- Analgesics: effects of valproic acid enhanced by **ASPIRIN**
- Antibacterials: metabolism of valproic acid possibly inhibited by **ERYTHROMYCIN** (increased plasma concentration); avoidance of valproic acid advised by manufacturer of **PIVMECILLINAM**; plasma concentration of valproic acid reduced by **CARBAPENEMS**—avoid concomitant use
- Anticoagulants: valproic acid possibly enhances anticoagulant effect of **COUMARINS**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by **SSRIS** and **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of valproic acid reduced by **CARBAMAZEPINE**, also plasma concentration of active metabolite of carbamazepine increased; valproic acid possibly increases plasma concentration of **ETHOSUXIMIDE**; valproic acid increases or possibly decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of valproic acid reduced; valproic acid increases plasma concentration of **LAMOTRIGINE** (increased risk of toxicity—reduce lamotrigine dose); valproic acid sometimes reduces plasma concentration of an active metabolite of **OXCARBAZEPINE**; valproic acid increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE** (also plasma concentration of valproic acid reduced); valproic acid possibly increases plasma concentration of **RUFINAMIDE** (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when valproic acid given with **TOPIRAMATE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by **ANTIPSYCHOTICS** (convulsive threshold lowered); valproic acid possibly increases or decreases plasma concentration of **CLOZAPINE**; increased risk of side-effects including neutropenia when valproic acid given with **OLANZAPINE**
- Antivirals: plasma concentration of valproic acid possibly reduced by **RITONAVIR**; valproic acid possibly increases plasma concentration of **ZIDOVUDINE** (increased risk of toxicity)

Valproic Acid (continued)

- ▶ Anxiolytics and Hypnotics: plasma concentration of valproic acid possibly increased by **CLOBAZAM**; increased risk of side-effects when valproic acid given with **CLONAZEPAM**; valproic acid possibly increases plasma concentration of **DIAZEPAM** and **LORAZEPAM**
- ▶ Bupropion: valproic acid inhibits the metabolism of **BUPROPION**
- ▶ Cytotoxics: valproic acid increases plasma concentration of **TEMOZOLOMIDE**
- ▶ Guanfacine: plasma concentration of valproic acid increased by **GUANFACINE**
- ▶ Lipid-regulating Drugs: absorption of valproic acid possibly reduced by **COLESTYRAMINE**
- ▶ Netupitant: caution with valproic acid advised by manufacturer of **NETUPITANT**
- ▶ Oestrogens: plasma concentration of valproic acid possibly reduced by **ETHINYLESTRADIOL**
- Orlistat: possible increased risk of convulsions when antiepileptics given with **ORLISTAT**
- ▶ Sodium Benzoate: valproic acid possibly reduces effects of **SODIUM BENZOATE**
- Sodium Oxybate: valproic acid increases the plasma concentration of **SODIUM OXYBATE** (see under Sodium Oxybate, in BNF)
- ▶ Sodium Phenylbutyrate: valproic acid possibly reduces effects of **SODIUM PHENYLBUTYRATE**
- Ulcer-healing Drugs: metabolism of valproic acid inhibited by **CIMETIDINE** (increased plasma concentration)

Valsartan see Angiotensin-II Receptor Antagonists

Vancomycin

- ▶ Anaesthetics, General: hypersensitivity-like reactions can occur when *intravenous* vancomycin given with **GENERAL ANAESTHETICS**
- Antibacterials: increased risk of nephrotoxicity and ototoxicity when vancomycin given with **AMINOGLYCOSIDES**, **CAPREOMYCIN** or **COLISTIMETHATE SODIUM**; increased risk of nephrotoxicity when vancomycin given with **POLYMYXINS**
- ▶ Antifungals: possible increased risk of nephrotoxicity when vancomycin given with **AMPHOTERICIN**
- Ciclosporin: increased risk of nephrotoxicity when vancomycin given with **CICLOSPORIN**
- ▶ Cytotoxics: increased risk of nephrotoxicity and possibly of ototoxicity when vancomycin given with **CISPLATIN**
- Diuretics: increased risk of ototoxicity when vancomycin given with **LOOP DIURETICS**
- ▶ Lipid-regulating Drugs: effects of *oral* vancomycin antagonised by **COLESTYRAMINE**
- Muscle Relaxants: vancomycin enhances effects of **SUXAMETHONIUM**
- ▶ Tacrolimus: possible increased risk of nephrotoxicity when vancomycin given with **TACROLIMUS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNFC

Vandetanib

- Analgesics: possible increased risk of ventricular arrhythmias when vandetanib given with **METHADONE**—avoid concomitant use
- Anti-arrhythmics: possible increased risk of ventricular arrhythmias when vandetanib given with **AMIODARONE** or **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: possible increased risk of ventricular arrhythmias when vandetanib given with *parenteral* **ERYTHROMYCIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when vandetanib given with **MOXIFLOXACIN**—avoid concomitant use; plasma concentration of vandetanib reduced by **RIFAMPICIN**—manufacturer of vandetanib advises avoid concomitant use
- ▶ Antidepressants: manufacturer of vandetanib advises avoid concomitant use with **ST JOHN'S WORT** (plasma concentration of vandetanib possibly reduced)
- ▶ Antidiabetics: vandetanib possibly increases plasma concentration of **METFORMIN** (consider reducing dose of metformin)
- ▶ Antiepileptics: manufacturer of vandetanib advises avoid concomitant use with **CARBAMAZEPINE**, **PHENOBARBITAL** and

Vandetanib

Antiepileptics (continued)

- PRIMIDONE** (plasma concentration of vandetanib possibly reduced)
- Antihistamines: possible increased risk of ventricular arrhythmias when vandetanib given with **MIZOLASTINE**—avoid concomitant use
- Antimalarials: possible increased risk of ventricular arrhythmias when vandetanib given with **ARTEMETHER WITH LUMEFANTRINE**—avoid concomitant use
- Antipsychotics: possible increased risk of ventricular arrhythmias when vandetanib given with **AMISULPRIDE**, **CHLORPROMAZINE**, **HALOPERIDOL**, **PIMOZIDE** or **SULPIRIDE** or **ZUCLOPENTHIXOL**—avoid concomitant use; avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
- Beta-blockers: possible increased risk of ventricular arrhythmias when vandetanib given with **SOTALOL**—avoid concomitant use
- ▶ Cardiac Glycosides: vandetanib increases plasma concentration of **DIGOXIN**—possible increased risk of bradycardia
- Cytotoxics: possible increased risk of ventricular arrhythmias when vandetanib given with **ARSENIC TRIOXIDE**—avoid concomitant use
- Hormone Antagonists: possible increased risk of ventricular arrhythmias when vandetanib given with **TOREMIFENE**—avoid concomitant use
- 5HT₃-receptor Antagonists: increased risk of ventricular arrhythmias when vandetanib given with **ONDANSETRON**—avoid concomitant use
- Pentamidine Isetionate: possible increased risk of ventricular arrhythmias when vandetanib given with **PENTAMIDINE ISETIONATE**—avoid concomitant use

Vardenafil

- Alpha-blockers: enhanced hypotensive effect when vardenafil given with **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate vardenafil at the lowest possible dose—separate doses by 6 hours (except with tamsulosin)
- ▶ Anti-arrhythmics: avoidance of vardenafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- ▶ Antibacterials: plasma concentration of vardenafil possibly increased by **CLARITHROMYCIN** (consider reducing initial dose of vardenafil); plasma concentration of vardenafil increased by **ERYTHROMYCIN** (reduce dose of vardenafil)
- Antifungals: plasma concentration of vardenafil increased by **KETOCONAZOLE**—avoid concomitant use; plasma concentration of vardenafil possibly increased by **ITRACONAZOLE**—avoid concomitant use
- Antivirals: plasma concentration of vardenafil possibly increased by **FOSAMPRENAVIR**; plasma concentration of vardenafil increased by **INDINAVIR** and **RITONAVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when vardenafil given with **SAQUINAVIR**—avoid concomitant use; avoidance of vardenafil advised by manufacturer of **TELAPREVIR**; caution with vardenafil advised by manufacturer of **TIPRANAVIR**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when vardenafil given with **NIFEDIPINE**
- Cobicistat: plasma concentration of vardenafil possibly increased by **COBICISTAT**—manufacturer of cobicistat advises reduce dose of vardenafil (consult cobicistat product literature)
- ▶ Dapoxetine: avoidance of vardenafil advised by manufacturer of **DAPOXETINE**
- Grapefruit Juice: plasma concentration of vardenafil possibly increased by **GRAPEFRUIT JUICE**—avoid concomitant use
- Nicorandil: possible increased hypotensive effect when vardenafil given with **NICORANDIL**—avoid concomitant use
- Nitrates: possible increased hypotensive effect when vardenafil given with **NITRATES**—avoid concomitant use
- Riociguat: possible enhanced hypotensive effect when vardenafil given with **RIOCIGUAT**—avoid concomitant use

Varicella-zoster Vaccine see Vaccines

Vasodilator Antihypertensives

- ACE Inhibitors: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ACE INHIBITORS**
- Adrenergic Neurone Blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ADRENERGIC NEURONE BLOCKERS**
- Alcohol: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALCOHOL**
- Aldesleukin: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALDESLEUKIN**
- Alpha-blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALPHA-BLOCKERS**
- Anaesthetics, General: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **GENERAL ANAESTHETICS**
- Analgesics: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **NSAIDS**
- Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antidepressants: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MAOIS**; enhanced hypotensive effect when hydralazine or sodium nitroprusside given with **TRICYCLIC-RELATED ANTIDEPRESSANTS**
- Antipsychotics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **PHENOTHIAZINES**
- Anxiolytics and Hypnotics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ANXIOLYTICS AND HYPNOTICS**
- Beta-blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **BETA-BLOCKERS**
- Calcium-channel Blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CALCIUM-CHANNEL BLOCKERS**
- Clonidine: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CLONIDINE**
- Corticosteroids: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **CORTICOSTEROIDS**
- Diazoxide: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **DIAZOXIDE**
- Diuretics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **DIURETICS**
- Dopaminergics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CO-BENELDOPA**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CO-CARELDOPA**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **LEVODOPA**
- Methyldopa: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **METHYLDOPA**
- Moxisylyte: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MOXISYLYTE**
- Moxonidine: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MOXONIDINE**
- Muscle Relaxants: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **BACLOFEN**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **TIZANIDINE**
- Nicorandil: possible enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **NICORANDIL**
- Nitrates: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **NITRATES**
- Oestrogens: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **OESTROGENS**
- Prostaglandins: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALPROSTADIL**
- Vasodilator Antihypertensives: enhanced hypotensive effect when hydralazine given with **MINOXIDIL** or **SODIUM NITROPRUSSIDE**; enhanced hypotensive effect when minoxidil given with **SODIUM NITROPRUSSIDE**

Vecuronium see Muscle Relaxants

Vedolizumab

- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live
 - **VACCINES**—avoid concomitant use

Vemurafenib

- Antibacterials: manufacturer of vemurafenib advises avoid concomitant use with **RIFABUTIN** and **RIFAMPICIN**
- Anticoagulants: vemurafenib possibly enhances anticoagulant effect of
 - **WARFARIN**
- Antidepressants: manufacturer of vemurafenib advises avoid concomitant use with **ST JOHN'S WORT**
- Antiepileptics: manufacturer of vemurafenib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**
- Antipsychotics: avoid concomitant use of cytotoxics with
 - **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: avoidance of vemurafenib advised by manufacturer of **IPILIMUMAB**
- Oestrogens: manufacturer of vemurafenib advises contraceptive effect of
 - **OESTROGENS** possibly reduced
- Progestogens: manufacturer of vemurafenib advises contraceptive effect of
 - **PROGESTOGENS** possibly reduced

Venlafaxine

- Analgesics: increased risk of bleeding when venlafaxine given with
 - **NSAIDS** or ● **ASPIRIN**; possible increased serotonergic effects when SSRI-related antidepressants given with **FENTANYL**; possible increased serotonergic effects when venlafaxine given with **TRAMADOL**
- Anti-arrhythmics: manufacturer of venlafaxine advises avoid concomitant use with
 - **AMIODARONE** (risk of ventricular arrhythmias)
- Antibacterials: manufacturer of venlafaxine advises avoid concomitant use with
 - **ERYTHROMYCIN** and ● **MOXIFLOXACIN** (risk of ventricular arrhythmias)
- Anticoagulants: venlafaxine possibly enhances anticoagulant effect of
 - **WARFARIN**; possible increased risk of bleeding when SSRI-related antidepressants given with ● **DABIGATRAN**
- Antidepressants: possible increased serotonergic effects when venlafaxine given with **ST JOHN'S WORT**, **DULOXETINE** or **MIRTAZAPINE**; enhanced CNS effects and toxicity when venlafaxine given with
 - **MAOIS** (venlafaxine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 1 week after stopping venlafaxine); after stopping SSRI-related antidepressants do not start ● **MOCLOBEMIDE** for at least 1 week; possible increased risk of convulsions when SSRI-related antidepressants given with ● **VORTIOXETINE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of
 - **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: venlafaxine increases plasma concentration of **HALOPERIDOL**
- Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Beta-blockers: manufacturer of venlafaxine advises avoid concomitant use with
 - **SOTALOL** (risk of ventricular arrhythmias)
- Dapoxetine: possible increased risk of serotonergic effects when venlafaxine given with
 - **DAPOXETINE** (manufacturer of dapoxetine advises venlafaxine should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping venlafaxine)
- Dopaminergics: caution with venlafaxine advised by manufacturer of **ENTACAPONE**; increased risk of hypertension and CNS excitation when venlafaxine given with
 - **SELEGILINE** (selegiline should not be started until 1 week after stopping venlafaxine, avoid venlafaxine for 2 weeks after stopping selegiline)
- 5HT₁-receptor Agonists: possible increased serotonergic effects when venlafaxine given with **5HT₁ AGONISTS**
- 5HT₂-receptor Antagonists: possible increased serotonergic effects when SSRI-related antidepressants given with **5HT₂ ANTAGONISTS**
- Lithium: possible increased serotonergic effects when venlafaxine given with **LITHIUM**

Venlafaxine (continued)

- Methylthionium: risk of CNS toxicity when SSRI-related antidepressants given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthionium and observe patient for up to 4 hours after administration)

Verapamil see Calcium-channel Blockers

Vigabatrin

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: vigabatrin reduces plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

Vilanterol see Sympathomimetics, Beta₂

Vildagliptin see Antidiabetics

Vinblastine

- Aldesleukin: avoidance of vinblastine advised by manufacturer of ● **ALDESLEUKIN**
- Antibacterials: toxicity of vinblastine increased by ● **ERYTHROMYCIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when vinblastine given with ● **DELAMANID**
- Antifungals: possible increased risk of vinblastine toxicity when given with ● **ITRACONAZOLE**; metabolism of vinblastine possibly inhibited by ● **POSACONAZOLE** (increased risk of neurotoxicity)
- Antimalarials: avoidance of vinblastine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of vinblastine possibly increased by ● **RITONAVIR**

Vincristine

- Antibacterials: possible increased risk of ventricular arrhythmias when vincristine given with ● **DELAMANID**
- Antifungals: increased risk of vincristine toxicity when given with ● **ITRACONAZOLE**; metabolism of vincristine possibly inhibited by ● **POSACONAZOLE** (increased risk of neurotoxicity)
- Antimalarials: avoidance of vincristine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Calcium-channel Blockers: metabolism of vincristine possibly inhibited by ● **NIFEDIPINE**
- Cardiac Glycosides: vincristine possibly reduces absorption of ● **DIGOXIN tablets**
- Cytotoxics: increased risk of hepatotoxicity when vincristine given with ● **DACTINOMYCIN**

Vindesine

- Antibacterials: possible increased risk of ventricular arrhythmias when vindesine given with ● **DELAMANID**
- Antifungals: possible increased risk of vindesine toxicity when given with ● **ITRACONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Vinflunine

- Antibacterials: plasma concentration of vinflunine possibly reduced by ● **RIFAMPICIN**—manufacturer of vinflunine advises avoid concomitant use; increased risk of ventricular arrhythmias when vinflunine given with ● **DELAMANID**
- Antidepressants: plasma concentration of vinflunine possibly reduced by ● **ST JOHN'S WORT**—manufacturer of vinflunine advises avoid concomitant use
- Antifungals: plasma concentration of vinflunine increased by ● **KETOCONAZOLE**—manufacturer of vinflunine advises avoid concomitant use; possible increased risk of vinflunine toxicity when given with ● **ITRACONAZOLE**

Vinflunine (continued)

- Antimalarials: avoidance of vinflunine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of vinflunine possibly increased by ● **RITONAVIR**—manufacturer of vinflunine advises avoid concomitant use
- Grapefruit Juice: plasma concentration of vinflunine possibly increased by ● **GRAPEFRUIT JUICE**—manufacturer of vinflunine advises avoid concomitant use

Vinorelbine

- Antibacterials: possible increased risk of neutropenia when vinorelbine given with ● **CLARITHROMYCIN**; possible increased risk of ventricular arrhythmias when vinorelbine given with ● **DELAMANID**
- Antifungals: possible increased risk of vinorelbine toxicity when given with ● **ITRACONAZOLE**
- Antimalarials: avoidance of vinorelbine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Vismodegib

- Antibacterials: manufacturer of vismodegib advises avoid concomitant use with ● **RIFAMPICIN** (plasma concentration of vismodegib possibly reduced)
- Antidepressants: manufacturer of vismodegib advises avoid concomitant use with ● **ST JOHN'S WORT** (plasma concentration of vismodegib possibly reduced)
- Antiepileptics: manufacturer of vismodegib advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN** (plasma concentration of vismodegib possibly reduced)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

Vitamin A see Vitamins

Vitamin D see Vitamins

Vitamin E see Vitamins

Vitamin K (Phytomenadione) see Vitamins

Vitamins

- Antibacterials: absorption of vitamin A possibly reduced by ● **NEOMYCIN**
- Anticoagulants: vitamin E possibly enhances anticoagulant effect of ● **COUMARINS**; vitamin K antagonises anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- Antiepileptics: alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with ● **CARBAMAZEPINE**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with ● **FOSPHENYTOIN**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with ● **PHENYTOIN**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with ● **PRIMIDONE**
- Antifungals: plasma concentration of paricalcitol possibly increased by ● **KETOCONAZOLE**; effects of alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol and vitamin D possibly reduced by ● **MICONAZOLE**
- Antivirals: increased risk of bleeding when high doses of vitamin E given with ● **TIPRANAVIR**
- Ciclosporin: vitamin E possibly affects plasma concentration of ● **CICLOSPORIN**
- Cytotoxics: effects of alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol and vitamin D possibly reduced by ● **DACTINOMYCIN**; avoidance of vitamin E advised by manufacturer of ● **IBRUTINIB**
- Diuretics: increased risk of hypercalcaemia when alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D given with ● **THIAZIDES AND RELATED DIURETICS**

Vitamins (continued)

- Dopaminergics: pyridoxine reduces effects of **LEVODOPA** when given without dopa-decarboxylase inhibitor
- Lipid-regulating Drugs: absorption of calcitriol possibly reduced by **COLESTYRAMINE** (give at least 1 hour before or 4 to 6 hours after colestyramine)
- Retinoids: risk of hypervitaminosis A when vitamin A given with ● **RETINOIDS**—avoid concomitant use
- Selenium: ascorbic acid possibly reduces absorption of **SELENIUM** (give at least 4 hours apart)
- Sevelamer: absorption of calcitriol reduced by **SEVELAMER** (give at least 1 hour before or 3 hours after sevelamer)

Voriconazole see Antifungals, Triazole

Vortioxetine

- Analgesics: possible increased serotonergic effects when vortioxetine given with **TRAMADOL**
- Antibacterials: plasma concentration of vortioxetine reduced by ● **RIFAMPICIN**—consider increasing dose of vortioxetine
- Antidepressants: plasma concentration of vortioxetine possibly increased by **FLUOXETINE** and **PAROXETINE** (consider reducing dose of vortioxetine); increased risk of hypertension and CNS excitation when vortioxetine given with ● **MAOIS** (vortioxetine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 2 weeks after stopping vortioxetine); manufacturer of vortioxetine advises avoid concomitant use with ● **LINEZOLID** and ● **MOCLOBEMIDE**; possible increased risk of convulsions when vortioxetine given with ● **SSRI-RELATED ANTIDEPRESSANTS**, ● **SSRIS** or ● **TRICYCLICS**; possible increased serotonergic effects when vortioxetine given with **ST JOHN'S WORT**
- Antiepileptics: plasma concentration of vortioxetine possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**—consider increasing dose of vortioxetine
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**; possible increased risk of convulsions when vortioxetine given with ● **MEFLOQUINE**
- Antipsychotics: possible increased risk of convulsions when vortioxetine given with ● **BUTYROPHENONES**, ● **PHENOTHIAZINES** or ● **THIOXANTHENES**
- Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Bupropion: plasma concentration of vortioxetine increased by **BUPROPION** (consider reducing dose of vortioxetine)
- Dopaminergics: risk of CNS excitation and hypertension when vortioxetine given with ● **RASAGILINE** or ● **SELEGILINE**
- 5HT₁-receptor Agonists: possible increased serotonergic effects when vortioxetine given with **5HT₁ AGONISTS**

Warfarin see Coumarins

Wasp Venom Extracts

- ACE Inhibitors: possible severe anaphylactoid reaction when wasp venom extracts given with ● **ACE INHIBITORS**

Xipamide see Diuretics

Xylometazoline see Sympathomimetics

Yellow Fever Vaccine see Vaccines

Zafirlukast see Leukotriene Receptor Antagonists

Zaleplon see Anxiolytics and Hypnotics

Zidovudine

- NOTE** Increased risk of toxicity with nephrotoxic and myelosuppressive drugs—for further details consult product literature
- Analgesics: increased risk of haematological toxicity when zidovudine given with **NSAIDs**; plasma concentration of zidovudine possibly increased by **METHADONE**
 - Antibacterials: absorption of zidovudine reduced by **CLARITHROMYCIN** tablets (give at least 2 hours apart); manufacturer of zidovudine advises avoid concomitant use with **RIFAMPICIN**
 - Antiepileptics: zidovudine increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; plasma concentration of zidovudine possibly increased by **SODIUM VALPROATE** and **VALPROIC ACID** (increased risk of toxicity)
 - Antifungals: plasma concentration of zidovudine increased by ● **FLUCONAZOLE** (increased risk of toxicity)
 - Antimalarials: increased antifolate effect when zidovudine given with **PYRIMETHAMINE**

Zidovudine (continued)

- Antivirals: profound myelosuppression when zidovudine given with ● **GANCICLOVIR** or ● **VALGANCICLOVIR** (if possible avoid concomitant administration, particularly during initial ganciclovir or valganciclovir therapy); increased risk of granulocytopenia when zidovudine given with ● **NEVIRAPINE**; increased risk of anaemia when zidovudine given with ● **RIBAVIRIN**—avoid concomitant use; zidovudine possibly inhibits effects of ● **STAVUDINE** (manufacturers advise avoid concomitant use); plasma concentration of zidovudine reduced by ● **TIPRANAVIR**
- Atovaquone: plasma concentration of zidovudine increased by **ATOVAQUONE** (increased risk of toxicity)
- Netupitant: caution with zidovudine advised by manufacturer of **NETUPITANT**
- Orlistat: absorption of zidovudine possibly reduced by ● **ORLISTAT**

Zinc

- Antibacterials: zinc reduces absorption of **CIPROFLOXACIN**, **LEVOFLOXACIN**, **NORFLOXACIN** and **OFLOXACIN** (give at least 2 hours apart); zinc reduces absorption of **MOXIFLOXACIN** (give at least 6 hours apart); zinc possibly reduces absorption of **TETRACYCLINES** (give at least 2 to 3 hours apart)
- Calcium Salts: absorption of zinc reduced by **CALCIUM SALTS**
- Eltrombopag: zinc possibly reduces absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- Iron Salts: absorption of zinc reduced by **oral IRON SALTS**, also absorption of **oral** iron salts reduced by zinc
- Penicillamine: absorption of zinc reduced by **PENICILLAMINE**, also absorption of penicillamine reduced by zinc
- Trientine: absorption of zinc reduced by **TRIENTINE**, also absorption of trientine reduced by zinc

Zoledronic Acid see Bisphosphonates

Zolmitriptan see 5HT₁-receptor Agonists (under HT)

Zolpidem see Anxiolytics and Hypnotics

Zonisamide

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
 - Antiepileptics: plasma concentration of zonisamide reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
 - Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
 - Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
 - Diuretics: manufacturer of zonisamide advises avoid concomitant use with **CARBONIC ANHYDRASE INHIBITORS** in children
 - Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Zopiclone** see Anxiolytics and Hypnotics
- Zuclopenthixol** see Antipsychotics

Appendix 2

Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page 928
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	928
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	929
Enteral feeds (non-disease specific): Child under 12 years	932
Nutritional supplements (non-disease specific)	936
Nutritional supplements: less than 5 g protein/100 mL	936
Nutritional supplements: 5 g (or more) protein/100 mL	937
Specialised formulas	941
Specialised formulas: Infant and child	941
Specialised formulas for specific clinical conditions	946
Feed supplements	948
High-energy supplements	948
Fibre, vitamin, and mineral supplements	953
Feed additives	954
Special additives for conditions of intolerance	954

Feed thickeners and pre-thickened drinks	page 954
Flavouring preparations	955
Foods for special diets	955
Gluten-free foods	955
Low-protein foods	958
Nutritional supplements for metabolic diseases	959
Glutaric aciduria (type 1)	959
Glycogen storage disease	960
Homocystinuria or hypermethioninaemia	960
Hyperlysinaemia	960
Isovaleric acidemia	961
Maple syrup urine disease	961
Methylmalonic or propionic acidemia	962
Other inborn errors of metabolism	962
Phenylketonuria	963
Tyrosinaemia	964

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table,

below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin; see **Interactions**: Appendix 1 (Vitamins).

The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease following total gastrectomy, short bowel syndrome, bowel fistula.

Paediatric ACBS indications: Disease-related malnutrition, intractable malabsorption, growth failure, pre-operative preparation of malnourished patients, dysphagia, short bowel syndrome, bowel fistula.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations. For details of the preparations see Chapter 13.

Dermatitis, eczema and pruritis

Aveeno® Bath Oil; *Aveeno*® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream; *E45*® Lotion

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark® classic foundation and finishing powder;
Dermablend® Ultra corrective foundation; *Dermacolor*®
 Camouflage cream and fixing powder; *Keromask*® masking
 cream and finishing powder; *Veil*® Cover cream and
 Finishing Powder. (Cleansing Creams, Cleansing Milks,
 and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such
 quantities and with such directions as are appropriate for
 the treatment of patients, but not for general hygienic
 purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having
 (or having undergone) radiotherapy, or sicca syndrome.

AS Saliva Orthana®; *Biotène Oralbalance*®; *BioXtra*®;
Glandosane®; *Saliveze*®

Photodermatoses (skin protection in)

Anthelios® XL SPF 50+ Melt-in cream; *Sunsense*® Ultra;
Uvistat® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and
 50

Prices quoted in Appendix 2 are basic NHS net prices; for
 further information see Prices in BNFC.

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Standard p. 926 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £13.28
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Standard p. 926	Fresubin Original liquid: blackcurrant, chocolate, nut, peach, vanilla Bottle 500 mL = £2.14 unflavoured 200 mL = £4.17 1000 mL = £8.26, 1500 mL = £12.39
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Standard p. 926 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 500 mL = £4.72; 1000 mL = £9.42
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 470 mg)	3.47 g	1.76 g	Gluten-free Residual lactose	Standard p. 926 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 500 mL = £5.20; 1000 mL = £9.46; 1500 mL = £14.14
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Standard p. 926	Nutrison liquid: 500 mL = £4.43; 500 mL = £4.92 (bottle); 1000 mL = £8.63; 1500 mL = £12.93
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Standard p. 926 except bowel fistula	Nutrison Multi Fibre liquid: 500 mL = £5.31 (bottle); 500 mL = £5.31; 1000 mL = £9.99; 1500 mL = £14.97
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 630 mg)	3.4 g	Nil	Gluten-free Residual lactose	Standard p. 926	Osmolite liquid: 500 mL = £4.65; 1000 mL = £8.46; 1500 mL = £12.65
SOYA PROTEIN FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Standard p. 926; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 mL = £4.88
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Standard p. 926; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 mL = £5.30; 1000 mL = £10.62

Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 700 mg)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Standard p. 926 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £17.66
PEPTIDE-BASED FORMULA									
Nutrison® Peptisorb® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 500 ml = £7.04 (bottle); 500 ml = £7.73; 1000 ml = £13.94
Peptamer® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamer liquid: vanilla 800 ml = £12.14, unflavoured 500 ml = £6.66, 1000 ml = £12.50
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51 %)	100 mg	Gluten-free Residual lactose Contains fish oil	Standard p. 926; also growth failure	Survimed OPD: liquid 500 ml = £6.96, 800 ml = £12.84, 1000 ml = £13.92, HN liquid 500 ml = £6.70
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS) Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years									
Elemental 028® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental 028 Extra liquid summer fruits: grapefruit, orange & pineapple 250 ml = £3.68
	Standard dilution (20 %) of powder (sip or tube feed) per 100 mL	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental 028 Extra powder: plain, orange, citrus, banana 100 gram = £7.14 (sachets)
Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g									
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL									
Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years									
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Standard p. 926	Fresubin 2250 Complete liquid: 1.5 litre = £14.82

Enteral feeds: 1.5 kcal/ml and 5 g (or more) protein/100 mL (product list continued)

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars)	5.8 g	Nil	Gluten-free Residual lactose Contains fish gelatin Strawberry flavour may contain traces of wheat starch & egg	Standard p. 926	liquid: 200 ml Fresubin Energy liquid: banana, blackcurrant, cappuccino, chocolate, lemon, strawberry, tropical fruits, vanilla 200 ml = £1.40 (bottle) liquid: unflavoured 200 ml = £1.40 500 ml = £5.05 1000 ml = £10.03 1500 ml = £13.45

Fresubin [®] 2 kcal Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	Nil	Gluten-free Residual lactose	Standard p. 926; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1–5 years.	Fresubin 2 kcal drink: apricot-peach, cappuccino, fruits of the forest, neutral, toffee, vanilla 200 mL = £1.98
Fresubin [®] 2 kcal Fibre Drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g cows' milk	22.5 g (sugars 5.8 g)	7.8 g	1.6 g	Gluten-free Residual lactose	Standard p. 926; also CAPD, haemodialysis. Not suitable for use in child under 1 year; use with caution in child 1–5 years.	Fresubin 2 kcal Fibre drink: apricot-peach, cappuccino, chocolate, lemon, neutral 200 mL = £1.98 Nutritional values vary with flavour—consult product literature.
Fresubin [®] Powder Extra (Fresenius Kabi Ltd)	Powder per 100 g	1764 kJ (420 kcal)	17.5 g cows' milk whey protein	63 g (sugars 24.7 g)	10.9 g	Nil	Gluten-free Contains lactose	Standard p. 926 Not suitable for child under 1 year; use with caution in child 1–5 years.	Fresubin Powder Extra oral powder 62g sachets: chocolate, neutral, strawberry, vanilla 7 sachet = £5.32. Nutritional values vary with flavour—consult product literature.
Powder 62 g reconstituted with 200 mL whole milk provides: protein 17.7 g, carbohydrate 48.5 g, fat 14.8 g, energy 1658 kJ (397 kcal)									
Nutrilis [®] Complete Stage 1 (Nutricia Ltd)	Liquid (pre-thickened) per 100 mL	1010 kJ (240 kcal)	9.6 g cows' milk	29.1 g (sugars 5.4 g)	9.3 g	3.2 g	Residual lactose	Standard p. 926 Not suitable for child under 3 years; use with caution in child 3–5 years.	Nutrilis Complete Stage 1 liquid: strawberry, vanilla 500 mL = £8.84
Nutrilis [®] Complete Stage 2 (Nutricia Ltd)	Semi-solid per 100 g	1030 kJ (245 kcal)	9.6 g cows' milk	29.1 g (sugars 11.8 g)	9.4 g	3.2 g	Gluten-free Residual lactose	Standard p. 926 Not suitable for child under 3 years; use with caution in child 3–6 years.	Nutrilis Complete Stage 2 custard: chocolate, strawberry, vanilla 500 gram = £8.84. Nutritional values vary with flavour—consult product literature.
Nutricrem [®] (Nutra Ltd)	Semi-solid per 100 g	756 kJ (180 kcal)	10 g cows' milk soya protein	18.8 g (sugars 9.7 g)	7.2 g	Nil	Gluten-free Residual lactose	Standard p. 926 Not suitable for child under 3 years; use with caution in child 3–6 years.	Nutricrem dessert: strawberry, vanilla 500 gram = £5.60

Renilon® 7.5 (Nutricia Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	7.5 g cows' milk	20 g (sugars 4.8 g)	10 g	Nil	Gluten-free Residual lactose	Standard p. 926 Not suitable for child under 3 years; use with caution in child 3-5 years.	Renilon 7.5 liquid: apricot, caramel 500 ml = £8.64
Resource® 2.0 Fibre (Nestle Health Science)	Liquid (sip feed) per 100 mL	836 kJ (200 kcal)	9 g cows' milk	21.4 g (sugars 5.5 g)	8.7 g	2.5 g	Gluten-free Residual lactose	Standard p. 926 Not suitable for child under 6 years; caution in child 6-10 years.	Resource Fibre 2.0 liquid: apricot, coffee, neutral, strawberry, summer fruit, vanilla 200 ml = £1.88
Resource® Dessert Fruit	Semi-solid per 100 g	678 kJ (160 kcal)	5 g cows' milk	2.4 g (sugars 16.4 g)	5 g	1.4 g	Gluten-free Residual lactose	Standard p. 926; also CAPD, haemodialysis.	

Table 3 Specialised formulas

Specialised formulas: Infant and child

Specialised formulas: Infant and child: Amino acid-based formula									
Specialised formulas are suitable for infants from birth unless otherwise indicated.									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alfamino® (Nestle Health Science)	Standard dilution (13.8 %) of powder per 100 mL	291 kJ (69 kcal)	1.8 g protein equivalent (essential and non- essential amino acids)	7.9 g (sugars 2.2 g)	3.4 g	Nil		Severe cows' milk allergy and/or multiple food allergies	SMA Alfamino powder: 400 gram = £23.00
Neocate® Active (Nutricia Ltd)	Standard dilution (21 %) of powder per 300 mL serving (63-g sachet made up to 300 mL with water)	1255 kJ (300 kcal)	8.3 g protein equivalent (essential and non- essential amino acids)	34 g (sugars 3.1 g)	14.5 g	Nil	Milk protein-free	Proven whole protein intolerance, short bowel syndrome, intractable malabsorption, or other gastro- intestinal disorders where an elemental diet is indicated. Nutritional supplement only. Not suitable for child under 1 year.	Neocate Active powder: blackcurrant, unflavoured 945 gram = £66.60
Powder provides: protein equivalent 13.1 g, carbohydrate 54 g, fat 23 g, energy 1992 kJ (475 kcal)/100 g									
Neocate® Advance (Nutricia Ltd)	Standard dilution (25%) of powder per 100 mL	420 kJ (100 kcal)	2.5 g protein equivalent (essential and non- essential amino acids)	14.6 g (sugars 1.3 g)	3.5 g (MCT 35 %)	Nil	Milk protein-free	Proven whole protein intolerance, short bowel syndrome, intractable malabsorption, or other gastro- intestinal disorders where an elemental diet is indicated. Not suitable for child under 1 year	Neocate Advance powder: banana & vanilla 750 gram = £46.35
Powder provides: protein equivalent 10 g, carbohydrate 58.5 g, fat 14 g, energy 1683 kJ (400 kcal)/100 g									

Specialised formulas are suitable for infants from birth unless otherwise indicated.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Neocate [®] LCP (Nutricia Ltd)	Standard dilution (13.8%) of powder per 100 mL	279 kJ (67 kcal)	1.8 g protein equivalent (essential and non-essential amino acids)	7.2 g (sugars 650 mg)	3.4 g	Nil	Milk protein-free	Cows' milk allergy, multiple food protein intolerance, and conditions requiring an elemental diet	Neocate LCP powder: 400 gram = £28.30
Neocate [®] Spoon (Nutricia Ltd)	Standard dilution (38 %) of powder per 97 g serving (37 g sachet diluted with 60 mL water)	733 kJ (175 kcal)	3 g protein equivalent (essential and non-essential amino acids)	24.9 g (sugars 4.6 g)	7 g	Nil	Milk protein-free	Cows' milk allergy, multiple food protein intolerance, and conditions requiring an elemental diet. Not suitable for child under 6 months.	Neocate Spoon powder: 555 gram = £39.30
Powder provides protein equivalent 8.2 g, carbohydrate 67.4 g, fat 18.8 g, energy 1981 kJ (472 kcal)/100 g									
Nutrigen [®] Puramino (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13.6 %) of powder per 100 mL	290 kJ (68 kcal)	1.89 g essential and non-essential amino acids	7.2 g	3.6 g	Nil	Gluten-free Lactose-free	For use in the management of severe protein intolerance, multiple food intolerance and other gastro-intestinal disorders where an amino acid based diet is specifically indicated for infants and young children.	Nutrigen PurAmino powder: 400 gram = £27.09
Powder provides; protein 13.9 g, carbohydrate 53 g, fat 26 g, energy 2100 kJ (500 kcal)/100 g									
Specialised formulas: infant and child: Hydrolysate formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Althera [®] (Nestle Health Science)	Standard dilution (13.2%) of powder per 100 mL	280 kJ (67 kcal)	1.7 g whey hydrolysed	7.3 g (sugars 4 g)	3.4 g	Nil	Contains lactose	Complete nutritional support from birth to 3 years or supplementary feeding from 6 months to 3 years, in cow's milk protein allergy or multiple food protein allergies	Althera can: 450 g = £10.68
Powder provides; protein 12.5 g, carbohydrate 55.5 g, fat 26 g, energy 2117 kJ (506 kcal)/100 g									
Aptamil Pepti [®] 1 (Allergy) (Milkupa Ltd)	Standard dilution (13.6 %) of powder per 100 mL	280 kJ (67 kcal)	1.6 g whey hydrolysed	7.1 g (sugars 3.5 g)	3.5 g	0.6 g	Contains lactose and fish oil	Established cows' milk protein intolerance, with or without secondary lactose intolerance	Milkupa Aptamil Pepti 1 (Allergy) powder: 400 gram = £9.74; 800 gram = £19.48
Formerly Aptamil Pepti [®] Powder provides: protein 11.6 g, carbohydrate 52 g, fat 25.6 g, energy 2025 kJ (484 kcal)/100 g									
Aptamil Pepti [®] 2 (Allergy) (Milkupa Ltd)	Standard dilution (14.3 %) of powder per 100 mL	285 kJ (68 kcal)	1.6 g	8 g (sugars 3.6 g)	3.1 g	0.6 g	Contains lactose and fish oil	Established cows' milk protein allergy or intolerance. Not suitable for child under 6 months.	Milkupa Aptamil Pepti 2 (Allergy) powder: 400 gram = £9.29; 800 gram = £18.58
Powder provides; protein 11.2 g, carbohydrate 56.1 g, fat 21.8 g, energy 1985 kJ (473 kcal)/100 g									

Cow & Gate Pepti-Junior® (Cow & Gate Ltd)	Standard dilution (12.8 % of powder per 100 mL	275 kJ (66 kcal)	1.8 g whey hydrolysed	6.8 g (sugars 1.1 g)	3.5 g	Nil	Residual lactose Contains fish oil	Disaccharide and/or whole protein intolerance, or where amino acids and peptides are indicated in conjunction with medium chain triglycerides.	Pepti-Junior powder: 450 gram = £13.06
Powder provides: protein 14 g, carbohydrate 53.4 g, fat 27.3 g, energy 2155 kJ (515 kcal)/100 g									
Infatrin® Peptisorb (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	2.6 g whey protein hydrolysed	10.3 g (sugars 2.7 g)	5.4 g (MCT 50%)	Nil	Gluten-free Residual lactose Contains fish oil	Disease-related malnutrition, intractable malabsorption, proven inflammatory bowel disease, short bowel syndrome, bowel fistula, and intolerance to whole protein feeds in child from birth to 18 months or body-weight up to 9 kg	Infatrin Peptisorb liquid: 200 ml = £3.47
Nutrarenim 1 with LGG® (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13.5 % of powder per 100 mL	280 kJ (68 kcal)	1.9 g casein hydrolysed	7.5 g	3.4 g	Nil	Gluten-free Lactose-free	For the dietary management of cow's milk allergy with / or without lactose intolerance	Nutrarenim 1 with LGG powder: 400 gram = £10.87
Powder provides: protein 14 g, carbohydrate 55 g, fat 25 g, energy 2100 kJ (500 kcal)/100 g									
Nutrarenim 2 with LGG® (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (14.1 % of powder per 100 mL	285 kJ (68 kcal)	1.7 g casein hydrolysed	8.8 g	2.8 g	Nil	Gluten-free Lactose-free	For the dietary management of cow's milk allergy with / or without lactose intolerance	Nutrarenim 2 with LGG powder: 400 gram = £10.99
Powder provides: protein 12 g, carbohydrate 62 g, fat 20 g, energy 2000 kJ (480 kcal)/100 g									
Pepdite® (Nutricia Ltd)	Standard dilution (15 % of powder per 100 mL	297 kJ (71 kcal)	2.1 g protein (non-milk hydrolysate)	7.8 g (sugars 700 mg)	3.5 g	Nil	Lactose-free Contains meat (pork) and soya derivatives	Disaccharide and/or whole protein intolerance	Pepdite powder: 400 gram = £18.78
Powder provides: protein equivalent 13.8 g, carbohydrate 52 g, fat 23.2 g, energy 1977 kJ (472 kcal)/100 g									
Pepdite® 1+ (Nutricia Ltd)	Standard dilution (22.8 % of powder per 100 mL	423 kJ (100 kcal)	3.1 g protein equivalent (non-milk hydrolysate essential amino acids)	13 g (sugars 1.2 g)	3.9 g (MCT 35 %)	Nil	Lactose-free Contains meat (pork) and soya derivatives	Disaccharide and/or whole protein intolerance, or where amino acids or peptides are indicated in conjunction with medium chain triglycerides. Not suitable for child under 1 year.	Pepdite 1+ powder: 400 gram = £19.71
Powder provides: protein equivalent 13.8 g, carbohydrate 57 g, fat 17.3 g, energy 1844 kJ (439 kcal)/100 g									
Pregestimil® Lipil (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13.5 % of powder per 100 mL	280 kJ (68 kcal)	1.89 g casein hydrolysed	6.5 g	3.8 g (MCT 54 %)	Nil	Gluten-free Lactose-free	Disaccharide and/or whole protein intolerance, or where amino acids or peptides are indicated in conjunction with medium chain triglycerides.	Pregestimil Lipil powder: 400 gram = £12.19
Powder provides: protein 14 g, carbohydrate 51 g, fat 28 g, energy 2100 kJ (500 kcal)/100 g									
Similac® Alimentum (Abbott Laboratories Ltd)	Standard dilution (14 % of powder per 100 mL	283 kJ (676 kcal)	1.86 g casein hydrolysed	6.62 (sugars 1.5 g)	3.75 g (MCT 33%)	Nil	Gluten-free Lactose-free Contains meat derivatives	Cows' milk protein allergy and other conditions where an extensively hydrolysed formula is indicated.	Similac Alimentum powder: 400 gram = £9.10
Powder provides: protein equivalent 14.4 g, carbohydrate 51.4 g, fat 29.1 g, energy 2196 kJ (525 kcal)/100 g									

Specialised formulas: Infant and child: Residual lactose formula							
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics
Enfamil® O-Lac (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13%) of powder per 100 mL	280 kJ (68 kcal)	1.42 g cows' milk	7.2 g	3.7 g	Nil	Gluten-free Residual lactose
Powder provides: protein 10.9 g, carbohydrate 55 g, fat 28 g, energy 2200 kJ (524 kcal)/100 g							
Galactomin 17® (Nutricia Ltd)	Standard dilution (13.6%) of powder per 100 mL	295 kJ (70 kcal)	1.7 g protein equivalent (cows' milk)	7.5 g (sugars 1.4 g)	3.7 g	Nil	Residual lactose
Powder provides: protein equivalent 12.3 g, carbohydrate 55.3 g, fat 27.2 g, energy 2155 kJ (515 kcal)/100 g							
SMA® LF (SMA Nutrition)	Standard dilution (13 %) of powder per 100 mL	281 kJ (67 kcal)	1.5 g casein whey	7.2 g (sugars 2.6 g)	3.6 g	Nil	Residual lactose
Powder provides: protein 12 g, carbohydrate 55.6 g, fat 28 g, energy 2185 kJ (522 kcal)/100 g							
Specialised formulas: Infant and child: MCT-enhanced formula							
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics
Lipistart® (Vitalfo International Ltd)	Standard dilution (15%) of powder per 100 mL	282 kJ (68 kcal)	2.1 g protein equivalent (whey soya)	8.3 g (sugars 700 mg)	3.1 g (MCT 81%)	Nil	Residual lactose
Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g							
MCT Peptite® (Nutricia Ltd)	Standard dilution (15 %) of powder per 100 mL	286 kJ (68 kcal)	2 g protein equivalent (non-milk peptides essential amino acids)	8.8 g (sugars 1.2 g)	2.7 g (MCT 75 %)	Nil	Gluten-free Lactose-free Contains meat (pork) and soya derivatives
Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g							
MCT Peptite® +1 (Nutricia Ltd)	Standard dilution (20 %) of powder per 100 mL	381 kJ (91 kcal)	2.8 g protein equivalent (non-milk peptides essential amino acids)	11.8 g (sugars 1.6 g)	3.6 g (MCT 75 %)	Nil	Gluten-free Lactose-free Contains meat (pork) and soya derivatives
Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g							
Specialised formulas: Infant and child: Residual lactose formula							
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics
Enfamil® O-Lac (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13%) of powder per 100 mL	280 kJ (68 kcal)	1.42 g cows' milk	7.2 g	3.7 g	Nil	Gluten-free Residual lactose

MCT Peptite® (Nutricia Ltd)	Standard dilution (15 %) of powder per 100 mL	286 kJ (68 kcal)	2 g protein equivalent (non-milk peptides essential amino acids)	8.8 g (sugars 1.2 g)	2.7 g (MCT 75 %)	Nil	Gluten-free Lactose-free Contains meat (pork) and soya derivatives
Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g							
MCT Peptite® +1 (Nutricia Ltd)	Standard dilution (20 %) of powder per 100 mL	381 kJ (91 kcal)	2.8 g protein equivalent (non-milk peptides essential amino acids)	11.8 g (sugars 1.6 g)	3.6 g (MCT 75 %)	Nil	Gluten-free Lactose-free Contains meat (pork) and soya derivatives
Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g							

Specialised formulas: Infant and child: Residual lactose formula

Product: Enfamil® O-Lac (Mead Johnson Nutrition (UK) Ltd)
Formulation: Standard dilution (13%) of powder per 100 mL
Energy: 280 kJ (68 kcal)
Protein: 1.42 g cows' milk
Carbohydrate: 7.2 g
Fat: 3.7 g
Fibre: Nil
Special Characteristics: Gluten-free
Residual lactose
Presentation & Flavour: Enfamil O-Lac powder: 400 gram = £4.98

Powder provides: protein 10.9 g, carbohydrate 55 g, fat 28 g, energy 2200 kJ (524 kcal)/100 g
Product: Galactomin 17® (Nutricia Ltd)
Formulation: Standard dilution (13.6%) of powder per 100 mL
Energy: 295 kJ (70 kcal)
Protein: 1.7 g protein equivalent (cows' milk)
Carbohydrate: 7.5 g (sugars 1.4 g)
Fat: 3.7 g
Fibre: Nil
Special Characteristics: Residual lactose
Presentation & Flavour: Galactomin 17 powder: 400 gram = £16.80

Powder provides: protein equivalent 12.3 g, carbohydrate 55.3 g, fat 27.2 g, energy 2155 kJ (515 kcal)/100 g
Product: SMA® LF (SMA Nutrition)
Formulation: Standard dilution (13 %) of powder per 100 mL
Energy: 281 kJ (67 kcal)
Protein: 1.5 g casein whey
Carbohydrate: 7.2 g (sugars 2.6 g)
Fat: 3.6 g
Fibre: Nil
Special Characteristics: Residual lactose
Presentation & Flavour: SMA LF powder: 430 gram = £5.34

Powder provides: protein 12 g, carbohydrate 55.6 g, fat 28 g, energy 2185 kJ (522 kcal)/100 g
Specialised formulas: Infant and child: MCT-enhanced formula

Product: Lipistart® (Vitalfo International Ltd)
Formulation: Standard dilution (15%) of powder per 100 mL
Energy: 282 kJ (68 kcal)
Protein: 2.1 g protein equivalent (whey soya)
Carbohydrate: 8.3 g (sugars 700 mg)
Fat: 3.1 g (MCT 81%)
Fibre: Nil
Special Characteristics: Residual lactose
Presentation & Flavour: Lipistart powder: 400 gram = £19.37

Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g
Product: MCT Peptite® (Nutricia Ltd)
Formulation: Standard dilution (15 %) of powder per 100 mL
Energy: 286 kJ (68 kcal)
Protein: 2 g protein equivalent (non-milk peptides essential amino acids)
Carbohydrate: 8.8 g (sugars 1.2 g)
Fat: 2.7 g (MCT 75 %)
Fibre: Nil
Special Characteristics: Gluten-free
Lactose-free
Contains meat (pork) and soya derivatives
Presentation & Flavour: MCT Peptite powder: 400 gram = £20.43

Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g
Product: MCT Peptite® +1 (Nutricia Ltd)
Formulation: Standard dilution (20 %) of powder per 100 mL
Energy: 381 kJ (91 kcal)
Protein: 2.8 g protein equivalent (non-milk peptides essential amino acids)
Carbohydrate: 11.8 g (sugars 1.6 g)
Fat: 3.6 g (MCT 75 %)
Fibre: Nil
Special Characteristics: Gluten-free
Lactose-free
Contains meat (pork) and soya derivatives
Presentation & Flavour: MCT Peptite 1+ powder: 400 gram = £20.43

Powder provides: protein equivalent 13.8 g, carbohydrate 59 g, fat 18 g, energy 1903 kJ (453 kcal)/100 g

Monogen® (Nutricia Ltd)	Standard dilution (17.5%) of powder per 100 mL	310 kJ (74 kcal)	2.2 g protein (whey)	12 g (sugars 1.2 g)	1.9 g (MCT 80 %)	Nil	Residual lactose Supplementation with essential fatty acids may be needed	Long-chain acyl-CoA dehydrogenase deficiency (LCAD), carnitine palmitoyl transferase deficiency (CPD), primary and secondary lipoprotein lipase deficiency, chylothorax, and lymphangiectasia	Monogen powder: 400 gram = £20.31
Powder provides: protein equivalent 12.5 g, carbohydrate 68 g, fat 11 g, energy 1769 kJ (420 kcal)/100 g									
Specialised formulas: Infant and child: Soya-based formula									
Wysof® (SMA Nutrition)	Standard dilution (13.2%) of powder per 100 mL	280 kJ (67 kcal)	1.8 g soya protein isolate	6.9 g (sugars 2.5 g)	3.6 g	Nil	Lactose-free	Proven lactose and associated sucrose intolerance in pre-school children, galactokinase deficiency, galactosaemia, and proven whole cows' milk sensitivity.	SMA Wysof powder: 860 gram = £9.91
Powder provides: protein 14 g, carbohydrate 54 g, fat 27 g, energy 2155 kJ (515 kcal)/100 g									
Specialised formulas: Infant and child: Low calcium formula									
Locaso® (Nutricia Ltd)	Standard dilution (13.1%) of powder per 100 mL	278 kJ (66 kcal)	1.9 g cows' milk	7 g (sugars 6.9 g)	3.4 g	Nil	Contains lactose Calcium less than 7 mg/100 mL No added vitamin D	ACBS Indications Conditions of calcium intolerance requiring restriction of calcium and vitamin D intake	Locaso! powder: 400 gram = 23.36
Powder provides: protein 14.6 g, carbohydrate 53.7 g, fat 26.1 g, energy 2125 kJ (508 kcal)/100 g									
Specialised formulas: Infant and child: Fructose-based formula									
Galactomin 19® (Nutricia Ltd)	Standard dilution (12.9%) of powder per 100 mL	288 kJ (69 kcal)	1.9 g protein equivalent (cows' milk)	6.4 g (fructose 6.3 g)	4 g	Nil	Residual lactose galactose and glucose	ACBS Indications Conditions of glucose plus galactose intolerance	Galactomin 19 powder: 400 gram = £44.23
Powder provides: protein equivalent 14.6 g, carbohydrate 49.7 g, fat 30.8 g, energy 2233 kJ (534 kcal)/100 g									
Specialised formulas: Infant and child: Pre-thickened infant feeds									
Not to be used for a period of more than 6 months; not to be used in conjunction with any other feed thickener or antacid products.									
Enfamil® AR (Mead Johnson Nutrition (UK) Ltd)	Standard dilution (13.5%) of powder per 100 mL	285 kJ (68 kcal)	1.7 g cows' milk	7.6 g (lactose 4.6 g)	3.5 g	Nil	Contains lactose pregelatinised rice starch	ACBS Indications Significant gastro-oesophageal reflux	Enfamil AR powder: 400 gram = £3.73
Powder provides: protein 12.5 g, carbohydrate 56 g, fat 26 g, energy 2093 kJ (500 kcal)/100 g									
SMA® Staydown (SMA Nutrition)	Standard dilution (12.9%) of powder per 100 mL	279 kJ (67 kcal)	1.6 g casein whey	7 g (lactose 5 g)	3.6 g	Nil	Contains lactose pre-cooked corn starch	Significant gastro-oesophageal reflux	SMA Staydown powder: 900 gram = £7.80
Powder provides: protein 12.4 g, carbohydrate 54.3 g, fat 28 g, energy 2166 kJ (518 kcal)/100 g									

Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alcalim® (Nutricia Ltd)	Standard dilution (30%) of powder per 100 mL	567 kJ (135 kcal)	4.5 g caseinate whey	17.4 g (sugars 3.2 g)	5.3 g	Nil	Residual lactose	Crohn's disease Not suitable for child under 1 year; use as nutritional supplement only in children 1–6 years.	Alcalim oral powder: 400 gram = £21.49
Powder provides: protein 15 g, carbohydrate 58 g, fat 17.5 g, energy 1889 kJ (450 kcal)/100 g									
Forticare® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	675 kJ (160 kcal)	9 g cows' milk	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with lung cancer undergoing chemotherapy, or with pancreatic cancer Not suitable in child under 3 years	Forticare liquid: cappuccino, orange & lemon, peach & ginger: 500 ml = £8.92
Heparon® Junior (Nutricia Ltd)	Standard dilution (18%) of powder per 100 mL	363 kJ (86 kcal)	2 g cows' milk	11.6 g (sugars 2.9 g)	3.6 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 0.56 mmol K ⁺ 1.9 mmol Ca ²⁺ 2.3 mmol P ⁻ 1.6 mmol	Enteral feed or nutritional supplement for children with acute or chronic liver failure	Heparon Junior powder: 400 gram = £21.65
Powder provides: protein 11.1 g, carbohydrate 64.2 g, fat 19.9 g, energy 2016 kJ (480 kcal)/100 g									
KetoCal® (Nutricia Ltd)	Standard dilution (20 %) of powder per 100 mL	602 kJ (146 kcal)	3.1 g cows' milk with additional amino acids	600 mg (sugars 120 mg)	14.6 g (LCT 100 %)	Nil	Electrolytes/100 mL: Na ⁺ 4.3 mmol K ⁺ 4.1 mmol Ca ²⁺ 2.15 mmol P ⁻ 2.77 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of epilepsy resistant to drug therapy, in children over 1 year, only on the advice of secondary care physician with experience of ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £30.48
Powder provides: protein 15.25 g, carbohydrate 3 g, fat 73 g, energy 3011 kJ (730 kcal)/100 g									
KetoCal® 3:1 (Nutricia Ltd)	Standard dilution (9.5%) of powder per 100 mL	276 kJ (66 kcal)	1.5 g	680 mg (sugars 570 mg)	6.4 g	Nil	Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 2.4 mmol Ca ²⁺ 2 mmol P ⁻ 1.7 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children from birth to 6 years; as a nutritional supplement in children over 6 years.	KetoCal 3:1 powder: 300 gram = £29.50
Powder provides: protein 15.3 g, carbohydrate 7.2 g, fat 67.7 g, energy 2927 kJ (699 kcal)/100 g									
KetoCal® 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.09 g casein and whey with additional amino acids	610 mg (sugars 230 mg)	14.8 g (LCT 100 %)	1.12 g	Residual lactose Electrolytes/100 mL: Na ⁺ 4.9 mmol K ⁺ 4.7 mmol Ca ²⁺ 2.4 mmol P ⁻ 3.1 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children 1–10 years; as a nutritional supplement in children over 10 years.	KetoCal 4:1 LQ liquid: unflavoured, vanilla 200 ml = £4.35

Kindergen® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	421 kJ (101 kcal)	1.5 g whey protein	11.8 g (sugars 1.2 g)	5.3 g (LCT 93%)	Nil	Electrolytes/100 mL: Na ⁺ 2 mmol K ⁺ 0.6 mmol Ca ²⁺ 2.8 mmol P ⁺ 3 mmol Low Vitamin A	Enteral feed or nutritional supplement for children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £29.06
Powder provides: protein 7.5 g, carbohydrate 59 g, fat 26.3 g, energy 2104 kJ (504 kcal)/100 g									
Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished (provided)	Modulen IBD powder: 400 gram = £15.06 (8.3 g measuring scoop provided)
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g									
Nepro® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	838 kJ (200 kcal)	7 g cows' milk	20.6 g (sugars 3.26 g)	9.6 g	1.56 g	Gluten-free Residual lactose Electrolytes/100 mL: Na ⁺ 3.67 mmol K ⁺ 2.72 mmol Ca ²⁺ 3.43 mmol P ⁺ 2.23 mmol	Enteral feed or nutritional supplement in patients with chronic renal failure who are on haemodialysis or CAPD, or with cirrhosis, or other conditions requiring a high energy, low fluid, low electrolyte diet. Not suitable for child under 1 year; use with caution in child 1–5 years.	Nepro HP liquids: strawberry 220 mL = £2.98 vanilla 220 mL = £2.98 500 mL = £6.80
ProSure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	536 kJ (127 kcal)	6.65 g cows' milk	18.3 g (sugars 2.95 g)	2.56 g	2.07 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement for patients with pancreatic cancer. Not suitable for child under 1 year; use with caution in child 1–4 years.	ProSure liquid: 240 mL = £3.34
Renamil® (Stanningley Pharma Ltd)	Powder (sip or tube feed when reconstituted) per 100 g	2003 kJ (477 kcal)	4.6 g cows' milk	70.8 g	19.3 g	Nil	Contains lactose Gluten-free Electrolytes/100 g: Na ⁺ 1.04 mmol K ⁺ 0.13 mmol Ca ²⁺ 10.22 mmol P ⁺ 1.06 mmol Contains no vitamin A or vitamin D	Enteral feed or nutritional supplement for adults and children over 1 year with chronic renal failure.	Renamil powder: 1000 gram = £25.40
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1580 kJ (372 kcal)	90 g whey protein	0.8 g	1 g	Nil	Gluten-free Residual lactose Electrolytes/100 g: Na ⁺ 23 mmol K ⁺ 2 mmol Ca ²⁺ 4.99 mmol P ⁺ 4.84 mmol	Nutritional supplement for biochemically proven hypoproteinaemia and patients undergoing dialysis. Not suitable for child under 1 year.	Renapro powder: 600 gram = £69.60
Powder provides: protein 18 g, energy 316 kJ (74 kcal)/20 g sachet									
Renastart® (Vitalfo International Ltd)	Standard dilution (20%) of powder per 100 mL	414 kJ (99 kcal)	1.5 g cows' milk soya	12.5 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 2.1 mmol K ⁺ 0.6 mmol Ca ²⁺ 0.6 mmol P ⁺ 0.6 mmol	Dietary management of renal failure in child from birth to 10 years.	Renastart powder: 400 gram = £26.37
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 23.8 g, energy 2071 kJ (494 kcal)/100 g									

Table 4 Feed supplements
High-energy supplements

High-energy supplements: carbohydrate							
Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.							
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics
Caloreen® (Nestle Health Science)	Powder per 100 g	1640 kJ (390 kcal)	Nil	96 g Maltodextrin	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Not suitable for child under 3 years.
Maxijul® Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g Glucose polymer (sugars 8.6 g)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.
Polycal® (Nutricia Ltd)	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g Maltodextrin (sugars 12.2 g)	Nil		Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.
	Powder per 100 g	1630 kJ (384 kcal)	Nil	96 g Maltodextrin (sugars 6 g)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.
S.O.S.® (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil		For use as an emergency regimen in the dietary management of inborn errors of metabolism in adults and children from birth. S.O.S.: 15 oral powder: 31g sachets 30 sachet =£10.79; S.O.S. 10 oral powder 21g sachets 30 sachet = £7.31; S.O.S. 20 oral powder 42g sachets 30 sachet = £14.62; S.O.S. 25 oral powder 52g sachets 30 sachet =£18.09
Contents of each sachet should be reconstituted with water to a total volume of 200 mL							
VitaJoule® (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g Dried glucose syrup (sugars 9 g)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.
							VitaJoule powder: 500 gram = £4.38

High-energy supplements: fat

Liquid supplements should be diluted before use in child under 5 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g	50 g (LCT 100 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Liquid supplements should be diluted before use in child under 5 years.	Calogen emulsion: banana 500 ml = £10.72 neutral, strawberry 200 ml = £4.36 500 ml = £10.72
Fresubin® 5 kcal Shot (Fresenius Kabi Ltd)	Liquid (emulsion) per 100 mL	2100 kJ (500 kcal)	Nil	4.0 g (sucrose)	53.8 g	0.4 g	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Liquid supplements should be diluted before use in child under 5 years. Not suitable for child under 3 years.	Fresubin 5kcal shot drink neutral: 480 ml = £11.20
Liquigen® (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	Nil	50 g (MCT 97 %) Fractionated coconut oil	Nil	Gluten-free Lactose-free	Steatorrhea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in epilepsy, and in type 1 lipoproteinaemia	Liquigen emulsion: 250 ml = £9.26
Medium-chain Triglyceride (MCT) Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	MCT 100 %	Nil		Nutritional supplement for steatorrhea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease and liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia	MCT oil: 500 ml = £14.68
FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 35 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Duocal® Super Soluble powder: 400 gram = £18.09
Energivit® (Nutricia Ltd)	Standard dilution (15%) of powder per 100 mL	309 kJ (74 kcal)	Nil	10 g (sugars 900 mg)	3.75 g	Nil	Lactose-free With vitamins minerals and trace elements	For children requiring additional energy, vitamins, minerals, and trace elements following a protein-restricted diet	Energivit powder: 400 gram = £21.99

High-energy supplements: protein

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® Jelly (Nutrinovo Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein hydrolysate whey protein isolate	Less than 1 g	Nil	Less than 1 g	Gluten-free Lactose-free Contains porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource jelly: fruit punch, orange 118 mL = £1.80
Protifar® (Nutricia Ltd)	Powder per 100 g	1580 kJ (373 kcal)	88.5 g cows' milk	less than 1.5 g	1.6 g	Nil	Gluten-free Residual lactose Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 1.28 mmol Ca ²⁺ 33.75 mmol P ⁻ 22.58 mmol	Nutritional supplement for use in biochemically proven hypoproteinaemia.	Protifar powder: 225 gram = £8.69
Powder provides: protein 2.2 g per 2.5 g scoopful									
PROTEIN AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (essential and non- essential amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Contains vitamin C	Hypoproteinaemia, chronic renal failure, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake, and haemodialysis. Not suitable for child under 6 months.	Dialamine powder: 400 gram = £73.46
Powder provides: protein equivalent 2.5 g, carbohydrate 65 g, vitamin C 125 mg, energy 1530 kJ (360 kcal)/100 g									
ProSource® Liquid (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	10 g collagen protein isolate	15 g (sugars 8 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Biochemically proven hypoproteinaemia Not recommended for child under 3 years.	ProSource liquid 30mL sachets: citrus berry, lemon, orange creme, original 100 sachet = £97.23
ProSource® Plus (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	15 g collagen protein isolate	11 g (sugars 10 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource Plus liquid sachet: 100 x 30 mL = £140.53 unflavoured

PROTEIN, FAT, AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® Extra (Nutricia Ltd)	Liquid per 100 mL	1650 kJ (400 kcal)	5 g cows' milk	4.5 g (sugars 3.5 g)	40.3 g	Nil	Gluten-free Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra emulsion: neutral, strawberry 200 ml = £4.98
Calogen® Extra Shots (Nutricia Ltd)	Liquid per 100 mL	1650 kJ (400 kcal)	5 g cows' milk	4.5 g (sugars 3.5 g)	40.3 g	Nil	Gluten-free Residual lactose With vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £5.75
Calshake® (Fresenius kabi Ltd)	Powder per 87 g	1841 kJ (439 kcal)	4.1 g cows' milk	56.4 g (sugars 20 g)	22 g	Nil	Contains lactose Gluten-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year.	Calshake powder: chocolate 630 gram = £16.73 banana, neutral, strawberry, vanilla 609 gram = £16.73
Powder: one sachet reconstituted with 240 mL whole milk provides approx. 2 kcal/ml & protein 1.2 g									
Enshake® (Abbott Laboratories Ltd)	Powder per 100 g	1893 kJ (450 kcal)	8.4 g cows' milk soy protein isolate	69 g (sugars 14.5 g)	15.6 g	Nil	Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year; use with caution in child 1-6 years.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £12.93
Powder: 96.5 g reconstituted with 240 mL whole milk provides approx. 2 kcal/ml & protein 1.6 g									
MCT Procal® (Vitafo International Ltd)	Powder per 100 g	2742 kJ (657 kcal)	12.5 g cows' milk	20.6 g (sugars 3.1 g)	63.1 g (MCT 99%)	Nil	Contains lactose	Dietary management of disorders of long-chain fatty acid oxidation, fat malabsorption, and other disorders requiring a low LCT, high MCT supplement. Not suitable for child under 1 year.	MCT procal oral powder 16g sachets: 30 sachet = £23.76
Powder 16 g provides: protein 2 g, carbohydrate 3.3 g, fat 10.1 g, energy 439 kJ (105 kcal)									

PROTEIN, FAT, AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Pro-Cal® (Vitalfo International Ltd)	Powder per 100 g	2787 kJ (667 kcal)	13.6 g cows' milk	28.2 g (sugars 16 g)	55.5 g	Nil	Contains lactose Gluten-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year; use with caution in child 1-5 years.	Pro-Cal powder: 375 gram = £15.83; 510 gram = £14.67; 1500 gram = £29.88; 3000 gram = £70.54; 12500 gram = £212.37
Powder 15 g provides: protein 2 g, carbohydrate 4.2 g, fat 8.3 g, energy 418 kJ (100 kcal)									
Pro-Cal® Shot (Vitalfo International Ltd)	Liquid per 100 mL	1385 kJ (334 kcal)	6.7 g cows' milk	13.4 g (sugars 13.3 g)	28.2 g	Nil	Contains lactose Gluten-free Contains soya	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years.	Pro-Cal: shot starter pack 360 ml = £7.23; neutral, shot strawberry 120 ml 720 ml = £14.44 banana 720 ml = £14.44
Scandishake® Mix (Nutricia Ltd)	Powder per 100 g	2099 kJ (500 kcal)	4.7 g cows' milk	65 g (sugars 14.3 g)	24.7 g	Nil	Gluten-free Contains lactose	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years.	Scandishake Mix oral powder 85g sachets: banana, caramel, chocolate, strawberry, unflavoured, vanilla 6 sachet = £14.70
Powder: 85 g reconstituted with 240 mL whole milk provides: protein 11.7 g, carbohydrate 66.8 g, fat 30.4 g, energy 2457 kJ (588 kcal)									
Vitasavour® (Flavour Not Specified)	Powder per 100 g	2562 kJ (619 kcal)	12 g cows' milk	22.5 g (sugars 1.4 g)	52 g	6.4 g	Contains lactose Contains soya (chicken flavour)	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years.	Vitasavour powder: chicken, golden vegetable, leek & potato, mushroom 500 g = £18.97 Vitasavour powder starter pack: 400g = £15.18

Fibre, vitamin, and mineral supplements									
High-fibre supplements									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Resource® Optifibre® (Nestle Health Science)	Powder per 100 g	323 kJ (76kcal)	Nil	19 g guar gum partially hydrolysed	Nil	78 g	Gluten-free Lactose-free	Standard p. 926 except dysphagia Not suitable for child under 5 years	Resource Optifibre powder: 80 gram = £4.18; 250 gram = £10.28
Vitamin and Mineral supplements									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
FruitVits® (Vitaflo International Ltd)	Powder per 100 g	133 kJ (33 kcal)	Nil	8.3 g (sugars 400 mg)	0.1 g	3.3 g		Vitamin, mineral, and trace element supplement in children 3–10 years with restrictive therapeutic diets	Sachets: 30 x 6 g = £64.23
Paediatric Seravit® (Nutricia Ltd)	Powder per 100 g	1275 kJ (300 kcal)	Nil	75 g (sugars 6.75 g)	Nil	Nil	Pineapple flavour. Not suitable for child under 6 months	Vitamin, mineral, and trace element supplement in infants and children with restrictive therapeutic diets.	Seravit Paediatric powder: pineapple 200 gram = £19.08 unflavoured 200 gram = £17.91

Feed additives

Special additives for conditions of intolerance

Colief®

- ▶ For the relief of symptoms associated with lactose intolerance in infants, provided that lactose intolerance is confirmed by the presence of reducing substances and/or excessive acid in stools, a low concentration of the corresponding disaccharide enzyme on intestinal biopsy or by breath hydrogen test or lactose intolerance test. For dosage and administration details, consult product literature.

LIQUID, lactase 50 000 units/g

Colief 50,000units/g infant drops (Forum Health Products Ltd)

7 ml (ACBS) · NHS indicative price = £8.40

Fructose

- ▶ (Laevulose) For proven glucose/galactose intolerance

Glucose

- ▶ (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

VSL#3®

- ▶ Nutritional supplement for use under the supervision of a physician, for the maintenance of remission of ileoanal pouchitis induced by antibacterials in adults. For dosage and administration details, consult product literature.

POWDER, containing 8 strains of live, freeze-dried, lactic acid bacteria. Contains traces of soya, gluten, and lactose.

VSL#3 Probiotic Food Supplement oral powder 4.4g sachets (Ferring Pharmaceuticals Ltd)

10 sachet (ACBS) · NHS indicative price = £14.64 | 30 sachet

(ACBS) · NHS indicative price = £41.66

Feed thickeners and pre-thickened drinks

Carobel, Instant®

- ▶ For thickening feeds in the treatment of vomiting.

POWDER, carob seed flour.

Instant Carobel powder (Cow & Gate Ltd)

135 gram (ACBS) · NHS indicative price = £2.80

Multi-thick®

- ▶ For thickening of liquids and foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.

POWDER, modified maize starch, gluten- and lactose-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

Nutilis® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, maltodextrin, xanthan gum, guar gum, gluten- and lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

Nutilis® Powder

- ▶ For thickening of foods in dysphagia. Not suitable for child under 3 years.

POWDER, carbohydrate 86 g, energy 1520 kJ (358 kcal)/100 g, modified maize starch, gluten- and lactose-free.

Nutilis powder (Nutricia Ltd)

240 gram (ACBS) · NHS indicative price = £6.40 | 300 gram (ACBS) · NHS indicative price = £5.01

Resource® ThickenUp Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, maltodextrin, xanthum gum, gluten- and lactose-free.

Resource ThickenUp Clear powder (Nestle Health Science)

28.8 gram (ACBS) · NHS indicative price = £5.28 | 125 gram (ACBS) · NHS indicative price = £8.46

Resource® ThickenUp®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.

POWDER, modified maize starch. Gluten- and lactose-free.

Resource ThickenUp powder (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.55 | 337.5 gram

(ACBS) · NHS indicative price = £17.44

Resource® Thickened Drink

- ▶ For dysphagia. Not suitable for children under 1 year.

LIQUID, carbohydrate 22 g, energy: orange 382 kJ (90 kcal); apple 376 kJ (89 kcal)/100 mL. Gluten- and lactose-free.

Resource Thickened Drink (Nestle Health Science)

apple, orange 114 ml (ACBS) · NHS indicative price = £0.73

Resource Thickened Drink syrup (Nestle Health Science)

apple, orange 114 ml (ACBS) · NHS indicative price = £0.73

SLO Drinks®

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink 1 oral powder (SLO Drinks Ltd)

lemon, orange, hot chocolate, white coffee, white tea 25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink 2 oral powder (SLO Drinks Ltd)

hot chocolate, lemon, orange, white tea 25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink 3 oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Milkshakes+®

- ▶ Nutritional supplement in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (2 consistencies available), see product literature.

SLO Milkshake+ 1 oral powder chocolate (SLO Drinks Ltd)

7 x 50 gram (ACBS) · NHS indicative price = £5.88

SLO Milkshake+ 1 oral powder strawberry (SLO Drinks Ltd)

7 x 50 gram (ACBS) · NHS indicative price = £5.88

Nutritional supplements for metabolic diseases

GA1 Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven glutaric aciduria (type 1) in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

Glutaric aciduria (type 1)

GA Gel®

- ▶ Nutritional supplement for dietary management of type 1 glutaric aciduria in children 6 months–10 years. GEL, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 10 g, carbohydrate 10.3 g, fat trace, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements.

GA gel oral powder 24g sachets

(VitaFlo International Ltd)
30 sachet (ACBS) • NHS indicative price = £212.44

XLVS, Low TRY, Maxamaid®

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria.

POWDER, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

XYLYS LOW TRY Maxamaid powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £98.23

XYLYS, TRY Glutaridon®

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria in children and adults; requires additional source of vitamins, minerals, and trace elements.
POWDER, protein equivalent (essential and non-essential amino acids except lysine and tryptophan) 79 g, carbohydrate 4 g, energy 1411 kJ (332 kcal)/100 g.

XYLYS TRY Glutaridon powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £186.08

Glycogen storage disease

Corn flour and corn starch

For glycogen storage disease

Glycosade®

- ▶ A nutritional supplement for use in the dietary management of glycogen storage disease and other metabolic conditions where a constant supply of glucose is essential. Not suitable for use in children under 2 years.

POWDER, protein 200 mg, carbohydrate (maize starch) 47.6 g, fat 100 mg, fibre less than 600 mg, energy 803 kJ (192 kcal)/60 g.

Glycosade oral powder 60g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £111.65

Homocystinuria or hypermethioninaemia

HCU Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

HCU Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £38.91

HCU cooler® 15

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 3 years with homocystinuria.
LIQUID, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

HCU orange cooler 15 liquid (Vitaflo International Ltd)

130 mL (ACBS) • NHS indicative price = £11.21

HCU Express® 15

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria.
POWDER, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements.

HCU express 15 oral powder 25g sachets (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £329.89

HCU Express® 20

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria.
POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 4.7 g, fat 70 mg, energy 416 kJ (99 kcal)/34 g with vitamins, minerals, and trace elements.

HCU express 20 oral powder 34g sachets (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £426.21

HCU gel®

- ▶ A methionine-free protein substitute for use as a nutritional supplement for the dietary management of children 1–10 years with homocystinuria.

POWDER, protein (essential and non-essential amino acids except methionine) 10 g, carbohydrate 10.3 g, fat 20 mg, energy 339 kJ (81 kcal)/24 g with vitamins, minerals, and trace elements.

HCU gel oral powder 24g sachets (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £212.38

HCU Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of homocystinuria in children over 3 years.
LIQUID, protein equivalent (essential and non-essential amino acids except methionine) 20 g, carbohydrate 8.8 g, fat 440 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

HCU Lophlex LQ 20 liquid (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £16.05

HCU LV®

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or vitamin B6 non-responsive homocystinuria in children over 8 years.
POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 2.5 g, fat 190 mg, energy 390 kJ (92 kcal)/27.8 g sachet, with vitamins, minerals, and trace elements.

HCU-LV oral powder 27.8g sachets (Nutricia Ltd)

tropical, unflavoured 30 sachet (ACBS) • NHS indicative price = £493.20

XMET Homidon®

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children and adults.
POWDER, protein equivalent (essential and non-essential amino acids, except methionine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XMET Homidon powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £186.08

XMET Maxamaid®

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.
Maxamaid products are generally intended for use in children 1–8 years.

XMET Maxamaid powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £98.23

XMET Maxamum®

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.
Maxamum products are generally intended for use in children over 8 years.

XMET Maxamum powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £157.46

Hyperlysinaemia

HYPER LYS Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except lysine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein

equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

HYPER LYS Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £38.91

XLYS Maxamaid®

- ▶ Nutritional supplement for the dietary management of hyperlysinemia.

POWDER, protein equivalent (essential and non-essential amino acids except lysine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g with vitamins, minerals, and trace elements.

XLYS Maxamaid powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £98.23

Isovaleric acidemia

IVA Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven isovaleric acidemia or other proven disorders of leucine metabolism in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except leucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

IVA Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £38.91

XLEU Faladon®

- ▶ Nutritional supplement for the dietary management of isovaleric acidemia.

POWDER, protein equivalent (essential and non-essential amino acids except leucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XLEU Maxamaid®

- ▶ Nutritional supplement for the dietary management of isovaleric acidemia.

POWDER, protein equivalent (essential and non-essential amino acids except leucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g with vitamins, minerals, and trace elements.

XLEU Maxamaid powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £98.23

Maple syrup urine disease

MSUD Aid II®

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

MSUD Aid 111 powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £186.08

MSUD Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

MSUD Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) • NHS indicative price = £38.91

MSUD Anamix® Junior

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 474 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

MSUD Anamix Junior oral powder 36g sachets (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £207.90

MSUD Anamix® Junior LQ

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

MSUD Anamix Junior LQ liquid (Nutricia Ltd)
125 mL (ACBS) • NHS indicative price = £9.02

MSUD cooler® 15

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years and adults.

LIQUID, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

MSUD (Vitalfo International Ltd)
orange cooler 15 liquid, red cooler 15 liquid 130 mL (ACBS) • NHS indicative price = £11.21

MSUD express® 15

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 3.8 g, fat less than 100 mg, energy 315 kJ (75 kcal)/25 g, with vitamins, minerals, and trace elements.

MSUD express 15 oral powder 25g sachets (Vitalfo International Ltd)
30 sachet (ACBS) • NHS indicative price = £329.89

MSUD express® 20

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements.

MSUD express 20 oral powder 34g sachets (Vitalfo International Ltd)
30 sachet (ACBS) • NHS indicative price = £426.21

MSUD Gel®

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements.

MSUD gel 24g sachets (Vitalfo International Ltd)
30 sachet (ACBS) • NHS indicative price = £214.88

MSUD Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years.

LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

MSUD Lophlex LQ 20 liquid (Nutricia Ltd)
125 mL (ACBS) • NHS indicative price = £16.05

MSUD Maxamaid®

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

Maxamaid products are generally intended for use in children 1–8 years.

MSUD Maxamaid powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £98.23

MSUD Maxamum®

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease.

POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.

Maxamum products are generally intended for use in children over 8 years.

orange, unflavoured 500 gram (ACBS) • NHS indicative price = £157.46

Methylmalonic or propionic acidemia**MMA/PA Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven methylmalonic acidemia or propionic acidemia in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

MMA PA Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £38.91

XMTVI Asadon®

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia in children and adults.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XMTVI Asadon powder (Nutricia Ltd)

200 gram (ACBS) • NHS indicative price = £74.43

XMTVI Maxamaid®

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

XMTVI Maxamaid powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £98.23

XMTVI Maxamum®

- ▶ Nutritional supplement for the dietary management of methylmalonic acidemia or propionic acidemia.
- POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.

XMTVI Maxamum powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £157.46

Other inborn errors of metabolism**Cystine500®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 63 kJ (15 kcal)/4 g

DocOmega®

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth.

POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

DocOmega oral powder 4g sachets (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £39.06

EAA® Supplement

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.

POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

EAA Supplement oral powder 12.5g sachets (Vitafo International Ltd)

50 sachet (ACBS) • NHS indicative price = £203.64

Isoleucine50®

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Isoleucine50 oral powder 4g sachets (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £53.97

KeyOmega®

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism.

POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

KeyOmega oral powder 4g sachets (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £39.94

Leucine100®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

Leucine100 oral powder sachets (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £53.97

Low protein drink

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements.

Contains lactose.

Milupa LP drink (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £9.23

Phenylalanine50®

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.

POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Phenylalanine50 oral powder sachets (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £52.40

ProZero®

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.

LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

ProZero liquid (Vitafo International Ltd)

250 ml (ACBS) • NHS indicative price = £1.44 | 1000 ml (ACBS) • NHS indicative price = £5.75

Tyrosine1000®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

Tyrosine1000 oral powder 4g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £4.95

Valine50®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Valine50 oral powder 4g sachets (Vitafo International Ltd)
30 sachet (ACBS) • NHS indicative price = £53.97

Phenylketonuria

Add-Ins®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 4 years.

POWDER, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate nil, fat 5.1 g, energy 359 kJ (86 kcal)/18.2-g sachet, with vitamins, minerals, and trace elements.

Add Ins oral powder 18.2g sachets (Nutricia Ltd)
60 sachet (ACBS) • NHS indicative price = £375.60

Easiphen®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years.

LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

Easiphen liquid (Nutricia Ltd)
250 mL (ACBS) • NHS indicative price = £9.65

L-Tyrosine

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

L-Tyrosine powder (Nutricia Ltd)
100 gram (ACBS) • NHS indicative price = £21.91

Lophlex®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

Lophlex powder 27.8g sachets (Nutricia Ltd)
berry, orange, unflavoured 30 sachet (ACBS) • NHS indicative price = £289.80

Loprofin® PKU Drink

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults.

LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

Loprofin PKU drink (Nutricia Ltd)
200 mL (ACBS) • NHS indicative price = £0.75

Loprofin® SNO-Pro

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 273 kJ (65 kcal)/100 mL. Contains lactose.

Loprofin SNO-PRO drink (Nutricia Ltd)
200 mL (ACBS) • NHS indicative price = £1.25

Phlexy-10® Exchange System

- ▶ Nutritional supplement for the dietary management of phenylketonuria.
- CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

Phlexy-10 500mg capsules (Nutricia Ltd)

200 capsule (ACBS) • NHS indicative price = £42.80

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

Phlexy-10 tablets (Nutricia Ltd)

75 tablet (ACBS) • NHS indicative price = £27.00

DRINK MIX, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

Phlexy-10 drink (Nutricia Ltd)

mix apple & blackcurrant, mix citrus burst, mix tropical surprise 600 gram (ACBS) • NHS indicative price = £128.40

Phlexy-Vits®

- ▶ For use as a vitamin and mineral component of restricted therapeutic diets in children over 11 years and adults with phenylketonuria and similar amino acid abnormalities.

POWDER, vitamins, minerals, and trace elements

Phlexy-Vits (Nutricia Ltd)

powder 210 gram (ACBS) • NHS indicative price = £71.40

TABLETS, vitamins, minerals, and trace elements

Phlexy-Vits (Nutricia Ltd)

tablets 180 tablet (ACBS) • NHS indicative price = £81.00

PK Aid 4®

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children and adults.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 79 g, carbohydrate 4.5 g, fat nil, energy 1420 kJ (334 kcal)/100 g.

PK Aid 4 powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £143.04

PKU Anamix® First Spoon

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children from 6 months to 5 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 5 g, carbohydrate 4.8 g, fat 150 mg, fibre nil, energy 168 kJ (41 kcal)/12.5-g sachet, with vitamins, minerals, and trace elements

PKU Anamix First Spoon oral powder 12.5g sachets (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £91.80

PKU Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

PKU Anamix Infant powder (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £35.36

PKU Anamix® Junior

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.4 g, carbohydrate 9.9 g, fat 3.9 g, energy 455 kJ (108 kcal)/29-g sachet, with vitamins, minerals, and trace elements

PKU Anamix Junior powder (Nutricia Ltd)

chocolate, neutral 870 gram (ACBS) • NHS indicative price = £123.90 | 1080 gram (ACBS) • NHS indicative price = £126.30

PKU Anamix® Junior LQ

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free. Flavours: Berry, orange, or unflavoured, net price 125-mL carton = £5.61

PKU Anamix Junior LQ liquid (Nutricia Ltd)

berry, orange 125 mL (ACBS) • NHS indicative price = £5.51

PKU cooler10®

- Nutritional supplement for the dietary management of phenylketonuria in children over 3 years. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 5.1 g, energy 258 kJ (62 kcal)/87-mL pouch, with vitamins, minerals, and trace elements.

PKU (Vitafo International Ltd)

orange cooler 10 liquid, purple cooler 10 liquid, red cooler 10 liquid, white cooler 10 liquid 87 mL (ACBS) • NHS indicative price = £4.56

PKU cooler15®

- Nutritional supplement for the dietary management of phenylketonuria in children over 3 years. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 7.8 g, energy 386 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

PKU (Vitafo International Ltd)

orange cooler 15 liquid, purple cooler 15 liquid, red cooler 15 liquid, white cooler 15 liquid 130 mL (ACBS) • NHS indicative price = £6.80

PKU cooler20®

- Nutritional supplement for the dietary management of phenylketonuria in children over 3 years. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 10.2 g, energy 517 kJ (124 kcal)/174-mL pouch, with vitamins, minerals, and trace elements.

PKU (Vitafo International Ltd)

orange cooler 20 liquid, purple cooler 20 liquid, red cooler 20 liquid, white cooler 20 liquid 174 mL (ACBS) • NHS indicative price = £9.12

PKU express15®

- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 2.4 g, energy 293 kJ (70 kcal)/25 g, with vitamins, minerals, and trace elements.

PKU express 15 powder (Vitafo International Ltd)

lemon, orange, tropical, unflavoured 750 gram (ACBS) • NHS indicative price = £200.00

PKU express20®

- Nutritional supplement for the dietary management of phenylketonuria. Not recommended for children under 3 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 3.3 g, energy 389 kJ (93 kcal)/34 g, with vitamins, minerals, and trace elements.

PKU express 20 powder (Vitafo International Ltd)

lemon, orange, tropical, unflavoured 1020 gram (ACBS) • NHS indicative price = £258.39

PKU gel®

- For use as part of the low-protein dietary management of phenylketonuria in children 1–10 years POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.9 g, fat less than 100 mg, energy 318 kJ (76 kcal)/24 g, with vitamins, minerals, and trace elements.

PKU gel powder (Vitafo International Ltd)

orange, orange, raspberry, unflavoured 720 gram (ACBS) • NHS indicative price = £138.36

PKU Lophlex® LQ 10

- Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 4.4 g, fibre 250 mg, energy 245 kJ (58 kcal)/62.5 mL, with vitamins, minerals, and trace elements.

PKU Lophlex LQ 10 liquid juicy (Nutricia Ltd)

berries, orange 62.5 mL (ACBS) • NHS indicative price = £5.18

PKU Lophlex® LQ 20

- Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women.

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 8.8 g, fibre 340 mg, energy 490 kJ (115 kcal)/125 mL, with vitamins, minerals, and trace elements.

PKU Lophlex LQ 20 liquid (Nutricia Ltd)

berry, juicy berries, orange 125 mL (ACBS) • NHS indicative price = £10.33

PKU Lophlex® Sensation 20

- Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women.

SEMI-SOLID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 20.2 g, fibre 1 g, energy 706 kJ (166 kcal)/109 g, with vitamins, minerals, and trace elements.

PKU Lophlex Sensation 20 (Nutricia Ltd)

berries, orange 327 gram (ACBS) • NHS indicative price = £33.00

PKU squeeze®

- Nutritional supplement for the dietary management of phenylketonuria in children from 6 months to 10 years. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 22.5 g, fat 500 mg, energy 565 kJ (135 kcal)/85 g, with vitamins, minerals, and trace elements.

PKU squeeze liquid (Vitafo International Ltd)

2550 gram (ACBS) • NHS indicative price = £132.27

XP Maxamaid®

- Nutritional supplement for the dietary management of phenylketonuria in children 1–8 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

XP Maxamaid powder (Nutricia Ltd)

orange, unflavoured 500 gram (ACBS) • NHS indicative price = £58.11

XP Maxamum®

- Nutritional supplement for the dietary management of phenylketonuria in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.

XP Maxamum oral powder 50g sachets (Nutricia Ltd)

orange, unflavoured 30 sachet (ACBS) • NHS indicative price = £269.40

XP Maxamum powder (Nutricia Ltd)

orange, unflavoured 500 gram (ACBS) • NHS indicative price = £89.88

Tyrosinaemia

Methionine-free TYR Anamix® Infant

- Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £38.91

TYR Anamix® Infant

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant (Nutricia Ltd)

methionine free powder, powder 400 gram (ACBS) • NHS indicative price = £38.91

TYR Anamix® Junior

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

TYR Anamix Junior oral powder 29g sachets (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £206.40

TYR Anamix® Junior LQ

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see), type II, and type III, in children over 1 year.

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

TYR Anamix Junior LQ liquid (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £9.02

TYR cooler® 15

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.

LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

TYR orange cooler 15 liquid (VitaFlo International Ltd)

130 mL (ACBS) • NHS indicative price = £11.21

TYR red cooler (VitaFlo International Ltd)

20 liquid 174 mL (ACBS) • NHS indicative price = £14.84

15 liquid 130 mL (ACBS) • NHS indicative price = £11.21

10 liquid 87 mL (ACBS) • NHS indicative price = £7.10

TYR express15®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults.

POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements.

TYR express 15 oral powder 25g sachets (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £329.89

TYR express20®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years.

POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements.

TYR express 20 oral powder 34g sachets (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £426.21

TYR Gel®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years.

GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements.

TYR gel oral powder 24g sachets (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £212.38

TYR Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.

LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

TYR Lophlex LQ 20 liquid (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £16.05

XPHEN TYR Maxamaid®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–8 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

XPHEN TYR Maxamaid powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £98.23

XPHEN TYR Tyrosidon®

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £186.08

XPTM Tyrosidon®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPTM Tyrosidon powder (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £91.31

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. The advice in patient information leaflets may be less appropriate when the medicine is for a child, particularly for unlicensed medicines or indications. Pharmacists should explain discrepancies to carers, if necessary. The patient information leaflet should only be withheld in exceptional circumstances because it contains other information that should be provided. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard.... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the *BNF for Children* these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid

preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquids and for this reason no separate label has been recommended.

The label wordings recommended by the *BNF for Children* apply to medicines dispensed against a prescription. Children and carers should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the *BNF for Children* does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The *BNF for Children* will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For *BNF for Children* 2011–2012, a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–50, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the *BNF for Children* and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label. These appear directly under the English label.

Labels

- Warning: This medicine may make you sleepy**
Rhybudd: Gall y feddyginiath hon eich gwneud yn gysglyd
To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.
- Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol**
Rhybudd: Gall y feddyginiath hon eich gwneud yn gysglyd. Peidiwch â gyrnu, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol
To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the

first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyn. Peidiwch â grru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**
Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdrefuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin where the absorption is significantly affected by antacids. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdrefuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
Peidiwch â chymryd llaeth, meddyginiaethau camdrefuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthyhych am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**
Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cynyngor i stopio

To be used on *preparations where a course of treatment should be completed to reduce the incidence of relapse or failure of treatment*.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Many drugs other than those listed in Appendix 3 (e.g. phenothiazines and sulfonamides) may, on rare occasions, cause reactions in susceptible patients. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**
Gadewch i ddatodi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders,

granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**
Gall y feddyginiaeth hon lliwio eich dŵr. Nid yw hyn yn arwydd o ddrwg

To be used on *preparations that may cause the patient's urine to turn an unusual colour. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).*

- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**
Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau

To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.*

- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**
Rhowch y dabled i doddi dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hager
To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.

- 17 Do not take more than... in 24 hours**
Peidiwch â chymryd mwy na... mewn 24 awr
To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.

It may also be used on preparations for which no dose has been specified by the prescriber.

- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**
Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.

- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**
Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.

It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.

- 21 Take with or just after food, or a meal**
Cymerwch gyda neu ar ôl bwyd
To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*. Patients should be advised that a small amount of food is sufficient.

- 22 Take 30 to 60 minutes before food**
Cymerwch 30 i 60 munud cyn bwyd
To be used on some preparations whose absorption is thereby improved.
Most oral antibacterials require label 23 instead (see below).

- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**
Cymerwch y feddyginiaeth hon ar stomog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.

- 24 Suck or chew this medicine**
Bydd angen cnoi neu sugno'r feddyginiaeth hon
To be used on *preparations that should be sucked or chewed*. The pharmacist should use discretion as to which of these words is appropriate.

- 25 Swallow this medicine whole. Do not chew or crush**
Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
To be used on *preparations that are enteric-coated or designed for modified-release*.
Also to be used on *preparations that taste very unpleasant or may damage the mouth* if not swallowed whole. Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.

- 26 Dissolve this medicine under your tongue**
Gadewch i'r feddyginiaeth hon doddi o dan y tafod
To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.

- 27 Take with a full glass of water**
Cymerwch gyda llond gwydr o dŵr
To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose)*. The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.

- 28 Spread thinly on the affected skin only**
Taeu'nwch yn denau ar y croen sydd wedi'i effeithio yn unig
To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).

- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**
Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.

This label has been introduced because of the serious consequences of overdose with paracetamol.

- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**
Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
To be used on all containers of dispensed *preparations containing paracetamol*.

- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**
Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred.

Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
 Aciclovir Oral Suspension, BP, 200 mg/5 mL
 Aciclovir Tablets, BP, 200 mg
 Aciclovir Tablets, BP, 800 mg
 Amoxicillin Capsules, BP
 Amoxicillin Oral Powder, DPF
 Amoxicillin Oral Suspension, BP
 Artificial Saliva Gel, DPF
 Artificial Saliva Oral Spray, DPF
 Artificial Saliva Pastilles, DPF
 Artificial Saliva Protective Spray, DPF
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
BioXtra[®] Gel Mouthspray
BioXtra[®] Moisturising Gel
Glandosane[®]
Saliveze[®]
 Artificial Saliva Substitute Spray, DPF
 Aspirin Tablets, Dispersible, BP
 Azithromycin Capsules, 250 mg, DPF
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF
 Azithromycin Tablets, 250 mg, DPF
 Azithromycin Tablets, 500 mg, DPF
 Beclometasone Pressurised Inhalation, BP,
 50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite[®]
 Benzydamine Mouthwash, BP 0.15%
 Benzydamine Oromucosal Spray, BP 0.15%
 Betamethasone Soluble Tablets, 500 micrograms, DPF
 Carbamazepine Tablets, BP
 Cefalexin Capsules, BP
 Cefalexin Oral Suspension, BP
 Cefalexin Tablets, BP
 Cefradine Capsules, BP
 Cetirizine Oral Solution, BP, 5 mg/5 mL
 Cetirizine Tablets, BP, 10 mg
 Chlorhexidine Gluconate Gel, BP
 Chlorhexidine Mouthwash, BP
 Chlorhexidine Oral Spray, DPF
 Chlorphenamine Oral Solution, BP
 Chlorphenamine Tablets, BP
 Choline Salicylate Dental Gel, BP
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
 Clarithromycin Tablets, BP
 Clindamycin Capsules, BP
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
 Diazepam Oral Solution, BP, 2 mg/5 mL

Diazepam Tablets, BP
 Diclofenac Sodium Tablets, Gastro-resistant, BP
 Dihydrocodeine Tablets, BP, 30 mg
 Doxycycline Tablets, Dispersible, BP
 Doxycycline Capsules, BP, 100 mg
 Doxycycline Tablets, 20 mg, DPF
 Ephedrine Nasal Drops, BP
 Erythromycin Ethyl Succinate Oral Suspension, BP
 Erythromycin Ethyl Succinate Tablets, BP
 Erythromycin Stearate Tablets, BP
 Erythromycin Tablets, Gastro-resistant, BP
 Fluconazole Capsules, 50 mg, DPF
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF
 Hydrocortisone Cream, BP, 1%
 Hydrocortisone Oromucosal Tablets, BP
 Hydrogen Peroxide Mouthwash, BP, 6%
 Ibuprofen Oral Suspension, BP, sugar-free
 Ibuprofen Tablets, BP
 Lansoprazole Capsules, Gastro-resistant, BP
 Lidocaine Ointment, BP, 5%
 Lidocaine Spray 10%, DPF
 Loratadine Syrup, 5 mg/5 mL, DPF
 Loratadine Tablets, BP, 10 mg
 Menthol and Eucalyptus Inhalation, BP 1980
 Metronidazole Oral Suspension, BP
 Metronidazole Tablets, BP
 Miconazole Cream, BP
 Miconazole Oromucosal Gel, BP
 Miconazole and Hydrocortisone Cream, BP
 Miconazole and Hydrocortisone Ointment, BP
 Nystatin Oral Suspension, BP
 Omeprazole Capsules, Gastro-resistant, BP
 Oxytetracycline Tablets, BP
 Paracetamol Oral Suspension, BP
 Paracetamol Tablets, BP
 Paracetamol Tablets, Soluble, BP
 Phenoxymethylpenicillin Oral Solution, BP
 Phenoxymethylpenicillin Tablets, BP
 Promethazine Hydrochloride Tablets, BP
 Promethazine Oral Solution, BP
 Saliva Stimulating Tablets, DPF
 Sodium Chloride Mouthwash, Compound, BP
 Sodium Fluoride Mouthwash, BP
 Sodium Fluoride Oral Drops, BP
 Sodium Fluoride Tablets, BP
 Sodium Fluoride Toothpaste 0.619%, DPF
 Sodium Fluoride Toothpaste 1.1%, DPF
 Sodium Fusidate Ointment, BP
 Temazepam Oral Solution, BP
 Temazepam Tablets, BP
 Tetracycline Tablets, BP

Nurse Prescribers' Formulary

Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations (p. 971).

Almond Oil Ear Drops, BP

Arachis Oil Enema, NPF

Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)

Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)

Bisacodyl Tablets, BP

Catheter Maintenance Solution, Sodium Chloride, NPF

Catheter Maintenance Solution, 'Solution G', NPF

Catheter Maintenance Solution, 'Solution R', NPF

Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%

Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%

Choline Salicylate Dental Gel, BP

Clotrimazole Cream 1%, BP

Co-danthramer Capsules, NPF

Co-danthramer Capsules, Strong, NPF

Co-danthramer Oral Suspension, NPF

Co-danthramer Oral Suspension, Strong, NPF

Co-danthrusate Capsules, BP

Co-danthrusate Oral Suspension, NPF

Crotamiton Cream, BP

Crotamiton Lotion, BP

Dimeticone barrier creams containing at least 10%

Dimeticone Lotion, NPF

Docusate Capsules, BP

Docusate Enema, NPF

Docusate Oral Solution, BP

Docusate Oral Solution, Paediatric, BP

Econazole Cream 1%, BP

Emollients as listed below:

Aquadrate® 10% w/w Cream

Arachis Oil, BP

Balneum® Plus Cream

Cetaben® Emollient Cream

Dermamist®

Diprobace® Cream

Diprobace® Ointment

Doublebase®

Doublebase® Dayleve Gel

E45® Cream

E45® Itch Relief Cream

Emulsifying Ointment, BP

Eucerin® Intensive 10% w/w Urea Treatment Cream

Eucerin® Intensive 10% w/w Urea Treatment Lotion

Hydromol® Cream

Hydromol® Intensive

Hydrous Ointment, BP

Lipobase®

Liquid and White Soft Paraffin Ointment, NPF

Neutrogena® Norwegian Formula Dermatological Cream

Nutraplus® Cream

Oilatum® Cream

Oilatum® Junior Cream

Paraffin, White Soft, BP

Paraffin, Yellow Soft, BP

Ultrabase®

Unguentum M®

Emollient Bath and Shower Preparations as listed below:

Aqueous Cream, BP

Balneum® (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

Balneum Plus® Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

Cetaben® Emollient Bath Additive

Dermal® Bath Emollient

Doublebase® Emollient Bath Additive

Doublebase® Emollient Shower Gel

Doublebase® Emollient Wash Gel

Hydromol® Bath and Shower Emollient

Oilatum® Emollient

Oilatum® Gel

Oilatum® Junior Bath Additive

Zerolatum® Emollient Medicinal Bath Oil

Folic Acid Tablets 400 micrograms, BP

Glycerol Suppositories, BP

Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)

Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)

Ispaghula Husk Granules, BP

Ispaghula Husk Granules, Effervescent, BP

Ispaghula Husk Oral Powder, BP

Lactulose Solution, BP

Lidocaine Ointment, BP

Lidocaine and Chlorhexidine Gel, BP

Macrogol Oral Liquid, Compound, NPF

Macrogol Oral Powder, Compound, NPF

Macrogol Oral Powder, Compound, Half-strength, NPF

Magnesium Hydroxide Mixture, BP

Magnesium Sulfate Paste, BP

Malathion aqueous lotions containing at least 0.5%

Mebendazole Oral Suspension, NPF

Mebendazole Tablets, NPF

Methylcellulose Tablets, BP

Miconazole Cream 2%, BP

Miconazole Oromucosal Gel, BP

Mouthwash Solution-tablets, NPF

Nicotine Inhalation Cartridge for Oromucosal Use, NPF

Nicotine Lozenge, NPF

Nicotine Medicated Chewing Gum, NPF

Nicotine Nasal Spray, NPF

Nicotine Oral Spray, NPF

Nicotine Sublingual Tablets, NPF

Nicotine Transdermal Patches, NPF

Nystatin Oral Suspension, BP

Olive Oil Ear Drops, BP

Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)
 Paracetamol Tablets, Soluble, BP (includes 120-mg and 500-mg tablets; max. 96 tablets; max. pack size 32 tablets)
 Permethrin Cream, NPF
 Phosphates Enema, BP
 Povidone–Iodine Solution, BP
 Senna Oral Solution, NPF
 Senna Tablets, BP
 Senna and Ispaghula Granules, NPF
 Sodium Chloride Solution, Sterile, BP
 Sodium Citrate Compound Enema, NPF
 Sodium Picosulfate Capsules, NPF
 Sodium Picosulfate Elixir, NPF
 Spermicidal contraceptives as listed below:
 Gygel® Contraceptive Jelly
 Sterculia Granules, NPF
 Sterculia and Frangula Granules, NPF
 Titanium Ointment, BP
 Water for Injections, BP
 Zinc and Castor Oil Ointment, BP
 Zinc Oxide and Dimeticone Spray, NPF
 Zinc Oxide Impregnated Medicated Bandage, NPF
 Zinc Oxide Impregnated Medicated Stocking, NPF
 Zinc Paste Bandage, BP 1993
 Zinc Paste and Ichthammol Bandage, BP 1993

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:
 National Health Service Drug Tariff for England and Wales:
www.ppa.org.uk/ppa/edt_intro.htm
 Health and Social Care, Business Services Organisation,
 Northern Ireland Drug Tariff:
<http://www.hscbusiness.hscni.net/services/2034.htm>
 Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

Arachis Oil Enema

arachis oil 100%

Catheter Maintenance Solution, Sodium Chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

Catheter Maintenance Solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

Catheter Maintenance Solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solution R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

Co-danthramer Capsules [PoM]

co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

Co-danthramer Capsules, Strong [PoM]

co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

Co-danthramer Oral Suspension [PoM]

(proprietary product: *Codalex*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

Co-danthramer Oral Suspension, Strong [PoM]

(proprietary product: *Codalex Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

Co-danthrusate Oral Suspension [PoM]

(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Stoppel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

Dimeticone Lotion

(proprietary product: *Hedrin*), dimeticone 4%

Docusate Enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

Liquid and White Soft Paraffin Ointment

liquid paraffin 50%, white soft paraffin 50%

Macrogol Oral Liquid, Compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

Macrogol Oral Powder, Compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K⁺ 5.4 mmol/litre)

Macrogol Oral Powder, Compound, Half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

Mebendazole Oral Suspension [PoM]

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

Mebendazole Tablets [PoM]

(proprietary products: *Oxex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

Mouthwash Solution-tablets

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

Nicotine Inhalation Cartridge for Oromucosal Use

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

Nicotine Lozenge

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

Nicotine Medicated Chewing Gum

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

Nicotine Nasal Spray

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

Nicotine Oral Spray

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

Nicotine Sublingual Tablets

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

Nicotine Transdermal Patches

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

Permethrin Cream

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

Senna Oral Solution

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

Senna and Ispaghula Granules

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

Sodium Citrate Compound Enema

(proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium Picosulfate Capsules

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

Sodium Picosulfate Elixir

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

Sterculia Granules

(proprietary product: *Normacol Granules*), sterculia 62%

Sterculia and Frangula Granules

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

Zinc Oxide and Dimeticone Spray

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

Zinc Oxide Impregnated Medicated Bandage

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

Zinc Oxide Impregnated Medicated Stocking

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice—responding to legislative changes*, National Prescribing Centre, May 2010 (available at www.npc.nhs.uk/improving_safety/mixing_meds/resources/mixing_of_medicines.pdf).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary for Community Practitioners p. 970 provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Index of proprietary manufacturers

Alphabetical list of manufacturers and other companies

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdslike.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:

www.mhra.gov.uk/yellowcard**MHRA**
Regulating medicines and medical devices

REPORT OF SUSPECTED ADVERSE DRUG REACTIONS

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNFC or www.mhra.gov.uk/yellowcard for guidance. Do not be put off reporting because some details are not known.

PATIENT DETAILS

Patient initials: _____

Sex: M / F

Is the patient pregnant? Y / N

Ethnicity: _____

Age (at time of reaction): _____

Weight (kg): _____

Identification number (e.g. Practice or Hospital Ref): _____

SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known) _____

Batch _____

Route _____

Dosage _____

Date started _____

Date stopped _____

Prescribed for _____

SUSPECTED REACTION(S)

Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):

Outcome

Recovered ☐Recovering ☐Continuing ☐Other ☐

Date reaction(s) started: _____ Date reaction(s) stopped: _____

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

☐ Patient died due to reaction☐ Involved or prolonged inpatient hospitalisation☐ Life threatening☐ Involved persistent or significant disability or incapacity☐ Congenital abnormality

Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

☐ Mild☐ Unpleasant, but did not affect everyday activities☐ Bad enough to affect everyday activities

It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No
If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

Additional relevant information e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

Resuscitation Council (UK)

Paediatric Basic Life Support

(Healthcare professionals with a duty to respond)

Paediatric Advanced Life Support

Resuscitation Council (UK)

Paediatric Advanced Life Support

During CPR

- Ensure high-quality CPR: rate, depth, recoil
- Plan actions before interrupting CPR
- Give oxygen
- Vascular access (intravenous, intraosseous)
- Give adrenaline every 3-5 min
- Consider advanced airway and capnography
- Continuous chest compressions when advanced airway in place
- Correct reversible causes
- Consider amiodarone after 3 and 5 shocks

Reversible Causes

- Hypoxia
- Hypovolaemia
- Hyper/hypokalaemia, metabolic
- Hypothermia
- Thrombosis (coronary or pulmonary)
- Tension pneumothorax
- Tamponade (cardiac)
- Toxic/therapeutic disturbances

Body Surface Area in Children

Body-weight under 40 kg

Body-weight (kg)	Surface area (m ²)	Body-weight (kg)	Surface area (m ²)
1	0.10	17	0.71
1.5	0.13	18	0.74
2	0.16	19	0.77
2.5	0.19	20	0.79

Values are calculated using the Boyd equation

Note Height is not required to estimate body surface area using these tables

Medical emergencies in the community

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the child's condition requires investigation and further treatment, the child should be transferred to hospital promptly.

Airways disease, obstructive

▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

▶ **EITHER Salbutamol aerosol inhaler p. 146**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER
(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

- ▶ Child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR Salbutamol nebuliser solution (1 mg/mL, 2 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
- ▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary
- ▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ **OR Terbutaline sulfate nebuliser solution p. 148 (2.5 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary
- ▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary
- ▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER Prednisolone tablets p. 413 (or prednisolone soluble tablets) (5 mg)**

BY MOUTH

- ▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
- ▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ **OR Hydrocortisone p. 411 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

- ▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
- ▶ Child 1 year and below: 25 mg
- ▶ Child 2–4 years: 50 mg
- ▶ Child 5–17 years: 100 mg

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission.

While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 143

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary

▶ **CROUP**

Dexamethasone oral solution p. 410 (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 128 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

Chlorphenamine maleate injection p. 168

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone (preferably as sodium succinate)

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial disease

▶ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 318 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ **OR if history of allergy to penicillin**

Cefotaxime injection p. 301 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 334 (1 g)

BY INTRAVENOUS INJECTION

- Child: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, bacterial p. 286.

Hypoglycaemia

- **DIABETIC HYPOGLYCAEMIA**

Glucose or sucrose

BY MOUTH

- Child over 2 years: approx. 10–20 g
(55–110 mL *Lucozade® Energy Original* or 100–200 mL *Coca-Cola®*—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- **OR if hypoglycaemia unresponsive or if oral route cannot be used**

Glucagon injection p. 433 (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
► Child body-weight 25 kg and above: 1 mg (1 mL)

- **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

Glucose intravenous infusion p. 549 (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- Child: 5 mL/kg (glucose 500 mg/kg)

Seizures

- **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- **EITHER Diazepam rectal solution p. 207** (2 mg/mL, 4 mg/mL)

BY RECTUM

- Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
► Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
► Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
► Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary

- **OR Midazolam oromucosal solution p. 210**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- Neonate: 300 micrograms/kg [unlicensed]
► Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
► Child 3 months–11 months: 2.5 mg
► Child 1–4 years: 5 mg
► Child 5–9 years: 7.5 mg
► Child 10–17 years: 10 mg

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.2

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of actual measurements. However, the child's actual weight and height might vary considerably from the values in the table and it is important to see the child to ensure that the value chosen is appropriate. In most cases the child's actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year-old boy	49	163
14 year-old girl	50	159
Adult male	68	176
Adult female	58	164

Recommended wording of cautionary and advisory labels

For details including Welsh language translation, please see Appendix 3

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine

- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

ACBS	Advisory Committee on Borderline Substances, <i>see</i> Borderline Substances
ACE	Angiotensin-converting enzyme
ADHD	Attention deficit hyperactivity disorder
AIDS	Acquired immunodeficiency syndrome
	approx. approximately
AV	atrioventricular
BAN	British Approved Name
BMI	body mass index
BP	British Pharmacopoeia 2013, unless otherwise stated
BPC	British Pharmaceutical Codex 1973 and Supplement 1976, unless otherwise stated
BRCA	breast cancer gene
CAPD	Continuous ambulatory peritoneal dialysis
CD1	preparation in Schedule 1 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations <i>see</i> Controlled drugs and drug dependence p. 8.
CD2	preparation in Schedule 2 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations <i>see</i> Controlled drugs and drug dependence p. 8.
CD3	preparation in Schedule 3 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations <i>see</i> Controlled drugs and drug dependence p. 8.
CD4-1	preparation in Schedule 4 (Part I) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations <i>see</i> Controlled drugs and drug dependence p. 8.
CD4-2	preparation in Schedule 4 (Part II) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations <i>see</i> Controlled drugs and drug dependence p. 8.
CHM	Commission on Human Medicines
CHMP	Committee for Medicinal Products for Human Use
CNS	central nervous system
CSM	Committee on Safety of Medicines (now subsumed under Commission on Human Medicines)
d. c.	direct current
DMARD	Disease-modifying antirheumatic drug
DPF	Dental Practitioners' Formulary
e/c	enteric-coated (termed gastro-resistant in BP)
ECG	electrocardiogram
EEG	electro-encephalogram
eGFR	estimated glomerular filtration rate, <i>see</i> Prescribing in renal impairment p. 15
f/c	film-coated
G6PD	glucose 6-phosphate dehydrogenase
HIV	Human immunodeficiency virus
HRT	Hormone replacement therapy
i/m	intramuscular
i/v	intravenous
INR	international normalised ratio
MAOI	Monoamine-oxidase inhibitor
max.	maximum
MHRA	Medicines and Healthcare products Regulatory Agency
m/r	modified-release
NCL	no cautionary labels, <i>see</i> Guidance for cautionary and advisory labels p. 966
NHS	National Health Service
NICE	National Institute for Health and Care Excellence
NPF	Nurse Prescribers' Formulary
NSAID	Non-steroidal anti-inflammatory drug
	NSTEMI segment elevation myocardial infarction
non-ST- PARP	poly (ADP-ribose) polymerase
PGD	patient group direction
PHE	Public Health England (formerly Health Protection Agency (HPA))
PoM	prescription-only medicine, <i>see</i> Fig. 1 <i>How to use BNF publications</i>
®	trade mark
rINN	Recommended International Non-proprietary Name
RSV	respiratory syncytial virus
s/c	sugar-coated
SLS	Selected List Scheme
SMC	Scottish Medicines Consortium
SPC	Summary of Product Characteristics
spp.	species

SSRI	Selective serotonin reuptake inhibitor
STEMI	ST-segment elevation myocardial infarction
UK	United Kingdom
Units	for SI units <i>see</i> Prescription writing p. 4
WHO	World Health Organization
▼	limited experience of the use of this product and the MHRA requests that all suspected adverse reactions should be reported, <i>see</i> Adverse reactions to drugs p. 11
GSL	general sales list
P	pharmacy only medicine
M	drug-class monograph, <i>see</i> How to use BNF Publications, p. xii
1234	drug monograph has a corresponding drug-class monograph; the page number of the class monograph is indicated within the tab, <i>see</i> How to use BNF Publications p. xii
EvGr	precedes evidence graded content, <i>see</i> How BNF Publications are constructed p. ix
A to E	symbols will be displayed – grades reflect the strengths of recommendations in evidence graded content, <i>see</i> How BNF Publications are constructed p. ix

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing. The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t. i. d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E211	Sodium Benzoate
E104	Quinoline Yellow
E223	Sodium Metabisulfite
E110	Sunset Yellow FCF
E320	Butylated Hydroxyanisole
E123	Amaranth
E321	Butylated Hydroxytoluene
E124	Ponceau 4R
E322	Lecithins
E127	Erythrosine BS
E420	Sorbitol
E132	Indigo Carmine
E421	Mannitol
E142	Green S
E422	Glycerol
E171	Titanium Dioxide
E901	Beeswax (white and yellow)
E172	Iron oxides, iron hydroxides
E1520	Propylene Glycol
E200	Sorbic Acid
